Chicago and North Western Railway System

July 15, 1947.

File 8555

Mr. W. A. Mayfield, General Traffic Manager, Swift & Company, Union Stock Yards, Chicago, Illinois.

DEAR MR. MAYFIELD:

Supplementing my letter of July 11th acknowledging my copy of your joint letter of July 8th requesting that the line haul carriers accord your company direct delivery of live stock at your Chicago plant at rates no higher than those assessed for delivery at the pens of the U. S. Y. & T. Co.

Our investigation has now been completed and it is our conclusion that we cannot afford to absorb the additional expense which would be necessary to comply with your request.

As to our reasons, the foregoing paragraph indicates that because of the low freight rates it is impossible for us to absorb any additional expense in the handling of this traffic.

Sincerely yours, (S.) F. G. Fitz-Patrick.

CC—Mr. L. R. Capron, Mr. J. W. Hill, Mr. R. G. Hawkinson, Mr. E. B. Finegan.

(Summarized from financial statements on Pages 20 to 23 and previous financial reports.)

[fols. 1248-1255] Distribution of Swift's Average 1947 Sales Dollar

Our 1947 sales dollar was distributed as follows:

Paid to Producers of Livestock, Dairy and Poultry Products, Oilseeds, and Other Raw Materials	79.3 cents
Paid to Manufacturers of Supplies	3.8 cents
Paid to Railroad and Trucking Companies	1.8 cents
Paid to Holders of Interest-bearing Obligations, and for Depreciation, Advertising, Rent, Telegraph, Telephone, and Miscellaneous	3.1 cents
Taxes, Federal, State, and Municipal, Including Unemployment Insurance and Old-age Benefit Taxes	1.3 cents
Paid to Employes (Operating, Sales and Office)	9.7 cents
Balance Remaining with Swift & Company as Earnings	1.0 cents
Total	100.0 cents

Further analysis of the company's sales income shows 79.3% went for raw materials, livestock, etc., as follows:

Total Sales	$2,248,766,634
Paid for Raw Materials, Livestock, etc.	1,782,472,718
which leaves a gross income before operating and other expenses of	$466,293,916

This gross income from the company's operations (20.7% of sales) was used for:

	Amount	%
* Total Employment Costs	$234,603,601	50.3
Selling Expenses, etc.	35,722,748	7.6
Supplies	86,005,885	18.4
Transportation	41,053,244	8.8
Taxes	25,915,888	5.6
Depreciation	8,657,573	1.9
Dividends to Shareholders	12,436,612	2.7
Set Aside for Contingencies, High Cost Additions to Fixed Assets, and Future Development	21,898,365	4.7
Total	$466,293,916	100.0%

* Includes salary and wage costs, social security taxes, pension contributions, etc.

[fol. 1256] Competition Forces Price Changes

Competition forces price changes to be reflected quickly all the way back to the livestock on the hoof. Each dealer and each meat packer knows that if he does not pay a little higher for the products he wants, somebody else will—and get the business.

A retail meat dealer who did not pay the market price would be left again with even less meat to sell than he had the week before. The meat packer who did not bid the market price for livestock would find that his competitors were getting increased volume while he would be unable to keep his plants operating and his customers supplied.

Anybody in the meat business who stays below the market quickly finds himself out of business. Certainly this was proved during the final days of price control, when legitimate meat packers could not legally pay the market prices which prevailed for many types of livestock, and consequently suffered serious loss of volume.

Meat and livestock, therefore, are just naturally going to be sold to those who bid market prices.

Competitive market prices of livestock and meat are among the most flexible in our entire economy. They must change quickly and with delicate precision to make possible the fair and efficient marketing of a perishable product whose supply varies weekly and daily.

Incomes at Record Levels

Prices of almost everything have risen because, taking everybody together, people have more money than they ever had before.

Not only have average incomes increased substantially, but more people are at work. About 60 million people, including those who have their own farms or businesses, are now employed, compared with 47 million in 1940. With expanding population, several million people who never worked before have been added to the nation's work force, and very few people are unemployed. Total personal incomes, after taxes, are estimated at about $175 billion this year compared with $76 billion in 1940. Thus, purchasing power for meat and other goods has more than doubled since 1940.

Meat Supply Large

The supply of meat has gone up one-fifth. Farmers are doing a good job. The nation does not have a shortage of meat compared with the supply before the war.

But the number of dollars on one side of the meat dealer's counter has increased much faster than the number of pounds of meat for sale on the other side of the counter.

Increased consumer purchasing power is usually reflected in Swift & Company's dollar sales. The accompanying chart shows how sales have generally moved up when people's incomes rose and moved down when incomes declined. Substantial deviations occurred in 1939, 1940, and 1941, as well as during the war years. In 1947, sales slightly exceeded the amount that would be expected on the basis of average experience in the past.

[fol. 1257] *The New York Times* on September 10, 1947, reported "porterhouse steaks quoted at $1 a pound in some stores here."

Cattle prices on the Chicago market at that time ranged from 11 to 35 cents a pound.

Many people have remarked about the apparently large spread between the price of a pound of steak and the price per pound of live cattle. It is a natural question to raise, because people do not often remember that only about half of a steer can be sold as retail beef cuts, and only a small part is steak.

These relationships can best be clarified by following a steer through the meat packing plant and the retail store.

As shown in the previous article, the price of livestock is a reflection of the prices of meat and byproducts, rather than the other way around. Nevertheless, to the individual meat packer, the price of livestock is his cost, and he must sell his products for enough to cover his costs, on the average, if he is going to stay in business. For this reason, as well as to follow the actual sequence of operations, the example starts with the livestock.

Only a Few Cattle Are Choice

The steaks that sold for $1 a pound in New York City on September 10 came from cattle dressed ten days to two weeks earlier. Although this meat could have come from many markets, let's assume that it came from Chicago. The cattle that produce that kind of steaks are choice steers (or heifers), which represent only a small proportion of all cattle sold for beef.

The farmer who produced the choice steer sent it to the Chicago market consigned to an experienced commission agent. The steer was displayed in a pen and the commission man sold it for the highest price he could get from any of a large number of buyers representing meat packing companies in Chicago and elsewhere. Choice cattle were quoted by the U. S. Department of Agriculture at from 31 cents to 34 cents a pound on August 27, 1947. The same prices prevailed on August 28 and 29.

Farmer Gets $325

Assuming the steer sold at the middle of this range—32.5 cents—and weighed 1,000 pounds, the farmer received $325. Out of this the farmer paid his marketing expenses, such as

trucking, yardage and commissions, and his production costs—corn, hay, wages, interest, taxes, etc.

The meat packer buyer ordered the steer driven to a plant in Chicago's Packingtown, where it was dressed the following day. After dressing and chilling, the sides of beef weighed 625 pounds.

What happened to the other 375 pounds? The meat packer saved everything of value—the hide, fats, liver and other fancy meats, blood, glands, and a good deal of low value tissues and bones used for livestock and poultry feeds. What was left was moisture and other material which had no value and had to be disposed of. The total value of [fol. 1258] by-products (at market less the expense of getting them ready for market) was $28.42.*

Expenses of buying, dressing, chilling, and loading the beef in cars totaled $11.31.*

Not All the Steer Is Beef

How much did the beef cost the meat packer? The way to figure it is:

Cost of 1,000 lb. steer	$325.00
Add plant expenses	11.31
Total cost at plant	336.31
Less value of by-products	28.42
Cost of 625 lbs. of beef	$307.89

The meat packer's cost per pound at Chicago was $307.89 divided by 625 pounds, or 49¼ cents. Every pound of the live steer cost 32½ cents, including the worthless materials that had to be disposed of. *The reduction of weight raises the cost per pound of the beef.*

The meat packer incurred additional cost in getting the beef to New York and in selling it to the retail dealer. The cost of freight, initial icing, icing in transit, unloading the

---

* By-product values change frequently. Both the figure for by-product values and the figure for plant expenses apply to the Swift & Company Chicago plant for the last week in August, 1947.

cars, branch house refrigeration, and selling expense totaled $14.64, bringing the total cost of the beef sold in New York to $322.53. While in transit, the beef suffered a shrinkage in weight of about 4 pounds, so that the amount finally sold was only 621 pounds.

Meat Packer Sells Beef for $323

The meat packer's cost per pound at the point of sale was:

$$621 \text{ lb.} \overline{)\ \$322.53}\quad 51.9¢$$

The wholesale price of choice beef in New York was quoted by the U. S. Department of Agriculture at from 51.5 cents to 52.5 cents per pound each day during the week beginning September 8. If the beef were sold at the middle of this range—52 cents—the meat packer's cost of 51.9 cents left him a profit in this particular case of only one-tenth of a cent a pound. Such market conditions are not unusual in the meat business. Sometimes the meat packer makes more than this; sometimes there is a loss. As shown on Page 4, Swift & Company's average profit per pound of meat sold this year was less than ¼ of a cent per pound.†

The total sales value of the beef was 621 pounds at 52 cents, or $322.92, *actually less than the $325 paid for the steer in Chicago.* However, the beef and by-products together were worth $351.34.

This brings us through the stockyards, the meat packing plant, and the branch house.

If You Were a Meat Retailer . . .

Now let's suppose you were the retail meat dealer handling these sides of beef.

The first step is to cut the beef into retail cuts. When this is completed the dealer finds that he has about 528 pounds of beef cuts to sell over the counter. The other 93 pounds are bones, sinews, fat, and shrinkage due to loss of moisture. The value of these materials would total about $4.00. This

† Swift & Company's profit on all products sold this year, including by-products, was 1.0% of the selling price.

is in effect a credit against the cost of the beef, and reduces the retailer's cost to $318.92. Dividing this figure by the 528 pounds of retail cuts brings the cost of these cuts to 60½ cents a pound.

Retail Dealer Sells Cuts for $385

The expenses of selling meat at retail, including rent, heat, light, taxes, insurance, wages, refrigeration, owner's profit, and in some cases delivery service and charge accounts, averages 10 to 15 cents a pound, depending on the [fol. 1259] service given to customers. Only a small part of this gross margin is profit.* Taking a middle expense figure of 12½ cents a pound, and adding it to the cost of 60½ cents for the beef cuts, you find the average selling price must be 73 cents a pound. The sales value of the beef cuts totals:

528 lb.
×73¢

$385.44

What would happen if you as a dealer offered all kinds of beef cuts in the case at the average price of 73 cents a pound? This is what a dealer would like to do. It would make the business relatively simple. But, in a very short time all the steaks and rib roasts would be sold out, but most of the short ribs, briskets, and stew meat would be left in the case. The chuck roasts, which usually sell at near the average price, would be moving out gradually.

Not All Cuts Sell at Same Price

Meat is perishable and must be sold promptly. No cut of beef can be held very long. Even a very small amount of waste or spoilage would wipe out the profit and result in a loss. So the price must be slashed on the cuts of meat that will not sell at the average price. Some may be marked as

* A recent study by the United States Chamber of Commerce showed that meat and seafood stores earned a net profit of 2 per cent on sales.

low as 40 cents—*lower than the net cost of beef cuts, and lower even than the wholesale carcass price.*

How can you as a dealer cover your costs and make a profit on that basis? The answer is that you must charge more for the steaks and roasts that are in most demand. And by doing so, you transfer some of the consumer demand to the low-priced cuts, so that you do not run out of steaks and have only the less choice cuts left. All the cuts are then sold in the proportion in which nature produced them.

Based on the usual relationships between wholesale and retail prices, it is clear that all steaks from 52-cent sides must sell at considerably more than 73 cents in order for the retail dealer to cover his costs and make a reasonable profit. Steaks from the loin, such as porterhouse, T-bone, and sirloin—which make up only a small portion of the side—bring the highest prices.

A similar explanation applies to other types of meat—pork, veal, and lamb.

Figures in this article apply to choice beef dressed in Chicago and sold in New York City early in September, 1947. During that month, Swift & Company sold beef carcasses at widely varying prices, depending on the quality, weight, location of sale, and market conditions of the moment. The methods of retail cutting and trimming vary in different localities, and for different grades and weights of animals. Retail prices vary with location and with the quality and character of services rendered to customers in the form of delivery, charge accounts, etc.

EXHIBIT NO. 23

U. S. Y. & T. Company No. 14

(Cancels and supersedes all previous Schedules, Amendments and Supplements)

The Union Stock Yard and Transit Company

OF CHICAGO

SCHEDULE OF CHARGES

ISSUED AUGUST 1, 1947 **EFFECTIVE AUGUST 11, 1947**

Issued by
WM. J. O'CONNOR, General Manager
The Union Stock Yard and Transit Company of Chicago
Chicago, Illinois

SECTION 1—YARDAGE CHARGES:

The following yardage charges will be made on all live stock received at these yards:

Cattle	65c per head
Calves (450 lbs. or under)	*40c per head
*(With a maximum of $28.00 for a single-deck car or truck or $56.00 for a double-deck car or truck.)	
Hogs	21c per head
Sheep or Goats	15c per head
Horses or Mules	67c per head

The following charges will be made, in addition to the regular yardage charges, on live stock delivered at these yards in other than railroad cars:

Cattle	5c per head
Calves (450 lbs. or under)	*3c per head
*(With a maximum of $2.10 for a single-deck truck or $4.20 for a double-deck truck.)	
Hogs	4c per head
Sheep or Goats	3c per head
Horses or Mules	15c per head

A service and weighing charge, equal to one-half of the total of the above two charges for each species, will be assessed on all live stock weighed over our scales the second and successive times.

SECTION 1-A—DRIVING LIVE STOCK TO RAILROAD CHUTES:

Driving live stock to railroad chutes for outbound shipment, the following charges will apply:

Cattle	10c per head
Calves	5c per head
Hogs	3c per head
Sheep	2c per head
Horses and Mules	10c per head

The above charges will not apply to live stock driven to the railroad chutes by the shipper or his agent.

SECTION 2—FEED AND FEEDING CHARGES:

The charge for feed at this market will be the cost delivered at this stock yards plus the following amounts:

Corn	50c per bushel measure
Tame Hay	70c per cwt.
Prairie Hay	70c per cwt.
Oats	40c per bushel measure
Alfalfa	70c per cwt.

All feed charges shall be divisible by 5 and such charges will be amended when the margin between the cost and sale price of feed varies 5c from the margins specified above.

Horses and Mules:—Horses and Mules arriving after 6:00 p. m., 50 cents for that day, and $1.00 per day for each day thereafter.
—Horses and Mules arriving before 6:00 p. m., $1.25 for the first day, and $1.00 per day for each day thereafter.
—Horses and Mules stopping enroute for feed, water and rest in barns, $1.00 per head, per day or fraction thereof.
—Horses and Mules stopping en route for feed, water and rest in pens, 65c per head per day or fraction thereof.

SECTION 3—BEDDING:

The charge for straw bedding in pens at this market will be the cost delivered at this stock yards plus the following amount:

Straw bedding in pens.....70c per cwt.

All charges for straw bedding in pens shall be divisible by 5 and such charges will be amended when the margin between the cost and sale price of straw varies 5c from the margin specified above.

Sand bedding, not exceeding ¼ inch in depth	$2.00 per deck
Straw bedding in cars	1.60 per cwt.

SECTION 4—DIPPING AND SPRAYING:

All dipping and spraying is subject to the supervision and regulation of the Bureau of Animal Industry, U. S. Department of Agriculture.

SUPPLEMENT No. 5 TO THE
U. S. Y. & T. COMPANY No. 14

The Union Stock Yard and Transit Company

OF CHICAGO

SCHEDULE OF CHARGES

Cancels and supersedes Sections 5 and 17 of
U. S. Y. & T. Co. No. 14,

SECTION 5— IMMUNIZING HOGS:

The Stock Yards Company furnishes facilities, the veterinary service, and the necessary labor required in immunizing hogs, all of which is subject to the supervision and regulation of the Bureau of Animal Industry, U. S. Department of Agriculture.

Only serum and virus manufactured under Government supervision is used. The Stock Yards Company is not responsible for loss of or damage to hogs occasioned by or resulting from vaccination, and does not guarantee immunity to the hogs vaccinated.

Charges are as follows:

Serum	**(A)**	**2½c per cubic centimeter for the serum used**
Virus	**(A)**	**2½c per cubic centimeter for the virus used**

The above charges include the use of the facilities, veterinary service, and the necessary labor of taking temperatures and vaccinating the hogs.

SECTION 17— COVERED PENS:

(W) Covered pens in No. 2, No. 3 and No. 4 houses will be furnished for cattle and calves at a charge of $2.00 per pen for each 24 hours, or fraction thereof, ending at 11:00 A. M. All such stock must be removed from these pens by 11:00 A. M. except over weekends and holidays, when arrangements may be made to keep the stock in pens until 11:00 A. M. on the first market day thereafter.

All such stock must be taken to and from these pens by the owner, or his agent. No stock is to be sold in these pens.

All stock in these pens will be fed by this Company after receipt of an order from the owner, or his agent, and at the owner's expense.

This Company's obligation to furnish covered pens is limited to the number of pens in these houses designated for this purpose.

ISSUED NOV. 4, 1947 **EFFECTIVE NOV. 15, 1947**

Issued by
WM. J. O'CONNOR, General Manager
The Union Stock Yard and Transit Company of Chicago
Chicago, Illinois

(A) Advance
(W) Wording changed

The Stock Yards Company is not responsible for loss of or damage to live stock occasioned by or resulting from dipping or spraying.

The necessary dipping and spraying material and use of the facilities at the dip and spray and the labor are included in the charges for dipping and spraying, which are as follows:

Dipping Sheep and/or Goats	10c per head, minimum, $5.00*
Spraying Hogs	10c per head.

*The minimum charge for dipping will not apply when one or more owners dip 50 head or more from one charging

Spraying Motor Trucks	$1.00 each
Spraying Wagons	75c each

SECTION 5——IMMUNIZING HOGS:

The Stock Yards Company furnishes facilities, the veterinary service, and the necessary labor required in immunizing hogs, all of which is subject to the supervision and regulation of the Bureau of Animal Industry, U. S. Department of Agriculture.

Only serum and virus manufactured under Government supervision is used. The Stock Yards Company is not responsible for loss of or damage to hogs occasioned by or resulting from vaccination, and does not guarantee immunity to the hogs vaccinated.

Charges are as follows:

Serum	1½c per cubic centimeter for the serum used
Virus	1½c per cubic centimeter for the virus used

The above charges include the use of the facilities, veterinary service, and the necessary labor of taking temperatures and vaccinating the hogs.

SECTION 6——CATTLE TESTING:

Cattle are tested for tuberculosis and other diseases by the U. S. Bureau of Animal Industry or by veterinarians under the direction of the State Veterinarian of the State of Illinois.

This Company is not responsible for loss of or damage to stock moving to and from the testing facilities, or in process of testing, or as a result of the test, or for the efficacy of the test.

For the use of equipment, when services and tags are provided by the regulatory body making the test, no charge.

When tags are furnished, and affixed, by employees of this Company, the charge is 10 cents per head.

If special equipment in barns is desired, the use of such facilities and all services in connection therewith will be charged for under special agreement.

SECTION 7——CLEANING AND DISINFECTING:

When it is necessary to clean and disinfect any portion of these yards by reason of movement in, or through, the yards of live stock exposed to or infected with a contagious disease, the owner of such exposed or infected live stock will be required to pay for such disinfecting as follows:

Chutes	$2.50 each
Pens (single)	2.50 each
Pens (double)	4.00 each
Alleys	.40 per hundred square feet

For disinfecting cleaned cars, trucks, trailers or other vehicles, actual cost of labor and material used plus twenty (20) per cent for supervision.

For use of facilities and water for washing trucks, the following charges will apply:—

Trucks under 2-ton capacity	25c
Trucks 2-ton capacity or over	50c

SECTION 8——BRANDING:

Various state laws require that all animals shipped into the state for feeding purposes must be branded.

This company is not responsible for loss of or damage to stock moving to or from the branding station, or in process of branding, or as a result of branding.

For the use of facilities and labor a charge of 25c per head per iron will be made.

SECTION 9—SPECIAL SALES:

This Company maintains special stables and pavilions for sales of pure bred live stock. The use of such facilities and all services in connection therewith will be charged for under special agreement made in advance of their use.

SECTION 10—SPECIAL SERVICES:

Special services not ordinarily or usually required in the handling of live stock will be charged for under special agreement made in advance.

SECTION 11—

Any firm, corporation, or individual by themselves or their employees, detected using unfair, dishonest or fraudulent practices will be denied the privileges of these Stock Yards, treated as a trespasser and dealt with accordingly.

SECTION 12—LOADING ACCESSORIAL SERVICES:

The service of loading carloads of live stock when performed by this Company does not include the cost of partitioning cars, or the tying of bulls. Where these accessorial services are required, arrangements must be made by the owner or his agent sufficiently in advance of the loading time so that arrangements may be made therefor at charges to be agreed upon.

SECTION 13—REMOVING PARTITIONS OR TEMPORARY DECKS:

When it is necessary to remove partitions or temporary decks in unloading cars containing live stock, the following charges will be assessed:

REMOVING PARTITIONS, 50 cents each, subject to a minimum of $1.00 per car.

REMOVING TEMPORARY DECKS, $2.50 per car.

SECTION 14—CERTIFICATES OF LOADING OR UNLOADING:

Upon request of the owner, his agent, or the carrier handling the shipment this Company will furnish loading or unloading certificates. A charge of twenty-five (25) cents per each certificate will be made. When it is necessary to have a notarial seal affixed, the notarial fee will be collected in addition to the 25 cent charge.

SECTION 15—SPRINKLING OR DRENCHING STOCK CARS:

A charge of twenty-five (25) cents per deck will be made for sprinkling or drenching stock cars, the charge to apply each time the service is performed before, during or after loading. This company will not be liable for injury to or death of animals drenched or sprinkled.

SECTION 16—SPRINKLING HOGS IN THE SHIPPING DIVISION:

A charge of twenty-five (25) cents per pen will be made for sprinkling animals held in the shipping division awaiting loading. This company will not be liable for injury to or death of hogs as the result of sprinkling.

SECTION 17—COVERED PENS:

Covered pens in No. 2 house will be furnished for cattle and calves at a charge of $2.00 per pen for each 24 hours, or fraction thereof, ending at 11:00 A. M. All stock must be removed from these pens by 11:00 A. M. except over weekends and holidays, when arrangements may be made to keep the stock in pens until 11:00 A. M. on the first market day thereafter.

All stock must be taken to and from these pens by the owner, or his agent. No stock is to be sold in these pens.

All stock in these pens will be fed by this Company after receipt of an order from the owner, or his agent, and at the owner's expense.

This Company's obligation to furnish covered pens is limited to the capacity of this house.

BEFORE THE INTERSTATE COMMERCE COMMISSION

Docket No. 29467

In the Matter of NEUHOFF PACKING COMPANY

vs.

LOUISVILLE AND NASHVILLE RAILROAD COMPANY

Hearing Room "C",
Interstate Commerce Commission,
Washington, D. C.
Tuesday, July 30, 1946.

Met, pursuant to notice, at 9:30 a.m.

Before: J. E. Snider, Examiner

Appearances:

R. D. Rynder, 4115 Packers Avenue, Chicago, Illinois, appearing for Neuhoff Packing Company, Complainant.

J. Carter Fort, Jr., 1110 Shoreham Building, Washington, D. C., appearing for N. C. and St. L. Railroad.

Edward D. Mohr, 908 West Broadway, Louisville, Kentucky, appearing for Louisville and Nashville Railroad.

[fol. 1301] PROCEEDINGS

Exam. Snider: Are you ready to proceed?

The Interstate Commerce Commission has set for hearing at this time and place Docket 29467, Neuhoff Packing Company, against the L. and N. Railroad Company, et al.

Who appears for complainant?

Mr. Rynder: R. D. Rynder.

Exam. Snider: And for defendants?

Mr. Fort: J. Carter Fort, Jr., for N. C. and St. L.

Mr. Mohr: Edward D. Mohr and E. R. Roby, appearing for the defendant, L. and N. Railroad Company.

Exam. Snider: Is Mr. Roby appearing as counsel or witness?

Mr. Mohr: As a witness.

Exam. Snider: He will not be shown as an appearance.

Any further appearances?

It is alleged that the defendant's rules, regulations and practices which result in their refusal to deliver upon complainant's industrial side track adjacent to its meat packing plant at Nashville, Tennessee, interstate shipments of livestock in carloads from points of origin other than to Nashville, Tennessee, are and for the future will be unreasonable and unduly prejudicial to complainant, and the community of Nashville, and unduly preferential of complainant's competitors located at Atlanta, Georgia, Chattanooga, Knoxville, and Memphis, Tennessee, Evansville, Indiana, Birmingham, Alabama, and Lexington, Kentucky, [fol. 1302] in violation of Section I and III of the Interstate Commerce Act.

The Commission is asked to prescribe just and reasonable rules and practices for the future.

Is that a substantially correct statement of the issues?

Mr. Rynder: I think so.

Exam. Snider: Whenever you are ready, Mr. Rynder, you may proceed.

E. C. Tompkins was sworn and testified as follows:

Direct examination.

By Mr. Rynder:

Q. Please state your name and address.

A. E. C. Tompkins.

Q. And your residence?

A. Nashville, Tenn.

Q. And what is your position or business occupation?

A. President, Neuhoff Packing Company.

Q. Where is the Neuhoff Packing Company, Inc.

A. In Tennessee.

Q. What does it do?

A. It produces meat and meat products.

Q. And does it have a packing plant at Nashville, Tennessee for that purpose?

A. Yes.

Q. Could you give us some idea of the size or capacity [fol. 1303] or otherwise of the operations as a whole?

A. I think it is the largest packing house in the southeast.

Q. Does it process all types of livestock?

A. All species.

Q. And does it receive livestock in carload quantities from many points outside the State of Tennessee?

A. Yes.

Q. And does it ship its products to all available markets whether state or interstate?

A. Yes, it does.

Q. What rail connections has the Neuhoff packing plant?

A. The N. C. and St. L. Railroad, and the L. and N. Railroad.

Q. Are there side track connections from those two railroads to the plant?

A. Yes.

Q. As to inbound shipments of livestock purchased by you at other points, do the railroads refuse to deliver the livestock on your private siding at the Neuhoff plant?

A. They do.

Q. And where do they deliver livestock consigned to you at Nashville?

A. At the Nashville Union Stockyards.

Q. Now, Mr. Tompkins, in the operation of your Neuhoff plant, are you in competition with other packing companies throughout the southeast?

A. Yes.

[fol. 1304] Q. And can you give some general description of that competition and the location of competitors and things of that kind?

A. It is of course difficult to know where livestock is bought by competing packers, but we do know of instances where receipts in the national market, as well as other points in surrounding territory, have been for the account of a number of other packers, such as the Allison Packing Company at Chattanooga, cattle from Bowling Green, Kentucky, hogs from Decker, Tennessee, also cattle from Nashville, Armour and Company at Atlanta, Georgia, various species from Nashville, Tennessee, Clarksville, Tennessee, Hopkinsville, Kentucky, also cattle and hogs from various points south of Nashville, and Armour and Com-

pany, Birmingham, calves and hogs from Athens, Alabama, from Huntsville, Alabama, calves and cattle and hogs from Hopkinsville, Kentucky, and Clarksville, Tennessee; also cattle and hogs from Nashville, East Tennessee Packing Company at Knoxville, Tennessee, hogs from Campbellville, Kentucky, Carthage, Tennessee, McMinnville, and Lebanon, Tennessee.

Q. Mr. Tompkins, could you say in a general way that your plant is in competition with all of the other major packing plants in the southeast, in the effort to obtain livestock in that territory?

A. Yes.

[fol. 1305] Q. Will you please state some of the concerns with which you are in competition in the selling of your products, that is, concerns in the south or southeast?

A. We compete with the Allison Packing Company in Chattanooga, Tennessee, with Armour and Company, Atlanta, Armour and Company, Birmingham, Alabama, East Tennessee Packing Company at Knoxville, Tennessee, and in Dayton, Harriman, Knoxville, Lenore City, Rockwood, Sweetwater, Tennessee, and other east Tennessee points.

We compete with the Hunter Packing Company of St. Louis, Missouri. In Dixon, Tennessee, Waverly, Tennessee, Nashville, Tennessee, Brewston, Camden and McEwan, Tennessee.

Exam. Snider: They are the points at which you compete or points at which there are packing companies?

The Witness: At which we compete.

Krey Packing Company at St. Louis.

Exam. Snider: Mr. Rynder, are those considered packing houses in the southeast, at St. Louis? I want to get the record straight. You compete in the southeast, but these packing houses are in St. Louis, as I understand it?

Mr. Rynder: I believe he was stating generally the competition with which he had to compete, and while the packing house at St. Louis is of course not in the southeast, it apparently does a good bit of business in the southeast.

By Mr. Rynder:

Q. Is that it?

[fol. 1306] A. There is a great deal of product shipped out of St. Louis and East St. Louis, into the southeastern territory.

Exam. Snider: I wanted to get the record clear.

The Witness: The Krey Packing Company, St. Louis, Missouri, Waverly, Tennessee, Dixon, Tennessee, Birmingham, Alabama, Brewston, Tennessee, Camden, Tennessee, Huntington, Tennessee, McEwan, Tennessee.

Kahn and Sons, Cincinnati, in Birmingham, Alabama, Knoxville, Tennesssee; E. Kahn and Sons of Cincinnati have a private siding on the B. and O. Railroad.

Hunter Packing Company has pens and receives their shipments from the Pennsylvania Railroad. Krey Packing Company of St. Louis receives shipments at its plant by the Terminal Railroad.

The two defendants participate in joint rates with the railroads serving these packing companies. All of the competitors mentioned above have inspection by the Meat Inspection Division, and do interstate shipping.

By Mr. Rynder:

Q. The Neuhoff Packing Company, of course, is a federally inspected plant, is it?

A. Yes.

Q. Now, Mr. Tompkins, will you please explain very briefly the present method of delivery of interstate shipments of livestock, consigned by railroad to your plant at Nashville?

A. At present inbound carload shipments of livestock consigned to Neuhoff are delivered by defendants to the Nashville Union Stockyards, and unloaded at that point [fol. 1307] into the points of the Nashville Union Stockyards.

They are held in those pens awaiting drayage by our draymen to the private yards adjoining the Neuhoff plant. The distance between these two points by highway is approximately .69 miles. The cost of drayage incurred by Neuhoff is at present 4 cents a head on hogs, lambs and calves, and 9 cents a head on cattle.

Although these raised rates have been in effect for some time, the prospects are that the draymen are about to ask for a substantial increase.

Q. Mr. Tompkins, are shipments of the kind that you are describing, that is, livestock, bought by you or your agents at distant points and shipped to your plant at Nashville, known as direct shipments?

A. Yes.

Q. And does that have a well understood meaning in the packing and livestock industry?

A. I think so.

Q. Will you please proceed in your own way to explain what you do mean by direct shipments, such as are here involved?

A. The shipments here involved are so-called direct shipments, that is to say, they are purchased at points outside of Nashville by or on behalf of Neuhoff Packing Company, are the property of that company during transportation, and the only purpose of transportation is to get them to [fol. 1308] the packing house for slaughter.

By direct shipments are meant shipments as to which the Neuhoff Packing Company at Nashville, Tennessee, is shown as the consignee in the bill of lading, shipping receipt, waybill or other transportation documents issued by the railroads at the various points of origin. For example, Neuhoff or its agents might purchase a carload of cattle, hogs, or sheep, on some other public market, such as Louisville, Omaha, St. Louis, and so forth, or make a similar purchase at a country point. The term direct shipment from shipments by livestock producers and others consigned to commission men at public stockyards, where they are placed on sale by the commission men, and purchased generally by a local packer, or by an order buyer for purchases at other points.

This class of shipment is now well recognized on the market. In connection with this class of shipment, Neuhoff does not desire any stockyard services. It does not desire any services or facilities furnished at a public stockyards in connection with the receiving, buying or selling on a commission basis, or otherwise, marketing, feeding, watering, holding, delivery, shipment, weighing or handling.

Neuhoff does not desire at any time to have them taken to the commission men's pens for sale. The direct shipments of livestock are not marketed in any form as live-[fol. 1309] stock at Nashville, but are marketed in the form of meat after processing at the plant. Shipments to the commission men on the contrary are placed in pens assigned to commission men and there offered for sale. Direct shipments are not in this category.

No feeding of direct shipments of livestock at the public stockyards is desired or required by Neuhoff, nor any watering. Those services would be performed by the consignee, Neuhoff, at its own plant. No weighing or handling by the stockyards is desired or necessary in connection with such shipments. Neuhoff has set up scale facilities at its own plants and its weights are inspected by and accepted as satisfactory by the railroads.

Q. In what you have just said as to the lack of need for any service at the public stockyards, may I ask if you are receiving a substantial number of shipments by truck.

A. Yes, we are.

Q. And in connection with them, are they brought directly to your own stock pens at your plant?

A. Yes.

Q. And do you there perform all of these services that you have mentioned, such as watering, weighing, etc.?

A. We do.

Q. As you are probably aware, Mr. Tompkins, there was a prior case involving somewhat similar issues, Nashville [fol. 1310] Abattoir Hide Melting Association, against the L. and L. 40 ICC 134, and I wanted to ask you a few questions for the purpose of determining whether there had been or whether your present complaint differs somewhat from the case that was presented at that time.

In reading the transcript of the hearing in that case, I noticed that a good bit of point was made of the necessity for federal inspection of livestock at this stockyards.

Do you know whether any such inspection is necessary in connection with livestock consigned to your plant for slaughter?

A. At the first hearing quite a point was made about federal inspection of livestock, that it was readily performed at one point, such as a stockyards, but would be

difficult or imposible if required at various private sidings.

Our information is that all livestock inspected by the Meat Inspection Division before going to the killing floor, that this is done with respect to direct receipts by truck at Neuhoff, and at all other plants under government inspection where direct shipments are received, which do not go through a public yard.

Q. The Meat Inspection Division that you mentioned is a Bureau of the Department of Agriculture, is it not?

A. Yes.

Q. Charged by law with certain duties of this kind?

A. That is right.

Exam. Snider: Did I understand you to say that you [fol. 1311] understood that to be so, or that that was so, that they did inspect all of the livestock in your plant on all direct shipments?

The Witness: They do inspect all livestock before it goes to the killing floor, and on the killing floor.

Exam. Snider: I understood you to say that you understood that to be so. I just wanted you to state that it was so.

By Mr. Rynder:

Q. At your plant is it a fact that inspection is done by a federal inspector on duty at your plant?

A. Yes.

Q. And that is the only inspection necessary in connection with this class of livestock slaughter?

A. Yes.

Q. I observe that in the previous hearing some witness stated that the complainant, the Nashville Abattoir Hide and Melting Association, was not a federally inspected plant.

I believe you have stated that your plant is federally inspected.

A. Yes, it is.

Q. I have noticed that a witness stated that he did not at that time know of a single interstate shipment ever sent to the Abbatoir Company. Is the condition different from that with respect to your plant? Do you receive substantial interstate shipments in carloads by rail?

A. Yes, we do. They originate in Official and Western

[fol. 1312] Trunk Line Territories, and are therefore interstate.

Q. And I noticed that another witness, a Mr. Houston Thomas, said he was in the livestock commission business, and that he wanted to make a deal with the Abattoir people for the purpose of changing location of his business to the Abattoir facilities if delivery could be obtained. In other words, that he was a commission man who wanted to set up a second public livestock market in Nashville.

Is the establishment of any additional livestock market in Nashville contemplated in your complaint?

A. No, it is not.

Q. It would involve only the placement of cars on your siding for immediate unloading into your plant, is that right?

A. That is correct.

Q. And I observe that another witness testified that all of the livestock that he was interested in, in that case prior, was shipped to be sold on the Nashville market.

A. Yes.

Q. Is any of the livestock shipped to you at Nashville to be sold on the Nashville market?

A. No, none of it.

Q. I observe that another witness in the prior hearing testified that no livestock at that time was being shipped into Nashville consigned to the Abattoir Company, that very little of the livestock is sold previous to coming to [fol. 1313] Nashville, that it was consigned to commission men to handle, and that the Commission men there found buyers; with respect to the present situation of your company, is all of the livestock sold to you prior to being shipped to Nashville?

A. Yes.

Q. And is any of it consigned to commission men in Nashville for handling?

A. None of it.

Q. There was some point made at the prior hearing of the fact that livestock must be promptly delivered under the 36 hour law. Do you know of any reason why delivery could not be made at your plant within the time limits prescribed by law?

A. No, none.

Q. And I observe that in the prior hearing one witness stated that 75 per cent of the livestock coming to Nashville is not consumed there, but is bought at Nashville by packers and reshipped from the stockyards to other destinations.

Have you any impression as to whether that condition is considerably changed since 1914 or 1915?

A. Yes, it has changed considerably. We are consuming a much larger percentage.

Q. That is, Neuhoff consumes a much larger percentage of the livestock bought at the Nashville yards?

A. Yes, and there are other packers there that also purchase livestock on the Nashville market.

[fol. 1314] Q. Incidentally, do you purchase, that is, your purchase on the Nashville market very substantial quantities of livestock that are sent there for sale?

A. Yes, we do. We do that. We buy on the Nashville stockyards every day that it is open.

Q. But that livestock bought on the Nashville stockyards is entirely apart and aside from anything involved in this case?

A. That is right.

Q. You are speaking here only of the livestock bought at other points, consigned to your plant at Nashville?

A. Direct, yes.

Q. Mr. Tompkins, will you please state what facilities you have at your plant for the unloading and placing of livestock in the pens?

A. Neuhoff present car unloading facilities accommodate the placement of two cars at a time. A spur track at these facilities was recently built at an expenditure of approximately $800. In addition to this, new yards were recently constructed, and were built to accommodate the unloading of livestock shipments. Providing for this service increased the expense of the new yards approximately $3,000. However, a larger number of cars can at any time be accommodated by the use of movable chutes, which can be placed at the car door and permit the unloading at points immediately adjacent to Neuhoff livestock pens. It would [fol. 1315] also be possible to unload livestock with such a chute from the terminal track of Adams Street to Neuhoff pens on the opposite side of Adams Street.

Q. And the pens to which you refer are pens for the holding of livestock immediately adjacent to your plant, pending the slaughter of the livestock?

A. That is correct.

Mr. Rynder: I believe that is all on direct.

Mr. Fort: I have no questions.

Cross examination

By Mr. Mohr:

Q. What is the volume of livestock received by Neuhoff during the peak season, per day, what would be the number of cars?

A. It would vary with the season and the specie. It extends fairly well around the year. It is pretty hard to place the maximum on it, but it would probably be four or five doubles.

Q. Four or five doubles?

A. Yes.

Q. That means that would be ten cars?

A. If you shipped them in singles.

Q. I was wondering if, from what you said, there would be sufficient track capacity at your plant to receive all of your livestock during the peak of the season.

A. I think so.

Q. Without any additional switching or coming back and forth to take care of it?

[fol. 1316] A. If you ship them in singles instead of doubles, why, you might; you would have to make more than one switch, yes.

Q. That would be additional switching.

A. Yes.

Mr. Mohr: That is all.

By Exam. Snider:

Q. Do you designate when you buy this livestock whether it will come in singles or doubles?

A. Hogs, calves and lambs are all ordered, you always order doubles, but I understand it is the railroad's privilege, if no doubles are available, to supply two singles.

Q. But you could handle the livestock in doubles?

A. Yes.

Q. If they do not come in doubles, it is not your fault, if you order in doubles.

A. That is right.

By Mr. Mohr:

Q. You have facilities for unloading double deck cars?

A. Yes.

Mr. Mohr: That is all.

Exam. Snider: Any further questions? If not, the witness is excused.

(Witness excused.)

GILBERT F. FORD was sworn and testified as follows:

Direct examination.

By Mr. Rynder:

Q. Please state your name and residence.

[fol. 1317] A. Gilbert F. Ford, Chicago, Illinois.

Q. And your business occupation?

A. I am in charge of the rate division of Swift and Company, general transportation department, and Neuhoff Packing Company is a wholly owned subsidiary of Swift and Company.

Q. And in that connection do you have the same familiarity with its rate problems, transportation problems, that you do with any of the other plants of the parent company or subsidiaries?

A. Yes.

Q. And have you visited Nashville and become familiar with the location of the tracks?

A. I have.

Q. And the facilities that we are talking about?

A. I have, a number of times. The last time was during this month.

Q. Will you please describe briefly the routes by which livestock comes into Nashville and in a general way the movements that are made in getting it to the stockyards or that will be made in getting it to the Neuhoff plant?

Mr. Rynder: Perhaps at this time, Mr. Examiner, before Mr. Ford goes into this explanation, it would be well to offer for identification certain exhibits. I presume that will be marked for identification Exhibit No. 1.

Exam. Snider: It will be marked for identification as Exhibit No. 1.

[fol. 1318] (Exhibit No. 1, Witness Ford, marked for identification.)

Mr. Rynder: The next is a similar map of the L. and N., which they were kind enough to give us, and I think our supply is the same number. I assume that will be marked Exhibit 2 for identification.

Exam. Snider: That will be marked Exhibit No. 2 for identification.

(Exhibit No. 2, Witness Ford, marked for identification.)

Mr. Rynder: Now, the next is a more detailed map of the Nashville terminal area. I assume that will be marked No. 3 for identification.

Exam. Snider: It will be so marked.

(Exhibit No. 3, Witness Ford, marked for identification.)

By Mr. Rynder:

Q. With the assistance or reference to the maps marked for identification Exhibits 1, 2 and 3, will you proceed to describe the terminal delivery practices in connection with livestock at Nashville?

A. Most of Neuhoff's livestock shipments are received over the L. and N. and originate in Official Trunk Line territory, Western Trunk Line. The small number of cars received from the southern part of the state of Kentucky and the northwestern part of Tennessee. This means that the livestock moving into Nashville over the L. and N. Railroad will enter Nashville from a northeasterly direc-

[fol. 1319] tion. In both instances, it is practice of the L. and N. Railroad to set off perishable and livestock freight at the Maplewood Station. At this point, the cars are picked up by switching crews of the Nashville terminal and perhaps I should say there that the Nash-

ville terminals are merely the terminal facilities of the two railroads, the L. and N., and the N. C. and St. L., and moved from Maplewood Station to the Cane Avenue yards, by the crews, which are the breakup yards.

The approximate distance from Maplewood to Cane Avenue yards is six miles. Cane Avenue cars move by the terminal lines to the Nashville Union Stockyards, a distance of approximately a mile and a half. On some occasions the L. and N. traffic moves to Radnor yard, which is shown on the L. and N. Railroad map, Exhibit No. 2. Radnor yard is the main breakup yard for the handling of north and southbound shipments. Cars which are set out at Radnor are picked up at that point by the Nashville terminal switch crews and moved into the Cane Avenue yards.

The distance from Radnor to the Cane Avenue yards is approximately 8 miles. From Cane Avenue cars are moved to the Nashville Union Stockyards, in the same manner as if they had been set out at Maplewood station.

Most of the livestock shipments received by the N.C. and St. L. originate in Official and Western Trunk Line ter- [fol. 1320] ritories. A small percentage in the western sections of Kentucky and Tennessee. This traffic enters Nashville from a westerly direction into the Cane Avenue yards, where the N.C. and S.L. trains are broken up for final delivery.

From this point deliveries are made to Nashville Union Stockyards in the same manner as the shipments previously described arriving by the L. and N. As stated the approximate distance from Cane Avenue yards to the Nashville Union Stockyards is one and a half miles. The approximate distance from the Nashville Union Stockyards on the Nashville Terminal tracks is one and a half miles. This would make a total distance of three miles from the Cane Avenue yards to the Neuhoff private siding. The stockyards are better shown on Exhibit 3.

Q. By reference to Exhibit 3, can you show the Examiner the approximate location that you have been describing?

A. Swift and Company location or the Neuhoff location, rather, is in the lower lefthand corner.

Mr. Mohr: You have the map upside down, do you not?

The Witness: Have I?

Mr. Mohr: The printing is upside down.

The Witness: Yes, I have it upside down. The Neuhoff location is in the upper righthand corner of Exhibit 3. You will note the Cumberland River runs along about the middle or a little above the middle of the exhibit, and the [fol. 1321] first street is Adams Street, the first street running practically parallel with the river.

In getting from these various yards, they switch around through the city over to the upper righthand corner of this exhibit, and then pull back into these sidings. The Neuhoff location is at Taylor and Adams streets. If you will note there Van Buren runs into the river, and the next extension of Van Buren continues up to the top of the page, and then the very next street is Taylor.

Now, the track of the Nashville terminal is laid in Adams Street, and if you will notice a switch takes off from the Nashville terminal tracks just before you reach Taylor Street, and runs into the block surrounded by Adams, Taylor, Monroe, and First Avenue. It is just a little short mark that runs into that corner.

Then as you go on further on this Nashville terminal track in Adams street, you find that there are two switches that run off from that track towards the river, and they are the ones that serve our plant. The packing house itself. The tracks previously mentioned are the ones that serve the livestock yards of Neuhoff Packing Company.

Mr. Mohr: Would you mind stating whether the Nashville stockyards are?

The Witness: The Nashville stockyards, instead of continuing on Adams Street, if you will look at the next [fol. 1322] street which is First Avenue, the tracks are laid in First Avenue and run on in the same direction that we have been coming from the switch point to across the large intersection, which is Jefferson Street, and then Jackson Street, and then the very next street is Whiteside Street, and that portion, or the stockyards are located in the portion of those two blocks, and we now take delivery into our trucks from chutes that face on Whiteside Street, between First, Second and Third Avenues.

By Mr. Rynder:

Q. Mr. Ford, with respect to the rates at which livestock moves in the south, will you please state the origin and any other facts about them?

A. The level of the livestock rates from points within the south to Nashville as well as those from the Western district to Nashville and other points in the south is that prescribed by the Commission, and livestock to and from the south, 253 ICC 241, decided August 11, 1942. The rates there prescribed were duly published by all of the carriers in Southern territory, including the defendants in this case, and are now applicable not only to Nashville, but also to all other points in the south, including those at which defendants and other southern carriers deliver carloads of livestock upon the private sidings of a packing plant.

This includes such points as Atlanta, Georgia, Knoxville, Tennessee, Memphis, Tennessee, Evansville, Indiana, [fol. 1323] Birmingham, Alabama, and others. That is to say, switching service to and in such as is requested in the present complaint is actually performed by the defendants and other carriers at numerous points in the south under precisely the same scale of livestock rates, and it cannot be said that the livestock rates are upon too low a level or are inadequate to permit of this switching service.

Q. The situation is that that uniform livestock scale applies interstate in the south, regardless of whether the livestock is placed at the plant or stockyards or whatnot.

A. That is right.

Q. Mr. Ford, do the railroads which are defendants in this case deliver to the Neuhoff Packing Company all kinds and classes of freight shipped to it for use at its plant?

A. Yes.

Mr. Rynder: Can that be marked for identification as Exhibit No. 4?

Exam. Snider: It will be so marked.

(Exhibit No. 4, Witness Ford, marked for identification.)

By Mr. Rynder:

Q. Mr. Ford, in Exhibit 4 for identification, have you shown a list of some of the inbound and outbound com-

modities that are commonly shipped to and from the Neuhoff plant and delivered on the private siding at its plant?

A. Yes. The last page of the exhibit shows a representa-
[fol. 1324] tive commodities inbound that are considered, you might say, supplies for the operation of the packing house. All of such shipments are delivered on our private siding at Nashville.

The right hand side of this page shows numerous commodities which are our finished products, and the destinations to which we ship such products. Such products are loaded on our private siding, and are switched to the carrers' lines for these destinations.

Q. May I ask this, Mr. Ford: The destination points on shipments from Nashville are not intended to be exhausted but rather illustrative, are they not?

A. Illustrative, and very limited as to the general territory they might ship to.

Q. Is that also true of the inbound shipments?

A. That is also true.

Q. As illustrative of inbound shipments of livestock, to the Neuhoff Packing Company at Nashville, did you obtain a limited number of livestock contracts for such shipments?

A. Yes.

Mr. Rynder: May the documents just distributed be marked Exhibit 5 for identification?

Exam. Snider: It will be so marked.

(Exhibit No. 5, Witness Ford, marked for identification.)

By Mr. Rynder:

[fol. 1325] Q. Are the documents that have been distributed and marked for identification Exhibit 5 true and correct copies of livestock contracts covering what they purport to show on their face?

A. They are.

Q. And were they obtained by you solely for the purpose of showing the method of billing direct livestock to Neuhoff at Nashville from various points?

A. Yes.

Q. They show, I believe, the Neuhoff Packing Company

at Nashville in each instance as the consignee of the shipment?

A. That is correct.

Q. Mr. Ford, what is shown on the first sheet of the document marked Exhibit 4?

A. That is an extract from a tariff of Agent Pope, Tariff No. 18 ICC 15, and covers the switching of livestock at Nashville, Tennessee. The right hand column is what we are particularly interested in, and that provides, following Note (A) that the Nashville Union Stockyards constitute the exclusive depot of the L. and N. Railroad and the N. C. and St. L. Railway for the receipt and delivery of livestock at Nashville, Tennessee, and then there are certain exceptions in connection with Note (B), and I might call to your attention Note 4 at the bottom, which is one of those exceptions to the individual of exclusive delivery through the Nashville stockyards.

No. 4 provides the delivery of dairy cattle and livestock [fol. 1326] of all kinds for breeding, show purposes, when receipt or delivery at the racetrack siding at the State Fair Grounds is requested.

Q. From that do you infer that there at the present time are at least two authorized deliveries in Nashville?

A. Yes.

Q. And what do you show on the second page of your exhibit?

A. That is the location of plants, packing plants in the south, and showing whether they are public yards or private yards, particularly, Atlanta, Georgia, Chattanooga, Tennessee, Jackson, Tennessee, Knoxville, Tennessee, Memphis, Tennessee, and North Birmingham, Alabama. They are all packing house points, and there are no public yards at Jackson, Tennessee, or North Birmingham, Alabama.

Q. And do the tariffs provide for delivery to the plants that you have mentioned?

A. Yes.

Q. Mr. Ford, on the fourth and fifth sheets of your Exhibit No. 4, will you undertake to show whether delivery of livestock direct to the side tracks or pens of packing companies is a more or less general practice throughout the United States?

A. Yes.

Q. And in what way have you attempted to show that?

A. I have attempted to show that, but have only used packing house points throughout the United States at which [fol. 1327] Swift and Company or its affiliates operate packing houses, and the list shown on these two pages is a complete list of all of the points at which we take delivery at our own packing houses, and not through the stockyards.

Q. These points are, I guess, practically all of them, off the lines of the defendants in this case.

A. Yes.

Q. And you put it in simply to show that there is a very general practice of delivering livestock to packing plants did you not?

A. That is right.

Mr. Rynder: Mr. Examiner, may I have the document I have just distributed marked for identification at Exhibit 6?

Exam. Snider: It will be so marked.

(Exhibit No. 6, Witness Ford, marked for identification.)

By Mr. Rynder:

Q. The figures shown on Exhibit 6 are of course self-explanatory, but what was your purpose in preparing it?

A. One of the principal reasons for preparing it was that we actually slaughter more livestock at the Neuhoff Packing Company than is received at the Nashville Union Stockyards?

Q. At various seasons?

A. At various seasons, indicating that their supply is not adequate for our needs.

[fol. 1328] Q. If you got everything that came there, you would not have enough?

A. That is correct.

Q. It indicates one reason who Neuhoff goes to other places to buy livestock, certain species and certain times of the year, is that right?

A. Yes.

Mr. Mohr: The information is shown in heads of livestock, so many heads?

The Witness: That is right.
Mr. Mohr: Not weight nor cars.
The Witness: That is right.

By Mr. Rynder:

Q. Mr. Ford, do you know whether written request was made of the defendants for delivery of livestock on the private side track of the Neuhoff Packing Company?
A. Such request has been made.

Mr. Rynder: I hand you a carbon copy of a letter, and I would like to call the attention of the defendants to the fact that this letter was written by our transportation man Mr. Stacey, at Nashville, whom we could not bring here today. I am therefore unable to have him personally identify it, but I will be glad to show it to you first, with the reply, to see if there is any objection.
Exam. Snider: Off the record.

(Discussion off the record.)

Exam. Snider: On the record.

[fol. 1329] Mr. Rynder: It is stipulated and agreed by and between complainant and defendants what written request for delivery of carload shipments of livestock upon its private side track at Nashville was made by Neuhoff Packing Company to the defendants, and said request was declined by said defendants in accordance with the provisions of their tariff.
Mr. Mohr: That is all right.
Mr. Fort: All right.
Mr. Rynder: That is all now.
Mr. Fort: I have no questions of Mr. Ford.
Mr. Mohr: I have no questions of Mr. Ford.
Exam. Snider: If there are no further questions, of this witness, he is excused.

(Witness excused.)

Exam. Snider: Is that the complainant's case?
Mr. Rynder: Except for the stipulation that I want to bring up.

Mr. Examiner, I offer in evidence the documents, Exhibits 1 to 6, inclusive.

Exam. Snider: They will be received.

(Exhibits 1 to 6, incl., Witness Ford, received in evidence.)

Exam. Snider: Is that complainant's case on direct?

Mr. Rynder: Except for a stipulation which I will now mention.

[fol. 1330] Mr. Examiner, in the preparation of this case, I requested counsel for the L. and N. and N.C. and St. L. to investigate and determine and advise me, if possible, with respect to deliveries of livestock, carloads of livestock, at plants at other points in the south, at which there were also livestock markets.

Counsel were kind enough to do that, and if it is agreeable to them, I should like to have those letters which I am sorry I do not have copies of, become a part of the record, by stipulation.

Mr. Mohr: It will be satisfactory to us to copy them in.

Mr. Fort: It is all right with us.

Exam. Snider: Could not those be reproduced and filed in the form of exhibits, that the truth of these things will be agreed to by the parties, or do you think it is better to have the letters copied into the record.

Mr. Rynder: If the Examiner is willing, I would prefer to have them become part of the record, just as if we had orally here stipulated to these facts.

Exam. Snider: It is easier to put them in by copying the letters, than it is to read each one and stipulate that fact?

Mr. Rynder: This gives exactly what the defendants have stipulated, and if they may go in as if I had read them, I will appreciate that.

Exam. Snider: It shall be done in that way.

[fol. 1331]

Louisville and Nashville Railroad Company

Law Department

Louisville 1, Kentucky

March 4, 1946
A-4121

Neuhoff Packing Co. v. L&NRR Co., et al.,

ICC Docket No. 29467

Mr. R. D. Rynder
Chicago, Ill.

Dear Mr. Rynder:

With further reference to your letter of the 21st ultimo regarding stipulation concerning certain facts which you desire to develop at the hearing of the above-styled case.

The investigation conducted disclosed that we deliver live stock to both the packing house plants and the public stock yards at Evansville, Ind., Knoxville, Tenn., and Atlanta, Ga.

At Birmingham there is no public stock yard and live stock consigned to Armour & Company and Alabama Packing Company is delivered by the Belt, a switching carrier located at that point.

At Lexington neither the Kentucky Independent Packing Company nor the Munns Packing Company has any facilities for unloading live stock; both take delivery at the public stock yards.

[fol. 1332] At Memphis, Tenn., live stock that we handle for delivery to the Dixie-National Stockyard and the packing house plant of Abram Bros. is handled through the chute and pens of the Leewood Stockyard, a private concern. On shipments destined to Memphis Packing Company and the South Memphis Public Stock Yards, delivery is made through the Frisco and the unloading for both concerns is performed at the stock yards which adjoin the Memphis Packing Company's plant.

We are willing to stipulate the foregoing facts. If you have information that is at variance with the foregoing

please let me know and I will give the matter further attention.

I assume that you have handled or will handle with the NC&St. L. the matter of stipulation covering shipments delivered by that carrier, particularly at points not reached by the L&N Railroad.

Yours very truly,

M. W. A. Northcutt,
General Solicitor.

June 3, 1946, fwg.

Neuhoff Packing Co. v. Louisville & Nashville RR Co. et al.

I.C.C. Docket 29467

Mr. Ross D. Rynder,
Law Department,
Swift & Company,
Union Stock Yards,
Chicago 9, Ill.

Dear Mr. Rynder:

With reference to your letters of April 16th and May 21st, I have now received the following advice from Mr. H. L. Hanes respecting the handling of livestock by the N.C. & ST. L. Ry., at Atlanta, Ga., and Chattanooga and Jackson, Tenn.:

"*At Atlanta, Ga.:* We deliver livestock cars for the packer (White Provision Co.) direct to their plant. Livestock for

this concern is not handled through the public (National) Stock Yards.

"*At Chattanooga, Tenn.:* The J. H. Allison Co., packing [fol. 1334] house does not have facilities for unloading livestock at the plant which is located on property adjoining the public stock yards—Foust-Yarnell Stock Yards—and cars containing livestock for the packing company are delivered direct to Foust-Yarnell Stock Yards from which point stock is driven to the packing house slaughter pens near by. The packing house has contract with the stock yards for unloading, feeding, watering, etc., livestock for immediate slaughter as well as that requiring feed and water.

"*At Jackson, Tenn.:* There is no public stock yard. The Jackson Packing Company is located on G.M. & O. R.R.'s tracks and it is our understanding livestock for this concern is placed on consignee's private or assigned siding."

We are willing to stipulate the above facts, and if you will prepare and forward to me an appropriate stipulation I shall be glad to execute and return it in order that you may offer it at the hearing which, I note, has now been set for July 15, 1946, at Nashville, Tenn.

With my kind regards,

Very truly yours,

Frank W. Gwathmey,
Special Counsel.

cc Mr. H. L. Hanes, Commerce Agent, Nashville, Chattanooga & St. Louis Railway, Nashville 2, Tenn.

[fol. 1335] Exam. Snider: Is that your case in chief, Mr. Rynder?

Mr. Rynder: Just a second.

The stipulation on behalf of the N.C. and St. L., to which I have just referred, says that the L. and N. delivers livestock to the plant of the White Provision Company at Atlanta. Our later investigation has indicated that the deliveries are also made at Atlanta to Armour and to the United Butchers Abattoir. If the correctness of that can

be checked within a reasonable time, so that you could advise us or the Commission, either that it is right or wrong, I would appreciate it.

Mr. Hanes: I can say now that it is right.

Mr. Rynder: It is right?

Mr. Hanes: Yes. We took those on our own tracks when we received this letter.

Mr. Rynder: Thank you. I believe that that concludes the direct case for the complainants.

Exam. Snider: We will take a five-minute recess.

(A short recess was taken.)

H. L. HANES was sworn and testified as follows:

Direct examination.

By Mr. Fort, Jr.:

Q. State your name.

A. H. L. Hanes.

Q. What is your position?

A. I am with the Nashville and Chattanooga, St. Louis [fol. 1336] Railway, Nashville, Tennessee.

Q. Will you outline briefly your experience?

A. I have been in the railroad business for more than 40 years.

Q. Proceed.

A. I have been in the Traffic Department practically all of that time. Before the other war, I was assistant freight agent of N. C. and St. L.

Mr. Rynder: We will concede his qualifications.

By Mr. Fort, Jr.:

Q. Are you familiar with the issues in this case?

A. Yes, sir.

Q. Will you give your testimony in your own way?

A. Mr. Examiner, I have three exhibits, and if it is satisfactory, I will identify these now.

Exam. Snider: They will be Exhibits 7, 8 and 9.

(Exhibits 7, 8 and 9, Witness Hanes marked for identification.)

The Witness: Switching within the terminal limits of Nashville, Tennessee, served by the Louisville and Nashville Railroad Company and the Nashville, Chattanooga and St. Louis Railway, is performed by the Nashville Terminals, which is a jointly owned facility of these two lines with Mr. J. P. Polk as Superintendent. Switching rates and service charges applicable within the switching limits of the Nashville Terminals are published in J. P. Polk, [fol. 1337] Agent's, Terminal Charge Tariff No. 19, I.C.C. No. 16, effective January 25, 1946. This tariff in addition to providing rates, rules and regulations contains a list of industries located in the terminals showing business in which each listed industry is engaged, location and track number on which situated, the latter being for information and convenience of employees particularly.

The Nashville Union Stock Yards, Neuhoff Packing Co. and Swift & Co. are served by the Nashville Terminals.

I offer for identification as Exhibit No. 7 a sketch of that portion of the Nashville Terminals in which are situated these three locations. The approximate distance from the junction with the main line tracks to the Nashville Union Stock Yards, Neuhoff Packing Co. and Swift & Co. by rail and from the stock yards to Swift & Co. and Neuhoff's by rail and by truck are as follows:

	From Junction with Main Line Tracks	From Union Stock Yards	
	Miles By Rail	Miles By Rail	By Truck
Union Stock Yards (Track location 174)	0.17		
Swift & Co. Shown on sketch as Neuhoff Packing Co. Stock Chute. (Track location 191)	1.56	1.39	0.69
Neuhoff Packing Co. (Track locations 192 and 192-A)	1.56	1.39	0.69

[fol. 1338] It will be observed from this sketch that in order to reach Swifts and Neuhoffs, engines traveling from the main line junction move along the First Avenue track past the stock yards (17/100 of a mile from the junction) to Hune Street, thence in a northerly direction about one-fifth of a mile to connection with a track crossing Burns Ave. and Van Buren Street, running southeast along Adams Street to the plants of Swift & Co. and Neuhoff Packing Co. The distance from the junction with the main line to Swifts, shown on the sketch as "Neuhoff Stock Chute" being 1.56 miles, the same as the packing company.

I now offer for identification as Exhibit No. 8 an extract (being Section 10) of an original contract dated March 11th, 1904, between the Louisville & Nashville Railroad Company and the Nashville, Chattanooga & St. Louis Railway and W. J. Cummins & Associates, purchasers of the property formerly belonging to the Union Stock Yards Company of Nashville.

It is shown in this exhibit that this contract was transferred and extended from time to time since March 11, 1904. The last extension, dated January 22, 1940, to the Nashville Union Stock Yards, Inc., extended the life of the contract until March 11, 1954, and that the L&N RR and NC&St. L. Ry. agreed that they will not lease or rent any of their grounds in the City of Nashville for the establishment of a stock yard or other stock yards in the City of Nashville and that they will establish no other stock depot in the City of [fol. 1339] Nashville and that they will deliver and cause to be delivered to the Nashville Union Stock Yards, all live stock shipped over their lines of road consigned to the City of Nashville, and agreeing to make the Nashville Union Stock Yards their stock depot for the City of Nashville, and unless compelled to do so by law they agreed not to deliver live stock at any other point or points in Nashville, but to deliver all live stock shipped to Nashville at the Nashville Union Stock Yards. (There is one exception by mutual agreement to this provision carried in Paragraph (b) of Item 55 of Agent Polk's I.C.C. No. 16 relating to movement of live stock, to and from the race track siding near the State Fair Grounds.)

At this place I want to call attention to the Commission's decision in Docket 8136 of June 22, 1916, Nashville Abattoir,

Hide & Melting Association, et al., v. L&N RR Co., et al., I & S Docket 715, Live Stock switching at Nashville, Tenn., 40 I.C.C. 134, and offer for identification Exhibit No. 9, which is a copy of Item 55 of Agent Polk's Terminal Charge Tariff No. 19, I.C.C. No. 16, providing that the Nashville Union Stock Yards constitute the exclusive depot of the L&N RR and NC & St.L. Ry., for the receipt and delivery of live stock at Nashville, except as provided in Paragraph (b).

This provision in Mr. Polk's tariff is issued in compliance with order of the Interstate Commerce Commission in Docket 8136, 40 I.C.C. 134, decided June 22, 1916, previously [fol. 1340] referred to and in conformity with Section 10 of contract shown in Exhibit No. 8.

Our records show that during 1945, the Neuhoff Packing Co., received 561 cars of live stock via rail at Nashville which were handled through the Nashville Union Stock Yards in accordance with contract and provisions of Agent Polk's tariff.

Our records also show that the NC & St.L. Ry. delivered direct to the Neuhoff Packing Company's tracks, locations 192 and 192-A, during the year, 1945, 56 carloads of various commodities other than live stock.

That is a statement of the situation as it is today, and we are simply telling you and the Commission what the situation is and leaving it up to the Commission to decide what shall be done with this complaint.

Mr. Fort: I ask that Exhibits 7, 8 and 9 be received in evidence.

Exam. Snider: Any objections?

Mr. Rynder: None.

Exam. Snider: They will be received.

(Exhibits 7, 8 and 9, Witness Hanes, received in evidence.)

Q. (Direct continued by Mr. Mohr) Is the stockyards the sole delivery point and receiving point for stock of both carriers at Nashville?

A. Yes, except as provided in that exception.

[fol. 1341] Q. Now, with respect to through traffic that is stopped off for feed, rest and water, where is that done?

A. That is done at the Union Stock Yards and at Radnor Yard.

Q. The same place?

A. Yes.

Mr. Mohr: That is all of the direct.

Cross examination

By Mr. Rynder:

Q. Just one question. Mr. Hanes, in the first part of your statement, you gave certain distances, I expect you have it before you.

A. Yes, sir.

Q. Would those distances be substantially the same if the shipment were dead freight?

A. Yes, sir.

Mr. Rynder: Thank you.

Exam. Snider: Is the Commission to understand the only reason you are not making deliveries at the Neuhoff Packing Company plant is because of this contract that you have with Mr. Cummins and his associates, with respect to making no deliveries at other stock yards?

The Witness: That is correct.

Exam. Snider: That is the only reason?

The Witness: That is the only reason.

Exam. Snider: The consideration for this contract is what?

Mr. Mohr: To take care of the railroad's needs. Under [fol. 1342] the law, the railroads are required to load and unload ordinary livestock, and in order to, that is, the livestock that they transport, to make delivery, to provide a place for loading and unloading, and to do that properly they had to have some kind of stock yard facilities, and to meet this obligation, the carriers made arrangements with the stock yards to do it for them. Not only to load and unload, but also to take care of those instances in which the carriers are required to stop in transit for loading, unloading, feed and rest.

Because of the necessity of taking care of the peak loads of the railroads' business, the stock yards felt that they ought to get all of the business and that is what caused that

arrangement to be made. They insisted on getting all of the business that is loaded and unloaded in Nashville, and the carriers acquiesced in that proportion. I have here, Mr. Examiner——

Mr. Rynder: Before you leave that, Mr. Mohr, perhaps we would agree as lawyers, the I.C.C. Act requires the unloading by the carrier only of the livestock delivered at public stock yards.

Mr. Mohr: That is right.

Mr. Rynder: And that you would not be under the obligation to deliver, that is, to unload livestock if it were placed at our Neuhoff plant.

Mr. Mohr: That is correct.

I have, Mr. Examiner, copies, complete copies of the [fol. 1343] contract referred to by the witness, dated November 11, 1904, which runs for ten years. That contract was supplemented later by a number of contracts which extended the life thereof, and changed the location of the stock yards and also the owners thereof.

If it is agreeable with Mr. Rynder, I can have these made part of the record. I only have an original and one carbon.

Exam. Snider: I presume you do construe in view of your delivery of race horses, that a finding by the Commission that such a practice is unreasonable would be enough to vitiate the contract as being unlawful. This has great import, greater import, than it seems to me on the face of the thing. The only reason you are not doing it is because you have a contract with some private individual that you would not do it.

Mr. Mohr: That is correct.

Exam. Snider: I am just thinking out loud, I do not know how we are coming out so far as the Commission's decision on the contract, if we should make one.

Anyway, we will see what we do about it after you offer the contract.

Mr. Mohr: That is correct.

Mr. Rynder: If I may suggest something, it is this, that [fol. 1344] if the railroad were required by an order of the Commission to do what the complainants seek, that would be requiring it by law to do a certain thing.

Exam. Snider: I think you are right.

Mr. Rynder: It would not even vitiate the contract.

Mr. Mohr: I was wondering if I should make them all one exhibit. I offer them as an exhibit. May I put in the record what they consist of? The original, that is, the contract marked 620-5 is a contract between the railroads and W. J. Cummins and Associates, the purchasers of the Union Stock Yards.

It is a contract about making the stockyards the railroads' depot, and under these subsequent contracts is still in effect.

The one marked 620-6 extends the other contract for a period of 20 years to March 11, 1924. The one marked 620-7, the Tennessee Packing Company and Stock Yards Corporation, which became the owners of the stock yards by this contract, became parties to and agreed to and to perform and abide by the terms and provisions of the original contract.

The contract marked 620-8 is where the Union Stock Yards is taken over by the successors, to the Tennessee Packing and Stock Yards Corporation.

The one marked 620-9 is a contract with the Union Stock Yards, the then present owner of the stock yards, and deals with the movement thereof to a new location at 1st and Jefferson Streets, and it provides that the terms and conditions of the contract then in effect will apply to the [fol. 1345] new yards.

6200-10 is a transfer from the Union Stock Yards to the Nashville Union Stock Yards Company, and the one marked 620-11 is the contract between the railroads and the Nashville Union Stock Yards extending it until March 11, 1954.

Exam. Snider: I do not think those are necessary unless you do, Mr. Rynder.

Mr. Mohr: They were all referred to by Mr. Hanes.

Exam. Snider: They are purely extensions, though, aren't they?

Mr. Mohr: As he indicated, they have some provisions in them that may be interesting to the Commission.

Exam. Snider: I have no objection.

Mr. Mohr: I should like to have them in there so there will be no question as to what they provide.

Mr. Examiner, we will ask that they be received in evidence.

Exam. Snider: Without objection, they will be received and marked 10 to 16, inclusive.

(Exhibits 10 to 16, inclusive, Witness Hanes. Marked for identification and received in evidence.)

The Witness: I want to call attention to Exhibit No. 8, which sets forth, in those exhibits there, except they go into detail.

Exam. Snider: Any other witnesses?

(Witness excused.)

Mr. Mohr: That is all for the defendants.

[fol. 1346] Exam. Snider: Is that the case?

Mr. Mohr: Yes.

Exam. Snider: Do you desire briefs in the case?

Mr. Rynder: I would like to, Mr. Examiner. There may be some interesting law points involved in this case, as well as the facts.

Exam. Snider: Briefs will be filed September 15. If there is nothing further, the hearings are closed.

(Thereupon, the hearing adjourned at 11.30 a.m., Tuesday, July 30, 1946.)

Received

TREASURY DEPARTMENT

WASHINGTON

May 11, 1936

PURSUANT to the provisions of Section 661, Chapter 17, Title 28 of the d States Code (Section 882 of the Revised Statutes of the United States), eby certify that the annexed is a true copy of a photostat of agreement Jersey City, New Jersey, January 15, 1892, between The Chicago Junction ays and Union Stock Yards Company, and Philip D. Armour and others, and n Morris and others, and Gustavus F. Swift and others,

in this Department.

IN WITNESS WHEREOF, I have hereunto set my hand, and caused the seal of the Treasury Department to be affixed, on the day and year first above written.

By direction of the Secretary of the Treasury:

F. A. Birgfeld

Chief Clerk, Treasury Department.

THE CHICAGO JUNCTION RAILWAYS AND UNION STOCK YARDS COMPANY,

AND

PHILIP D. ARMOUR AND OTHERS,

AND

NELSON MORRIS AND OTHERS,

AND

GUSTAVUS F. SWIFT AND OTHERS.

AGREEMENT,

Dated Jersey City, N. J., January 15, 1892.

1300

[fol. 1370] An Agreement, made and entered into at the City of Jersey City, State of New Jersey, this 15th day of January, A.D. one thousand eight hundred and ninety-two, by and between The Chicago Junction Railways and Union Stock Yards Company (hereinafter called the "New Jersey Company") as party of the first part, and Philip D. Armour, Jonathan O. Armour, Philip D. Armour, Junr., and George H. Webster, individually and as co-partners, composing the firm of Armour & Company; Nelson Morris, Frank E. Vogel and Edward Morris, individually and as co-partners, composing the firm of Nelson Morris & Company, and Gustavus F. Swift, Edwin C. Swift, Louis F. Swift and Edward F. Swift, all of the City of Chicago, State of Illinois, parties of the second part.

Whereas the party of the first part, The Chicago Junction Railways and Union Stock Yards Company, is a Corporation organized and existing under the laws of the State of New Jersey, United States of America, with an authorized capital stock of thirteen million dollars ($13,000,-[fol. 1371] 000) divided into sixty-five thousand shares of six per cent. preferred stock of the par value of one hundred dollars ($100) each, namely $6,500,000, and sixty-five thousand shares of common or general stock of the par value of one hundred dollars ($100) each, namely $6,500,000, and of which said capital stock shares amounting in the aggregate to over the sum of $12,400,000 have been duly issued and are now outstanding; and which said Company was formed and incorporated for the purpose, among other things, of purchasing and holding shares of the capital stock of the Union Stock Yard and Transit Company (hereinafter called the "Transit Company"); and

Whereas the said Transit Company was incorporated in the year 1865 under the laws of the State of Illinois, with power to locate, construct and maintain, at or in proximity to the City of Chicago, yards, inclosures, buildings, railway lines, &c., for the conduct or accommodation of the business of a General Union Stock Yard for cattle and live stock; and

Whereas the said Transit Company in or about the year 1865 constructed and has since maintained in said City of Chicago large yards and extensive buildings, plant and

railways necessary for the conduct of said stock yards business, which premises are owned by said Company, and represent the investment of its capital stock of $13,200,000 divided into 132,000 shares of the par value of $100 each; and

[fol. 1372] Whereas the said New Jersey Company purchased and acquired about 129,770 shares of said capital stock of said Transit Company, for which shares the said New Jersey Company paid the sum of over $22,000,000, partly in cash and partly in its bonds, which said bonds are part of a total issue of ten million dollars ($10,000,000), due July 1st, 1915, with interest at the rate of 5 per cent. per annum, payable semi-annually, and are secured by a deed of trust pledging as collateral security for their payment 120,000 of the shares of said Transit Company; and

Whereas the principal revenue and income of said Transit Company are derived from yardage charges on cattle and live stock, and from the sale of feed for such cattle and live stock, and which revenue and income from such yardage and charges have annually increased since the establishment of the stock yards of said Transit Company, and now amount to about the sum of $2,000,000 per annum; and

Whereas the market and demand for cattle and live stock at the yards of the Transit Company in the City of Chicago arise from and by reason of the presence of many large slaughtering, packing and canning plants and establishments on premises in the immediate neighborhood or contiguous to said stock yards, in the part of said city known as Packingtown, and the largest and the principal of such slaughtering, packing and canning plants and establish-
[fol. 1373] ments are owned or controlled by the parties of the second part hereto, whose purchases of cattle and live stock at said yards have for several years last past represented and constituted about fifty-five (55) per cent of the demand and market for cattle at the said yards; and

Whereas said co-partnership of Nelson Morris & Company are the owners and holders of all of the shares of the capital stock of the Fairbank Canning Company and said Gustavus F. Swift, Edwin C. Swift, Louis F. Swift and Edward F. Swift are the owners and holders of a majority of the shares of the capital stock of Swift and Company,

both of said corporations being organized under the laws of the State of Illinois; and

Whereas the said parties of the second part have purchased and acquired certain premises at Packingtown aforesaid, known as the "Central Stock Yards," near the yards of the said Transit Company, and have constructed and erected on said premises various platforms, pens, sheds, railway sidings &c., for the purpose of receiving and distributing among themselves any and all cattle and live stock owned or purchased by them outside of the City of Chicago, or directly consigned to them or either of them, and thereby avoiding the payment of any yardage charges to the said Transit Company and have demanded that the said Transit Company permit the use of their railway tracks for the transportation and delivery of such cattle and live stock to their said Central Stock Yards, and said Armour [fol. 1374] & Company, Swift and Company, and Nelson Morris & Company have recently commenced three several suits in equity in the Circuit Court of Cook County, State of Illinois, against the said Transit Company, claiming and demanding as relief that the said Court by order and decree compel the said Transit Company to afford facilities over its railways for the transportation and delivery of any and all cattle and live stock belonging or consigned to them or any of them or to said Central Stock Yards without the payment of the usual yardage charges thereon as heretofore paid by them and collected by said Transit Company; and

Whereas if such parties succeed in such litigation and discontinue purchasing live stock at such yards of the Transit Company to the extent of the capacity of said Central Stock Yards, the demand and market in Chicago for live stock would be diminished to the extent of over 500,000 cattle per annum, thus increasing *pro tanto* the demand and market in other States, viz., at Kansas City, at Omaha and elsewhere, to the great injury and diminution of the market at Chicago, and to the loss and damage of said Transit Company's income and yardage to the extent of over $100,000 per annum; and

Whereas the said New Jersey Company desires to secure and provide, for the use of the said Transit Company, prem-

[fol. 1375] ises located near the City of Chicago and suitable for the business of stock yards in case it shall hereafter become necessary to remove thereto the said yards of the Transit Company by reason or because of the growth of the City of Chicago or municipal ordinances or legislation or other causes; and

Whereas the said parties of the second part have caused to be purchased and now own at Tolleston, in the State of Indiana, and within about ten miles of the City of Chicago, a tract of land consisting of about four thousand acres which is believed to be the most suitable location within such distance for the purposes mentioned, and which they have acquired for the purpose and with the intention of removing their entire slaughtering, packing and canning plants and establishments from said Packingtown, in the City of Chicago, to the said premises at Tolleston, State of Indiana, and of inducing other slaughtering, packing and canning concerns to likewise remove their plants and establishments to said Tolleston property, and with the intention of locating and establishing in the State of Indiana, stock yards for the use of all parties locating on or in proximity to said premises, and have entered into negotiations and contracts with one or more railway companies to furnish the required facilities for the transportation to and from said property of cattle, live stock, &c.; and

Whereas the removal from the City of Chicago to Tolleston aforesaid of the businesses and slaughtering, packing [fol. 1376] and canning plants and establishments so owned or controlled by said parties of the second part and said Swift and Company and the Fairbank Canning Company would diminish the demand and market for cattle and live stock at Chicago, and shipments thereof to the yards of said Transit Company, so as to result in a large decrease of its business, revenue and income, and so as to remove from said City of Chicago, State of Illinois, into another State, about one-half of the present demand and market at Chicago for live stock, to the great injury generally of the City of Chicago, and particularly of the business of said Transit Company; and

Whereas the said parties of the second part have consented to compromise their claims and demands against the said Transit Company as set forth and alleged in said

three suits; also to transfer, surrender and convey to said Transit Company the said Central Stock Yards together with the railway sidings, platforms, pens, sheds, fixtures and appliances thereon, and to release and convey thereto all covenants or easements claimed and alleged in the said suits; also to continue for the period of fifteen years from the first day of July, 1891, to conduct their several businesses at Chicago as aforesaid, and to purchase cattle and live stock at said yards of the Transit Company, and pay yardage charges upon cattle and live stock purchased and owned by or consigned to them; also to transfer and convey [fol. 1377] to said New Jersey Company one thousand acres of said tract of land at Tolleston, in the State of Indiana, and also to further covenant and agree as hereinafter particularly set forth, upon the terms and for the considerations below stated:

Now this Agreement witnesseth that the parties hereto for and in consideration of the premises and of the covenants and agreements hereinafter set forth, have covenanted and agreed and do hereby covenant and agree to and with each other as follows:

First.—The said parties of the second part covenant and agree, upon demand of the said New Jersey Company, to cause to be conveyed to said Transit Company, all and singular the premises known as the Central Stock Yards, including any and all railway sidings, platforms, pens, sheds, fixtures and appliances whatsoever, together with all covenants, rights, privileges and easements thereunto in any way appertaining, and including the covenants, rights, privileges and easements mentioned, referred to or set forth in the bills of complaint in said suits so pending in the Circuit Court of Cook County, Illinois. Such conveyance of said premises to said Transit Company shall be for the sum or consideration of one dollar, lawful money of the United States of America, payable by said Transit Company, and shall be in fee simple free and clear of all liens and incumbrances whatsoever.

[fol. 1378] Second.—The said parties of the second part covenant and agree that they will cause each and all of the said suits to be discontinued and abandoned at their own proper cost and expense, and that they will not, nor

will any of them, at any time during the continuance of this agreement, make or set up against the said Transit Company the claims and demands alleged in the bills of complaint in said suits, nor directly or indirectly bring or cause to be brought any similar suits at law or in equity making or alleging any claims or demands similar to those set forth in said bills of complaint.

Third.—The said parties of the second part further covenant and agree to convey or cause to be conveyed unto the said New Jersey Company, its nominees or assigns, one thousand acres of said land at Tolleston in fee simple free from all liens or incumbrances whatsoever, such land being more particularly described as follows:

"A tract of land containing one thousand (1,000) acres more or less, situated in the County of Lake and State of Indiana, being a part of sections two (2) and three (3) in township thirty-six (36) north, range eight (8) west and a part of sections thirty-four (34) and thirty-five (35) in township thirty-seven (37) north, range eight (8) west, described as follows, to wit: Beginning at a point on the south line of said section three (3) nine hundred seventy-eight and five-tenths (978.5) feet east of the southwest corner of said section three (3), and running thence east along the south line of said section, a distance of forty-two hun-
[fol. 1379] dred eighty-three and one-tenth (4283.1) feet to the southeast corner of said section; thence north along the east line of said section three (3), seventeen hundred and eighty-eight (1788.0) feet; thence east 0° 56′ south (true bearing as governed by true meridian monumented at southwest corner of section four (4), township thirty-six (36) north, range (8) west seven hundred fifty-six and eight-tenths (756.8) feet; thence north 0° 56′ east (true bearing as governed by said true meridian) seventy hundred twenty-three and four-tenths (7023.4) feet to the shore of Lake Michigan; thence westwardly along said shore to a point north 0° 56′ east (true bearing as governed by said true meridian) from point of beginning; thence south 0° 56′ west (true bearing as governed by said true meridian) a distance of forty-one hundred twenty-six and four

tenths (4126.4) feet to the north line of said section three (3), thence westwardly along said north line eleven hundred and fifty-five (1155.0) feet to the northwest corner of said section three (3); thence southwardly along the west line of said section three (3), twelve hundred forty-eight and one-tenth (1248.1) feet to a stone monument marking the southeast corner of Lake Shore and Michigan Southern Railroad Company's land; thence eastwardly parallel to the north line of said section three (3), eleven hundred and ten (1110.0) feet to a point north 0° 56′ east (true bearing as governed by said true meridian) from point of beginning; thence south 0° 56′ west (true bearing as governed by said true meridian) thirty-six hundred fifty-one and two-tenths (3651.2) feet to point of beginning, excepting the right of way across said premises of the Lake Shore & Michigan Southern Railway Company and of the Baltimore & Ohio Railroad Company."

Fourth.—The parties of the second part further covenant and agree, that during the period of fifteen years from the [fol. 1380] first day of July, 1891, unless the Transit Company's yards are during that time removed from the City of Chicago, and in such event, then until such removal within said period, they and said Swift and Company and the Fairbank Canning Company shall and will continue their several businesses and slaughtering, packing or canning plants and establishments at Packingtown aforesaid and covenant, undertake and guarantee that any and all cattle and live stock slaughtered by them or any of them, or said companies or either of them, on their said premises or within two hundred miles of the City of Chicago, during such period, shall pass through and use said yards, and pay the usual yardage and charges therefor.

Fifth.—The said parties of the second part further covenant, undertake and guarantee that the said Transit Company shall receive and collect from its yardage and charges on cattle and live stock, owned or purchased by or consigned to said parties of the second part and said companies, at said yards, the aggregate sum of at least two million dollars ($2,000,000) within six years from said 1st of July, 1891. If, at the expiration of said six years, the said

yardage and charges on such cattle and live stock shall not have equalled the said sum of $2,000,000, then the said parties of the second part covenant and agree that they will immediately and on demand pay to the said New [fol. 1381] Jersey Company whatever sum may be necessary to make up the said $2,000,000.

Sixth.—The said parties of the second part further covenant and agree that during the term of fifteen years from the said 1st of July, 1891, they will not themselves use, or permit others to use, any portion of said remaining three thousand acres at Tolleston for slaughtering, canning or packing-house purposes, and that during said term no portion of said three thousand acres shall be sold or conveyed without there being inserted in the deeds or grants thereof a condition or restriction against the use of the premises for any such purposes during said term, unless the said New Jersey Company shall in writing expressly waive such condition in each and every instance. The said parties of the second part shall give, grant and convey to said New Jersey Company, its nominees, or assigns, any and all reasonable easements and connections over said remaining three thousand acres, in order to enable the said one thousand acres or any part thereof to be connected by road or railway with Lake Michigan or any railways, canals, roads or highways in the neighborhood of said one thousand acres, and the said New Jersey Company, its nominees or assigns, as owners of the said one thousand acres, shall likewise grant to the parties of the second part, their nominees or assigns, such easements and connections over the said one thousand acres as may [fol. 1382] be reasonably necessary to connect any part of the said three thousand acres with said one thousand acres or with Lake Michigan, or any railways, canals, roads or highways in the neighborhood.

Seventh.—The said parties of the second part further covenant and agree that during the term of fifteen years from the said 1st of July, 1891, they, and said Swift and Company and said Fairbank Canning Company will aid, assist and co-operate with said Transit Company and said New Jersey Company in all lawful ways in furthering and promoting the business and interests of said Transit Company, and likewise covenant and agree that during said

period they and said Swift and Company and said Fairbank Canning Company, will not, nor will any of them in said City of Chicago, or at any place within two hundred miles thereof, establish or carry on, directly or indirectly, or be concerned or interested in any manner or form whatsoever in any stock yards for the receipt and use of their own live stock.

Eighth.—The said parties of the second part further covenant and agree that as long as the said Transit Company shall conduct the business of a general stock yard for cattle and live stock at the City of Chicago, State of Illinois, on its premises aforesaid, or any part thereof, they and said Swift and Company and said Fairbank Canning Company will not, nor will any of them, within [fol. 1383] the limits of the City of Chicago, establish or carry on, directly or indirectly, or be concerned or interested in any manner or form whatsoever in any stock yards in said city for the receipt and use of their own live stock.

Ninth.—The said parties of the second part further covenant and agree that they will do or cause to be done, execute or cause to be executed, any and all such further acts, deeds and instruments as may be necessary for the more effectually carrying out this agreement according to its true intent and purpose and that may be reasonably advised or required by said New Jersey Company or its counsel. The covenants herein recited on the part of the parties of the second part are joint and several, and said parties and each of them jointly and severally, guarantee the due performance of all the obligations and conditions hereof by the other parties of the second part, and shall be jointly and severally responsible in damages to the said Transit Company or said New Jersey Company, their successors or assigns, for any and all breach or breaches thereof, by one or more of said parties of the second part.

Tenth.—The party of the first part hereto, said New Jersey Company, covenants and agrees to execute, issue and deliver to said parties of the second part three million dollars ($3,000,000) of income bonds, dated July 1st, 1891, [fol. 1384] and payable as to principal on or before the 1st day of July, 1907, with interest payable semi-annually on the first days of January and July of each year at such rate not exceeding five per cent. per annum as the net

surplus income of said company shall suffice to pay, as hereinafter provided, beginning from said 1st of July, 1891, the first semi-annual payment of interest to accrue as of the 1st day of January, 1892. The said income bonds shall, among other things, provide that the interest thereon shall accrue and be payable in each and every year only out of the net income of said New Jersey Company if sufficient, after paying its present fixed charges on its issue of $10,000,000 Collateral Trust Bonds, its current expenses, and the six per cent. cumulative dividends on $6,500,000 of its Preferred Stock, but before its common or general stock shall receive or be paid or entitled to any dividend. The interest on said income bonds shall be payable in each year only out of net income of such year as aforesaid, and shall not be cumulative; that is to say the income of one year shall not be used to provide for any previous deficiency nor to provide for any future payments. Said bonds, however, shall contain the provision that in each and every year the party of the first part shall, after paying out of its net income its said present fixed charges, current expenses and six per cent. dividend on said preferred stock, set aside semi-annually, beginning on the 1st [fol. 1385] day of July, 1892, the sum of $100,000 before any dividend is paid on or set aside for the common stock, provided the surplus net income of the Company shall be sufficient so to do; or if insufficient, then such amount of surplus net income, if any, as may have been collected or received; but this provision shall not be cumulative. The said sum of $100,000 semi-annually or such lesser sum as such surplus net income may represent shall be used and applied, if sufficient (first) to pay or provide interest for the current half year on such income bonds then outstanding; and (secondly) the balance, if any, of such sum shall be used for the purpose of redeeming the said income bonds at par, to be drawn by lot in the usual way, or, at the option of said New Jersey Company, instead of drawing the same by lot, such surplus may be used to purchase and cancel said bonds. The principal and interest on said income bonds shall be payable at the office or agency of the New Jersey Company in the City of New York, and the Central Trust Company of New York shall be the Trustee of said issue of bonds. The said income bonds

shall further provide that no new bonds ranking prior to or equal to said income bonds shall be issued by said party of the first part without the consent of the holders of seventy-five per cent. of the said income bonds then outstanding. The form and provisions of said income bonds shall be such as may be agreed upon by the counsel [fol. 1386] for the respective parties hereto, and such bonds shall be lithographed or engraved, executed and delivered with all convenient speed.

Eleventh.—The party of the first part shall have the right and option to deliver to said parties of the second part shares of its said common stock, at par, in lieu of any or all of said income bonds, less the coupons for interest past due at the time of making such delivery, which coupons shall be paid to the parties of the second part. Should such income bonds be delivered prior to the first day of May, 1892, then and in that event said New Jersey Company shall have the right and option, until such last mentioned date, to exchange any of its said common stock at par for any or all of said bonds with their coupons not then due.

Twelfth.—The parties of the second part covenant and agree that they will hold and not alienate, dispose of or transfer any of said income bonds, for the period of eighteen months from the date hereof, and will at all times during the period of five years from the date hereof, hold and own at least $1,000,000 of said bonds, and not alienate, dispose of or transfer said $1,000,000 of bonds during said term of five years. If, however, any shares of stock be delivered in lieu of or in exchange for bonds as aforesaid, then and in that event the said parties of the second part shall at all times during said term of five years, own and [fol. 1387] hold, and not alienate, dispose of or transfer $1,000,000 par value of such stock, if so much, be delivered in lieu of or in exchange for bonds, but if insufficient, then all shares of stock so delivered and sufficient bonds to make the total holding $1,000,000 par value in bonds and stock shall be held for said period of five years. If, however, more than $1,000,000 of stock be so delivered or exchanged, then and in that event, the parties of the second part shall be at liberty to sell and dispose of any surplus

of stock over $1,000,000 par value as and when they may desire so to do.

Thirteenth.—Should there be any delay in the execution and delivery of said income bonds for any cause whatsoever, any and all amounts due and payable on said income bonds, whether for interest or redemption purposes, shall in the meantime be deposited with the Central Trust Company of New York, to be held as Trustee under this agreement.

Fourteenth.—Any and all previous agreements heretofore executed and now existing between the parties hereto are hereby cancelled and annulled.

In witness whereof, the said party of the first part has, by resolution of its Board of Directors, duly caused these presents to be signed in its name by its Vice-President,

(Here follow 3 photos, fols. 1388, 1389, 1390)

EXHIBIT NO. 48

United States of America

TREASURY DEPARTMENT

WASHINGTON

May 11, 1936

PURSUANT to the provisions of Section 661, Chapter 17, Title 28 of the ited States Code (Section 882 of the Revised Statutes of the United States), hereby certify that the annexed is a true copy of a photostat of agreement ted, Jersey City, June 23, 1892, between The Chicago Junction Railways and ion Stock Yards Company and Henry Botsford and others, and The Chicago cking and Provision Company and others,

on file in this Department.

IN WITNESS WHEREOF, I have hereunto set my hand, and caused the seal of the Treasury Department to be affixed, on the day and year first above written.

By direction of the Secretary of the Treasury:

E. A. Birgfeld

Chief Clerk, Treasury Department.

[illegible]—TREASURY DEPARTMENT, Chief Clerk and Superintendent.

1888

12-20

THE CHICAGO JUNCTION RAILWAYS AND UNION STOCK YARDS COMPANY

AND

HENRY BOTSFORD AND OTHERS,

AND

THE CHICAGO PACKING AND PROVISION COMPANY AND OTHERS.

AGREEMENT.

Dated, Jersey City, June 23rd, 1892.

1390

[fol. 1391] An Agreement, made and entered into at the City of Jersey City, State of New Jersey, this 23d day of June, A. D. one thousand eight hundred and ninety-two, by and between The Chicago Junction Railways and Union Stock Yards Company, as party of the first part; Henry Botsford, Samuel W. Allerton, Charles P. Libby, John Cudahy, John C. Hately, William Jones, Josiah Stiles, Hugh Shields, William H. Silberhorn, Anderson Fowler, Robert Stobo, Thomas E. Wells, and Phineas L. Underwood and James Viles, Jr., individually and as co-partners composing the firm of Underwood & Co., as parties of the second part, and The Chicago Packing and Provision Company, The Allerton Packing Company, The Anglo-American Provision Company, The Thomas J. Lipton Company, The W. H. Silberhorn Company, Libby, McNeil & Libby (a corporation), The International Packing Company, T. E. Wells Company, John Cudahy Packing Company, Hately Brothers Company, and Jones-Stiles Packing Company, all being corporations duly organized and existing under the laws of the State of Illinois, as parties of the third part.

Whereas, the party of the first part, The Chicago Junction Railways and Union Stock Yards Company, is a cor-
[fol. 1392] poration duly organized and existing under the laws of the State of New Jersey, with an authorized capital stock of thirteen million dollars ($13,000,000), divided into sixty-five thousand shares of six per cent preferred stock of the par value of one hundred dollars ($100) each, namely: Six million five hundred thousand dollars ($6,500,000); and sixty-five thousand shares of common general stock of the par value of one hundred dollars ($100) each, namely: Six million five hundred thousand dollars ($6,500,000); and which said Company was formed and incorporated for the purpose, among other things, of investing its capital in the shares of the capital stock of the Union Stock Yard and Transit Company (hereinafter called the "Transit Company"), and of which capital stock said New Jersey Company now owns and holds over 127,000 shares; and

Whereas, the principal revenue and income of said Transit Company are derived from yardage on live stock

and feed charges; and the market and demand for live stock at the yards of the Transit Company, in the City of Chicago, arise from and by reason of the presence of slaughtering, packing and canning plants and establishments on premises in the immediate neighborhood or contiguous to said yards, and many of such slaughtering, packing and canning plants and establishments are owned, controlled or managed by the parties of the second and third [fol. 1393] parts hereto, and the yards of the Transit Company have been built and arranged largely to accommodate the livestock for such establishments; and

Whereas, the parties of the second and third parts are about to remove their said plants and establishments from their present location to certain premises known as the Stickney Tract (situated in and on sections sixteen to twenty-one and twenty-eight to thirty, all inclusive, in Township thirty-eight North Range thirteen East of third principal meridian, Cook County, Illinois), and to discontinue making their purchases of live stock at the yards and market of the Transit Company, which would tend to greatly diminish its business, but are willing to remain and continue their business at the Transit Company's yards in consideration of the payments hereinafter set forth.

Now this agreement witnesseth, that the parties hereto, for and in consideration of the premises, and of the covenants and agreements hereinafter set forth, have covenanted and agreed, and do hereby covenant and agree to and with each other as follows:

First.—The parties of the second and third parts, except the said Underwood and Viles, severally covenant and guarantee, each for himself or itself, that for and dur- [fol. 1394] ing the period of five years, from the first day of July, 1893, all live stock of every nature and kind slaughtered or packed by them, or any of them, respectively, at any place in or within seventy-five miles of the City of Chicago, shall be purchased by them at said yards of the Transit Company, or be there delivered to them, or shall pass through and use the yards of the said Transit Company, and that the usual yardage and charges shall be paid on all such live stock to the said Transit Company.

Second.—The parties of the third part and said Underwood and Viles jointly and severally undertake and

guarantee that the said Transit Company shall receive and collect from yardage and charges on live stock owned or purchased by, or consigned to the parties of the second and third parts hereto, or some of them, at said yards, the aggregate sum of at least five hundred thousand dollars ($500,000) within five years from the first day of July, 1892. If at the expiration of the said term of five years, the said yardage and charges paid to the Transit Company on such livestock shall not have equalled the said sum of five hundred thousand dollars ($500,000), then the said parties of the third part and said Underwood and Viles, jointly and severally, covenant and agree that they will forthwith, on demand, pay to the said New Jersey Company whatever deficit there may be between the actual yardage and charges collected by the Transit Company during such period on live stock owned or purchased by or con- [fol. 1395] signed to the parties of the second and third parts hereto, at said yards, and said guaranteed sum of five hundred thousand dollars ($500,000).

Third.—The parties of the third part and said Underwood & Company do severally covenant and guarantee, each for himself or itself, that they shall and will continue the business of their respective slaughtering, packing and canning plants and establishments upon the premises adjoining or contiguous to the yards of the Transit Company, for the said period of five years from July 1st, 1892.

Fourth.—The said parties of the second and third parts further severally covenant and agree, each for itself or himself, that so long as the said Transit Company shall conduct the business of a general stockyard for live stock, at the City of Chicago, on its premises aforesaid, or any part thereof, they will not, nor will any of them, within the present limits of the City of Chicago, establish or carry on, directly or indirectly, or be concerned or interested in, any manner or form whatsoever, in any stockyards within said City, for the receipt and use of live stock to be slaughtered or packed by them, or any of them, respectively, other than the yards of the Transit Company.

Fifth.—The said parties of the second and third parts [fol. 1396] further severally covenant and agree, that dur-

ing the term of five years, from the said first day of July, 1892, they will aid, assist and co-operate with said Transit Company and said New Jersey Company in all lawful ways in furthering and promoting the business and interests of said Transit Company.

Sixth.—The parties of the second and third parts severally covenant and agree that they will not nor will any of them, at any time during the period of ten years from the first day of July, 1892, unless the Transit Company's yards are during that time removed from the City of Chicago, and in such event, then until such removal within said period, establish or carry on, directly or indirectly, or be concerned or interested in any manner or form whatsoever in any plants or establishments for slaughtering, packing or canning purposes that may be situated or erected on or within three miles of the premises known as the Stickney Tract, situated as aforesaid.

Seventh.—The parties of the second and third parts further jointly and severally covenant and agree to remise, release and discharge, and by these presents do remise, release and forever discharge the said Transit Company and said party of the first part of and from all and all manner of action and actions, cause and causes of actions, suits, debts, dues, sums of money, accounts, contracts, [fol. 1397] controversies, agreements, trespasses, discriminations, damages, claims and demands whatsoever in law or in equity which against them or either of them the parties of the second and third parts, or any of them, ever had, or now have for, upon or by reason of any matter, cause or thing whatsoever to the day of the date of these presents.

Eighth.—The parties of the second and third parts further severally covenant and agree that they will do, or cause to be done, execute or cause to be executed, any and all such further acts, deeds and instruments as may be necessary for the more effectually carrying out this agreement according to its true intent and purpose, and that may be reasonably advised or required by said party of the first part, its successors or assigns, or its or their counsel.

Ninth.—The party of the first part hereto covenants and agrees, in consideration of the foregoing, to pay to

said Henry Botsford, of the second part hereto, as Trustee, for the account, benefit and advantage of the parties of the second and third parts, on or before the first day of August, 1892, the sum of one hundred thousand dollars ($100,000), in cash.

Tenth.—The party of the first part further covenants and agrees to deposit, or cause to be deposited, on or before the first day of August, 1892, with the American [fol. 1398] Trust and Savings Bank, of the City of Chicago, three hundred thousand dollars ($300,000), in five per cent income bonds at par (with coupons maturing on and after January 1st, 1893), of the issue particularly described in a certain agreement dated January 15th, 1892, between said party of the first part and Philip D. Armour *et al.* or of any issue of five per cent income bonds ranking equal to said income bonds. Such income bonds are to be held by the said American Trust and Savings Bank for the period of one year from July 1st, 1892, when one-half thereof, namely, one hundred and fifty thousand dollars ($150,000) shall be delivered upon the order of said Henry Botsford, as Trustee, for the account, benefit and advantage of the parties of the second and third parts, or in case of his death, refusal or inability to act upon the order of said Charles P. Libby, of the second part hereto, for said account, and the remaining one-half shall be held by said Trust and Savings Bank for the further term of one year from July 1st, 1893, and on the expiration thereof, namely, on or after July 1st, 1894, shall be delivered to or upon the order of said Henry Botsford, Trustee, or his said successor as aforesaid, for the like account, benefit and advantage. The party of the first shall have the privilege of delivering temporary printed income bonds to be held by the said American Trust and Savings Bank until the delivery in lieu thereof and exchange therefor of

engraved bonds, which shall be engraved, executed and delivered with all convenient speed.

ELEVENTH.—The said American Trust and Savings Bank executes these presents (one of the triplicate originals being deposited with it) as evidence of its receipt of six temporary income bonds each for $50,000 and of its acceptance of the deposit herein provided for, and it agrees and covenants on its part with the party of the first part and the other parties hereto, to hold and retain said income bonds so to be deposited with it for and during the periods above mentioned and to deliver the same as provided in Article Tenth hereof, and not otherwise.

IN WITNESS WHEREOF, each of the parties of the first and third parts have duly caused these presents to be executed in its name by its President (or Vice-President), and its corporate seal to be affixed and attested by its Secretary by order of its Board of Directors, and the parties of the second part have affixed hereto their hands and seals (all as of the date aforesaid) in triplicate.

Elton E Rice
Notary Public

[fol. 1408] STATE OF ILLINOIS,
Cook County, ss.:

To the Honorable, the Judges of the Circuit Court of Cook County:

In Chancery Sitting.

Your orator, Swift and Company, a corporation organized and doing business under the laws of the State of Illinois, of the County of Cook and State of Illinois, respectfully represents unto your Honor that the Union Stock Yard and Transit Company of Chicago is a corporation incorporated by special act of the General Assembly of the State of Illinois, approved and in force February 13th, 1865, with power, among other things, to locate, construct and maintain upon certain lands in convenient proximity to the southern limits of the City of Chicago necessary yards, structures and buildings for the accommodation of the business of a general Union Stock Yards for cattle and live stock, and also with power to construct a railway with one or more tracks as may be expedient from the grounds selected for the said yards so as to connect outside of the City of Chicago the same with the tracks of all the railroads which terminate in said City of Chicago within certain limits, as defined by the terms of said Act; and also with power and authority to locate and from time to time renovate, change, alter, construct and reconstruct said railroad and railroad tracks and [fol. 1409] side tracks and conveniences, and with the further power to transport and allow to be transported thereon with steam or other power, between said railroads and cattle yards, cattle and live stock and persons accompanying the same, and all freight and property of every kind as well as stock and cattle, and also with power to fix and establish, take and receive such rates of toll for all freight and property so transported between said railroads as the directors of said Union Stock Yard and Transit Company may from time to time establish.

Your orator further shows that said Union Stock Yard and Transit Company under its said charter also had power and authority to receive, take and hold all such voluntary grants and donations of land and real estate as might be made to said company for the purposes aforesaid, and all

lands and easements necessary for its right of way, and for the purpose of effectuating the said grant said corporation had conferred upon it by said charter the right and power of acquiring all lands necessary for such right of way under the power of eminent domain, and especially in the manner provided for in "an Act to amend a law condemning the right of way for the purposes of internal improvement"; approved June 22, A.D. 1852, and Acts amendatory thereof. And your orator charges the fact to be that the corporators named in said Act proceeded to organize said corporation by the election of a Board of Directors and other proper officers, and from and after said date until the present time [fol. 1410] has been and is a corporation duly organized, and exercising the powers of railroad corporations, and is a common carrier of freight of all kinds and character under and in pursuance of the powers conferred upon it by said special charter.

Your orator further represents unto your Honors that in the carrying out of the objects and purposes for which said corporation was organized it became the owner of the East Half of Section Five and the East Twenty-five acres of the North-east Quarter of the North-west Quarter of Section Five in Township Thirty-eight, North, Range Fourteen, East of the Third Principal Meridian in said Cook County, and located thereon its yards and pens for stock yard purposes and constructed its lines of railroad connecting said East Half of Section Five with all of the lines of railroad terminating in the City of Chicago so that at the present time the said Union Stock Yard and Transit Company is the owner of and operating by itself or by others one hundred and thirty miles of railroad track specially connecting the said East Half of Section Five with the main line of the Chicago, Burlington & Quincy Railroad Company, the Chicago, Milwaukee & St. Paul Railway Company, the Atchison, Topeka & Santa Fe Railroad Company, the Chicago & Alton Railroad Company, the Chicago & Northwestern Railway Company, the Chicago, Rock Island & Pacific Railroad Company, the Wisconsin Central Railroad Company and other [fol. 1411] railway companies, and is operating its said railway to such an extent that during the year 1889 it handled thereon or thereover 1,076,551 freight cars, being more than 25 per cent. of all the freight cars handled at Chicago

by all the railroads centering in said city as is represented and published by said Union Stock Yard and Transit Company.

Your orator further represents unto your Honors that at the time the said Union Stock Yard and Transit Company established its yards as aforesaid on the east half of said Section Five, and the East Twenty-five acres of the North-east Quarter of the Northwest Quarter of Section Five John F. Tracy, Martin L. Sykes, Jr., and Henry H. Porter were the owners in fee of a large part of the South half and the West Fifteen acres of the North-east Quarter of the North-west Quarter of said Section Five; that said premises last described were then vacant and unoccupied and immediately adjoined on the west the said lands in Section Five hereinbefore described as belonging to the Union Stock Yard and Transit Company; that for the purpose of inducing the establishment of manufacturing and slaughtering establishments on said premises the said Porter, Sykes and Tracy subdivided the said premises into blocks and streets and alleys and recorded the plat of said subdivision in the Recorder's office of Cook County as a private subdivision called Packer's Addition to Chicago, reserving the fee of the streets and alleys in said subdivision to themselves for the [fol. 1412] benefit of the owners and occupants of the blocks in said subdivision and for the construction of railroad tracks which would connect said property with the railway tracks of the said Union Stock Yard and Transit Company, and thereby with the railroad tracks of other railroad companies with which said Union Stock Yard and Transit Company's tracks might be connected.

Your orator further represents that at the period aforesaid Henry H. Walker, Briggs Swift, James D. Lehmer and Nathan Powell were the owners in fee of the South-west Quarter of said Section Five immediately adjoining on the south the lands of said Porter, Sykes and Tracy and immediate-adjoining on the west the lands of said Union Stock Yard and Transit Company, and for the purpose of obtaining the benefit of any contracts existing between the said Porter, Sykes and Tracy and the Union Stock Yard and Transit Company and of railroad connections and facilities aforesaid which attached to the said lands of said Porter, Sykes and Tracy, the said Henry H. Walker, Briggs Swift,

James D. Lehmer and Nathan Powell as parties of the second part, on the 5th day of March, 1869 entered into a contract with the said John F. Tracy, Martin L. Sykes and Henry H. Porter as parties of the first part, by which contract it was agreed as follows:

"That whereas the said Tracy, Sykes and Porter are the owners of a large part of the South Half and the West fifteen acres of the North-east Quarter of the North-west quarter of Section Five, Town Thirty-eight, North Range Fourteen, East and by virtue of such ownership, and by [fol. 1413] contract with the owners of the residue of the said premises, are fully and lawfully authorized to make the contract herein contained.

And Whereas, the said Henry H. Walker, Briggs Swift, James D. Lehmer and Nathan Powell are the owners of the South-west Quarter of Section Five in the same township and range, which said last mentioned tract adjoins the said first mentioned tract on the south:

And Whereas, said parties of the second part are desirous to secure for their said tract of land certain rights of ingress and egress, and the use of certain streets and alleys and railroad track now laid out, or which may be hereafter constructed over the said land of the parties of the first part, and the said parties of the first and second parts have for that purpose agreed with each other as follows:

Parties of first part, in consideration of $12,000 and of the right to use in common with the parties of the first part and their assigns, the thirty foot alley to be constructed between the Blocks Five and Six and the lands of the parties of the second part, do hereby grant, sell and convey to said parties of the second part, their heirs and assigns as an appurtenance to the said south-west quarter of Section Five and passing with the same, the right to use for the purpose of ingress and egress to and from the said last named quarter section the street marked "private street" and the alleys marked "private alleys" and the private street [fol. 1414] or way marked "railroad track" on the plat of Packer's Addition in Book 166 of Maps, page 187, filed for record in the office of the Recorder of Deeds for Cook County, Illinois, on July 1st, 1868. Said parties of the first

part agree to build so much of said railroad track in said Addition as is now platted but not yet built, and to lay out and construct half of the alley thirty feet in width on the south line of Blocks Five and Six in said Addition, being the same alley, the use whereof is heretofore made a part of the consideration paid by said second party; parties of the first part also grant, sell and convey to parties of the second part the use for purposes of ingress and egress to and from said last named quarter section, the railroad track now built on the west and part of the south sides of said lands, being the same track now used by Nelson Morris.

It is further understood that the object of the said purchase by the parties of the second part of the rights and privileges hereinbefore mentioned is to procure a connection for their said premises by railroad tracks and streets with the Union Stock Yards' track and the street running east and west north of the Union Stock Yards' track and south of Egan Ave., and as other railroad tracks and streets connecting the same may be built by the party of the first part; that this agreement covers the right for said parties of the second part without further payment to parties of the [fol. 1415] first part, or their assigns, to make connections with the same whenever the said streets or railroad tracks may be extended by parties of the first part to the north line of said lands of said parties of the second part with the right of passage over such streets and railroad tracks in the same manner as this agreement as hereinbefore expressed, now gives them the same rights on all streets, railroad tracks and alleys now built. But nevertheless reserving to parties of the first part the right themselves to use, and the right to grant to any other person or persons, in their discretion, in common with parties of the second part and their assigns, the use of said private streets, alleys and railroad tracks and to both of the said parties hereto the right to grant to any other person or persons, in their discretion, owning any portion of the said premises hereinabove described, a like privilege in common with the said parties of the first and second parts to use said private streets, alleys and railroad tracks, and provided further it is the intent and purpose of this agreement in good faith to give to parties of the second part without further payment to parties of the first part or their assigns, the right to

connect with and use any such streets, alleys or railroads which the said parties of the first part might thereafter construct through their said premises to the lands of said parties of the second part."

[fol. 1416] Your orator further represents unto your Honors that afterwards and on the 26th day of November, 1875, the said Union Stock Yard and Transit Company desiring to obtain further privileges for railroad tracks in said North-west quarter of Section Five belonging to Porter, Sykes and Tracy, as aforesaid, than it then enjoyed, and to secure the control and operation of the railroad tracks therein, made, entered into and executed a certain contract and deed with the said Porter, Sykes and Tracy, in and by which the said Porter, Sykes and Tracy, parties of the first part, conveyed to said Union Stock Yard and Transit Company, parties of the second part, (which deed was dated November 26th, 1875), and recorded February 11th, 1876, in Book 563, page 142 of Cook County Records), certain lands and premises in said deed described and being a part of the North-west quarter of Section Five aforesaid, subject to certain conditions and covenants to be observed, kept and maintained by said Union Stock Yard and Transit Company. Among other covenants in said deed assumed by said Union Stock Yard and Transit Company were the following: "The said parties of the first part made and concluded an agreement in writing bearing date March 5th, 1869, (being the contract hereinbefore referred to), with one Henry H. Walker and others giving to them certain rights of passage over the private streets and alleys on the premises of the first party hereinbefore described, to which [fol. 1417] agreement reference is hereby made for more certainty herein. It is expressly understood and agreed by and between the parties hereto, in consideration as aforesaid, that this agreement in all its parts, is made subject to such legal rights and interests in said premises as the aforesaid agreement made with said Walker and others shall confer upon the parties thereto, and which shall be held to be in force by virtue thereof, and binding upon the parties of the first part hereto on the day of the execution and delivery hereof. The said second party for and in consideration of the covenants and agreements herein contained on the part of second party to be performed, and in considera-

tion of one dollar, covenants and agrees to and with said first party as follows:

"That it will during its corporate existence maintain and operate and permit other persons and corporations to operate in the same manner and under the same conditions as the same are now operated, the railroad tracks across the east twenty-five acres of the said North-east Quarter of the North-west Quarter of said Section Five hereinbefore more particularly described as the same are now constructed and located, so as to at all times give the railroad tracks now and hereafter to be laid on the premises of first party as hereinbefore described good and sufficient railroad connections with the other tracks of said second party upon the premises herein first above conveyed and with its other [fol. 1418] tracks connecting with the general railroad tracks in use in said Cook County.

"The said second party further covenants and agrees that it will at all times during its corporate existence maintain the said railroad tracks in good condition for all the business that may be required to be done over them at its own proper charge and cost, that it will permit at all times during the continuance of this agreement to first parties, or either of them, and to any or all persons or corporations to whom said parties and their grantor have heretofore, or to whom they may hereafter convey, whether by lease or fee, any portion of the premises hereinbefore particularly described, free access to and free use of all or any of the tracks heretofore or that may hereafter be laid upon any of such premises (not for standing, but for the passage of cars and wagons) for the transportation of any lawful business for which such parties, persons or corporations require such use.

"It is expressly understood and agreed by and between the parties hereto that the several conveyances, covenants and agreements herein contained on the part of each of the parties hereto to be performed, shall extend to, bind and are for the benefit of as well the parties hereto as the successors of the second party, and the assigns of second party, and the assigns or grantees of first party, or their predecessors whether now owning or occupying any portion [fol. 1419] of the premises hereinbefore described, or who shall hereafter become owners or occupants of any portion

of said premises, whether mediately or immediately from said first party."

"That the right of access to said railroad tracks, and the rights to the use of such tracks as hereinbefore stated for all business purposes shall be and remain an appurtenance to each and every lot and block, and to all the said premises hereinbefore described, and that all said covenants and agreements shall be taken and held to be covenants running with the land to all persons or corporations now owning or who may become owners thereof in any manner whatsoever."

Your orator further represents unto your Honors that afterwards and on or about the 12th day of October, A. D. 1878, the said Union Stock Yard and Transit Company, desiring to secure certain additional rights of way and privileges across the South-west quarter of said Section Five for its said railway, entered into an agreement in writing, recorded in the Recorder's Office of Cook County, Illinois, in Book 848, page 154, with James D. Lehmer who was then the owner thereof, by which the said James D. Lehmer conveyed to the said Union Stock Yard and Transit Company certain lands and premises in said deed described, and being a portion of said South-west quarter of Section Five, and upon which portion of land so conveyed the said Union Stock Yard and Transit Company has constructed [fol. 1420] and is now operating a portion of its said railway, in and by which contract it was expressly covenanted that said right of way should be subject to the right of use in common with and by the other owners and occupants of property in said subdivision, said James D. Lehmer, and others now or hereafter entitled thereto under him or otherwise, of all streets and alleys including railroad streets, right of way and tracks laid down on the map or plat of said subdivision. And the said Union Stock Yard and Transit Company in said agreement specially covenanted and agreed with said James D. Lehmer, his heirs and assigns, to extend a double track, when required so to do by him or them, along said right of way thereby conveyed and also between Blocks Eleven and Twelve in Lehmer's subdivision of a portion of said South-west Quarter of Section Five to 47th Street; also that the owners and occupants of property in said South-west Quarter of Section

Five should severally and at all times have the right to make railway connections for business purposes with any track or tracks owned or operated by said company, which should include the right to have switches at every half block on each side of such track or tracks as said company might own or operate upon or over said land.

Your orator further represents unto your Honors that afterwards and on the 13th day of September, A. D. 1889, the said Union Stock Yard and Transit Company, desiring to obtain certain further rights of way and privileges for [fol. 1421] its railway in and upon said South-west Quarter of Section Five, made a further contract and agreement in writing, recorded in the Recorder's Office of Cook County, Illinois, in Book No. 2714 at page 247, with James D. Lehmer, who was then the owner of said above described property in and by which the said James D. Lehmer conveyed to the said Union Stock Yard and Transit Company certain premises in said deed described to be used only for the purposes of railway tracks and right of way, and upon the express covenants and agreements that said right of way should be used by said Union Stock Yard and Transit Company in common with and by the other owners and occupants of property in said South-west Quarter of Section Five, said James D. Lehmer and others now or hereafter entitled thereto under him or otherwise, and subject to the rights of the owners and occupants of property in said South-west quarter of said Section Five and others now or hereafter entitled thereto under said James D. Lehmer or otherwise, to make railroad connections for business purposes with any track or tracks situated on either of said tracts of land in said deed conveyed, and owned or operated by the said Union Stock Yard and Transit Company, which should also include the right of said owners and occupants to have a switch at every block on each side of the track or tracks owned and operated over said premises by said Union Stock Yard and Transit Company, and also the right of use in common with and by the owners and occupants of property in said Lehmer's [fol. 1422] subdivision now or hereafter entitled thereto, of all streets and alleys including the railroad streets, right of way and tracks laid down on the map or plat of the subdivision of said land.

Your orator further represents unto your Honors that

because of the inducements held out by the owners of the West half of Section Five aforesaid, by reason of the establishments of railroad tracks and connections and convenient access thereby to all the railroads centering in the City of Chicago and because of the promises and covenants contained in said contracts as aforesaid, between the said owners of the said west half of Section Five and the Union Stock Yard and Transit Company as aforesaid, your orator, as well as others, was induced to locate its business on the west half of said Section Five; that in the course of its business it has constructed a large number of valuable buildings for the purpose of slaughtering and preparing for market cattle, sheep and hogs and for the several industries connected therewith. That in the construction of said buildings and the machinery and appurtenances connected therewith it has expended more than three millions of dollars. That all of said buildings so constructed have been connected by railroad tracks and switches with the main and other tracks of the Union Stock Yard and Transit Company in accordance with said agreements, and the said Union Stock Yard and Transit Company without objection, since the establishment of said business to the present time has [fol. 1423] received from and delivered to your orator at its several buildings, slaughtering houses and places of business loaded and empty cars, freights and property necessary to the successful prosecution of its said business.

Your orator further states that it received and slaughtered in the prosecution of its business at said Union Stock Yards at its several slaughtering houses built on the West Half of Section Five aforesaid, during the year 1890, more than 700,000 head of cattle, more than 650,000 sheep and nearly 600,000 head of hogs.

Your orator further represents that up to the present time all of the live stock required by it in the carrying on of its business that has been purchased by your orator at other points than Chicago, has been received by it in the yards of the Union Stock Yard and Transit Company, for the reason that your orator had no other convenient place at which to receive such live stock, and the several railroad companies bringing such live stock to your orator had provided no convenient yard or place for the delivery thereof

other than in the yards of the Union Stock Yard and Transit Company.

Your orator further avers that Armour & Co. and Nelson Morris & Co., copartnerships, doing business in said City of Chicago, are engaged in similar business to your orator and have slaughtering and packing establishments located near your orator's on the west half of Section Five aforesaid, and that your orator in connection with said Armour & Co. and Nelson Morris & Co. for the purpose of pro- [fol. 1424] viding a suitable place for the receipt and delivery of their own live stock which might be purchased by them at points outside of the City of Chicago, purchased from said James D. Lehmer at a large expenditure of money the following described real estate, to wit: all that part of the North-west Quarter of the South-west Quarter of Section Five in Township Thirty-eight, North, Range Fourteen East of the Third Principal Meridian in the County of Cook and State of Illinois, bounded and described as follows, to-wit:

Commencing at a point thirty (30) feet South and three hundred sixty-eight and one-third (368⅓) feet West of the North-east corner of the North-west quarter of said Section Five (5), thence South parallel with the East line of said tract six hundred and three-tenths (600 3/10) feet, thence West parallel with the North line of said tract two hundred sixty-two and four tenths (262 4/10) feet, thence North parallel with the East line of said tract six hundred and three-tenths (600 3/10) feet, thence East parallel with the North line of said tract two hundred sixty-two and four-tenths (262 4/10) feet to the place of beginning, being a part of the real estate described in the contracts hereinbefore recited; together with and subject to the right of use in common with and by the other owners and occupants of property in said North-west quarter of the South-west quarter of Section Five (5) aforesaid, said James D. Lehmer and any others now or hereafter entitled thereto under him or otherwise, of all streets and alleys which may here- [fol. 1425] after be laid out through said north-west quarter of the South-west quarter of Section Five (5), including railroad streets.

Also, with the right of use in common with the parties aforesaid, the Union Stock Yard and Transit Company

and any others entitled thereto of any right or rights of way and other rights and privileges, which may attach to the land aforesaid or which the said James D. Lehmer may have in common with others under a certain deed between John F. Tracy and others of the one part and said James D. Lehmer and others of the other part, dated March 5, 1889 and recorded in the Recorder's office of said Cook County on March 30, 1869 in Book 508, page 69; together with all the rights and privileges to make railroad connections for business purposes with the railroad tracks of the Union Stock Yard and Transit Company and all other privileges, so far as they may appertain to said premises, reserved by the said James D. Lehmer in his certain deed conveying to the Union Stock Yard and Transit Company of Chicago, certain premises in the South-west quarter of Section Five (5) aforesaid, dated September 13, 1889, and recorded in the Recorder's office of said Cook County on September 13th, 1889, in Book 2714, page 247, and that the said premises have been conveyed by the said James D. Lehmer and wife by means conveyences to Albert H. Veeder and Edward J. Martyn as trustees for your orator and the said Armour & Co. and Nelson Morris & Co. for their joint use.

[fol. 1426] Your orator further states that said premises last described are a portion of the North-west Quarter of the South-west Quarter of said Section Five and are a part of the premises entitled to the privileges reserved by the contracts between Porter, Sykes and Tracy and Lehmer, Walker, Swift and Powell and between Porter, Sykes and Tracy and the Union Stock Yard and Transit Company and the two contracts between James D. Lehmer and the Union Stock Yard and Transit Company, all of which have been hereinbefore set out and referred to.

Your orator further represents that the said premises are immediately south of and adjacent to Forty-third Street and north of and adjacent to Forty-fourth Street; that the main tracks of the Union Stock Yard and Transit Company pass these premises on both the north and the south sides thereof, and that at the time of the purchase of the said premises by Veeder and Martyn in trust as aforesaid, the same were connected by suitable frogs and switches with both of said named tracks of the Union

Stock Yard and Transit Company and were so connected by the Union Stock Yard and Transit Company for the said James D. Lehmer in accordance with the contracts and agreements hereinbefore set out.

Your orator further states that the said premises have been converted by it, in conjuction with the said Armour & Co. and Morris & Co. into cattle yards and pens, with suitable and convenient unloading tracks and chutes and are connected as aforesaid with the main tracks of the Union [fol. 1427] Stock Yard and Transit Company and are as convenient to the Union Stock Yard and Transit Company in all respects for the delivery and unloading of cars of live stock as are the premises of the Union Stock Yard and Transit Company located on the East Half of Section Five as aforesaid.

And your orator states that it has connected the said premises by means of a viaduct with its slaughtering establishment and that the said premises are more convenient for it in the receipt of its live stock than are the premises of the Union Stock Yard and Transit Company. That your orator is able to prosecute its slaughtering and packing business with greater convenience and economy if its live stock purchased at points outside of the City of Chicago are delivered to it on said premises, than if they are delivered in the yards of the Union Stock Yard and Transit Company, and your orator says that it has no other yard or place belonging to it or under its control where its live stock necessary to the successful prosecution of its business can be delivered.

Your orator further states unto your Honors that for convenience in making consignments of live stock to said premises it has designated said premises "The Central Stock Yards, located at the corner of Justine and 43rd Streets," and the same are designed for the sole and exclusive use of the owners thereof, to wit: your orator, Armour & Co. and Nelson Morris & Co. for the receipt of [fol. 1428] their own cattle bought by them at points outside of Chicago and transported to said premises for the purpose of being slaughtered at their said slaughtering and packing establishments.

Your orator further represents that ever since the establishments of the various industries aforesaid of your orator

on the west half of said Section Five and for many years last past the various railroad companies entering the City of Chicago and connecting with said Union Stock Yard and Transit Company's railway have received from and delivered to your orator at its said various establishments freight of all kinds and descriptions except live stock, in cars without breaking bulk over the tracks of the Union Stock Yard and Transit Company and the switches connecting the same with the private tracks of your orator, the Union Stock Yard and Transit Company preferring that the several railroads should thus deliver their freight over their tracks, instead of themselves furnishing the motive power therefor, and to such an extent that during the year 1890 more than fifteen thousand cars of freight were received by your orator at said place of business or shipped therefrom by your orator over the tracks of the Union Stock Yard and Transit Company and the various railroads connecting therewith; that the Union Stock Yard and Transit Company has not provided itself with motive power and has never undertaken to furnish motive power for the transportation of such freight. And your orator states that all the live stock which it has slaughtered at its [fol. 1429] said establishments has up to the present time been delivered to it in the yards of the Union Stock Yard and Transit Company for the reason that your orator has not, up to the time of the commission of the grievances hereinafter stated any other suitable or convenient place for the receipt of such live stock, and because the several railroad companies bringing such live stock into the City of Chicago had provided no suitable or convenient place for unloading or delivering the same to your orator.

Your orator further represents unto your Honors that from and after the construction of said yards and pens of your orator known and designated as the Central Stock Yards it was the duty of the said Union Stock Yard and Transit Company under the contracts hereinbefore recited and referred to, and under the statutes in such case made and provided, as well as under its special charter, to receive all freights consigned to your orator at said Central yards at the point of connection with any and all railroads with the tracks of said Union Stock Yard and Transit Company leading to and connecting the premises of your orator with

the main or other tracks of said connecting railroad companies, or to permit said other railroad companies to use the tracks of said Union Stock Yard and Transit Company for the delivery of such freight so consigned to your orator. Yet your orator charges the fact to be that notwithstanding the covenants of said Union Stock Yard and Transit Company hereinbefore recited and its duty to your orator there- [fol. 1430] under, as well as its duty under its charter and the law affecting railroad corporations and common carriers, it has wrongfully refused and continues to refuse to receive from any and all railroads making such connections any and all shipments of live stock or live freight consigned to your orator for delivery at said Central yards, to the great damage and injury of your orator.

Your orator further states unto your Honors that on the 25th day of April, 1891, at Kansas City, in the State of Missouri, your orator delivered to the Hannibal & St. Joseph Railroad Company to be transported by the said Hannibal & St. Joseph Railroad Company and its connection, the Chicago, Burlington & Quincy Railroad Company, and to be delivered to your orator on its said premises described as the Central Stock Yards, corner of Justine and 43rd Streets in the City of Chicago, six cars containing 98 cattle, being cars numbered C. B. & Q 8107, C. B. & Q. 8279, C. B. & Q. 4336, C. B. & Q. 12883, H. & St. Joe. 3156 and S. L. 392; that said cars of cattle were transported by said Railroad Companies from said Kansas City in the State of Missouri to the Junction of the said Chicago, Burlington & Quincy Railroad Company with the railway tracks of said Union Stock Yard and Transit Company, in said Cook County; that at said junction of said railway tracks the parties in charge of said cars were met by the officers and servants of the Union Stock Yard and Transit Company, and were forbidden to move said cars [fol. 1431] onto the tracks of said Union Stock Yard and Transit Company, and the said Union Stock Yard and Transit Company refused to permit the said Chicago, Burlington and Quincy Railroad Company to enter upon the tracks of said Union Stock Yard and Transit Company or to pass over the same, or to use the same for the delivery of such freight so consigned as aforesaid to

your orator upon its premises known as the Central Stock Yards.

Your orator further represents unto your Honors that in the prosecution of its business upon its said premises large shipments of cattle and other live stock purchased outside of the City of Chicago and also at points beyond the State of Illinois are being consigned to your orator for delivery upon said premises known as the Central Stock Yards. That your orator is the owner of a large number of cattle at different points upon the lines of railroads leading to the City of Chicago and connecting with said tracks of said Union Stock Yard and Transit Company which your orator intends to have conveyed and transported to it and delivered upon said premises, but your orator charges that said Union Stock Yard and Transit Company wrongfully and wilfully refuses to receive any of said cattle or other live stock consigned to your orator to be delivered upon said premises as aforesaid, or to permit the same to be transported over its said tracks connecting with said premises, and has given notice to all connecting railroad companies that it will not hereafter receive any live stock con- [fol. 1432] signed to any yards owned by your orator in Chicago, and that the stock so consigned will not be permitted to be hauled over the tracks of said company; and further charges that such stock cannot be delivered to your orator upon its said premises, by any railway line or lines other than those controlled and operated by the said Union Stock Yard and Transit Company.

Your orator avers that it is ready and willing to pay all reasonable and lawful charges for the transportation of said freight or for its delivery to your orator upon its said premises, but as your orator is informed and believes the said Union Stock Yard and Transit Company has given out and notified all connecting railroads that no freight so consigned will be allowed to pass over its said tracks or be delivered to your orator upon its said premises, nor can any delivery be made of such freight except as heretofore made upon and through the premises and yards of the said Union Stock Yards and Transit Company, said last named company insisting that it has the legal right to force or compel your orator to cause all shipments of live stock so consigned to your orator for delivery upon its said premises to be de-

livered at the yards or upon the premises of the said Union Stock Yard and Transit Company, and also claims the right to make and compel the payment of so-called yardage charges for all live stock so owned by or consigned to your orator for delivery upon its said premises, of 25 [fol. 1433] cents per head for cattle, 6 cents per head for sheep, 8 cents per head for hogs and 15 cents per head for calves, which said charge is made as a charge in favor of said Union Stock Yard and Transit Company and in addition to the freights charged for the transportation of said live stock.

Your orator further shows unto your Honors as before stated, that there are no tracks over which deliveries can be made to its said premises, of cattle purchased outside the City of Chicago and consigned to your orator at its said place of business, except the tracks of the said Union Stock Yard and Transit Company; that unless the cattle so purchased outside the City of Chicago can be shipped to your orator over the said tracks of the Union Stock Yard and Transit Company and delivered to your orator at its said Central Yards, its business will be irreparably injured; that there is no basis upon which the damages resulting to your orator from the acts and doings of said Union Stock Yard and Transit Company above recited, can be estimated, and that your orator's legal remedies in the premises are wholly inadequate.

[for. 1434] Forasmuch therefore as your orator is without remedy in the premises, except in a court of equity where such matters are properly cognizable and relievable, and to the end that the said Union Stock Yard and Transit Company of Chicago, which is made party defendant to this bill of complaint, may be required to make full and direct answer to the same (but not under oath, its answer under oath being hereby expressly waived), and that the said defendant, the Union Stock Yard and Transit Company of Chicago may be restrained by the order of this Honorable Court from interfering with any railroad or transportation company having made connections with the tracks of said Union Stock Yard and Transit Company as hereinbefore charged that desires to deliver live stock to your orator upon the premises above described, and known as the Cen-

tral Stock Yards, and from refusing to permit the use of its tracks or tracks to any railroad company so desiring or attempting to deliver live stock to your orator at its said yards, and from refusing to permit the use of its railway tracks to any such railway company for the purpose of delivering live stock to your orator at said Central Stock Yards, and that the said Union Stock Yard and Transit Company may be compelled by order of this Honorable Court, to receive from any connecting railroad company desiring to make such delivery, cars of live stock consigned to your orator at said Central Stock Yards, and to transport the same over its railway tracks to such Central Stock Yards, or in default thereof that it be compelled [fol. 1435] to permit the use of its said railway tracks to any connecting railroad over which to transport cars of live stock consigned to your orator at such Central Stock Yards from such connecting road, and that your orator may have such other, further and different relief as to your Honors may seem meet.

May it please your Honors to grant the writ of summons in Chancery directed to the Sheriff of the County of Cook and State of Illinois, commanding him that he summon the defendant, the Union Stock Yard and Transit Company of Chicago to be and appear before said court on the first day of the next term thereof, to be held at the Court House in the city of Chicago, County of Cook aforesaid, then and there to answer this bill, etc.

And may it please your Honors to grant unto your orator the People's Writ of Injunction to be directed to the said defendant, the Union Stock Yard and Transit Company of Chicago, restraining and commanding it, its agents, employes and attorneys, in manner and form as aforesaid.

And your orator will ever pray, etc.

Swift and Company, by G. F. Swift, Pres.

Albert H. Veeder, Campbell & Custer, Walker & Eddy, Solicitors and of Counsel.

[fol. 1436] STATE OF ILLINOIS,
Cook County, ss:

G. F. Swift, being first duly sworn on oath says that he is the President of Swift and Company, the complainant in the above and foregoing bill of complaint; that he has read the foregoing bill of complaint and knows the contents thereof and that the matters and things therein contained are true of his own knowledge, except as to those matters therein stated to be on information and belief, and as to them he believes it to be true.

Affiant further says that he believes that serious and irreparable damage will result to the business of said Swift and Company unless an injunction is speedily granted herein as prayed for in said bill.

G. F. Swift.

[fol. 1437] [Endorsed:] 90859. Circuit Court. 4418. Swift and Company vs. The Union Stock Yards and Transit Company of Chicago. Bill. Filed Apr. 30, 1891. 1-1. Henry Best, Clerk. Ret. for —. Albert H. Veeder, Campbell & Custer, E. Walker, Solicitors for Complt.

[fol. 1438] STATE OF ILLINOIS,
County of Cook, ss:

I, John E. Conroy, Clerk of the Circuit Court of Cook County, and the keeper of records and files ther-of, in the State aforesaid, do hereby certify the above and foregoing to be a true, perfectly and complete copy of a certain Bill filed in this office on the 30th Day of April 1891 in a certain cause lately pending in said Court, on the Chancery side thereof, between Swift & Company, Complainant, and Union Stock Yard & Transit Co., Defendant.

In witness whereof, I have hereunto set my hand and affixed the Seal of said Court, at Chicago, in said County, this 13th day of June 1938.

John E. Conroy, Clerk.

[fol. 1439] [Endorsed:] 90861. Circuit Court. 4420. Nelson Morris & Co. vs. The Union Stock Yard and Transit

Company. Bill, 4420. Apr. 30, 1891. Henry Best. Albert H. Veeder, Campbell & Custer, E. Walker, Solrs. for Complts.

[fol. 1440] STATE OF ILLINOIS,
County of Cook, ss:

To the Honorable, the Judges of the Circuit Court of Cook County.

In Chancery Sitting.

Your orators, Nelson Morris, Edward Morris and Frank E. Vogel composing the firm of Nelson Morris & Co. of the County of Cook and State of Illinois, respectfully represent unto your Honors that the Union Stock Yard and Transit Company of Chicago is a corporation incorporated by special act of the General Assembly of the State of Illinois, approved and in force February 13th, 1865, with power, among other things to locate, construct and maintain upon certain lands in convenient proximity to the southern limits of the City of Chicago necessary yards, structures and buildings for the accommodation of the business of a general Union Stock Yards for cattle and live stock, and also with power to construct a railway with one or more tracks as may be expedient from the grounds selected for the said yards so as to connect, outside of the City of Chicago, the same with the tracks of all the railroads which terminate in said City of Chicago within cetrain limits, as defined by the terms of said Act; and also with power and authority to locate and from time to time renovate, change, [fol. 1441] alter, construct and reconstruct said railroad and railroad tracks and side tracks and conveniences, and with the further power to transport and allow to be transported thereon with steam or other power between said railroads and cattle yards, cattle and live stock and persons accompanying the same, and all freight and property of every kind as well as stock and cattle, and also with power to fix and establish, take and receive such rates of toll for all freight and property so transported between said railroads as the directors of said Union Stock Yard and Transit Company may from time to time establish.

Your orators further show that said Union Stock Yard and Transit Company under its said charter also had power

and authority to receive, take and hold all such voluntary grants and donations of land and real estate as might be made to said company for the purposes aforesaid, and all lands and easements necessary for its right of way, and for the purpose of effectuating the said grant said corporation had conferred upon it by said charter the right and power of acquiring all lands necessary for such right of way under the power of eminent domain, and especially in the manner provided for in "an Act to amend a law condemning the right of way for the purposes of internal improvement"; approved June 22, A. D. 1852, and Acts amendatory thereof. And your orators charge the fact to be that the corporators named in said Act proceeded to organize said [fol. 1442] corporation by the election of a Board of Directors and other proper officers, and from and after said date until the present time has been and is a corporation duly organized and exercising the powers of railroad corporations, and is a common carrier of freight of all kinds and character under and in pursuance of the powers conferred upon it by said special charter.

Your orators further represent unto your Honors that in the carrying out of the objects and purposes for which said corporation was organized it became the owner of the east half of Section Five and the east twenty-five acres of the North East Quarter of the North West Quarter of Section Five in Township Thirty-eight, North, Range Fourteen, East of the Third Principal Meridian in said Cook County, and located thereon its yards and pens for stock yard purposes and constructed its lines of railroad connecting said east half of Section Five with all of the lines of railroad terminating in the City of Chicago so that at the present time the said Union Stock Yard and Transit Company is the owner of and operating by itself or by others one hundred and thirty miles of railroad track especially connecting the said east half of Section Five with the main line of the Chicago, Burlington & Quincy Railroad Company, the Chicago, Milwaukee & St. Paul Railway Company, the Atchison, Topeka and Santa Fe Railroad Company, the Chicago & Alton Railroad Company, the Chicago & Northwestern Railway Company, the Chicago, [fol. 1443] Rock Island & Pacific Railroad Company, the

Wisconsin Central Railroad Company, and other Railway Companies, and is operating its said railroad to such an extent that during the year 1889 it handled thereon or thereover 1,076,551 freight cars, being more than 25 per cent of all the freight cars handled at Chicago by all the railroads centering in said city as is represented and published by said Union Stock Yard and Transit Company.

Your orators further represent unto your Honors that at the time the said Union Stock Yard and Transit Company established its yards as aforesaid on the east half of said Section Five and the east twenty-five acres of the North East Quarter of the North West Quarter of Section Five John F. Tracy, Martyn L. Sykes Jr. and Henry H. Porter were the owners in fee of a large part of the South half and the West fifteen acres of the North East Quarter of the North West Quarter of said Section Five; that said premises last described were then vacant and unoccupied and immediately adjoined on the west the said lands in Section Five hereinbefore described as belonging to the Union Stock Yard and Transit Company; that for the purpose of inducing the establishment of manufacturing and slaughtering establishments on said premises the said Porter, Sykes and Tracy subdivided the said premises into blocks and streets and alleys and recorded the plat of said subdivision in the Recorder's office of Cook County [fol. 1444] as a private subdivision, called Packer's Addition to Chicago, reserving the fee of the streets and alleys in said subdivision to themselves for the benefit of the owners and occupants of the blocks in said subdivision and for the construction of railroad tracks which would connect said property with the railway tracks of the said Union Stock Yard and Transit Company, and thereby with the railroad tracks of other railroad companies with which said Union Stock Yard and Transit Company's tracks might be connected.

Your orators further represent that at the period aforesaid Henry H. Walker, Briggs Swift, James D. Lehmer and Nathan Powell were the owners in fee of the South West quarter of said Section Five immediately adjoining on the south the lands of said Porter, Sykes and Tracy and immediately adjoining on the west the lands of said Union

Stock Yard and Transit Company, and for the purpose of obtaining the benefit of any contracts existing between the said Porter, Sykes and Tracy and the Union Stock Yard and Transit Company and of railroad connections and facilities as aforesaid which attached to the said lands of said Porter, Sykes and Tracy, the said Henry H. Walker, Briggs Swift, James D. Lehmer and Nathan Powell as parties of the second part, on the 5th day of March, 1869 entered into a contract with the said John F. Tracy, Martin L. Sykes and Henry H. Porter as parties of the first part by which contract it was agreed as follows: "That whereas the said Tracy, Sykes and Porter are the owners of a large [fol. 1445] part of the South half, and the West fifteen acres of the North East quarter of the North West quarter of Section Five, Town Thirty-eight North, Range Fourteen East and by virtue of such ownership, and by contract with the owners of the residue of the said premises, are fully and lawfully authorized to make the contract herein contained.

And Whereas, the said Henry H. Walker, Briggs Swift, James D. Lehmer and Nathan Powell are the owners of the South West quarter of Section Five in the same township and range, which said last mentioned tract adjoins the said first mentioned tract on the south:

And Whereas, said parties of the second part are desirous to secure for their said tract of land certain rights of ingress and egress, and the use of certain streets and alleys and railroad track now laid out, or which may be hereafter constructed over the said land of the parties of the first part, and the said parties of the first part and second parts have for that purpose agreed with each other as follows:

Parties of first part, in consideration of $12,000 and of the right to use in common with the parties of the first part and their assigns, the thirty foot alley to be constructed between the Blocks Five and Six and the lands of the parties of the second part, do hereby grant, sell and convey to said parties of the second part, their heirs and assigns as an appurtenance to the said south west quarter of Section Five and passing with the same, the right to use for the purpose of ingress and egress to and from said last named quarter section the street marked [fol. 1446] "private street" and the alleys marked "pri-

vate alleys" and the private street or way marked "railroad track" on the plat of Packer's Addition in Book 166 of Maps, page 187, filed for record in the office of the Recorder of Deeds for Cook County, Illinois, on July 1st, 1868. Said parties of the first part agree to build so much of said railroad track in said Addition as is now platted but not yet built, and to lay out and construct half of the alley thirty feet in width on the south line of Blocks Five and Six in said Addition, being the same alley, the use whereof is heretofore made a part of the consideration paid by said second party; parties of the first part also grant, sell and convey to parties of the second part the use for purposes of ingress and egress to and from said last named quarter section, the railroad track now built on the west and part of the south sides of said lands, being the same track now used by Nelson Morris.

It is further understood that the object of the said purchase by the parties of the second part of the rights and privileges hereinbefore mentioned is to procure a connection for their said premises by railroad tracks and streets with the Union Stock Yards' track and the street running east and west north of the Union Stock Yards' track and south of Egan Ave., and as other railroad tracks and streets connecting the same may be built by the party of the first part; that this agreement covers the right for said parties of the second part without further pay-
[fol. 1447] ment to parties of the first part, or their assigns, to make connections with the same whenever the said streets or railroad tracks may be extended by parties of the first part to the north line of said lands of said parties of the second part with the right of passage over such streets and railroad tracks in the same manner as this agreement, as hereinbefore expressed, now gives them rights on all streets, railroad tracks and alleys now built. But nevertheless reserving to parties of the first part the right themselves to use, and the right to grant to any other person or persons, in their discretion, in common with parties of the second part and their assigns, the use of said private streets, alleys and railroad tracks and to both of the said parties hereto the right to grant to any other person or persons, in their discretion, owning any portion of the said premises hereinabove described, a

like privilege in common with the said parties of the first and second parts to use said private streets, alleys and railroad tracks, and provided further it is the intent and purpose of this agreement in good faith to give to parties of the second part without further payment to parties of the first part or their assigns, the right to connect with and use any such streets, alleys or railroads which the said parties of the first part might thereafter construct through their said premises to the lands of said parties of the second part."

Your orators further represent unto your Honors that afterwards and on the 26th day of November, 1875 the said Union Stock Yard and Transit Company desiring to obtain further privileges for railroad tracks in said North West quarter of Section Five belonging to Porter, Sykes [fol. 1448] and Tracy, as aforesaid, than it then enjoyed, and to secure the control and operation of the railroad tracks therein, made, entered into and executed a certain contract and deed with the said Porter, Sykes and Tracy, in and by which the said Porter, Sykes and Tracy, parties of the first part, conveyed to said Union Stock Yard and Transit Company, party of the second part (which deed was dated November 26th, 1875 and recorded February 11th, 1876, in Book 563, page 142 of Cook County Records) certain lands and premises in said deed described and being a part of the North West quarter of Section Five aforesaid, subject to certain conditions and covenants to be observed, kept and maintained by said Union Stock Yard and Transit Company. Among other covenants in said deed assumed by said Union Stock Yard and Transit Company were the following: "The said parties of the first part made and concluded an agreement in writing bearing date March 5th, 1869, (being the contract hereinbefore referred to) with one Henry H. Walker and others, giving to them certain rights of passage over the private streets and alleys on the premises of the first party hereinbefore described, to which agreement reference is hereby made for more certainty herein. It is expressly understood and agreed by and between the parties hereto, in consideration as aforesaid, that this agreement in all its parts, is made subject to such legal rights and interests in said premises as the aforesaid agreement

[fol. 1449] made with said Walker and others shall confer upon the parties thereto, and which shall be held to be in force by virtue thereof, and binding upon the parties of the first part hereto on the day of the execution and delivery hereof. The said second party for and in consideration of the covenants and agreements herein contained on the part of second party to be performed, and in consideration of one dollar, covenants and agrees to and with said first party as follows:

That it will during its corporate existence maintain and operate and permit other persons and corporations to operate in the same manner and under the same conditions as the same are now operated the railroad tracks across the East twenty-five acres of the said North East quarter of the North West quarter of said Section five hereinbefore more particularly described as the same are now constructed and located, so as to at all times give the railroad tracks now and hereafter to be laid on the premises of first party as hereinbefore described good and sufficient railroad connections with the other tracks of said second party upon the premises herein first above conveyed and with its other tracks connecting with the general railroad tracks in use in said Cook County.

The said second party further covenants and agrees that it will at all times during its corporate existence maintain [fol. 1450] the said railroad tracks in good condition for all the business that may be required to be done over them at its own proper charge and cost, that it will permit at all times during the continuance of this agreement to first parties, or either of them, and to any or all persons or corporations to whom said parties and their grantor have heretofore, or to whom they may hereafter convey, whether by lease or fee, any portion of the premises hereinbefore particularly described, free access to and free use of all or any of the tracks heretofore or that may hereafter be laid upon any of such premises (not for standing but for the passage of cars and wagons) for the transportation of any lawful business, for which such parties, persons or corporations require such use.

It is expressly understood and agreed by and between the parties hereto that the several conveyances, covenants

and agreements herein contained on the part of each of the parties hereto to be performed, shall extend to, bind and are for the benefit of as well the parties hereto as the successors of the second party, and the assigns of second party and the assigns or grantees of first party, of their predecessors whether now owning of occupying any portion of the premises hereinbefore described, or who shall hereafter become owners or occupants of any portion of said premises, whether mediately or immediately, from said first party.

[fol. 1451] That the right of access to said railroad tracks, and the rights to the use of such tracks as hereinbefore stated for all business purposes shall be and remain an appurtenance to each and every lot and block, and to all the said premises hereinbefore described, and that all said covenants and agreements shall be taken and held to be covenants running with the land to all persons or corporations now owning or who may become owners thereof in any manner whatsoever."

Your orators further represent unto your Honors that afterwards and on or about the 12th day of October, A. D. 1878, the said Union Stock Yard and Transit Company, desiring to secure certain additional rights of way and privileges across the South West quarter of said Section Five for its said railway, entered into an agreement in writing, recorded in the Recorder's Office of Cook County, Illinois, in Book 848, page 154, with James D. Lehmer who was then the owner thereof, by which the said James D. Lehmer conveyed to the said Union Stock Yard and Transit Company certain lands and premises in said deed described, and being a portion of said South West quarter of Section Five, and upon which portion of land so conveyed the said Union Stock Yard and Transit Company has constructed and is now operating a portion of its said railway; in and by which contract it was expressly covena-ted that said right of way should be subject to the right of use in common with and by the other owners and occupants of property in said subdivision, said James D. [fol. 1452] Lehmer, and others now or hereafter entitled thereto under him or otherwise, of all streets and alleys including railroad streets, right of way and tracks laid down on the map or plat of said subdivision. And the said

Union Stock Yard and Transit Company in said agreement specially convena-ted and agreed with said James D. Lehmer, his heirs and assigns, to extend a double track, when required so to do by him or them, along said right of way thereby conveyed, and also between Blocks eleven and twelve in Lehmer's subdivision, of a portion of said South West quarter of Section five to 47th Street; also that the owners and occupants of property in said South West quarter of Section five should severally and at all times have the right to make railway connections for business purposes with any track or tracks owned or operated by said company, which should include the right to have switches at every half block on each side of such track or tracks as said company might own or operate upon or over said land.

Your orators further represent unto your Honors that afterwards and on the 13th day of September, A. D. 1889 the said Union Stock Yard and Transit Company, desiring to obtain certain further rights of way and privileges for its railway in and upon said South West quarter of Section Five, made a further contract and agreement in writing, recorded in the Recorder's office of Cook County, Illinois, in Book No. 2714 at page 247, with James D. [fol. 1453] Lehmer who was then the owner of said above described property in and by which the said James D. Lehmer conveyed to the said Union Stock Yard and Transit Company certain premises in said deed described to be used only for the purposes of railway tracks and right of way, and upon the express covenants and agreements to that said right of way should be used by said Union Stock Yard and Transit Company in common with and by the other owners and occupants of property in said South West quarter of Section Five, said James D. Lehmer and others now or hereafter entitled thereto under him or otherwise, and subject to the rights of the owners and occupants of property in said South West quarter of said Section Five and others now or hereafter entitled thereto under said James D. Lehmer or otherwise, to make railroad connections for business purposes with any track or tracks situated on either of said tracts of land in said deed conveyed and owned or operated by the said Union Stock Yard and Transit Company, which should

also include the right of said owners and occupants to have a switch at every block on each side of the track or tracks owned and operated over said premises by said Union Stock Yard and Transit Company; and also the right of use in common with and by the owners and occupants of property in said Lehmer's subdivision now or hereafter entitled thereto, of all streets and alleys including the railroad streets, right of way and tracks laid down on [fol. 1454] the map or plat of the subdivision of said land.

Your orators further represent unto your Honors that because of the inducements held out by the owners of the West half of Section Five aforesaid by reason of the establishment of railroad tracks and connections and convenient access thereby to all the railroads centering in the City of Chicago and because of the promises and covenants contained in said contracts as aforesaid, between the said owners of the said West half of Section Five and the Union Stock Yard and Transit Company as aforesaid, your orators, as well as others, were induced to locate their business on the West half of said Section Five; that in the course of their business they have constructed a large number of valuable buildings for the purpose of slaughtering and preparing for market cattle, sheep and hogs and for the several industries connected therewith. That in the construction of said buildings and the machinery and appurtenances connected therewith they have expended more than three millions of dollars. That all of said buildings so constructed have been connected by railroad tracks and switches with the main and other tracks of the Union Stock Yard and Transit Company, in accordance with said agreements, and the said Union Stock Yard and Transit Company without objection, since the establishment of said business to the present time has received from and delivered to your orators at their several buildings, slaughtering houses and [fol. 1455] places of business loaded and empty cars, freights and property necessary to the successful prosecution of their said business.

Your orators further state that they received and slaughtered in the prosecution of their business at said Union Stock Yard at their several slaughtering houses built on the West half of Section Five aforesaid, during the year 1890

more than 470,000 head of cattle and more than one hundred and seventy thousand head of sheep.

Your orators further represent that up to the present time all of the live stock required by them in the carrying on of their business that has been purchased by your orators at other points than Chicago, has been received by them in the yards of the Union Stock Yard and Transit Company for the reason that your orators had no other convenient place at which to receive such live stock, and the several railroad companies bringing such live stock to your orators had provided no convenient yard or place for the delivery thereof other than in the yards of the Union Stock Yard and Transit Company.

Your orators further aver that Armour & Co. a co-partnership, and Swift and Company, a corporation, doing business in said City of Chicago, are engaged in similar business to your orators and have slaughtering and packing establishments located near your orators' on the West half of Section Five aforesaid, and that your orators in connec-[fol. 1456] tion with said Armour & Co. and Swift and Company for the purpose of providing a suitable place for the receipt and delivery of their own live stock which might be purchased by them at points outside of the City of Chicago, purchased from said James D. Lehmer at a large expenditure of money the following described real estate, to wit: all that part of the North West quarter of the South West quarter of Section Five in Township thirty-eight North, Range fourteen East of the Third Principal Meridian in the County of Cook and State of Illinois, bounded and described as follows, to wit:

Commencing at a point thirty (30) feet South and three hundred sixty-eight and one-third (368 1-3) feet West of the North-east corner of the North-West quarter of said Section five (5), thence South parallel with the East line of said tract six hundred and three-tenths (600 3-10) feet, thence West parallel with the North line of said tract two hundred sixty-two and four-tenths (262 4-10) feet, thence North parallel with the East line of said tract six hundred and three-tenths (600 3-10) feet, thence East parallel with the North line of said tract two hundred sixty-two and four-tenths (262 4-10) feet to the place of beginning, being a part

of the real estate described in the contracts hereinbefore recited; together with and subject to the right of use in common with and by the other owners and occupants of property in said North west quarter of the South west [fol. 1457] quarter of Section five (5) aforesaid, said James D. Lehmer and any others now or hereafter entitled thereto under him or otherwise, of all streets and alleys which may hereafter be laid out through said north west quarter of the south west quarter of section five (5), including railroad streets.

Also, with the right of use in common with the parties aforesaid, the Union Stock Yard and Transit Company and any others entitled thereto of any right or rights of way and other rights and privileges, which may attach to the land aforesaid or which the said James D. Lehmer may have in common with others under a certain deed between John F. Tracy and others of the one part and said James D. Lehmer and others of the other part, dated March 5, 1869 and recorded in the Recorder's office of said Cook County on March 30, 1869 in Book 508, page 69; together with all the rights and privileges to make railroad connections for business purposes with the railroad tracks of the Union Stock Yard and Transit Company and all other privileges, so far as they may appertain to said premises, reserved by the said James D. Lehmer in his certain deed conveying to the Union Stock Yard and Transit Company of Chicago certain premises in the South West quarter of Section five (5) aforesaid, dated September 13, 1889 and recorded in the Recorder's office of said Cook County on September 13th, 1889, in Book 2714, page 247; and that the said premises have been conveyed by the said James D. Lehmer and wife [fol. 1458] by mesne conveyances to Albert H. Veeder and Edward J. Martyn as trustees for your orators and the said Armour & Co. and Swift & Company for their joint use.

Your orators further state that said premises last described are a portion of the North West quarter of the South West quarter of said Section Five and are a part of the premises entitled to the privileges reserved by the contracts between Porter, Sykes and Tracy and Lehmer, Walker and Swift and Powell and between Porter, Sykes and Tracy and the Union Stock Yard and Transit Company

and the two contracts between James D. Lehmer and the Union Stock Yard and Transit Company, all of which have been hereinbefore set out and referred to.

Your orators further represent that the said premises are immediately South of and adjacent to Forty-Third street and North of and adjacent to Forty-fourth Street; that the main tracks of the Union Stock Yard and Transit Company pass these premises on both the North and the South sides thereof, and that at the time of the purchase of the said premises by Veeder and Martyn in Trust as aforesaid, the same were connected by suitable frogs and switches with both of said named tracks of the Union Stock Yard and Transit Company and were so connected by the Union Stock Yard and Transit Company for the said James D. Lehmer in accordance with the contracts and agreements hereinbefore set out.

[fol. 1459] Your orators further state that the said premises have been converted by them, in conjunction with the said Armour & Co. and Swift and Company into cattle yards and pens, with suitable and convenient unloading tracks and chutes and are connected as aforesaid with the main tracks of the Union Stock Yard and Transit Company and are as convenient to the Union Stock Yard and Transit Company in all respects for the delivery and unloading of cars of live stock as are the premises of the Union Stock Yard and Transit Company located on the East half of Section Five as aforesaid.

And your orators state that it has connected the said premises by means of a viaduct with its slaughtering establishments and that the said premises are more convenient for it in the receipt of its live stock than are the premises of the Union Stock Yard and Transit Company. That your orator is able to prosecute its slaughtering and packing business with greater convenience and economy if its live stock purchased at points outside of the City of Chicago are delivered to it on said premises, than if they are delivered in the yards of the Union Stock Yard and Transit Company; and your orators say that they have no other yard or place belonging to them or under their control, where their live stock necessary to the successful prosecution of their business can be delivered.

Your orators further state unto your Honors that for

[fol. 1460] convenience in making consignments of live stock to said premises it has designated said premises "The Central Stock Yards, located at the corner of Justine and 43rd Streets", and the same are designed for the sole and exclusive use of the owners thereof, to wit: your orators, Armour & Co. and Swift and Company for the receipt of their own cattle bought by them at points outside of Chicago and transported to said premises for the purpose of being slaughtered at their said slaughtering and packing establishments.

Your orators further represent that ever since the establishment of the various industries aforesaid of your orators on the West half of said Section 5 and for many years last past the various railroad companies entering the City of Chicago and connecting with said Union Stock Yard and Transit Company's railway have received from and delivered to your orators at their said various establishments freight of all kinds and descriptions except live stock, in cars without breaking bulk over the tracks of the Union Stock Yard and Transit Company and the switches connecting the same with the private tracks of your orators, the Union Stock Yard and Transit Company preferring that the several railroads should thus deliver their freight over their tracks instead of themselves furnishing the motive power therefor, and to such an extent that during the year 1890 more than 15,000 cars of freight were received by your orators at their said place of business or shipped therefrom, [fol. 1461] by your orators over the tracks of the Union Stock Yard and Transit Company and the various railroads connecting therewith; that the Union Stock Yard and Transit Company has not provided itself with motive power and has never undertaken to furnish motive power for the transportation of such freight. And your orators state that all the live stock which they have slaughtered at their said establishments has up to the present time been delivered to them in the yards of the Union Stock Yard and Transit Company for the reason that your orators had not, up to the time of the commission of the grievances hereinafter stated any other suitable or convenient place for the receipt of such live stock, and because the several railroad companies bringing such live stock into the City of Chicago had pro-

vided no suitable or convenient place for unloading or delivering the same to your orators.

Your orators further represent unto your Honors that from and after the construction of said yards and pens of your orators known and designated as the Central Stock Yards it was the duty of the said Union Stock Yard and Transit Company under the contracts hereinbefore recited and referred to, and under the statutes in such case made and provided, as well as under its special charter, to receive all freights consigned to your orators at said Central Yards at the point of connection with any and all railroads with [fol. 1462] the tracks of said Union Stock Yard and Transit Company leading to and connecting the premises of your orators with the main or other tracks of said connecting railroad companies, or to permit said other railroad companies to use the tracks of said Union Stock Yard and Transit Company for the delivery of such freight so consigned to your orators. Yet your orators charge the fact to be that notwithstanding the covenants of said Union Stock Yard and Transit Company hereinbefore recited and its duty to your orators thereunder, as well as its duty under its charter and the law affecting railroad corporations and common carriers, it has wrongfully refused and continues to refuse to receive from any and all railroads making such connections any and all shipments of live stock or live freight consigned to your orators for delivery at said Central Yards, to the great damage and injury of your orators.

Your orators further state unto your Honors that on the 25th day of April, 1891, your orators delivered to the Atchison, Topeka and Santa Fe Railroad Company to be transported by the said Railroad Company and to be delivered to your orators on their said premises described as the Central Stock Yards, corner of Justine and 43rd Streets in the City of Chicago, five loads of cattle; that said cars of cattle were transported by said Railroad Company from said Kansas City in the State of Missouri to the Junction of [fol. 1463] said Atchison, Topeka and Santa Fe Railroad Company with the railway tracks of the said Union Stock Yard and Transit Company in said Cook County; that at said junction of said railway tracks the parties in charge of said cars were met by the officers and servants of the Union

Stock Yard and Transit Company, and were forbidden to move said cars on to the tracks of said Union Stock Yard and Transit Company, and the said Union Stock Yard and Transit Company refused to permit the said Atchison, Topeka and Santa Fe Railroad Company to enter upon the tracks of said Union Stock Yard and Transit Company or to pass over the same, or to use the same for the delivery of such freight so consigned as aforesaid to your orators upon their premises known as the Central Stock Yards.

Your orators further represent unto your Honors that in the prosecution of their business upon their said premises large shipments of cattle and other live stock purchased outside of the City of Chicago and also at points beyond the State of Illinois are being consigned to your orators for delivery upon said premises known as the Central Stock Yards. That your orators are the owners of a large number of cattle at different points upon the lines of railroads leading to the City of Chicago and connecting with said tracks of said Union Stock Yard and Transit Company which your orators intend to have conveyed and transported to them and delivered upon said premises; but your orators charge [fol. 1464] that said Union Stock Yard and Transit Company wrongfully and wilfully refuses to receive any of said cattle or other live stock consigned to your orators to be delivered upon said premises as aforesaid, or to permit the same to be transported over its said tracks connecting with said premises, and has given notice to all connecting railroad companies that it will not hereafter receive any live stock consigned to any yards owned by your orators in Chicago, and that the stock so consigned will not be permitted to be hauled over the tracks of said company; and further charge that such stock cannot be delivered to your orators upon their said premises by any railway line or lines other than those cont-olled and operated by the said Union Stock Yard and Transit Company.

Your orators aver that they are ready and willing to pay all reasonable and lawful charges for the transportation of said freight or for its delivery to your orators upon their said premises, but as your orators are informed and believe the said Union Stock Yard and Transit Company has given out and notified all connecting railroads that no freight so

consigned will be allowed to pass over its said tracks or be delivered to your orators upon their said premises, nor can any delivery be made of such freight except as heretofore made upon and through the premises and yards of the said Union Stock Yard and Transit Company, said last named company insisting that it has the legal right to force or [fol. 1465] compel your orators to cause all shipments of live stock so consigned to your orators for delivery upon their said premises to be delivered at the yards or upon the premises of the said Union Stock Yard and Transit Company, and also claims the right to make and compel the payment of so-called yardage charges for all live stock so owned by or consigned to your orators for delivery upon its said premises, of 25 cents per head for cattle, 6 cents per head for sheep and 8 cents per head for hogs and 15 cents per head for calves, which said charge is made as a charge in favor of said Union Stock Yard and Transit Company and in addition to the freights charged for the transportation of said live stock.

Your orators further show unto your Honors as before stated; that there are no tracks over which deliveries can be made to their said premises, of cattle purchased outside the City of Chicago and consigned to your orators at their said place of business, except the tracks of the said Union Stock Yard and Transit Company; that unless the cattle so purchased outside the City of Chicago can be shipped to your orators over the said tracks of the Union Stock Yard and Transit Company and delivered to your orators at their said Central Yards, their business will be irreparably injured; that there is no basis upon which the damages resulting to your orators from the acts and doings of said Union Stock Yard and Transit [fol. 1466] Company above recited, can be estimated, and that your orators' legal remedies in the premises are wholly inadequate.

[fol. 1467] Forasmuch therefore as your orators are without remedy in the premises except in a court of equity where such matters are properly cognizable and relievable and to the end that the said Union Stock Yard and Transit Company of Chicago, which is made party defendant to this bill of complaint, may be required to make full and

direct answer to the same (but not under oath, its answer under oath being hereby expressly waived), and that the said defendant, the Union Stock Yard and Transit Company of Chicago may be restrained by the order of this Honorable Court from interfering with any railroad or transportation company having made connections with the tracks of said Union Stock Yard and Transit Company as hereinbefore charged that desires to deliver live stock to your orators upon the premises above described, and known as the Central Stock Yards, and from refusing to permit the use of its track or tracks to any railroad company so desiring or attempting to deliver live stock to your orators at their said yards and from refusing to permit the use of its railway tracks to any such railway company for the purpose of delivering live stock to your orators at said Central Stock Yards, and that the said Union Stock Yard and Transit Company may be compelled by order of this Honorable Court to receive from any connecting railroad company desiring to make such delivery cars of live stock consigned to your orators at said Central Stock Yards, and to transport the same over its railway tracks to such Central Stock Yards, or in default thereof that [fol. 1468] it be compelled to permit the use of its said railway tracks to any connecting railroad over which to transport cars of live stock consigned to your orators at such Central Stock Yards from such connecting road, and that your orators may have such other, further and different relief as to your Honors may seem meet:

May it please your Honors to grant the writ of summons in Chancery, directed to the Sheriff of the County of Cook and State of Illinois, commanding him that he summon the defendant, the Union Stock Yard and Transit Company of Chicago to be and appear before said court on the first day of the next term thereof to be held at the Court House in the City of Chicago, County of Cook aforesaid, then and there to answer this bill, etc.

And may it please your Honors to grant unto your orators the People's Writ of Injunction, to be directed to the said defendant, the Union Stock Yard and Transit Company of Chicago, restraining and commanding it, its

agents, employees and attorneys, in manner and form as aforesaid.

And your orators will ever pray, etc.

Nelson Morris, Edward Morris, Frank E. Vogel, Composing the firm of Nelson Morris & Co.; By Nelson Morris.

[fol. 1469] State of Illinois
Cook County, ss:

Nelson Morris, being first duly sworn on oath says that he is a member of the firm of Nelson Morris & Co. which is the complainant in the foregoing bill of complaint; that he has read the foregoing bill of complaint and knows the contents thereof and that the matters and things therein contained are true of his own knowledge, except as to those matters therein stated to be on information and belief, and as to them he believes it to be true.

Affiant further says that he believes that serious and irreparable damage will result to the business of said Nelson Morris & Co. unless an injunction is speedily granted herein as prayed for in said bill.

Nelson Morris.

[fol. 1470] [Endorsed:] 90860, Circuit Court, 4419, Armour & Co. vs. Union Stock Yard and Transit Co. Bill, Filed, Apr. 30, 1891, Henry Best, Campbell & Custer, A. H. Veeder, E. Walker, Solicitors for Complts.

[fol. 1471] STATE OF ILLINOIS,
Cook County, ss:

To the Honorable, the Judges of the Circuit Court of Cook County. In Chancery Sitting:

Your orators, Philip D. Armour, Jonathan O. Armour, George H. Webster and Philip D. Armour Jr., composing the firm of Armour & Co., of the County of Cook and State of Illinois, respectfully represent unto your Honors that the Union Stock Yard and Transit Company of Chicago is a corporation incorporated by special act of the General Assembly of the State of Illinois, approved and in force February 13th, 1865, with power, among other things, to locate, construct and maintain upon certain lands in convenient proximity to the southern limits of the City of Chicago necessary yards, structures and buildings for the accommodation of the business of a general Union Stock Yards for cattle and live stock, and also with power to construct a railway with one or more tracks as may be expedient from the grounds selected for the said yards so as to connect, outside of the City of Chicago, the same with the tracks of all the railroads which terminate in said City of Chicago within certain limits, as defined by the terms of said Act; and also with power and authority to locate and from time to time renovate, change, alter, construct and reconstruct said railroad and railroad tracks [fol. 1472] and side tracks and conveniences, and with the further power to transport and allow to be transported thereon with steam or other power between said railroads and cattle yards, cattle and live stock and persons accompanying the same, and all freight and property of every kind as well as stock and cattle, and also with power to fix and establish, take and receive such rates of toll for all freight and property so transported between said railroads as the directors of said Union Stock Yard and Transit Company may from time to time establish.

Your orators further show that said Union Stock Yard and Transit Company under its said charter also had power and authority to receive, take and hold all such voluntary grants and donations of land and real estate as might be made to said company for the purposes aforesaid, and all lands and easements necessary for its right of way,

and for the purpose of effectuating the said grant said corporation had conferred upon it by said charter the right and power of acquiring all lands necessary for such right of way under the power of eminent domain, and especially in the manner provided for in "An Act to amend a law condemning the right of way for the purposes of internal improvement"; approved June 22, A. D. 1852, and Acts amendatory thereof. And your orators charge the fact to be that the corporators named in said Act proceeded to organize said corporation by the election of a Board of [fol. 1473] Directors and other proper officers, and from and after said date until the present time has been and is a corporation duly organized and exercising the powers of railroad corporations, and is a common carrier of freight of all kinds and character under and in pursuance of the powers conferred upon it by said special charter.

Your orators further represent unto your Honors that in the carrying out of the objects and purposes for which said corporation was organized it became the owner of the east half of Section five, and the east twenty-five acres of the Northeast quarter of the northwest quarter of Section five, in Township thirty eight, North, Range fourteen, east of the Third Principal Meridian in said Cook County, and located thereon its yards and pens for stock yard purposes and constructed its lines of railroad connecting said east half of Section five with all of the lines of railroad terminating in the City of Chicago so that at the present time the said Union Stock Yard and Transit Company is the owner of and operating by itself, or by others, one hundred and thirty miles of railroad track specially connecting the said east half of Section five with the main line of the Chicago, Burlington & Quincy Railroad Company, the Chicago, Milwaukee & St. Paul Railway Company, the Atchison, Topeka & Santa Fe Railroad Company, the Chicago & Alton Railroad Company, the Chicago & Northwestern Railway Company, the Chicago, Rock Island & Pacific Railroad Company, the Wisconsin Central Railroad Company and other [fol. 1474] Railway Companies, and is operating its said railroad to such an extent that during the year 1889 it handled thereon or thereover 1,076,551 freight cars, being more than 25 per cent of all the freight cars handled at Chicago by all the railroads centering in said City, as is

represented and published by said Union Stock Yard and Transit Company.

Your orators further represent unto your Honors that at the time the said Union Stock Yard and Transit Company established its yards as aforesaid on the east half of said section five, and the east twenty-five acres of the northeast quarter of the northwest quarter of Section five, John F. Tracy, Martin L. Sykes, Jr., and Henry H. Porter were the owners in fee of a large part of the south half and the west fifteen acres of the northeast quarter of the northwest quarter of said Section five; that said premises last described were then vacant and unoccupied and immediately adjoined on the west the said lands in Section five hereinbefore described as belonging to the Union Stock Yard and Transit Company; that for the purpose of inducing the establishment of manufacturing and slaughtering establishments on said premises the said Porter, Sykes and Tracy subdivided the said premises into blocks and streets and alleys and recorded the plat of said subdivision in the Recorder's office of Cook County as a private subdivision called Packers Addition to Chicago, reserving the fee of the streets and alleys in said subdivision to themselves for the [fol. 1475] benefit of the owners and occupants of the blocks in said subdivision and for the construction of railroad tracks which would connect said property with the railway tracks of the said Union Stock Yard and Transit Company, and thereby with the railroad tracks of other railroad companies with which said Union Stock Yard and Transit Company's tracks might be connected.

Your orators further represent that at the period aforesaid Henry H. Walker, Briggs Swift, James D. Lehmer and Nathan Powell were the owners in fee of the southwest quarter of said Section five immediately adjoining on the south the lands of said Porter, Sykes and Tracy and immediately adjoining on the west the lands of said Union Stock Yard and Transit Company, and for the purpose of obtaining the benefit of any contracts existing between the said Porter, Sykes and Tracy and the Union Stock Yard and Transit Company, and of railroad connections and facilities as aforesaid which attached to the said lands of said Porter, Sykes and Tracy, the said Henry H. Walker, Briggs Swift, James D. Lehmer and Nathan Powell, as

parties of the second part, on the 5th day of March, 1869 entered into a contract with the said John F. Tracy, Martin L. Sykes and Henry H. Porter as parties of the first part, by which contract it was agreed as follows: "That whereas the said Tracy, Sykes and Porter are the owners of a large part of the south half, and the west fifteen acres of the northeast quarter of the northwest quarter of Section five, [fol. 1476] Town thirty-eight North, Range fourteen, East, and by virtue of such ownership, and by contract with the owners of the residue of the said premises, are fully and lawfully authorized to make the contract herein contained.

And Whereas, the said Henry H. Walker, Briggs Swift, James D. Lehmer and Nathan Powell are the owners of the southwest quarter of Section five in the same township and range, which said last mentioned tract adjoins the said first mentioned tract on the south:

And Whereas, said parties of the second part are desirous to secure for their said tract of land certain rights of ingress and egress, and the use of certain streets and alleys and railroad track now laid out, or which may be hereafter constructed over the said land of the parties of the first part, and the said parties of the first and second parts have for that purpose agreed with each other as follows:

Parties of the first part, in consideration of $12,000 and of the right to use in common with the parties of the first part and their assigns, the thirty foot alley to be constructed between the blocks five and six and the lands of the parties of the second part, do hereby grant, sell and convey to said parties of the second part, their heirs and assigns as an appurtenance to the said southwest quarter of Section five and passing with the same, the right to use for the purpose of ingress and egress to and from the said last named [fol. 1477] quarter section the street marked "private street" and the alleys marked "private alleys" and the private street or way marked "railroad track" on the plat of Packer's Addition in Book 166 of Maps, page 187, filed for record in the office of the Recorder of Deeds for Cook County, Illinois, on July 1st, 1868. Said parties of the first part agree to build so much of said railroad track in said Addition as is now platted but not yet built, and to lay out and construct half of the alley thirty feet in width on the

south line of Blocks five and six in said Addition, being the same alley, the use whereof is heretofore made a part of the consideration paid by said second party; parties of the first part also grant, sell and convey to parties of the second part the use for purposes of ingress and egress to and from said last named quarter section, the railroad track now built on the west and part of the south sides of said lands, being the same track now used by Nelson Morris.

It is further understood that the object of the said purchase by the parties of the second part of the rights and privileges hereinbefore mentioned is to procure a connection for their said premises by railroad tracks and streets with the Union Stock Yard's track and the street running east and west north of the Union Stock Yards' track and south of Egan Ave., and as other railroad tracks and streets connecting the same may be built by the party of the first part; that this agreement covers the right for said parties [fol. 1478] of the second part without further payment to parties of the first part, or their assigns, to make connections with the same whenever the said streets or railroad tracks may be extended by parties of the first part to the north line of said lands of said parties of the second part with the right of passage over such streets and railroad tracks in the same manner as this agreement, as hereinbefore expressed, now gives them the same rights on all streets, railroad tracks and alleys now built. But nevertheless reserving to parties of first part the right themselves to use, and the right to grant to any other person or persons, in their discretion, in common with parties of the second part and their assigns, the use of said private streets, alleys and railroad tracks and to both of the said parties hereto the right to grant to any other person or persons, in their discretion, owning any portion of the said premises hereinabove described, a like privilege in common with the said parties of the first and second parts to use said private streets, alleys and railroad tracks, and provided further it is the intent and purpose of this agreement in good faith to give to parties of the second part without further payment to parties of the first part or their assigns, the right to connect with and use any such streets, alleys or railroads which the said parties of the first part might thereafter

construct through their said premises to the lands of said parties of the second part".

[fol. 1479] Your orators further represent unto your Honors that afterwards and on the 26th day of November, 1875, the said Union Stock Yard and Transit Company desiring to obtain further privileges for railroad tracks in said north west quarter of Section five belonging to Porter, Sykes and Tracy, as aforesaid, than it then enjoyed, and to secure the control and operation of the railroad tracks therein, made, entered into and executed a certain contract and deed with the said Porter, Sykes and Tracy in and by which the said Porter, Sykes and Tracy, parties of the first part, conveyed to said Union Stock Yard and Transit Company, party of the second part, (which deed was dated November 26th, 1875, and recorded February 11th, 1876, in Book 563, page 142 of Cook County Records), certain lands and premises in said deed described and being a part of the northwest quarter of Section five aforesaid, subject to certain conditions and covenants to be observed, kept and maintained by said Union Stock Yard and Transit Company. Among other covenants in said deed assumed by said Union Stock Yard and Transit Company were the following: "The said parties of the first part made and concluded an agreement in writing bearing date March 5th, 1869 (being the contract hereinbefore referred to) with one Henry H. Walker and others, giving to them certain rights of passage over the private streets and alleys on the premises of the first party hereinbefore described, to which agreement reference is hereby made for more certainty herein. It is [fol. 1480] expressly understood and agreed by and between the parties hereto, in consideration as aforesaid, that this agreement in all its parts, is made subject to such legal rights and interests in said premises as the aforesaid agreement made with said Walker and others shall confer upon the parties thereto, and which shall be held to be in force by virtue thereof, and binding upon the parties of the first part hereto on the day of the execution and delivery hereof. The said second party for and in consideration of the covenants and agreements herein contained on the part of the second party to be performed, and in consideration of one dollar, covenants and agrees to and with said first party as follows:

That it will during its corporate existence maintain and operate and permit other persons and corporations to operate in the same manner and under the same conditions as the same are now operated the railroad tracks across the east twenty-five acres of the said northeast quarter of the northwest quarter of said Section five hereinbefore more particularly described as the same are now constructed and located, so as to at all times give the railroad tracks now and hereafter to be laid on the premises of first party as hereinbefore described good and sufficient railroad connections with the other tracks of said second party upon the premises herein first above conveyed and with its other tracks connecting with the general railroad tracks in use in said Cook County:

[fol. 1481] The said second party further covenants and agrees that it will at all times during its corporate existence maintain the said railroad tracks in good condition for all the business that may be required to be done over them at its own proper charge and cost, that it will permit at all times during the continuance of this agreement to first parties, or either of them, and to any or all persons or corporations to whom said parties and their grantor have heretofore, or to whom they may hereafter convey, whether by lease or fee, any portion of the premises hereinbefore particularly described, free access to and free use of all or any of the tracks heretofore or that may hereafter be laid upon any of such premises (not for standing, but for the passage of cars and wagons) for the transportation of any lawful business, for which such parties, persons or corporations require such use.

It is expressly understood and agreed by and between the parties hereto that the several conveyances, covenants and agreements herein contained on the part of each of the parties hereto to be performed, shall extend to, bind and are for the benefit of as well the parties hereto as the successors of the second party, and the assigns of second party, and the assigns or grantees of first party, or their predecessors whether now owning or occupying any portion of the premises hereinbefore described, or who shall hereafter [fol. 1482] become owners or occupants of any portion of

said premises, whether mediately or immediately from said first party.

That the right of access to said railroad tracks, and the rights to the use of such tracks as hereinbefore stated for all business purposes shall be and remain an appurtenance to each and every lot and block, and to all the said premises hereinbefore described, and that all said covenants and agreements shall be taken and held to be covenants running with the land to all persons or corporations now owning or who may become owners thereof in any manner whatsoever".

Your orators further represent unto your Honors that afterwards and on or about the 12th day of October, A. D. 1878, the said Union Stock Yard and Transit Company, desiring to secure certain additional rights of way and privileges across the southwest quarter of said Section five for its said railway, entered into an agreement in writing, recorded in the Recorder's office of Cook County, Illinois, in Book 848, page 154, with James D. Lehmer, who was then the owner thereof, by which the said James D. Lehmer conveyed to the said Union Stock Yard and Transit Company certain lands and premises in said deed described, and being a portion of said southwest quarter of Section five, and upon which portion of land so conveyed the said Union Stock Yard and Transit Company has constructed and is now operating a portion of its said railway; in and by which contract it was expressly covenanted that said right of way should be subject to the right of use in common with and by [fol. 1483] the other owners and occupants of property in said subdivision, said James D. Lehmer, and others now or hereafter entitled thereto under him or otherwise, of all streets and alleys including railroad streets, right of way and tracks laid down on the map or plat of said subdivision. And the said Union Stock Yard and Transit Company in said agreement specially covenanted and agreed with said James D. Lehmer, his heirs and assigns, to extend a double track, when required so to do by him or them, along said right of way thereby conveyed and also between blocks eleven and twelve in Lehmer's subdivision of a portion of said southwest quarter of Section five, to 47th Street; also that the owners and occupants of property in said southwest

quarter of Section five should severally and at all times have the right to make railway connections for business purposes with any track or tracks owned or operated by said company, which should include the right to have switches at every half-block on each side of such track or tracks, as said company might own or operate upon or over said land.

Your orators further represent unto your Honors that afterwards and on the 13th day of September, A.D. 1889 the said Union Stock Yard and Transit Company, desiring to obtain certain further rights of way and privileges for its railway in and upon said southwest quarter of Section five, made a further contract and agreement in writing, recorded in the Recorder's office of Cook County, Illinois in [fol. 1484] book No. 2714 at page 247, with James D. Lehmer who was then the owner of said above described property in and by which the said James D. Lehmer conveyed to the said Union Stock Yard and Transit Company certain premises in said deed described to be used only for the purposes of railway tracks and right of way, and upon the express covenants and agreements that said right of way should be used by said Union Stock Yard and Transit Company in common with and by the other owners and occupants of property in said southwest quarter of Section five, said James D. Lehmer and others now or hereafter entitled thereto under him or otherwise, and subject to the rights of the owners and occupants of property in said southwest quarter of said Section five and others now or hereafter entitled thereto under said James D. Lehmer or otherwise, to make railroad connections for business purposes with any track or tracks situated on either of said tracts of land in said deed conveyed and owned or operated by the said Union Stock Yard and Transit Company, which should also include the right of said owners and occupants to have a switch at every block on each side of the track or tracks owned and operated over said premises by said Union Stock Yard and Transit Company, and also the right of use in common with and by the owners and occupants of property in said Lehmer's subdivision now or hereafter entitled thereto, of all streets and alleys including the railroad streets, right of way and tracks laid down on the map or plat of the subdivision of said land.

[fol. 1485] Your orators further represent unto your

Honors that because of the inducements held out by the owners of the west half of Section five aforesaid, by reason of the establishment of railroad tracks and connections and convenient access thereby to all the railroads centering in the City of Chicago and because of the premises and covenants contained in said contracts as aforesaid, between the said owners of the said west half of Section five and the Union Stock Yard and Transit Company as aforesaid, your orators as well as others, were induced to locate their business in the west half of said Section five; that in the course of their business they have constructed a large number of valuable buildings for the purpose of slaughtering and preparing for market cattle, sheep and hogs and for the several industries connected therewith. That in the construction of said buildings and the machinery and appurtenances connected therewith they have expended more than three millions of dollars. That all of said buildings so constructed have been connected by railroad tracks and switches with the main and other tracks of the Union Stock Yard and Transit Company in accordance with said agreements, and the said Union Stock Yard and Transit Company without objection, since the establishment of said business to the present time has received from and delivered to your orators at their several buildings, slaughtering houses and places of business loaded and empty cars, freights and property necessary to the successful prosecution of their said business.

[fol. 1486] Your orators further state that they received and slaughtered in the prosecution of their business at said Union Stock Yards at their several slaughtering houses built on the west half of Section five aforesaid, during the year 1890 nearly three-quarters of a million head of cattle, nearly five hundred thousand sheep and nearly two million head of hogs.

Your orators further represent that up to the present time all of the live stock required by them in the carrying on of their business that has been purchased by your orators at other points than Chicago, has been received by them in the yards of the Union Stock Yard and Transit Company, for the reason that your orators had no other convenient place at which to receive such live stock, and the several railroad companies bringing such live stock to your orators

had provided no convenient yard or place for the delivery thereof other than in the yards of the Union Stock Yard and Transit Company.

Your orators further aver that Swift and Company, a corporation, and Nelson Morris & Co., a copartnership, doing business in said City of Chicago are engaged in similar business to your orators and have slaughtering and packing establishments located near your orators, on the west half of Section five aforesaid, and that your orators in connection with said Swift and Company and Nelson Morris & Co., for the purpose of providing a suitable place for the receipt and delivery of their own live stock which [fol. 1487] might be purchased by them at points outside of the City of Chicago, purchased from said James D. Lehmer at a large expenditure of money the following described real estate, to wit: all that part of the north west quarter of the southwest quarter of Section five in Township thirty-eight, North, Range fourteen, East of the Third Principal Meridian in the County of Cook and State of Illinois, bounded and described as follows, to wit:

Commencing at a point thirty (30) feet south and three hundred sixty-eight and one-third (368 1/3) feet west of the northeast corner of the northwest quarter of said Section five (5), thence south parallel with the east line of said tract six hundred and three-tenths (600 3/10) feet, thence west parallel with the north line of said tract two hundred sixty-two and four-tenths (262 4/10) feet, thence north parallel with the east line of said tract six hundred and three-tenths (600 3/10) feet, thence east parallel with the north line of said tract two hundred sixty-two and four tenths (262 4/10) feet to the place of beginning, being a part of the real estate described in the contracts hereinbefore recited; together with and subject to the right of use in common with and by the other owners and occupants of property in said northwest quarter of the southwest quarter of Section five (5) aforesaid, said James D. Lehmer and any others now or hereafter entitled thereto under him or otherwise, of all streets and alleys which may hereafter be laid [fol. 1488] out through said northwest quarter of the southwest quarter of Section five (5), including railroad streets.

Also, with the right of use in common with the parties

aforesaid, the Union Stock Yard and Transit Company and any others entitled thereto of any right or rights of way and other rights and privileges, which may attach to the land aforesaid or which the said James D. Lehmer may have in common with others under a certain deed between John F. Tracy and others of the one part and said James D. Lehmer and others of the other part, dated March 5, 1869 and recorded in the Recorder's office of said Cook County on March 30, 1869 in Book 508, page 69; together with all the rights and privileges to make railroad connections for business purposes with the railroad tracks of the Union Stock Yard and Transit Company and all other privileges, so far as they may appertain to said premises, reserved by the said James D. Lehmer in his certain deed conveying to the Union Stock Yard and Transit Company of Chicago certain premises in the southwest quarter of Section five (5) aforesaid, dated September 13, 1889 and recorded in the Recorder's office of said Cook County on September 13th, 1889, in Book 2714, page 247; and that the said premises have been conveyed by the said James D. Lehmer and wife by mesne conveyances, to Albert H. Veeder and Edward J. Martyn as trustees for your orators and the said Swift and Company and Nelson Morris & Co. for their joint use.

Your orators further state that said premises last de- [fol. 1489] scribed are a portion of the northwest quarter of the southwest quarter of said Section five and are a part of the premises entitled to the privileges reserved by the contracts between Porter, Sykes and Tracy and Lehmer, Walker, Swift and Powell and between Porter, Sykes and Tracy and the Union Stock Yard and Transit Company and the two contracts between James D. Lehmer and the Union Stock Yard and Transit Company, all which have been hereinbefore set out and referred to.

Your orators further represent that the said premises are immediately south of and adjacent to Forty-third Street and north of and adjacent to Forty-fourth Street; that the main tracks of the Union Stock Yard and Transit Company pass these premises on both the north and the south sides thereof, and that at the time of the purchase of the said premises by Veeder and Martyn in trust as aforesaid, the same were connected by suitable frogs and switches with both of said named tracks of the Union Stock Yard and

Transit Company and were so connected by the Union Stock Yard and Transit Company for the said James D. Lehmer in accordance with the contracts and agreements hereinbefore set out.

Your orators further state that the said premises have been converted by them in conjunction with the said Swift and Company and Nelson Morris & Co., into cattle yards and pens, with suitable and convenient unloading tracks and chutes and are connected as aforesaid with the main tracks of the Union Stock Yard and Transit Company and are as [fol. 1490] convenient to the Union Stock Yard and Transit Company in all respects for the delivery and unloading of cars of livestock as are the premises of the Union Stock Yard and Transit Company located on the east half of Section five as aforesaid.

And your orators state that they have connected the said premises by means of a viaduct with their slaughtering establishments and that the said premises are more convenient for them in the receipt of their live stock than are the premises of the Union Stock Yard and Transit Company. That your orators are able to prosecute their slaughtering and packing business with greater convenience and economy if their live stock purchased at points outside of the City of Chicago is delivered to them on said premises, than if it is delivered in the yards of the Union Stock Yard and Transit Company. And your orators say that they have no other yard or place belonging to them or under their control where their live stock necessary to the prosecution of their business, can be delivered.

Your orators further state unto your Honors that for convenience in making consignments of live stock to said premises they have designated said premises "The Central Stock Yards located at the corner of Justine and 43rd Streets", and the same are designed to the sole and exclusive use of the owners thereof, to wit: your orators, Swift and Company and Nelson Morris & Co. for the receipt of their own cattle bought by them at points outside of Chicago and transported to said premises for the purpose of being [fol. 1491] slaughtered at their said slaughtering and packing establishments.

Your orators further represent that ever since the establishment of the various industries aforesaid of your orators

on the west half of said Section 5 and for many years last past the various railroad companies entering the City of Chicago and connecting with said Union Stock Yard and Transit Company's railway have received from and delivered to you orators at their said various establishments freight of all kinds and descriptions except live stock, in cars, without breaking bulk, over the tracks of the Union Stock Yard and Transit Company and the switches connecting the same with the private tracks of your orators, the Union Stock Yard and Transit Company preferring that the several railroads should thus deliver their freight over their tracks instead of themselves furnishing the motive power therefor, and to such an extent that during the year 1890 more than 15,000 cars of freight were received by your orators at their said place of business or shipped therefrom by your orators over the tracks of the Union Stock Yard and Transit Company and the various railroads connecting therewith; that the Union Stock Yard and Transit Company has not provided itself with motive power and has never undertaken to furnish motive power for the transportation of such freight. And your orators state that all the live stock which they have slaughtered at said establishments has up to the present time been delivered to them in the yards of the Union Stock Yard and Transit Company for [fol. 1492] the reason that your orators had not, up to the time of the Commission of the grievances hereinafter stated any other suitable or convenient place for the receipt of such live stock, and because the several railroad companies bringing such live stock into the City of Chicago had provided no suitable or convenient place for unloading or delivering the same to your orators.

Your orators further represent unto your Honors that from and after the construction of said yards and pens of your orators known and designated as the Central Stock Yards it was the duty of the said Union Stock Yard and Transit Company under the contracts hereinbefore recited and re-referred to, and under the statutes in such case made and provided, as well as under its special charter, to receive all freights consigned to your orators at said Central Yards at the point of connection with any and all railroads with the tracks of said Union Stock Yard and Transit Company leading to and connecting the premises of your orators with

the main or other tracks of said connecting railroad companies, or to permit said other railroad companies to use the tracks of said Union Stock Yard and Transit Company for the delivery of such freight so consigned to your orators. Yet your orators charge the fact to be that notwithstanding the covenants of said Union Stock Yard and Transit Company hereinbefore receited and its duty to your orators thereunder, as well as its duty under its charter and the law [fol. 1493] affecting railroad corporations and common carriers, it has wrongfully refused and continues to refuse to receive from any and all railroads making such connections and any and all shipments of live stock or live freight consigned to your orators for delivery at said Central Yards, to the great damage and injury of your orators.

Your orators further state unto your Honors that on the 25th day of April, 1891, your orators delivered to the Chicago, Milwaukee and St. Paul Railway Company at Kansas City, Missouri, to be delivered to your orators on their said premises described as the Central Stock Yards, corner of Justine and 43rd Streets in the City of Chicago, ten cars containing 160 cattle; that said cars of cattle were transported by said Railroad Company from said Kansas City in the State of Missouri to the Junction of said Chicago, Milwaukee and St. Paul Railway Company, with the line of the Chicago St. Louis and Pittsburgh Railroad and over the tracks of the last named company to its junction with the railway tracks of the said Union Stock Yard and Transit Company in said Cook County; that at said last named junction of said railway tracks the parties in charge of said cars were met by the officers and servants of the Union Stock Yard and Transit Company, and were forbidden to move said cars onto the tracks of said Union Stock Yard and Transit Company, and the said Union Stock Yard and Transit Company refused to permit the said ten cars of the Chicago, Milwaukee and St. Paul Railway Company so loaded with cattle to enter upon the tracks of said Union Stock Yard and Transit Company or to pass over the same, or to use the same for the delivery of such freight so consigned as aforesaid to your orators upon their premises [fol. 1494] known as the Central Stock Yards.

Your orators further represent unto your Honors that in the prosecution of their business upon their said premises

large shipments of cattle and other live stock purchased outside of the City of Chicago and also at points beyond the State of Illinois are being consigned to your orators for delivery upon said premises known as the Central Stock Yards. That your orators are the owners of a large number of cattle at different points upon the lines of railroads leading to the City of Chicago and connecting with said tracks of said Union Stock Yard and Transit Company which your orators intend to have conveyed and transported to them and delivered upon said premises; but your orators charge that said Union Stock Yard and Transit Company wrongfully and wilfully refuses to receive any of said cattle or other live stock consigned to your orators to be delivered upon said premises as aforesaid, or to permit the same to be transported over its said tracks connecting with said premises, and has given notice to all connecting railroad companies that it will not hereafter receive any live stock consigned to any yards owned by your orators in Chicago, and that the stock so consigned will not be permitted to be hauled over the tracks of said company; and further charge that such stock cannot be delivered to your orators upon their said premises by any railway line or lines other than those controlled and operated by the said Union Stock Yard and Transit Company.

[fol. 1495] Your orators aver that they are ready and willing to pay all reasonable and lawful charges for the transportation of said freight or for its delivery to your orators upon their said premises, but as your orators are informed and believe the said Union Stock Yard and Transit Company has given out and notified all connecting railroads that no freight so consigned will be allowed to pass over its said tracks or be delivered to your orators upon their said premises, nor can any delivery be made of such freight except as heretofore made upon and through the premises and yards of the said Union Stock Yard and Transit Company, said last named company insisting that it has the legal right to force or compel your orators to cause all shipments of live stock so consigned to your orators for delivery upon their said premises to be delivered at the yards or upon the premises of the said Union Stock Yard and Transit Company, and also claim the right to make and compel the payment of so-called yardage charges

for all live stock so owned by or consigned to your orators for delivery upon its said premises, of 25 cents per head for cattle, 6 cents per head for sheep and 8 cents per head for hogs, and 15 cents per head for calves, which said charge is made as a charge in favor of said Union Stock Yard and Transit Company and in addition to the freights charged for the transportation of said live stock.

Your orators further show ~~unto~~ your Honors as before stated that there are no tracks over which deliveries can be [fol. 1496] made to their said premises, of cattle purchased outside of the City of Chicago and consigned to your orators at their said place of business, except the tracks of the said Union Stock Yard and Transit Company; that unless the cattle so purchased outside the City of Chicago can be shipped to your orators over the said tracks of the Union Stock Yard and Transit Company and delivered to your orators at their said Central Yards, their business will be irreparably injured; that there is no basis upon which the damages resulting to your orators from the acts and doings of said Union Stock Yard and Transit Company above recited, can be estimated, and that your orators' legal remedies in the premises are wholly inadequate.

[fol. 1497] Forasmuch therefore as your orators are without remedy in the premises except in a court of equity where such matters are properly cognizable and relievable, and to the end that the said Union Stock Yard and Transit Company of Chicago, which is made party defendant to this bill of complaint, may be required to make full and direct answer to the same (but not under oath, its answer under oath being hereby expressly waived), and that the said defendant, the Union Stock Yard and Transit Company of Chicago may be restrained by the order of this Honorable Court from interfering with any railroad or transportation company having made connections with the tracks of said Union Stock Yard and Transit Company, as hereinbefore charged, that desires to deliver live stock to your orator upon the premises above described, and known as the Central Stock Yards, and from refusing to permit the use of its track or tracks to any Railroad Company so desiring or attempting to deliver live stock to your orators at their said yards, and from refusing to permit the use of its railway tracks to any such railway company for the purpose

of delivering live stock to your orators at said Central Stock Yards, and that the said Union Stock Yard and Transit Company may be compelled by order of this Honorable Court to receive from any connecting railroad company desiring to make such delivery cars of live stock consigned to your orators at said Central Stock Yards, and to transport the same over its railway tracks to such Central Stock Yards, or in default thereof that it be compelled to permit [fol. 1498] the use of its said railway tracks to any connecting railroad over which to transport cars of live stock consigned to your orators at such Central Stock Yards from such connecting road, and that your orators may have such other, further and different relief as to your Honors may seem meet.

May it please your Honors to grant the writ of summons in Chancery, directed to the Sheriff of the County of Cook and State of Illinois, commanding him that he summon the defendant, the Union Stock Yard and Transit Company of Chicago to be and appear before said court on the first day of the next term thereof to be held at the Court House in the City of Chicago, County of Cook aforesaid, then and there to answer this bill, etc.

And may it please your Honors to grant unto your orators the People's Writ of Injunction to be directed to the said defendant the Union Stock Yard and Transit Company of Chicago, restraining and commanding it, its agents, employes and attorneys in manner and form as aforesaid.

And your orators will ever pray, etc.

Philip D. Armour, Jonathan O. Armour, Philip D. Armour, Jr., by Geo. H. Webster.

Circuit Court of Cook County

In Chancery

Nelson Morris, et al., Complainants,

vs.

The Union Stock Yard & Transit Company, Defendant

Answer

Herrick & Allen, Winston & Meagher, Defendant's Solicitors.
W. C. Goudy, of Counsel.

Filed May 22, 1891. Henry Best, Clerk

[fol. 1501] The Answer of the Defendant, Union Stock Yard & Transit Company, to the Bill of Complaint of the Above Named Complainant

This defendant, The Union Stock Yard and Transit Company, now and at all times hereafter, reserving to itself all benefit and advantage of exception or otherwise than can

or may be had, to the many errors and uncertainties in the said bill contained, for answer thereto, or to so much thereof as it is advised it is material for it to answer, answering says:

That it admits that this defendant is a corporation incorporated by special act of the General Assembly of the State of Illinois, approved and in force February 13, 1865. That section 1, of said charter conferred on said corporation the general powers of succession, the right to sue, etc. That section 2 provided as follows: "That said company shall [fol. 1502] have power to locate, construct and maintain, upon the land purchased for such purpose, in convenient proximity to the southerly limits of the city of Chicago, and west of Wallace street, as the same would be extended in a straight line south from said city limits, all the necessary yards, inclosures, buildings, structures, and railway lines, tracks, switches and turn-outs, aqueducts, for the reception, safe-keeping, feeding and watering, and for the weighing, delivery and transfer of cattle and live-stock of every description * * * and for the accommodation of the business of a general union stock yard for cattle and live-stock, including the erection and establishment of one or more hotel buildings, and the right to use the same, if deemed expedient, for the convenience of drovers, dealers and the public doing business at the said yards," etc. That by said section 2 this defendant was also authorized to make advances of money upon such cattle and live-stock, for freight and other purposes, and to make and require to be paid "such reasonable charges as may be deemed just and proper" for "such care, subsistence and handling," etc., and to lease the hotel building "so erected for the accommodation of those drawn together by the business of such yards," and "if the same shall be kept and managed by said company, shall have power to fix and require to be paid, such reasonable charges for the accommodation afforded by said house or houses, as shall be just and proper." Section 3 of said charter provided as follows: "The said company shall construct a railway, with one or more tracks, as may be expedient, from the grounds which may be [fol. 1503] selected for its said yards, so as to connect, outside of the city of Chicago, the same with the tracks of all the railroads which terminate in Chicago, the lines of

which enter the city on the south between the lake shore and the south-west corner of said city, and on the west between said last named point and the north line of section number nineteen (19), township number thirty-nine (39) north, range fourteen (14) east of third principal meridian, and shall have the right and power to make such connections with such suitable side-tracks, switches and connections as to enable all of the trains running upon said railroads easily and conveniently to approach the grounds selected for said yards, and may make such arrangements or contracts with such railroad companies, or either of them, for the use of any part or portion of the track or tracks of such company or companies, which now is or hereafter may be constructed, for the purposes aforesaid, as may be agreed upon between the parties; and shall have power and authority to locate, and, from time to time, renovate, change, alter, construct and reconstruct, and fully to finish and maintain its said railroad or roads, side tracks and connections, and to transport and allow to be transported thereon between said railroads and cattle yards, all cattle and live-stock and persons accompanying the same, to and from said yards, and may also transport or allow to be transported between the railroads entering said city, and so connected by the road or roads hereby authorized, by steam or other power, freight and property of every kind, as well as stock and cattle, and may fix and establish, [fol. 1504] take and receive such rates of toll for all freight and property so transported between said several railroads as the directors shall, from time to time, establish." That, by its said charter, this defendant also had power and authority to receive, take and hold all such voluntary grants and donations of land and real estate as might be made to it for the purposes aforesaid, and all lands and easements necessary for its right of way, and also the right and power of acquiring all lands necessary for such right of way under the power of eminent domain in the manner provided in said act. And, for greater certainty as to the powers conferred by said charter and the several provisions thereof, this defendant refers to said act as printed and published and declared to be a public act.

This defendant, further answering, says that it admits that the corporators named in said act duly organized said

corporation by the election of a board of directors and other proper officers, and that from and after its said organization, and until the present time, this defendant has been and is a corporation duly organized under said act. But this defendant denies that it has been or is a corporation exercising the powers of railroad corporations, or that it has been or is a common carrier, or that it has been or is exercising any powers other than those conferred by its said charter, and in the manner hereinafter set forth.

This defendant, further answering, admits that, for the purpose of carrying out the objects for which it was organized, and in pursuance of the power conferred by said section 2 of its charter, this defendant, shortly after its incorporation, and in the year 1865 became the owner of [fol. 1505] the east half of section five, and the east twenty-five acres of the north-east quarter of the north-west quarter of said section five, in township thirty-eight north, range fourteen east of the third principal meridian, in said Cook county, and thereupon located, on the land so acquired, its stock-yards, including all the necessary inclosures, buildings, structures, tracks, switches and turnouts, for the reception, safe keeping, feeding and watering, and for the weighing, delivering and transfer of live-stock of every description, and for the accommodation of the business of a general union stock-yards for cattle and live-stock, and also erected thereon a hotel building for the convenience of drovers, dealers and the public doing business at said yards. That, after it had acquired said land and located said yards, this defendant, in pursuance of the power conferred by said section 3, constructed a railway, from the grounds so selected for its said yards, so as to connect (outside of the city of Chicago) the said yards with the tracks of all the railroads which terminated in Chicago, the lines of which entered the city within the territory designated by said section 3, and also made such connections, with such suitable side tracks and switches as to enable all of the trains running upon said railroads easily and conveniently to approach the grounds selected for said yards.

This defendant, further answering, admits that, at the time this defendant established its said yards on said east half of said section *section* five and said east twenty-five

acres of said north-east quarter of the north-west quarter of said section five, John F. Tracy, Martin L. Sykes, Junior, [fol. 1506] and Henry H. Porter were the owners in fee of a large part of the south half of the north-west quarter of said section five, and the west fifteen acres of the north-east quarter of said northwest quarter of said section, and that said premises last described were then vacant and unoccupied and immediately adjoined on the west the said lands in said section five acquired by this defendant and on which said stock-yards had been so located and established.

This defendant further answering says, that the said land of the said Tracy, Sykes and Porter, by reason of the fact that it immediately adjoined this defendant's said yards, was specially adapted for the location thereon of slaughtering houses and packing establishments engaged in the business of slaughtering and packing the cattle, hogs and other live-stock received at this defendant's said yards. That, to promote the sale of said land for such slaughtering houses and packing establishments the said Tracy, Sykes and Porter, by a plat duly recorded on the 1st day of July, 1868, subdivided into blocks, lots, streets and alleys, that part of said land immediately west of and adjoining this defendant's said yards, being the east twenty-seven acres of said south half of said north-west quarter. That said subdivision was designated on said plat as "Packer's Addition to Chicago." That, for the purpose of affording convenient and adequate approaches to this defendant's said stock yards, and the necessary ingress and egress to and from said proposed slaughtering and packing establishments, certain streets and alleys, connecting all the blocks and lots in said subdivision [fol. 1507] with said stock-yards, and marked, respectively, "Private Street" and "Private Alley," were shown on said plat; that said subdivision consisted of six blocks; that there was also shown on said plat a strip of land thirty-two feet wide and running north and south between said blocks, with a red line marked thereon which was intended to represent a proposed railroad track. That it was the intention of said Porter, Sykes and Tracy that a railroad track should be laid, where said red line was shown on said plat, so as to connect with this defend-

ant's said railroad tracks, for the purpose of having the product of the slaughtering houses and packing establishments, which might be located on said Packer's Addition, and the other dead freight incident to the same, transported over this defendant's tracks, to and from the several connecting roads. That, thereafter, in the year 1868 or 1869, tracks were laid on said subdivision, as shown on said plat, and connected with this defendant's tracks, and, about the same time, certain *al*sughtering houses and packing establishments were located on said subdivision. That, from the time said tracks were laid and in use up to the present time, the course of business as to the use of this defendant's tracks and the said tracks connecting therewith, has been uniform. That this defendant has never owned or operated any cars or engines except one engine and six flat cars used exclusively for the construction and repair of its tracks. That, by mutual arrangements with the several connecting roads, this defendant has allowed to be hauled over its tracks cars loaded with live-stock to be delivered and unloaded at its said yards. That on all such live stock it has col- [fol. 1508] lected and received its customary charges for feeding and yardage, and has made no trackage charges to the railroad companies delivering the same. That this defendant, by like mutual arrangements, has allowed cars loaded with live-stock in transit and consigned to points beyond Chicago to be transferred over its tracks from one connecting road to another, charging and collecting from the several railroad companies a trackage charge per car for the use of its tracks. That the live-stock to be slaughtered at said slaughtering houses and packing establishments located on said subdivision and the other slaughtering houses and packing establishments in the vicinity of said yards, has been thus delivered by the connecting roads and unloaded at this defendant's said yards. That said slaughtering houses and packing establishments have been connected with said yards by runways and viaducts over which the said live stock, after having been unloaded into pens and fed and watered, has been driven from this defendant's yards to the several slaughtering houses and packing establishments. That, by like mutual arrangements with the connecting roads, this

defendant has allowed to be transported over its tracks cars loaded with the product of said slaughtering houses and packing establishments, and other dead freight, consigned to and from said slaughtering houses and packing establishments. That this defendant has charged to the several railroad companies for the use of its tracks by the cars of dead freight so allowed to be hauled over them a certain charge per car for the use of its tracks. And that this defendant has, at no time, transported, or allowed to be transported, over any of the tracks owned or controlled [fol. 1509] by it, any live-stock except the live-stock so to be delivered and unloaded at its yards, and said live-stock in transit, so transferred over its tracks from one connecting road to another. This defendant, further answering, says that said entire Packer's Addition has long since been occupied by slaughtering houses and packing establishments, and that, in like manner, the said Tracy, Sykes and Porter, and their grantees, have made other like subdivisions of said land owned by them. That said additional subdivisions are known respectively as Packer's Second, Packer's Third, Packer's Fourth and Packer's Fifth Additions, and, with said Packer's First Addition, cover said entire south half of the north-west quarter of said section five and said west fifteen acres of the north-east quarter of said north-west quarter. That on the plats of said several subdivisions like streets and alleys and railroad tracks have been shown, as on said plat of said Packer's Addition. That said streets, alleys and railroad tracks have been laid out so as to form continuations of the streets, alleys and railroad tracks shown on said Packer's Addition, and to connect, in like manner, with this defendant's said stock-yards and tracks; and that the greater part of all of said subdivisions is now occupied by slaughtering houses and packing establishments. That there are no other industries located on said subdivisions, except the Northwestern and Thompson & Edwards Fertilizing Works, which manufacture fertilizers from the refuse of said slaughtering houses and packing establishments; and that the uniform course of business as to all of said slaughtering houses and packing estab- [fol. 1510] lishments has been the same as that hereinbefore set forth.

This defendant, further answering, admits that prior to the fifth day of March 1869, Henry H. Walker, Briggs Swift, James D. Lehmer and Nathan Powell were the owners in fee of the south-west quarter of said section five, immediately adjoining on the south the lands of said Porter, Sykes and Tracy, and immediately adjoining on the west the yards of this defendant; and that, on said fifth day of March, 1869, said Walker, Swift, Lehmer and Powell, as parties of the second part, entered into a contract with said Tracy, Sykes and Porter, as parties of the first part, and that said contract is copied in part, but inaccurately, in said bill. And this defendant, for greater certainty as to the terms of said contract, refers to the original, or a copy thereof, to be produced on the hearing of this cause. This defendant denies that said contract was made for the purpose of obtaining the benefit of any contracts between said Porter, Sykes and Tracy and this defendant, or that there were any such contracts between said Porter, Sykes and Tracy and this defendant. This defendant further says that the purpose of said contract, as shown by the terms thereof, was to grant to said Walker, Swift, Lehmer and Powell, and their grantees, as an appurtenance to said south-west quarter of said section five, the right to use, in common with the said Porter, Sykes and Tracy, and their grantees, the said private streets and alleys on the plat of said Packer's Addition, and thereby obtain the benefit of any connections with the stock-yards and railroad tracks of this defendant afforded by said streets and alleys. And this defendant denies [fol. 151f] that by said contract said Walker and others acquired any right or interest in this defendant's railroad, or any right or interest material to the subject-matter of said bill.

This defendant, further answering, says that, after the making of said last mentioned contract by a plat recorded on the 20th day of September, 1870, Samuel J. Walker as the owner, platted and subdivided the north-east quarter of said south-west quarter of said section five, being the land immediately adjoining said Packer's Addition on the south and this defendant's yards on the west as "Packer's Subdivision." That, by a plat recorded on the first day of July, 1874, the said J. D. Lehmer, as the owner, platted

and subdivided the south-east quarter of said south-west quarter of said section five, being the land immediately adjoining said Packer's Subdivision on the south and this defendant's lands on the west as "J. D. Lehmer's Subdivision." That on said plats of said Packer's Subdivision and Lehmer's Subdivision were marked like private alleys and private streets as those shown on said plat of said Packer's Addition, and that the east and west streets and alleys were so laid out as to connect with this defendant's said yards on the east, and the north and south streets, so as to form continuations of the north and south streets in said Packer's Addition.

This defendant, further answering, says that said Packer's First, Second, Third, Fourth and Fifth Additions, Packer's Subdivision and Lehmer's Subdivision, in-
[fol. 1512] clude all of the west half of the south-west quarter, and all of the south half of the north-west quarter, and about fifteen acres of the north-east quarter of said north-west quarter of said section 5, and contain, in all, one hundred and seventy-five acres. That all but about twenty acres of said one hundred and seventy-five acres has been occupied and is now occupied by slaughtering houses and packing establishments and said Northwestern and Thompson & Edwards Fertilizing Works; and that the twenty acres not so occupied consists of certain lots and blocks, the most remote from this defendant's yards. And this defendant files herewith a map, showing this defendant's said yards and the several subdivisions, the slaughtering houses and packing establishments thereon and the said street and railroad connections marked "Exhibit A.," and prays that the same may be taken as part hereof.

This defendant, further answering, says that prior to the location and establishment of this defendant's said stock-yards, the land covered by said subdivisions was vacant and unoccupied prairie. That the occasion for the location of said slaughtering houses and packing establishments on said several subdivisions was the immediate proximity of said stock-yards. That there has been a continuous increase each year in the amount of live-stock received at this defendant's said yards over its said road.

That the total live-stock so received in the year 1866 (the first year said yards were in operation), was 393,007 cattle, 961,746 hogs, 207,987 sheep; that the total received in the year 1890 was 3,484,280 cattle, 175,025 calves, [fol. 1513] 7,663,820 hogs, and 2,182,667 sheep; and that the total so received in the twenty-five years (beginning with the year 1866 and ending with the year 1890) is 33,696,181 cattle, 726,217 calves, 115,038,471 hogs, and 16,243,867 sheep. That substantially all the said cattle, calves, hogs and sheep so received, except such as have been shipped to the east, have been slaughtered at said slaughtering houses and packing establishments in the immediate vicinity of said yards. That to connect said yards with said slaughtering houses and packing establishments, and to facilitate the delivery of the live-stock from the said yards to the said slaughtering houses and packing establishments, an extensive system of runways and viaducts leading from said yards to the several slaughtering houses and packing establishments has been constructed and enlarged from time to time with the growth of the business. That said runways and viaducts have been so constructed by mutual arrangements between this defendant and the owners of said several slaughtering houses and packing establishments—this defendant bearing part of the expense of constructing the same and said owners part. That, to promote said slaughtering and packing business, and, thereby, promote the growth of said yards, this defendant has cause- branch and switch tracks to be constructed from its main tracks so as to connect with the various slaughtering houses and packing establishments, for the purpose of allowing the immense product of such slaughtering houses and packing establishments, and the other dead freight occasioned by the [fol. 1514] business of said establishments, to be transported over its tracks to and from the various connecting roads under the mutual arrangements with other companies, hereinbefore set forth. That as the business has grown, this defendant has, from time to time, extended such branch and switch tracks acquiring the necessary additional rights of way for that purpose. That no live-stock has been transported or allowed to be transported over any of this defendant's tracks, except its main tracks

connecting the several roads with its said yards, and the side tracks in or immediately connected with said yards. That all of its other tracks, including the extensive system of branch and switch tracks connected with said slaughtering houses and packing establishments, have been used exclusively for the transportation of dead freight. That the tracks so laid down and used exclusively for dead freight are over fifty miles in length. And this defendant files herewith a map, showing the several tracks used exclusively for dead freight, and its main and other tracks, on which it has allowed live-stock to be transported as hereinbefore set forth, said runways and viaducts and slaughtering houses and packing establishments, and the yards of this defendant, marked "Exhibit B," and prays that the same may be taken as part hereof.

This defendant, further answering, admits that it owns or controls over one hundred and thirty miles of railroad track. And this defendant says that its main line of road, built to connect its said yards with the several connecting [fol. 1515] roads, is about eight miles in length; that the large part of said road consists of four main tracks, and that the total length of its said main tracks is about twenty-four miles. That, for the proper handling of the trains of live-stock delivered at its said yards and to afford standing room for empty cars, it has been necessary to construct a large number of sidings in and near said yards; that the total length of said sidings is about fifty-one miles. And that, in addition, this defendant has built the said branches and side tracks connected therewith, intended and used exclusively for dead freight, as hereinbefore set forth, and having a total length of about fifty miles, the location and extent of which are more particularly shown on said plat, marked "Exhibit B."

This defendant, further answering, says that, to meet the necessities and growth of the business of its said stock-yards, it has acquired additional lands and made extensive and valuable improvements from time to time, and, for that purpose, has expended large sums of money. That its said stock-yards and the premises used in connection therewith consist of four hundred and sixty acres of land. That it owns about one mile of river front, accessible to lake vessels, acquired for the purpose of its yards. That

on said land used for its stockyards are railway sidings, cattle yards and pens, to accommodate twenty-five thousand head of cattle, twelve thousand sheep and one hundred and sixty thousand hogs, brick stabling for two thousand [fol. 1516] horses, water-works, forty miles of water and drainage pipe, fifteen miles of macadamized streets, bank buildings, merchant's offices and a cattle exchange, a hotel with a capacity for five hundred guests, an extensive electric light plant which lights the yards, hotel, exchange, etc., a large warehouse, etc. That over one thousand persons are employed by this defendant in and about its said yards, and that, in addition, there are commission men and their employes, whose sole business is at said yards, to the number of over eight hundred and fifty.

This defendant, further answering, says that under mutual arrangements it has allowed the engines of the connecting railroads, to come upon its main tracks, with cars of live-stock for delivery therefrom at its yards, or for transfer to other roads, as hereinbefore set forth. That the dead freight business done over this defendant's tracks is of such a character, requiring the frequent switching and transfer of cars, and is so large in volume, that it became impracticable to permit the engines of all the different connecting roads to do the work, and that, for several years past, by mutual arrangements between this defendant and the connecting roads, the work of handling said dead freight has been done by particular engines employed exclusively in that work. That, on the 20th day of September, 1890, this defendant, as party of the first part, entered into an agreement in writing with the several connecting roads, as parties of the second part (a copy of which is attached hereto, marked "Exhibit C," and which this defendant [fol. 1517] prays may be taken as part hereof), whereby it was agreed that the said connecting roads should form an association for the sole purpose of receiving and delivering dead freight to and from the different industries located along this defendant's tracks; that this defendant should allow said connecting roads, acting through said association, its officers and servants, the right to enter upon and use its railway tracks and right of way for the purpose of receiving and delivering dead freight to and from all in-

dustries located along said tracks and rights of way, subject to such rules and regulations of this defendant as had been or might thereafter be made for the use of the tracks and rights of way of this defendant and the running of trains thereon. That, since the date of said agreement, all the dead freight transported over this defendant's tracks, has been so transported exclusively by the engines of said association, acting under the direction of its officers and agents, except through freight. That, with the growth of said slaughtering and packing business the volume of said dead-freight business has largely increased, particularly in the locality of said slaughtering houses and packing establishments. That the growth of said business has necessitated acquiring additional rights of way and laying additional tracks from time to time. That said grants to this defendant from said James D. Lehmer, dated respectively October 12, 1878, and September 13, 1889, and referred to in said bill, were procured for the purpose of additional right of way and furnishing increased facilities for the transaction of said dead-freight business. That, not- [fol. 1518] withstanding said additional rights of way and increased facilities, said tracks so used for said dead-freight business exclusively are even now inadequate for the same. That the said so-called Central Stock Yards mentioned in said bill can only be reached from the tracks of this defendant by passing over the said branch tracks, so used exclusively for dead freight, and, at a point where there are several switches, and where said tracks are in constant use, for the purpose of said dead-freight business. That if the volume of live-stock bought outside of Chicago by said three firms claiming the right of have their live-stock hauled over this defendant's tracks to said so-called Central Stock Yards, being said Armour Company and Swift & Company, and said complainants, or any considerable amount of live-stock, should be forced onto said tracks, so used for dead freight, the effect would be a blockade of the business done thereon and to practically destroy their use for the sole purpose for which they were intended and for which they have been heretofore used. That, in addition to this, the said contract between this defendant and said connecting roads being limited to dead freight, the switch-

ing association would not be authorized to handle the trains of live-stock, and the result would be that the engines of as many companies as there are connecting roads would come in over these tracks, and that this would necessarily result in so much confusion and delay as to render the successful use of the tracks by the switching association, for the pur-
[fol. 1519] pose for which they were intended, wholly impracticable.

This defendant, further answering, admits that on the 26th day of November, 1875, said Porter, Sykes and Tracy, and the then President and Secretary of this defendant, purporting to act in the name and on behalf of this defendant, executed a deed of that date, whereby the said Porter, Sykes and Tracy conveyed to this defendant certain lands and premises in said deed described and that portions of said deed are copied, with substantial correctness, in said bill. And this defendant, for greater certainty as to the land conveyed by and the terms and conditions of said deed, refers to the same, or a copy thereof, to be produced on the hearing of this cause. This defendant admits that, by the terms of said deed, the rights of way granted thereby, were conveyed to this defendant, subject to said prior grant from the said Porter, Sykes and Tracy to said Henry H. Walker and others, dated March 5, 1869, of the right to use in common said streets and alleys and the projected canal mentioned therein. But this defendant avers that the conditions and covenants of said deed of November 26, 1875, set out in said bill, are not material to the relief prayed therein: that neither said complainants nor those under whom they claim their alleged title to said premises, designated in their said bill as the Central Stock Yards, were parties to said deed, nor have any of the covenants of said deed inured to the benefit of said premises so described as the Central
[fol. 1520] Stock Yards, nor have said complainants, by reason of their alleged ownership in said so-called Central Stock Yards, any right or interest in any of the covenants of said deed. And this defendant denies that said complainants acquired or now have any right or interest under said deed of November 26, 1875, or that said deed is otherwise material to the subject matter of this suit, or the relief prayed in said complainants' bill.

This defendant, further answering, admits that on or about the 12th day of October, 1878, said James D. Lehmer and this defendant executed a certain deed of that date referred to in said bill. And this defendant says that by said deed said Lehmer conveyed to this defendant the right of way therein described through said Lehmer's subdivision of the south-east quarter of said south-west quarter of said section five, subject to and with the right of use, in common with and by the other owners and occupants of property in said Lehmer's Subdivision, of all streets and alleys, including the railroad street and track shown on the plat of said subdivision; and that by said deed this defendant agreed to extend a double track along said right of way in said Lehmer's Subdivision so granted, and also between blocks eleven and twelve in said Lehmer's Subdivison, and also to make no railroad connections with property on the south side of 47th Street until after said Lehmer should have sold all his property in said subdivision; and also that the owners and occupants of property in said Lehmer's Subdivision [fol. 1521] should severally have the right to make railroad connections with the tracks of this defendant over said Lehmer's Subdivision. And this defendant avers that it was expressly provided in said deed that "said right of way is hereby granted to said second party (this defendant) for the purpose of constructing and maintaining thereon by it, its successors and assigns, railroad tracks, which are to be maintained and operated so long as said second party, its successors and assigns, shall occupy its present grounds for stock-yard purposes. It is hereby mutually understood and agreed that whenever said second party (this defendant), its successors or assigns, shall abandon its said ground for stock-yard purposes, the use and rights hereby conveyed shall revert to said party of the first part, his heirs or assigns." And this defendant, for greater certainty as to the terms and conditions of said deed, refers to the same or a copy thereof, to be produced on the hearing of this cause. And this defendant denies that said complainants acquired or have any interest under said deed or the covenants thereof, or that, if they had any such interest, the said deed or any of its covenants have inured to the benefit of said premises in said north-west quarter of the south-west quar-

ter of said section five, designated in said bill as the Central Stock Yards, or are otherwise material to the subject-matter of this suit.

This defendant, further answering, admits that, on or about the 13th day of September, 1889, the said James D. [fol. 1522] Lehmer executed and delivered to this defendant a deed of conveyance, whereby said Lehmer conveyed to this defendant certain premises in said Lehmer's Subdivision, and also the right to use, for railway purposes, the west thirty feet of said subdivision and the east thirty feet of said north-west quarter of said south-west quarter of said section five, in common with and by the other owners and occupants of property in said subdivision and said north-west quarter, and subject to the right of the owners and occupants of property in said north-west quarter and said Lehmer's Subdivision, to make railroad connections, with any track or tracks situated on said thirty foot strip, owned or operated by this defendant, and which should include the right of said owners and occupants to have a switch at every block on each side of the track or tracks laid and operated on said thirty foot strip. And for greater certainty as to the terms and provisions of said deed, this defendant refers to the original, or a copy thereof, to be produced on the hearing of this cause. And this defendant denies that the said deed or any of the conditions thereof is or are material to the subject-matter of this suit, or to the relief prayed herein.

This defendant, further answering, admits that the complainants have located their business on the said west half of said section 5, and that, in the course of their business, they or their predecessors in business have constructed on said west half a large number of valuable buildings, for the [fol. 1523] purpose of slaughtering and preparing for market cattle, sheep and hogs, and for the several industries connected therewith; but whether said complainants have expended, in the construction of said buildings and machinery and appurtenances, the amount alleged in said bill this defendant is not informed, save from the allegations of said bill. And this defendant further says, that said buildings are located on the said Packer's First and Third Additions and said Packer's subdivision. That the first of

said buildings was built about the year 1871, and that additional buildings have been added from time to time, as the business has increased. That, at the time said first building was built a connection was made with said defendant's tracks, and that the buildings used in said business have been so connected with said tracks continuously since that date. That, at the time said connection was made with this defendant's tracks, said complainants well know this defendant's course of business as to the use of its tracks, and that this defendant had never transported or allowed to be transported over its tracks cars of live-stock, except cars for delivery at its yards and cars in transit transferred from one road to another, as hereinbefore set forth. That said complainants well knew that the said branch tracks with which their said buildings were connected were, and had always been, used exclusively for the transportation of dead freight, and not of live-stock. That, ever since said first building was built, until said 25th day of April, 1891, [fol. 1524] the course of business between said complainants and this defendant has been uniform. That, during all that period, said complainants have received no live-stock over this defendant's tracks, but have received all their live-stock from its said yards. And that said tracks connecting with said buildings have been used exclusively for dead freight.

This defendant, further answering, admits that said complainants, in the prosecution of their business, received at said Union Stock Yards at their said slaughter houses, during the year 1890, a large number of cattle, sheep and hogs, and this defendant believes the number stated in said bill as so received to be correct. And this defendant says that all of said cattle, sheep and hogs were received from the yards of this defendant in accordance with the previous uniform course of business.

This defendant, further answering, admits that up to the time of the filing of said bill, and ever since, all the live-stock required by said complainants in the carrying on of their business has been received by them in the said yards of this defendant. But this defendant denies that complainants' reason for so receiving said stock was that they had no other convenient place at which to receive the same,

and the several railroads had provided no convenient yard or place for the delivery thereof other than the yards of this defendant.

This defendant, further answering, admits that said Armour & Company, and said Swift and Company, doing [fol. 1525] business in said city, are engaged in similar business to said complainants, and that on the 28th day of January, 1891, the said James D. Lehmer and wife made a conveyance purporting to convey to said Nelson Morris the premises and rights described in said bill as purchased by said complainants in connection with said Swift & Company and Nelson Morris & Company, from said Lehmer, and that said deed was duly recorded. But this defendant says that the record of Cook County show no conveyance of said premises and rights by said Morris, and this defendant has no knowledge or information as to the alleged interest of said complainants therein, says from the allegations of said bill, and, therefore, neither admits nor denies said allegations, but leaves the complainants to make such proof thereof as they may be advised is material or necessary.

This defendant, further answering, admits that said premises described in said deed to said Morris are immediately south of and adjacent to Forty-third street and north of and adjacent to Forty-fourth street. This defendant denies that its main tracks pass said premises; but this defendant admits that one of its said branch tracks, used exclusively for dead freight, as hereinbefore set forth, passes said premises on the north side thereof, and another of said branch tracks, also used exclusively for dead freight, passes east of said premises on said thirty-foot strip along the east side of said north-west quarter of said south-west [fol. 1526] quarter, so conveyed to this defendant by said Lehmer; and that at the time of said conveyance to said Morris, said premises were connected by a side-track with both of said branch tracks. And this defendant says that said side-track was laid by this defendant prior to said conveyance to said Morris, and without any knowledge or information that it was intended to locate thereon the said so-called Central Stock Yards.

This defendant, further answering, admits that subse-

quent to said conveyance to said Morris, certain cattle-pens with unloading tracks and chutes, were built on said premises. But this defendant denies that said so-called stock-yards are as convenient for the delivery and unloading of cars of live-stock as this defendant's said yards; but, on the contrary, this defendant says that cars of live-stock cannot be delivered over this defendant's tracks at said so-called yards without destroying the use of said branch tracks for the purposes for which they were intended, and for which they have been heretofore used, as hereinbefore set forth, and without materially obstructing the transportation of live stock to this defendant's said yards.

This defendant, further answering, admits that said premises have been connected with the slaughtering establishments of said complainants by means of a viaduct. This defendant further says that a viaduct has also been constructed connecting said premises with the viaduct there-
[fol. 1527] tofore constructed and in use which connects said complainants' said slaughtering establishments with this defendant's yards, as hereinbefore set forth. And this defendant admits that if the live-stock of said complainants should be delivered and unloaded at said so-called Central Stock Yards, and not at this defendant's yards, said complainants would not pay yardage to this defendant; but, whether by the proposed use for said Central Stock Yards of the railroad tracks and connections built by this defendant in connection with and to promote its own yards, said complainants' business would be carried on with greater convenience and economy, this defendant has no knowledge or information, save from the allegations of said bill. And this defendant admits, on information and belief, that said complainants have no other yard or place, belonging to them or under their control, where their live-stock can be delivered. But this defendant says that all the live-stock of said complainants, transported over any of the railroads entering Chicago, can be delivered and unloaded for said complainants at this defendant's yards in the same manner and on the same conditions as all the live-stock heretofore slaughtered by said complainants has been delivered, as hereinbefore set forth.

This defendant, further answering, admits that said

premises have been designated by said complainants and said Swift & Company and Armour & Company, as the "Central Stock Yards," but whether said premises are [fol. 1528] designed for the sole and exclusive use of said complainants and said Swift and Company and Armour & Company for the receipt of their own cattle, bought by them at points outside of Chicago, this defendant has no knowledge or information, save from the allegations of said bill, and, therefore, leaves complainants to make such proof of their allegations in that behalf as they may be advised is material.

This defendant, further answering, says that it denies that it was or is the duty of this defendant, under said contracts recited in said bill, or under any statute of Illinois, or under this defendant's charter, or otherwise, to receive for transportation to said so-called Central Stock Yards, any live-stock consigned to said complainants for delivery at said Central Yards, or to permit other railroad companies to use its tracks for the transportation and delivery at said Central Yards of any live-stock. And this defendant avers that it is not a common carrier of live stock, and that it has never held itself out to said complainants or the public as a common carrier of live stock. And this defendant denies that it has in any way interfered with any of the rights of ingress or egress, or rights of user in common with others of any of the streets, or alleys, or rights of way particularly described in said several deeds and contracts, or that any of said deeds or contracts gave to any of the parties thereto any right or interest in this defendant's railroad, or any right to other companies to use this defendant's railroad, or that said complainants have acquired [fol. 1529] any rights under said contracts, or any conveyances or agreements by any of the parties thereto, material to the subject-matter of their bill, or to the relief prayed therein. And this defendant avers that it was not the intention of said deeds and contracts to give to the owners of the premises, entitled to the benefit of the same, the right to demand the transportation of live stock to said premises by this defendant or over this defendant's railroad, or the tracks referred to therein, as appears both by the terms thereof and the practical, contemporaneous construction

given to the same by the parties thereto and their grantees ever since said deeds and contracts were made, and that no such right was claimed by said complainants or the owners of any of said premises until about the time of the filing of said bill. And this defendant avers that said several deeds and contracts were made by this defendant; as was well known to the parties thereto, to promote this defendant's stock yards and the business done at said yards, and not to destroy and impair the same in the manner claimed by said complainants. And this defendant denies that this defendant's charter, or any provision thereof, or any statute of Illinois has imposed the duty on this defendant, having established its said stock-yards and built its said railroad in connection therewith and to promote the same, to turn over to said complainant or to any connecting railroad companies, the use of its railroad tracks and facilities for the benefit of other stock-yards, or that it was the intention of this defendant's charter, or of any statute of Illinois, to compel the use of its railroad tracks and facilities by other companies for the purpose of destroying or impairing the use and value of its said stock-yards.

[fol. 1530] This defendant, further answering, says that it admits that on the 27th day of April, 1891, the Atchison, Topeka and Santa Fé Railway Company, by its agents, was about to enter upon the railroad of this defendant with a train of cars loaded with live-stock, for the purpose of hauling the same over this defendant's railroad for delivery to said complainants at said premises described in said bill as the Central Stock Yards; that the persons in charge of said train were forbidden by the officers and agents of this defendant to enter upon or use its said railroad for the delivery of said cars of live-stock at said Central Stock Yards; that it has notified all connecting railroads that no cars of live-stock consigned for delivery at said so-called Central Stock Yards will be allowed to pass over its tracks for delivery at said Central Yards, and that no live-stock can be delivered over this defendant's said tracks, except upon and through this defendant's said yards. But this defendant denies that it insists or has insisted, that it has any legal right to compel the complainants to cause all shipments of live-stock consigned for delivery at said Central

Stock Yards to be delivered at this defendant's said stock-yards; or that this defendant claims any right in the premises, except the right to control the use of its own railroad tracks and not to permit the same to be used by other companies in the interest of the complainants or any other person or corporation for the establishment and maintenance of other stock-yards, or otherwise, to the injury of [fol. 1531] this defendant's said yards.

This defendant, further answering, admits that it claims the right to require the payment of a yardage charge for all live-stock received and unloaded at its said stock-yards. And this defendant says that by section 2 of its charter this defendant was expressly authorized to make and require to be paid such reasonable charges as might be deemed just and proper for the care, subsistence and handling of live-stock received and unloaded at its said yards. That it was also expressly provided by section 3 of said charter that all fees and charges for everything done by reason of the powers given by said charter should be subject to any general law that might be passed by the legislature of Illinois in reference to stock-yards or railroads, and that this defendant is advised that under said provision, all charges made by it must be reasonable, and that in the exercise of the power conferred by said charter it claims the right to charge for all live-stock delivered in its said yards reasonable yardage charges; and that this defendant has fixed as such charges for cattle, sheep, hogs and calves the several charges per head mentioned in said bill, and that said charges are reasonable.

This defendant further answering, admits that no deliveries can be made to the said so-called Central Stock Yards of live stock purchased outside the City of Chicago consigned to said Complainants direct to said yards over [fol. 1532] railroad tracks, except over the railroad tracks of this defendant, which are used by this defendant for the purposes of its own yards, but this defendant says that deliveries can be made of all live stock consigned to the said complainants over the several railroads running to the city of Chicago, at such places as may be provided for that purpose by the railroad companies operating the same, and that said complainants can transfer or convey such live

stock from the points at which the same may be delivered by such railroad companies in the city of Chicago, to said Central Stock Yards without using the tracks of this defendant.

And this defendant denies that unless the live stock so purchased outside of the city of Chicago can be shipped to the complainants over this defendant's tracks, and delivered to them at said Central Yards, the business of said complainants will be irreparably injured; but, on the contrary, this defendant says said complainants can continue to carry on their said business in the same manner and with the same profit as the same has heretofore been carried on by them. That the only advantage to said complainants' business in compelling this defendant to allow live-stock to be hauled over its tracks for delivery at said Central Yards would be to relieve said complainants of the payment of said yardage charge in place of which they would pay a charge for the use of this defendant's tracks, and their proportion of the cost of maintaining said Central Yards; and that since said demand by the complainants on said [fol. 1533] 25th day of April, said complainants have made certain payments of yardage to this defendant under protest, claiming the right to recover the same back if this defendant had no legal right thereto.

And this defendant submits to this Honorable Court that the several matters complained of in said complainants' bill are matters which may be tried and determined at law, and with respect to which the complainants are not entitled to any relief from a court of equity; and this defendant prays that it may have the same benefit of this defense as if it had demurred to the complainants' bill.

And this defendant denies all and all manner of unlawful combination and confederacy, wherewith it is by the said bill charged, without this that there is any matter, cause or thing in the complainants, said bill of complaint contained material or necessary for this defendant to make answer unto and not herein and hereby well and sufficiently answered, confessed, traversed and avoided or denied, is true to the knowledge or belief of this defendant; all which matters and things this defendant is ready and willing to aver, maintain and prove as this honorable court shall

direct; and prays to be hence dismissed with its reasonable costs and charges in this behalf most wrongfully sustained.

The Union Stock Yard & Transit Company of Chicago, by John B. Sherman, Its Vice President and General Manager.

Herrick & Allen, Winston & Meagher, Defendant's Solicitors. W. C. Coudy, of Counsel.

[fol. 1534] State of Illinois,
County of Cook, ss:

John B. Sherman, being first duly sworn, on oath says that he is the vice-president, and general manager of the Union Stock Yard and Transit Company; that he was one of the original stockholders of said company and has been connected with said company as an officer since June 4, 1867; that he has read the foregoing answer of said company, and knows the contents thereof, and that the matters and things therein stated are true of his own knowledge, except the matters stated on information and belief, and as to those matters he believes them to be true.

(Signed) John B. Sherman.

Subscribed and sworn to before me this 21st day of May, A.D. 1891. (Signed) Charles Jameson, Notary Public. (Notarial Seal). Charles Jameson, Cook County, Ill. Attached.

[fol. 1535] Articles of Agreement, made this twentieth day of September, A.D. 1890, between The Union Stock Yard and Transit Company of Chicago, party of the first part, and the

Baltimore & Ohio Railroad Co.,
Chicago & Alton Railroad Co.,
Chicago & Erie Railroad Co. (Late Chicago & Atlantic Ry.),
Chicago, Burlington & Quincy Railroad Co.,
Chicago & Eastern Illinois Railroad Co.,
Chicago & Grand Trunk Railway,

Chicago, Milwaukee & St. Paul Railway Co.,
Chicago & North-Western Railway Co.,
Chicago, Rock Island & Pacific Railway Co.,
Atchison, Topeka & Santa Fe Railroad Co.,
Pittsburgh, Cincinnati, Chicago & St. Louis Railway Co.,
Chicago, St. Louis & Kansas City Railroad Co.,
Illinois Central Railroad Co.,
Lake Shore & Michigan Southern Railway Co.,
Louisville, New Albany & Chicago Railroad Co.,
Michigan Central Railroad Co.,
New York, Chicago & St. Louis Railroad Co.,
Pennsylvania Company, operating the
Pittsburgh, Ft. Wayne & Chicago Railroad Co.,
Wabash Railroad Co.,
Wisconsin Central Company,
[fol. 1536] The Chicago & Northern Pacific Railroad Co., and the
Belt Railway of Chicago,

constituting the Chicago Railway Transfer Association, parties of the second part.

Whereas, said party of the first part desires to afford the persons and corporations doing business along and over its railway tracks and right of way of the Chicago & Indiana State Line Railway Company with the best possible facilities and

Whereas, said parties of the second part have considered it for their mutual advantage to form an association for the purpose of receiving and delivering dead freight to and from the industries located along said tracks and rights of way, and for that purpose said second parties have entered into an agreement with each other and have formed a voluntary association, known as the Chicago Railway Transfer Association, which said railway transfer association has been made the agent of said second parties for the purpose aforesaid, and the officers, agents and employes of said association, now or hereafter employed, the agents and servants of the said second parties, and

Whereas, said second parties have severally requested said first party to recognize and deal with said Chicago Railway Transfer Association, its officers and employes,

as the representatives, officers and employes of said second [fol. 1537] parties, for the purposes aforesaid, and have agreed to become responsible for all acts and doings of said association, its officers, agents and employes:

Now, Therefore, in consideration of one dollar, the receipt whereof is hereby acknowledged, and in consideration of the premises and the agreements of said second parties hereinafter named,

These Presents Witnesseth: 1st. Said first party agrees to allow said second parties, acting by and through said association, its officers and servants, the right to enter upon and use its, said first party's railway tracks and right of way and the tracks and right of way of the Chicago and Indiana State Line Railway Company, for the purpose of receiving and delivering dead freight to and from all industries located along said tracks and rights of way, subject to such rules and regulations of said first party as have or hereafter may be made for the use of the tracks and right of way of said first party, and the tracks and right of way of the said Chicago & Indiana State Line Railway Company, and the running of trains thereon; and also subject to existing arrangements between said first party and the Illinois Steel Co. for the transportation of ore and other materials between said Illinois Steel Company's works at South Chicago and Archer Avenue.

2nd. Said first party agrees to assign to said railway transfer association, representing said second parties, grounds convenient for the use, by said association, for main outside office, round-house, coal-houses and water-[fol. 1538] tanks.

3rd. In consideration of the foregoing agreements on the part of said first party, and in consideration of one dollar, paid by said first party to each of said second parties, the receipt whereof is hereby acknowledged by said second parties, said second parties agree, during the existence of this contract, to keep and maintain engines and men sufficient for the proper receipt and delivery of all dead-freight shipped by, or consigned to, all persons and corporations located along the tracks and rights of way of said first party and said Chicago & Indiana State Line Railway Co., said engines and men to be under the direct

control of the officers of said Chicago Railway Transfer Association.

4th. Said second parties hereby jointly and severally agree to be responsible for all acts and doings of the officers, agents and employes of said association, and said parties of the second part further jointly and severally agree to indemnify and save harmless said first party against and from any and all damages, or claims for damages, judgments, decrees, costs and expenses of the same, including attorneys' and solicitor's fees, which said first party may suffer, or which may be recovered or obtained against said first party for, or by reason of, any act or acts of any officer, agent or servant of said Chicago Railway Transfer Association.

5th. This agreement may be terminated by either of the parties hereto giving thirty (30) days written notice, [fol. 1539] but should either or any of the said second parties withdraw from this agreement, such withdrawal shall not affect the validity or continuance of this agreement between the other parties hereto, and each and all of said parties of the second part shall continue liable for all damages, claims for damages, judgments, decrees, costs and expenses of the same, including attorney's and solicitor's fees, which said first party may thereafter suffer, or which may be recovered or obtained against said first party, from, by reason of, or growing out of, or resulting from, any act or acts of said transfer association, its officers, agents and servants, previous to such withdrawal.

In witness whereof the parties hereto have caused these presents to be executed by their respective general managers.

(Signed) The Union Stock Yard & Transit Company, of Chicago, by John B. Sherman, General Manager.

I, John E. Conroy, Clerk of the Circuit Court of Cook County, and the keeper of records and files thereof, in the State aforesaid, do hereby certify the above and foregoing to be a true, perfect and complete copy of a certain answer filed in this office on the 22nd. Day of May A. D. 1891 in a certain cause lately pending in said Court, on the Chan-

cery side thereof, between Nelson Morris et al, Complainant and The Union Stock Yard & Transit Co., Defendant.

In Witness Whereof, I have hereunto set my hand and affixed the Seal of said Court, at Chicago, in said County, this 18th day of June, 1938.

John E. Conroy, Clerk. (Seal.)

[fol. 1543] Copy

In the Circuit Court of Cook County. April Term, 1891

Swift and Company

vs.

The Union Stock Yard and Transit Company

State of Illinois,
County of Cook, ss.:

J. D. Besler being duly sworn says that he is the General Superintendent of the Chicago, Burlington & Quincy Railroad Company, said Company, in connection with the Hannibal & St. Joseph Railroad Company owning and operating a railroad between Kansas City in the State of Missouri and the City of Chicago in the State of Illinois.

Affiant further says that the road of said Company connects with the road and tracks of the Union Stock Yard and Transit Company North of Brighton in said County of Cook. That on the 25th day of April last past said Companies received at Kansas City aforesaid, six cars of livestock containing ninety-eight head of cattle billed to Swift and Company at Forty Third and Justine Streets, Chicago, Illinois, and issued to said Swift and Company a bill of lading which is hereto attached and made a part of this affidavit.

Affiant further says that he is advised and believes that said cars containing said stock were received at its connection with the tracks and road of the said Union Stock Yard and Transit Company at or North of Brighton afore- [fol. 1544] said at eleven o'clock P. M. on the night of April 26th, 1891.

Affiant further says that for several years prior to said 26th day of April it had been the custom of said Chicago, Burlington & Quincy Railroad Company to deliver all stock consigned over its road to said Swift and Company at the Union Stock Yards on the tracks of said Union Stock Yard and Transit Company at or North of Brighton aforesaid Chicago, Burlington & Quincy Company, and that such delivery was made by said Chicago, Burlington & Quincy Company running its own cars or trains of cars, and furnishing its own motive power over said tracks.

Affiant further says that the Central Yards of said Swift and Company were and are located upon tracks connected with the tracks of said Union Stock Yard and Transit Company.

Affiant further says that upon the arrival of said cars at said point of junction, the agents and employees in charge of said train of said Chicago, Burlington & Quincy Railroad Company containing the said six cars consigned to Swift and Company delivered the same at the Union Stock Yards in the usual manner as hereinbefore described.

That on or about the 25th day of April 1891, this affiant received a letter from the General Superintendent of said defendant, of which the following is a copy:

"Union Stock Yards,
Chicago, April 25th 1891.

J. D. Besler, General Supt. C. B. & Q. R. R. Co., City.

DEAR SIR:

By order of the Board of Directors of the Union Stock Yard and Transit Company of Chicago, I am instructed [fol. 1545] to notify your company, as well as all other companies using the tracks of this company, and delivering live stock at its yards that no cars containing live stock consigned to other yards owned by any individuals or other companies in Chicago will be permitted to be hauled over the tracks of this company or through its yards. This notice is not given on account of any apprehension that your company contemplates any violation of contract with this company or any act which may be contrary to our

charter, but simply to apprise your shippers through you what our rights and position are.

Respectfully, (Signed) James H. Ashby, General Superintendent."

Affiant further says that from and after said 25th day of April and the receipt of the letter above referred to said Union Stock Yard and Transit Company has refused and still continues to refuse to permit the Chicago, Burlington & Quincy Railroad Company to deliver any live stock consigned to the said complainant, or to any other party, at their private yards or premises located upon the tracks of said Union Stock Yard and Transit Company, although the said Chicago, Burlington & Quincy Railroad Company could deliver stock consigned to said complainant at the Central Stock Yards if it was allowed to use tracks of the Union Stock Yards and Transit Company for that purpose.

(Signed) J. D. Besler, Gen. Supt. C. B. & Q. R. R.

State of Illinois,
County of Cook, ss.:

Personally appeared before me a Notary Public in and for said County and State aforesaid, J. D. Besler, who [fol. 1546] being duly sworn on oath says that he has read the foregoing affidavit by him subscribed, and that the facts stated therein are true to the best of his knowledge, information and belief.

Witness my hand and Notarial seal this 5th day of June 1891. (Signed) Chester M. Dawes, Notary Public. (Seal.)

June 9th, 1891.

[fol. 1547] Hannibal & St. Joseph Railroad

Bill of Lading

K. CS. Yds Station, April 25, 1891.

Received from Swift and Company, in apparent good order, by the Hannibal & St. Joseph Railroad, the following described property (contents and value unknown), consigned as marked and numbered in the margin, upon the terms and conditions hereinafter contained, and which are hereby made a part of this agreement; also subject to the conditions and regulations of the published tariffs in use by said Railroad Company, to be transported over the line of this Road to Chicago Station, and there delivered in like good order to the consignee, or owner, at said station or to such Company or Carriers (if the same are to be forwarded beyond said station), whose line may be considered a part of the route to the place of destination of said party—it being distinctly understood and agreed that the responsibility of this Company as a common carrier shall cease at the station where delivered or tendered to such consignee or owner, or Company or carrier; but it guarantees that the rate of freight for the transportation of said property shall not exceed rates as specified below, and charges advanced by this Company, upon the following condition:

The consignee or owner is to pay freight or charges as per specified rates upon the property as it arrives.

Freight carried by the Company must be removed from the station during business hours, on the day of its arrival, or it will be stored at the consignee's or owner's risk and expense, and in the event of its destruction or damage from any cause, while in the depots of the Company, either in transit or at the terminal point, it is agreed that the Company shall not be liable except as warehousemen.

It is agreed, and is a part of the consideration of this agreement, that the Company shall not be responsible for the leakage of Liquors or liquids of any kinds; breakage of Glass or Queensware; Injury or breakage of Castings, Carriages, Furniture, Glass Show Cases, Hollow Ware, Looking Glasses, Machinery, Musical Instruments of any

kind, packages of Eggs, or Picture Frames; loss of weight of Coffee or Grain in bags, or Rice in tierces; nor for any decay of perishable articles; nor for damage arising from effects of heat or cold; nor for loss of Nuts in bags, or Lemons, or Oranges in boxes, unless covered with canvas; nor for loss or damage of Hay, Hemp, Cotton, or any article, the bulk of which renders it necessary to transport in open cars, unless it can be shown that such loss or damage occurred through the negligence or default of the agents of this Company.

Goods in Bond subject to Custom House Regulations and Expenses.

It is agreed that the Company shall not be responsible for accidents or delays from unavoidable causes. The responsibility, of this Company, as carriers is to terminate on the delivery or tender of the freight as per this Bill of Lading, to the Company whose line may be considered a part of the route to the place of destination of said property. In the event of the loss of any property for which the carriers may be responsible under this Bill of Lading, the value or cost of the same at the point and time of shipment is to govern in the settlement for the same, except the value of the property has been agreed upon with the shipper, or is determined by the classification upon which the rates are based. And in case of loss or damage of any of the property named in this Bill of Lading, for which this Company may be liable, it is agreed and understood that this Company may have the benefit of any Insurance effected by or on account of the owner of said property.

Erasures or Alterations Are Not to be Made on This Receipt

NOTE:—If Agents are required to issue more than one Bill of Lading for same property, they must endorse them Original or Duplicate, as the case may be.

IN THE CIRCUIT COURT OF COOK COUNTY, APRIL TERM, A.D. 1891

In Chancery

PHILIP D. ARMOUR, ET AL.,

vs.

UNION STOCK YARD & TRANSIT CO.

STATE OF ILLINOIS,
County of Cook, ss:

A. J. Earling, being duly sworn, deposes and says that he is and has been for the year last past, General Manager of the Chicago, Milwaukee & St. Paul Railway Company; that said Railway Company owns and operates several lines extending westward from the City of Chicago through the State of Illinois, and to and across other States in the West and North-west; and also has a direct line from Chicago to Kansas City; that for several years past it has had and now has a connection with the railroad of said defendant in the City of Chicago at or near Brighton.

Deponent further states that on the twenty-fifth day of April, 1891, he was advised by reports of freight and live-stock in transit, that ten (10) cars of live-stock containing one hundred and sixty (160) head of cattle, were in transit between Kansas City and Chicago, consigned to Armour and Company.

Deponent further says that on the following day he

received, by due course of mail, a letter of which the following is a copy:

[fol. 1552] Union Stock Yard & Transit Company, of Chicago

Union Stock Yards, Chicago, 4-25-91.

A. J. Earling, Gen. Mngr. C.M. & St. P. R.R., City.

Dear Sir:

By order of the Board of Directors of the Union Stock Yard and Transit Company of Chicago, I am instructed to notify your Company, as well as all other Companies using the tracks of this Company and delivering live-stock at its yards, that no cars containing live-stock consigned to other yards owned by any individuals or other Companies in Chicago, will be permitted to be hauled over the tracks of this Company or through its yards.

This notice is not given on account of any apprehension that your Company contemplates any violation of the contract with this Company, or any act which may be contrary to our charter, but simply apprise our shippers through you what our rights and position are.

Respectfully, (Signed) James H. Ashley, General Superintendent.

Deponent further says that said ten (10) cars loaded with cattle as aforesaid, were received by the said Chicago, Milwaukee and St. Paul Railway Company at Kansas City on the 25th day of April 1891 from Armour & Company, and consigned to Armour & Company, Central Stock Yards, 43rd & Justine Streets, Chicago, Ill. and the deponent attaches hereto the Bill of Lading issued for said cattle, marked "Exhibit A."

[fol. 1553] Deponent further says that on the receipt of said notice from the General Superintendent of the defendant company he notified the agents of the said Chicago, Milwaukee & St. Paul Railway Company to deliver said cars as consigned to the said Armour & Company at said Central Stock Yards, if said defendant would permit them so to do; and if said defendant refused to permit such

delivery, then to deliver such cattle at the yards of said Union Stock Yard and Transit Company, for the reason that said Chicago, Milwaukee & St. Paul Railway Company had no yards of its own at which such cattle could be delivered, and that as said carrier was required to unload said cattle within a given time after their arrival, as this deponent is advised and believes.

Deponent further says that said Central Stock Yards are located upon the railroad tracks of the said defendant, and that said stock could and would have been delivered at said Central Stock Yards had not said defendant company peremptorily refused to permit such delivery, and further says that such delivery was refused and prohibited in accordance with said notice of said defendant of April 25th, and that thereupon said stock was delivered at the yards of the defendant.

Deponent further says that in answer to a letter written by said Armour & Company to the said Chicago, Milwaukee & St. Paul Railway Company relative to the shipment of said cattle and their non-delivery as consigned, Mr. E. P. Ripley, Third Vice-President of said Railway Company, wrote Messrs Armour & Company a letter explanatory thereof which is hereto attached and marked "Exhibit B." [fol. 1554] Deponent further states that said notice so served upon ~~him~~ as General Manager of said Railway Company has not been revoked, and as this deponent is advised, said defendant refuses to permit any cars or any live-stock to be transported over the lines of the defendant for delivery upon any premises or at any yards other than the yards of said defendant.

(Signed) A. J. Earling.

No. .....

Kansas City 4/25 1891.

Received from Armour & Co. in apparent good order by the Chicago, Milwaukee & St. Paul Railway Company, the following described packages, marked and numbered as per margin, subject to the conditions and regulations of the published tariff of said Company, to be transported over the line of this Railway to —— and delivered after Payment of freight in like good order to —— a company or carrier, (if the same are to be forwarded beyond the lines of the Company's road) to be carried to the place of destination; it being expressly agreed that the responsibility of this Company shall cease at this Company's depot, at which the same are to be delivered to such carrier; but this Company guarantees that the rate of freight for the transportation of said packages shall not exceed rates noted in margin of this Bill of Lading and charges advanced by this Company: Provided Contents of Packages Are Correctly Stated in Railroad Receipts (Original and Duplicate,) on Which This Bill of Lading Is Issued, subject to the following conditions:

This Company shall not be responsible for the loss of packages the contents of which are unknown; for the leak-

age of any kind of Liquids, breakage of any kind of Glass, carboys of Acid or articles packed in Glass, Stoves or Stove Furniture, Castings, Machinery, Carriages, Furniture, Musical Instruments of any kind, packages of Eggs, or for loss or damage on Hay, Hemp, Cotton, or any article whose bulk renders it necessary to transport on open cars, or for damage to perishable property of any kind, occasioned by delays from any cause, or change of weather, nor for any loss of weight of Grain, or Coffee in bags, or Rice in Tierces, nor for loss of Nuts in bags, or Lemons or Oranges in boxes, not covered by canvas, or for damage or loss by fire, or for loss or damage on the lakes and rivers unless it can be shown that such damage or loss occurred through the negligence or default of the Agents of the Company. It is further especially agreed that for all loss and damage occurring in the transit of said packages, the legal remedy shall be against the particular carrier or forwarder only in whose custody the said packages may actually be at the time of the happening thereof, it being understood that the said Chicago, Milwaukee & St. Paul Railway Company assumes no other responsibility for their safe carriage or safety than may be incurred on its own road. All packages subject to charge for Cooperage if necessary.

All car load freight shall be subject to a minimum charge for trackage and rental of $1.00 per car for each 24 hours detention or fractional part thereof, after the expiration of 48 hours from its arrival at destination.

[fol. 1557] "EXHIBIT B"

Copy

Chicago, Milwaukee & St. Paul Railway

Office of the Third Vice-President

Chicago, April 28th, 1891.

Messrs. Armour & Co., City.

DEAR SIR:

Answering your letter of 26th, wherein you state that you ordered on Saturday 10 carloads cattle consigned to Central Stock Yards, 43rd and Justin streets,—that this consignment was accepted by us and receipt given for delivery accordingly,—that you are advised that the said cattle have been delivered to the Union Stock Yards chutes,—that you desire us to take notice that this entails

upon you a cost of 25 cents per head for yardage which would have been avoided had cars been delivered as consigned,—and asking us to explain why the cattle were not delivered as consigned I beg to attach copy of letter received on Saturday from the General Superintendent of the Union Stock Yards & Transit Co., notifying us that no cars containing livestock consigned to other yards owned by individuals or companies in Chicago will be permitted to be hauled over the tracks of the U.S.Y. & T. Co., or through its yards. I think this sufficiently answers the question contained in your letter. I may say, however, in addition, that the Superintendent and yardmaster of the U.S.Y. & T. Co., stopped the 10 cars referred to at Brighton Park Sunday night, and would not let them go over their tracks unless unloaded in the U.S.Y. chutes,—which was done in order that the stock might not be injured by being kept in the cars.

Yours truly, (Signed) E. P. Ripley, Third Vice-President.

June 9th, 1891.

[fol. 1560] Copy

IN THE CIRCUIT COURT OF COOK COUNTY, APRIL TERM, 1891

NELSON MORRIS & Co.

vs.

THE UNION STOCK YARD AND TRANSIT COMPANY

STATE OF ILLINOIS,
County of Cook, ss:

J. D. Springer being first duly sworn deposes and says that he is the third Vice President of the Atchison, Topeka & Santa Fe Railroad Company, said company leasing and operating a railroad between Kansas City in the State of Missouri, and the City of Chicago in the State of Illinois.

Said deponent further says that the road of said company connects with the road and tracks of the Union Stock Yard and Transit Company at or near 47th Street in the said County of Cook; that on the 25th day of April last past said company received at Kansas City aforesaid five cars of cattle to be transported from Kansas City and delivered to Nelson Morris & Co. at the Central Stock Yards located at 43rd and Justine Streets, in the City of Chicago, and issued to said Nelson Morris & Co., stock contracts.

[fol. 1561] Affiant further says that he is advised and believes that said cars containing said stock were received at its connection with the tracks and road of said Union Stock Yard and Transit Company at or near 47th Street on the morning of April 28th, 1891.

Said affiant further says that for several years prior to said 28th day of April it had been the custom of said Atchison, Topeka & Santa Fe Railroad Company to deliver all stock consigned over its road to said Nelson Morris &

Co. on the tracks of the said Union Stock Yard & Transit Company connecting with the tracks of the Atchison, Topeka & Santa Fe Railroad Company in said County of Cook, and that such delivery was made by said Atchison, Topeka & Santa Fe Railroad Company running its own cars or trains of cars and furnishing its own motive power over said tracks under a running or traffic arrangement with said Union Stock Yard and Transit Company.

Affiant further says that said Central Yards of said Nelson Morris & Co. were and are located upon the tracks of said Union Stock Yard and Transit Company so connected with the tracks of the Atchison, Topeka & Santa Fe Railroad Company, and that delivery could have been made at said last named yards with the same facility as at any other point upon the tracks of said Union Stock Yard and Transit Company.

[fol. 1562] Affiant further says that upon the arrival of said cars at said point of junction, the agents and employees in charge of said train of said Atchison, Topeka & Santa Fe Railroad Company, containing said five cars consigned to Nelson, Morris & Co. were refused permission to run said cars or train upon said tracks, and were not permitted to use the tracks of said Union Stock Yard and Transit Company for the delivery of said cars to said Nelson Morris & Co., as directed in said bill of lading, although the Atchison, Topeka & Santa Fe Railroad Company was ready and willing to make such delivery as directed by said bill of lading.

That on the 25th day of April, 1891, this deponent received a letter from the General Superintendent of said defendant, of which the following is a copy:

"Union Stock Yards,
Chicago, April 25, 1891.

DEAR SIR:

By order of the Board of Directors of the Union Stock Yard and Transit Company of Chicago, I am instructed to notify your company, as well as all other companies using the tracks of this company, and delivering live stock at its yards that no cars containing live stock consigned to other yards owned by any individuals or other companies in [fol. 1563] Chicago will be permitted to be hauled over the

tracks of this company or through its yards. This notice is not given on account of any apprehension that your company contemplates any violation of contract with this company or any act which may be contrary to our charter, but simply to apprise your shippers through you what our rights and position are.

Respectfully, (Signed) James H. Ashby, General Superintendent."

Affiant further says that from and after said 25th day of April, and the receipt of the letter above referred to, said Union Stock Yard and Transit Company has refused and still continues to refuse to permit the said Atchison, Topeka & Santa Fe Railroad Company to deliver any live stock consigned to the said complainant or to any other party at their private yards or premises located upon the tracks of said Union Stock Yard and Transit Company, although the said Atchison, Topeka & Santa Fe Railroad Company is ready and willing to and could, except for such order and such refusal of said Stock Yard Company, deliver all stock consigned to the complainant at its private yards or premises known as the Central Stock Yards.

Affiant further says that the said Union Stock Yard and Transit Company also refuses to receive from said Atchison, Topeka & Santa Fe Railroad Company any stock con- [fol. 1564] signed to Nelson Morris & Co., Chicago, but insists and demands that all live stock consigned to said Nelson Morris & Co. at Chicago, shall be delivered at the yards of said Union Stock Yard and Transit Company and not at any other place located upon the tracks of said last named company, and refuses to recive any and all live stock upon any of its tracks in the City of Chicago, Illinois, unless the same is specially consigned to said Union Stock Yard and Transit Company's yards.

(Signed) J. D. Springer.

[fol. 1574] Food Investigation

Report of the Federal Trade Commission

On the Meat-Packing Industry

Part III

Methods of the Five Packers in Controlling

The Meat-Packing Industry

June 28, 1919

Washington
Government Printing Office
1919

[fol. 1575] The Chicago Stockyards

Section 14.—Conclusions.

Judging from the facts in the foregoing sections, there can be no doubt that in many sections of the country large

rendering concerns, either singly or in combination, have used trade practices which are not defensible. The chief offenders have been the concerns in which the large packing companies are interested, especially Swift & Co., Morris & Co., and Wilson & Co., Inc., and, in addition to the packers, the American Agricultural Chemical Co.

It has been shown that these companies have used certain methods mentioned in the introductory section of this chapter, two of which stand out more prominently than any of the others; namely, fixing the channels of trade by means of a division of customers, and bidding up prices of raw material, not on account of the market value, but with the obvious intent of forcing competitors out of business. The intent in such cases is made all the more palpable by the fact that as soon as the competitor was eliminated, prices were again depressed. Apparently with the same objective in view, it has been shown that combinations or individuals have practiced misrepresentation of competitors and enticement of their employees, have persuaded customers to break their contract with competitors, have practiced espionage, paid bonuses to take away competitors' trade, and have established bogus competitors.

With such practices as these brought to bear upon them, the small rendering concerns in many cases have found it impossible to continue in business and have failed or have been forced to sell to those who practiced these methods against them. In other cases the independent competitor has cast in his lot with his oppressors.

Chapter V.—The Chicago Stockyards

Section 1.—General Statement

When the Commision began the inquiry into the Chicago stockyards for the purpose of ascertaining, among other things, in whom the ownership and control of these yards was vested, it was found that while the operations of the yards were carried on by an Illinois corporation the ownership of the yards was vested in a New Jersey corporation. It was also developed that a Maine company, though owning less than one-fourth of the stock of the New Jersey company, nevertheless, by virtue of certain contractual rela-

tions, is entitled to receive all of the surplus earnings of the New Jersey company and of its subsidiary companies over a certain per cent. Although these contractual relations do not carry any ownership control of the properties of the New Jersey company, this Maine company exercises a practical control over the affairs of the New Jersey company, because of the fact that the stockholders of the Maine company attained at one time a majority representation in its management, which they have continued to maintain. [fol. 1576] The Commission's inquiry developed that the following companies were closely interrelated and subject to the control of the Chicago Stock Yards Co. of Maine (hereinafter designated the Maine company).

(1) The Chicago Junction Railways & Union Stock Yards Co. of New Jersey (hereinafter designated the New Jersey company).

(2) The Union Stock Yard & Transit Co. of Illinois (hereinafter designated the Yards company).

(3) The Chicago Junction Railway Co. of Illinois (hereinafter designated the Railway company).

(4) The Chicago Junction Railroad Co. of Illinois.

(5) The Central Manufacturing District of Illinois.

(6) The Chicago River & Indiana Railroad Co. of Illinois.

The Chicago Junction Railways & Union Stock Yards Co. of New Jersey was incorporated in 1890. It was formed as an investment company, for the purpose of acquiring the stock of the Union Stock Yard & Transit Co. of Illinois. Although it soon secured all but 2 per cent of this stock, it did not succeed in acquiring the entire issue till 1913.

The Union Stock Yard & Transit Co. of Illinois was incorporated in 1865. This corporation is actually an operating company, engaged in furnishing facilities for the marketing of live stock at the great central market in Chicago. In receipts of live stock and of earnings realized it ranks as the most important stock yards in this country.

The Chicago Junction Railway Co. was organized in 1898 for the purpose of acting as an operating company to furnish transportation and switching facilities in conjunction with the operations of the stockyards, and for the plants located in the vicinity of the stockyards. The facilities of

this company, however, have been continuously extended and, at the present time, the volume of the services which it performs in its daily operations have reached such a magnitude in the aggregate that the company is readily recognized as one of the most important links of the great railway systems centering in Chicago. The stock of this company is also owned by the New Jersey company.

The Chicago Junction Railroad Co. is the name given to the elevated railway line which provides for the transportation of passengers within the stock yards. The capital stock of this company is also entirely owned by the New Jersey Company.

The Central Manufacturing District, ownership of which is evidenced by certificates of beneficial interest held by the New Jersey company was organized (by that company) to take over investments which the New Jersey company had made in land adjacent to the Union Stock Yards of Chicago. It operates primarily as a land development company and owns about 375 acres of what is considered among the best land now available as sites for manufacturing enterprises in [fol. 1577] Chicago. There have already been located on land developed by this company some of Chicago's most important establishments. This investment is rated at a value far in excess of the value at which it is carried on the books of the New Jersey company, and there are already signs that in the future the annual income of the New Jersey company will be greatly increased by earnings from this source.

The Chicago River & Indiana Railroad Co., one-half of the stock of which is owned by the New Jersey company, the other half being owned by Richard Fitzgerald, president of the Chicago Junction Railway Co., is a small railway line operating in Chicago. The New Jersey company has materially assisted this company in obtaining funds in the past and at the present time is the guarantor of bonds which have been issued by the company.

In addition to the investments described above, the New Jersey company has other investments, of less importance, which will be referred to in the main body of this report. The control and surplus usufruct of all these properties, the value of which in 1913, it has been said, was in excess of $50,000,000, was acquired by the promoters of the Maine

company through the investment of $1,000,000. The conditions which made possible the acquisition of the control of these properties by the Maine company did not necessitate the actual investment of this $1,000,000, this sum having been provided, as one of the promoters of that company has stated, for its "moral effect."

A schedule was sent by the Commission to the Chicago Stock Yards Co. of Maine requesting information concerning the ownership of its stock. From the reply which was received it was learned that 79,990 of the 80,000 shares of stock issued and outstanding, were held in the name of F. R. Pegram, the treasurer of the company, as trustee. The other 10 shares were held in the names of the directors of the company, who were found to be employees of the Corporation Trust Co., of Portland, Me.

F. R. Pegram, who was later found to be an employee in the office of F. H. Prince & Co. of Boston, Mass., in reply to the Commission's inquiry, asserted that his books did not show the names of the real owners of the stock for whom he was acting as trustee.

Further inquiry by the Commission showed that Pegram was acting as trustee under a provision of the by-laws whereby "bearer warrants" had been issued in exchange for certificates of stock deposited with him. These certificates of stock upon deposit ceased to be a necessary instrumentality for the exercise of voting privileges and the securing of dividends declared by the company.

The bearer warrants were an ingenious device for the concealment of the names of the real owners of the Chicago Stock Yards Co. of Maine, and the Commission therefore conducted an intensive study of this company and the conditions which had brought about its formation. From the information obtained in the course of this study it appears: [fol. 1578] That the formation of the Chicago Stock Yards Co. of Maine in 1911, by F. H. Prince, of Boston, Mass., and J. O. Armour, of Chicago, Ill., marked the successful execution of the plan of these men to acquire the control of the Union Stock Yards of Chicago, which since 1890 had been held by the New Jersey company, and to secure for themselves the large surpluses of the various companies—surpluses then accrued but partly undisclosed, and anticipated surpluses of the future.

That Prince and Armour were enabled successfully to gain advantages at the expense of the stockholders of the New Jersey company because of favorable conditions created by demands for a share in the earnings of the stockyards of Chicago which were made upon the New Jersey company after 1906 by the three big packers, Armour, Swift, and Morris. Demands of a similar character had been advanced and only temporarily satisfied in 1891. At that time the directors of the New Jersey company, after threats which these three big packers made of removing their plants from the yards at Chicago, gave them $3,000,000 as an inducement to remain, and by so doing immediately subjected the company to legal attacks from dissenting stockholders and other packers who had not shared in the payment of the bonus. The renewed demand of the three big packers for participation in the earnings of the Chicago stockyards in 1906 caused an uncertainty in the minds of the stockholders as to the future earnings of the company, and thus brought about the conditions which inured to the benefit of those seeking control.

That in addition to Armour's share in the stock of the Maine company, there are indications that the demands of the packers for a share in the earnings of the stockyards have been, at least partly, satisfied by the receipt of certain bonds which had formerly been held in the treasury of the Maine company.

That the New Jersey company and the Maine company both represent financial superstructures which absorb the large earnings of the underlying operating companies. The income thus absorbed is distributed in the form of interest and dividends to the holders of bonds and stocks of the two holding companies aggregating $37,110,000 which when issued did not increase the working capital of the operating companies from whom this income is derived.

That $1,853,000 of the earnings of the operating companies is taken up annually by the holding companies in the form of dividends paid by those operating companies on their present capitalization of $18,700,000, which capitalization it appears has grown out of an original cash investment by the stockholders of only $1,000,000 and which capitalization represents in part therefore the capitalization of an increment in property values and in part the capitali-

zation of surplus earnings. By the erection of financial superstructures and the practice of increasing the capitalization of the operating companies an effective method has been provided for concealing the extent to which excessive charges have been levied on the public for services rendered by the operating companies. To this policy of [fol. 1579] concealing the magnitude of the profits derived from the operation of the Chicago stockyards has also been added the practice of carrying unrevealed assets on the books of the various companies.

The facts brought out by this inquiry supporting the conclusions expressed above are presented in the text of this report in the form of an historical account. The subject matter is arranged in the following order:

A brief sketch is first given of the history of the formation of the Union Stock Yard & Transit Co. in 1865, including such facts relating to the financial history of the Yards company down to 1890 as have been obtainable. This is followed by a description of the formation of the New Jersey company; the facts connected with the attempts of that company to satisfy the demands of the three big packers and the legal difficulties encountered by so doing.

Following this is a sketch of the financial activities of the New Jersey company in relation to the Yards company and other associated enterprises from the time of its attempts to satisfy the demands of the packers in 1891 until the renewal of their demands in 1906. The next subject matter treated relates to the reluctance of the New Jersey company to grant the packers a bonus while the legality of such an act was in question. Mention is then made of the test case (the Pfaelzer case) started in the Commerce Court for the purpose of establishing the legality of the bonus which the New Jersey company proposed to pay to a certain party named Pfaelzer.

This is followed by a description of the plan of Prince and Armour for the formation of the Maine company and the methods employed in accomplishing its formation. This description also deals with the absorption of part of the surpluses of the New Jersey company and its subsidiary

companies by the Maine company, that is, by Prince and Armour.

The report thereafter gives evidence showing that Swift and Morris expected to benefit as a result of the formation of the Maine company. It is this evidence, coupled with the fact that the records of the Maine company disclosed lack of regularity in the handling of certain treasury bonds of the company, which gives rise to the surmise that the demands of these packers may have been partly satisfied by the receipt of these bonds.

The report closes with a description of the financial conditions of the companies connected with the Chicago stockyards and controlled by Prince and Armour.

[fol. 1580] UNION STOCK YARD AND TRANSIT CO., OF ILLINOIS

Section 2.—Consolidation of Chicago Local Live Stock Markets

The Union Stock Yard & Transit Co. was incorporated under the laws of the State of Illinois by virtue of a special act approved by the legislature of that State on February 13, 1865, which granted to the company a perpetual charter permitting it to acquire land on which to construct and operate a stock yards in the city of Chicago and to build tracks to connect with all railroads centering in that city over which live stock and other freight consigned to or from the yards might be transported.

Prior to the formation of the Union Stock Yard & Transit Co. the railroads centering in Chicago over which shipments of live stock were made, had individually maintained small yards or receiving stations at which live stock were unloaded and sold. The Union Stock Yard & Transit Co. represented an attempt to consolidate all the then existing facilities for shipment and sale of all live stock entering or leaving the city of Chicago.

The plan was made possible through an agreement reached by nine railroads handling shipments of live stock to and from Chicago by which it was agreed that they would give up the yards they were then maintaining in widely separated sections of the city and that in the future such

live stock business would be handled through the Union Stock Yard & Transit Co. These nine railroads were as follows:

The Pittsburgh, Fort Wayne & Chicago Railway Co.; the Michigan Southern & Northern Indiana Railroad Co.; the Michigan Central Railroad Co.; the Chicago & Great Eastern Railroad Co.; the Chicago, Burlington & Quincy Railroad Co.; the Chicago & North Western Railway Co.; the Chicago, Rock Island & Pacific Railroad Co.; the Chicago & Alton Railroad Co.; and the Illinois Central Railroad Co.

Section 3.—Capitalization and Dividends

The Yards Company commenced business with a paid in capital of $1,000,000. The nine railroads mentioned above contributed $925,000 of this amount, some other outside interests having been permitted to contribute $75,000. Early in 1867 the capital stock was increased to $1,100,000 by a 10 per cent stock dividend on its original capital. The next increase in the capital stock of the company was made in 1873 at which time $1,100,000 of new stock was issued thus making the total outstanding capital stock of the company $2,200,000. Three years later, in 1876, the capital stock was again increased 100 per cent by the issue of $2,200,000 of new stock. The capital stock of the company remained at $4,400,000 until 1881. In that year the stockholders voted to increase the capital stock of the company to $13,200,000. Since 1881, a period of nearly 40 years, no further increases have been made in the capital stock of the company. [fol. 1581] The Yards company proved to be a very successful undertaking from the first year of operation, a 10 per cent dividend having been declared out of the first year's earnings. This dividend rate was maintained until the end of 1873. The following year the company paid 15 per cent dividends on an increased capital of $2,200,000. In 1875, 20 per cent dividends were paid. In 1876, when a 100 per cent increase in the capital stock again took place, the dividend rate was lowered to 10 per cent thus causing no actual change in the amount of money paid to the stockholders in the form of dividends. This rate was maintained each year until 1881, at which time the capital

was increased to $13,200,000, except during 1879 when an extra dividend of 5 per cent was paid.

Section 4.—Difficulties Encountered in Obtaining Detailed Financial Data

The minutes of the directors and stockholders meetings from which the above facts were obtained failed to record for a number of years all of the dividends paid subsequent to 1881. It has been ascertained, however, that the Yards company paid regular dividends at the rate of 13 per cent on its $13,200,000 of capital stock continuously from 1891 to 1918.

The Commission endeavored to secure more detailed information which would show whether the periodical increases in the capitalization of the company from $1,100,000 to $13,200,000 were brought about by cash subscriptions on the part of the stockholders, or merely represented the distribution of the surplus in the form of stock dividends, but owing to the fact that all of the accounting records of the company prior to 1905 have been destroyed, no definite data on this point could be obtained.

The wording of the resolutions authorizing the increases of capital stock from $1,100,000 to $13,200,000 points to the fact that these increases were always preceded by appraisals of the properties owned by the company, the values thus established serving as a basis for the increase in the capitalization which followed. This would be an unusual course to pursue where the capital increases to represent the investment of new funds supplied by the stockholders, and it indicates that all of the present capital of the Yards company amounting to $13,200,000 with the exception of the $1,000,000 originally paid in by the stockholders in 1865, represents the distribution of the surplus of the company in the form of stock dividends. This indication is supported by the fact that in the case of those other stockyards companies whose early financial history could be studied from the accounting records, numerous instances of capital stock increases were found to have been made as a result of dividing the surplus among the stockholders of the company in the form of stock dividends.

It must be noted that the large surpluses of stockyards

companies out of which stock dividends have arisen did not always represent accumulated earnings from opera- [fol. 1582] tions but were to a very large extent due to enhanced market values of the properties established by periodical appraisals. While the resolutions authorizing the increases of the capital stock of the Chicago stockyards, referred to above, leave no doubt that the capital stock increases were based upon stock dividends, they do not yield any definite information as to the extent to which accumulated earnings were retained by the company and included in the surplus distributions.

It was difficult to obtain authentic information from the management of the company concerning its early financial history. The only statement elicited by the Commission in reply to its inquiries on this point is contained in the following letter written by J. A. Spoor, chairman of the board of directors of the company, who for more than 20 years has had a most active part in the management of the yards:

The Chicago Junction Railway Company. The Union Stock Yard and Transit Company. J. A. Spoor, Chairman of the Board.

Chicago, May 21, 1919.

Mr. S. W. Tator, Examiner, Federal Trade Commission, Washington, D. C.

DEAR SIR:

I have received from Mr. Wooden a memorandum of certain information you desire to have from our books and from me.

I might say that in a recent decision it has been held that the Union Stock Yard & Transit Company of Chicago is a common carrier and this decision would seem to take the Company from under the jurisdiction of the Federal Trade Commission and relieve us from the obligation of making reports to it. Nevertheless I am glad to hand you herewith copies of the Minutes of special meetings of the stockholders designated in your inquiry.

As the examiners of the Commission know, there are in existence no books or records of the Union Stock Yard

& Transit Company of Chicago prior to the year 1905. This is a source of great regret to me because I, personally, did not become connected with the Company in any capacity until the year 1898 and the absence of such books and records makes it impossible for me to verify the legend of the Company and I believe to be the fact, to wit: that all increases in capitalization made in the earlier years of its existence represented either actual cash invested or its equivalent in property or earnings.

I am, however, able to state with assurance that the Union Stock Yard & Transit Company of Chicago is very conservatively capitalized and that the value of its tangible property far exceeds the par value of its outstanding stock and obligations.

[fol. 1583] I regret that I am unable to furnish you copies of financial statements made between the years 1865 and 1891 inclusive. There are no such statements in existence and no books from which copies could be drawn. Indeed, I do not know whether any such statements were furnished the stockholders during the years in question.

Referring to your inquiry touching donations of land and money made by the Company. I append hereto a statement giving the information you request so far as I have any personal knowledge of the same.

Very truly yours,

(Signed) J. A. Spoor.

While this letter does not furnish any additional information of a positive character on this subject, it is apparent that Mr. Spoor, the author of the letter, is aware that some of the present capital stock of the company represents the capitalization of increased property values or earnings.

Section 5.—Early Management Exercised by Railroads.

From 1865 to 1892 the majority of the directors who managed the Yards company were officials of the railroads which had originally organized the company. The earnings of the company were almost entirely derived from yardage, feeding, loading, unloading, and trackage charges. The trackage charges until 1894 had only been made for dead freight passing over the tracks owned by the com-

pany, as the railroads had not permitted the Yards company to collect trackage on shipments of live stock. The yardage and feeding charges were paid by the shippers who used the facilities of the yards for the sale of their live stock. The loading and unloading charges as well as the trackage charges were collected by the Yards company from the railroads, these charges having been absorbed by the railroads and made a part of the freight rate charged to the shippers.

The loading and unloading charges had been established in 1867 by agreement with the railroads who owned the yards for the specific purpose of furnishing the Yards company with an additional source of income. In 1894, a few years after the control of the Yards company had been acquired by new financial interests, a controversy arose, over the imposition of a trackage charge on live stock, between the railroad interests represented by four members of the board of directors and the new interests who had now acquired control of the management of the yards. The seven members of the board of directors representing the new interests voted in favor of the imposition of the trackage charge, whereupon the four directors representing the railroads resigned after filing a protest that the railroads could not absorb the charge. A copy of the records of the directors' meeting in which the written protest of the railroad officials is embodied is presented as Exhibit 7 on page 314 of this report. Since the withdrawal of these officials the railroads have had no representation on the board of directors.

[fol. 1584] As already noted, no increases were made in the capital stock of the Yards company after 1881, a new policy having been inaugurated in 1890 by the financial interests that had acquired control of the yards at that time, by which policy the surplus earnings of the yards were absorbed by new companies formed for that purpose. The Chicago Junction Railways & Union Stock Yards Co. of New Jersey, formed in 1890 for the purpose of securing the control of the Yards company, represents the first instance of this kind, and a detailed account of its financial history follows.

The Chicago Junction Railways & Union Stock Yards Co. of New Jersey

Section 6.—The Formation of the New Jersey Company

In 1890 a holding company, known as the Chicago Junction Railways & Union Stock Yards Co., was organized under the laws of New Jersey for the purpose of acquiring the stock ownership of the Union Stock Yard & Transit Co. of Chicago, Ill. The history of the formation of the New Jersey company, based upon data obtained from the records of that company, can be summarized as follows: Nathaniel Thayer and Richard Olney, of Boston, Mass., the former at that time president of the Union Stock Yard & Transit Co., made an arrangement early in 1890 with the stockholders of that company whereby at least 98 per cent of the outstanding stock of the company was to be deposited with them as trustees. This trust agreement had been made preparatory to the consummation of another agreement these gentlemen made with F. H. Prince, of Boston, Mass., and H. Osborne O'Hagan, an Englishman, dated June 21, 1890. The latter agreement provided that all the stock deposited with Thayer and Olney was to be sold to the newly organized New Jersey company through the agency of Prince and O'Hagan.

The New Jersey company contracted to pay $150 a share for the stock, of which price $100 was to be paid in cash and $50 in bonds of the new company. In order, therefore, to provide the necessary funds to carry out this arrangement the New Jersey company issued $10,000,000 of 5 per cent bonds and $13,000,00 of stock. The bonds were secured by depositing with a trustee, as collateral, 120,000 shares of the Yards company stock acquired under the above arrangements. The new stock which was now issued was equally divided between common and preferred, the latter class having full voting privileges but limited to a 6 per cent dividend.

The records of the New Jersey company show that 129,770 shares of the Yards company stock were secured from Prince and O'Hagan in July, 1890. This represented slightly over 98 per cent of the $13,200,000 of Yards company stock outstanding. Under the terms of the agreement the amount to be paid in cash and bonds for the stock ac-

quired would be $19,465,500. The stock, however, was entered on the books of the New Jersey company at a value [fol. 1585] of $22,587,283.90. After making allowance for $421,783.90, representing dividends on this stock, which was included in the above amount, it is evident that $2,700,000 was added to the contract price to cover the promoters' fees and other expenses connected with the organization of the new company.

While under examination by a representative of the Commission, F. H. Prince admitted that he and O'Hagan received $1,500,000 as a commission for acting as promoters. What happened to the balance of $1,200,000 the Commission is unable to determine, as the records available did not contain sufficient details of the transaction to make this clear.

It is obvious from this sketch that from a financial viewpoint the formation of the New Jersey company meant only the capitalization of the accumulated and potential earnings of the stockyards in Chicago, introducing a new group of financial interests and an imposition of capital obligations amounting to $23,000,000 without augmenting the working funds of the Yards company.

Section 7.—Demands of Armour, Swift, and Morris for a Share in the Earnings of the Company

In the course of his examination by the Commission's representative, F. H. Prince also made statements tending to show that the New Jersey company owes its existence partly to the inability of Nathaniel Thayer as president of the Yards company to satisfy the demands of the three big packers, Armour, Swift, and Morris, for a share in the earnings of the company and a voice in its management. In view of the fact that in the first meetings of the board of directors of the New Jersey company plans were considered whereby the packers would become managerial and profit-sharing factors in the stockyards of Chicago, credence may be given to the assertion that the three big packers had made concerted demands of this nature before the holding company was formed. Furthermore, a review of the wide range of schemes thus considered shows that none of them would have been possible of consummation by the Yards

company operating under the restricted charter granted by the State of Illinois in 1865.

A study of the Annual Review of the Chicago Economist of January, 1891, furnishes evidence that the New Jersey company had been formed at a time when a state of uncertainty existed as to the continuance of the large earnings of the Chicago stockyards. In the above publication mention*ed* is also made of the fact that the public was reluctant to purchase the stock of the new company; there being a possibility of a break between the three big packers and the stockyards' interests which would result in a considerable reduction of the large earnings of the yards.

This agrees with Mr. Prince's assertion that the New Jersey company was confronted immediately after its formation with the necessity of satisfying the three big packers by granting them liberal concessions. The exist-
[fol. 1586] ence of such a condition of affairs may also explain why the stockholders of the old company had been willing to relinquish their holdings in a company which had always yielded a large income on its investment.

Section 8.—The Tolleston Land Purchase by the Three Big Packers

It appears from the records of the New Jersey company, as well as from other sources, that the three big packers, Armour, Swift, and Morris, jointly purchased about 4,000 acres of land in Indiana in 1890, within 25 miles of Chicago and familiarly referred to as "the Tolleston land purchase." They announced their intention of constructing a stockyards on part of this land and of moving their plants and other establishments from Chicago to the new location. The packers let it appear to the public at large that they were induced to purchase the Tolleston land because of crowded conditions and lack of available sites for future expansion at the Chicago stockyards. They also announced that inducements would be offered to persuade other packers to remove their plants and establishments and to locate them at Tolleston.

In order to provide temporary facilities for their immediate use, the packers also purchased a small tract of land near their plants in Chicago, erected platforms, pens,

and sidetracks for handling live stock shipped to them. These new yards they called the Central stockyards. They then demanded that cars of live stock consigned to them be delivered over the tracks owned by the Yards company free from the yardage and charges collected by that company on all stock handled through its yards. Upon refusal by the Yards company to comply with their demands, a suit was instituted by the three packers in the Chicago courts to force the company to do so.

In order that the situation created by the purchase of the Tolleston land may be properly understood it should be noted at this point that charges have been made at various times that the announcement by the three big packers of their intention of dismantling their plants at Chicago and of establishing stockyards and plants at Tolleston, Ind., was not made in good faith. It has been asserted that the tract of land at Tolleston was wholly unimproved and barren; to a considerable extent swamp land and under water; that it had no special adaptability for a stockyards business; that the land had originally been purchased at an average price of $30 an acre, or a total cost of about $120,000 for the whole tract, and that the purchase of this land was merely a move made to forestall any unwillingness on the part of the stockholders of the New Jersey company to acquiesce in any arrangements which the directors of the company might make in order to meet the demands of the packers for a share in the earnings of the Chicago stockyards and a representation in its management.

The sincerity of the intentions expressed and the reasons advanced by the three big packers as the motive by which [fol. 1587] they were actuated in purchasing the Tolleston land have been justly questioned. It would appear that had these packers been prompted solely by their need for more building space for future expansions and by the crowded conditions in the Chicago stockyards, they would have demanded in their negotiations with the New Jersey company which subsequently took place, that greater facilities be put at their disposal in the Chicago yards. Instead, these negotiations dealt solely with the question of securing for the packers the largest possible share in the earnings from the Yards, and a voice in the management.

Section 9.—Tentative Bonus Agreement of July 3, 1891, with the Three Big Packers

Official announcement was made to the directors of the New Jersey company at a meeting held May 11, 1891, of the steps taken by the packers in instituting the suits against the Yards company and of their announced intentions to remove their plants to the Tolleston land, and a committee was immediately appointed to negotiate with them. The personnel of this committee changed subsequently, but when its report was submitted to the directors of the company, on July 8, 1891, it consisted of Chauncey Depew, of New York; Nathaniel Thayer, of Boston; and F. H. Winston, of Chicago.

Before the terms of the agreement which was subsequently consummated between the New Jersey company and the three big packers are taken up, it is well to have clearly in mind the general principles which had to be considered by the directors of the New Jersey company in arriving at their decision on the terms.

First. The terms of the payments to be made to the packers had to be so arranged as to reduce to a minimum the possibility of the stockholders withholding their approval.

Second. The agreement had to be so framed as to generally convey the idea that it grew out of the ordinary necessities of the stockyards business and was not a bonus pure and simple.

The above committee after negotiations with the packers submitted an outline of a tentative agreement, which had been drafted on July 3, 1891. It contained provisions whereby the New Jersey company would give to the three big packers $3,000,000, of which amount $1,000,000 was to be common stock of the company, and P. D. Armour was to be made a director. The packers obligated themselves in turn to convey to the Yards company the property known as the Central stockyards and 1,000 acres of the Tolleston land. They agreed also to dismiss the suits that had been pending in the Chicago courts and pledged themselves to continue their business at the yards for 10 years. This tentative agreement was never carried out because the concessions granted to the packers were found to be too liberal. The common stock of the New Jersey company

had become more attractive to investors since the stock had been first offered for subscription, due to the fact that the packers had shown signs of their willingness to remain in the Chicago yards and the company, therefore, could not easily carry out the agreement to give the packers $1,000,000 [fol. 1588] of its common stock. The terms under which the remaining $2,000,000 were to be paid were also found to be too exacting for the New Jersey company. On the other hand the obligation of the packers to do business at the Chicago stockyards for a period of 10 years only was not considered commensurate with the remuneration to be given them by the New Jersey company.

Section 10.—The London Agreement of July 27, 1891.

On July 27, 1891, an agreement was drawn up in London by a committee composed of representatives of the New Jersey company and of the packers. In this agreement while the principle of paying the packers $3,000,000 was maintained, the provision whereby the New Jersey company obligated itself to give the packers $1,000,000 in common stock was eliminated. The packers in turn agreed to continue doing business at the yards for a period of 15 years.

It appears that the three big packers had organized a company known as the Tolleston Stock Yards Co. with a capital of $1,000,000. This company proposed to build a stockyard on the 1,000 acres of land, which, according to the tentative agreement of July 3, 1891, were to be conveyed to the New Jersey company. An issue of $2,000,000 of bonds was authorized for this purpose.

The London agreement in giving the packers $3,000,000 as originally contemplated aimed to clothe this bonds with the appearance of having accomplished the acquisition of a going stock yards concern. It therefore provided that the New Jersey company would purchase from the packers the $1,000,000 of stock issued by the Tolleston Stock Yards Co. and would guarantee the payment of the principal and interest on the Tolleston Co.'s $2,000,000 of bonds. These bonds were to be retained by the packers.

Following the announcement that an agreement between the packers and the directors of the New Jersey company

had been signed in London several suits were started in the courts of New Jersey by stockholders of the New Jersey company contesting the legitimacy of the directors' acts. These suits had a retarding effect on the consummation of the agreement. A decision rendered by the vice chancellor of New Jersey in one of these suits known as the Ellerman case, which was instituted as a test case by the directors of the New Jersey company, upheld the validity of the London agreement. The directors of the company, however, discouraged by the determined opposition of the stockholders, deemed it advisable to draw up a new contract containing terms more liberal for their company than those incorporated in the London agreement. Furthermore, the directors by taking over the Tolleston stockyards as a going concern, while having no intention of immediately extending the business of the Chicago stockyards to Tolleston would have laid themselves open to possible attacks of having misrepresented the use to which the company's funds had been put.

[fol. 1589] Section 11.—Final Bonus Agreement of January 15, 1892

These considerations led to the drawing of a new agreement on January 15, 1892, which marked the final consummation of the negotiations which had been in progress since May 1891. The new agreement provided for the issuance of $3,000,000 of 5 per cent 15-year noncumulative income bonds by the New Jersey company, the interest on these bonds to be payable only after (and if) the income of any year was sufficient to pay interest on the $10,000,000 of bonds already issued by the New Jersey company, and after 6 per cent dividends had been paid on the preferred stock. The preferred stock, it will be recalled, carries full voting rights, and, therefore, by giving the preferred stockholders a prior claim on the profits of the company over the holders of the income bonds, the possibility of meeting with opposition from the preferred stockholders was reduced to a minimum if not entirely removed. The directors also reserved the option of delivering to the packers shares of common stock of the New Jersey company at par in lieu of the whole or any part of the $3,000,-

000 of income bonds, and afforded the dissatisfied common stockholder, who might see his income jeopardized by the issuance of income bonds that had a prior claim on the profits of the company, an opportunity to exchange his stock for income bonds.

The provision of the London agreement by which the New Jersey company was to acquire the 1,000 acres of Tolleston land through the purchase by it of the capital stock of the Tolleston Stock Yards Co. was eliminated. Instead, the 1,000 acres of land were conveyed to the New Jersey company, not in the guise of a going concern, but directly as a valuable piece of property. A clause was inserted in the preamble to the agreement to the effect that the 1,000 acres of land was acquired for the purpose of providing suitable premises for the business of stockyards in case the New Jersey company should thereafter find it necessary to remove the Chicago yards by reason of the growth of the city of Chicago, or municipal ordinances or legislation or other causes.

No steps were taken by the directors of the New Jersey company to execute the agreement of January 15, 1892, until it had been ratified at a special meeting of the stockholders on March 1, 1892. At the same time an appeal was made to the common stockholders to exchange their holdings for 5 per cent income bonds to the amount of $3,000,000 in accordance with a clause of the agreement of January 15, 1892. The appeal met with no response owing to the fact that the New Jersey company had already begun to pay dividends on the common stock at the rate of 8 per cent per annum. The harmonious relations which had now been established between the company and the three big packers was also a contributing factor in adding to the attractiveness of the common stock as an investment. The agreement was finally consummated by the delivery to the three big packers of $3,000,000 of 5 per cent noncumulative income bonds in July, 1892.[1] The same year the packers

[1] These bonds were retired in 1900, at which time the New Jersey Company issued its 40-year 4 per cent collateral trust gold bonds, and used part of the proceeds from the sale of these bonds to pay off the principal of the income bonds then outstanding.

were given a representation in the management of the [fol. 1590] Chicago stockyards through the election of two of their representatives, A. H. Veeder and E. J. Martyn, to the board of directors of both the New Jersey company and the Yards company.

Section 12.—The Bonus Agreement with the Small Nonassociate Packers and Other Bonus Agreements

Before the agreement between the three big packers and the New Jersey company was finally consummated, 12 small Chicago packers doing business at the yards instituted suits against the company in the Chicago courts charging that discrimination had been practiced against them in favor of the three big packers. These small packers had been restive for some time past, having threatened to remove their plants and establishments from their locations in and adjacent to the Chicago stockyards and to locate them at a new site known as the Stickney tract. The three big packers had originally stirred up the small packers by offering them inducements to join them at the Tolleston tract in order to strengthen their own position in dealing with the officials responsible for the management of the yards, but differences subsequently arose between the two groups of packers, and the small packers decided on the Stickney tract. The following letter found in the files of the New Jersey company and written in February, 1892, by F. H. Prince, one of the promoters of the New Jersey company and a director of the company at this time, throws an interesting light on the turn which the relations between the three big packers and the 12 nonassociate packers took when the latter had learned that the former were to receive $3,000,000 from the directors of the New Jersey company:

F. H. Prince & Co., Bankers & Brokers, 288 State Street

Boston, February 6, 1892.

William C. Lane, Esq., Secretary, Chicago Junction Railways & Union Stock Yards Co., New York, N. Y.

Dear Sir: Will you kindly obtain for me through the attorney, a printed copy of all the evidence in the different

suits against the Company, that have been entered to date? What I want especially is the evidence of the small packers and their witnesses against the three big packers, and also the answer of the three big packers, wherein they both state that each other were attempting blackmail. Please send me copy of the new agreement that has been made with packers.

Very truly yours,

Confronted with the possibility of coming into conflict with the Interstate Commerce Act and with the Sherman Antitrust Act the directors of the New Jersey company hastened to reach an understanding with the small packers. By the terms of an agreement dated June 3, 1892, the New Jersey company contracted to pay the small packers [fol. 1591] $100,000 in cash and $300,000 in 5 per cent 15-year noncumulative income bonds and the small packers in turn obligated themselves not to remove their plants to the Stickney tract. Funds to the extent of $300,000 for the bonus paid to the small packers were supplied by the three big packers, by repurchasing the Central stockyards for $100,000 in cash and by giving back to the New Jersey company, in exchange for 300 acres of the Tolleston land, $200,000 of the $3,000,000 income bonds, which the three big packers had received from that company.

The records of the New Jersey company do not show that any further payments were made to packers until 1900 other than those necessary in settlement of the $3,000,000 given to the three big packers and the $400,000 given to the 12 small packers in 1892. These payments, it should be noted, were made for the purpose of inducing the packers already established at the yards to continue doing business there. Beginning with 1900, the New Jersey company adopted a policy of granting cash bonuses for the purpose of securing the establishment of new packing plants at the Chicago yards. As a result three packing companies were induced to establish plants at the Chicago yards, Schwarzchild & Sulzberger Co. receiving $540,000 in 1900; Anglo-American Provision Co. $200,000 in 1901; and Hammond & Co. $500,000 in 1902.

Section 13.—Renewed Demands of Armour, Swift, and Morris for a Bonus, and the Pfaelzer Case

The contract between the New Jersey company and the three big packers expired in 1906. The records of the New Jersey company show that about that time negotiations were in progress between a committee composed of representatives of the packers and of the New Jersey company with a view of renewing the contract which was about to expire. Serious obstacles seem to have been found in reaching a settlement that would not be in contravention of the law.

The contention was raised that through the ownership and control of the Chicago Junction Railway Co. the New Jersey company was restrained from giving to the packers a bonus by virtue of the Interstate Commerce Act. In 1910, the negotiations reached a point where it was decided to arrange for a test case with a view of getting a decision from the courts in passing upon the right of the New Jersey company to grant bonuses.

With this end in view, the company agreed to give $50,000 to Louis Pfaelzer & Sons, a small packing concern then located at the Chicago yards, for the purpose of rebuilding its plant which had been condemned by the Bureau of Animal Industry of the Department of Agriculture. The Interstate Commerce Commission thereafter asked the Commerce Court to enjoin the company from paying the $50,000. The Commerce Court held that the bonus could be paid. The case was then taken to the Supreme Court of [fol. 1592] the United States, which handed down a decision in 1912 overruling the decision of the Commerce Court and declared that the bonus, if paid, would be in violation of the law.

Section 14.—Significance of Certain Events Following the Pfaelzer Case

It is of interest to note that most of the data embodied in the preceding pages of this report, especially that relating to the negotiations between the New Jersey company and the packers, was obtained from the records of the New Jersey company. A study of the same records beginning with 1910 shows that after the Pfaelzer case was

brought before the courts no further efforts were made on the part of the New Jersey company to solve the recurring problem resulting from the demands of the packers for a share in the earnings of the company.

It would, however, be erroneous to conclude from this circumstance that the bringing of the Pfaelzer case marked the end of the packers' attempts to obtain some financial interest in the company's earnings. Evidence at hand, shows that while the New Jersey company as a corporate entity ceased to appear after that time as a party to any negotiations of this kind, one of the directors of the company whose official duties brought him into close contact with the packers continued to negotiate with them for the purpose of devising a plan that would constitute a permanent settlement of the packers' claims.

It has been found that without waiting for the final decision of the court, steps were taken in 1910 by F. H. Prince, vice president and director of the New Jersey company and J. O. Armour one of the three big packers who had made the demands upon the New Jersey company, to consummate a plan of their own for securing control of the surplus earnings of the New Jersey company through the formation of a new company to be known as the Chicago Stock Yards Co. of Maine. By acquiring this control, apparently, they thought they would put themselves in a position ultimately to satisfy the packers' demands regardless of any decision which the courts might render.

The history of the events relating to the activities of Prince and Armour and of their agents in consummating their plan opens up a new chapter in the history of the New Jersey company. This new chapter is replete with obscure elements, and great difficulty has been experienced in interpreting the great mass of evidence obtained in the form of testimony, letters, and other documents as well as accounting records, and in arriving at a final conclusion as to whether or not the demands of the packers were satisfied by the consummation of the plan.

Some of this evidence indicates that the plan of Prince and Armour was conceived and set in motion without the knowledge of the other directors of the New Jersey company and of Swift and Morris. It also shows that Swift and

Morris were not identified either as promoters or as stockholders, when the new company was formed. And yet, it is [fol. 1593] an established fact that as the plan was developing both the directors of the New Jersey company and Swift and Morris came to look upon the new company as an agency which would redound, somehow or other, to the financial benefit of the packers. Other evidence pointed to Swift and Morris not only as beneficiaries of the Maine company plan, but as promoters and stockholders along with Prince and Armour.

Confronted with the task of harmonizing the conflicting evidence at hand the Commission did not rely solely upon testimony given by the packers concerning their relationship with the Chicago stockyards. For one thing, Armour & Co. failed to report the fact of its interest in the Chicago Stock Yards Co. in reply to the schedule sent Armour & Co. by the Commission on September 25, 1917, at the outset of the meat investigation. Furthermore, Arthur Meeker, vice president of Armour & Co. stated before the Committee on the Judiciary of the House of Representatives on July 6, 1916, in answer to questions of Representative Gard of Ohio, that the Armour people had no interest in the Chicago stockyards.

In the succeeding pages of this report conclusions as to the events that followed the institution of the Pfaelzer case in 1910 are given.

The Chicago Stockyards Co. of Maine

Section 15.—The Syndicate Agreement between F. H. Prince and J. O. Armour

In 1910 while the Pfaelzer case was under consideration by the Commerce Court, F. H. Prince, vice president at that time of the New Jersey company and who had been instrumental in bringing about the formation of the company in 1890, entered into a syndicate agreement with J. O. Armour, of Chicago, for the purchase of 13,000 shares of the common stock of the New Jersey company at the rate of $150 per share. This stock was to be purchased for their joint account by the brokerage firm of F. S. Moseley & Co., of Boston, Mass.

The following is a copy of a letter from the files of F. H. Prince. The original copy of this letter, which was signed by F. H. Prince, was delivered to J. O. Armour and retained by him, while the duplicate, of which this is a copy, was returned to Prince with the O.K. of J. O. Armour attached to it. This letter was written on October 31, 1910, one month after the syndicate agreement was entered into and indicates the methods by which that transaction was to be financed.

[fol. 1594] F. H. Prince & Co., Cor. State and Devonshire Sts.

Boston, October 31, 1910.

J. Ogden Armour, Esq.,
Chicago, Ill.

Dear Sir:

This is to certify and confirm that there have been arranged to be purchased for joint account of yourself and this firm thirteen thousand shares of the Common Stock of The Chicago Junction Railways and Union Stock Yards Company at and for the aggregate price of $2,080,000, and that your interest in said purchase is six thousand five hundred shares. It is the arrangement between us that said purchased stock shall be transferred into our names upon the books of said company and to the extent of six thousand five hundred shares is to be held by us for your account and in trust for you. You are to pay us $300,000 to apply on account of the purchase price of said stock. We are to borrow on our notes, but for your account, the remainder of said purchase price, namely $740,000, as per list of notes to be handed to and approved by you. On payment of the said notes or any renewals or extensions thereof by you, or if no such notes shall be outstanding, then on payment to us of said sum of $740,000 and any interest due us, we will deliver to you or order duly endorsed in blank for transfer, certificates for said six thousand five hundred shares of said stock. The fact that we hold these shares for account and in trust for another will be properly indi-

cated by entries upon our books. The account will be known on our books as "Trust Account A."

Very truly yours,

OK
J. O. A.

F. H. Prince, who for several years had been a large holder of the common stock of the New Jersey company, also undertook in 1910, to purchase additional stock for his own account. He was successful in acquiring enough stock to increase his holdings of the common stock to about 20,000 shares. This stock, together with the 13,000 shares acquired under the syndicate agreement gave to Prince and Armour the ownership of about 33,000 shares of the 65,000 shares of common stock of the New Jersey company. This, however, was not a controlling amount since the 65,000 shares of preferred stock also has voting rights.

Section 16.—The Plan for the Formation of the Maine Company

The syndicate agreement between Prince and Armour was only part of a comprehensive plan which had been devised whereby a new company was to be organized under the laws of Maine to be known as the Chicago Stock Yards Co. of Maine.

It is evident that Prince and Armour carefully planned to surround the stock ownership of the Maine company with [fol. 1595] an impenetrable veil of secrecy from the fact that dummies were used as promoters, officers, and directors of the company. They also devised "bearer warrants" to circulate in lieu of stock certificates with no apparent object in view other than more effectively to conceal the real ownership of the company. It was planned that this company, which was to have a paid in capital of $1,000,000 to be subsequently increased to $8,000,000 would ultimately become the sole controlling factor in the management of the New Jersey company which control carried with it the control of the stockyards at Chicago and the several affiliated enterprises. This control was not to be established through the acquistion of the entire common stock then outstanding, but through an entirely novel device.

It was planned that the Maine company would offer to the common stockholders of the New Jersey company, through the agency of a committee composed largely of prominent bankers of Boston, Mass., three of whom were also directors of the New Jersey company, a guarantee of 9 per cent dividends on their stock. In return for this guarantee, the stockholders were to surrender their right to participate in the accumulated surplus of the New Jersey company, of the underlying subsidiary companies and in the future earnings of all of these companies in excess of the 9 per cent guaranteed to them. The New Jersey company stockholders were also given the option of exchanging their stock for 5 per cent bonds of the Maine company at the ratio of 2 to 1, that is, $200 in 5 per cent bonds would be given in exchange for each share (par value $100) of common stock. This would net them 10 per cent on the par value of their stock.

On June 30, 1911, the committee selected by Prince, consisting of Richard Olney, chairman, Samuel Carr, Guy Norman, S. L. Schoonmaker, E. V. R. Thayer, and F. R. Hart, secretary, submitted to the common stockholders of the New Jersey company the Plan given below. They submitted this Plan on behalf of the Maine company, which at that time had not as yet been formed, and advised its acceptance. It had been arranged that the Old Colony Trust Co. of Boston would act as trustee for the stockholders who were now asked to signify their assent to the Plan by affixing their signature to a form prepared for this purpose which was to be sent by the stockholders to the Old Colony Trust Co. of Boston to be held by the latter as trustee until such time as the committee, deciding that a sufficient number of assents had been deposited, would declare the Plan operative. The stockholders pledged themselves to present their stock certificates to the trustees immediately after the committee had taken such action and to permit the trustee to stamp their certificates with the guarantee of the Maine company as outlined in the Plan of June 30, 1911.

[fol. 1596] Chicago Stock Yards Company Plan

Dated June 30th, 1911

Storey, Thorndike, Palmer & Dodge, Counsel

Chicago Stock Yards Company Plan, dated June 30th, 1911

On behalf of the Chicago Stock Yards Company, if and when formed (hereinafter called the New Company), it is proposed to the holders of common stock of The Chicago Junction Railways and Union Stock Yards Company, subject to the terms and conditions hereinafter set forth, as follows:

To enter into a Trust Agreement, with such of said stockholders as may elect to become parties hereto, whereby (among other things) said assenting stockholders will receive the guaranty and agreement of the New Company (by way of a stamp thereof on their respective stock certificates) to pay such stockholders, annually, the fixed sum of Nine Dollars in respect of each share of said stock, in quarterly instalments of $2.25 each. There is also extended to the holders of such stamped certificates the privilege of exchanging the same for Collateral Trust Bonds on the basis of $200 face amount of Fifty-year Five Per Cent. Collateral Trust Gold Bonds of the New Company, in such form and secured as the Committee may prescribe or approve for each share; which privilege shall remain in force until the New Company shall give or cause to be given in such manner, and for such period as the New Company, with the written approval of the Committee, may fix and determine, notice of the withdrawal and termination thereof.

The Old Colony Trust Company is hereby designated and authorized to receive from stockholders electing to become parties to this Plan stock certificates for the purpose of being subjected to the Trust Agreement and stamped as in the above Paragraph provided, and, pending

the declaration by the Committee that this Plan has become and is operative, assents and agreements of stockholders, manifesting their election to accept this Plan and to become parties thereto.

[fol. 1597] This Plan and the said Trust Agreement shall become operative if and when in the opinion of the Committee it has become advisable to carry the same into effect.

Upon such declaration being filed with the Old Colony Trust Company, the New Company shall deliver to the Trust Company the Collateral Trust Bonds (or interim certificates temporarily representative thereof) which are deliverable to stockholders who shall at that time have elected to avail themselves of the provisions hereof.

The Trust Agreement shall be deposited with the Old Colony Trust Company.

Each and every holder of such common stock who shall deliver the certificate therefor or who shall deliver to the said Trust Company his assent to said Plan, as above authorized and provided for, shall thereby become a party to this Plan and the agreements herein contained with the same force and effect as if he had subscribed and affixed his seal to this Plan and the agreements herein contained.

Each such depositing or assenting stockholder agrees that, upon demand of the Committee or of the Old Colony Trust Company, he will from time to time execute such assignments, powers of attorney, and other instruments as the Committee shall deem necessary or proper to more fully effectuate the transfer of such stock certificates, the stamping of said guaranty thereon, the making of such stockholder a party to the Trust Agreement, and the accomplishment of the provisions thereof.

The Committee undertakes in good faith to promote the consummation of this Plan; but it is expressly understood that no member of the Committee assumes any responsibility for its success. No member of the Committee shall be in anywise liable because of the aforesaid offers or the promulgation of this Plan.

The Committee shall have power, in its discretion, from time to time, to extend the time within which the holders of any of the aforementioned common stock may deposit the same and become parties to the Trust Agreement, and in

connection therewith to impose such terms and conditions as it shall see fit, including the making of a cash payment as a condition of becoming a party or parties; to provide that any member thereof may, with the approval of the other members, act and vote by proxy; to prescribe the form and terms of any securities for the issue of which provision is made in the said Plan and Agreement; to declare the aforesaid offers and this Plan operative if and when the Committee shall, in its discretion, deem that the amount of the deposited and assenting stock is sufficient to warrant such declaration, and the declaration of the Committee shall be final and conclusive upon all parties hereto; to provide, after the making of said declaration, if and when the Committee sees fit and upon such terms as it shall prescribe, for the acceptance of the said offer by holder of any of the aforementioned stock not deposited prior to such declaration; to carry out and effectuate this Plan in whatever manner the Committee shall at the time deem [fol. 1598] most expedient, and, generally, to make and determine all arrangements and things which in its judgment are necessary or expedient to carry out this Plan; to construe this Plan and the appended Trust Agreement. Any such construction by the Committee, or any action under any such construction made or taken in good faith, shall be final and conclusive. Also to supply any defect or omission of or in this Plan or said Agreement or to reconcile inconsistencies in it in such manner and to such extent as shall, in the opinion of the Committee, be necessary or expedient to carry out the same properly and effectively, and the Committee shall be the sole judge of such necessity or expediency; and from time to time to make such modification of said Agreement as it shall consider necessary or expedient, provided it is consistent with its general purpose and does not change the price which the common stockholders shall receive for their shares or the terms of the guaranty thereon in case of election to accept the guaranty. The New Company shall have power to make any and all adjustments of interest and dividends by it deemed fair and equitable in case of the exchange of any such stock or stamped certificate for bonds, and such adjustment shall be final and conclusive.

In the event of the resignation, death, or inability to act of any member of the Committee, the vacancy so caused shall be filled by the remaining members of the Committee.

All action of the Committee may be had and taken by a majority of its members.

In no event is any claim to be made against any depositing or assenting stockholder, or enforced by way of lien, or otherwise, against any of the deposited or assenting stock for which such certificates shall have been issued, for or on account of the charges or expenses of the Committee. The compensation of the Committee and of the Trustee and all expenses of the Committee and of the Trustee, in connection with the carrying out of this Plan and said Trust Agreement, shall be paid by the New Company.

No assenting stockholder shall have any interest in any of the shares of stock of the New Company or of the disposition thereof.

The provisions and benefits of this Plan and said Trust Agreement shall be confined strictly to the parties thereto in accordance with the terms and provisions thereof.

This Plan and said Trust Agreement shall be deemed, according to its terms, to bind and benefit the several parties thereto, their and each of their survivors, executors, administrators, and assigns.

Richard Olney, Chairman; Samuel Carr, Guy Norman, S. L. Schoonmaker E. V. R. Thayer, F. R. Hart, Secretary, 17 Court St., Boston, Mass., Committee.

Boston, June 30th, 1911.

[fol. 1599] Chicago Stock Yards Company

To the Old Colony Trust Company:

The undersigned hereby assents and becomes a party to the Plan dated June 30, 1911, and promulgated by Richard Olney, Samuel Carr, Guy Norman, S. L. Schoonmaker, E. V. R. Thayer, F. R. Hart, Committee, and the agreements therein contained and the Trust Agreement which may be formulated pursuant thereto; and elects to receive, in respect of each share of the Common Stock of The Chicago Junction Railways and Union Stock Yards Company

standing in his name on the date hereof, the guaranty of the New Company to pay annually the fixed sum of Nine dollars on each such share of Common Stock in quarterly installments of $2.25 each, in accordance with said Plan and said Trust Agreement, with the privilege of exchanging said guaranteed shares for collateral trust bonds as in said Plan and Agreement provided and subject to the conditions thereof, and agrees, on demand of the Old Colony Trust Company or of the Committee in said Plan mentioned to present to said Trust Company the Certificates for said shares of Common Stock for indorsement thereon of the guaranty and agreement in said Plan and Agreement specified.

The said right to exchange for collateral trust bonds may be cancelled upon thirty days' notice by the Directors of the New Company.

On presentation of such certificates the undersigned will receive in cash a sum equal to dividends accrued at the rate of 8 per cent per annum, up to the date fixed by the Committee for adjustment.

Dated June 1911

Section 17.—Financial Condition of the Chicago Stockyards in 1911

In order that the significance of the above plan may be fully understood, it is necessary to present an outline of the financial condition in 1911 of the New Jersey company and of its subsidiary companies. The New Jersey company, as has been shown on previous pages of this report, was organized in 1890 for the purpose of acquiring the stock of the Union Stock Yard & Transit Co. of Illinois. In the first year of its existence it acquired 129,770 of the 132,000 shares issued by the Yards company. Up to 1911 the New Jersey company had increased its holdings by 4,086 shares, leaving, at this time, 1,144 shares in the hands of outside stockholders.

[fol. 1600] This Yards company stock had yielded dividends each year at the rate of 13 per cent, this rate having been established and maintained after the New Jersey company acquired control of the yards. Up to 1898 the dividends received from the Yards company constituted practically all of the income of the New Jersey company.

In 1898 the New Jersey company formed the Chicago Junction Railway Co. by consolidating two small railway corporations, the stock of which had been acquired by the New Jersey company for $500,000. The new company issued capital stock to the amount of $2,200,000, representing the par value of the capital stock of the two companies thus merged. The Railway company took over the operation of the railway way property owned by the Yards company under the terms of a lease whereby the Yards company was to be given, in lieu of a fixed rental, two-thirds of the net earnings of the Railway company. In 1910 the New Jersey company was receiving 6 per cent dividends on the $2,200,000 of capital stock of the Railway company, which it owned, this rate having been established by the Railway company one year after its formation and maintained each year.

Both the Yards company and the Railway company had been accumulating a surplus from their earnings in addition to the annual dividends paid on their capital stock, and during 1909 and 1910 the combined earnings of these two companies in excess of dividends paid amounted to over $600,000 each year. On December 31, 1910, the surplus of the Yards company amounted to $2,014,692.14, while on June 30, 1911, the Railway company showed a surplus of $1,204,533.70. The surplus of both of these companies, however, was actually very much in excess of the amounts shown by the reports of the company, owing to the fact that considerable sums had been expended annually for a number of years in additions to and improvements of their properties, which were charged to operating expenses.

The New Jersey company had several other investments in addition to its holdings in the Yards company and the Railway company, but they were of minor importance at that time from the standpoint of income received. The income of the New Jersey company in 1910 amounted to about $2,000,000, and of this amount more than $1,800,000

was received in the form of dividends from the Yards company and the Railway company.

The income of the New Jersey company had been sufficient to pay interest on its bonded indebtedness, 6 per cent dividends on its preferred stock, and 8 per cent dividends on its common stock. The company had begun paying 8 per cent dividends to its common stockholders in 1891 and had maintained the same rate each year in spite of the large bonuses which it had given to the packers in 1892 and the subsequent bonuses of 1900-1903.

In 1910 the New Jersey company showed a surplus of $2,449,673.71. For several years prior to that date the company had been adding about $300,000 to its surplus account each year. This $300,000, if distributed in the form [fol. 1601] of dividends, would have enabled the New Jersey company to pay dividends to the common stockholders at the rate of 12½ per cent instead of 8 per cent.

It was shown above that the New Jersey company had several other investments, the income from which was not an important factor at that time in the total income received. Two of these investments are worth mentioning, however, at this point, in view of the fact that they were not carried on the books of the New Jersey company at their full value, thereby constituting hidden assets which, if carried at their actual value, would have materially increased the surplus of the New Jersey company. One of these investments consisted of bonds of the Indiana Harbor Belt Railroad, having a face value of $2,500,000, while the other was represented by manufacturing sites adjacent to the Yards company of Chicago, which were being developed by the Central Manufacturing District.

The $2,500,000 of Indiana Harbor Belt Railroad bonds were carried on the books of the New Jersey company at $50,000, this being the price at which the company had acquired them in 1907 from its subsidiary company, the Chicago Junction Railway Co. The latter company had received these bonds as part consideration for the sale to the Vanderbilt lines of a piece of its railroad property in 1907, known as the Outer Belt. The bonds which mature in 1957 are guaranteed as to principal and interest by the Lake Shore & Michigan Southern Railway and by the Michigan Central Railroad Co. The New Jersey company

received interest each year amounting to $50,000 at the rate of 2 per cent on the face value of the bonds for five years after 1907. The rate was increased in 1912 to 3 per cent and in 1917 to 4 per cent, which rate will be maintained until the bonds mature and are paid in 1957.

The Central Manufacturing District was managed by trustees appointed by the New Jersey company, and had been formed for the purpose of developing extensive land purchases which the New Jersey company had been making for a number of years prior to 1911. The earnings of the Central Manufacturing District, however, had not been included, prior to 1911, in the income of the New Jersey Company, these earnings having been retained by the trustees for further reinvestment in improvements to the property.

As a result of the above policy, the books of the New Jersey company did not reflect the true value of the company's investment in the Central Manufacturing District, but merely represented the cost of that piece of property to the New Jersey company as measured by the money which had been taken out of the treasury of the company for this particular purpose. In 1911, the value of the Central Man-facturing District was carried on the books of the New Jersey company at a little over $3,000,000. Of this amount, $1,455,000 represented funds secured through the sale of real estate improvement bonds, the liability for which was assumed by the New Jersey company.

[fol. 1602] The additional value of the property that grew out of the reinvestment of the annual profits of the Central Manufacturing District was not included in the amount at which the investment was carried on the books of the New Jersey company, nor was the enhanced value of the property due to the location of numerous large enterprises on the property of the Central Manufacturing District shown.

The data obtained by the Commission on these points was not in sufficient detail to estimate the value of the Central Manufacturing District property in 1911 in excess of the amount recorded on the books of the New Jersey company. An interesting side light on this point may be gleaned, however, from the balance sheet of the Central Manufacturing District for December 31, 1918, which places a value on the assets of the company of $12,967,898.17. Part of this

amount was offset by $3,680,000 of bonds, $6,399,863.45 represented accumulated earnings, and $2,550,605.59 represented increment in land values.

In calling attention to the fact that the New Jersey company was not carrying its investment in the Central Manufacturing District at the full market value of the property in 1911, it is not to be understood that a policy is favored of recording enhanced values of this nature on the books of a company. It is desired to point out merely that the stockholders of the company who were asked to give their assents to the Plan of Prince and Armour were not told of the real value of the property and its actual and potential earning power, but other methods were employed which did not disclose the value of their properties.

In order to summarize the important points brought out in the preceding pages, relating to the financial condition of the New Jersey company, and of its subsidiary companies in 1911, it should be noted that the combined surplus of the New Jersey company, the Yards company and the Railway company, each of which has been stated individually, aggregated $5,668,899.82. It was also pointed out that certain investments of the New Jersey company were carried on the books of the company at less than their real value, and that both the Yards company and the Railway company had, for several years, pursued a policy of charging additions to, and improvements of their properties to operating expenses which might well have been charged to capital accounts. In spite of this policy and the further fact that the profits from the Central Manufacturing District had not been included in the income of the New Jersey company, it has just been shown that the combined income of the three companies, the New Jersey company, the Yards company, and the Railway company, in excess of requirements for fixed expenditures and regular dividends, had amounted to over $900,000 for at least two years prior to 1911. This sum, if distributed, would have made possible the payment of dividends to the common stockholders of the New Jersey company at the rate of 2½ per cent instead of the 8 per cent they were then receiving.

[fol. 1603] Section 18.—Analysis and Specimens of the Committee's Circular Letters and of the Moseley Letters

The Plan submitted to the stockholders of the New Jersey company through the committee, a detailed statement of which has been given in the preceding pages, had as its primary effect the acquisition for the benefit of the Maine company and its promoters, Prince and Armour, of the accumulated surplus of the New Jersey company and of its subsidiary companies, and the annual earnings in excess of the stipulated payments.

The efforts exerted by these promoters for the accomplishment of this task were marked with complete success, and the Plan was declared operative by the committee in September, 1911. The committee did not deem it necessary to secure the assents of the entire 65,000 shares before taking their action, but provided for later acceptance by the few thousand shares, the assents of which could not be immediately obtained.

The successful outcome of the campaign initiated by Prince and Armour to acquire for the Maine company the surplus earnings of the New Jersey company was assisted through the agitation among the common stockholders of the company, as a result of the renewed demands of the big packers for a share in the earnings of the company. These demands were made about the time the contract between the New Jersey company and the three big packers, Armour, Swift, and Morris, expired in 1906. The negotiations begun at that time culminated in the test case brought before the Commerce Court for the purpose of definitely ascertaining whether the New Jersey company could legally give the packers a bonus.

The case was brought in 1910, and the decision of the Commerce Court was not rendered until December, 1911. During this period disquieting rumors were afloat to the effect that the packers contemplated the removal of their plants from the yards at Chicago. Prince and Armour had letters sent broadcast, through their agents, to stockholders of the New Jersey company, which said that in order to successfully solve the legal problems connected with the necessity of satisfying the demands of the packers for a

share in the earnings of the yards, the directors of the New Jersey company had decided to form a new company, of which the packers were to be the majority owners, or, if need, be the sole owners. The stockholders of the New Jersey company were also led to believe that the income of the new company would only equal the bonus that the New Jersey company would otherwise have to give to the packers.

Through the medium of these letters the common stockholders of the New Jersey company were given to understand that the formation of the new company was predicated upon the assent of the stockholders to the Plan, and that the new company would come into possession of sufficient funds to satisfy the packers as a result of the additional income that could be derived through the continuance of the pack- [fol. 1604] ers' business with the Chicago stockyards. It was asserted in these letters that the income of the New Jersey company was to be increased through the arrangement by which the Maine company took over the control of its properties, and the common stockholders would be assured, under the terms of this arrangement, of full participation in the earnings of their company, which, they were informed by the circular letters, were up to 1911 never in excess of 10 per cent. The common stockholders were also given to understand that in case they withheld their assents to the Plan the packers would undoubtedly discontinue their slaughtering establishments at Chicago and the yards property would cease to yield an income. It was thus that the stockholders of the New Jersey company were induced to accept the proposal outlined in the Plan of June, 1911.

These letters were sent out by the committee and by F. S. Moseley & Co., a Boston brokerage firm, who, it will be recalled, had been successful in purchasing the 13,000 shares of common stock in 1910 for the syndicate composed of Prince and Armour. Moseley & Co. had been engaged to assist the committee in obtaining the assents of the stockholders to the Plan.

The Commission secured copies of letters written by the committee, as well as a number of copies of letters written by F. S. Moseley & Co., to the stockholders. Specimens of the committee's letters are presented at this point.

The Chicago Junction Railways and
Union Stock Yards Company,
Boston, July 31, 1911.

To the Holders of the Common Stock of The Chicago Junction Railways and Union Stock Yards Company:

The earnings of the Stock Yards Company, and its connecting Railways, depend largely upon a single industry, and the continued profitable working of that industry in its present location. The situation at the present time is such that the income of the Railways and Stock Yards Company is in effect limited to 8 per cent., and furthermore, it is not certain that the present business will be permanent. Holders of a large majority of the common stock of the company have devised a plan which, if accepted by the remaining holders of the common shares, will have the effect of materially increasing the income to all of the common share holders as well as more definitely assuring the permanency of the company's business. This Plan, a copy of which is appended hereto, has been carefully examined by the undersigned Committee, has received its approval, and is to be carried out under its supervision. The Plan includes the following offers:

An offer to the holders of the common shares of a fixes income equal to 9 per cent on their present stock, guaranteed by a company to be organized under the laws of Maine, with [fol. 1605] a capital stock of $1,000,000 and called The Chicago Stock Yards Company.

The holders of the assenting shares, whether such shares have been guaranteed or not as above mentioned, are to have the right or option to exchange their shares for 5 per cent. 50-year collateral trust bonds of the new company, on a basis of 200 per cent. when the said bonds are ready for issue. The said right is to remain in force as long as the Committee shall approve.

In order that the proposed Plan may be carried into effect, it is important that each holder of the common stock shall promptly sign the stockholder's assent herewith enclosed, thereby manifesting his assent to the Plan and becoming a party thereto. Such assent should be signed and delivered

to the Old Colony Trust Company, Boston, Massachusetts, on or before August 31, 1911.

As in said Plan provided, the said Plan and Trust Agreement shall become operative if and when, in the opinion of the Committee, it has become advisable to carry the same into effect. In case the Committee determines not to declare said Plan and Trust Agreement to be operative and effective, the offers therein contained and all assents and actions pursuant thereto, and likewise the said Trust Agreement shall become null and of no effect.

Copies of the Trust Agreement and additional copies of the proposed Plan, if desired, may be obtained at the Old Colony Trust Company.

Richard Olney, Chairman, Samuel Carr, Guy Norman, S. L. Schoonmaker, E. V. R. Thayer, F. R. Hart, Secretary, 17 Court Street, Boston.

August 23, 1911

Samuel S. Sloan, Esq.:

Vice President Farmers Loan & Trust Company, New York City

Dear Sir: As I am one of the Committee which has made the recommendation in regard to the Chicago Junction plan, I want to call your attention to the necessity of sending the assent of your stock in as early as possible as we are anxious to carry out our arrangement on the first of September which we deem so important to the shareholders.

The Situation is as follows: The Company's business in Chicago depends very largely upon certain definite industries. When these industries were established at Chicago it was the natural centre for the businesses done, but Chicago is now less conveniently situated than many Western cities. To insure the continuance of profitable business for the company, it is necessary to work with close and harmonious relations with those upon whom the company is [fol. 1606] dependent for the continuance of its business. It is the belief of the Committee that the new Company can give much more definite assurances as to the continued prosperity of the company than a company such as the present, practically wholly owned far away from the scene of the company's operations. The shareholders of the new com-

pany are to pay in $1,000,000 in cash, which is in effect a guaranty fund of forfeit, that their promises can be fulfilled.

The Committee has endeavored to weigh every advantage and disadvantage fairly, and is very definitely of the opinion that the plan is for the best interest of all shareholders, and the fact that some 45,000 shares out of the 65,000 have already, at this date, assented, encourages the Committee to believe that the assent to the proposed plan will be substantially unanimous.

Very truly yours, F. R. Hart, Secy., Chicago Stock Yards Committee.

Dictated by Mr. Hart who was unable to sign it.

Boston Mass., September 2, 1911

To the Shareholders of the Chicago Junction Railways and Union Stock Yards Company:

Referring to the circular of the undersigned Committee dated July 31st, 1911, the time fixed therein for the filing of the assents to the plan expired September 1st. As a convenience to distant shareholders and those who have been on vacations, and to enable all shareholders to participate in the advantages of the plan, the Committee has extended the time within which assents may be deposited with the Old Colony Trust Company, Boston, to Saturday, September 17th, 1911, on or before which date your assent should be filed, after which date it will be optional with the guaranteeing company whether they will accept stock or not. The Committee are forwarding these notices by registered mail.

Application will be made to list the nine percent. assented stock on the New York and Boston Exchanges, striking off from the list the present common stock of the Chicago Junction Railways and Union Stock Yards Company.

The guaranty will become operative on October first or as soon as the proper proceedings can be taken.

The Committee believe it for the best interest of every shareholder to become a party to the plan and to participate in its benefits and believe they have fully protected the minority interests by extending to you the same opportunity that a large majority have accepted. A copy of the circular

[fol. 1607] of July 31, 1911, and form of assent are enclosed herewith.

Richard Olney, Chairman, Samuel Carr, Guy Norman, S. L. Schoonmaker, E. V. R. Thayer, F. R. Hart, Secretary, 17 Court Street, Boston, Mass.

Storey, Thorndike, Palmer & Dodge, Counsel.

In pages 220 to 225 are presented copies of letters which were obtained from the files of F. S. Moseley & Co. These are duplicate copies of letters which were sent by this firm to the stockholders to whom they are addressed.

Sept. 12, 1911

W. S. Clough, Esq., % F. S. Moseley & Co., New York, N.Y.

Dear Clough: The points to bring out forcibly to these Chicago Junction stockholders, are as follows:

All the Directors have signed and recommend the plan on the ground that they will lose their tenant; that the earnings have averaged 9¾% per annum for the last four years, and with this plan they get 9% or 10% if they desire. None of them have any interest in the Maine Corporation. It is practically legalizing the rebate that they have paid to the packers in the past, which they are sure that they can pay in the future.

For a non-assenting stockholder the packers can reduce the Yard charges and consequently the dividends.

After obtaining the amount of stock that is necessary the Maine Corporation will not care for any more stock and consequently it will not have the value that ordinary minority shares of a railroad have where it is the desire to absorb all of the shares.

Application will be made to have stricken off from the Stock Exchange the non-assenting shares, and, in the opinion of those who seem to know, the value will be materially reduced.

If this tenant leaves the Stock Yards, they cannot get another. It will come down to a real estate proposition or a railroad terminus of great value but of greatly reduced earning power.

55,000 of the 65,000 shares have assented, or signified their intention of so doing.

Very truly yours, —— ——.

August 16, 1911

Miss Carrie W. Andrews, Newbury, Vt.

Dear Madam: We have been asked to get the assent of the stockholders of the Chicago Junction Railways & Union Stock Yards to the new plan, regarding which you [fol. 1608] have had circulars. The story is that for some years the Western Railroads have exerted considerable pressure on the packers to move West. The Directors of the Chicago Junction Railways and Union Stock Yards Company have gotten around this in past years by giving rebates to the packers. There is now a suit in the Courts on account of this, and it is necessary to find some other way to keep the packers in Chicago. The large stockholders thought the only way to do this was to get the packers financially interested in the Stock Yards Company, and so got the packers to say that they would take over the Chicago Junction Company, provided they could get a sufficient number of shares and run it themselves. In this plan the packers have formed a million dollar corporation, in which they guarantee for the present stockholders of the Chicago, Junction Railway & Union Stock Yards to pay you 9% a year instead of the 8%. Your stock remains the same, except that it is guaranteed by this new corporation for the additional 1% dividend. You also have the privilege of changing your stock at the rate of $100. per value into Collateral Trust Bonds at the rate of $200. for your present share.

We have looked into this plan very carefully, and advise your acceptance. We trust you will consider the matter and send your assent to the Old Colony Trust Company.

Very truly yours, —— ——.

August 17, 1911.

Messrs. H. T. Carey & Co., 66 Broadway, New York, N. Y.

Dear Sir:

Your letter addressed to the Old Colony Trust Co. in regard to the Chicago Junction Railways & Union Stock Yards Co. has been referred to us as we are acting in this matter for them.

In answer to your question, we would say the new Maine Corporation will be simply a holding company but, on account of its holdings of the Stock Yards stock, either through guarantee or in exchange for its bonds, it will be the controlling interest in the operating company.

The advantage of the formation of this company is that the majority of the stock will be controlled by the packers, which will insure their permanency in Chicago, of which periodically there is some question. It is only through large bonuses being paid to them in the past that they have stayed in Chicago and not moved nearer to the cattle industry. Without their business your company would have little earning power and would become merely a real estate proposition with the railroad adjoining, but without any special earning power.

The guarantee, of course, is limited to the $1,000,000, but you have the strength of the stockholders of this concern back of it and the inducement for them to stay proportioned to what they can make out of the situation. It is a question of these new interests taking a little out each year or a large amount every eight or ten years. This very question of rebate has been argued before the Court of Justice in Illinois and an opinion is expected on October 1st. The [fol. 1609] Directors of the Company feel that it will be adverse as, through their ownership in the railroad, it is in the nature of a rebate. They are anxious to have the plan consummated before that date.

An unassenting stockholder will be in the position of any minority stockholder and he must receive the same dividends that are declared by the company, and of course, might be in a position to receive more than the 9% as it is fair to assume the new interest expect to make m ney out

of the situation, although it would be easy for them to reduce the charge against them. The danger of staying out is that this new interest have told us they would not take it up without the total 65,000 shares assenting. They will doubtless, however, accept a smaller amount but just what that amount may be it is impossible for us to tell and if many of the stockholders stay out it will jeopardize the plan.

All of the old Directors, none of whom have any interest in this new corporation, and many of the large Trustees here have assented to the plan. In fact, there must be nearly 50,000 shares who have assented or agreed to assent.

Very truly yours, —— ——.

August 23, 1911.

Albert O. Brown, Esq., 1008 Elm St., Manchester, N. H.

Dear Sir:

You have 50 shares of Chicago Junction Common. You doubtless received the circulars from the Committee and our previous letter. We have received the assent of about 50,000 shares, out of 65,000, to the plan, and simply want to tell you that it is a plan that all the Directors have recommended and have assented to; and that none of them have any interest in the Maine Corporation.

If you are coming to Boston in the near future, we should be pleased to talk with you about this, as we feel that we can convince you that it is the only thing to be done. The situation of a minority stockholder can be made very unpleasant for, with the packing interest in control of the Stock Yards, they can make the yard charges to satisfy themselves as long as they pay the dividend on the guaranteed stock. This process of course, would minimize the earnings of the Stock Yards.

Very truly yours, —— ——.

August 18th, 1911.

Mrs. Annie S. Churchill, No. 131 Magazine St., Cambridge, Mass.

Dear Madam:

Our representative called at your house today and found you were away, so we are taking this method of giving you [fol. 1610] more information regarding the proposed indorsement of Chicago Junction Railways & Union Stock Yards Stock by the new Company, Chicago Stock Yards Company, which Company agrees to pay 9% on the Common Stock.

We are enclosing herewith a copy of the Trust Agreement. The situation is as follows: The Western Railroads have been trying for many years to draw out your Company's business to other parts of the West, such as St. Louis, Kansas City and Omaha, which are more centrally located in the cattle district and, therefore, more advantageous to the packing business. The business of the packers amounts to about three-quarters of the total business done by your Company. Owing to the Sherman Anti-Trust Law, your Company will be unable, as formerly to pay the packing interests a certain amount of money for their business, as this is ruled out as a rebate. The packers have, therefore, agreed to form a new Company called the Chicago Stock Yards Company, which shall be capitalized for $1,000,000 paid in. This new Company to guarantee dividends as in the plan. The packing interests feel that by co-operation with one another and local management, they will be able to make your Company earn larger profits than ever before, and, therefore, can afford to pay 9% interest.

It seems to us that the strongest argument in favor of this is the fact that those men forming the Committee, who are the largest stockholders in your Company and most deeply interested in it, have all of them signed the agreement. These men, although in this case acting as private individuals, are many of them Directors of the Company and in a position to know the condition of affairs there better than any one else. It is needless to add that these gentlemen are considered of the highest integrity.

No stockholder in your Company is interested in any

way in the new Company, and so any change which they may make would not be of any monetary advantage to them except as stockholders, or trustees of estates holding this stock.

We shall be very glad to furnish you any additional information and would say in closing that we are receiving daily many signed agreements.

Hoping this matter will have your favorable consideration, and assuring you that in our opinion, it is for your best interest to sign, we remain

Very truly yours, —— ——.

August 26th, 1911.

Frank Grant, Esq., Westfield, Mass.

Dear Sir:

We are in receipt of your favor of August 25th.

The Chicago Junction situation is as follows:—

[fol. 161] The Chicago Junction Company has been almost exclusively an Eastern Company, while its customers are the packers of Chicago and have no direct interest in its affairs. This has led to considerable friction in the past and it has been necessary on several occasions when contracts with packers were expiring, to make it worth their while to extend them. The contracts with the packers have either expired or are expiring in 1913, and it is to obviate this difficulty that this plan has been formulated. It amounts to a lease of the property to the packers, who are the only ones interested in the Maine corporation. The million dollar capital of this company is to be paid in cash and it is to be held either in cash or good securities as a guarantee of payment of the dividends, but as the packers will have every incentive to turn business toward the Stock Yards Company, there can be no question as to the payment of the 9% dividend or the 10% bond interest. Both Kansas City and Omaha are endeavoring to divert the packing business from Chicago and if this plan does not go through it is possible they will be successful.

The amount of bonds issued by the new Company will be determined by the number of stockholders of the Chi-

cago Junction Railways & Union Stock Yards Company who elect to receive bonds in exchange for their stock, as $200 in bonds will be issued for $100 par value of stock, and the stock held in trust as security against the bonds.

Very truly yours, —— ——.

August 18, 1911.

W. B. Hale, Esq., c/o McMillan & Hale, Rondout, N. Y.

Dear Sir: Your letter to the Old Colony Trust Co. in regard to the Chicago Junction Railways & Union Stock Yards Co. has been referred to us as we are acting in this matter for them.

This Maine Corporation which is to guarantee the stock will be controlled by the packers, who now furnish 75% of the business of the Stock Yards and have always demanded something in return for it. This something has been given in the past in large blocks, in either bonds or cash, periodically. Up to date something like $6,000,000, has been given to them as an inducement for them to remain in Chicago. In giving them the control, in our opinion, it will insure the permanency of the packers in Chicago, in any event, for a much longer time than they would ordinarily find it for their best interest to stay.

The Company has earned about 10% for the last four or five years and distributed 8%. In this way you can take the 9%, or the 10% if you so elect to take the bonds, which is in all probability more than the company could afford to give you on account of the demands made by the packers for their share of the profits.

About 45,000 to 50,000 shares of stock have assented to the plan but the interests controlling the Maine Corporation insist that they obtain all the Common Stock, 65,600 shares. Of course, there may be some shares stay out but exactly how much they will allow to stay out and declare the plan operative we do not know.

[fol. 1612]. We understand that a minority stockholder, while he would have the same dividend paid to him that was paid to the stock controlled by the Maine Corporation, yet it would be perfectly possible for the packers to reduce the yard charges so that the earnings of the Stock Yards

Company would be much reduced. We simply state this to show that it is safer to come along with the plan which has had the careful consideration of all the Directors of the Company and who have no interest whatever in the Maine Corporation.

Very truly yours, —— ——.

August 15, 1911.

James H. Pinchon, Esq., 10 Chestnut St., Springfield, Mass.

Dear Sir: We have your letter of the 14th and you are right in your assumption as to who the holders of the Maine Corporation will be. As far as we know none of the stockholders of the Stock Yards Co. have any interests in this concern.

It is most important, in our opinion, to hook the packers permanently into this situation as there has always been fear of their leaving for a different locality. Furthermore, you understand that every time there is a question of renewing their leases the packers have demanded large bonuses. Your Company has not earned over 9 or 10% in the past years and has paid out 8%. It has been necessary to accumulate a surplus for the very purpose of treating with the packers. There is a new lease coming up in the near future and the question of paying a bonus has been referred to the Courts and the opinion will be rendered on October 1st. This plan should be settled before that date.

All of the old Directors, such as the Thayers and Gardners and the large Trustees have deposited their stock. You do not lose the equity in the property if you take the 9% guaranteed stock. There is no question but that the people taking the lease of this stock expect to make money out of the situation but you can afford to let them make money in this way just as well as to pay them a bonus periodically.

Very truly yours, —— ——.

August 18, 1911

B. A. Jackson, Esq.,
Treasurer, Providence Banking Co., Providence, R. I.

Dear Sir:

In regard to the Common stock of the Chicago Junction Railways & Union Stock Yards Co. which Mr. Wellington asked you yesterday to obtain the assent to plan proposed by the Olney Committe, we would say that all the Directors and large stockholders have carefully gone into the situation, have recommended and assented to the plan, and there is no stockholder in the Chicago Junction stock, as we are advised, who has any interest in the Maine Corporation.

Between ourselves, it is simply a case of legalizing the rebate which the packers have insisted on obtaining as they state they contribute 75% of the earnings of the company and are entitled to a portion of the plunder. In the past this has been paid by giving them large blocks of stock or [fol. 1613] payments in cash; hereafter they will take whatever pickings may seem proper to them. The property, however, must not be wasted and must be kept intact, so the lawyers who are handling this matter advise us.

The Company has been earning about 10% and paying 8%. But it was necessary for them to save a certain surplus to distribute back to the packers periodically.

This question of rebate has been argued before a Court of Justice and a decision is expected on October 1st to see if these rebates are legal in view of their holding and operating a railroad property. The Directors fear an adverse decision and are, therefore, anxious to have this plan become operative before that date.

A minority holder may have in mind that by staying out he can get these extra dividends that the Maine Corporation expect to get on the stock which they control through guarantee or by deposit as collateral against the bonds in case the stockholder takes them. The fact of the matter is, it would be well within the power of those who control the Maine Corporation to reduce the yard charges so that the earnings of the Stock Yards Company would make a much poorer showing than they do now. We feel it is very important to retain this earning power of the packers,

otherwise, this valuable tract of land would have to be cut up for manufacturing or terminal purposes, and, while the stockholders would eventually get back a handsome return on their money, it would take a number of years to do so. In the meantime, there would be the payment of taxes and interest on the bonds with no income.

We should be pleased to allow you ⅛ on any assents that you send to this office. We understand that Mr. Matteson has the controlling interest in about 1,000 shares of stock and that you will take this matter up with him.

Very truly yours,——,——.

The following is a letter written by Arthur C. Graves, an attorney to F. S. Moseley & Co., in August, 1911. It was written in reply to a letter sent by F. S. Moseley & Co. to a stockholder of the New Jersey company of whose affairs Mr. Graves had charge, and was obtained from the files of F. S. Moseley & Co.

Law Offices of Arthur C. Graves, 48 Church Street, New Haven, Conn.

August 15th, 1911

Messrs. F. S. Moseley & Co.,
50 Congress Street, Boston, Mass.

Gentlemen:—Your letter of recent date to Mrs. Sarah K. Graves in reference to the proposed re-organization of the Chicago Junction Railways and Union Stock Yards has been handed to me for attention, and in view of what the re-organization offers to the present common stockholders, and in reply to your letter, I desire to make the following observations:

[fol. 1614] There are a few stockholders in this company of whose affairs I have charge. Thus far, none of them have indicated their assent to the proposed plan, and I have carefully refrained from advising them to do it. In the first place, it is very apparent to all, except perhaps to those who devised the plan and who are on the inside and know all about it, that the proposed reorganization is very indefinite, and the common stockholders really do no know what is offered to them. Passing by this, however, which I think after all is of minor importance, the real criticism

of the intelligent stockholders of the Chicago Junction Railways would be this—that the present stockholders are not receiving under the proposed plan a return commensurate with the present actual assets and cash surplus of its company. It is true that the earnings of the stock yards and its connecting railway depend almost wholly on a single industry and that its profitable operation depends upon its present location, and it is also true that possibly the stock yards business may be carried further and further to the West thereby injuring to a considerable degree the Chicago market. But on the contrary, the present actual assets and cash surplus of the company belongs to the present stockholders, and not legitimately to those who, through some skillful devise of reorganization, succeed in getting the old company and its assets entirely into their possession. The parent company of which we are common stockholders is virtually scarcely more than a holding company, and derives all its income from dividends paid on the stock of the Chicago Junction Railways Company and the Union Stock Yards Company. While it is true that the earnings have not increased to any marked degree in this business, at the same time it is also true that each of these subsidiary concerns has earned with a very comfortable surplus the dividends which have been paid over into the treasury of the parent company, and for a large number of years such surplus has remained untouched in the treasury of the subsidiary companies. Such surplus has been earned, too, after very liberal appropriations for improvements and betterments, a portion of which might have been charged to new capital. Furthermore, the parent company has received from the dividends thus paid by its subsidiaries a surplus over and above its dividend requirements; viz: 6% on the preferred and 8% on the common. The public and the casual observer, therefore, do not often realize that the surplus and assets of the present company lie still in the treasury of three corporations, and assuming that future improvements or exigencies would warrant our leaving untouched the surplus now resting in the treasury of the subsidiary companies, nevertheless the surplus in the treasury of the parent company has now reached a very considerable sum.

I have not before me the reports of the last two or three years of the Chicago Junction Railways and Union Stock Yards Company, and I cannot in this letter give the exact figures of the earning power and surplus of the different concerns; I want to say, however, that some seven years ago, when advising a client to invest in the common stock of this corporation, I had occasion to make a very careful investigation of the earning power of the company and [fol. 1615] the surplus which it had virtually at its disposal, either in its own treasury or that of its subsidiary concerns. At that time the cash surplus amounted to something like three millions of dollars, as I discovered by investigation. My calculations on this score were also corroborated by those of some Boston brokers who were acquainted with the company. A cash surplus of three millions of dollars on an outstanding issue of common stock of only $6,500,000 was a very large surplus. This was some seven years ago, and in the meantime this surplus has slowly grown from year to year.

A few years ago, about the time the company discontinued making a report of the separate earnings of the subsidiary companies I wrote to the treasurer of the parent company, and at my request he sent me the figures, at the same time explaining the reason why the company had discontinued giving these separate earnings was because it was deemed wise not to reveal the company's true earning power and its resources to some of our state legislatures and thereby open itself to insidious legislation. It was upon this explanation that I refrained at that time from writing an article for some prominent financial paper, revealing for the information of investors in general the real financial strength of the Chicago Junction Railways and Union Stock Yards Company.

In conclusion I have only to say, that the present plan of reorganization by no means gives to the present common stock holders full return for the value of their property, with which they are asked to part. It is true that the proposed new securities, offered to the stockholders with an increased dividend of 9 or 10% assured, seems better at first blush than the present security which they hold. At the same time it is also true that the present 8% on the

common stock of the parent company is absolutely assured, and in the future the common stock holders must and ought to reap the advantage of the results of all these past years of provident and skillful management. Instead of that, the reorganization committee themselves, representing a group of inside stockholders, offer something which is sufficiently attractive to induce the present holders to part with their stock, and after they have parted with it, the rich surplus to which I have referred and the accumulation of all the past years will redound to the benefit of the inside few perhaps followed by the "cutting of a rich melon." Frankly, gentlemen, do you think this is treating the stockholders squarely? Does it not bear in some respects a slight resemblance to the old Chicago and Alton deal?

Were I in a position to secure names of all the common stockholders of the company and had the time and means to devote to it, I could easily put so many of the stockholders in possession of facts that would make the present plan impossible of fulfillment. However, I think it would be better if the committee, or yourselves did this.

Very truly yours, (Signed) Arthur C. Graves.

[fol. 1616] Section 19.—The Misrepresentations in the Moseley Letters

Before taking up for discussion the salient points contained in the foregoing letters, it should be said that simultaneously with the finding of these letters a memorandum was found in the files of F. H. Prince which stated that Prince contemplated the formation of a new company with $8,000,000 of capital stock of which $4,400,000 was to be given to the three big packers in consideration of their agreement to continue their business at the Chicago stockyards. This memorandum was drawn in November, 1910. It is obvious that the new company spoken of in this memorandum had reference to the Maine company which was subsequently organized by Prince and Armour in September, 1911. The capital stock of this company when formed was $1,000,000, but this amount was increased to $8,000,000 almost immediately.

In view of this circumstance, it was believed for a time

during this inquiry that Armour's close association with Prince in the deal that culminated in the formation of the Maine company was a direct outgrowth of the plan outlined in the memorandum which aimed to give the control of the new company to the three big packers and that Armour acted as their representative. The Moseley letters which gave so much prominence to the contention that the Maine company was to be controlled by the packers tended to substantiate this view of the memorandum.

However, in consulting the Moseley letters as a source of information in connection with its attempts to correctly interpret the trend of events that followed the bringing of the Pfaelzer case, the Commission has at no time been oblivious to the fact that these letters were replete with gross inaccuracies. An instance of this kind is to be noted in the statements made as to the financial condition of the New Jersey company. The impression was given that less than 10 per cent had actually been earned by the New Jersey company on its common stock, whereas the report has already disclosed that the earnings of the New Jersey company actually amounted to over 12½ per cent on the common stock without taking into consideration the surplus earnings retained by its subsidiary companies, the Yards company and the Railway company. If the surplus earnings of these two companies had been taken up by the New Jersey company the actual amount available for distribution in the form of annual dividends to its common stockholders would have permitted that company to pay dividends at the rate of 21 per cent. The letters also contained inaccuracies concerning the amount of the bonuses paid to the packers. According to these letters these bonuses had amounted to $6,000,000, whereas it has already been shown that the three big packers to whom the control of the new company was to be given had actually received $3,000,000, from which amount must be deducted the proceeds received by the New Jersey company from the sale of the Tollesfon land and the Central Stockyards.

The letters also made it appear that the packers were merely tenants using properties of the New Jersey company [fol. 1617] under terms of a lease about to expire in 1913. The actual facts were that the packers owned the properties

used by them and their investment in land, buildings, and equipment represented many millions of dollars.

These inaccuracies, though serious enough in themselves, did not at first detract from the value of the letters as evidence that the Maine company had been formed for the purpose of permitting the packers to share in the earnings of the New Jersey company through stock ownership in the Maine company. Additional data which was subsequently considered, however, made it impossible for the Commission to continue to regard these letters as worthy documentary evidence to substantiate its first impression that all of the packers were represented in the ownership of the Maine company.

The evidence of the unreliability of the Moseley letters in this and other respects is now given.

Section 20.—The Prince and Armour Deal and the Directors of the New Jersey Company

The Moseley letters were so constructed as to convey to the stockholders to whom they were addressed the idea that the new company was conceived by the directors of the New Jersey company, acting in an official capacity as a means of permanently solving the bonus problem to the satisfaction of the packers; that every one of the packers was assisting in the formation of the new company, and that no directors or stockholders of the New Jersey company were to be financially interested as stockholders of the new company or in any other way.

From letters secured in this inquiry it would appear that the initial step leading to the formation of the Maine company, namely, the purchase of 13,000 shares of common stock of the New Jersey company, was undertaken by Prince and Armour without having previously submitted the matter to the board of directors of the New Jersey company for their official sanction.

About one week after Prince and Armour had concluded their syndicate agreement to purchase 13,000 shares of the common stock of the New Jersey company through Moseley & Co., the following letter was written by Eugene V. R. Thayer, a director of the New Jersey company, to J. A.

Spoor, of Chicago, also a director of the New Jersey company:

50 State Street,
Boston, October 8, 1910

J. A. Spoor, Esq., Pittsfield, Mass.

Dear Mr. Spoor:

It may be of interest to you to know that our friend (meaning Prince) here in Boston has secured an option which I understand runs for sixty days on 16,500 shares of stock at $160 a share, and has deposited $50,000, which he forfeits if the option is not taken up. Just what his object is in securing this stock of course I do not know. He told the parties who were working for him that he was buying the stock for an outside interest who would [fol. 1618] want representation on the Board. The Normans, (relatives of Prince, by marriage) I believe, have sold all their stock which rather surprises me.

Before starting to gather this stock, he agreed with the house that was doing the work for him to come up and tell me what he was doing and his object in doing so, but of course, I have heard nothing from him.

Mr. Thayer continues about the same.

Very truly yours, (Signed) Eugene V. R. Thayer.

The sentence of this letter reading: "Just what his object is in securing this stock of course I do not know," is significant, in so far as it shows that Prince undertook the purchase of the New Jersey company's stock without having taken into his confidence Mr. E. V. R. Thayer, a member of the family which had been most actively connected with the financial affairs of the Chicago stockyards from the earliest years of its existence.

In a letter from Wm. C. Lane, for many years director and treasurer of the New Jersey company, dated October 10, 1910, and written to J. A. Spoor, the following significant passage appears:

I had a telephone call from Mr. Eugene Thayer on Friday. He told me that somebody was endeavoring to obtain options on the Jersey Company's common stock in Boston at 160, the market price at present being about 140. He

mentioned no names but one can imagine who is doing it and the purpose of it.

The words "one can imagine who is doing it and the purpose of it" indicate that Lane had no authentic knowledge of the deal.

To further illustrate that the purchase of the 13,000 shares was undertaken by Prince and Armour without the official sanction of the directors of the New Jersey company, the following letter is presented:

Chicago, Illinois, October 10, 1910

Dear Mr. Thayer:

A reporter called here this P.M. and stated that Moseley & Co. of Boston had offered $160.00 per share for the common stock of the Jersey Company, provided that a sufficient amount was turned in to give control of the company.

If this report is true, I presume you have heard about it. Let me know what information you have.

Very truly yours, (Signed) J. A. Spoor.

Mr. Eugene V. R. Thayer,
50 State Street, Boston, Mass.

This letter of October 10, written by J. A. Spoor, of Chicago, apparently before receiving Thayer's letter of [fol. 1619] October 8, is particularly worthy of attention, owing to the fact that Spoor was one of the most prominent figures in the management of the stockyard affairs. In addition to being a director of the New Jersey Company, he was chairman of the board of directors of both the Yards company and the Railway company, and was one of the trustees appointed by the New Jersey company to manage the Central Manufacturing District.

That Prince not only undertook the initial steps toward the formation of the Maine company without the sanction of the directors of the New Jersey company, as shown in the above letters, but that at a certain stage of the campaign he met with decided opposition on the part of W. D. Guthrie, one of the most influential directors of the company, is evident from certain letters secured by the Commission. Guthrie had been connected with the New Jersey company since its formation in 1890, having been a member

of the law firm which acted as general counsel for the company, and in this capacity he had been consulted in all of the negotiations between the New Jersey company and the packers. He had been a director of the company since 1898, and had served as a member of the committee representing the New Jersey company in its negotiations with the packers following the expiration of the contract with the packers in 1906. There negotiations had resulted in the agreement to bring the Pfaelzer case, and Guthrie was at this time (in 1910) representing the New Jersey company as their chief counsel in that case.

The opposition on the part of Guthrie, referred to above, arose from the fact that soon after the announcement was made of the purchase of the New Jersey company's common stock by the syndicate, Prince divulged to Guthrie his intentions of bringing about a radical change in the membership of the board of directors of the company; this change he sought to effect by declaring himself a candidate for the office of president in lieu of Nathaniel Thayer, who had been inactive for some time owing to ill health, and of forcing some of the directors to resign in order to create the necessary vacancies for the men Prince was anxious to have as his associates on the board of directors.

It is significant to note that during his controversy with Guthrie Prince never disclosed the reasons that prompted him in his efforts to strengthen his position in the New Jersey company, both as a stockholder and as a director of its affairs, apparently letting the merits of the issue he took up with Guthrie be decided on his contention that the membership of the directorate of the company, as then constituted, was not fair to the large stockholders and detrimental to the interests of the company. Later events indicated that such a change in the personnel of the board of directors made it possible for Prince to form the Maine company.

October 18, 1910.

DEAR MR. GUTHRIE:

As you are doubtless aware, a sydicate has purchased a large amount of the stock of the Chicago Junction Rys. and Union Stock Yards Co. I am the representa-
[Vol. 1620] tive of the syndicate and have undertaken cer-

tain obligations with them. The stock of the syndicate together with my own holdings, amount to a substantial control of the common stock and I have agreed with my associates that I will supply three vacancies on the present Board of Directors, to be filled by nominees of the syndicate, whom I will name later. I desire to go abroad immediately, not to return before the annual meeting, and therefore even at this early date I should like to have an understanding regarding this matter. I have considered the several members of the Board and it seems to me that the following vacancies are the ones most available. You yourself have already indicated your desire not to remain a director, for purely personal reasons. Therefore your position would be available. Mr. Foss has likewise desired to resign. Mr. Lane occupies the position of Treasurer and his services can doubtless be retained for the Company without his being a member of the Board. Therefore, it has occurred to me in studying the mater that the above changes would accomplish what is necessary for me and would make practically no change in the present organization. I ought to add that in view of Mr. Thayer's serious illness, this may cause a vacancy. In that case the syndicate intends to name me as his successor as President, in which event the vacancy on the Board would be open for Mr. Lane.

With regard to the proxies for the coming annual meeting I should like to have them made out in the names of Nathaniel Thayer (or Eugene V. R. Thayer), Guy Norman[1] and myself. I assume that such a proxy would be so expressed as to be exerciseable by a majority of the persons named or their substitutes present at the meeting.

Very truly yours,

———.

[1] Brother-in-law of Prince, who had sold his stock to Prince and Armour, Federal Trade Commission.

Guthrie, Bangs & Van Sinderen,
Victor Morawetz
44 Wall Street, New York

October 18, 1910.

DEAR MR. PRINCE:

I desire to answer your letter of today which you handed me at our interview in reference to the Chicago Junction Railways and Union Stock Yards Company and also to confirm what I then stated to you. I understand from you that the new syndicate has actually acquired 18,000 shares of the common stock of the company; in other words has acquired out of the total of 130,000 shares of preferred and common stock approximately 13 per cent. So far as I am personally concerned or called upon to advise other directors, I think that if the new interests have acquired such a holding over common stock, it will be quite proper to give them a representation on the Board, and I do not doubt that the election of Mr. Schoonmaker whose name you mentioned, will be entirely agreeable to all the directors. I do not think, however, that the syndicate is entitled to demand the election of three nominees out of a board of only ten directors; nor do I think that you were warranted in [fol. 1621] undertaking or agreeing with such syndicate, as you state in your letter to supply three vacancies in the present board of directors, and thus practically secure to you and your associates in the new syndicate the control of the company. In my opinion, no arrangement on the part of a board of directors which would thus turn over control of the company to the holders of a minority of its stock, would be either proper or justifiable particularly when the annual election is shortly to be held, at which time the wishes of the majority can be consulted.

I want, also to confirm what I stated in regard to the suggestion of a vacancy in the office of President in case anything should happen to Mr. Nathaniel Thayer. I do not think that the directors should be called upon now to state what they will do in that case—a contingency which we all hope will be long deferred. Nor in any event, do I think that the new syndicate which has just bought into the property and owns only 13 per cent. of the stock is en-

titled to name Mr. Thayer's successor. That, surely, is a matter to be determined, not by the syndicate, but by the board of directors representing all the stockholders.

As to your suggestion in regard to the proxies at the coming annual meeting, I will submit it to the board of directors, but under the circumstances, and in view of what you have said to me as to your determination to secure control of the company, I deem it proper to say candidly that I cannot advise the directors to agree to your suggestion that you and your nominees shall constitute a majority of the proxies, and thereby control the exercise of the voting power on behalf of the stockholders.

Yours faithfully,
(Signed) Wm. D. Guthrie.

F. H. Prince, Esq.,
28 State Street, Boston, Mass.

The following letter was drafted by Prince in answer to Guthrie's letter, and although it was not sent to him this fact does not detract from its value as a document showing the manner in which Prince was prepared to defend his attempt to gain the control of the management of the New Jersey company.

Dear Mr. Guthrie:

Replying to yours of the 18th, I believe you entirely misapprehend my position. The number of shares of stock acquired by myself and a Syndicate is independent of my previous holdings and the holdings of members of my family in the Chicago Junction Railway & Union Stockyards Company.

I disclaim any desire to secure an arrangement with the Board of Directors intended to turn over the control of the Company to the holders of the minority of its stock, but you will agree with me that it is exactly the situation of the Board at the present time. I believe you will concede that the Board as at present constituted, and in control of the Company, are the holders of the decided minority of its capital stock and is in no way representative in (of) sub- [fol. 1622] stantial individual interests, and I and my immediate associates have the largest concentrated holdings of the stock. Exclusive of these as I understand it, the

Directors at the last annual meeting, and I believe without any material change since, are holders of stock as follows:

(Here insert Directors holdings.)

With these unimportant individual interests the affairs of the Company have been conducted in a way to provoke just criticism both from a business, moral and political standpoint, and I felt that I must either dispose of my stock or increase my interest and bring others into its management to correct these abuses of management. After consulting with my friends, the latter course seemed to me to be the more feasible and practical.

No intention to obtain control of the Company was involved except so far as we deemed it to our interests and to the interests of the shareholders, that its affairs should be conducted by parties that have the most substantial interest in the property, rather than by a Board of Directors whose personal stock holdings are insignificant. That Directors with insignificant stock interest should persist in perpetuating their control of this important property through proxy committees or otherwise naturally subjects their motives to just suspicion. I believe it will be better for the property and better for the shareholders that the Directors should take warning of the present state of the public mind to clean house and that new and substantial interests brought into the property who are sure to give added value to the Company's securities are given an adequate representation and that no Director be elected who is not also an important stockholder.

Very truly yours,

———

That the controversy with Guthrie was finally decided in favor of Prince is evidenced from the fact that Lothrop Ames, Bradley W. Palmer, and S. L. Schoonmaker, all of whom were Prince's choice, were subsequently elected as directors of the company, and Prince became president in place of Nathaniel Thayer. These vacancies were made possible through the resignation of W. D. Guthrie, Gordon Abbott, and Nathaniel Thayer, the latter resigning because of ill health.

It is not possible to submit a detailed account of all that transpired at the directors' meeting when the issue between Guthrie and Prince was being threshed out, but the following letter written by E. V. R. Thayer to J. A. Spoor indicates that the expediency of yielding to Prince's demands apparently loomed prominently in the discussion, and that an affirmative decision was arrived at, largely because of the aversion, on the part of some of the directors, to have an open fight with "an interest which has acquired such a large amount of stock." The letter just referred to follows:

[fol. 1623]

50 State Street,
Boston, October 28, 1910.

My Dear Mr. Spoor:

I saw Gardner, and as I have already telegraphed you, he is intirely in accord with what was done in New York last week and quite agrees that it would not only be useless but unwise to oppose an interest which had acquired such a large amount of stock. While he is still not an ardent admirer of Prince, he appreciates that the situation has materially changed since the Syndicate has bought the property. He promised me that he would stay with us and remain as a Director.

He was very glad that you are going to remain as the active head of the local companies for he appreciates the fact, as I do, that you are the man behind the gun in this whole business.

I am indeed very glad that the matter has been finally settled for I am sure it would have been a bad thing for the Company to have had an open figlft and in the end we would not have gained anything. I know you will agree with me on this point.

I shall hope to see you in New York in the near future, and in the meantime, believe me,

Very truly yours,
(Signed) Eugene V. R. Thayer.

J. A. Spoor, Esq.,
First National Bank Building, Chicago, Illinois.

By way of a summary of what has been suggested by the above letters, the attitude shown by such prominent directors as Spoor, Thayer, and Lane upon learning of the fact that the brokerage firm of Moseley & Co. had been endeavoring to purchase 13,000 shares of common stock of the New Jersey company for the syndicate headed by Prince, furnishes evidence that these gentlemen did not in any way assist in the formation of the syndicate agreement between Prince and Armour. In view of the contents of some of these letters and of what subsequently transpired; it is perhaps unnecessary to say that neither Guthrie nor Gardner gave to Price and Armour any assistance of this kind.

It is, therefore, clear that the letters written by Moseley & Co. to the common stockholders of the New Jersey company, in which they were informed that the Maine company had been conceived by the directors of their company as a final and permanent solution of the bonus problem was not true, inasmuch as it has been shown that the directors of the New Jersey company had not taken any official action in initiating the purchase of the 13,000 shares of common stock of the company—this purchase constituting as it did such an essential part of the Plan for the formation of the Maine company.

[fol. 1624] It is not meant to say here that Prince accomplished his object of forming the Maine company without the cooperation of any of the directors of the New Jersey company. The fact that three directors of the New Jersey company were members of the committee which submitted the Plan of June 30, 1911, to the stockholders of the New Jersey company would militate against such an assertion. Furthermore, the importance that Prince attached to the personnel of the board of directors of the New Jersey company at the outset of his campaign, as evidenced from his efforts to have men of his choice as directors of the

company, shows that Prince himself realized that without enlisting the good will of the directors of the New Jersey company it would be impossible for him to attain the object he had in view, which was to form the Maine company.

But the facts refute the statements in the Moseley letters bearing upon the relation of the directors to the formation of the new company, which imply that the directors of the New Jersey company, acting as officers and representatives of the company, conceived, helped to conceive, or even sanctioned the Plan, the object of which was, as stated, to devise the final solution of the ever-recurring bonus problem of the packers. Such an assertion is not in harmony with the actual facts, the truth being that Prince had maintained secrecy about the deal until he had secured the 13,000 shares of stock for his syndicate with Mr. Armour, and had strengthened his position in the company by changing the membership of its directorate in accordance with his designs.

Furthermore, after this was accomplished the matter of sanctioning the Plan for the formation of the Maine company was never submitted to the directors of the New Jersey company for their official consideration and approval. The fact that the names of three directors of the New Jersey company appear as members of the committee selected by Prince to represent the Maine company did indeed lend credibility to the assertion in the Moseley letters, that the directors of the New Jersey company had helped to formulate the Plan. The truth of the matter is that the selection of these three men by Prince was not the result of official action taken by the company, these three directors having acted in a strictly private capacity.

Section 21.—The Prince and Armour Deal, and Swift and Morris

The Moseley letters indicated that Swift and Morris, as well as Armour, were to be interested in the Maine company and that these packers were to have the controlling interest in that company. Evidence at hand shows that these statements, like others which have already been examined, were not in accord with the facts. Three letters, written by different persons at different dates, are presented below.

These letters, if read together, tend to show that Swift and Morris were not associated with Prince and Armour at any stage of their campaign which culminated in the formation of the Maine company.

The following letter was written by Albert H. Veeder to [fol. 1625] F. S. Moseley in October, 1910, at the time Moseley & Co. was endeavoring to purchase the 13,000 shares of the New Jersey company's common stock for the Prince and Armour syndicate. It evidently grew out of a newspaper announcement, which had come to the notice of Albert H. Veeder, who had acted as confidential adviser for Swift & Co. in all of its negotiations with the New Jersey company relating to the payment of bonuses to his company ever since 1891, and who was at this time a director of the Chicago Junction Railway Co. It indicates that Swift was not a party to the transaction.

Law Offices Albert H. & Henry Veeder,
125 Monroe Street, Chicago.

October 12, 1910.

F. S. Moseley, Esq., Boston, Massachusetts

Dear Sir:

Please send me one of your circulars, according to the papers, you recently issued, in reference to the stock of the Chicago Junction Railways and Union Stock Yards Company, and oblige.

Your truly,
(Signed) Albert H. Veeder.

AHV/NA.

In July, 1911, about nine months after the above letter was written by Veeder, F. H. Prince wrote a letter to J. O. Armour in which he outlined the progress he had made in the campaign which had been quietly initiated to obtain the assets of the largest stockholders of the New Jersey company to the Plan of June 30, 1911. The letter also discussed the steps that were to be taken in securing sufficient assents to make possible the formation of the Maine company at an early date, and how this was to be accom-

plished. The following passage, bearing on the relation of Swift and Morris to the deal, appeared in this letter:

In the meantime, if Mr. Spoor thinks it advisable, I can meet the packers and explain to them what the advantage in the formation of the Company is; namely, that the large holders have bought up the small holders in order to permit them to carry out the present arrangement if possible, or to be in a position to make some other arrangement for the mutual benefit of both parties.

For a better understanding of the above passage it should be noted that the Pfaelzer case was still pending in the Commerce Court, and the packers, especially Swift and Morris, were still looking forward to the possibility of securing a bonus from the New Jersey company in the event that the decision of the court was favorable to them. This bonus, they expected, would be paid to them out of the accumulated surpluses of the New Jersey company, and of its subsidiary companies. This is no doubt what is meant by "the present arrangement."

If additional evidence were needed to indicate that Swift and Morris had not participated in the formation of the [fol. 1626] Maine company, it would seem that the following passage, quoted from a letter written by J. A. Spoor to Prince on August 8, 1911, would supply it. This letter was written a few days after the committee selected by Prince to represent the Maine company had sent out its circular letter of July 31, 1911, to the stockholders of the New Jersey company announcing that the Maine company was to be formed, and would offer them a guaranty of 9 per cent on their stock.

Swift and Veeder came to see me yesterday on my arrival in regard to the "Chicago Stock Yards Company," and Mr. Morris asked me about it today. I think they are all entirely satisfied with the explanation I have given them.

It is evident that Swift and Morris would not have shown the curiosity which Spoor's words indicate they displayed upon learning that the Maine company was to be formed had they been parties to the formation of that company. Until reassured by Spoor, they had evidently looked upon the new company with suspicion, representing as it did

the creation of an agency expecting to derive its income from the same source they had counted on to supply them with a bonus.

It is not necessary at this stage to inquire into the nature of the assurances given by Spoor to Swift and Morris to allay the concern which had been aroused in them by the announcement concerning the formation of the Maine company, as the main point at issue is to dispose of the assertion made by the Moseley letters that all of the packers had participated in the formation of the Maine company. That Swift and Morris did not participate in the formation of the Maine company with Prince and Armour seems to be clear from the evidence just given.

It still remains to present the data from which it appears that, although not associated with the formation of the Maine company, certain financial benefits accrued to Swift and Morris some time after the Maine company was called into existence. But before taking up this aspect of the Prince and Armour deal, there is given a detailed account of all the noteworthy circumstances that marked the gradual progress of the Maine company from its formative stage to that of a full-fledged, functioning corporate entity.

Section 22.—Methods considered by Prince and Armour for the Successful Accomplishment of the Deal

While the committee and F. S. Moseley & Co. were engaged in securing the assents of the New Jersey company's common stockholders, an extensive correspondence was carried on between F. H. Prince and J. O. Armour. Both Prince and Armour had delegated the execution of many details of the deal to confidential men in their employ. Some of this correspondence passed between F. W. Croll, treasurer of Armour & Co. and confidential man of J. O. Armour, and W. M. Wadden, who held a position similar to that of Croll with F. H. Prince.

Prince was aware that the small stockholders would be [fol. 1627] more readily induced to assent to the plan by the fact that the large stockholders had recorded their willingness to accept it. He therefore deferred the submission of the Plan to the small stockholders until he had succeeded in obtaining the assents of the large stockholders. This

task was greatly facilitated, since Armour and Prince controlled between them over 33,000 shares of the 65,000 shares of common stock issued by the New Jersey company. Prince utilized his influence with some of the large stockholders by personally interviewing and persuading them to accept the Plan. He also received considerable assistance from the members of the committee, composed of Olney, Carr, Norman, Schoonmaker, Thayer and Hart. The assents of several thousand shares of stock controlled directly and indirectly by these men were immediately made available when they were persuaded by Prince to serve on the committee. The result was that when Moseley & Co. launched its soliciting campaign among the smaller stockholders in August, following the circular letter of July 31, sent out by the committee, they were in a position to state, without seriously exaggerating the real situation, that from 45,000 to 50,000 shares had already assented.

Following are two letters, bearing on the facts stated above, which passed between Prince and Armour in July, 1911:

July 17, 1911.

Dear Mr. Armour:

I am glad to hear that you are home. I am working along the lines of the plan decided upon. It is hard work and requires my seeing personally each shareholder, therefore taking much time. I am getting all the large shareholders in and when that is accomplished I think all the smaller ones will follow. As soon as I get the matter along so that my presence is not necessary I will come out and see you.

Sincerely yours, —— ——.

J. Ogden Armour, Esq., Chicago, Ill.

J. Ogden Armour, Chicago

July 19, 1911

Mr. F. H. Prince,
c/o F. H. Prince & Co., Cor. State & Devonshire Sts.,
Boston, Mass.

Dear Mr. Prince:

I am glad to get your note and to know you are getting along satisfactorily. Do you think that you will be able to put the matter through as you started and is it possible at the present time for you to know about when it will be accomplished?

Hoping you are well, I am,

Sincerely yours,

(Signed) J. Ogden Armour

[fol. 1628] The question of devising an effective method to supplement the Moseley letters, and by which the common stockholders could be induced to give their assent to the Plan of June 30, 1911, received a great deal of attention in the correspondence between Price and Armour. Not being satisfied with the slow progress they were experiencing in getting the assents of the stockholders, Prince considered the adoption of coercive measures which would spur them to quicker action and force the adoption of the Plan. The feasibility of having the committee declare the Plan operative after a certain majority of the stockholders had expressed their assent, and without waiting until all the stockholders had agreed, came under the consideration of Prince. He and Armour also had under consideration a plan to have the stock acquired under the syndicate agreement converted into 5 per cent bonds of the Maine company, which exchange, it will be remembered, could be effected at the ratio of $200 in bonds for one share (par value $100) of the common stock of the New Jersey company. It was in contemplation to have the assenting stock listed on the stock exchange and the non-assenting stock stricken from the list. Prince and Armour were then to manipulate the market in order to depreciate the value of the outstanding stock, and thus to force the small stockholders to assent to the Plan. The profitableness of this scheme, as well as the

other points mentioned above, were the subject matter of the following two letters:

Dear Mr. A:

My program is as follows:

We now have all the large stockholders signed, actually	40,589
With 2,500 shares in New York whom I have been unable to see but whom I know will come in	2,511
Making a total of	43,000

There are 20,000 shares held in small lots which the Old Colony Trust Company and the Committee feel will certainly come in and it is proposed to give them until the first of September, so that on that date we should have between 62,000 and 63,000 shares in. I suppose there will probably be about 2,000 shares that it will take some time to bring in, the parties being away, etc. If these are the conditions on that date my idea is to have the Committee declare the plan operative on the first of September and then F. H. P. & Co. will pay in $1,000,000 to the Old Colony Trust Co., of which your proportion will be as 6,500 shares is to 33,000 shares. My idea is to immediately dispose of our bonds including yours with ours. We can sell the same in the Boston market at about 90 but if the Morocco situation is out of the way in Paris, I believe from proposals I have had from there that we should be able to get about par in France. At 90 for the bonds the stock will show you about 18 per cent. profit, so that on marketing the bonds you would have your $300,000 returned and about $117,000 profit on your shares, while your (the) proportion you would have invested would be a little less than $200,000.

[fol. 1629] I would then await the decision of the U. S. Commerce Court. This will give our office time to pick up the remaining 2,000 shares. In the meantime, if Mr. Spoor thinks it advisable, I can meet the packers and explain to them what the advantage in the formation of the Company is; namely, that the large holders have bought up the small holders in order to permit them to carry out the present

arrangement if possible, or to be in a position to make some other arrangement for the mutual benefit of both parties.

Very truly yours, —— ——.

Dear Mr.:

My idea is that we shall have a committee meeting on Monday when we shall have over 60,000 shares assented. I then propose to declare the plan operative and ask the stockholders to deposit their stock immediately. Then we will form the Maine Company with a capital of say $8,000,000 and we will pay in $1,000,000 of which your proportion will be ———— I then propose to form a syndicate to purchase $1,500,000 of the 5 per cent. bonds and I would like to have your Bank take $500,000 and we will get the Standard Trust Co. to take $500,000, you and I to take $250,000 each. You and I will sell to the syndicate $1,000,000 at 90 less two percent., of which you will sell $350,000 and we will sell $650,000, and we will give the syndicate an option on the balance of our bonds at 90, 91 and 92. I propose to have the guarantee stock listed on the stock exchanges and the present stock will be stricken from the list. We shall do our best then to depreciate the value of the outstanding stock so as to get the small holders to come in. The guarantee stock will commence, to draw dividends at the rate of nine percent. commencing with November 1st. My idea would be that perhaps for the first six months to have the New Jersey Company only pay 8 percent as at present and the other two percent to be paid out of the treasury of the Maine company, which would amount to but $65,000. Then during the next two or three months our office will busy itself with getting the outstanding stock in, which in time we should get down to a minimum. In the meantime we will have the decision some time in January in the Commerce Court case, which, according to agreement, we are to carry to the Supreme Court. As soon as we have all the stock in, and it seems advisable, we can declare the surplus by a dividend on the old stock.

Both of these letters presented above were found in the files of F. H. Prince. The first letter bore a pencil memorandum in the upper left-hand corner to the effect that the

original had been delivered to J. O. Armour on August 1, 1911. The second letter, though apparently never completed and mailed to Armour by Prince, is of value, inasmuch as it reveals the plans he had under consideration at the time.

[fol. 1630] Section 23.—The Consummation of the Plan.

Although it had been contemplated, as evidenced by reference to Prince's letter to Armour on page 238, that the Plan would be declared operative on September 1st, official action of this nature was not taken by the committee until September 25th. A memorandum representing a copy of the minutes of the meeting at which the committee declared the Plan operative, together with the announcement of the action taken, which was sent to the common stockholders of the New Jersey company, is as follows:

A meeting of the Committee was held at Room 710, Sears Building, Boston, on Monday the 25th day of September, at twelve o'clock noon.

There were present Messrs. Olney, Carr, Thayer, and Hart of the Committee, Mr. Palmer of counsel, and during part of the meeting, by invitation, Messrs. Prince and Wadden of the firm of F. H. Prince & Company. Absent, Messrs. Schoonmaker and Norman, of the Committee.

The records of the meeting of 28th July, and the record of the informal action of the Committee relating to the circular dated September 2, 1911, were read and approved.

The Secretary reported that the Old Colony Trust Company, Depositary, advised him that the company had on file assents from the holders of 59,823 shares, and in transit 373 shares, making the total definite assents to date 60,196.

Mr. Prince submitted the names of the holders of about 1,500 shares, assents from whom were delayed from one cause or another, but assents from whom were definitely expected.

On motion duly made and seconded it was voted:

(Plan declared operative. Mr. Palmer will prepare vote.)

Mr. Palmer submitted the following form of circular:

(Insert circular.)

Upon motion duly made and seconded it was voted:

(Mr. Palmer will prepare vote.)

Upon motion duly made and seconded it was Voted: That the Old Colony Trust Company, Depositary, be and hereby is authorized to receive assents from shareholders, such assents to be accepted subject to the approval of this Committee.

Upon motion duly made and seconded, it was

Voted: That the Secretary be and he hereby is authorized in his discretion to approve on behalf of this Committee the acceptance of assents by the depositary.

There being no further business, it was voted to adjourn subject to the call of the Chairman.

Chicago Stock Yards Company,
Boston, September 27, 1911

To the Holders of the Common Stock of the Chicago Junction Railways and Union Stock Yards Company.

[fol. 1631] The undersigned committee under the Plan dated June 30, 1911, announced that the holders of more than 60,000 shares of the common stock of the Chicago Junction Railways and Union Stock Yards Company have assented to the said Plan, and that the Chicago Stock Yards Company has been organized under the laws of Maine with a capital stock of $1,000,000 paid in cash.

The committee has declared the said Plan to be operative.

Assenting shareholders are notified to present their certificates forthwith to the Old Colony Trust Company, 17 Court Street, Boston, for endorsement of the guaranty thereon as provided in the said Plan. Shareholders desiring to exchange their shares immediately for the 5 per cent bonds of the Chicago Stock Yards Company, on the basis of $200 in par value of bonds for each share as provided in the said Plan, should sign the enclosed form and file the same with their certificates properly endorsed in blank with the trust company, receiving therefor receipts of the said trust company exchangeable for bonds when ready.

The bonds will be dated 1st October, 1911, but any shareholders failing to file their election to take bonds on or before 15th October, 1911, will be charged with accrued interest up to date of filing same with the said trust company.

The fixed income on guaranteed shares (not exchanged for bonds) will begin as of 1st October, 1911, for all shareholders who present their certificates for endorsement on or before 15th October, 1911. For shareholders who do not present their certificates on or before 15th October, 1911, the fixed income will begin as of the date of actual presentation.

The right of exchange for bonds will remain open until 30 days after notice of withdrawal shall be given to the trust company by the Stock Yards Company.

As a dividend is to be paid on the present common shares on the 1st October, 1911, and the interest on the bonds as well as the fixed income on the assenting shares are to begin as of the same date, no interest or dividend adjustment in cash is necessary.

Arrangements will be made to buy or sell fractions of bonds for amounts less than $500 at a price to be fixed later.

Richard Olney, Chairman; Samuel Carr; Guy Norman; S. L. Schoonmaker; E. V. R. Thayer; F. R. Hart, Secretary. 17 Court St., Boston.

[fol. 1632] As noted in the above circular, the holders of the 60,000 and odd shares of the common stock of the New Jersey company who up to that time had assented to the Plan of June 30 by affixing their signatures to the special form prepared for this purpose and deposited by them with the Old Colony Trust Co. were given the option of either turning in their certificates of stock for endorsement of the 9 per cent guarantee of the Maine company thereon or of exchanging their stock certificates for 5 per cent bonds of the Maine company on the basis of $200 in par value of bonds for each share as provided in the Plan of June 30, 1911.

On September 27, 1911, when the Plan was declared operative, a trust agreement provided for by the Plan of June 30, 1911, became effective. Under the terms of this trust agreement the Old Colony Trust Co. was appointed trustee for those stockholders who elected to have the 9 per cent guarantee endorsed on their stock certificates. The trustee was authorized to accept on behalf of the guaranteed stockholders, such dividends as might be declared

by the New Jersey company on the stock thus endorsed, as well as any funds contributed by the Maine company to make up the guaranteed 9 per cent. It was provided that in the event of a declaration of dividends in excess of 9 per cent on its common stock the residue thereof should be paid by the trustee to the Maine company. Provision was also made that in case of default on the part of the Maine company to provide funds to cover the 9 per cent guaranteed dividends and such default continuing for a period of one year the guaranteed shareholder was given the right to withdraw from the agreement.

It is to be noted that although the guaranteed shareholders assigned their right to receive dividends declared by the New Jersey company on its common stock in excess of 9 per cent they have not surrendered their voting privileges. This is not true of the stock exchanged for bonds of the Maine company in which case the Maine company exercises as owner of the stock the full voting privileges. The trust agreement follows:

Chicago Stock Yards Company Trust Agreement with Old Colony Trust Company

An Agreement the 27th day of September, 1911, by and between the Chicago Stock Yards Company, incorporated under the laws of Maine (herein called the Stock Yards Company), of the 1st part, the Old Colony Trust Company, incorporated under the laws of Massachusetts (herein called the Trustee), of the 2nd part, and the holders of certificates representing shares in the common stock of The Chicago Junction Railways and Union Stock Yards Company, incorporated under the laws of New Jersey (herein called the Old Stock Yards Company), guaranteed as hereinafter provided (said several holders being collectively referred to herein as the Guaranteed Shareholders) of the 3rd part. [fol. 1633] Whereas the Stock Yards Company has been organized under the laws of Maine with a capital of $1,000,000 and with power to own and hold shares of the Old Stock Yards Company and generally to engage in the business of a stock yards company and to have and exercise all the powers, rights, and authorities and do all the things that the Old Stock Yards Company is authorized to do;

And Whereas the holders of more than a majority of all of the common shares of the Old Stock Yards Company have either expressed their assent to the provisions of this agreement and agreed to deposit their certificates to be guaranteed as hereinafter provided or have sold or agreed to sell their shares to the Stock Yards Company, all in pursuance of a Plan, dated June 30, 1911, a copy of which is on file with the Trustee,—

Now, Therefore, it is agreed by and between the parties hereto as follows:

(1) The Stock Yards Company agrees to pay to every holder of shares of common stock in the Old Stock Yards Company whose certificates shall be stamped as hereinafter provided a sum equal to 2¼ per cent, of the par value of the shares represented by such certificates on the 1st days of January, April, July, and October in each year.

(2) Any holder of common shares of the Old Stock Yards Company may present his certificates representing such shares to the Old Colony Trust Company to be indorsed or stamped with the following indorsement, to wit:—

"The Chicago Stock Yards Company does hereby guarantee to the holder of the shares evidenced by this certificate and the assigns of such holder and to the transferee hereof, to pay to the registered holder of said shares at the time of such payment, on the first days of January, April, July and October in each and every year, beginning on the 1st day of January, 1912, a fixed sum amounting to two and one-fourth per cent. upon the par value of said shares, in consideration of which guaranty and the due and punctual performance thereof from time to time, the holder of said shares and each and every assign thereof does hereby sell, assign, set over and direct to be paid to the Old Colony Trust Company, as Trustee under the agreement hereinafter mentioned, or upon its written order, any and all dividends and other payments out of earnings apportionable to the shares represented by this certificate or directed to be paid to the holder hereof, which may at any time be made by or on behalf of The Chicago Junction Railways and Union Stock

Yards Company, or its successor, to be by said Trustee disposed of as in said agreement specified and provided.

"This indorsement is placed hereon pursuant to and subject to the terms and conditions of a certain Trust Agreement dated September 27th, 1911, signed by the Chicago Stock Yards Company and deposited [fol. 1634] with the Old Colony Trust Company, as Trustee, to which the holder hereof has assented and become a party.

"Each and every assign or transferee of this certificate, by accepting delivery hereof, does accept and confirm the above-mentioned assent of the holder and the terms and conditions of said Trust Agreement and become a party thereto and does direct the placing of this indorsement on any new certificate which may be issued in lieu hereof."

Chicago Stock Yards Company, by Assistant Secretary.

And upon such guaranty having been indorsed upon the said certificate or certificates every holder of such certificate by accepting delivery thereof shall become a party of the 3rd part to this agreement in the same manner and to the same extent as if he had signed the same and affixed his seal thereto.

(3) The Stock Yards Company hereby agrees to authorize, execute, and deliver to the Old Colony Trust Company as Trustee a trust indenture to secure an authorized issue of its Collateral Trust Gold Bonds, and payable in 50 years from their date with interest in the mean time at the rate of 5 per cent, per annum, payable semi-annually, and to secure such debentures by deposit with the Trustee of (1) shares in the common stock of the Old Stock Yards Company to an amount of $100 on par value of such shares for $200 of face amount of bonds, or (2) shares in the preferred stock of the Old Stock Yards Company to an amount of $100 in par value of such shares for $120 in face amount of bonds. And, in case shares so deposited as security shall be represented by certificates guaranteed as hereinbefore provided, such guaranty shall be cancelled and new certificates without such guaranty shall be obtained from the Old

Stock Yards Company and substituted under said trust indenture.

(4) The Stock Yards Company hereby vests in each and every holder of certificates guaranteed as herein provided the privilege to exchange such certificates and the shares represented thereby for Collateral Trust Bonds hereinbefore described at the rate of $200 in par value of debentures for $100 in par value of such shares. The Stock Yards Company may withdraw the said right of exchange provided that such withdrawal shall not take effect until at least 30 days after notice thereof shall have been given to the Trustee. Upon receiving such notice the Trustee shall as soon as convenient notify the holders of the outstanding certificates so guaranteed by mail at their addresses as shown on its books or the books of the Old Stock Yards Company, of the termination of such right of exchange and the date when the same takes effect.

(5) In consideration of the foregoing agreement on the part of the Stock Yards Company the Guaranteed Shareholders hereby sell, assign, and transfer to the Trustee all their several and respective rights to dividends upon the shares of common stock of the Old Stock Yards Company represented by the guaranteed certificates, and hereby authorize and direct the Old Stock Yards Company to pay [fol. 1635] such dividends and all other sums, profits, and values accruing from or on account of any such shares to the Trustee, to be held and paid out by the Trustee as follows: (a) to be used together with any sums that may be contributed by the Stock Yards Company for the purpose in paying to the respective holders of guaranteed certificates fixed sums amounting to 2¼ per cent. on par value of the shares represented by the said certificates on the first days of January, April, July, and October in each year, and (b) to pay the residue thereof to the Stock Yards Company or upon its written order. And the Stock Yards Company hereby guarantees to the Trustee and to the Guaranteed Shareholders that it will pay and make up to the Trustee all deficits, so that the Trustee will be able to pay the said fixed sums to the Guaranteed Shareholders as hereinbefore provided.

(6) In case for any reason the Trustee shall not pay the

said fixed sums to the Guaranteed Shareholders and default in such payment shall continue for a period of 60 days the Trustee shall have the right to proceed against the Stock Yards Company and enforce such payment and the fulfillment of all the agreements on the part of the Stock Yards Company herein contained. And the Trustee shall represent equally and pro rata all the Guaranteed Shareholders in any such proceedings.

(7) In case of such default continued for the period of one year any Guaranteed Shareholder may notify the Trustee that he withdraws from this agreement and may present his certificate to the Trustee for the purpose of having his said indorsed guaranty thereon cancelled. In that case the Trustee shall cancel the said guaranty and the holder of such certificate shall be freed from all further obligation hereunder and the Stock Yards Company shall be freed from all obligations to such certificate-holder except with respect to any fixed sums which theretofore shall have become due and payable under the provisions hereof.

(8) Each Guaranteed Shareholder hereby irrevocably directs the Old Stock Yards Company (except as in and by the foregoing Paragraphs 3 and 7 permitted) not to make or cause to be made any transfer of any stock certificate which may be stamped as hereinbefore provided or to issue or deliver any certificate for or representing any shares mentioned therein, unless (a) the transferee of such stock certificate shall have first assented to this Trust Agreement and consented to and directed the stamping thereon of said guaranty and agreement or (b) the said new certificate shall before the issue and delivery thereof be stamped with said guaranty and agreement.

(9) It is expressly agreed that the Trustee shall not have any duty or responsibility from, arising out of, or on account of any the terms or provisions of these presents, except for the payment of the moneys coming into its hands according to the provisions hereof, and shall not be in any way liable or responsible for the execution or fulfilment of any covenants or agreements herein contained. But it is agreed that the Trustee may and shall be fully empowered, either in its own name or for or on behalf of the Guaranteed Shareholders, with or without the request of any of them,

[fol. 1636] to enforce and compel, or to take any or all proceedings to enforce or compel, the due execution and fulfilment of the said covenants and agreements without any duty, obligation, or responsibility on the part of the Trustee to take, bring, or continue any such action or proceeding. The Trustee may pay such reasonable remuneration as it shall deem proper to any attorneys, officers, agents, servants, and employees that it may reasonably employ in the management of the trusts and powers thereof, and all such remuneration and all other reasonable expenses and disbursements of the Trustee, including its own reasonable remuneration, shall be paid by the Stock Yards Company. The Trustee may at any time in its discretion resign its trusts hereby created by filing its resignation in any court having jurisdiction and publishing notice thereof once a week for three successive weeks in one or more newspapers published in the city of Boston, and such resignation shall take effect upon the appointment of a new trustee, which shall be a trust company incorporated by or under the laws of Massachusetts, and may be appointed by such court upon application of the retiring Trustee or any of the Guaranteed Shareholders. And the clauses contained herein and referring to the Trustee shall extend and be applicable to the trustee for the time being of these presents, and every such trustee shall be exempt from giving any bond or surety in respect of the execution of the said trusts or powers or otherwise in respect of the premises.

In Witness Whereof the Chicago Stock Yards Company and the Old Colony Trust Company have caused their common seals to be hereto affixed and these presents to be assigned in their behalf by their proper officers thereto duly authorized the day and year first above written.

Chicago Stock Yards Company, by —— ——, President. Attest: —— ——, Secretary. Old Colony Trust Co., by —— ——, Vice-President. Attest: —— ——, Secretary.

Section 24.—The $1,000,000 Fund of the Maine Company and the Reasons for Raising the Fund

The Maine Company was formed as announced in the foregoing circular letter and the first meeting of directors of the company was held September 27, 1911. Two letters quoted below show that two days prior to this meeting, F. W. Croll, representing J. O. Armour, sent a check for $194,000 to W. M. Wadden, confidential man for F. H. Prince. This amount, together with $806,000 furnished by Prince, as disclosed from a study of Prince & Co.'s accounting records, represented the $1,000,000 of paid-in capital which it had been announced the new company would have as a guarantee fund.

[fol. 1637] Chicago, Sept. 25, 1911

Personal.

Mr. W. M. Wadden,
28 State St., Boston, Mass.

Dear Mr. Wadden:

As requested in your telegram of the 22nd I beg to enclose herewith check on Boston for $194,000. I should have forwarded this on Saturday but it was overlooked and I trust that this will not inconvenience you in any way.

Kindly acknowledge receipt.

Yours very truly,

FWC Er ENC. (Signed) F. W. Croll

F. H. Prince & Co., Cor. State and Devonshire Sts.
Boston, September 27.

Dear Mr. Croll:

I duly received your cheque for $194,000, which has been paid in to the Chicago Stock Yards Company. This Company was formed today and held its first meeting. I will write you later, giving the list of officers and full information regarding the company.

Very truly yours,

F. W. Croll, Esq., Chicago, Ill.

The following letter written by Wadden on the same day that the $1,000,000 referred to above was placed to the credit of the Maine company in the Merchants National Bank throws light on the motives that prompted Prince and Armour to pay the $1,000,000 into the treasury of the Maine company. According to the circular letters issued by the committee and the Moseley letters, this money was to serve as a guarantee fund for the prompt fulfillment of the stipulations made to the assenting stockholders of the New Jersey company.

October 4, 1911

Dear Mr. Croll:

Assents have been obtained regularly since Mr. Prince was in Chicago and we now have close to 62,000 deposited. Exchanges are being made rapidly and should be completed some time the middle of the month. We are arranging in accordance with instructions from Mr. Prince to have bonds issued covering the 6,500 shares owned by Trust Account A.

I suppose you know that at present I am Treasurer of the Chicago Stock Yards Co. We have $1,000,000 in cash on deposit with the Merchants National Bank. This deposit is drawing 2 per cent. interest at present and we thought it best to allow it to stand for a time,—for the moral effect.

I expect to be in Chicago at an early date and will be glad to go over all the affairs with you at that time that you may have whatever information you desire.

Very truly yours, ——.

[fol. 1638] The words "we thought it best to allow it to stand for a time—for the moral effect" are significant in as far as they show that in offering the stockholders of the New Jersey company a guarantee of 9 per cent dividends on their stock to insure the payment of which they pledged on behalf of the Maine company the sum of $1,000,000, Prince and Armour were well aware that the property already back of the New Jersey company's stock possessed an earning power sufficient to pay dividends very much in excess of 9 per cent, and that any income which might be derived from the contribution of $1,000,000 would not be needed. The $1,000,000 fund was useful in the committee's letters and the Moseley letters in that it tended to impress the small stockholders and so minimized the sacrifice they

were being called upon to make. The fact that a few months later Prince and Armour borrowed almost all of the $1,000,000 from the Maine company serves to explain what may have been meant by Wadden's words, "we thought it best to allow it to stand for a time," and furnishes further evidence that Prince and Armour never anticipated that the $1,000,000 would be used by the Maine company as an indispensable means of carrying out the stipulations of the Plan, and that it was only used for the "moral effect."

Section 25.—Dummies used as Organizers, Officers, and Stockholders of the Maine Company

Although the evidence is plain that Prince and Armour were the actual promoters and organizers of the Maine company and that they alone contributed between them the $1,000,000 in cash paid into the Maine company, at the time of its formation in 1911, their names have never been associated with the Maine company as officers or directors nor as stockholders of record on the books of the company. The officers and directors of the company have always been dummies consisting in part of clerks furnished by the Corporation Trust Co. of Maine and in part of employees in the office of F. H. Prince & Co., Boston.

The following names appear as the original subscribers to the stock of the Maine company, and these men, who were employees of the Corporation Trust Co. of Portland, Me., also constituted the first board of directors:

	Shares
Clarence E. Eaton, Portland, Me.	2
T. L. Crotean, Portland, Me.	2
Albert F. Jones, Portland, Me.	2
Albert A. Richards, Portland, Me.	2
B. M. Maxwell, Portland, Me.	2

Section 26.—Capitalization of the Plan at $7,000,000.

The first meeting of the directors at which official business was transacted, was held on September 27, 1911. At this meeting a resolution was adopted that an agreement be entered into by the directors with F. R. Pegram, a man who had been for 25 years in the employ of F. H. Prince & Co.

as messenger and bookkeeper. This agreement provided for the issuance by the Maine company of 80,000 shares of its capital stock, having a total par value of $8,000,000, all [fol. 1639] of which was to be given to F. R. Pegram as consideration for the payment by him of $1,000,000 in cash and the sale to the company of the Plan, dated June 30, 1911, with assents thereto of the shareholders of the New Jersey company; the Maine company to acquire thereby all the benefits arising out of the Plan and the assents. The following is a copy of this agreement as consummated at that meeting:

> An Agreement made this 27th day of September 1911 between Frank R. Pegram of Cohasset, in Massachusetts of the one part and the Chicago Stock Yards Company, Inc. under the laws of Maine (herein called the company) of the other part.

Whereas the said Pegram and his associates caused to be formulated a plan dated June 30, 1911 with the following, namely: Richard Olney, Chairman, Guy Norman, S. L. Schoonmaker, E. V. R. Thayer, F. R. Hart, as committee and the said Pegram has obtained the assent to the said plan of the holders of more than sixty thousand common shares of the Chicago Junction Railways & Union Stock Yards Company. As evidenced by their assents deposited with the Old Colony Trust Company and the said Pegram now holds and controls the said assents and the right to transfer the same together with all interests therein and all benefits to accrue therefrom.

And whereas the said plan

> (a) Assures to the Chicago Junction Railways & Union Stock Yards Company a continuance of the business now carried on by the packers upon a permanent basis and a great increase in the earnings, profits and dividends, to which the holders of the common shares of the Chicago Junction Railways & Union Stock Yards Company will become entitled as well as a great increase in the value of the said shares, and
>
> (b) will vest in the company (if it shall acquire the uses and benefits of the said plan) the right to all divi-

dends and other payments out of earnings apportionable to the said common shares the holders of which have heretofore assented or may hereafter assent to the said plan over and above the fixed annual amounts and fixed annual charges specified in the said plan. But the company cannot receive any of the said benefits without having acquired the same from the said Pegram nor without having raised $1,000,000 in cash in order to comply with the conditions specified in the said plan.

And whereas the company has been organized under the laws of Maine with a capital of $1,000,000, and desires to acquire the uses and benefits of the said plan and the action of the said share holders thereunder and requires the sum of $1,000,000. in cash so to do.

Now therefore it is agreed by and between the parties hereto as follows:

[fol. 1640] (1) The said Pegram hereby sells, assigns, transfers and sets over to the company its successors and assigns the said plan dated June 30, 1911 and all the assents thereby of the share holders of the Chicago Junction Railways and Union Stock Yards Company which have heretofore been made as well as all such assents and benefit in and to the said plan and assents that may hereafter be made together with all right title, interest of every kind and nature. And the said Pegram agrees to pay to the company forthwith the sum of $1,000,000. in cash.

(2) The company hereby accepts the foregoing property and acknowledges that it has received the payment of the said sum of $1,000,000.

(3) As consideration for the said property and for the services of the said Pegram the company agrees to pay $8,000,000. therefor payable in the full paid nonassessible stock of the company at par. The company agrees to issue and deliver forthwith to the order of the said Pegram $999,000 par value of the capital stock of the company now authorized and not heretofore subscribed. The company further agrees to cause to be delivered forthwith to the order of the said Pegram the $1,000 par value of its capital stock

heretofore subscribed. The company further agrees to increase its authorized capital stock to an authorized amount of $8,000,000 capital and to issue and deliver to the order of the said Pegram $7,000,000 par value of its shares as soon as such increase can be made according to law.

In witness whereof the said Pegram has hereto affixed his hand and seal and the company has caused its common seal to be hereto affixed and these presents to be signed in its name and behalf of its proper officer the day and year first above written.

Frank R. Pegram (Seal)
Chicago Stock Yards Company
By
George F. Doherty, President
Attested, Norman J. MacGaffin

(Seal C. S. Y. Co.)

It is evident that Pegram was used as a dummy by Prince and Armour to conceal their identity with the deal. The $1,000,000 which Pegram used in this connection was the same money which Prince and Armour had jointly contributed, and the Plan, which had now become possessed of a value of $7,000,000, was the same Plan to which the holders of about 60,000 shares of the New Jersey company's stock had assented at that time.

On November 11, 1911, the capital stock of the Maine company was increased to $8,000,000 divided into 80,000 shares of a par value of $100 all of which was given to [fol. 1641] Pegram in accordance with an agreement of September 27, 1911. On the records of the company he was credited only with 79,990 shares, the other 10 shares having been recorded in the names of other dummies in order to qualify them as directors.

Section 27.—Obstacles Encountered by Prince and Armour in Absorbing the Surplus Earnings of the New Jersey Company and of its Subsidiaries.

Prince had intended to have the New Jersey company and its subsidiary companies declare dividends from their accumulated surplus earnings soon after the Maine com-

pany was formed. This plan was frustrated owing to the fact that the holders of nearly 4,000 shares of the common stock of the New Jersey company failed to send in their assents to the Plan of June 30, 1911, at the time the Maine company was formally organized and consequently he could not declare a dividend without permitting the holders of the non-assenting stock to share in it. The situation was still more complicated by the fact that not all of the stock of the Yards company was owned by the New Jersey company in 1911 and any dividends declared by that company would not go to the New Jersey company alone but would be shared by all the holders of the stock.

The obstacle presented by the non-assenting stock of the New Jersey company and of the 1,000 and odd shares of the Yards company owned by outside interests was not removed until the end of 1913. At that time the assents of all but 103 shares of the non-assenting stock of the New Jersey company had been secured. Prince and Armour found it necessary to purchase 100 shares of the stock, paying the sum of $65,000 for it, while no arrangement has ever been made with reference to three shares owned by P. H. Clark, it having been asserted that it has been impossible to locate him.

All of the stock of the Yards company was finally acquired in 1913 and added to that already held by the New Jersey company. For some of this stock more than $470 per share was paid. The following table, an analysis made from the records of the New Jersey company, shows when and at what price the stock of the Yards company was acquired by the New Jersey company.

[fol. 1642]

Analysis of Investment account representing Union Stock Yard & Transit Co. stock owned by the New Jersey company.

Year Bought	Number of Shares	Total Amount paid	Average Price Paid per Share
1890	[1] 129,770	$22,587,283.90	$174.05
1893	218	39,759.92	182.38
1894	205	35,450.00	172.92
1894	50	10,000.00	200
1896	360	72,000.00	200

[1] Original purchase from promoter.

Section 28.—Issue of Bonds by the Maine company and Reasons for their low market value

On October 1, 1911, the Maine company began to issue its 5 per cent collateral trust gold bonds in exchange for the assented stock of the New Jersey company. By the end of December 1911, three months after the formation of the Maine company a total of $3,741,000 in bonds had been exchanged for 18,705 shares of common stock. During the next two years the records of the Maine company show that only 12,265 additional shares were exchanged for bonds, or in other words in December, 1913, the records show that a total of 30,970 shares of stock had been acquired by the Maine company in exchange for bonds which that company had issued amounting to $6,194,000. Since that date and up to December 31, 1918, only 130 additional shares of stock have been converted into bonds. At that date, 33,897 shares still bore the guarantee of the Maine company and were receiving 9 per cent dividends, while the three shares owned by P. H. Clark were still classed as non-assenting stock, having never been stamped with the guarantee or exchanged for bonds.

The bonds of the Maine company were not favorably regarded by the investing public as sales of these bonds

as low as $76 were recorded. There was one reason at least which undoubtedly accounts in part for the attitude of the investing public toward the bonds of the Maine company. These bonds were secured only by the stock of the New Jersey company for which they had been exchanged and the $1,000,000 in cash paid into the Maine company by Armour and Prince. The New Jersey com-
[Vol. 1643] pany had been paying 8 per cent dividends on its common stock and since the Maine company had obligated itself under the terms of the Plan to pay 9 per cent dividends on such shares as accepted the guarantee provision of the Plan, the additional 1 per cent had to be made up by the Maine company. In the case of stockholders who had elected to exchange their stock for 5 per cent bonds of the Maine company at the rate of $200 in bonds for $100 par value of stock, thus insuring themselves a 10 per cent return on their stock, the Maine company was obligated to make up the additional 2 per cent.

The income derived from the $1,000,000 of cash paid in by Armour and Prince was not sufficient to pay the expenses of the Maine company and provide the additional income required to meet the obligations of the Maine company outlined above. It is not surprising, therefore, to find that on December 31, 1912, the Maine company showed a deficit of $168,489.44. This means that the fund of $1,000,000 which had been provided as a guarantee fund to insure that the provisions of the Plan would be carried out, had been depleted to that extent in less than one and one-half years after the company had been formed. As the depletion of the $1,000,000 increased, that part of the income of the Maine company which had been derived from this source decreased. This naturally hastened the depletion of the capital of the Maine company. The attitude of the investing public toward the bonds of a company which seemed to be approaching insolvency is readily understandable.

It will be noted that the Maine company owns and exercises the voting rights of the stock surrendered to it in exchange for its 5 per cent bonds. The Maine company also owns 100 shares of the New Jersey company's common stock which it purchased outright for $65,000. This stock

has been stamped with the guarantee and is therefore classed as guaranteed stock. It has been pointed out on page 242 that the holders of the guaranteed shares retained and may exercise full voting rights with respect to their stock holdings.

At the end of 1913 the Maine company owned 30,970 shares of the common stock of the New Jersey company for which it gave bonds in exchange and 100 shares of guaranteed stock, thus giving the Maine company a total voting strength of 31,070 shares. This represented less than one-half of the voting strength of the 65,000 shares of common stock and less than one-fourth of the total voting strength of the stock of the New Jersey company—it being recalled that the 65,000 shares of preferred stock issued by that company also carry full voting privileges.

The fact that the Maine company owns less than one-fourth of the voting securities issued by the New Jersey company does not, however, prevent the Maine company from actually controlling that company due to the fact that Prince succeeded in being elected president and in securing the election of a sufficient number of his associates as directors in 1911 to insure to him the majority control of the management of that company. Prince continues to main- [fol. 1644] tain his control of the management by naming the men each year who vote the proxies which he obtains from the preferred and guaranteed stockholders.

It was pointed out above that the $1,000,000 of the Maine company was rapidly nearing depletion owing to the fact that from October, 1911, to December, 1913, the New Jersey company had continued to pay 8 per cent dividends on its common stock and the Maine company had been forced to provide the additional funds in order to make up the 9 per cent dividends on the guaranteed stock and the interest on the 5 per cent bonds given in exchange for stock—this interest being an equivalent of 10 per cent dividends on such stock.

It lay within the power of Prince and Armour to remedy the condition of the Maine company at any time by having the New Jersey company increase the dividend rate on its common stock or by declaring a special dividend. But, as previously brought out, if this had been done at any time during 1911 or 1912, those stockholders of the New

Jersey company who had not assented to the Plan would also have shared in the extra dividends. Furthermore, the declaration of extra dividends would have made it more difficult for Prince and Armour to acquire the outstanding stock for the obvious reason that this would have increased its market value.

As evidenced from the letters quoted on pages 238 to 239, Prince and Armour had expected to convert the 13,000 shares of stock which they had acquired under the syndicate agreement into 5 per cent bonds of the Maine company soon after the formation of that company. But in view of the attitude of the investing public toward the bonds of the Maine company, they did not deem it wise to carry out this plan for a time.

However, in August, 1912, Prince found that the New Jersey company and its subsidiary companies had some funds which were not needed for their immediate business operations, and he then decided to convert part of his stock and of Armour's into bonds to be sold to these companies. In this way he eventually disposed of $2,085,000 worth of the Maine company's bonds mostly at the rate of $91, which was a somewhat better price than he had originally planned to dispose of the bonds to the banks. The companies were induced by Prince to invest their funds in these bonds, as shown in the following table:

	Number of bonds purchased	Amount paid
New Jersey company	600	$ 546,000
Yards company	1,244	1,127,415
Railway company	241	218,810
Total	2,085	1,892,225

[fol. 1645] Section 29.—The First Acquisition of the Surplus of the New Jersey Company and of its Subsidiaries

In October, 1913, the first steps were taken by Prince and Armour to acquire the surplus of the New Jersey company and of its subsidiary companies, but it was not until December, 1913, that the Maine company received any of these surplus funds.

On October 2, 1913, both the Yards company and the Railway company adopted resolutions authorizing the pay-

ment of a special dividend to the stockholders of record on that date. The New Jersey company in turn adopted a similar resolution on November 31, 1913. At the same time a resolution was adopted by the directors of the New Jersey company, instructing the Yards company and the Railway company to pay the special dividends declared on October 2, 1913, to the Maine company. It should be noted that, although the subsidiary companies had authorized the payment of the special dividends declared by them immediately, such payment was held up. The reason for withholding the payment of the dividends on the part of the Yards company may have been the fact that on October 2, 1913, there were still a few shares of stock of this company which the New Jersey company had not acquired, and it would have been necessary to have divided the special dividend between the New Jersey company and the outside shareholders. The directors of the Yards company had probably taken the action declaring the special dividend on October 2, 1913, without being aware that all of the Yards company stock had not yet actually been acquired by the New Jersey company.

On December 11, 1913, a short time after the New Jersey company had finally acquired all of the outstanding stock of the Yards company, a new resolution was adopted by the Yards company, as well as by the Railway company, amending their respective resolutions of October 2, 1913, to the effect that instead of making the dividends payable to the stockholders of record, each of these companies adopted a resolution making the dividend payable to the order of the Chicago Junction Railways & Union Stock Yards Co., the owner of all of the stock of this company.

Copies of the records of the directors' meetings at which all of the above actions were taken follow:

Meeting of the Board of Directors of The Union Stock Yard & Transit Company, held at the office of the Chairman, Room 1305 First National Bank Building, Chicago, pursuant to by-laws and due notice, at 2:30 P.M., Thursday, October 2nd, 1913.

Present: A. G. Leonard, R. Fitzgerald, F. H. Prince, J. A. Spoor, R. M. Shaw.

Mr. Spoor acted as Chairman and Mr. Poronto as Secretary.

Minutes of the last meeting were read and approved.

[fol. 1646] The Chairman read the following letter:

"Chicago Junction Railways and
Union Stock Yards Company,
Chicago, October 1, 1913

Mr. J. A. Spoor, Chairman of the Board, Union Stock Yards & Transit Company, Chicago, Illinois.

Dear Sir: Referring to our personal conversation at different times, I would be glad to have you call a meeting of the directors of the Company and declare a dividend from your surplus earnings and undivided profits of Eight and three-quarters (8¾) per cent, to be paid to the shareholders of record on October 2nd.

It is understood that this dividend shall be paid in part by the transfer to the stockholders of 1,244 (par value $1,000.00 each) Chicago Stock Yards 5% bonds your Company hold at their book value with interest to October 2nd, amounting to $1,127,587.79; and it is further understood that these bonds will be accepted by the stockholders in lieu of cash on the above basis, the remainder of the dividend, amounting to $27,412.21, to be paid in cash.

Very truly yours, (Signed) F. H. Prince, President."

On motion duly made and seconded, the following Resolution was unanimously adopted:

Resolved that a dividend of Eight and three-quarters (8¾%) per cent, on the capital stock of the Union Stock Yard & Transit Company, from the surplus earnings and undivided profits of the Company be, and the same is, hereby declared payable on the second (2nd) day of October 1913, to stockholders of record of said date.

On motion duly made and seconded, the following Resolution was unanimously adopted:

Resolved that the Treasurer of this Company be authorized to use the 1,244 bonds of the Chicago Stock Yards Company, now in the treasury, value, including interest to October 2nd, being $1,127,587.79, in partial payment of the

dividend of 8¾%, providing the stockholders agree to accept the same in lieu of cash. The balance of said dividend to be paid in cash.

There being no further business to come before the meeting, it was, upon motion duly made and seconded, adjourned.

(Signed) J. A. Spoor, Chairman, H. E. Poronto, Secretary.

Meeting of the Board of Directors of the Chicago Junction Railway Company, held at the office of the Chairman, Room 1305 First National Bank Building, Chicago, pursuant to By-laws and due notice, at 2:15 P.M., Thursday, October 2nd, 1913.

[fol. 1647] Present: J. A. Spoor, A. H. Leonard, F. H. Prince, R. Fitzgerald, A. H. Veeder, S. H. Strawn, H. E. Poronto.

Mr. Spoor acted as Chairman and Mr. Poronto as Secretary.

Minutes of the last meeting were read and approved.

The Chairman read the following letter:

"Chicago Junction Railways &
Union Stock Yards Company
Chicago, October 1, 1913

Mr. J. A. Spoor, Chairman of the Board, Chicago Junction Railway Company, Chicago.

Dear Sir: Referring to our personal conversations at different times, I would be glad to have you call a meeting of the directors of the Company and declare a dividend from your surplus earnings and undivided profits of Ten (10%) per cent, to be paid to the shareholders of record on October 2nd.

It is understood that this dividend shall be paid by the transfer to the stockholders of the 241 (per value $1,000 each) Chicago Stock Yards 5% bonds your Company hold at their book value with interest to October 2nd, amounting to $218,843.47; and it is further understood that these bonds will be accepted by the Chicago Junction Railways & Union Stock Yards Company in lieu of cash on the above basis, the balance of the dividend, amounting to $1,156.53, to be paid in cash.

Very truly yours, (Signed) F. H. Prince, President."

Upon motion duly made by Mr. Leonard and seconded by Mr. Fitzgerald, the following Resolution was unanimously adopted:

Resolved, that a dividend of Ten (10%) per cent, on the capital stock of the Chicago Junction Railway Company, from the surplus earnings and undivided profits of the Company, be, and the same is, hereby declared payable on the second (2nd) day of October, 1913, to stockholders of record of said date.

Upon motion made by Mr. Fitzgerald and seconded by Mr. Leonard the following Resolution was unanimously adopted:

Resolved that the Treasurer of this Company be authorized to use the 241 bonds of the Chicago Stock Yards Company, now in the treasury, value, including interest to October 2nd, being $218,843.47, in partial payment of the dividend of ten (10%) per cent, providing the stockholders agree to accept the same in lieu of cash. The balance of said dividend to be paid in cash.

[fol. 1648] There being no further business to come before the meeting, it was, upon motion duly made, adjourned.

(Signed) J. A. Spoor, Chairman, H. E. Poronto, Secretary, Silas H. Strawn.

At the meeting of the Board of Directors of The Chicago Junction Railways and Union Stock Yards Company held at the office of F. H. Prince & Company, Boston, Mass., on Monday, the third day of November, 1913, at 11 o'clock A. M.

Present: Messrs. Prince, Wadden, Palmer, Thayer, Ames, Gardner, and Norman.

Absent: Messrs. Lane, Schoonmaker, Dennis, and Spoor.

Upon motion duly made it was unanimously

Voted to authorize and instruct the Union Stock Yard & Transfer (Transit) Co. to deliver and pay to the Chicago Stock Yards Company or order the 1244 bonds and the $27,412.21 in cash constituting the special dividend declared by the said Union Stock Yard & Transit Company on the 2nd of October, 1913, and to authorize and instruct the Chicago

Junction Railway Company to deliver and pay to the Chicago Stock Yards Company the 241 bonds and $1,156.53 in cash constituting the special dividend declared by the Chicago Junction Railway Company on the 2d of October, 1913.

Whereas the Chicago Stock Yards Company has acquired and now owns 31,073 shares of the common stock of this company and the holders of all the remainder of the said common stock to wit the holders of 33,927 have accepted the terms of the trust agreement between the Chicago Stock Yards Company and the Old Colony Trust Company dated 27th September 1911 and the payment of guaranteed dividends at the rate of 9 per cent per annum as therein provided and all their certificates have been endorsed as provided therein and in consideration thereof have assigned all their rights to dividends and to all other sums profits and values accruing from or on account of the said guaranteed shares to the said trustee and subject to the payment of the said guaranteed dividends to the use of the Chicago Stock Yards Company.

And whereas the full guaranteed dividends have been paid to the holders of the guaranteed certificates for the year 1913 and accordingly the Chicago Stock Yards Company is entitled to all dividends and payments out of earnings apportionable to the common shares of this company.

Upon motion duly made and seconded it was unanimously

Voted to pay an extra dividend of 10 per cent on the Common share of the company in cash such payment to be made to the Chicago Stock Yards Company forthwith.

Upon motion duly made and seconded it was unanimously

[fol. 1649] Voted to authorize and instruct the treasurer to deliver $600,000 bonds of the Chicago Stock Yards Company now held by this Company and constituting part of its surplus net earnings to the Chicago Stock Yards Company.

There being no further business to come before the meeting it was unanimously

Voted to adjourn

The meeting adjourned pursuant to foregoing vote.

A true record.

Attest: W. G. Dooley, Secretary.

Meeting of the Board of Directors of the Union Stock Yard & Transit Company held at the office of the Chairman, Room 1305 First National Bank Building, Chicago, pursuant to by-laws and due notice, at 2 P. M., Thursday, December 11th, 1913.

Present: J. A. Spoor, R. M. Shaw, A. G. Leonard, R. Fitzgerald.

Mr. Spoor acted as Chairman and Mr. Poronto as Secretary.

Minutes of the last meeting were read and approved.

On motion duly made and seconded, the following Resolution was unanimously adopted:

Whereas, The Chicago Junction Railways and Union Stock Yards Company, the owner of all the capital stock of this Company, has requested this company to amend the resolution declaring the 8¾% dividend on October 2d, 1913;

Now, therefore, in accordance with said request:

Be it resolved, that the resolution declaring a dividend of 8¾% on the capital stock of this Company adopted on October 2d, 1913, be and the same is hereby amended to read as follows:

Resolved, that a dividend of 8¾% on the capital stock of the Union Stock Yard & Transit Company from the surplus earnings and the undivided profits of the company be, and the same is, hereby declared payable to the order of the Chicago Junction Railways and Union Stock Yards Company, the owner of all of the stock of this company.

There being no further business to come before the meeting, it was, upon motion duly made and seconded, adjourned.

(Signed) J. A. Spoor, Chairman, H. E. Poronto, Secretary.

Minutes of meeting of the Board of Directors of the Chicago Junction Railway Company, held at the office of the Chairman of the Board, Room 1305 First National Bank Building, Chicago, pursuant to by-laws and due notice, at 2:15 o'clock P.M. Thursday, December 11, 1913.

[fol. 1650] Present: J. A. Spoor, H. E. Poronto, A. G. Leonard, R. Fitzgerald, Arthur Meeker, S. H. Strawn, A. H. Veeder, and Mr. R. M. Shaw of the Company's Counsel.

Mr. Spoor acted as Chairman and Mr. Poronto as Secretary.

Minutes of the last meeting were read and approved.

Upon motion duly made and seconded, the following Resolution was unanimously adopted:

Whereas, The Chicago Junction Railways and Union Stock Yards Company, the owner of all the capital stock of this Company, has requested this Company to amend the resolution declaring the 10% dividend on October 2d, 1913:

Now, therefore, in accordance with said request:

Be it resolved, that the resolution declaring a dividend of 10% on the capital stock of this company adopted on October 2nd, 1913, be and is hereby amended to read as follows:

Resolved, that a dividend of 10% on the capital stock of the Chicago Junction Railway Company from the surplus earnings and the undivided profits of the company be, and the same is hereby declared payable to the order of the Chicago Junction Railways and Union Stock Yards Company, the owner of all of the stock of this company.

There being no further business to come before the meeting, it was, upon motion duly made and seconded, adjourned.

(Signed) J. A. Spoor, Chairman; H. E. Poronto, Secretary.

Summarizing the above actions of these three companies, it is found that the three companies placed the following amounts at the disposal of the Maine company at that time:

	Maine company bonds valued at	Cash	Total
The Union Stock Yards & Transit Co.	$1,127,587.79	$37,412.21	$1,155,000.00
The Chicago Junction Ry. Co.	218,843.47	1,156.53	220,000.00
The Chicago Junction Ry. & Union Stock Yards Co. of New Jersey	540,000.00	650,000.00	1,196,000.00
Total	$1,886,431.26	$678,568.74	$2,571,000.00

The above table shows that in addition to $678,568.74 in cash having been turned over, bonds of the Maine company valued at $1,886,431.26 were also turned over by the three [fol. 1651] companies named. The value of these bonds, as stated, represents the price which these three companies

had paid for the bonds in 1912 when Prince had sold them to these companies, plus accrued interest amounting to $2,872.92. The par value of the bonds amounted to $2,085,000, and when they were received by the Maine company the following entry (copies from the record of the company) was made to place them on the books of the company.

1913		Dr.	Cr.
Dec. 31.	Chicago Stock Yards Co.	$2,085,000	
	5% Bonds in Treasury to		
	Surplus Account		$1,895,097.92
	Discount		189,902.08

The effect of the above entry was to record the bonds as an asset, and the company having become the owner of part of its own liabilities might very well have chosen to cancel the bonds thereby reducing its liabilities and the yearly interest charges for which it was obligated to provide funds. But the bonds were not canceled and the company continued to pay interest on them each year. The most interesting feature connected with these bonds now presents itself.

Section 30.—Interest Paid on Bonds Held by the Maine Company Not Recorded on the Books of That Company

Although the company continued to record the $2,085,000 of bonds as an asset of the company from December 31, 1913, and continued to pay interest on the bonds, none of the interest paid on the entire amount of $2,085,000 of bonds, amounting to $104,250 each year, has ever been recorded as income on the books of the Maine company.

The first interest payable on the bonds after December 31, 1913, was due on April 1, 1914. Coupons from the $2,085.00 of bonds amounting to $52,125, representing the interest due on April 1, 1914, were credited on March 31, 1914, to the profit and loss account of F. H. Prince & Co. At the same time, an account was opened on Prince & Co.'s books in the name of F. H. Prince, trustee, and this account was charged with the same amount, namely, $52,125. The records show that the coupons were not presented for payment by Prince & Co. until July 25, 1914. On that date Prince & Co. received cash amounting to $52,125, which was added to Prince & Co.'s cash balance and the account with F. H. Prince, trustee, was credited with the same

amount, thus closing the account. From the above entries it appears that Prince was credited with all of the April 1 interest on the $2,085,000 of bonds.

Since April 1, 1914, the Commission has been unable to trace to whom all of the interest on the $2,085,000 of bonds has been paid. It has been found, however, that F. H. Prince's personal account—as kept on the books of F. H. Prince & Co.—has been credited with the interest on $485,000 of these bonds as follows:

[fol. 1652]

Interest due	Amount of bonds	Amount of interest
October 1, 1914	$485,000	$12,125
April 1, 1915	$485,000	$12,125
April 1, 1916	$485,000	$12,125
October 1, 1916	$485,000	$12,125
April 1, 1917	$485,000	$12,125
October 1, 1917	$485,000	$12,125

The interest on the $485,000 of bonds, amounting to $12,125, due on October 1, 1915, was not shown on the books of F. H. Prince, and it is not known to whom the interest was paid on that date. It has also been impossible to ascertain to whom the interest on $1,600,000, amounting to $40,000 every six months, has been paid since April 1, 1914.

The following entries were found on the books of Armour & Co., for which the officials of the company could give no satisfactory explanation:

	Credit of—
October 21, 1914	$40,000
July 10, 1915	$24,575
October 30, 1915	$24,575
May 3, 1916	$24,575

These amounts were credited to an account called J. O. Armour No. 4, Dividend Account, this being the name of the account to which all income derived from Armour's investment in the Chicago stockyards was credited. It is quite probable that the entry of October 21, 1914, amounting to $40,000, represents the interest on $1,600,000 of bonds due on October 1, 1914. It has been shown that Prince received interest on $485,000 of bonds, amounting to $12,125, due on the same date.

These two entries would seem to account for the total

interest due on the $2,085,000 for October 1, 1914. The total interest for the year 1914 would seem, therefore, to have been divided between Prince and Armour, the former receiving $64,250 and the latter receiving $40,000.

In default of any tangible evidence as to the nature of the other three entries of $24,575 each, comment can only be made on the basis of speculation as to what these entries represent. It is quite possible that these entries represent a part of the interest payable on the $1,600,000 of bonds which the Commission has been unable to trace.

The inquiry also revealed that an entry had been made on the Maine company's books under date of December 31, 1916, the effect of which was to reverse the entry of December 31, 1913, with the result that the bonds no longer constituted an asset of record of the Maine company in 1918, [fol. 1653], at the time when the records of this company were being examined by the representatives of the Commission. The entry read as follows:

1916	Debit	Credit
Dec. 31, Surplus Account	$1,895,097.92	
Discount Bonds	189,902.08	
To Chicago Stock Yards 5% Bonds in Treasury		$2,085,000

Section 31.—Disposition of the Bonds and the Interest Payments Thereon

The elimination of the bonds as an asset of record on the books of the Maine company and the fact that the Commission has been unable to locate to whom the interest has been paid on the greater part of these bonds gains still greater significance in the light of letters and other documents found in an investigation of this case.

The following letter is from the files of Swift & Co., and was written by L. F. Swift, president of Swift & Co., to his brother, E. F. Swift. The letter itself bears no date but the file number with which it was marked, as well as the fact that reference is made in the letter to a meeting to be held on December 4, 1913, indicate that the letter was written in the latter part of November, 1913. This letter reads in part as follows:

Did not get anything from Wadden as he has not the 18 shares but thinks will get in a week. Says Spoor called

meeting New York, December 4, and he, Wadden, will be Chicago December 5 with goods if can get 18 shares. Had a wire from Croll. Hurry him up. Will tell you lot more he said.

It would appear from this letter that L. F. Swift had some kind of an understanding with Prince and Armour at the end of 1913 by virtue of which he expected to receive some financial consideration from their hands.

It also appears that L. F. Swift was made to believe that the fulfillment of the promise made to him was contingent upon the procuring of some 18 shares of common stock of the New Jersey company which evidently were the last 18 shares that Prince and Armour were endeavoring to obtain before having the Maine company acquire the surplus earnings of the New Jersey company and of its subsidiaries, the Yards company and the Railway company. It will be remembered that the efforts of Prince and Armour were finally successful, and in December, 1913, they were in a position to have the Maine company absorb part of the surplus earnings of the New Jersey company and its subsidiaries by receiving $2,085,000 per value of bonds and $678,568.74 in cash.

The tenor of the following letter, however, written by Croll to Wadden on February 10, 1914, seems to indicate that Swift met with a setback to his expectations, and as late as February, 1914, about two months after the time that his claim was to have been adjusted, he was still expecting [fol. 1654] a settlement.

Chicago, February 10, 1914.

Mr. W. M. Wadden, 28 State Street, Boston, Mass.

MY DEAR MR. WADDEN:

We are very anxious to hear from you as to what progress you are making in the matter that we are jointly interested in. It should be cleaned up as soon as possible and, while we know that you are doing the best you can, we are of the opinion that the other parties are somewhat anxious about it.

Kindly write me on receipt of this under personal cover.

Very sincerely yours, (Signed) F. W. Croll.

The letter does not disclose the identity of the individuals that were designated as "the other parties." But, if read in conjunction with the Swift letter cited above, the indication would be that in this letter Croll was urging a speedy adjustment of the understanding that existed between Prince and Armour on the one hand and Swift and possibly Morris on the other hand, and which according to the representations made to Swift by Wadden was to be settled some time in December, 1913.

No more letters bearing on this matter were found and the Commission is not in a position to state definitely whether the pending claims have ever been adjusted or what was to have been the method of adjustment.

Exhaustive efforts have been made in this inquiry to secure an authentic explanation of these letters from the parties involved but without success. The parties claimed that they could not recall the subject matter which was under discussion in these letters and were most emphatic in asserting that Swift did not receive any financial consideration from the Maine Company either at the time of its formation or at any time thereafter.

On the basis of the evidence obtained in the course of the investigation of the Chicago stockyards, and as borne out by the evidence submitted in this report, the Commission is able to definitely state that neither Swift nor Morris have obtained any of the stock of the Maine company, but the question must still be left open as to whether either or both of these parties received any other financial compensation to satisfy their previous demands.

In the absence of any tangible evidence which would show what the ultimate outcome of the subject matter under discussion in the above letters was, further comment can only be based upon speculation. One interpretation which might be offered would be that Swift, or possibly both Swift and Morris, had been given a part or the whole of $1,600,000 of Maine company bonds. It has been shown that while Prince has been receiving the interest on $485,000 of the $2,085,000 [fol. 1655] of bonds received by the Maine company from the New Jersey company and its subsidiary companies no records could be found showing to whom the interest on $1,600,000 of these bonds has been paid.

F. H. Prince has been examined several times by representatives of the Commission with reference to the disposition of the bonds and the interest paid on them since 1914, but no satisfactory information could be obtained from him on these two points.

Prince was interrogated on May 8, 1918, with reference to these bonds and the interest payments which had been made on them and he then asserted that he was the owner of the bonds and the recipient of the interest, the same having been given to him by the Maine company as a commission for having promoted the company. However, when the books of F. H. Prince & Co. were previously submitted to the representative of the Commission about a month and a half before Prince made the above statement his bookkeeper had only been able to show the receipt of interest on $485,000 of these bonds by Prince. In view of this fact his statement therefore could not be considered as conclusive.

Another opportunity to explain the disposition of the bonds and the interest payments thereon was offered to Prince by the Commission on June 13, 1919. On that occasion he asserted that the bonds had been taken off the books of the Maine company in December, 1916, on advice of his attorney, on the ground that the Maine company could not credit its own bonds to the surplus account of the company, and guided by this advice, he averred that the bonds had been turned over to F. H. Prince & Co. to be held by it as trustee for the Maine company until such time as the bonds could be disposed of and the proceeds turned over to the Maine company. Prince also asserted that Prince & Co. was holding the bonds as collateral security for stock of the New Jersey company, which Prince & Co. had been buying on behalf of the Maine company. He submitted the following statement in writing with reference to the bonds:

The $2,085,000 bonds of the Chicago Stock Yards Company of Maine paid to them as dividends are held by me as security for my loans to the Chicago Stock Yards Company of Maine. The interest coupons paid to me have been used in reducing these loans. Of this interest Mr. Armour has received $240,000 on account of the $300,000 borrowed by the Maine Company from him and there is now owed him about $60,000. When this loan is paid off this collateral will

be released and returned to the treasury of the Maine Company.

The books of the Maine company do not disclose that any loans have ever been made to that company either by F. H. Prince or J. O. Armour. The statement of Prince quoted above could not refer to anything else but to an entry which was made on the books of the Maine company on December 30, 1918, five years after the Maine company first recorded the receipt of the $2,085,000 on its books as a dividend from the New Jersey company and its subsidiary companies. [fol. 1656] This entry reads as follows:

1918				
Dec. 30	(Ca-15)	Chicago Stock Yards 5% Bonds Par Value $286,000 at $85.06	$ 243,354.39	
	(Ca-8)	Chicago Junc. Ry. & Union Stock Yards Co. Common Stock		
		13,196 shares of $100 each at $177.11	2,385,092.90	
		4,733 shares of $100 each at $160.00	804,247.06	
		To Bankers		$3,433,694.35

To record the cost of the foregoing securities hitherto carried by Bankers, to be taken up by the company at cost (subject to adjustment of interest and coupon charges) in accordance with vote of the directors of the company this date.

It appears from this entry that 17,929 shares of the assented common stock of the New Jersey company and $286,000 par value of the Maine company bonds were acquired on December 30, 1918, from some parties designated as "bankers," and that the Maine company assumed a liability to those "bankers" for $3,433,694.35. In the light of the memorandum it would appear that Prince and Armour were the parties who sold this stock to the Maine company. It is also evident that part of the stock thus acquired by the Maine company was made up of the assented common stock of the New Jersey company originally bought by Prince and Armour under the syndicate agreement of October 1, 1910, toward which Armour contributed at that time $300,000 in cash. Prince's assertion now is that the interest on the $2,085,000 of bonds has been used to pay back to Armour and himself the cash invested by them in purchasing stock of the New Jersey company and that Prince has been holding the $2,085,000 of Maine company bonds as collateral security for this debt.

While the books of Armour & Co. have not been examined since this statement was made, a previous examination of those books showed no entry that could be identified as representing the interest payment of $240,000 referred to in this memorandum. Nor did the books of F. H. Prince & Co., when examined in March, 1918, show that Prince had received the interest on more than $485,000 of these bonds, after the interest date of April 1, 1914, leaving unaccounted for to the Commissions' accountants the interest on $1,600,000 of bonds.

Furthermore, the contention that the $2,085,000 of bonds were held as collateral by F. H. Prince & Co. for stock which was only turned over to the Maine company on December 30, 1918, does not satisfactorily explain the circumstance that the Maine company has never recorded the interest paid on the $2,085,000 of bonds as income. Moreover, the books of the Maine company failed to show that any arrangement existed between Prince and Armour and the Maine company prior to December 31, 1917, whereby the former were to convey to the latter the stock of the New Jersey company which they owned, and in consideration of which [fol. 1657] the Maine company in turn assumed the obligation of assigning to Prince and Armour the interest to which that company has been entitled since December 31, 1913.

Another complicating feature was injected into the obscure situation which has arisen as a result of the accounting procedure followed in handling the $2,085,000 of bonds, by the fact that on December 30, 1918, the same day that the entry was made on the books of the Maine company, recording an obligation on the part of the Maine company of $3,433,694.35 to "Bankers," another entry was made, putting back on the books of the company and crediting again to surplus account the $2,085,000 of bonds which had been stricken off the books on December 31, 1916. It will be recalled that Prince said that the bonds had been taken off the books in December, 1916, because his attorney had advised him that the Maine company could not credit its surplus account with its own bonds. It is obvious that none of the explanations advanced by Prince solve the problems arising out of the accounting procedure connected with the handling of the bonds of the Maine company and the interest paid thereon.

If Prince's statement that the interest on the $2,085,000 of bonds has been used to pay back to Armour and himself the cash they invested in purchasing the New Jersey company stock is accepted, then Prince and Armour have made the Maine company repay them for the money they had invested in the New Jersey company's stock, the Maine company having derived no benefit from the transaction.

Section 32.—The Bearer Warrants and Reasons for Issuing Them

The secrecy with which Prince and Armour surrounded all their transactions in connection with the Maine company, beginning with the purchase of the New Jersey company's common stock in 1910, and up to the time of the formation of the company in 1911, when dummies were employed in the organization of the company, was emphasized by the issue in 1914 of bearer warrants in lieu of the regular stock certificates which up to that time served as evidence of the ownership of the company.

Pegram was recorded as the owner of 79,990 shares of stock of the Maine company in 1911, after his sale of the plan and the payment of $1,000,000 by him to the company had been made, 10 shares having been recorded in the name of the dummy directors as qualifying shares.

The stock records of the Maine company do not record any changes in the ownership of the stock until June, 1913, when 64,480 shares of stock were transferred to Mrs. F. H. Prince, who held this amount of stock in her name for F. H. Prince until April, 1914. Pegram continued to hold 15,510 shares of stock for Armour until November, 1913, at which time certificates of stock for this number of shares were transferred to W. M. Wadden, who sent them as shown in the following letter, to F. W. Croll, treasurer of Armour & Co.:

[fol. 1658] Nov. 14, 1913.

Dear Mr. Croll:

Your deposit on account of the Chicago Stock Yards Co. capital was $194,000, which entitled you to 19.4 per cent

of the stock or $1,552,000. I am therefore enclosing you certificates

No. 10, for 10,000 shares
No. 29, for 5,510 shares

leaving 10 shares still due you. These ten shares have been issued in the names of the directors and are held by me to qualify those gentlemen. As soon as Mr. Prince returns from Europe I will have other stock issued to you to cover the above 10 shares and thereby complete your requirements.

I will appreciate it if you will wire me upon receipt of this letter that you have received same and also acknowledge the receipt by mail.

Very truly yours, F. W. Croll, Esq.

Croll's acknowledgment follows:

Frederick W. Croll, 205 LaSalle St., Chicago

Chicago, November 19, 1913.

Mr. W. M. Wadden, 28 State Street, Boston, Mass.

My Dear Mr. Wadden:

Your favor of the 14th instant with enclosures of Certificate No. 10 for 10,000 shares and Certificate No. 25 for 5,510 shares was duly received as per my wire.

I wired you first at Boston and afterwards repeated that wire to New York when I heard from you.

Very truly yours, (Singed) F. W. Croll.

In April, 1914, bearer warrants were issued in accordance with a by-law of the Maine company, which provided that any stockholder of the company could exchange his regular certificate of stock by depositing it with the treasurer of the company and receive in turn a warrant entitling the bearer at any time to the certificate of stock which had been deposited.

It was also provided that coupons should be attached to the bearer warrants entitling the holder of such coupons to any dividends declared by the company. Meanwhile, the treasurer of the Maine company, under the terms of the

by-laws, held the stock, which had been deposited, as trustee for the share warrants.

The bearer warrants carried with them voting privileges which could be exercised by the holder upon the deposit of his warrants with the company or at any other place which might be designated by the directors not less than three days before any meeting of the company. The person depositing a warrant was to receive a ticket or proxy author- [fol. 1659] izing him to attend and exercise his voting privileges at the meeting. The treasurer of the company was authorized to exercise voting privileges for all warrants not thus deposited.. A copy of the provision of the by-laws, which provides for the issuance of bearer warrants, together with a copy of the bearer warrants from itself, follows:

Article 25

Warrants For Shares To Bearer

(1) The Company may upon the delivery to it of the certificate for any fully-paid up share or shares with a transfer thereof to the Treasurer of the Company issue for each share therein specified a warrant entitling the bearer to such share and providing by coupons or otherwise, for the payment of the future dividends on the share.

(2) The shares specified in the certificate so delivered up shall from time to time be transferred to the Treasurer for the time being of the Company as Trustee for share warrants and shall not afterwards be transferred and no certificate shall be issued therefor except in accordance with the provisions hereof.

(3) The warrant may be expressed in either the English or the French language and shall be under the common seal of the Company and shall be signed by the President or a Vice-President and by the Secretary or an Assistant Secretary or some other person appointed in place of the Secretary by the directors and only one share shall be specified in each warrant.

(4) If any warrant or coupon shall be worn out or defaced the directors may on surrender thereof issue a new one in its place.

(5) The directors may upon proof to their satisfaction

of the loss or destruction of any warrant or coupon and upon such indemnity being given to the Company as they shall deem adequate to issue another warrant or coupon in its place.

(6) The Company shall be entitled to recognize the bearer of any warrant or coupon as absolutely entitled to the share or dividend therein specified.

(7) The bearer of a warrant upon depositing the warrant at the office or such other place as the directors shall appoint not less than three days before any meeting of the Company shall receive a ticket or proxy authorizing him to attend and vote and exercise the rights of a member at such meeting in respect of the share or shares for which the warrant or warrants have been so deposited and after the meeting the warrant or warrants shall be returned to him or the bearer of the ticket or proxy upon surrender thereof. And in respect of all shares specified in any warrants that shall not have been so deposited the Treasurer shall attend and vote and exercise the rights of a member in such manner as he and the President of the Company shall agree.

[fol. 1660] (8) If the bearer of a warrant shall surrender it and request in such form as the directors prescribe that he be registered as a stockholder or member in respect of the share specified in it the Company shall transfer into his name one of the shares specified in the certificate of shares originally delivered up and issue a new certificate therefor.

(9) The Company may appoint agents in London, Paris or elsewhere with full power and authority to do all things that may be necessary to carry out and give effect to the foregoing provisions respecting the share warrants and to vest in the holders of such warrants the rights and interests specified herein.

Chicago Stock Yards Co.

Warrant to Bearer

This is to certify that the bearer of this warrant is entitled to ..... fully paid up shares in the Chicago Stock

Yards Co. upon demand, and meanwhile to receive all dividends declared upon the said shares and to exercise the voting powers in respect thereof under and subject to the provisions of article 25 of the by-laws of the company, a copy of which is indorsed hereon." (On the back.)

In witness whereof the Chicago Stock Yards Co. has caused this warrant to be signed by its president or vice president and its secretary or an assistant secretary this ..... day of .....

——— ———, President.

Preparatory to the deposit with the treasurer of the Maine company and the issuance of bearer warrants in exchange by that official the 64,480 shares of stock held by Mrs. F. H. Prince were split up in April, 1914, and recorded in the names of dummies, who were found to be employees of F. H. Prince & Co. Similarly, the stock held by J. O. Armour was converted into bearer warrants in January, 1915. The records of the treasurer therefore did not show that Prince and Armour held any of the stock of the Maine company.

The following telegram was sent by the Commission on November 7, 1917, to F. R. Pegram, treasurer, of the Maine company, for the purpose of ascertaining the names of the common stockholders of that company:

November 7, 1917.

Frank R. Pegram, Treas, Chicago Stock Yards Co., Ames Building, No. 1 Court St., Boston, Mass.

Referring to your report Schedule "A", Slaughtering and Meat Packing, the Commission requires immediate transmission to it of names and addresses of owners of Common Stock for whom you as Trustee hold block re- [fol. 1661] ported on page 4 Schedule.

L. L. Bracken, Secretary, Federal Trade Commission.

To the above telegram Pegram telegraphed the following reply:

248W HP 54 4EX

Federal Trade Commission Received Nov. 9, 1917. Mails and Files.

Boston, Mass. 245 P M Nov 8

AG Bracken Washn DC

Answering your telegram just received the stock of Chicago Stockyards Company held in my name held by me as Treasurer of the Corporation in capacity of Trustee for the holders of Bearer Warrants. My books do not show who hold the bearer warrants which are transferrable by delivery.

F. R. Pegram, Treas., Chicago Stockyards Co.

It was only through a study of the books of F. H. Prince & Co. and of Armour & Co. that it was definitely ascertained that F. H. Prince held 50,000 shares, J. O. Armour 15,520, and Mrs. F. H. Prince [1] 14,480 shares of the 80,000 shares of common stock of the Maine company.

It is pertinent to inquire into the reasons for the issuance of the bearer warrants in lieu of stock certificates as an evidence of ownership in the Maine company. F. H. Prince stated to agents of the Commission that in issuing the bearer warrants he was prompted solely by the desire to conceal Mr. Armour's interest in the Chicago stockyards, as it had always been advertised throughout the West that the management of the yards was absolutely free from control by the packers. He found that should Armour's interest in the yard become known it would injure the reputation of the Chicago stockyards as an independent market among the live-stock raisers.

Another and perhaps more urgent reason for issuing the bearer warrants may be found in the following clause of the Plan of June 30, 1911, which the stockholders of the New Jersey company were induced to accept:

No assenting stockholder shall have any interest in any

[1] Mr. Prince testified that he had assigned this stock to Mrs. Prince.

of the shares of the New Company (Maine company) or of the disposition thereof.

From the facts as developed above, it does not appear that the committee's pledge was taken seriously by the promoters. It has been shown that F. H. Prince and J. O. Armour, who between them held over 33,000 shares of the [fol. 1662] common stock of the New Jersey company, became the sole owners of the stock of the Maine company. Prince and Armour could not well permit the fact to become known that Prince and Armour were the beneficiaries of the Plan and that the confidence of the assenting stockholders had been betrayed. Had this fact become known the reputation not only of Prince and Armour but of the men who had acted as the committee and of those who had assisted in soliciting the assents would have been weakened in the eyes of the investing public. The bearer warrants were evidently designed in part to forestall such a situation.

Section 33.—Dividends Paid by the Maine Company

The Maine company paid its first dividend on January 1, 1914. This was a cash dividend of 2½ per cent on the $8,000,000 of capital stock which had been issued by the company to F. R. Pegram in 1911 as consideration for the payment by Pegram to the company of $1,000,000 in cash and the transfer to it of his title to the Plan of June 30, 1911, and the assents of the stockholders of the New Jersey company thereto, which had been obtained through the agency of the committee and F. S. Moseley & Co. The interest of Pegram in this Plan and the assents thereto was appraised at a value of $7,000,000.

It has already been shown that Pegram acted as a dummy in this transaction for Prince and Armour, who, between them, had contributed the $1,000,000 in cash. The value of $7,000,000 which was placed upon the Plan represented merely the capitalization of their title to the surplus earnings of the New Jersey company and of its subsidiary companies.

The table following shows the amount of money received by Prince and Armour in the form of dividends paid by

the Maine company from January 1, 1914, to January 1, 1918.

Page 269

Dividends paid by the Chicago Stock Yards Co. of Maine

Date	Rate	Amount Paid	Received by— F. H. Prince	Mrs. Prince	J. O. Armour
Jan. 1, 1914	2½	$200,000	$125,000	$36,200	$38,800
July 1, 1914	2½	200,000	125,000	36,200	38,800
Jan. 1, 1915	2½	200,000	125,000	36,200	38,800
July 1, 1915	2½	200,000	125,000	36,200	38,800
Jan. 1, 1916	2½	200,000	125,000	36,200	38,800
July 1, 1916	4	320,000	200,000	57,920	62,080
Jan. 1, 1917	4	320,000	200,000	57,920	62,080
July 1, 1917	2½	200,000	125,000	36,200	38,800
Jan. 1, 1918	2½	200,000	125,000	36,200	38,800
Total	25½	2,040,000	1,275,000	369,240	395,760

[fol. 1663] As shown by this table, Prince and Armour have received in dividends from the Maine company up to January 1, 1918, $2,040,000 or the equivalent of over 200 per cent on their investment of $1,000,000.

Section 34.—Analysis of the Contract of October 1, 1914

It has been shown on pages 253 to 258 how the Maine company acquired funds in December, 1913, from the New Jersey company and its subsidiary companies. Prior to that time the Yards company and the Railway company had paid dividends to the New Jersey company on the stock which it owned in these two companies, and from this income the New Jersey company had paid its fixed charges and regular dividends on its outstanding preferred and common stock. It will be noted that the procedure followed by the New Jersey company in 1913 in instructing its two subsidiaries to pay directly to the Maine company the special dividends which those subsidiary companies had declared payable to the New Jersey company marked a departure from the regular method theretofore followed.

The Maine company had originally acquired its right to the surplus of the New Jersey company and of the underlying companies, owned and controlled by the latter, by virtue of the terms of the contract the Maine company had

entered into on June 30, 1911, with the individual common stockholders of the New Jersey company. This was the Plan which the committee, composed of Messrs. Richard Olney, chairman, Samuel Carr, Guy Norman, S. L. Schoonmaker, E. V. R. Thayer, F. R. Hart, secretary, submitted to the stockholders of the New Jersey company on behalf of the Maine company. Through this contract the Maine company became the guarantor of the 9 per cent dividends payable on the common stock of the New Jersey company, and the common stockholders assigned their respective rights to dividends upon their holdings in the company to the Maine company.

These contractual arrangements were extended on October 1, 1914, to all the outstanding obligations of the New Jersey company, including interest payments on the outstanding bonds and notes of the company, the payment of its expenses, taxes, and other obligations, and the payment of dividends on its preferred stock. The contract of October 1, 1914, also provided for the reorganization of the methods by which funds were secured by the Maine company from the New Jersey company and its subsidiaries. In lieu of the regular dividends formerly paid by the Yards company, a schedule of fixed payments was established which the Yards company and the Railway company had to make for the payment of the interest on the bonds of the New Jersey company and the dividends on its guaranteed preferred and on its guaranteed common stock. The schedule of payments established under the terms of the contract of October 1, 1914, follows:

Vol. 1664]

Schedule of periodical payments required to be made by the Yards company and the Railway company under the terms of the contract of October 1, 1914.

Date	To whom made	Application of payment	Amounts to be paid by the Yards Company	Amounts to be paid by the Railway Company
Mar. 15	Guaranty Trust Co.	Interest on New Jersey company's 4 per cent bonds	.....	$80,000.00
Sept. 15	....do	....do	.....	80,000.00
Mar. 15	....do	Interest on New Jersey company's 5 per cent bonds	.....	250,000.00
Sept. 15	....do	....do	.....	250,000.00
Mar. 25	Old Colony Trust Co.	6 per cent dividends on New Jersey company's preferred stock	$97,500.00	.....
June 25	....do	....do	97,500.00	.....
Sept. 25	....do	....do	97,500.00	.....
Dec. 25	....do	....do	97,500.00	.....
Mar. 25	....do	9 per cent dividends on New Jersey company's guaranteed common stock	76,324.50	.....
June 25	....do	....do	76,324.50	.....
Sept. 25	....do	....do	76,324.50	.....
Dec. 25	....do	....do	76,324.50	.....
Mar. 15	The Maine Company	Subject to use of Maine company	.....	38,750.00
Sept. 15	....do	....do	.....	38,750.00
Mar. 15	....do	....do	105,175.50	.....
June 15	....do	....do	105,175.50	.....
Sept. 15	....do	....do	105,175.50	.....
Dec. 15	....do	....do	195,175.50	.....
	Total payments for year	.....	1,116,000.00	737,500.00

The most significant fact, both from a financial and legal viewpoint, about this arrangement is that while not being a holding company the Maine company controls the finances of the New Jersey company and of its subsidiaries, and the Maine company is entitled to absorb the entire surplus of these companies, not because of stock ownership in them, but because of the position of guarantor assumed by the Maine company as the result of the contractual relations it has established with those companies.

A copy of the contract of October 1, 1914, is presented as Exhibit 8, on page 317 of this report.

[fol. 1665] Section 35.—Summary of Financial Conditions of the Chicago Stockyards up to 1917

On December 31, 1917, a little over six years after the Maine company was formed by Prince and Armour, and the acquisition of the surplus earnings of the New Jersey company and of its subsidiaries, the Yards company and the Railway company, in excess of a stipulated per cent was made possible, these companies reported surplus balances as shown in the following table. The surplus balances of these companies reported for December 31, 1910, the end of the fiscal year preceding the formation of the Maine company, are included in this table for comparative purposes.

Company	Surplus	
	Dec. 31, 1917	Dec. 31, 1910
New Jersey company	$3,415,185.88	$2,449,673.71
Yards company	2,476,101.97	2,014,692.41
Railway company	1,044,848.64	[1] 1,204,533.70
	6,936,136.49	5,668,899.82

[1] This amount was taken from the report of the company to the Interstate Commerce Commission for the fiscal year ending June 30, 1911.

It appears from these figures that the surplus of the three companies has increased by $1,267,236.67 during the seven-year period from December 31, 1910, to December 31, 1917. The New Jersey company and the Yards company each show a gain in surplus while the Railway company shows a small decrease.

The significance of the recorded surplus balances of these three companies can be best understood when viewed in

when considered in conjunction with the data given in sections 3 and 6 relating to the history of the increases in the capital obligations of these companies, which have occurred at various times. It was stated in section 17 that the accumulated surpluses of the New Jersey company and of its subsidiaries, as reported by those companies December 31, 1910, could not be considered as representing the actual extent of the accumulated earnings of those companies because of the accounting policy adhered to by them for several years.

Undervaluation of Investments.—It was noted that the two operating companies had followed a practice of charging additions to, and improvement of, their properties to operating expenses which might well have been charged to capital accounts. Nor could the surplus of the New Jersey company be taken as representing the true financial condition of that company in so far as several of its investments were carried on the books of the company at a figure very much below that which the real value would have warranted. As outstanding instances of this nature, the com- [fol. 1666] pany's investments in the bonds of the Indiana Harbor Belt Railroad Co. and in the Central Manufacturing District were mentioned.

It was pointed out that the bonds of the Indiana Harbor Belt Railroad co., with a par value of $2,500,000, which bear interest at 4 per cent and mature in 1957, were carried on the books of the New Jersey company in 1910 at $50,000. The company still recorded these bonds at a value of $50,000 on December 31, 1917. On this date the Central Manufacturing District was recorded on the books of the New Jersey company at a net value of $1,661,718.96, although the net value of this property as determined from the balance sheet of the Central Manufacturing District for December 31, 1917, was $8,137,848.64.

The Yards Company.—In section 3 of this chapter it was shown that the $13,200,000 of outstanding capital stock of the Yards company had grown out of an original cash investment of $1,000,000 by the stockholders in 1865 through periodically capitalizing up to 1881 in the form of stock dividends the increment in property values and the accumulated earnings of the company. A regular dividend rate

of 13 per cent on the $13,200,000 of capital stock had been maintained from 1890 to 1917, inclusive. Between 1913 and 1917 after all of the outstanding capital stock of the Yards company had been acquired by the New Jersey company extra dividends were paid by the Yards company amounting to $1,787,998.50; of this amount $1,155,000 was paid in 1913, when the Maine company for the first time took up the surplus of the New Jersey company and its underlying companies.

The net earnings of the Yards company have ranged from $1,892,572.90 to $2,643,171.01 [1] during the seven-year period from 1911 to 1917, inclusive. It will be seen, therefore, that the rate of profit of this company based upon the capital stock has ranged from 14 to 20 per cent during this period.

The Railway Company.—The fact that the Railway company showed a decrease in its surplus on December 31, 1917, as compared with the balance of December 31, 1910, is not to be taken as an indication that this company has met with serious financial reverses during the period from 1910 to 1917. It was found that in 1913 a stock dividend of 150 per cent, amounting to $3,300,000, was paid on its capital stock of $2,200,000 thus increasing the outstanding capital stock of the company to $5,500,000. During the same year the company declared a special 10 per cent dividend (in addition to its regular dividend of 6 per cent), amounting to $220,000.

[fol. 1667] The payment of the $3,300,000 stock dividend by the Railway company out of surplus was made possible by capitalizing addition and betterment expenditures from January 1, 1905, amounting to $1,514,136.85 all of which had previously been charged to operating expenses. The following letter was written by C. C. Chace, auditor of the

---

[1] This includes $600,000 paid by the Railway company as a rental for use of railroad property belonging to the Yards company; this rental since 1914 has not been paid to the Yards company but has been diverted as per schedule shown on page 270 to meet the obligations of the New Jersey company which were guaranteed by the Maine com-

Railway company, on February 5, 1914, a few months after the stock dividend was paid. This letter, while dealing with extraneous matters, discloses the accounting practices followed by the company in recording property values.

Chicago Junction Railway Company

Chicago, Feb. 5, 1914

Mr. J. A. Spoor, Chairman of the Board.

Dear Sir: The question before me at this writing, upon which I ask advice, is the subject of the depreciation to be used in connection with the Income Tax upon the physical assets of the C J Ry; that is, the rate of depreciation and the value which in your judgment should be placed upon the property in applying this per cent.

December report shows the physical value of the property investment as $3,978,678.16. This of course not including the value of the equipment which we depreciate monthly in our accounts under Interstate Commerce Commission provision. Said amount is the result of the capitalization of our Additions and Betterments expenses since January 1, 1905, and as previously explained is in the sum of $1,614,136.85.

It carries with it, however, somewhat fictitious valuation with respect to the property, inasmuch as it brings over the amount left in our capital account after the Outer Line was sold, and the capital investment was credited with the amount derived from the sale thereof, leaving balance in capital account of $2,286,427.84, which was designated by the attorneys and by Price, Waterhouse & Co. to represent the value of what we had left.

There are no books extant prior to January 1, 1905; and I do not believe that any government investigator could controvert our statement that this is the book value of the property, the result of legitimate capital account charges.

The books being destroyed, we can not in answer to their inquiry substantiate the figures; but we assume that we have a perfect right to depreciation on the book value of the property.

My suggestion is that we use as basis of depreciation this full capital investment valuation, less the value of

This would give us a figure on which to base depreciation of $3,954,144.30.

Our former method was the same as obtains with U S Y & T Co. accounts, namely, to take 6 per cent of the gross earnings as the depreciation to be used in connection with our income statement, which depreciation averaged $135,000.

[fol. 1668] We do not experience as heavy depreciation upon our railroad property as upon that of the Stock Yard Co. The heavy values of the railroad are iron and steel bridges, track elevation, rail, etc., on which the depreciation would be extremely light; but probably a reasonable depreciation would be allowed without comment, and my idea is that we should not greatly exceed the former depreciation written off, in order to avoid adverse criticism.

My recommendation is—subject to your approval—that we take 3½ per cent depreciation on this valuation, which would give us $138,395.05, or about $3,000 in excess of the average depreciation written off in former years; and considering the class of construction that obtains with the Railroad Company, it occurs to me that this is ample, if not too much.

However, the whole matter is left to your judgment, and I await instruction.

Yours truly, (Signed) C. C. Chace, Auditor.

After declaring the above special dividend the Railway company showed a surplus of $99,279.17 on December 31, 1913. The surplus of $1,044,848.64 on December 31, 1917, as shown by the report of the company, represented therefore an accumulation of earnings in four years amounting to $945,569.47, or an average of $236,392.36 each year. These earnings were accumulated after payment of a yearly rental of $600,000 for properties leased from the Yards company and after payment of dividends from 1914 to 1917 amounting to $137,500 each year.

From 1899, the year following the formation of the company, up to 1914 regular dividends at the rate of 6 per cent on its capital of $2,200,000 had been paid by the Railway company to the New Jersey company. It was pointed out in section 17 of this chapter that the original cost to the New Jersey company of the $2,200,000 capital stock of

the Railway company had been $500,000. It will thus be seen that the New Jersey company had actually been receiving dividends up to 1914 at the rate of 26.4 per cent each year on its original investment in the Railway company. Following the increase of the capital stock of the Railway company to $5,500,000 the annual dividends paid by the Railway company were increased from $132,000 to $137,500.

The New Jersey Company.—In section 6 emphasis was laid upon the fact that the proceeds derived from the sale of the $13,000,000 of capital stock issued in 1890 by the New Jersey company and the $10,000,000 5 per cent bonds issued at the same time were used to acquire the capital stock of the Yards company. These new capital obligations were increased by the issue of $4,000,000 of 4 per cent bonds in 1900, the funds received from the sale of these bonds having been used to retire the 5 per cent income bonds then outstanding, which had been given to the [fol. 1669] packers as a bonus in 1892 and to make additional payments to other packers in order to induce them to locate plants at the Chicago stock yards. A total, therefore, of $27,000,000 of capital obligations were created as a result of the formation of the New Jersey company, none of which were issued to increase the working capital of the yards.

The income of the New Jersey company up to 1899, when dividends from the Railway company were first received, was derived from the dividends paid to it by the Yards company. This income had been sufficient to pay interest on the bonded indebtedness of the New Jersey company, 6 per cent dividends on its preferred stock, and 8 per cent on its common stock up to 1911. The income of the New Jersey company had, however, for several years prior to 1911 exceeded the amount required for interest and dividend payments and on December 31, 1910, the New Jersey company recorded on its books an accumulated surplus amounting to $2,449,673.71.

As shown in the table on page 271, the surplus of the New Jersey company on December 31, 1917, amounted to $3,415,185.88, an increase of $965,512.17 for the seven-year period, or an average annual increase of $137,930.31. It

was noted in section 17 that for several years prior to January 1, 1911, the surplus of the New Jersey company had been increasing annually at the rate of $300,000. It is evident therefore that the average annual increase of the surplus account of the New Jersey company had decreased about $163,000 per year since December 31, 1910.

This large decrease in the annual surplus earnings of the New Jersey company is the direct result of the arrangements made on October 1, 1914, by the Maine company, whereby part of the income formerly received by the New Jersey company in the form of dividends from the Yards company and the Railway company was diverted to meet the obligations of the New Jersey company which were guaranteed by the Maine company and whereby part of the income went direct to the Maine company; the funds thus paid direct to the Maine company were used by that company from 1914 to 1918 to pay dividends on its $8,000,000 of common stock.

On December 31, 1913, about one year before the schedule of payments shown on page 270 was put into effect, the New Jersey company reported a surplus of $3,479,920.54. When this is compared with the surplus reported for December 31, 1917, amounting to $3,415,185.88, it will be seen that a decrease of $64,734.66 has occurred during the period of four years from 1913, and that the increase, therefore, of $965,512.17 in the surplus account of the New Jersey company on December 31, 1917, over the surplus balance reported for December 31, 1910, occurred during the three years from December 31, 1910, to December 31, 1913, before the dividends received by the New Jersey company from the Yards company and the Railway company were diverted by the Maine company. The average annual increase of the surplus account of the New Jersey company during the three-year period from December 31, 1910, to December 31, 1913, was $343,422.27.

[fol. 1670] It will be recalled that the Railway company declared a stock dividend in December, 1913, of $3,300,000. This dividend was paid to the New Jersey company and added to the surplus account of that company, thereby increasing the surplus account of the company by that amount. However, the published balance sheet of the company for

that year did not show that any such increase had taken place. This was due to the fact that in December, 1913, the New Jersey company paid a special dividend out of surplus to the Maine company of $1,196,000. Surplus account was also charged at that time with $2,104,000, and this amount was used to reduce the value at which the New Jersey company carried its investment in the stock of the Yards company on its books. Thus the $3,300,000 credited to surplus account as a result of the stock dividend paid by the Railway company was exactly offset by these charges, and the surplus account of the company remained unaffected by the transaction.

It was pointed out that in 1913 the Yards company paid a special dividend of $1,155,000, that the Railway company paid a special dividend of $220,000, and that the New Jersey company paid a special dividend of $1,196,000. All of these dividends, amounting to $2,571,000, went to the Maine company. Of this amount $678.568.74 consisted of cash, while the balance of $1,886,431.26 represented the value at which these three companies carried the $2,085,000 of bonds of the Maine company on their books and which were thus given back to the Maine company at that time.

The Maine Company.—The balance sheet of the Maine company for December 31, 1917, shows an accumulated surplus of $157,821.55 on that date. The surplus account at that time did not include the $2,085,000 (par value) of bonds which had been received in December, 1913, as a dividend from the New Jersey company, the Yards company, and the Railway company, as these bonds had been taken off the books of the Maine company, as previously described, on December 31, 1916. Had these bonds been left on the books of the Maine company at the value at which they were first received in December, 1913, the surplus account of that company would have amounted on December 31, 1917, to $2,044,212.81.

The Maine company accumulated this surplus from the time of its formation on September 27, 1911, to December 31, 1917, a period of a little over six years, after paying dividends on its common stock amounting to $2,040,000 to Prince and Armour.

Copies of balance sheets of the Yards company, the Rail-

way company, the Central Manufacturing District, the New Jersey company, and of the Maine company, as of December 31, 1917, are presented as Exhibits 9-A to 9-E, inclusive, on pages 324-325 of this report.

By way of a summary, it may be stated that as a result of the acceptance of the plan of June 30, 1911, by the common stockholders of the New Jersey company the Maine company was in a position on December 31, 1917, to absorb the recorded surpluses of the New Jersey company, the Yards company and of the Railway company, aggregating $6,936,136.49 this surplus could be increased by adding the [fol. 1671] surplus value of the Central Manufacturing District as shown on the report of the latter company over and above the value at which the New Jersey company carries this investment. If the additional value of this investment were taken up by the New Jersey company and added to its surplus account an increase in this account of $6,476,129.68 would result. A still further increase in the surplus account of the New Jersey company could be effectuated were its other investments, now carried on the books of that company at nominal values only, recorded at their true values. These surplus values were made available to Prince and Armour, the organizers of the Maine company, through the investment of $1,000,000.

[fol. 1672] EXHIBIT 7

Meeting of the board of directors of the Union Stock Yard and Transit Company on Monday, May 7th, 1894

Pursuant to a call issued by the Secretary of this Company a Special Meeting of the Board of Directors of the Union Stock Yard and Transit Company was held at the office of Mr. John Newell, Lake Shore & Michigan Southern Ry. depot on Monday May 7th, 1894, at eleven o'clock A. M.

Present F. H. Winston, John B. Sherman, John Newell, Marvin Hughitt, R. R. Cable, Geo. B. Harris, E. J. Martyn, A. H. Veeder, J. J. Mitchell and Jas. H. Ashby, Jno B. Sherman, Chairman, and Geo. T. Williams, Secy.

Minutes of the Executive Committee so far as same pertained to the donation to the Columbian Museum of the

World's Fair Stock held by the Union Stock Yard & Transit Company, were read.

Upon motion of Mr. Veeder, seconded by Mr. Winston, it was resolved that the action of the Executive Committee in donating the Stock of the World's Fair to the Columbia Museum be ratified:

Upon motion of Mr. Veeder, seconded by Mr. Winston, it was resolved that the further reading of minutes be postponed until the next meeting.

The Committee on Track Matters was then asked to report, and Mr. Martyn, as Chairman, prefaced his report by the following remarks, it was found upon investigation that the trackage system, considered aside from the Stock Yards proper, was earning but a very small revenue. Also that it was evident that a good deal of money had got to be accumulated to provide for track elevation; and recommended the following resolution:

Resolved: That this Company shall make and collect a trackage charge on all live stock cars, loaded and empty, passing over the tracks of this Company, which trackage charge shall be the same as the trackage now charged on all other cars passing over the tracks of this Company—This resolution shall take effect on May 20th, 1894.

Chicago, Ills., March 19, 1894

To the Board of Directors of the Union Stock Yard and Transit Company, Chicago.

Gentlemen: Your Committee appointed at the last meeting of your Board to report upon the suggestion of the President of your Company, that trackage should be charged upon all live stock cars passing over the tracks of your Company as is now charged upon other cars has carefully considered the matter and we beg to submit the following report:

[fol. 1673] Your Committee finds upon investigation that the Company is operating a terminal track system which was appraised in the year 1890 as being of the value of ten million ($16,000,000) dollars. Your Committee finds that for the past four years from 1890 to 1893 inclusive, the cost of maintaining and operating this system has been $1,131,810.91, or an average cost per year $282,952.72.

The average net revenue for the four years named has been $119,732.69. It is clear to your Committee that this return upon a system of tracks carefully appraised and valued as being worth $10,000,000, is entirely insufficient, amounting as it does to .0119 per cent. It is also apparent to your Committee that as all other cars do and have for a long period paid a trackage charge upon your tracks, we might be accused of permitting discrimination against dead freight in favor of live stock, unless this apparent discrimination is removed.

Your Committee are also informed and believe that within the near future, a large amount of money will be required by this Company to carry out the ordinances of the City of Chicago, in the Elevation of tracks—and other improvements for which expense provision must be made.

Your Committee therefore conclude that the same charge for trackage should be made on all live stock cars passing over your tracks, as is now made on cars carrying dead freight, and so recommend.

(Signed) John B. Sherman, Edward J. Martyn,
Albert H. Veeder.

Mr. Newell dissented from the report of the Committee as embodied in resolution submitted by Mr. Martyn, saying—"A trackage charge on live stock coming into the Stock Yards would be put upon the shipper—the railroads not feeling able to sustain it—I think it would be taken out of other charges. In my judgment such a charge will react upon the Stock Yards Company and tend to drive business away from the Yards. Therefore I report against the adoption of such a charge upon live stock",—Upon motion of Mr. Martyn; supported by Mr. Winston, it was resolved that such report of Mr. Newells be transcribed and filed.

The following additional report, signed by Mr. Harris, was submitted by him and read:

The undersigned, members of your Committee, report against the proposition to charge the same trackage on stock as on other car load freight for the following reasons:

I. Many years ago, when the Union Stock Yard & Transit Company was organized, the business was turned over

by the railroads to the Stock Yards Company, as we are informed with the understanding that the charges should remain on the basis then adjusted, and that no charge for trackage on stock would be made, the Stock Yard Company undertaking to secure its profit from the feed and yardage charges. The said charges of the Stock Yards Company [fol. 1674] have been maintained while the transportation charges received by the railroad have steadily decreased.

II. As a guaranty that the railroad interests would always be treated fairly, and for no other purpose whatever, officers of the railroads were elected Directors of the Stock Yard Company. "As an example of the manner in which the business has been made profitable to the Stock Yard Company, and burdensome to the railroads, we call attention to the charge made for unloading stock. A charge of 25 cents per car for unloading Stock was originally made for the purpose of enabling the railroads which then owned the Stock Yards, to show a profit on the investment, and to justify the judgment of those railway officers who induce their Companies to make that investment.

When the charge for unloading was fixed, as above mentioned it was with the distinct agreement that it should be abandoned as quickly as the feeding and yarding charges made the business profitable. That time speedily arrived, but the unloading charge remains to this day a burdensome charge. Instead of burdening an unprofitable traffic with charges it cannot afford to pay, we think good judgment and good business requires the abolition of some of the charges now made, and among them the charge for unloading stock. In our opinion it will be unfortunate for all concerned, when the Stock Yard Company, and the Railroad Companies divide on this trackage or on any other important question.

III. It is impracticable to add Eighty Cents (80c) or any other sum to the present charges, and pay it sum over to the Stock Yard Company, because the transportation charges are fixed by competition, and any such charge would necessarily have to be absorbed by the railroads, and the railroads cannot afford it.

IV. The Stock Yard Company cannot afford to make any additional charge, because competition stock would prob-

ably be diverted from the Yards in such quantity as to cause a net loss.

V. The proposed charge would be out of proportion to the railroad charges, and, in comparison therewith, seem extortiate and we fear that the application of such charges at this time would react to the disadvantage of all interests concerned in this question.

VI. The question of Stock Yards trackage and charges cannot be entirely divorced from the railroad side of the question, and we most respectfully urge that no charge be made. Having for nearly thirty years carried out the arrangement made, it would seem an inopportune time to add charges already exorbitant and provoke comments and comparisons, which must be expected and which will show that in view of value of property and franchises used, and value of services rendered, that the Stock Yard Company now makes larger charges and a larger profit from the live stock traffic than any interest or business coming in contact with it.

(Signed) Geo. B. Harris.

[fol. 1675] Upon motion of Mr. Hughitt seconded by Mr. Winston, it was ordered that the report submitted by Mr. Harris be placed on file and that a copy of the same be furnished the Directors.

After a very full and lengthy discussion of the whole matter, and upon suggestion of Mr. Mitchell the roll was called upon the passage of said resolution the vote being as follows:

Yes	No
James H. Ashley	Marvin Hughitt
J. J. Mitchell	Geo. B. Harris
F. H. Winston	John Newell
A. H. Veeder	R. R. Cable
J. B. Sherman	
E. J. Martyn	

There being six votes in favor of the resolution and four opposed to it, it was declared adopted.

After the ballot was announced and declared adopted Messrs. Cable, Hughitt, Harris and Newell tendered their

resignations as Directors, but no action was taken thereon, and upon motion of Mr. Veeder the meeting then adjourned.

(Signed) John B. Sherman, Chairman, Geo. T. Williams, Secy.

EXHIBIT 8

Agreement between the Chicago Junction Railways and Union Stock Yards Co. and the Chicago Stock Yards Co., relating to application of income, dated October 1, 1914.

An Agreement made this first day of October 1914 between the Chicago Junction Railways and Union Stock Yards Company incorporated under the laws of New Jersey (hereinafter called the New Jersey Company) of the one part the Chicago Stock Yards Company incorporated under the laws of Maine (hereinafter called the Maine Company) of the other part.

Whereas the Union Stock Yards & Transit Company (hereinafter called the Transit Company) is a corporation duly organized under the laws of Illinois and has issued and outstanding 132,000 common shares of the par value of $100 each and $500,000 4½ per cent gold debentures dated 1st January 1910 payable 1st January 1920 issued under an indenture between the Transit Company and the First Trust & Savings Bank dated 1st January 1910

Common Shares	$13,200,000
Debentures	500,000
Total Capitalization of the Transit Company	$13,700,000

[fol. 1676] And Whereas the Chicago Junction Railway Company (hereinafter called the Railway Company) is a corporation duly organized under the laws of Illinois and has now issued and outstanding 55,000 common shares of the par value of $100 each

Common Shares	$ 5,500,000
Total Capitalization of the Railway Company	$ 5,500,000

And Whereas the railways of the Transit Company are leased to the Railway Company of instrument dated 1st December 1913 under which the Railway Company is bound to pay as annual rent the sum of $600,000 to the Transit Company or upon its order.

And Whereas the New Jersey Company now has issued and outstanding

(a) 130,000 shares of capital stock of the par value of $100 each of which 65,000 are 6 per cent cumulative preferred shares and 65,000 are common shares

Preferred Shares	$ 6,500,000
Common Shares	6,500,000

(b) $10,000,000 Five Per Cent Collateral Trust Gold Bonds dated 1st July 1890 payable 1st July 1915 issued under a deed of trust from the New Jersey Company to the Central Trust Company of New York dated 10th July 1890 whereby 120,000 shares of the Transit Company are pledged as security for the said bonds

5% Bonds	$10,000,000

(c) $4,000,000 Four Per Cent Forty Year Mortgage and Collateral Trust Refunding Gold Bonds dated 1st April

1900 payable 1st April 1940 issued under a mortgage and deed of trust from the New Jersey Company to The Standard Trust Company of New York dated 10th April 1900 whereby there are pledged as security for the said bonds 11,083 shares of the Transit Company 54,991 shares of the Railway Company and $2,500,000 Fifty Year General Mortgage Gold Bonds of 1907 of the Indiana Harbor Belt Railroad Company dated 1st July 1907 payable 1st July 1957 issued under a mortgage from the Indiana Harbor Belt Railroad Company to the Guaranty Trust Company of New York dated 1st November 1907 and the said 120,000 shares of the Transit Company (subject to the lien of the said Five Per Cent Collateral Trust Gold Bonds)

4% Bonds	$ 4,000,000.
Total Capitalization of the New Jersey Company	$27,000,000

[fol. 1677] And Whereas the New Jersey Company has guaranteed the payment of the principal interest and sinking fund of a total authorized issue of $3,000,000 First Mortgage Five Per Cent Twenty Year Real Estate Improvement Bonds dated 1st March 1908 payable 1st March 1928 issued under a mortgage and deed of trust from John A. Spoor Frederick S. Winston and the New Jersey Company to the Standard Trust Company of New York dated 1st March 1908 of which there are now outstanding $2,584,000 bonds

Real Estate Bonds	$ 3,000,000

And Whereas the New Jersey Company has guaranteed the payment of the principal and interest upon $2,327,000 first mortgage Four Per Cent Forty Year Gold Bonds of The Chicago Junction Railroad Company dated 1st March 1905 payable 1st March 1945 issued under a first mortgage from The Chicago Junction Railroad Company to the First Trust and Savings Bank of Chicago dated 1st March 1905

Railroad Bonds	$ 2,327,000

And Whereas the New Jersey Company owns or controls all of the shares in the capital tock of the Transit Company and of the Railway Company now issued and outstanding

And Whereas the Maine Company now owns 31,075 common shares of the New Jersey Company and certificates representing 33,922 common shares of the New Jersey Company have been deposited with the Old Colony Trust Company under an agreement between said Old Colony Trust Company and the Maine Company dated 27th September 1911 and the Maine Company has in accordance with the said agreement endorsed the said certificates as follows:

The Chicago Stock Yards Company does hereby guarantee to the holders of the shares evidenced by this certificate and the assigns of such holder and to the transferee hereof, to pay to the registered holder of said shares at the time of such payment, on the first days of January, April, July and October in each and every year, beginning on the 1st day of January 1912 a fixed sum amounting to two and one-fourth per cent: upon the par value of said shares, in consideration of which guaranty and the due and punctual performance thereof from time to time, the holder of said shares and each and every assign thereof does hereby sell, assign, set over and direct to be paid to the Old Colony Trust Company, as Trustee under the agreement hereinafter mentioned, or upon its written order, any and all dividends and other payments out of earnings apportionable

to the shares represented by this certificate or directed to be paid to the holder hereof, which may at any time be made by or on behalf of The Chicago Junction Railways and Union Stock Yards Company, or its successor, to be by said Trustee disposed of as in said agreement specified [fol. 1678] and provided.

This indorsement is placed hereon pursuant to and subject to the terms and conditions of a certain Trust Agreement dated 27th September 1911, signed by the Chicago Stock Yards Company and deposited with the Old Colony Trust Company, as Trustee, to which the holder hereof has assented and become a party.

Each and every assign or transferee of this certificate, by accepting delivery hereof, does accept and confirm the above-mentioned assent of the holder and the terms and conditions of said Trust Agreement and become a party thereto and does direct the placing of this indorsement on any new certificate which may be issued in lieu hereof.

Chicago Stock Yards Company, By —— ——, Assistant Secretary.

so that the Maine Company is now entitled to all of the income of the New Jersey Company applicable to dividends on the common shares of the New Jersey Company.

And Whereas the parties hereto desire to simplify their financial relations and operations for their mutual benefit and the protection of the various creditors holders of securities and shareholders respectively

Now Therefore in consideration of the premises and of the mutual promises herein contained it is agreed by and between the parties hereto as follows.

1. The Maine Company hereby guarantees to the New Jersey Company the prompt payment of the following:

(a) All expenses, interest and taxes payable by or chargeable to the New Jersey Company including certain principal and interest payments under the two contracts between Richard Fitzgerald the Merchants' Loan & Trust Company and Anna L. Sexton both dated 1st June 1914 and the interest on certain demand notes of the New Jersey Company aggregating

$259,520 secured by 548 shares of the Transit Company.

(b) The interest upon the said Five Per Cent Collateral Trust Gold Bonds and the said Four Per Cent Forty Year Mortgage and Collateral Trust and Refunding Gold Bonds when and as the same become due and payable and the Maine Company further agrees to make the payments and to fulfil all of the obligations of the New Jersey Company under the mortgages and deeds of trust securing the said bonds except the payment of the principal of the said bonds.

[fol. 1679] (C) All payments which the New Jersey Company may be required to make under and in accordance with Article 6, section 3 of the said mortgage and deed of trust from John A. Spoor, Frederick S. Winston and the New Jersey Company to the Standard Trust Company of New York dated 1st March 1908 and all other payments other than the principal of the said First Mortgage Five Per Cent Twenty Year Real Estate Improvement Bonds which the New Jersey Company may be required to make under and in accordance with the covenants contained in the said mortgage to be performed by the New Jersey Company.

(D) All payments which the New Jersey Company may be required to make by virtue of its guaranty of the interest but not of the principal of the said $2,327,000 First Mortgage Four Per Cent. Forty Year Gold Bonds of the Chicago Junction Railroad Company.

(E) Dividends at the rate of 6 per cent per annum upon the preferred shares of the New Jersey Company now issued and outstanding.

(F) Fixed sums on the first days of January, April, July and October in each year amounting to 2¼ per cent upon the par value of all common shares of the New Jersey Company now or hereafter deposited with the Old Colony Trust Company as trustee under the said agreement dated the 27th September 1911.

2. The New Jersey Company assigns and transfers to the Maine Company all its right title and interest in and to any dividends that may hereafter be declared by the

Transit Company and the Railroad Company respectively and all its right title and interest in and to all income and surplus earnings of the said companies or either of them that may now or hereafter be divisible or distributable among the shareholders of the said companies or either of them in the form of dividends or otherwise subject however to all obligations and agreements respecting such dividends and income as may now exist.

3. The New Jersey Company as the owner of all of the shares in the capital stock of the Railway Company and in fulfillment of its obligation under the preceding paragraph hereof and for the purpose of insuring the performance by the Maine Company of its agreements hereunder hereby agrees to direct the Railway Company from time to time out of the funds in its treasury otherwise applicable to the payment of dividends on the shares of its stock owned by the New Jersey Company to pay the following:

(a) On or before the 1st days of June and December in each year the Railway Company shall be directed to pay to the Central Trust Company of New York the sum of $250,000 to be applied to the payment of interest on the said Five Per Cent Collateral Trust Gold Bonds of the New Jersey Company provided that after the said bonds shall have been paid or retired [fol. 1680] the said sums shall be paid in accordance with the order of the Maine Company.

(b) On or before the 15th day of March and September in each year the Railway Company shall be directed to pay to the Guaranty Trust Company of New York the sum of $80,000 to be applied to the payment of interest on the said Four Per Cent Forty Year Mortgage and Collateral Trust Refunding Gold Bonds of the New Jersey Company provided that after the said bonds shall have been paid or retired the said sums shall be paid in accordance with the order of the Maine Company.

(c) Whenever it shall from time to time appear that the Railway Company will have in its treasury funds sufficient to make the payments above specified as the same become due it may pay any surplus of the said funds to the Maine Company upon its request.

4. The New Jersey Company as owner of all of the shares in the capital stock of the Transit Company and in further fulfillment of its obligations under paragraph 2 hereof and for the purpose of insuring the performance by the Maine Company of its obligations hereunder hereby directs the Transit Company from time to time out of the funds in its treasury otherwise applicable to the payment of dividends on the shares of its stock owned by the New Jersey Company to pay the following:

(a) On or before the 25th day of March, June, September and December in each year the Transit Company shall be directed to pay to the Old Colony Trust Company the sum of $97,500 to be by it applied to the payment of the quarterly dividends on the preferred shares of the New Jersey Company now issued and outstanding.

(b) On or before the 25th day of March, June, September and December in each year the Transit Company shall be directed to pay to the said Old Colony Trust Company the sum of $76,324.50 to be by it applied to the payment on the 1st days of January, April, July and October of the sums payable under the said agreement of the 27th September 1911 to holders of common shares of the New Jersey Company deposited thereunder or such other sums as may from time to time be sufficient and payable for that purpose.

(c) Whenever it shall from time to time appear that the Transit Company will have in its treasury funds sufficient to make the payments above specified as the same become due it may pay any surplus of the said funds to the Maine Company upon its request.

5. The New Jersey Company agrees that it will by irrevocable instrument order the Transit Company to authorize and direct the Railway Company to apply the annual rent of $600,000 payable under the said lease to the payments to be made by the Railway Company under the provisions of paragraph 3 hereof.

[fol. 1681] 6. All income of the New Jersey Company hereafter received or collected by it from any source what-

ever shall be by it applied first to the payment of its own expenses second to the payment of all taxes payable or chargeable to the New Jersey Company and the surplus if any then remaining shall be paid to the Maine Company upon its request but subject however to any agreements or obligations on the part of the New Jersey Company now existing. Whenever practicable the New Jersey Company shall authorize the Maine Company to collect such other income direct from the source thereof and shall take all such proceedings and do all such acts as may be necessary or expedient to enable the Maine Company so to do.

7. The New Jersey Company may from time to time with the written consent of the Maine Company issue additional bonds or debentures secured by mortgage or otherwise or may guarantee the payment of principal and interest of bonds and debentures of other companies associations organizations or individuals whether or not the same are secured by mortgage whenever such issue or guaranty appears to be for the best interest of the New Jersey Company. And in the event that bonds or debentures are so issued or guaranteed the Maine Company guarantees to the New Jersey Company the prompt payment of all interest sinking fund payments, expenses and taxes which the New Jersey Company may be required or obliged to make in respect of such bonds or guaranty.

8. Both parties hereby agree to execute and deliver all agreements and instruments that may be necessary or proper to enable the provisions of this agreement to be carried out and fulfilled according to the true spirit hereof it being understood however that nothing herein contained shall be construed to require any corporation or person to do anything contrary to its existing contracts or obligations.

9. The president or treasurer of the Maine Company and of the New Jersey Company respectively may from time to time determine all questions which may arise relating to the accounts between the said companies and may make such payments from one company to the other as may be necessary or convenient in order to carry out the true intent and purpose of this agreement.

10. This agreement may be amended, modified or re-

scinded at any time by action of the boards of directors or executive committees of the parties.

[fol. 1682] In witness whereof the parties have caused their respective common seals to be hereto affixed and these presents to be signed in their respective names and on their behalf by their respective officers thereunto duly authorized the day and year first above written Executed in four parts.

[fol. 1684] FOOD INVESTIGATION

REPORT OF THE FEDERAL TRADE COMMISSION

ON THE

MEAT-PACKING INDUSTRY

Summary and Part I

June 24, 1919

[fol. 1685] Letter to the President

3 July, 1918.

To the President of the United States:

Sir: On February 7, 1917, you directed the Federal Trade Commission to "investigate and report facts relating to the production, ownership, manufacture, storage, and distribution of foodstuffs and the products or by-products arising from or in connection with their preparation and manufacture; to ascertain the facts bearing on alleged violations of the antitrust acts, and particularly

upon the question whether there are manipulations, controls, trusts, combinations, conspiracies, or restraints of trade out of harmony with the law or the public interest," to the end that "proper remedies, legislative or administrative, may be applied."

On July 1, 1917, funds for carrying out this direction became available and the Commission undertook the task.

The work fell naturally into various divisions and reports have already been made to you with reference to the milling and jobbing of wheat flour and the preparation and distribution of certain canned food products. Other divisions will be the subject of reports to you as rapidly as the results of our studies can be reduced to proper form. At this time we are reporting to you on the meat-packing industry.

[fol. 1686] Answering directly your question as to whether or not there exist "monopolies, controls, trusts, combinations, conspiracies, or restraints of trade out of harmony with the laws and the public interest," we have found conclusive evidence that warrants an unqualified affirmative.

This evidence in summary form accompanies this letter and will be set forth in more detailed form in seven reports in support of our findings and recommendations, which will be placed in your hand at the earliest possible moment.

While we have found and will disclose to you an intricate fabric of "monopolies, controls, combinations, conspiracies, and restraints" which would seem to indicate a similarly complex and minute system of legislative or administrative remedies, we believe that an adequate remedy may be more simply arrived at.

We believe that if the fundamental and underlying evils are rooted out the while structure of conspiracy, control, monopoly, and restraint must fall.

If we are correct in this judgment, the task of applying legislative and administrative remedy is greatly simplified.

It appears that five great packing concerns of the country—Swift, Armour, Morris, Cudahy, and Wilson—have attained such a dominant position that they control at will

the market in which they buy their supplies, the market in which they sell their products, and hold the fortunes of their competitors in their hands.

[fol. 1687] Not only is the business of gathering, preparing and selling meat products in their control, but an almost countless number of by-products industries are similarly dominated; and not content with reaching out for mastery as to commodities which substitute for meat and its by-products, they have invaded allied industries and even unrelated ones.

The combination has not stopped at the most minute integration but has gone on into a stage of conglomeration, so that unrelated hetrogeneous enterprises are brought under control.

As we have followed these five great corporations through their amazing and devious ramifications—followed them through important branches of industry, of commerce, and of finance—we have been able to trace back to its source the great power which has made possible their growth. We have found that it is not so much the means of production and preparation, nor the sheer momentum of great wealth, but the advantage which is obtained through a monopolistic control of the market places and means of transportation and distribution.

If these five great concerns owned no packing plants and killed no cattle and still retained control of the instruments of transportation, of marketing, and of storage, their position would not be less strong than it is.

The producer of live stock is at the mercy of these five companies because they control the market and the marketing facilities, and, to some extent, the rolling stock which [fol. 1688] transports the product to the market.

The competitors of these five concerns are at their mercy because of the control of the market places, storage facilities, and the refrigerator cars for distribution.

The consumer of meat products is at the mercy of these five because both producer and competitor are helpless to bring relief.

The stock car is a part of the equipment of the common carrier whose services are necessary to the producer of meat animals so that he may reach the market. The rail-

roads furnish suitable cars for the transportation of other kinds of freight, and as to the use of such cars the miner of coal or the manufacturer of furniture are on an equality, but in the matter of transportation of live stock to a small degree their comes in a private ownership and a control and a manipulation of the means of transportation—the stock car—so it is that we recommend:

> 1. That the Government acquire, through the Railroad Administration, all rolling stock used for the transportation of meat animals and that such ownership be declared a Government monopoly.

In the transportation of all other kinds of freight the transportation companies provide proper and suitable freight depots. The proper and suitable freight depot for [fol. 1689] live stock is a stockyard with its equipment of exchange buildings, terminal railways, and means of distributing full, unbiased, helpful market information, etc. We therefore recommend:

> 2. That the Government acquire, through the Railroad Administration, the principal and necessary stockyards of the country, to be treated as freight depots and to be operated under such conditions as will insure open, competitive markets, with uniform scale of charges for all services performed, and the acquisition or establishment of such additional yards from time to time as the future development of live-stock production in the United States may require. This to include customary adjuncts of stockyards.

A requisite for the proper transportation of fresh meat and dairy products is that type of rolling stock known as refrigerator cars. The railroads supply proper, special types of cars for other classes of freight, but the beef refrigerator cars and icing facilities, which are absolutely necessary for the transportation and distribution of fresh meats, are in private ownership. This ownership furnishes these five great packing companies one of their most powerful means for controls, manipulations, and restraints. Lacking access on equal terms to these facilities competitors of the five great packers are at their mercy, and, com-

[fol. 1690] petition being stifled, the consumer similarly is helpless. We therefore recommend:

> 3. That the Government acquire, through the Railroad Administration, all privately owned refrigerator cars and all necessary equipment for their proper operation and that such ownership be declared a Government monopoly.

Proper freight houses are provided by common carriers for the various sorts of freight except meat and perishable products. The indicated freight depot for such commodities is a cold-storage house. Such a depot used as a distributing station, if free of access to all, would constitute an agency for fair and free competition. Such a depot in private hands, as now, constitutes an invincible weapon for monopoly and control and manipulation. We therefore recommend:

> 4. That the Federal Government acquire such of the branch houses, cold-storage plants, and warehouses as are necessary to provide facilities for the competitive marketing and storage of food products in the principal centers of distribution and consumption. The same to be operated by the Government as public markets and storage places under such conditions as will afford an outlet for all manufacturers and handlers of food products on equal terms. Supplementing the marketing and storage facilities thus acquired, the [fol. 1691] Federal Government establish, through the Railroad Administration, at the terminals of all principal points of distribution and consumption, central wholesale markets, and storage plants, with facilities open to all upon payment of just and fair charges.

The Commission believes that these four suggestions strike so deeply at the root of the tree of monopoly that they constitute an adequate and simple solution of a problem the gravity of which will be unfolded to you in the pages which follow.

Out of the mass of information in our hands, one fact stands out with all possible emphasis. The small dominant group of American meat packers are now international

in their activities, while remaining American in identity. Blame which now attaches to them for their practices abroad as well as at home inevitably will attach to our country if the practices continue. The purely domestic problems in their increasing magnitude, their monopolization of markets and their manipulations and controls, grave as those problems are, are not more serious than those presented by the added aspect of inter-national activity. This urgently argues for a solution which will increase and not diminish the high regard in which this people is held in inter-national comity.

Some show of competition is staged by the five great packing companies. It is superficial. There is the natural [fol. 1692] rivalry of officials and departments, and this is made much of as indicating the existence of real competition. It is not real. How sham it is will be fully set out in the accompanying summary and the complete reports.

Some independent packers exist by sufferance of the five, and a few hardy ones have survived in real competition. Around such few of these as remain the lines are drawing in.

Having answered affirmatively the question to which you directed our attention and having summarized what we believe to be the simplest form of an adequate remedy, and before proceeding to a more detailed discussion of the subject, we make acknowledgment of the tireless industry, the fidelity to the public interest, and the patience and forbearance of the men who have composed the Commission's staff in this inquiry.

These men have met and overcome every obstacle that ingenuity and money could devise to impede them. Space forbidding individual mention, we make this general acknowledgment and this seems the proper time to call to your attention again and especially the work of Mr. Francis J. Heney, whose conduct of the case, because of its success, has met with condemnation, misrepresentation, and criticism. We contrast Mr. Heney's legal ethics with the legal ethics of the men by whom he was opposed.

[fol. 1693] The Commission, through Mr. Heney, had to meet deliberate falsification of returns properly required

under legal authority; we had to meet schools for witnesses where employees were coached in anticipation of their being called to testify in an investigation ordered by you and by the Congress of the United States; we had to meet a situation created by the destruction of letters and documents vital to this investigation; we had to meet a conspiracy in the preparation of answers to the lawful inquiries of the Commission.

We will not trespass upon your time to go into details as to the legal and business ethics employed, but on the foregoing statement, which we are prepared to substantiate in every detail, we contrast the ethics of the Commission's legal and investigating staff with the legal staffs of the five great companies. And in leaving this part of the subject, we say as we have said repeatedly to you during the time of the investigation, that Mr. Heney's conduct of the case, as well as that of the other agents and attorneys of the Commission, was under the direct supervision of the Commission, the acts were performed with the knowledge and under the direction of the Commission, and the Commission assumes all responsibility for them.

Respectfully, William B. Colver, Chairman, John Franklin Fort, Victor Murdock.

[fol. 1694] EXHIBIT 62

IN THE SUPREME COURT OF THE DISTRICT OF COLUMBIA

No. 37623. Equity

THE UNITED STATES OF AMERICA, Petitioner,

v.

SWIFT AND COMPANY AND OTHERS, Defendants

Decree and Consents

This cause having come on to be heard on this 27th day of February, in the year 1920, before the Hon. Walter I. McCoy, Chief Justice, and the petitioner having appeared by the Hon. A. Mitchell Palmer, Attorney General of the

United States, by its district attorney, John E. Laskey, and by Isidor J. Kresel, John H. Atwood, and Joseph Sapinsky, special assistants to the Attorney General, thereto duly authorized, and having moved the court for an injunction in accordance with the prayer of its petition; and it appearing to the court that the allegations of the petitioner state a cause of action against the defendants under the provisions of the act of July 2, 1890, entitled "An act to protect trade and commerce against unlawful restraints and monopolies," and acts amendatory thereof and supplemental or additional thereto, and that the court has jurisdiction of the persons and the subject matter; and the several defendants having accepted service of process and having appeared and filed answers to the petition, which answers are on file in the office of the clerk of this court; and the parties having this day entered into a stipulation in this action, which stipulation is on file in the office of the clerk of this court, and from which it appears, among other things, that while the defendants and each of them, maintain the truth of their answers and assert their innocence of any violation of law in fact or intent, they nevertheless, desiring to avoid every appearance of placing themselves in a position of antagonism to the Government, have consented and do consent to the making and entry of the decree now about to be entered without any findings of fact, upon condition that their consents to the entry of said decree shall not constitute or be considered an admission, and the rendition or entry of said decree, or the decree itself, shall not con-
[fol. 1695] stitute or be considered an adjudication that the defendants or any of them have in fact violated any law of the United States.

Now, upon the petition, the answers of the defendants, and the aforementioned stipulation and consents of the parties, all on file in the office of the clerk of this court, and on motion of the petitioner, it is ordered, adjudged, and decreed as follows:

First. That the corporation defendants and each of them be, and they are hereby, jointly and severally perpetually enjoined and restrained from, either directly or indirectly, by themselves or through their officers, directors, agents,

or servants, in any manner maintaining or entering into any contract, combination, or conspiracy with each other, or with any other person or persons, in restraint of trade or commerce among the several States, or from either directly or indirectly, by themselves or through their officers, directors, agents, or servants, either jointly or severally monopolizing or attempting to monopolize or combining or conspiring with each other, or with any other person or persons, to monopolize any part of such trade or commerce.

Second. That the defendants and each of them be, and they are hereby, jointly and severally perpetually enjoined and restrained from owning, either directly or indirectly, individually or by themselves, or through their officers, directors, agents or servants, any capital stock or other interest whatsoever in any public stockyard market company in the United States, or in any stockyard terminal railroad in the United States, or in any stockyard market newspaper or stockyard market journal published in the United States, except in so far as the court may permit any of the individual defendants to retain any such interests upon the conditions and in such circumstances as are provided for in paragraph tenth of this decree; and said defendants and each of them are hereby further enjoined and restrained from accepting or permitting to be given, directly or indirectly, on any pretext whatever, to any of them, or to any of their officers, directors, servants, or employees, for the use of and benefit of the corporation defendants or any of them, any capital stock or other interest in any public stockyard market company, stockyard terminal railroad, or stockyard market newspaper or stockyard market journal.

Third. That the corporation defendants and each of them and their successors and assigns be, and they are hereby, perpetually enjoined and restrained from, either directly or indirectly, by themselves or through their officers, directors, agents, or servants, through any device or arrangement whatsoever, using or permitting any other person, firm, or corporation to use their distributive system and facilities, including their branch houses, route cars, and auto trucks, or any of them, in any manner for the [fol. 1696] purchase, sale, handling, transporting, dis-

tributing, or otherwise dealing in any of the articles or commodities named and described in paragraph fourth of this decree, except in so far as permitted in said paragraph fourth, and except refrigerator cars when in good faith leased to common carriers, or furnished to them for their use as common carriers.

The corporation defendants or any of them may from time to time lease, sell or otherwise dispose of any of the items of their distributive system free from any of the restrictions of this decree when they have a surplusage thereof or when such items have become obsolete or are otherwise not required for the business of the defendants or any of them. But no sale, lease, or other disposition of a substantial part of defendants' respective distributive systems or such distributive system as an entirety shall be made without submitting the same to the court for the court's investigation and determination as to whether said proposed sale, lease, or other disposition is in accordance with the spirit and purpose of this decree, and without notice of the application for such approval first given to the Attorney General. Nothing herein contained shall be construed to prohibit the defendants or any of them from mortgaging or otherwise creating liens on said distributive system or parts thereof.

Fourth. That the corporation defendants and each of them be, and they are hereby, perpetually enjoined and restrained from, in the United States, either directly or indirectly, by themselves or through their officers, directors, agents, or servants, engaging in or carrying on, either by concert of action or otherwise, either for domestic trade or for export trade, the manufacturing, jobbing, selling, transporting (except as common carriers), distributing, or otherwise dealing in any of the following products or commodities, except when such products or commodities are purchased, transported, or used (1) as supplies in operating their packing houses, branch houses, or other facilities used by them, or as an incident in the processes of manufacturing soap or packing-house products; (2) in the construction and physical maintenance of their packing houses, branch houses, or other facilities used by them; (3) in the operation of their restaurants, laundries, or other

conveniences; primarily for the benefit of their employees; or (4) in combination with meat, to wit:

1. Fresh, canned, dried, or salted fish, including therein, but in nowise limiting the foregoing general description, the following to wit:

Canned oysters.	Canned salmon.
Canned mackerel.	Canned sardines.
Bulk mackerel.	Canned shrimp.
Bulk, canned, and cured herring.	Canned tuna fish.

[fol. 1697] 2. Fresh, dried, or canned vegetables, except in combination with meats, including therein, but in nowise limiting the foregoing general description, the following, to wit:

Asparagus.	Potatoes.
Navy beans.	Tomatoes.
Lima beans.	Celery.
Peas.	Garlic.
Beets.	Horse-radish.
Corn.	Pumpkins.
Okra.	

3. Fresh, crushed, dried, evaporated, or canned fruits, including therein, but in nowise limiting the foregoing general description, the following; but not including the same when used as an ingredient of mincemeat, to wit:

Ginger.	Figs.
Cherries.	Gooseberries.
Apple butter.	Oranges.
Apricots.	Strawberries.
Blackberries.	Apples.
Peaches.	Prunes.
Pineapple.	Raisins.
Raspberries.	Dates
Currants.	

4. Confectionery, sirups, soda-fountain supplies and sirups and soft drinks (grape juice is not included in this paragraph 4; see paragraph 14), including therein, but in

nowise limiting the foregoing general description, the following, to wit:

Apple cider.	Lemon extract.
Cherry juice.	Marshmallow topping.
Coca Cola.	Orange extract.
Creme de menthe.	Root beer.
Crushed fruit frappe.	Vanilla extract.
Ginger ale.	Vin fiz.
Green pineapple sirup.	

5. Molasses, honey, jams, jellies, and preserves of all kinds.

6. Spices, sauces, condiments, relishes, and sauerkraut, including therein, but in nowise limiting the foregoing general description, the following, to wit:

Catsup.	Olives.
Chili sauce.	Oyster cocktail sauce.
Cinnamon.	Pepper.
Cloves.	Pickles.
Mustard.	Spinace chili.
Mustard seed.	Tomato catsup.

7. Coffee, tea, chocolate, and cocoa.

8. Nuts, including therein the following, to wit:

Almonds.	Walnuts.
Pecans.	

But not including peanuts.

9. Flour, sugar, and rice.

10. Bread, wafers, crackers, biscuits.

[fol. 1698] 11. Cereals, including therein, but in no wise limiting the foregoing general description, the following, to wit:

Grits.	Ground corn.
Oats.	Cracked corn.
Hominy.	Crushed white oats.
Hominy feed.	Feed barley.
Horse feed.	Feed meal.
Brewers' flakes.	Feed wheat.
Brewers' grit.	Rolled oats.

Brewers' meal.
Buckwheat.
Canned hominy.
Clipped oats.
Corn grits.
Ground meal.
Ground oats.
Standard middlings.
Standard spring brand.
Spaghetti.
Vermicelli.
Macaroni.
Corn flakes.
Wheat foods.

12. Grain.

13. Miscellaneous articles, to wit:

Cigars.
China.
Furniture.
Bluing, starch.
Fence posts and wire fences.
Alfalfa meal.
Babbitt.
Bar iron.
Binding and twine.
Brass castings for heavy ordnance.
Brick.
Builders' hardware.
Bumping posts for railroads.
Cement, lime, plaster.
Doors and windows.
Dried brewers' grains.
Lath.
Pitting and fruit handling machinery.
Roofing.
Sand and gravel.
Shingles.
Soda fountains or parts thereof.
Structural steel.
Tile.
Waste.

14. Grape juice.

And the corporation defendants and each of them be, and they are hereby, further perpetually enjoined and restrained from owning, either directly or indirectly, severally or jointly, by themselves or through their officers, directors, agents, or servants any capital stock or other interest whatsoever in any corporation, firm, or association except common carriers, which is in the business, in the United States, of manufacturing, jobbing, selling, transporting, except as common carriers, distributing, or otherwise dealing in any of the above-described products or commodities.

Fifth. That the individual defendants, and each of them

be, and they are hereby, perpetually enjoined and restrained from, in the United States, either directly or indirectly, by themselves or through their agents, servants, or employees, owning voting stock which in the aggregate amounts to 50 per cent or more of the voting stock of any corporation, except common carriers, or any interest in such corporation resulting in a voting power amounting to 50 per cent or more of the total voting power of such corporation, or which interest by any device gives to any such defandant or defendants a voting power of 50 per cent or more in any such corporation, or a half interest or more in any firm or association which corporation, firm, or association may be, in the United States, in the business of [fol. 1699] manufacturing, jobbing, selling, transporting, distributing, or otherwise dealing in any of the following products or commodities, to wit:

1. Fresh, canned, dried, or salted fish, including therein, but in nowise limiting the foregoing general description, the following, to wit:

Canned oysters.	Canned salmon.
Canned mackerel.	Canned sardines.
Bulk mackerel.	Canned shrimp.
Bulk, canned, and cured herring.	Canned tuna fish.

2. Fresh, dried, or canned vegetables, except in combination with meats, including therein, but in nowise limiting the foregoing general description, the following, to wit:

Asparagus.	Potatoes.
Navy beans.	Tomatoes.
Lima beans.	Celery.
Peas.	Garlic.
Beets.	Horse radish.
Corn.	Pumpkins.
Okra.	

3. Fresh, crushed, dried, evaporated, or canned fruits, including therein, but in nowise limiting the foregoing gen-

eral description, the following, but not including the same when used as an ingredient of mince meat, to wit:

Ginger.
Cherries.
Apple butter.
Apricots.
Blackberries.
Peaches.
Pineapples.
Raspberries.
Currants.
Figs.
Gooseberries.
Oranges.
Strawberries.
Apples.
Prunes.
Raisins.
Dates.

4. Confectionery, sirups, soda fountain supplies, and sirups and soft drinks, not including grape juice, including therein, but in nowise limiting the foregoing general description, the following, to wit:

Apple cider.
Cherry juice.
Coca Cola.
Creme de menthe.
Crushed nut frappe.
Ginger ale.
Green pineapple sirup.
Lemon extract.
Marshmallow topping.
Orange extract.
Root beer.
Vanilla extract.
Vin fiz.

5. Molasses, honey, jams, jellies, and preserves of all kinds.

6. Spices, sauces, condiments, relishes, and sauerkraut, including therein, but in nowise limiting the foregoing general description, the following, to wit:

Catsup.
Chili sauce.
Cinnamon.
Cloves.
Mustard.
Mustard seed.
Olives.
Oyster cocktail sauce.
Pepper.
Pickles.
Spinace Chilli.
Tomato catsup.

7. Coffee, tea, chocolate, and cocoa.

[fol. 1700] 8. Nuts, including therein the following, to wit:

Almonds. Walnuts.
Pecans.

But not including peanuts.

9. Flour, sugar, and rice.

10. Bread, wafers, crackers, biscuits.

And further perpetually enjoining and restraining said individual defendants and each of them from individually or jointly, either directly or indirectly, by themselves or through their agents, servants, or employees, adopting any device or arrangement which by reason of the relation of said individual defendants or any of them to the corporation defendants or any of them would have the purpose or effect of giving to such business of dealing in the articles hereinabove in this paragraph mentioned and described, in which business such individuals or any of them may be substantially interested, an advantage over their competitors similar in purpose or effect to any advantage now enjoyed by any of the corporation defendants through their distributing system.

Sixth. That the defendants and each of them be, and they are hereby, perpetually enjoined and restrained from, in the United States, owning and operating or conducting, either directly or indirectly, severally or jointly, by themselves or through their officers, directors, agents, or servants, any retail meat markets in the United States: *Provided, however,* That nothing contained in this decree shall prohibit said defendants or any of them from continuing to conduct the retail meat markets located at their several plants and maintained by said defendants primarily for the accommodation of their own employees as long as said retail meat markets shall be continued to be operated for that purpose.

Seventh. That the defendants and each of them be, and they are hereby, perpetually enjoined and restrained from owning, directly or indirectly, jointly or severally, by themselves or through their officers, directors, agents, or servants, any capital stock or other interest whatsoever in public cold-storage warehouses in the United States; pro-

vided, however, that nothing herein contained shall be construed to prevent the defendants or any of them from owning capital stock or other interests in any corporation, firm, or association owning or operating, or from themselves owning or operating, the public cold-storage warehouses now maintained by the defendants or any of them at stockyards where said defendants or any of them now maintain packing plants; nor to prevent any of said defendants, directly or indirectly, from establishing, owning, maintaining, or leasing necessary cold-storage facilities or space required in good faith for the storage of commodities in which they or any of them may be interested, nor from renting space in any cold-storage warehouse directly or [fol. 1701] indirectly owned or leased by any of them to the public whenever such space is not in good faith required or needed by the defendants for their own use, nor from storing products for the public whenever the space used for that purpose is not in good faith required by the defendants for their own use.

Eighth. That the corporation defendants and each of them be, and they are hereby, perpetually enjoined and restrained from engaging in the United States, either directly or indirectly, jointly or severally, by themselves or through their officers, directors, agents, or servants, in the business of buying, collecting, selling, transporting, except as common carriers, distributing or otherwise dealing in fresh milk and cream, and further perpetually enjoining and restraining said defendants and each of them by themselves or through their directors, officers, agents, and servants, from either directly or indirectly owning any capital stock or other interest in any corporation, firm, or association engaged in the business of buying, collecting, selling, transporting (except as common carriers), distributing, or otherwise dealing in fresh milk or cream; provided, however, that nothing herein contained shall be construed as preventing the corporation defendants or their subsidiaries from buying, collecting, and transporting fresh milk and cream to be used by them or any of them in manufacturing condensed or evaporated or powdered milk or oleomargarine or other butter substitutes, or butter, ice cream, cheese, or buttermilk, or to be used as feed or in combination with any commodity not specif-

ically mentioned and described in paragraph fourth hereof; and further provided that nothing herein contained shall be construed as preventing said defendants from selling or otherwise disposing of milk and cream bought or collected for manufacture, when such sale or disposition is necessary to avoid waste.

Ninth. That the corporation defendants and each of them be, and they are hereby, perpetually enjoined and restrained from, jointly or severally, by themselves or through their officers, directors, agents, or servants, engaging in, carrying on, or using any illegal trade practices of any nature whatsoever in relation to the conduct of any business in which they or any of them may be engaged.

Tenth. That within 90 days after the entry of this decree such of the defendants as have interests in public stockyard market companies, stockyard terminal railroads, or market newspapers, shall file in this court, for the court's approval, a plan or plans for divesting themselves of all ownership or interest in: (1) public stockyard market companies; (2) stockyard terminal railroads; (3) market newspapers; provided, however, that the court may, in the event that it deems such provision necessary in order to enable the defendants to divest themselves of their interests in public stockyard market companies [fol. 1702] and stockyard terminal railroads, upon reasonable terms, permit the individual defendants, or some of them, to retain an interest by way of stock ownership, or otherwise, in any public stockyard market company or stockyard terminal railroad, or in any corporation organized to take over such public stockyard market companies or stockyard terminal railroads or the stock thereof; but no defendant or defendants shall at any time, either individually or jointly, own a controlling interest in any such stockyards or stockyard terminal railroads. Within such period of time after the entry of this decree and the approval of said plan or plans as the court may determine, the defendants shall, in good faith, completely divest themselves of all such ownership or interests in public stockyard market companies, stockyard terminal railroads, and market newspapers. If, within the time so fixed, the defendants shall not have disposed of said interests or-

dered by the court to be disposed of, and the court upon application shall determine that the defendants have been unable, despite due diligence, to dispose of the same upon reasonable terms, the court may extend the time during which such ownership, control, or interest may continue until the same can be disposed of.

Eleventh. That immediately upon the entry of this decree the defendants shall in good faith and with due diligence proceed to dispose of their interests in, and shall completely divest themselves (to the extent required by this decree) of all ownership of or interest in all public cold-storage warehouses and retail meat markets; but in no event shall the defendants, or any of them, make final disposition of any of their interests in such public cold-storage warehouses and retail meat markets without first obtaining the court's approval to such final disposition. If, within nine months after the entry of this decree, the defendants shall not have finally disposed of their interests in public cold-storage warehouses and retail meat markets, the Attorney General may apply to the court for an order specifying the time within which the defendants shall finally dispose of all said interests.

Twelfth. That immediately upon the entry of this decree the defendants and each of them shall commence to dispose of such commodities owned or handled by them as are described in paragraphs fourth and fifth of this decree and which are to be disposed of by them under this decree, and shall likewise immediately upon the entry of this decree commence to divest themselves of all interests which are to be disposed of by them as and to the extent required by this decree in firms, corporations, and associations, including departments of the business of any of the corporation defendants when any of such departments is sold as a going concern, manufacturing, selling, or otherwise dealing in any of the commodities so mentioned and de- [fol. 1703] scribed in paragraphs fourth and fifth of this decree, and shall continue in good faith to dispose of said commodities required to be disposed of hereunder, and to divest themselves of such interests required to be disposed of hereunder as rapidly as may be consistent with the nature of the business and the seasonal nature of the merchandise

involved, and that in any event the defendants and each of them shall completely dispose of said commodities and shall cease to manufacture, job, sell, transport, except as common carriers, distribute, or otherwise deal in the same, and shall completely divest themselves of said interests within two years from the date of the entry of this decree; provided, however, to the end that the provisions of this decree may be complied with, the approval of the court shall be obtained prior to the final disposition of said interests in firms, corporations, or associations manufacturing, selling, or otherwise dealing in any of the commodities mentioned and described in paragraphs fourth and fifth of this decree. At any time within said two years the Attorney General may apply to the court for an order or orders to compel the defendants, and each of them, to make report to the court as to the progress being made by them in disposing of said commodities and in divesting themselves of said interests.

Thirteenth. That the purchaser or purchasers of the defendants' interests in any stockyard, shall as a part of said purchase, agree with such of the defendants as now maintain packing plants in said stockyards that for a period of at least 10 years after the date when such purchase shall be consummated said purchasers, their successors or assigns, will continue to maintain and efficiently operate such stockyards and each of them, and such of said defendants as now maintain packing plants at any of said stockyards shall agree with said purchasers that during the same period of 10 years said defendants, their successors or assigns, will continue to maintain and operate said packing plants at the points where the same are now located, unless strikes, shortages of supplies, or other causes beyond the control of either the purchasers, the stockyard companies, or said defendants, shall prevent the carrying out of said agreement. Performance by either party shall be a condition concurrent to performance by the other.

Fourteenth. That nothing in this decree contained shall be construed to prohibit anything that may be otherwise lawfully done by the defendants or any of them in the United States in connection with or for the purpose of export trade or foreign commerce or business of the defend-

ants; provided, however, that nothing in this paragraph contained shall limit the effect of the injunction contained in paragraphs fourth and fifth of this decree.

Fifteenth. That nothing contained in this decree shall be held to preclude the petitioner from proceeding against any or all of the defendants, either civilly or criminally, for any [fol. 1704] violation of any law in connection with the carrying on by them of the business of buying and selling poultry, butter, eggs, and cheese, or any other business or activity not specifically mentioned in this decree; nor shall anything contained herein prejudice the Government in any such proceeding; nor shall this decree interfere with or prejudice any legal rights, business, or activity of the defendants, or any of them, not prohibited or covered by this decree.

Sixteenth. That for the purpose of (1) enabling the petitioner to ascertain whether the defendants are in good faith carrying out the terms of this decree; and (2) for the purpose of enabling the Attorney General to determine and advise the court whether in any transaction consummated or begun at any time prior to the entry of this decree the defendants, or any of them, have retained and now retain such an interest in or control over any public stockyard market company, stockyard terminal railroad, stockyard market newspaper, stockyard market journal, cold-storage warehouse, retail meat market, or corporation, firm, or association manufacturing, jobbing, selling, distributing, transporting (except as common carriers), or otherwise dealing in any of the commodities mentioned and described in paragraphs fourth and fifth of this decree, which would constitute a violation of this decree if the retention of such interest or control had been the result of a transaction consummated or begun subsequent to the date of the entry of this decree; and (3) for the further purpose of enabling the Attorney General to determine and advise the court whether any leases, contracts, or arrangements concerning their, or any of their, distributing systems made or entered into by the defendants, or any of them, prior to the entry of this decree, and in force on the day when it shall be entered, are in violation of the terms thereof, then, in the event that the Attorney General in writing notifies the defendant or defendants concerned

with respect to such alleged violation, reciting in reasonably specific terms the nature thereof, the corporation defendants are hereby directed to make full and complete discovery to the petitioner with respect thereto, and the corporation defendants are further directed to submit to the Attorney General or to any Assistant Attorney General by him duly authorized all of their books, records, correspondence, or other documents in so far as the same refer to the alleged violation, and to furnish all information concerning the same.

Seventeenth. That all sales, transfers, or other disposition made by any of the defendants since the first day of October, nineteen hundred and nineteen, of any of their interests in public stock yard market companies, stock yard terminal railroads, stock yard newspapers or journals, public cold-storage warehouses and retail meat markets, or in-[fol. 1705] corporations, firms, or associations manufacturing, jobbing, selling, transporting, except as common carriers, distributing or otherwise dealing in any of the commodities mentioned and described in paragraphs fourth and fifth of this decree, and all leases, contracts, or arrangements or other disposals made by any of the defendants since the first of October, nineteen hundred and nineteen, affecting their delivery systems, shall be submitted by the defendants to the court for its investigation and determination as to whether the same were made in accordance with the spirit and purpose of this decree, in the same manner and with the same force and effect as though the said sales, dispositions, leases, contracts, or arrangements had been made subsequent to the entry of this decree.

Eighteenth. That jurisdiction of this cause be, and is hereby, retained by this court for the purpose of taking such other action or adding at the foot of this decree such other relief, if any, as may become necessary or appropriate for the carrying out and enforcement of this decree and for the purpose of entertaining at any time hereafter any application which the parties may make with respect to this decree.

Walter I. McCoy, Chief Justice.

February 27, 1920.

The defendants Western Meat Company, Oakland Meat & Packing Company, Nevada Packing Company, and Fred L. Washburn, appear herein generally by Henry Veeder, their attorney, and do hereby consent that the foregoing decree may be entered herein upon the stipulation of the parties filed in this cause without further notice.

Henry Veeder, Attorney for above-named defendants.

Dated 27th day of February, 1920.

The defendants Wilson & Co., Inc., (N. Y.); Wilson & Co. (N. J.), Wilson & Co., Inc., of Calif. (Nev.); Wilson and Co., Inc., of Louisiana (La.); Wilson & Co., Inc., of Okla. (Oklahoma); South Dakota Provision Co., Gotham Hotel Supply Co., Inc.; Standard Beef Co.; Stiefel-O'Mara Co., Inc.; Drexel Packing Co.; Albert Lea Packing Co., Inc.; Mississippi Packing Co., Inc.; Morton-Gregson Co.; Paul O. Reymann Co.; Standard Provision Co., Central Products Corporation, Thomas E. Wilson, Arthur Lowenstein, Jacob Moog, Vonce De Leon Skipworth, Arthur L. Smith, James A. Hamilton, George D. Hopkins, Adolph E. Peterson, George H. Cowan, William C. Buethe, Carl F. Burrell, [fol. 1706] James C. Good, appear herein generally by Jewel P. Lightfoot, their attorney, and do hereby consent that the foregoing decree may be entered herein upon the stipulation of the parties filed in this cause without further notice.

Jewel P. Lightfoot, Attorney for above-named Defendants.

Dated Washington, February 27, 1920.

The defendants The Cudahy Packing Company (Me.), Cudahy Packing Company of Nebraska, Cudahy Packing Company of Alabama, Cudahy Packing Company of Louisiana, Ltd., Nagle Packing Company, Edward A. Cudahy, sr., Edward A. Cudahy, jr., Guy C. Shepard, John E. Wagner, Andrew W. Anderson, Emil A. Strauss, Frank E. Wilhelm, and George Marples, appear herein generally by

Thomas Creigh, their attorney, and do hereby consent that the foregoing decree may be entered herein upon the stipulation of the parties filed in the cause without further notice.

Thomas Creigh, Attorney for above-named Defendants.

Dated Washington, February 27, 1920.

The defendants Armour and Company (Ill.), Armour & Company (N. J.), Armour & Company (Ky.), Armour & Company (Tex.), Armour & Company, Ltd. Squire & Company (Me.), John P. Squire & Company, Inc. (Mass.), John P. Squire & Company, Inc. (R. I.), Springfield Provision Company, White, Pevey and Dexter Company, Louis F. Swift, Edward F. Swift, Charles H. Swift, Gustavus F. Swift, Jr., Harold H. Swift, Alden B. Swift, George H. Swift, Laurence A. Carton, Frank S. Hayward, Charles A. Peacock, Wilfred W. Sherman, Wellington Leavitt, John M. Chaplin, and William B. Traynor, appear herein generally by Henry Veeder, their attorney, and do hereby consent that the foregoing decree may be entered herein upon the stipulation of the parties filed in this cause without further notice.

Henry Veeder, Attorney for the above-named Defendants.

Dated Washington, February 27, 1920.

[fol. 1708] State of Illinois,
County of Cook, ss.

In the Circuit Court of Cook County.

In Chancery

Philip D. Armour, et al.

vs.

Union Stock Yard & Transit Co.

In Chancery

Swift & Company

vs.

Union Stock Yard & Transit Co.

In Chancery

Nelson Morris, et al.

vs.

Union Stock Yard & Transit Co.

State of Illinois,
County of Cook, ss.

Sheldon E. Holmes, being duly-sworn deposes and says that he is personally acquainted with the location of the slaughter and packing houses of the above named complainants, Armour and Company, Swift and Company, and Nelson Morris and Company, located upon the premises described in the Complainants' several bills of complaint, situated immediately west of the premises of the Union Stock Yard & Transit Company, also particularly described in said complainants' bills of complaint; that he has exam-
[fol. 1709] ined the map marked "Ex A" and made a part of this affidavit, showing the location of the property of said Union Stock Yard and Transit Company, and also the property of said complainants and the system of railroad tracks connecting said complainants' property with the main and other tracks of said Union Stock Yard and Transit Company. That upon said map the slaughter and packing houses and other improvements of said several

complainants are designated as follows, to wit: Those of the complainant Armour and Company, are colored yellow; those of Swift and Company, green; those of Nelson Morris and Company, pink. The deponent is also acquainted with the location of the joint stock yards of said complainants, known as the Central Stock Yards, the location of which is also designated and described upon said map.

The deponent further states that he is, at the present time, and has been for about eighteen months last past, employed by said complainant Swift and Company, and that prior thereto he was employed by the Railway Switching Association of Chicago, which said Association had charge of the distribution of cars and freights consigned to said several complainants and other parties, firms, or corporations engaged in prosecuting business upon said premises, lying immediately west of the Union Stock Yards, commonly known as Packingtown. The deponent says that he was in the employ of said switching Association for a [fol. 1710] period of about two years as yard clerk and assistant yard master; that prior to his last said employment, and for a period of about eight years prior thereto, he was employed by the Chicago, Rock Island & Pacific Railroad Company as yard clerk and bill clerk, and also that for about three years of said time he had charge and direction of the out-freight yard of said Company at the City of Chicago.

The deponent further says that for more than three years last past, and from the time he entered the service of said Chicago Railway Switching Association, he has been, and he is now, familiar with, and has had, and he now has a personal knowledge of the manner or system of handling and switching cars at said Packingtown and at the Stock Yards of said Union Stock Yard and Transit Company upon the side and main tracks owned and controlled by said last named Company, and upon the tracks connected therewith owned by the several complainants and other persons, firms and corporations; that he has a personal knowledge of the capacity of said tracks, as now located and constructed, for handling, delivering and receiving loaded and empty cars at the various packing and slaughter houses and other establishments located upon the property hereinbefore described, situate immediately west and

adjoining said Union Stock Yard & Transit Company's property, and at the Stock Yards of said Company.

Deponent further states that the various railways terminating at the City of Chicago, and having connections with the railway system of the defendant, connect with the [fol. 1711] tracks of said last named company as shown upon said map marked exhibit "A", as follows, to wit: The Chicago Milwaukee & St. Paul Railway Company, the Chicago & Northwestern Railroad Company, the Pan Handle, the Northern Pacific, the Chicago & Alton, and the Chicago, Burlington & Quincy Railroad Company, connect with said system of tracks on the west at or near Brighton Park; that the Michigan Central, The Illinois Central, the Rock Island, the Lake Shore, the Nickel Plate, the Chicago & Eastern Illinois, the Louisville, New Albany & Chicago, and the Pittsburgh, Fort Wayne & Chicago Railroad Company connect with said system of tracks on the east; that the Grand Trunk, the Wabash, the Atchison, Topeka & Santa Fe, and the Chicago & Erie Railroad Companies connect with said system of tracks on the south. All of said railways have suitable connections with the railway system of the said Union Stock Yard & Transit Company.

The deponent further says that each and all of said railroads so connecting with the defendant's railway system have in convenient proximity to the tracks of said Union Stock Yard & Transit Company, their several yards for the distribution of cars and freight consigned to said Stock Yards or to other parties and consignee located upon the tracks of said defendant company; that said defendant has also its own yards located upon the premises hereinbefore described, as shown upon said map marked Exhibit "A" and designated by being colored red, and that said several [fol. 1712] yards are especially adapted to and used for the switching of cars and the making up of trains preparatory to the delivery of such cars either loaded or empty at the said several slaughter houses and other establishments located upon said tracks, or for the delivery from said slaughter houses and establishments to the various Railroads.

The deponent further says that in the Fall of 1889 the defendant located and constructed yards for the distribu-

tion of cars upon the southwestern portion of said property as shown upon the said map, and also about the same time made proper double track connections with the tracks of the defendant previously constructed, and thereby greatly increased the capacity of the main tracks connecting said named roads with the premises of these complainants, especially of the west main north and south tracks upon which the principal packing and slaughter houses of these complainants, as well as said Central Stock Yards, are located.

The deponent says that all of said main tracks used for the purpose of receiving or shipping freight from the said packing and slaughter houses are double track roads and are not at any time used for loading, unloading, sorting or holding of cars or for making up trains. That all of the complainants have constructed or caused to be constructed upon their own premises, side tracks and switch connections for the accommodation of their own private business and for the greater convenience in receiving and [fol. 1713] delivering freight from and upon the main tracks of said defendant company.

Deponent says that he is generally familiar with the number of cars of dead freight now and heretofore handled by the defendant company in the regular prosecution of the business of complainants; also the method of delivering such freight to the complainants and of receiving the freight for transshipment to other markets; that he is also acquainted with the business of the organization now known as the Chicago Railway Transfer Association, which said association has charge of the switching and handling of freights upon the system of railroad tracks of the defendant company; that said Switching Association receives all of the dead freight, but the deponent says that cars of live freight, when delivered at the Stock Yards of the Union Stock Yard & Transit Company are so delivered by the different railways over which said freight is consigned to said Yards with the locomotives of said railways; that said Transfer Association use about twenty three switch engines, kept constantly in the business of said Stock Yard Company and connected therewith; that of the said twenty-three engines the complainants keep about seven thereof constantly employed in and about their special business in receiving and delivering loaded and empty cars to or

from their said several packing and slaughter houses and other business houses.

[fol. 1714] And deponent says that over ninety-five per cent of all of the business done upon or over said west main north and south tracks is the business of these complainants.

The deponent further says that he is personally acquainted with the premises known and described as the Central Stock Yards, constructed and arranged for the joint business of said complainants; that said yards cover about three acres of ground and are connected with said west main north and south tracks by proper switches and side tracks; that the capacity of said yards in the prosecution of the business of the complainants is about one hundred cars of stock per day, and the deponent believes that that would be the average amount of business that could be done by the complainants in said yards; and deponent says that the capacity of said side tracks and switches is ample in proportion to the capacity of said yards.

The deponent further says that from his personal knowledge of the distribution and the making up and delivery of cars by the said defendant and other railway companies, he believes and says that so far as track capacity is concerned much more than one hundred cars of live freight could be delivered at said Central Stock Yards each twenty-four hours without any interference with or interruption of the other business of the complainants, or of the business of other persons, firms and corporations located upon said main and side tracks, and without any interruption of the business of delivering live or dead [fol. 1715] freight at the stock yards of said Union Stock Yard & Transit Company, or elsewhere upon the said Company's system of railroad tracks; that all cars of live or other freight consigned either to the Central Stock Yards or to the yards of said Union Stock Yard & Transit Company, would be distributed into proper trains or sections of trains by the various railroad companies so transporting the said freight, in the private yards of said railway company adjacent to the track of said Union Stock Yard & Transit Company, and then delivered at either the said Central Stock Yards or at the Stock Yards of said Union Stock Yard & Transit Company, without interference with

each other and without any interruption to the business of said defendant or other business located upon said railway system. That under the present system of business as conducted by said Chicago Railway Transfer Association all of the freight consigned to, and that can be handled inside of the Central Stock Yards, can be delivered at said yards without causing any blockade or interruption of the business now prosecuted in the Stock Yards of said Union Stock Yard & Transit Company or upon the premises located upon or connected with said Company's railway system.

The deponent further says that from his knowledge of said defendant's railway system, and of the various roads, side tracks and switches connected therewith, and of the method of conducting such business by said Chicago Railway Transfer Association, he believes and states that at [fol. 1716] the present time the average amount of business now done upon the said west main tracks of said railway system, could be increased three fold, without any interference with or interruption of the business of said Union Stock Yard Company.

The deponent further says that prior to October 1889 said west main north and south tracks, being the west tracks shown upon said map, terminated on the south at Forty-fifth Street, and that all of the business of these complainants arising from or connected with their packing and slaughter houses located upon said west north and south tracks, was prosecuted upon the said tracks from the north end only, and was received from and delivered upon the main tracks of said defendant's railway system located upon the said north side of the property of said defendant; that when said yard was constructed in October 1889 at the southwest corner of said premises as shown by said map and connected at Forty-fifth Street with said north and south tracks theretofore existing, and also with the east and west tracks at the east of said yard, the track capacity of said west north and south main tracks, upon which the principal packing and slaughter houses of these complainants are located, was increased at least three fold, while the business of said complainants done upon and over said west main tracks has materially decreased since October 1889, and that therefore there has been a three

fold increase of track capacity with a decrease of the [fol. 1717] business of receiving and delivering loaded and other cars over said tracks.

The deponent further says that on account of such increase of track capacity and facility for handling freight, all of the live freight that can be consigned to or handled in said Central Stock Yards can be transported over said main tracks hereinbefore more particularly described, without interference with or interruption of other live freight consignments to the yards of the said Union Stock Yard & Transit Company, and without prejudice to the delivery of freights to other business houses located upon the tracks east of the premises of the said complainants.

(Signed) Sheldon E. Holmes.

Subscribed and sworn to before me this 4th day of June 1891.

(Signed) D. E. Hartwell, Notary Public, June 9th, 1891. (Notarial Seal Attached.)

[fol. 1718] [Endorsed:] 4419—90860. Circuit Court of Cook County. Philip D. Armour, et al. vs. Union Stock Yard & Transit Company. Swift & Company vs. Union Stock Yard & Transit Company. Nelson Morris, et al. vs. Union Stock Yard & Transit Company. Affidavit of Sheldon E. Holmes. Filed June 9, 1891, Henry Best, Clerk.

[fol. 1719] State of Illinois,
County of Cook, ss.

I, John E. Conroy, Clerk of the Circuit Court of Cook County, and the keeper of records and files thereof, in the State aforesaid, do hereby certify the above and foregoing to be a true, perfect and complete copy of a certain affidavit of Sheldon E. Holmes filed in this office on the 9th day of June, A. D. 1891 in a certain cause lately pending in said Court, on the Chancery side thereof, between Philip D. Armour, et al., Complainant, and Union Stock Yards & Transit Co., Defendant.

In witness whereof, I have hereunto set my hand and affixed the Seal of said Court, at Chicago, in said County, this 13th day of June 1938.

John E. Conroy, Clerk. (Seal.)

IN THE CIRCUIT COURT OF COOK COUNTY

In Chancery

PHILIP D. ARMOUR, ET AL.

vs.

UNION STOCK YARD & TRANSIT COMPANY

In Chancery

SWIFT AND COMPANY

vs.

UNION STOCK YARD & TRANSIT COMPANY

In Chancery

NELSON MORRIS, ET AL.

vs.

UNION STOCK YARD & TRANSIT COMPANY

GEORGE ALEXANDER, being first duly sworn doth depose and says that he now is and for three years last past has been in the employ of the firm of Armour & Company, the complainants in one of the bills filed in this cause, as clerk of the transportation department of the business of said firm; that his office, in connection with said business, is located at the places of business of said Armour & Company lying immediately west of the Union Stock Yards in the City of Chicago; that in his employment aforesaid he has become familiar with the conduct of the said Armour & Company's business, so far as the same is affected by or relates to the transportation of dead freight to and from the various packing houses and slaughtering houses of said Armour & Company.

Deponent further says that in his employment aforesaid it is necessary for him to be out of his office nearly all the time and engaged upon and about the railroad tracks located in the neighborhood of and adjoining the premises of the complainants Armour & Company, as well as those

of the complainants in the other bills filed by Nelson Morris & Co. and Swift & Company.

[fol. 1721] Deponent further says that prior to his employment with the said Armour & Company he was for nine years train master of the Michigan Central Railroad in the City of Chicago, and that during his employment as such train master with said Michigan Central Railroad Company he was required frequently to be on and about the premises lying west of the Union Stock Yards, and on the premises of the Union Stock Yards, and that in his employment with the Michigan Central Railroad Company, as well as with Armour & Company he necessarily became thoroughly acquainted with the manner of transporting and shifting cars from place to place over main and side tracks wherever the same might be situated, and that he thereby ordained knowledge as to the capacity of railway tracks for transporting cars.

Deponent further says that he has examined the map which is called "Map of the Union Stock Yards in Chicago" and which is marked Exhibit A, which is herein referred to and hereby made a part of this; his affidavit, that he has examined the tracings on said map in blue and red colors showing the location of the various railway tracks, side tracks and switches upon the grounds occupied by the Union Stock Yard and Transit Company, and upon the grounds occupied by the packers whose premises are located west of the grounds of said Union Stock Yard and Transit Company and that said map correctly represents the location of said tracks, side tracks and [fol. 1722] switches.

Deponent further says that he has examined said map with reference to the location of the packing and slaughtering establishments of Armour & Company which are marked yellow on said map, those of Swift & Company which are marked green on said map, and those of Nelson Morris & Company which are marked pink on said map, and that said locations are correctly represented thereon.

Deponent further says that he has examined said map with reference to the location of the Central Stock Yards, and that the place marked on said map as the location thereof, is the place of location, and is a correct representation of the same, and that they lie immediately west

of and adjoining the packing and slaughtering establishments of Nelson Morris & Company.

Deponent further says that he has examined said map with reference to the location of the packing and slaughtering establishments of Armour & Company, Nelson Morris & Company and Swift & Company with reference to their proximity to the most westerly system of main tracks, shown on said plat marked red, belonging to the Union Stock Yard and Transit Company, extending from 47th Street on the south to nearly Transit Avenue extended, on the North; and that the relative position thereof is correctly shown thereon.

Deponent further says that all of the business which is conducted on said west main track between the points aforesaid, arises from the packing and slaughtering and [fol. 1723] kindred establishments which lie contiguous thereto and between Packers Avenue and Ashland Avenue, as shown on said map and that at least 95 per cent. of the cars which pass back and forth on said main track are engaged in the transportation of freight to and from the packing houses of said Armour & Company, Swift & Company and Nelson Morris & Company.

Deponent further says that said west main system of tracks above referred to consists of two double tracks the entire length, with such switches as are necessary to connect the same with the side track laid in and about the premises of said Armour & Company, Morris & Company and Swift & Company, and a few other small shippers; that said main track is not used for the purpose of switching cars or making up trains, but only for the purpose of hauling in or out cars, or trains of cars, as the same may be required, from the various establishments of said Swift & Company, Armour & Company and Nelson Morris & Company, and others; that said main tracks are not intended for any other purpose, and that it rarely occurs that the same are obstructed by reason of any delay in switching from said main tracks to said side tracks.

Deponent further says that prior to the fall of the year 1889 the said west main tracks extended only as far south as 45th Street; that in the fall of 1889 the same were extended southwardly to 47th Street, at which point a large

[fol. 1724] number of tracks were laid down by the defendant for the purpose of a switching yard, and that the same were thereupon connected with the system of tracks lying farther towards the east, and between said point and Halsted Street.

Deponent further says that prior to the extension of said west main track southwardly to 47th Street, all of the business in the way of the delivery of cars to and from the slaughtering and packing establishments of the complainants in said bill lying adjacent to said main tracks was carried on said west main tracks between 45th Street and their junction at the north with the east and west main track of the defendant company; and that prior to said extension, when cars came on to said west main tracks from the north, that is to say, from the main east and west tracks of the defendant company shown on the north part of said map, and were unloaded at the various places of business of said complainants, it was necessary, in order to dispose of the same, that they be taken back on the same track upon which they were brought upon said premises. That since the extension of said west main tracks southward to 47th Street, more than 50 per cent. of the business done on said west main tracks is done by way of said connection by 47th Street, and that by reason thereof the burden imposed upon said west main tracks at the northern end thereof, is relieved more than one half.

Deponent further says that if the same number of cars were now transported back and forth over the whole length [fol. 1725] of said west main track that were transported upon the northern end thereof before its connection aforesaid, the business which could and would be done thereby would be more than double the present business carried on upon said west main track.

Deponent further says that the track shown on said map as running east and west between Armour & Company's premises on the north and Moran & Healy's, John Morrell & Company's and Armour & Company's ware house on the south, and connecting with the said west main tracks at about 43rd Street, is a private track used only for the conducting of business arising from the premises immediately adjoining the same on the north and south, and is

not used for transporting cars in any other manner or for any purpose other than as last above stated.

Deponent further says that said last mentioned track is used for about three weeks in the winter time for transporting ice to the ice houses of Armour & Company, located directly to the north of said track, and that during said period of three weeks, daily from 80 to 100 cars of ice are transported over the same and over the north end of said west main tracks in addition to the ordinary business done on said west main tracks, and that during said period of three weeks whilst said cars are being transported over the north end of said west main tracks this deponent did not discover that said west main tracks was [fol. 1726] crowded or taxed beyond its capacity, or that any unusual delay occurred by reason of the transporting of said 80 or 100 cars of ice per day.

Deponent further says that prior to the fall of 1890 a large portion of the ice which Swift & Company required in their business was brought in the cars over the north end of said west main tracks, and therefrom said cars were switched to the side tracks of said Swift & Company, and that during the ice cutting season annually at least as many of 1800 cars of ice were so delivered to the ice houses of Swift & Company over the north end of said main track, and the empty cars returned over the same tracks, and that said cars of ice were delivered to Swift & Company in the manner aforesaid during the ice cutting season, and at about the same time that the cars of ice were delivered over said tracks to Armour & Company.

Deponent further says that the railroad tracks shown on Exchange Avenue extended westerly, which lie to the east of said west main tracks are not through tracks, and do not cross said west main tracks, and have no connection therewith, and that whatever freight originates on either side of said track lying on Exchange Avenue as aforesaid, and east of said west main tracks is carried eastwardly across Packers Avenue, and thence northwardly to the main east and west tracks of the defendant company, and that such freight is not carried over, nor does [fol. 1727] it cross the west main track of the defendant company aforesaid.

Deponent further says that in the fall of 1890 the complainants, Swift & Company, connected the tracks which had theretofore been laid and been in use by said Swift & Company on the western end of Exchange Avenue, and northwardly therefrom, with the main tracks of the defendant company lying further to the north thereof.

Deponent further says that by reason of the connection aforesaid all of the ice which is required in the business of said Swift & Company upon the premises located west of said west main tracks is now delivered to said Swift & Company over the connection thus made, and that the same is no longer brought over the north end of said west main tracks, as was the case prior to the making of said connections.

And deponent further says that at least 50 per cent. of the remainder of the railroad business required to be done for said Swift & Company on their premises last aforesaid, is now done over the connections thus made, instead of over the west main tracks of the defendant company aforesaid.

Deponent further says that he is familiar with the Central Stock Yards indicated on said map, and with the tracks connected with said Central Stock Yards, and that a train containing 35 cars of cattle can be accommodated at one time on the track connected with said Central Stock [fol. 1728] Yards, without extending onto the said west main track of the defendant company.

Deponent further says that at least 90 per cent of the cattle which are slaughtered by Armour & Company at their said slaughtering and packing establishments are purchased by Armour & Company in the yards of the defendant company, and that not more than 10 per cent of the cattle so slaughtered are purchased by said Armour & Company at points outside of Chicago and shipped to Chicago; that none of the cattle which would in the future be slaughtered by said Armour & Company would in the ordinary course of business be delivered at said Central Stock Yards, except those purchased by Armour & Company at points outside of Chicago; and deponent further says that he verily believes that not more than 10 per cent of all of the cattle which are slaughtered by Swift & Com-

pany at their establishments aforesaid are purchased by Swift & Company at points outside of the City of Chicago, and that the balance of the cattle and other animals slaughtered are purchased by said Swift & Company at the yards of the defendant company.

Deponent further says that all of the cattle which in the future are purchased by said Armour & Company and by said Swift & Company at the yards of the defendant company would in the ordinary course of business be [fol. 1729] driven over the viaducts to the places of slaughter of said companies, and would not be brought to the said Central Stock Yards by rail.

Deponent further says that the cars which would be used for the purpose of bringing live freight to the said Central Stock Yards would in so doing pass over the said west main tracks of the defendant company to the point thereon where the tracks of said Central Stock Yards connect with said west main track; that no delay would necessarily be caused in transporting said cars over said line onto the side tracks connecting with said Central Stock Yards, for the reason that said side tracks and tracks connected with said Central Stock Yards are in themselves ample and sufficient to contain all of the cars which would be brought to said yards at any one time for unloading; that immediately upon unloading the same they could and would be pulled out upon said west main track both north and south, and taken away without any interference with the business of hauling dead freight over said tracks.

Deponent further says that he verily believes that said west main tracks would at the present time accommodate at least double the business which is now done over the same.

Deponent further says that from his knowledge of railroad business he is of the opinion that the delivery to the Central Stock Yards of such stock as is bought by the [fol. 1730] complainants in said three cases at points outside of the City of Chicago over the tracks of the defendant company would not result in overcrowding of any of the said track of the defendant company, or producing any stoppage or serious delay to the business now done upon said tracks.

(Signed) George Alexander, June 9th, 1891.

Subscribed and Sworn to before me this 2nd day of June A. D. 1891.

[fol. 1734] Excerpts From the Statement of Louis F. Swift, President, Swift & Company

Thursday, January 29, 1919

[fol. 1735] Mr. Heney: Were you promised any stock or bonds in the Chicago Stock Yards Co. of Maine by Mr. Prince or Mr. Warren?

Mr. Swift: Was I promised any?

Mr. Heney: Yes.

Mr. Swift: You know about these bonds or cash or something, the arrangement that Swift & Co. and the other packers made, when they were paid $3,000.00 of bonds?

Mr. Heney: Yes; that was in 1891, and they were payable by July 1, 1907.

Mr. Swift: Yes.

Mr. Heney: And they were paid off then. That is a matter of record.

Mr. Swift: That is a matter of record; yes.

Mr. Heney: They were paid off by new negotiable funds being issued to take the place of a portion of them; the rest had to be paid in cash; that is right, is it not, Mr. Swift?

Mr. Swift: Whatever the facts are; yes, sir.

Mr. Heney: That is my recollection of it.

Mr. Swift: That is the only circumstance that I know anything about.

Mr. Heney: When that was up, Swift & Co. had a representative, Swift & Co. and Armour & Co. each had a representative meet with the representative of the New Jersey company, and negotiated for several years down to 1910, from July, 1907, over what kind of an arrangement would be made, as a new inducement to Armour and Swift and Morris to remain at Chicago; is not that correct?

Mr. Swift: That may have been, but nothing ever came of it, so far as I knew.

Mr. Heney: I will come to that. Is it not correct that they did negotiate for several years, and that they finally agreed that they would take the Felzer case to the Supreme [fol. 1736] Court of the United States to determine whether a bonus could be given, the attorneys for the New Jersey company opposing the giving or holding back on the proposition that the Supreme Court would hold that it was a rebate.

Mr. Swift: We asked for a continuation of that.

Mr. Heney: Of that—arrangement?

Mr. Swift: Arrangement.

Mr. Heney: And how much were you getting a year out of that arrangement?

Mr. Swift: The evidence shows, I think, that out of that $3,000,000 we got about 30 per cent—perhaps $1,000,000, or close to it. That would cover a period of 15 years. That would be $60,000 a year.

Mr. Heney: With interest. There was interest at 5 per cent running on the entire $3,000,000.

Mr. Swift: That would be the same thing; if they paid $60,000 every year, it would be adding interest as you come along.

Mr. Heney: Was it not paid in that way?

Mr. Swift: I do not know how it was paid.

Mr. Heney: Then, you wanted the arrangement made by which you would get either $60,000 a year cash or its equivalent?

Mr. Swift: We tried to get something of that kind.

Mr. Heney: You negotiated for three years on that, and Armour, Swift, and Morris, and the New Jersey company agreed on the Felzer case, did they not?

Mr. Swift: Not that I know of. I am not familiar with that detail. That is a lawyer's matter, and I could not say that they did, but if it is in the evidence—if we did, we did; and if we did not, we did not. I would like to have you know all I know about it, Mr. Heney.

Mr. Heney: That was a matter that you folks were very insistent and pressing on, of getting that, was it not? [fol. 1737] Mr. Swift: I know that we wanted this arrangement to continue, and they would not do anything about continuing it, and they said something about the Felzer Case, or something. I think that had something to do with it.

Mr. Heney: And that the New Jersey company was going to await that decision before going ahead and doing what you folks were asking for.

Mr. Swift: They would not do anything for us, and they claimed that they wanted to wait about that decision, or something.

Mr. Heney: All right. Did not Mr. Prince tell you when that decision was pending that he had arranged a new scheme by which he was going to organize a holding company; that is, would acquire the common stock of the New Jersey company, and that they would give you stock in this company that would produce dividends about to the amount you were insisting upon having?

Mr. Swift: Mr. Prince did not take me into his confidence to that extent, Mr. Heney.

Mr. Heney: Never told you at any time that he would give you anything by way of a subsidiary from the New Jersey corporation or from the Maine corporation, or any other way; is that what you want to be understood as saying?

Mr. Swift: He did not give me any details about a stock or about stock in a stock company. Those names or facts were not mentioned. He told me if I would keep still and not press the matter—not move our plant or not threaten to move it, keep still, I might get something after awhile. But I never got anything.

Mr. Heney: That you might get something——

Senator Moses (interposing): Was $3,000,000 bonds issued in the first instance without any consideration?

Mr. Heney: The consideration was that they would stay there 15 years.

[fol. 1738] Mr. Swift: We signed a contract to support the Chicago stockyards, to purchase all of our cattle in Chicago at the stockyards; or if we did not purchase them there, if we did come in from the country, we were going to pay yardage just the same.

Mr. Heney: The question involved was whether you were going to leave the stockyards or not was it?

Mr. Swift: Yes, sir.

Senator Norris: The packers were threatening to leave Chicago, and this was a proposition to keep them there, was it not?

Mr. Swift: Yes, sir. The packers were in this position, that the stockyards in Chicago are pretty close to the center of the city—within the city limits—and they are more or less handicapped by being cramped and by being near the city; and I am sorry, as far as I am concerned, that we made this arrangement to stay there. I am sorry we did not move at the time we considered it.

Mr. Heney: Did the fact that you did not get anything at the final wind-up, and Armour got it all, have anything to do with that dissatisfaction? You were promised something and you did not get it, and Armour did, did he not?

Mr. Swift: That is right. At the same time we were promised something before and we did get it. I am sorry we took it. I had rather not have had it. I would rather have moved; we would have been better off to-day; it would be best, a much better proposition.

Mr. Heney: For the first 15 years you got your share of the subsidy for staying in Chicago?

Mr. Swift: Yes.

Mr. Heney: Then your understanding was with Prince that if you did not agitate the question, that when this other arrangement was carried out it would be arranged so you would still continue to get this subsidy that you did not get?

[fol. 1739] Mr. Swift: Senator, that was not the under-

standing. I tried to get an additional subsidy, and could not get it. That is all there is to it, and he kept telling me to keep still.

Senator Moses: This whole transaction was about the same that ordinarily takes place every time they locate a shoe factory in a town?

Mr. Swift: That is about the same thing.

Senator Moses: When they want to locate a shoe factory in a town in New England they give them exemption from taxes, and other things, which is simply that transaction on a larger scale in Chicago.

Mr. Swift: That is about the same thing, or it is the same thing as if we would go to such cities now. We have got offers before from certain people in certain cities that they would give us a bonus of a few thousand dollars or a land site if we would go and establish a packing house; it is an inducement to come and establish an industry in their town.

Mr. Heney: No, it is not; as I would say, as if Douglas or Emerson, if one or two of the other big ones at Brockton would say now to the trustees of the city of Brockton, "Unless you give us a mortgage on the town and agree to pay us half the taxes collected, we will get out of here and kill your town." Senator, would not that be a closer analogy?

Senator Moses: I am just trying to find out.

Mr. Heney: I am telling you what the facts were out there. They were already located. They had been located for years, these stockyards had grown up, belonging to some other company which had just organized, and these people held up the new corporation and made them come through with $3,000,000 on a threat to get out; is not that not a fact, Mr. Swift?

[fol. 1740] Mr. Swift: I would not exactly put it in that language.

Mr. Heney: I do not suppose you would. But you were threatening to get out unless they gave it to you, were you not?

Mr. Swift: Not exactly that way. We explained to them that it was through our support of the market that the stockyards was a profitable scheme; that if we continued

to support the market we would like to participate. We told them we were offered very great inducements to go to Stickney and to go to Gary, Ind.; in fact, we had land bought down there, and we were figuring on moving; and in the absence of our moving, they made an arrangement with us not to move for 15 years.

Mr. Heney: And if Emerson and Douglas said, "We are paying a large proportion of the taxes at Brockton, and we are going to get out unless the town releases us from that taxation, our share, by paying it to us as a subsidy," you would have the same situation, would you not, in principle?

Mr. Swift: If it were, and those factories had in view the moving of their plants to another advantageous location, and instead of their moving they were offered an inducement by the municipality to stay, that would be a similar thing.

Mr. Heney: Was this point af Gary, Ind., a more economic place in which to operate?

Mr. Swift: Yes, sir; that is where the Chicago stockyards ought to be; it is a serious mistake——

Mr. Heney (interposing): So that by staying there and taking the $3,000,000 the five big packers have taken a large amount of money out of the consumers and out of the producers of this country, have they?

Mr. Swift: No; I would not say that.

Mr. Heney: Well, you do not think, then, it is much more economic over at Gary, Ind., do you?

Mr. Swift: It would be better to be down in Indiana. As to how long it would take for those advantages to make up for the losses in wrecking these buildings already [fol. 1741] built is problematical.

Mr. Heney: And the longer you stay in Chicago, the bigger the problem will be?

Mr. Swift: The longer we stay in Chicago, the deeper we are in the proposition.

Mr. Heney: And the worse off?

Mr. Swift: I would not say that, Mr. Heney. I do not know that the public are getting the worse off by it.

Mr. Heney: If it is more economical to operate in Indiana, the public gets the advantage of all economies

of the five big packers—that is the contention you make now; that the five big packers are economizing to such an extent now that the public is getting its meat cheaper than it would otherwise get it?

Mr. Swift: Yes, sir; but whether the advantages in moving are going to make up for the disadvantages in leaving what we have got, that is a question; that is the only thing that we are hesitating about.

Mr. Heney: You do not have to stop in order to leave entirely, do you—stop entirely? Could you not start a plant over there and gradually increase it and gradually decrease this one at Chicago?

Mr. Swift: Mr. Heney, if you move, you move. Whether you do it gradually or all once, what is the difference—you know the loss.

Mr. Heney: Some great statesman said that the way to resume specie payments was to resume specie payments. I suppose that is so, but there are other ways of killing a cat besides drowning it?

Mr. Swift: There is no way of moving the plant except by dismantling it and taking a lot of money to build new ones.

Mr. Heney: Armour is putting a new plant up at St. Paul, and he has not abandoned Chicago.

[fol. 1742] Mr. Swift: Well, but he did not have an old plant in the neighborhood that he had to wreck first.

Mr. Heney: You do not have to wreck it first.

Mr. Swift: Armour is going to run his Chicago plant and he is going to run his St. Louis plant—that will make two plants running. When the packers move from the Chicago stockyards they would have to close down the stockyards there and have a new one, and that would make only one running.

Mr. Heney: What is the inducement offered to go to Gary, Ind.?

Mr. Swift: That was a question of being on the Lake there, having water privileges, dock privileges, sewer privileges—we would get rid of our sewage to better advantage, and we would get clean water to run the plant with, and it being a railroad terminal we would get our cattle, etc.

Mr. Heney: By the way, what is the name of that creek out there in Chicago, at the packing plants—what do they call it?

Mr. Swift: Bubbly Creek.

Mr. Heney: Did not the packers oppose permitting that creek being connected with the sanitary canal, or whatever they call it, that takes the sewage out?

Mr. Swift: I do not think so; not at all. The packers are working out a problem for the Chicago sewage jointly with the city.

Mr. Heney: Are being forced to do that right now, are they not?

Mr. Swift: I would not say that they are being forced into it; they are doing it from a matter of public policy.

Mr. Heney: At the time you demanded the $3,000,000 from the New Jersey company, was that because you wanted to get better service in the Chicago stockyards than you are getting?

Mr. Swift: I do not know that that had any bearing.

Mr. Heney: Do you not think that if you took away $3,000,000 for 15 years of their earnings, you would put them in a better position to give you improved service, [fol. 1743] decreased yardage, and decreased charges, or all?

Mr. Swift: That did not have any bearing.

Mr. Heney: Those $3,000,000 that they gave the three big packers with interest on it, and at least a million and a half more given to small packers, as Mr. Levy, by the way, told me as he was leaving here the other day, he jumped in and made them give the small packers, out of which he got a nice little slice.

Mr. Swift: Mr. Heney, there is one case where the small packers got equal advantage with the large ones.

Mr. Heney: They did not all get in.

Mr. Swift: The ones that did.

Mr. Heney: The ones that did not get that were in a much worse position, were they not? Do you think that if the stockyards company had all this money to pay out did not hamper it any in giving improved service during those 15 years; is that correct—that it could not give them any better service if it had that income to dispose of as it pleased?

Mr. Swift: I do not say that. I think that the service of the Chicago Stock Yards is gradually improving, barring the present war times, when they have had trouble in getting help.

Mr. Heney: Did Swift & Co. and Armour and Morris & Co. secure representation on the board of directors of the operating companies of the New Jersey company and upon the New Jersey company board of directors itself as a result of that arrangement by which they got the $3,000,000 of bonds back in 1891?

Mr. Swift: There is nothing in that connection that I know of about Swift & Co., except that Mr. A. H. V. Veeder, the father of this Mr. Veeder, was on the board of directors of the stockyards company for a few years. But I do not [fol. 1744] know the exact date—but I think it was previous to any of this—and I think Mr. Veeder might have the exact date, but I have not got it.

Mr. Heney: We do not care for it. Was any representative in the operating company at the stockyards, the Transit Co., board of directors in the past three years?

Mr. Swift: No, sir; Swift & Co., have no representative of that kind and never did have.

Mr. Heney: The Junction Railroad?

Mr. Swift: No, sir, they have not and they did not have, with the exception of what I said about Mr. Veeder, and that must have been 20 years ago.

Mr. Heney: Now, let us go back to Mr. Prince; I am not entirely satisfied on that. You say he said to keep quite and you might get something?

Mr. Swift: He said if I did not keep quiet I would not get anything. So I just kept quiet and did not get anything, either.

Mr. Heney: If that is so, when did he say that to you—not that I want to question you, [illegible]racity, but are you not stating some conclusions now rather than what he said to you? You then had the Felzer case pending, and it had been taken up by agreement of all the parties, including

the representatives of the New Jersey company, and Prince was not the whole thing in the New Jersey company at that time; this was before he had the absolute control, and as a matter of fact, Thayer was the president of the company, was he not?

[fol. 1745] Mr. Swift: I do not know, Mr. Heney.

Mr. Heney: You do not know who was president of the New Jersey company at that time?

Mr. Swift: I do not, and I do not know who is now.

Mr. Heney: And you do not know who the attorney was for the company who represented the English holders?

Mr. Swift: I do not.

Mr. Heney: I can not recall his name now; he is the author of a book on constitutional law.

Mr. Swift: Then we are both alike——

Mr. Heney: Except that I do know who he is; I know very well who he is.

Mr. Swift: I never pay any attention to that.

Mr. Heney: But you- representatives had agreed with Arthour and Morris and the representative of the New Jersey company that the Felzer case was to be taken up there; and Prince, I repeat, was not in control of the New Jersey company at that time, as shown by the records, and shown by the evidence. Now, then if Mr. Prince said to you that you would not get anything you would have considered that that was acting in bad faith, in consideration of that undertaking by which the Felzer case was to determine it, would you not?

Mr. Swift: I do not recall the details or the circumstances about it, Mr. Heney, the Felzer case or what bearing it had. That is something I did not keep track of.

Mr. Heney: Now, Mr. Wadden, the treasurer of the company, told me in Boston that down to the last minute of this correspondence which I am going to ask you about in a moment, he promised you—he acting for Mr. Prince—that you were to receive your share, and Morris his share, and that you were thrown down, that they did not carry out that promise when Mr. Prince got back from Europe: Is that true or false?

[fol. 1746] Mr. Swift: I presume it is true; I think Mr. Wadden is a truthful man.

Mr. Heney: Have you no recollection of it?

Mr. Swift: Now, I do not know that I would know him by sight. I am not positive that I ever met him, Mr. Heney. I may have been introduced to him. I may have met him once, but not over once, and I doubt if I did then, and I would not know him if he walked into this room this minute.

Mr. Heney: Do you recollect that conversation?

Mr. Swift: I do not recollect any conversation with him, and I do not know what kind of looking man he is. I do not recollect ever having met him.

Mr. Heney: Do you not recollect meeting him in New York City, and of writing your brother Edward F. Swift from the Holland House in New York, on Holland House paper, as follows:

Holland House, New York.

E. F. S.

Did not get anything from Wadden as he has not the 18 shares, but thinks will get in week——

Mr. Swift: Just one minute, Mr. Heney.

Mr. Heney: I will hand you this as soon as I read it so that you may have it before you (reading):

Says Spoon called meeting N. Y. Dec. 4 and he Wadden will be Chi. Dec. 5—with goods if he can get 18 shares.

Had a wire from Kroll of A. & Co.; hurry him up—will tell you a lot more he said.

L. F. S.

Did you not write that letter and does not that refresh your memory?

Mr. Swift: I think I wrote that letter, and I think I spoke with Wadden on the phone; I do not think I saw him. As I understand it, I was to buy 18 shares of stock for him of a man in Illinois—from Mr. Tilden. I think there were 18 shares of stock that he wanted that I was trying [fol. 1747] to get in for him, and that is what I understand that means.

Mr. Heney: Yes; and until they got the 18 shares in they were not going to divide up the spoils, because they were afraid of a lawsuit that might overturn the whole thing of their taking $3,000,000 surplus out of the treasury of these three corporations and passing it over to them-

selves, and that stock of Tilden's was put in then at $300 a share where they had been buying the other stock at $160. Do you recall that?

Mr. Swift: I do not recall it; that might be correct. But, Mr. Heney, this letter is not dated; might not this have referred to the other transaction?

Mr. Heney: Here you said you had Croll to wire them and here is Croll's letter.

Mr. Swift: No; this said I had a wire from Croll.

Mr. Heney: All right; let us see what it says. This says, "Had a wire from Croll of A. & Company; hurry him up." You said to Edward "hurry him up." Well, he did go on and hurry Croll up, and Croll wrote to Mr. Wadden, and here is what he wrote:

January 5, 1914.

Dear Mr. Croll:-I inclose herewith statements of "Trust account A" up to January 5, together with a check for $7,871.28 to balance same.

That was the dividend to Armour on his stock.

I also inclose a check for $25, being the dividend of 2½ per cent on the 10 shares of Chicago Stock Yards Co. stock which we have not as yet delivered to you.

Mr. Palmer will return to Boston this week and I will again take up that matter with him and have it straightened out. The more I think of it the more I am sure we are right in having it done the other way. I wrote to the other Chicago people and I believe they are satisfied to delay.

With best wishes for the new year, I am,

Very truly yours, ——— ———.

[fol. 1748] Now, the other Chicago people were Swift and Morris, were they not, particularly Swift?

Mr. Swift: Who signed this, Mr. Heney?

Mr. Heney: That is from Wadden.

Mr. Swift: I do not know this Mr. Palmer, and I do not know anything about anything in this letter.

Mr. Heney: Mr. Palmer is the attorney for Prince and also the main company—Bradley Balmor. He is also attorney for the Capital Issues Committee over here.

Senator Moses: Is he the partner of Walker Storey?

Mr. Heney: Yes; a partner of Storey; that is the Palmer.

Here is another letter:

Chicago, February 10, 1914.

Mr. W. M. Wadden,
28 State Street, Boston, Mass.

My Dear Mr. Wadden: We are very anxious to hear from you as to what progress you are making in the matter that we are jointly interested in. It should be cleaned up as soon as possible and, while we know that you are doing the best you can, we are of the opinion that the other parties are somewhat anxious about it.

Kindly write me on receipt of this under personal cover.

Very sincerely yours, F. W. Croll.

Senator Norris: Who wrote that?

Mr. Heney: This was written by F. W. Croll, the treasurer of Armour & Co.

You told your brother Edward there to hurry up Croll, and Croll is hurrying up Wadden. What is it all about?

Mr. Swift: Of course that letter is not dated. I do not know where that comes into the transaction. I do not know anything about these other two letters; I do not know what they refer to.

Mr. Heney: Let us confine ourselves to this one then. What was it that you were going to tell him a lot more about, that Wadden had told you, that you did not care [fol. 1749] to put on paper there?

Mr. Swift: I do not recall, but I presume it was that Mr. Wadden was trying to tell me he would get some further consideration from the Stockyards Co. I presume that is it.

Mr. Heney: Did he not tell you at that time, Mr. Swift, just what it was you were to get? And was not this it, that there was $2,085,000 of bonds of that Maine Company that were going to be divided between you and Morris in the proportions in which you had been receiving with Armour under this other arrangement?

Mr. Swift: No, sir; I do not know anything about those details. Do you mean $2,000,000 between the three, or just $2,000,000 for the two?

Mr. Heney: The two.

Mr. Swift: I do not know anything about that. The figures are not familiar to me, and I do not think I ever heard them before.

Mr. Heney: What would you have had to receive if those bonds were paying 5 per cent? That would be $100,000 a year. Now, you were expecting to get $60,000, in the proportion, as against Morris, of about 36 to 15, is it not—2 to 1?

Mr. Swift: In the proportion of the volume of business we did.

Mr. Heney: Yes; in the proportion in which you got that $3,000,000.

Mr. Swift: I do not know anything about that.

Mr. Heney: Then, if you got $2,085,000 of bonds which bore 5 per cent, which it $100,000, and you got your two-thirds of that, which it would amount to, you would be getting your $66,000, just about what the arrangement was before? Was not that what Wadden told you was to take place?

[fol. 1750] Mr. Swift: No, sir; I do not know that much about the details of how he was figuring it out. All I do know is that we did not get anything.

Mr. Heney: Did he tell you at that interview, that is referred to in this letter, that you would get the equivalent in some way, of what you had been getting under the prior arrangement.

Mr. Swift: He did not say that, but that is what I claimed we were entitled to.

Mr. Heney: Is not that what you expected, from your talk with him?

Mr. Swift: That is what we claimed, but, as I say, we never got together; there never was an arrangement.

Mr. Heney: When you had this talk with Mr. Wadden you understood the thing was going to be carried out, did you not?

Mr. Swift: I thought Swift & Co. was going to get some consideration; yes, sir.

Mr. Heney: And you thought the consideration you were going to get would be the equivalent of what you had been getting under the old arrangement?

Mr. Swift: I was in hope so.

Mr. Heney: Did he not give you to understand at that time that it would be?

Mr. Swift: He would not talk details with me.

Mr. Heney: But he tells me he did.

Mr. Swift: Well, perhaps his memory is better than mine.

Mr. Heney: If he says so you would not dispute it?

Mr. Swift: If he had those details in his mind, he might have had the impression that he spoke to me about them; at the same time, he may not. I do not recall his given me any details. But I do not see that it is important, Mr. Heney. We were trying to get this consideration if we could get it.

[fol. 1751] Mr. Heney: And you at that time understood that you were going to get it when you wrote that letter, did you not? Does not the tone of that indicate it to you, that you were satisfied with your talk with Wadden?

Mr. Swift: I was in hope we would get it, but I had felt the same way a good many time before. It was a matter of dragging this thing along——

Mr. Heney: Now, Mr. Swift, I have not asked you if you hoped you would get it; I asked you if you were not satisfied at the time you wrote that letter that you were going to get it as soon as the 18 shares were in?

Mr. Swift: No, sir; I was never satisfied; I was always more or less dubious about it.

Mr. Heney: Then you did not have much regard for Mr. Prince's word, did you?

Mr. Swift. Well, you know nobody's word is equivalent to—they say a bird in the hand is worth two in the bush.

Mr. Heney: I do not know about that. I know they say of some men that their word is as good as their bond. You do not consider Mr. Prince's word as good as his bond?

Mr. Swift: I could not say that; I can not cast any reflections on Mr. Prince.

Mr. Heney: Had you found Mr. Prince tricky in any way before that?

Mr. Swift: I cannot say anything detrimental to Mr. Prince's character, Mr. Heney. That would not be right, and you would not expect me to do that.

Mr. Heney: I expect you to tell me whether or not you expected to get that, and whether or not Mr. Prince gave you to understand you would get it.

Mr. Swift: I have told you several times that it was our expectation to get it. I would like to add to that that we did not get it.

Mr. Heney: Now, just one other thing, then. Is there [fol. 1752] any promise of any kind existing at present that you will get anything from any source?

Mr. Swift: No, sir; there is not, unless it should be connected back with previous promises.

Mr. Heney: Now, what was the final excuse that was given to you for their not coming through?

Mr. Swift: Oh, I do not know; they had lots of excuses.

Mr. Heney: Who gave you the excuses?

Mr. Swift: Why, it came from Mr. Prince and Mr. Wadden, that there was delay in the matter. Mr. Prince was away the biggest part of the time, and then Mr. Wadden would be away, and different things of that kind would happen.

Mr. Heney: Shortly after January, 1914. Mr. Wadden resigned as treasurer, and Mr. Prince came back from Europe and was out to Chicago more or less. How did it finally end? What was finally said? You did not give that up without a struggle, did you?

Mr. Swift: I never had very many meetings with Mr. Prince, Mr. Heney. I do not remember of over one or two meetings with him, and I have not seen the gentleman, I do not think, for three or four years.

Mr. Heney: No; this happened three or four years ago—1914; five years. Now, the last time you had a talk with Mr. Prince on the subject, what did he say?

Mr. Swift: Well, he intimated that he was going on with the transaction.

Mr. Heney: What was it he said that gave you the information?

Mr. Swift: I could not say, Mr. Heney. Do you know Mr. Prince?

Mr. Heney: Yes.

Mr. Swift: Of course he talks very fast and says a lot of things, and I could not enumerate what they were.

[fol. 1753]. Mr. Heney: Did he tell you at anytime that Armour had an interest?

Mr. Swift: No, sir.

Mr. Heney: Did you learn that at any time before these public hearings of the Federal Trade Commission?

Mr. Swift: All the knowledge I have got of the subject I have picked up at these hearings.

Mr. Heney: You did not attend the Borland hearings before the committee, did you?

Mr. Swift: No, sir.

Mr. Heney: Did you read in the papers that Arthur Meeker testified there that neither Armour & Co. nor Armour owned any interest in the Chicago stockyards?

Mr. Swift: I have heard that statement.

Mr. Heney: Did you see any of the letters that were sent out by Moseley & Co., in which he tried to get the common stockholders, a minority of common stockholders, to sign and assent that they would take a 9 per cent guaranty, and everything above that could go to the Maine company, and that the packers were to own the Maine company—putting it in the plural?

Mr. Swift: I did not see any of those letters, and I did not know anything about them at that time. I asked for one yesterday; I wanted to see one of them.

Mr. Heney: Did you get it?

Mr. Swift: No, sir.

Mr. Heney: Here are some here.

Mr. Swift: That is the first I have heard of it.

Mr. Heney: Oh, there was a large number of these sent out to stockholders, Mr. Swift, which you are welcome to see. Here is one dated August 15, 1911; that was to W. H. Latham. There are several to bankers.

[fol. 1754] Mr. Swift: That is the first I knew of it.

Mr. Heney: Here is one which I will read:

August 18, 1911.

W. B. Hale, Esq.,
Care of McMillan & Hale, Rondout, N. Y.

Dear Sir: Your letter to the Old Colony Trust Co. in regard to the Chicago Junction Railways & Union Stock Yards Co. has been referred to us, as we are acting in this matter for them.

This Maine corporation which is to guarantee the stock will be controlled by the packers, who now furnish 75 per cent of the business of the stockyards and have always demanded something in return for it. This something has been given in the past in large blocks, in either bonds or cash, periodically. Up to date something like $6,000,000 has been given to them as an inducement for them to remain in Chicago. In giving them the control, in our opinion, it will insure the permanency of the packers in Chicago, in any event, for a much longer time than they would ordinarily find it for their best interest to stay.

The company has earned about 10 per cent for the last four or five years and distributed 8 per cent. In this way you can take the 9 per cent or the 10 per cent if you so elect to take the bonds, which is in all probability more than the company could afford to give you on account of the demands made by the packers for their share of the profits.

About 45,000 to 50,000 shares of stock have assented to the plan, but the interests controlling the Maine Corporation insist that they obtain all the common stock, 65,000 shares. Of course, there may be some shares stay out, but exactly how much they will allow to stay out and declare the plan in operation we do not know.

We understand that a minority stockholder, while he would have the same dividend paid to him that was paid to the stock controlled by the Maine corporation, yet it would be perfectly possible for the packers to reduce the yard charges so that the earnings of the stockyards company would be much reduced.

That is a covert threat to induce the minority stockholders to let go. (Reading:)

We simply state this to show that it is safer to come along with the plan which has had the careful consideration of all the directors of the company, and who have no interest whatever in the Maine corporation.

Very truly yours, ——— ———.

Now, Mr. Swift, I do not know whether you heard my statement the other day, but here was the plan they had: There was over $3,000,000 of surplus in the treasury of the Junction Railway, the Transit Co., and the New Jersey company. Prince planned for him and Armour to put $2,040,000 into the purchase of common stock of the New

[fol. 1755] Jersey company, which, together with what Prince then had, would give them the majority. Then they would put this plan to the minority stockholders—the 49 per cent—by which they would assent to a guaranty of 9 per cent—and the company had been earning about 12 per cent—a guaranty of 9 per cent made by the Maine company, which would have no assets, except $1,000,000 which was put in and taken out, $400,000 two days later, $100,000 a week or so later, and another $100,000 three weeks later, and loaned back to themselves. The Maine company would guarantee it and exchange its bonds, bearing 5 per cent, at the rate of $200 for $100 of this common stock. The minority stockholders had to agree that everything over $9 per cent would go to the Maine company, the guarantor.

Now, Prince had a plan that he would exchange his stock and Armour's stock for bonds, and he did do that to the extent of $2,085,000 of bonds, and then sold those bonds to the two underlying companies and the New Jersey company, getting cash for them, from $89 to $94, making a total of $1,800,000. That left them with the majority of the stock still in their hands, because they were turning in at the rate of two to one for the bonds.

Now, they pay $160, and they sell the bonds for an average of $91, so they get all their money back from the sale of the bonds to the underlying companies. Then they had the underlying companies make a bond dividend and pass them along to the Maine company, it getting everything over the 9 per cent. Then they had an extra dividend of 3 per cent and passed along some more cash, and, of course, it would pass right through to the Maine company, and from the Maine company it went to Prince and Armour, because they owned all the stock. Armour put $194,000 into the Maine company, and borrower $100,000 back, and Prince [fol. 1756] put in the other $800,000, and borrowed it back within three weeks, and they put their notes into the company. They increased the $1,000,000 of stock to $8,000,000 without any consideration, except the false one that is recited, so that Armour's stock is now $1,500,000 and odd, and he has received dividends on it of over $300,000, and it only cost him $194,000 in the beginning.

So they have got back all the money they have put in, and Armour's share of it makes him a profit of about $2,000,000.

Mr. Swift: I do not know anything about it.

Senator Norris: Mr. Swift, you regard this Chicago incident now as closed? Have you any prospect or hope that you are going to get your share out of this transaction in which you said you hoped to get your share?

Mr. Swift: I do not know what to say to that, Senator Norris.

Senator Moses: Hope springs eternal in the human breast, Senator.

Senator Norris: For 15 years you had been getting your share of the interest on the $3,000,000. Now, when this operation with Mr. Prince commenced, you expected to have that, or its equivalent, continued if you remained in Chicago, did you not?

Mr. Swift: I was in hopes to.

Senator Norris: And you have not gotten that; you have not gotten anything out of that?

Mr. Swift: No, sir.

Senator Norris: What I am trying to get at is this: As to this bonus that it seemed Armour continued to get, do you expect to get a bonus somewhere?

Mr. Swift: There is no promise to that effect.

Senator Norris: I understand. You have not gotten it yet. But do you feel that Prince and Armour treated you squarely in that deal? You understand that Armour got his share?

[fol. 1757] Mr. Swift: Yes, sir.

Senator Norris: And he remained in Chicago, and you remained, just the same, and did not get anything. What I am trying to get at now is this: Is there some place where you expect to get it yet?

Mr. Swift: Why, I do not know of any place.

Senator Norris: Have you ever talked it over with Mr. Armour?

Mr. Swift: No, sir.

Senator Norris: Did you think Mr. Armour was treating you squarely in that deal?

Mr. Swift: It does not look very square.

Senator Norris: Did Mr. Morris get his share?

Mr. Swift: I do not know anything about that; not that I know of.

Senator Norris: You were all in, and expected to get the equivalent of what you had been getting for 15 years in the way of a bonus?

Mr. Swift: I can not answer about Morris, Senator.

Senator Norris: You understand Armour got his share?

Mr. Swift: Yes, sir; from the evidence here.

Senator Norris: From his own testimony.

Mr. Swift: Yes, sir.

Senator Norris: Have you ever told any of the parties interested in it that you had not been treated right and you expected your share of that bonus?

Mr. Swift: I have not made any such statement.

Senator Norris: You have not made a demand on anybody?

Mr. Swift: No, sir; I have not made any demand.

Senator Norris: Do you think there is any prospects of your getting it from any source?

Mr. Swift: I could not say, Senator Norris. I have no thoughts in the matter; it is a blank in my mind.

Mr. Heney: You would not refuse it, I suppose, Mr. Swift?

[fol. 1758] Mr. Swift: If it was legal and could be done clean and above board, I might not refuse it. If it had to be done under cover, I might.

Senator Norris: Do you know any way in which it could be done above board?

Mr. Swift: I can only repeat, if a way was in existence that it could be done legally and above board, I might participate. If it has to be done illegally and not above board, I would refuse to participate.

Senator Norris: At least, Armour did not get his above board, did he?

Mr. Swift: I can not comment, Senator. The evidence is all here, and one would have to be his own judge.

Senator Norris: You need not express your opinion unless you want to.

Mr. Swift: I do not want to say anything against Mr. Armour or Mr. Prince or anybody else. I want to keep my own counsel.

[fol. 1759] FOOD INVESTIGATION

Report of the Federal Trade Commission on the Meat-Packing Industry

Part III

Methods of the Five Packers in Controlling the Meat-Packing Industry

(Excerpts from Chapter I, Sections 6 to 13, pages 21 to 85.)

June 28, 1919

Washington

Government Printing Office

1919

[fol. 1760] Control of Principal Yards by Big Five

Section 6.—Companies controlled by Big Five.

The big packers are financially interested in most of the important stockyards companies of the country. Their holdings are increasing rapidly; they have acquired several new companies during the past few years.

Concealed Ownership.—The Commission had difficulty in ascertaining the exact ownership and control of the big packers in various stockyards. In many cases such ownership was concealed in the names of employees or business associates, and in the case of the Chicago Stock Yards Co. the concealment was through the "bearer warrants." The following communications are typical of a great number received by the Commission in its inquiry in reference to big packer ownership of the stock in various stockyards.

Eugene V. R. Thayer, 57 Broadway, New York,
January 21, 1918.

L. L. Bracken, Esq., Secretary,
Federal Trade Commission, Washington, D. C.

Dear Sir: I am in receipt of your favor of January 12, and in reply I beg to say that I am the sole owner of the 100 shares Kansas City Stock Yards Company of Maine preferred stock referred to. Of the 6,191 shares common

stock registered in my name 14 shares are owned by me, the balance having been endorsed in blank and forwarded to Mr. Edward Morris, of Chicago. The name or names of the beneficiary or beneficiaries are not known to me, and I did not receive any consideration for making such assignment.

Very truly yours, (Signed) Eugene V. R. Thayer.

Union Stock Yards,
Chicago, December 26, 1917.

Federal Trade Commission,
Washington, D. C.

Gentlemen: Replying to your letter, initialed A. B. A., and dated December 20, 1917, stating that you are informed that I hold stock in each of the following companies as enumerated below:

Company: Milwaukee Stock Yards Company, Milwaukee, Wisconsin. No. of shares of stock, common: 250.

[fol. 1761] I beg to advise I am not the owner of this stock, which was put into my name merely for convenience, at which time I endorsed certificates covering same in blank and delivered such certificates to the treasurer of Swift & Company, Union Stock Yards, Chicago, which corporation is the owner.

Yours very truly, W. W. Sherman.

Chicago, Feb. 11, 1918.

Mr. L. L. Bracken, Secy.,
Federal Trade Commission, Washington, D. C.

Dear Sir: Answering your letter addressed to me in care of the Portland Stock Yards Company, Portland, Oregon (No. 42901), which has just been forwarded to me here, relative to the 135 shares of stock of the Portland Union Stock Yards Company, standing in my name:

I wish to say that this stock was issued in my name several years ago, at which time certificates were endorsed

by me in blank and delivered to Mr. C. M. Macfarlane, of Morris & Company, and I had no other interest in said stock.

Yours respectfully, H. J. Nelson.

H. J. Nelson, incidentally, is employed in the office of L. F. Swift, but is here shown as stockholder of record for stock belonging to the Morrises.

Chicago, Dec. 31, 1917.

Mr. L. L. Bracken, Secy.,
Federal Trade Commission, Washington, D. C.

Dear Sir: Answering your favor of December 20th, will reply as follows:

Milwaukee Stock Yards Co., 200 shares.

These shares of stock were placed in my name some years ago merely for convenience, at which time I endorsed them in blank and delivered them to the treasurer of Swift & Company, and I hold these shares of stock for the benefit of Swift & Company and have no other or further interest therein.

Bourbon Stock Yards Co., 1,600 shares.

[fol. 1762] These shares of stock were placed in my name some years ago merely for convenience, at which time I endorsed them in blank and delivered them to the treasurer of Swift & Company, and I hold these shares of stock for the benefit of Swift & Company pension fund and have no other or further interest therein.

St. Paul Union Stock Yards Co., 3,985 shares.

These shares of stock were placed in my name some years ago merely for convenience, at which time I endorsed them in blank and delivered them to the treasurer of Swift & Company, and I hold these shares of stock for the benefit of Swift & Company pension fund and have no other or further interest therein.

Portland Union Stock Yards Co., 409 shares.

These shares of stock were placed in my name some years ago merely for convenience, at which time I endorsed them in blank and delivered them to the estate of G. F. Swift, Chicago, and I hold these shares of stock for the benefit

of the estate of G. F. Swift and have no other or further interest therein.

Jersey City Stock Yards Co., 900 shares.

I answered your inquiry on this stock in my letter of December 13th.

Ft. Worth Stock Yards Co., 100 shares.

These shares of stock were placed in my name some years ago merely for convenience, at which time I endorsed them in blank and delivered them to the treasurer of Swift & Company, and I hold these shares of stock for the benefit of Swift & Company pension fund and have no other or further interest therein.

Yours respectfully, H. A. Chetham.

Frank R. Pegram, Treas.,
Chicago Stock Yards Co., Ames Building,
No. 1 Court St., Boston, Mass.

Referring to your report Schedule "A", Slaughtering and Meat Packing, the Commission requires immediate transmission to it of names and addresses of owners of common stock for whom you as trustee held block reported on page 4, Schedule.

L. L. Bracken, Secretary Federal Trade Commission.

Bracken,
Washn., D. C.

Answering your telegram just received, the stock of Chicago Stock Yards Company held in my name, held by me as treasurer of the corporation in capacity of trustee [fol. 1763] for the holders of bearer warrants. My books do not show who hold the bearer warrants, which are transferable by delivery.

F. R. Pegram, Treasr. Chicago Stock Yards Co.

In view of the extent of concealment of their stockyards interest by the big packers the Commission is unable to say that it has located their complete ownership in the various yards companies. However, with the exception of

the Kansas City Stock Yards, it is probable that the amount of their ownership or control of stockyards still unknown to the Commission is comparatively small.

Extent of Big Packer Interests.—The table following shows to what extent the big packers are financially interested in 28 of the 50 stockyards companies in the United States which conduct livestock markets.

It should be noted from the table that the Big Five either jointly or separately have a controlling interest in 22 stockyards at which live stock are bought and sold. In the 20 companies named in the following list they own a majority of the voting stock:

Brighton Stock Yards Co.
Central Union Stock Yards Co.
Crescent City Stock Yards Co.
Denver Union Stock Yards Co.
Dallas Union Stock Yards Co.
El Paso Union Stock Yards Co.
Fort Worth Stock Yards Co.
Independent Union Stock Yards Co., St. Louis, Mo.
Interstate Stock Yards Co., Jacksonville, Fla.
Jersey City Stock Yards Co.
Kansas City Stock Yards Co.
Milwaukee Stock Yards Co.
New York Stock Yards Co.
Oklahoma National Stock Yards Co.
Pittsburgh Union Stock Yards Co.
Portland Union Stock Yards Co.
St. Joseph Stock Yards Co.
St. Louis National Stock Yards Co.
St. Paul Union Stock Yards Co.
Sioux City Stock Yards Co.

The Union Stock Yards of Omaha is also controlled by the Big Five through 36.8 per cent ownership, plus proxies. The Wichita Union Stock Yards Co. is also controlled through 41.7 per cent ownership plus proxies.

Pages 24 and 25 (table showing big packers' interests in stockyards which conduct live-stock markets) omitted.

Joint interests.—It will also be noted from the table that two or more of the Big Five are jointly financially

interested in the following 15 stockyards at which live stock is bought and sold:

[fol. 1764] Bourbon Stock Yards Co.
Brighton Stock Yards Co.
Denver Union Stock Yards Co.
Fort Worth Stock Yards Co.
Independent Stock Yards Co.
Jersey City Stock Yards Co.
Kansas City Stock Yards Co.
New York Stock Yards Co.
Oklahoma National Stock Yards Co.
Portland Union Stock Yards Co.
St. Joseph Stock Yards Co.
St. Louis National Stock Yards Co.
St. Paul Union Stock Yards Co.
Sioux City Stock Yards Co.
Union Stock Yards Co. of Omaha (Ltd.)

Section 7.—Relative importance of big packer yards.

Though the Big Five have a majority interest in only 44 per cent in number of the 50 stockyards where live stock are bought and sold and have a minority interest in an additional 12 per cent of them—which gives them an interest in 56 per cent of the marketing yards—more than 84 per cent of all the animals which are marketed at stockyards in the United States pass through the yards in which these packers are interested. They have the controlling interest in the marketing yards through which 56.8 per cent of the animals pass and have a minority interest in other yards through which an additional 27.7 per cent of the animals pass.

The live-stock receipts of the stockyards markets in which the Big Five are interested as compared with the receipts of the total number of stockyards are given in the following table:

Receipts of live stock at the 22 yards in which the Big Five have a controlling interest and at the 6 yards in which they have less than a controlling interest, as compared with the receipts at the total 50 stockyards markets in the United States.

(For the year 1916.)

	Receipts at the 50 market yards.	Receipts at the 22 yards controlled by Big Five.	Per cent of total.	Receipts at the 6 yards in which Big Five have less than controlling interest.[1]	Per cent of total.	Per cent of total receipts at the 28 yards in which the Big Five are interested.
Cattle	14,365,900	9,416,852	65.5	3,254,811	22.6	88.1
Calves	2,726,408	1,624,965	66.9	722,332	29.7	96.6
Sheep	19,389,784	11,567,709	59.5	5,822,149	30.0	89.5
Hogs	42,517,364	22,344,493	52.5	12,126,045	28.5	81.0
Total	78,999,456	44,954,019	56.8	21,925,337	27.7	84.6

[1] Chicago is included in this class.

[fol. 1765] The table shows that the market yards in which the Big Five are not interested are comparatively unimportant. It was pointed out on page 15 of this chapter that more than 69 per cent of the animals pass through 12 large markets in the United States, and it should be

(Map attached to page 26 showing location of the 50 stock yards markets and of the interstate slaughtering plants in the United States omitted.)

noted here that the Big Five have majority stock control in each of these markets with the exception of Chicago. It was further stated on page 15 that at Chicago, Kansas City, St. Louis, and Omaha—the four largest yards—more than 52 per cent of the cattle, 43 per cent of the hogs, and 51 per cent of the sheep are received. The big packers, again with the exception of Chicago, control each of these four largest markets.

The 12 large markets are equally important as slaughtering and meat-packing centers. Of the live stock slaughtered by interstate slaughterers in the country 70.7 per cent of all animals or 81 per cent of the cattle, 65.3 per cent of the calves, 78.5 per cent of the sheep, and 58 per cent of the hogs are slaughtered at these 12 centers.

A map showing the location of 50 stockyards markets and of the interstate slaughtering plants in the United States is inserted opposite this page. The proportion of big packer ownership of each yard or plant is indicated by

colors. The relative importance of the various yards and plants is indicated by the size of the symbols, except that, for legibility, a minimum sized symbol has been adopted which somewhat exaggerates the relative importance of the small independents.

Packer Feeding-in-Transit Yards.—The exact extent of the big packers' interest in feeding-in-transit yards is not known. It has been found, however, that some of these yards are owned or controlled by them, such as the Laramie Stock Yards Co. at Laramie, Wyo., and the Union Stock Yards of Lincoln, Nebr., controlled by Armour; Yankton Stock Yards Co. of Yankton, S. Dak., controlled by Swift through the Sioux City Stock Yards Co.; and the Connellsville Stock Yards Co. of Connellsville, Pa., controlled by Wilson & Co., Inc. Swift and Armour proposed buying the Hodge stockyards at Fort Worth, Tex., which were important feeding-in-transit yards, but were advised by their attorneys that such a purchase might be construed as a violation of the antitrust law. The yards were closed later at the request of the packers. The packers control several feeding-in-transit stations in Iowa in connection with their concentration stations.

There is another class of stockyards companies controlled by the big packers, such as the South San Francisco Stock Yards Co.; the Newark Stock Yards Co., and the Nebraska City Union Stock Yards Co., which are not [fol. 1766] public markets, but are used by the packers mainly as private concentration yards in connection with their slaughtering plants.

It is obviously to the advantage of the big packer to control feeding-in-transit stockyards. They buy a large proportion of the animals that are sent to the centralized markets. Those who control the feeding-in-transit yards have access to the shipping records relating to shipments made through their yards. Shipments may be and frequently are diverted at these transit points to different markets from those to which the live stock is originally consigned. This diverting is known to those who control the transit yards.

The acknowledgment of some of the advantages and the general attitude of Armour and Swift toward feeding-in-

transit yards are shown in the following letters from their files:

Union Stock Yards Company of Omaha,
South Omaha, Nebr., January 20, 1916.

Mr. R. J. Dunham, President, Chicago.

Dear Sir: Mr. Van Tassel of Cheyenne Yards has been in the hospital at Denver for some time, undergoing a pretty serious operation. Went out to the hospital to see him yesterday. While he is not at all well, he figures that in the near future he will be able to come to Omaha to discuss with me the sale of his grazing land in the vicinity of the Cheyenne yards, the situation there being very near the same as at Laramie, except that a good deal of the land he uses for grazing purposes he holds under lease. There was nothing said to indicate what he thought he ought to have for his land, transfer of leases, etc., but am a little afraid he is inclined to hold the figure a little high. This, however, will develop a little later on. There is one thing I would like to have you do and that is, ask Mr. Robbins to write to Mr. J. A. Munroe, vice president of the Union Pacific, about this Cheyenne yard proposition, as his doing so will make it a good deal easier to bring about the right kind of an understanding with the Union Pacific. They have been discussing among themselves the advisability of operating some of these yards instead of leasing them to outside parties, and they might take a notion to try it out at the Cheyenne yards.

If we can get hold of the Cheyenne yards, and thereby control of Sidney and Green River yards, both of which Van Tassel now operates, it will give us a cinch on the feeding business along the Union Pacific, and as I look at it, make it easier for the railroad company in that there will be no soliciting by feeding yards to influence business to stop at any particular yards. This will enable them to operate their trains of stock to better advantage, and they will have only one party to deal with instead of several, [fol. 1767] as at present. We would expect, of course, to maintain the same good service at all these yards that we are giving at the Laramie yards.

Have Mr. Robbins kindly mail me copy of his letter to Mr. Munroe.

Yours truly, E. Buckingham.

January 25, 1916.

Personal.

Mr. J. A. Munroe, Vice President,
Union Pacific R. R., Omaha, Nebraska.

Dear Sir: We are in communication, through Mr. Buckingham, with Mr. Van Tassel of the Cheyenne yards, who has been in the hospital for some time, we understand, and may be disposed to part with his feeding-yard holdings on certain conditions.

We are disposed to take over his Cheyenne holdings, and probably those of his in the other yards which go with them, and would like to do so and build these places up to the very highest possible standard, which, with our experience in this line, think we are better prepared to do than anyone else.

We also presume that the operation of all or most of these feeding yards by one interest will eliminate certain adverse influences and enable us jointly to arrange for stopping of shipments where it can be done to best advantage from an operating standpoint.

I hope you can see your way clear to use your good offices in connection with the matter.

With kind regards, I am,

Yours truly, —— ——, Vice President.

RM

May 7, 1912.

Mr. G. B. Robbins,

Armour & Company, Union Stock Yards, Ills.

Hodge Yards

Dear Sir: The following is an extract of telegram received from Mr. J. B. Googins, Fort Worth, Texas, yesterday, viz:

[fol. 1768] "Of Oklahoma City receipts today 1,400 cattle were tributary to our market; they went around us through Hodge. There are in Hodge yards today 20 cars beef cattle also billed for Oklahoma City. Oklahoma City buyers not buying any cattle here today. Hodge yards is a bad thing for this market, especially located as they are, one mile from us. Many cattle go through there for Oklahoma City and other northern markets directly from our own territory that we don't even get a chance at."

I presume we all agree that the Hodge yards are a detriment to the Ft. Worth Stock Yards Company, and it seems as though something should be done toward having them abandoned by the Katy.

In line with this, I asked Mr. Veeder if there was any legal objection to the Ft. Worth yards acquiring these if necessary, and I enclose you herewith a copy of letter from him, together with the copies of letters he refers to, which are all self-explanatory.

I know how you feel regarding the location of the dipping vats at Hicks, and I am taking the liberty of writing this letter to you. If you agree that something be worked out with the Katy which will eliminate this competition, you no doubt can get the stockyard's local attorney's opinion on this matter, and I would be glad to know your views.

Awaiting your reply.

Yours respectfully, H. A. Chetham, C.

GH

June 20, 1917.

Mr. Louis F. Swift: Mr. Harris reports this morning that at an interview with Vice President Haile and Vice President Webb, both of the M., K. & T. Railroad, that Mr.

Webb, the operating vice president, was given instructions to abandon and demolish the Hodge stockyards at once.

This will do away with the competition we have had at the gate of the Fort Worth yards for all these years.

In consideration of this; Armour and ourselves have agreed to give the M., K. & T. our shipments on the fast train from the Fort Worth plant Tuesdays and Thursdays of each week, as long as the rate and service via the M., K. & T. are equal to that of the other lines.

I feel quite sure you will be pleased to know that this competition is going to be discontinued.

I am sending a copy of this letter to Messrs. Dunham, Donovan, and Googins.

A. R. Fay.

ARF-LMC

[fol. 1769] CIRCUMSTANCES OF PACKER ACQUISITION OF YARDS

Section 8.—Reasons for acquisition of yards.

The big packers make the claim that they acquired control of stockyards and built new ones in order to provide adequate facilities for marketing live stock. In an article prepared by them, they said:

The producers of the live stock were unable and did not provide such facilities for caring for their product from the time of the arrival at the market until sold, and the railroad companies did not provide such facilities, so that it devolved upon the packers, at enormous cost, to establish and maintain the stockyards. * * * The packers did not acquire the stockyards and establish new ones at new centers in order to secure any peculiar or mysterious advantage over the industry, but it had to be done in order to secure proper facilities for accommodating the business and furnish fair treatment to the shippers.

The principal reason that the packers have become interested in the yards has been to provide such facilities and extend them as the business expanded. It is doubtful whether such efficient market places would ever have existed had they not been established in this manner.

Swift & Co., in a statement of July 23, 1917, said:

As a matter of fact, the principal reason why packers have become interested in yards at all has been to develop them to the highest point of efficiency. When a live-stock market is young and undeveloped the opportunity to make profits is hardly sufficient to induce private capital to enter the business; it has, therefore, devolved on the packing companies to develop the yards in some cases, so as to establish a market which will attract shipments and to provide facilities for the proper handling of animals. And this the packers have done.

In refutation of this claim the stockyards records show that, in general, private capital did go in and establish adequate and successful stockyards before the big packers ever became financially interested in them, and that the big packers subsequently gained control over those yards. This control passed to the big packers not because returns on the investments were unsatisfactory to the original owners nor because they had not properly equipped and maintained the yards. The big packers acquired the yards because they were profitable and because such ownership and control gave them private advantage in the industry.

Formerly there were several successful stockyards markets which had apparently kept pace with the development of the meat-packing industry. A number of these yards companies being ambitious to expand their business, gave the large packing companies gifts or bonuses as an inducement to establish packing plants at their yards. As the five big packing companies gained a predominant position in the meat-packing business they began to use their power, [fol. 1770] as the principal supporters of the markets at the large stockyards, to have the original owners and organizers of those markets cede to them the control of the yards. The original owners in many cases unwillingly relinquished their control to the packers.

As a result of the policy of first receiving gifts from the yards companies and then obtaining from the original owners an interest in the yards, the big packers gained control of most of the important stockyards of the country. They have established a few stockyards. But of the 28 market stockyards in which one or more of the Big Five

are interested not more than four of them were established by the big packers. At the 12 large markets only two of the yards—St. Joseph and Oklahoma City—were established by any of the big packers. None of the big packers had anything to do with the establishment of the stockyards at either of the four largest markets—Chicago, Kansas City, Omaha, and St. Louis.

The complete corporate records of the principal stockyards companies have not been located. In some cases parts of the records were destroyed, in others they were not to be found by the Commission. But a study of such records as are available shows that the big packers have in the past received gratis more than $9,000,000 from the yards in the form of cash, land, buildings, and bonds, in addition to the many more millions of stockyards stocks which they received free of cost. Practically all of these gifts were paid for out of the large earnings of the stockyards companies.

Section 9.—Nonstock gifts from yards.

Probably the big packers have received larger nonstock bonuses from the Chicago Stock Yards than from any other one yard. Swift & Co., Armour & Co.,[1] and Morris & Co. from 1892 to 1907 received $3,000,000 in bond bonuses from the Chicago Stock Yards. In 1900 Schwarzschild & Sulzberger Co. received $540,000 in cash bonus. In 1900 the Anglo-American Provision Co. received $200,000. In 1902-3 the G. H. Hammond Co.[2] got $500,000 in cash. Just how much and what the big packers have received from the Chicago Stock Yards since 1907 is uncertain, as shown in Chapter V.

A joint legislative committee of the State of Kansas reported that testimony up to 1907 showed that the Kansas City Stock Yards Co. had given to various packing companies bonuses amounting to about $2,400,000 in cash and in stock. The Commission was unable to locate the records of the Kansas City Stock Yards Co. but it secured evidence from other sources which shows that this stockyards com-

[1] Later absorbed by Armour & Co.

[2] Later absorbed by Swift & Co.

pany has given to the big packers the following nonstock bonuses: To Morris & Co. in 1904 $575,000 in cash and a site for a packing plant; to the Cudahy Packing Co. [fol. 1771] $500,000 in cash and a site for a packing plant valued at $129,000; to Sulzberger & Sons Co. in 1898 $200,000 in cash and a packing house site valued at $35,000.

The Union Stock Yards Co. of Omaha in 1887 gave to Swift & Co. $100,000 cash. About 1890 the Cudahy Packing Co. received a site for a packing plant from the Omaha Stock Yards Co. And in 1900 Armour & Co. received from that yards company 20 acres of land.

The St. Louis National Stock Yards Co. in 1893 gave to Swift & Co. $100,000 cash and a site for a packing plant. The same year Morris & Co. received a valuable tract of land from the stockyards. In 1901 the stockyards company gave to Armour & Co. 20 acres of land and in 1903 Armour received $388,000 in cash from the yards.

The St. Joseph Stock Yards Co. gave to Morris & Co. in 1897 $260,000 cash and a site for a packing plant. Also in 1897 this stockyards company gave to Swift & Co. $90,000 and a site for a packing plant. The next year Swift & Co. received an additional $390,000 from the St. Joseph yards company.

The Fort Worth Stock Yards Co. in 1902 gave to Armour & Co. $300,000 of the yards' bonds and 213 acres of land. At the same time Swift & Co. received from the Fort Worth yards $300,000 of the yards' bonds and a site for a packing plant.

The Sioux City Stock Yards Co. gave to the Cudahy Packing Co. real estate and building valued at $100,000. In 1901 that stockyards company gave to Armour & Co. 12½ acres of land.

The following letters show that the big packers were aggressive in demanding bonuses and other concessions from the stockyards companies. These letters do not disclose evidence of a desire on the part of the packers to secure stock in stockyards for the purpose of providing better facilities. On the other hand they do show the power of the packers to force stockyards companies into granting advantageous concessions:

In 1905 Armour and Swift interests purchased about 3,500 acres of land across the river from the present Kansas

City stockyards, located in what is now known as North Kansas City. It has been persistently rumored, and not without foundation in fact, that this land was secured either for the purpose of establishing new stockyards there or to threaten to do so; the latter as a means of securing concessions from the Kansas City Stock Yards Co.

The following extract of a letter written December 28, 1912, by C. M. Brewer to Kidder, Peabody & Co., reporting an interview with an official of the "Armour-Chapin estate," throws some light on this question:

[fol. 1772] Armour, Kirkland B., Armour, J. Ogden, Chapin, Simeon B., Trustee u/w Marietta Chapin, c/o Armour & Co., Chicago, Ill.

In regard to the Armour-Chapin estate, I called at the office of Mr. Chapin this morning, but learned that he resides permanently in New York City. However, his partner referred me to a Mr. Croll who, I believe, is treasurer of the Armour Company. He seemed to be perfectly familiar with the project, as he informed me that Mr. Thayer had tried to get the Armours and Swifts interested some time ago, but was unsuccessful, as the profit to Thayer, etc. seemed to be too great. He tells me that Mr. Thayer tried to sell the common stock to them at $100 per share.

In regard to the packers removing from the Kansas City location, he informed me that Swifts and the Armours have purchased all available property on the other side of the river, and did probably intend to locate their yards over there. He also said that the only parties that Mr. Thayer could get interested were Morris & Co., who did not own any land across the river, and could not obtain any, as the Swifts and Armours had acquired all of it. He said that old P. D. Armour originally held a very large block of this stock, but had sold a considerable amount, and had distributed a very large amount among his relatives; and it is a part of this latter lot that they now hold. He can not see any reason whatever for depositing his stock, as he feels that he will be as well, if not better off, with the present company.

V. D. Slipworth, who wrote the following letter to the president of Sulzberger & Sons Co., was then associated

with that company. He is now vice president of its successor, Wilson & Co., Inc.:

Executive Department
Chicago, January 23, 1913.

Personal.

Mr. G. F. Sulzberger,
New York, N. Y.

Dear Sir: Referring to your letter of January 18, regarding Kansas City yards situation. You no doubt received my letter written the same day in regard to my interview with the Cudahy people. I was talking to Mr. McNaughton today and he told me there have been no developments since our conference but he expected a party in Chicago tomorrow who is coming direct from Thayer and he, in all probability, would have some news to give me next Saturday. I would not be surprised but that they would be made a proposition similar to the one as outlined in your letter. It of course gave Mr. McNaughton no information that any proposition had been made us, but in line with my conference with him last week he spoke of the probability of our working together on an independent [fol. 1773] proposition which I feel is a logical thing to do if we consider it necessary to bring pressure to bear upon the interests now controlling the Kansas City yards.

I have been negotiating quietly for a suitable tract of land, south of our Kansas City plant for some time. I have two tracts in mind; one not so very desirable and one which I consider very adaptable for the purpose. I have been over the ground myself, have blue prints and descriptions of all available property in that locality. I am having Harry Friedberg, a Kansas City lawyer, who is absolutely reliable and very capable, working out the real estate feature. Fortunately he is intimate, personally, with the agent who controls the sale of these lands. This agent, of course, does not know what Friedberg wants the land for. The interesting part of it is that a portion of the land is now owned by a subsidiary corporation of the Kansas City Stock Yards Co.

The tract that I am figuring on as being most desirable is about one-half to three-quarters of a mile south from

our plant and comprises about twenty acres. I am endeavoring to get an option. The asking price is around $2,250 per acre. I quote you below wire just received from Mr. Friedberg:

"Doing everything to carry out your wishes, two parties interested are out of city. Rumor that railroad people desire all property in vicinity has caused temporary boom. If I could take few days time and not crowd matters too much I know I can make better terms. Wire me what is my limit in price and whether or not I can put up any cash money for option. Have already lined up all parties but I would advise going slow in order to save money. Delayed wiring as people out of town expected back yesterday. I learned this morning they will be back Saturday. Have talked to their agents. Am still following it up."

I am writing Friedberg today to use his judgment as regards the opportune time to work out a satisfactory option proposition and telling him that I think he ought to be able to option the property not to exceed $2,000 per acre.

The question of the driveway from this tract to our property and thence to the Cudahy plant is one that may be somewhat difficult to work out, but I believe that it can be done. For instance, from the property to our plant I expect to get authority from the drainage board to construct a driveway on the top of the dike.

I fully realize that if we feel it necessary to take any steps towards organizing a competitive yard that it must be done in a manner that will leave no doubt as to the seriousness of our intentions. In other words, it will be carried out without any element of a bluff. If we are successful in getting the land that I have in mind I do not know of any condition that will prevent us from working the thing out along practical lines.

I feel that now or the immediate future is the opportune time to put this proposition through with the maximum effect, as the interests now in control (particularly the Boston people, who are not practical) would undoubtedly look upon any demonstration of a competitive yard as a [fol. 1774] very serious matter, especially if it leaked out that the same was backed up by two large packing con-

cerns who have heretofore drawn their live-stock supply from the Kansas City yards.

My method of procedure would be for us to acquire the land and right of way, then organize a corporation, ourselves and the Cudahy interests keeping entirely in the background, leaving it to the Kansas City Yard. Co. to find out who was really engineering the deal, which they would have no difficulty in doing, and I believe that before we got very far we would be well paid for our trouble and would be offered satisfactory terms for participation in the Kansas City Stock Yards Co.

I am keeping close to the situation and hope in a few days to be able to advise you of successful negotiations for desirable lands.

I am also in close touch with the Cudahy people, who, I think, are sincere in their desire to work with us, which I am very glad of for the reason that if it should become necessary to take up the independent stockyard proposition it is only naturally that the matter would carry considerably more strength by the fact of two concerns being behind it rather than one. In fact, I do not believe that a proposition backed by only one concern would be taken very seriously by the Kansas City yard people.

Yours very truly, (signed) V. D. Skipworth.

VDS'IW

It is interesting to note from this letter that Sulzberger & Sons Co. was not aware that the reorganization which had just taken place marked the passing of control of the Kansas City yards to the Morrises. Skipworth refers to "the Boston interests now controlling the company," apparently not knowing that the principal Boston stockholders were dummies for Morris (see p. 49).

The following two letters were written by E. A. Cudahy at Chicago to Mr. M. R. Murphy, superintendent of the Cudahy Packing Co. at Omaha:

June 24, 1912.

Mr. M. R. Murphy,
South Omaha, Neb.

Dear Sir: Some time ago, before Swift started his new improvements at South Omaha, he bought a tract of land,

it was reported, on the Iowa side of the river, near the drawbridge. It was not purchased in his name, still it was reported that it was purchased by Swift & Company. There was never anything heard about it, and it may be possible Swift & Company had a bonus from the stock-yard company for putting up improvements. I wish you would see John D. Creighton, or, if McPherson is a director, see if you can learn from either of these men if Swift [fol. 1775] did get a bonus. I think this is the first thing we want to find out.

I wouldn't send off any fireworks about it or talk to any outside people at all. Whatever we do we ought to do in a very quiet way. We might need some fireworks to help us in the end, but we don't want to start them now.

I don't think there is any use of saying anything to Mr. Buckingham at the present time—not until we take it up with the president of the yards; and I will do that after I have had a talk with Mr. McNaughton, after he returns from looking the ground over with you.

Yours truly, ——— ———.

June 24, 1912.

Mr. M. R. Murphy,
South Omaha, Nebr.

Dear Sir: I have your several letters and note what you say in reference to your talk with Mr. Buckingham.

I hesitate about going to the Stock Yard Co. and asking them for a bonus, because I think the policy of the yards is controlled by Armour & Company, and of course they understand the situation thoroughly, and you can't get anything out of them unless you can do it by force. I could never see our way quite clear so that we could really force them to give us a bonus.

I understand you have stopped the work of tearing down and getting ready for grading, and you had not better do anything on it until you hear further from me.

I will make arrangements to see Mr. Dunham some time this week, and in the meantime I wish you and Mr. McNaughton would look over the ground thoroughly and see whether it is possible for us to unload hogs from the tracks that are in at the present time, weigh them and yard them,

and handle them in a way that would be satisfactory to us and to the shipper, and to be able to take care of a part of our supply, if not our entire requirements.

To start a new stockyard and build an entire plant is almost too big a proposition to undertake alone; still, if we could get another packer, like S. & S. and Morris to go in with us, I would be very glad to undertake the establishment of a new market in Council Bluffs, or somewhere on that side of the river.

I wouldn't figure on taking any small amount from the Stock Yard Co.; if we can get anything, we can probably get quite a nice-sized bonus.

If the Government men want to know why you have stopped, tell them we have under consideration the plan of building an entire plant somewhere else.

Yours truly, —— ——.

[fol. 1776] The following letter was writen by G. C. Shepard, vice president of Cudahy Packing Co., to another Cudahy official:

January 31, 1916.

Mr. F. S. Hatch,
The Cudahy Packing Co., Los Angeles, Cal.

Dear Sir: We have your letters of January 26 and 27 with regard to the inter-mountain proposition. We also have your letter of January 28 with regard to the Ogden Packing Co. proposition.

Since we last wrote you we have received a telegram from some bankers at Pocatello, who represent a large body of live-stock men, and in this telegram they have offered us a bonus of $250,000 if we will put up a plant at that point. We are now in correspondence with them to get full details as to just what they expect and what they can offer in the way of live stock, what power would cost, etc., etc.

Pocatello is not as good a location as Salt Lake, but they certainly know how to come through with a bonus proposition. What Mr. Cudahy would like to know is, How much of a bonus do you figure the commercial interests in Salt Lake would be willing to give us if we were to either take the intermountain plant over and operate it or build another plant in Salt Lake? If we could get a bonus of, say,

$250,000 we do not think there would be any hesitation whatever in going ahead with that intermountain proposition.

We would like to have your opinion on this subject. In the meantime we will be compelled to give these people at Pocatello some sort of answer. At the same time your opinion as to the possibility of raising a bonus in Salt Lake would go quite a long ways with us. If you think it would be raised without any difficulty there we might be inclined to string the Pocatello people along a little further until you could advise us with some degree of definiteness.

Kindly let us hear from you.

Yours very truly, The Cudahy Packing Co., G. C. Shepard.

GCS H

Section 10.—Methods of acquiring control of yards.

The following are the chief methods by which the big packers acquired control of the principal stockyards companies:

Receipt of shares of stock as gifts for locating or expanding packing plants at the yards; receipt of stock dividends on stock already held; and occasional cash payment for small amounts of stock.

[fol. 1777] Organization of new companies to acquire control over established stockyards.

These two methods of acquiring stockyards are best explained by giving the history of how they acquired control over certain important stockyards companies.

Through Capital Stock Gifts and Bonuses.—Examples illustrating this method of acquiring control over certain important stockyards are given below.

Union Stock Yards Co. of Omaha.—The Union Stock Yards Co. of Omaha was organized in 1884 with a capital stock of $1,000,000. In 1886 this stockyards company gave to Fowler Bros. (subsequently absorbed by the National Packing Co.) as a bonus for locating a plant at the yards $100,000 of its stock and sold to Fowler an additional $100,000 of its stock for $75,000. The capital stock of the stockyards was thereby increased to $1,200,000, $125,000 of

which was represented as appreciation of assets without the addition of cash receipts.

In 1887 the yards company gave to Swift & Co.[1] as a bonus for establishing a plant there $100,000 of its stock and agreed to sell it $100,000 additional stock of the yards company at par. The Swifts [1] bought $23,200 of the $100,000 additional stock offered. The same year the yards company gave as a bonus to the Armour-Cudahy Packing Co. $150,000 of its stock (of which the Cudahys received $103,100 and Armour $46,900), and agreed to sell the packing company $100,000 additional stock at par. In order to pay these gifts to the packers, and to sell them additional stock the authorized stock of the yards company was increased from $1,200,000 to $2,000,000 and the property assets of the company written up $250,000—the amount of the gifts.

From 1887 to 1889 Armours' holdings of stock in the Omaha stockyards increased from $46,900 to $166,900. In the same period the Cudahys' holdings increased from $103,100 to $159,400. The Swift holdings remained stationary.

In June, 1890, a stock dividend of $1,800,000 was issued by the company, which was a dividend of 90 per cent. In December, after the stock bonus, Armour held $407,900 of the stock. He probably, before the declaration of this dividend, bought an additional $47,800 of the stock, which, [fol. 1778] together with his $166,900 already held, would have given him a stock bonus of $193,200. Or he may not have bought until after the declaration of the dividend, in which case he would have received a dividend of $150,200 on his $166,900 and brought $90,800 stock to make his total holdings $407,900.

The Swifts sold some of their stock in 1890, either before or after the declaration of the 90 per cent stock dividend,

---

[1] From the records available in most cases it is impossible to tell whether the gifts and bonuses by the yards were received by the packer families or the packing companies. Hence, where "Swift & Co." is used it may mean "the Swifts," and vice versa. The same is true for the other packer families and companies.

because in December, 1890, they had on the books $195,800, whereas a 90 per cent dividend on their $123,200 holdings of 1889 would have given them a dividend of $110,900, or a total of $234,100. They may have sold $38,300 stock after the declaration of the dividend. Or they may have sold $20,200 of their $123,200 before the declaration of the stock dividend, in which case they would have received $92,800 stock dividend on their holdings of $103,000, which would have given them the $195,800 which stood to their credit on the books at that date.

The Cudahys also sold a large part of their holdings in the Omaha yards in 1890 either before or after the declaration of the stock dividend. A 90 per cent stock dividend on the $159,400 holdings of 1889 would have given them a dividend of $143,500, or a total holding of $302,900. So they may have sold $192,500 after the dividend so as to decrease their holdings to $110,400 in December, 1890. Or they may have sold $101,300 just before the dividend, so that they received a 90 per cent dividend on only $58,100, or $52,300 as a dividend. This would make their holding $110,400 as it was in December, 1890.

In December, 1891, the Armour holdings of stock had increased to $535,400, which was an increase of $127,500 over the previous year. This additional stock was probably bought in the open market. At the same time the Cudahy holdings were reduced to $57,700, which was a reduction of $52,700. This stock was probably sold in the open market.

In 1893 the Omaha yards declared a stock dividend of 25 per cent which on Armours' holdings of 1891 would have given them an additional $133,800, making a total holding of $669,200. In 1897 the stockyards company gave to the Armours as a stock bonus an additional $750,000, which would have given them a total holding of $1,419,200. In 1898 the records show that the Armours held $1,511,100 of the stock; so they must have bought a little additional stock. In 1903 a 25 per cent stock dividend was declared, which would, on the basis of the Armour holdings in 1898, give them a stock dividend of $377,800, which, together with the $32,800 stock bonus which was given the Armours in November of that year, made their holdings $1,921,700.

The Commission ascertained that in 1916 the Armours (excluding the Allertons) had a holding of $2,080,800 of stock in the Omaha Yards.

[fol. 1779] If the Armours now own only $2,080,800 of the capital stock of the Omaha yards, certainly less than 25 per cent of their holdings represents stock which was actually purchased. More than 75 per cent of it represents stock gifts and stock dividends.

Some time after 1891 the Cudahys disposed of all but 45 shares of their interest in the Omaha yards, and the Swifts disposed of a part of theirs. The two 25 per cent stock dividends—one in 1893 and the other in 1903—would have increased the Swift holdings of 1890 to $305,900 in 1903, providing none of their stock had been sold up to that time. But in 1916 L. F. Swift is found holding $73,600 and E. F. Swift $102,000, a total of only $175,600. The exact extent to which they realized on their gifts and stock dividends in this company is not known. However, it is evident that practically their entire holdings in the Omaha yards were a result of stock gifts and did not represent cash investment.

Fort Worth Stock Yards Co.—In 1893 the Fort Worth Stock Yards Co. was incorporated in the State of West Virginia with an authorized capital stock of $1,000,000. By 1900 the largest stockholders in the company were J. R. Hoxie, of Chicago, and L. V. Niles and G. W. Simpson, of Boston. They together owned about two-thirds of the stock, while the rest of it was held by local investors at Fort Worth. At that time there were only a few small packing plants at Fort Worth and the yards attracted little live stock. The local owners in the yards together with the Fort Worth Chamber of Commerce decided to induce some of the large packers to locate packing plants there. So in January, 1902, they made agreements with Armour & Co. and Swift & Co. whereby in consideration of these two packers establishing packing plants at Fort Worth the two packing companies were to be given as bonuses about two-thirds of the stock in the stockyards company, $600,000 of 5 per cent bonds of the stockyards company, and $100,000 in cash.

In order to carry out the above agreement with Armour & Co. and Swift & Co., in 1902 the capital stock of the Fort

Worth Stock Yards Co. was increased from $1,000,000 to $2,000,000 and the company issued $1,200,000 of 5 per cent bonds. Of these stockyards securities the two big packers were given as bonuses $1,320,000 ($660,000 apiece) of the stock, or 66 per cent of the total, and $600,000 ($300,000 apiece) of the bonds. Messrs. Niles and Simpson retained the balance of the stock ($680,000). The packers were paid the additional $100,000 by the citizens.

In 1903 the authorized capital stock of the Fort Worth Stock Yards was further increased from $2,000,000, to $3,000,000. From that date to 1917, the outstanding capital stock was increased from $2,000,000 to $2,750,000. As to whether this increase of $750,000 was declared as stock [fol. 1780] dividends or represents investment of outside money the Commission is unable to state. Since 1902 Swift & Co. and Armour & Co. have bought on the outside little or no stock of the stockyards company, as their reported holdings in 1916 were 66⅔ per cent of the total.

Oklahoma National Stock Yards Co.—As an inducement to get them to locate packing plants at Oklahoma City the chamber of commerce of that city in 1909-10 gave to the Morrises and the Sulzbergers a cash bonus of $600,000 ($300,000 each) and sold to the Morrises at a low price from 1,000 to 1,100 acres of land just outside the city which they paid for by selling off a small part of the lots. The City council exempted the packers from all city taxes on their property for a period of five years, gave them free 4,000,000 gallons of city water per day for their plants, and agreed to build a boulevard direct to their property. The street railway company also agreed to build a double-tracked car line to their property.

These packers at that time (1910) organized the Oklahoma National Stock Yards Co. with a capitalization of $1,000,000, of which the Morrises got $750,000 and the Sulzbergers $250,000. They gave to the stockyards company 140 acres of land which they got from the chamber of commerce and the balance of the land (after selling a small part of it) was turned over to the South Oklahoma Town Co., which was organized with a capitalization of $1,000,000 based on the land value. It is not known just how much cash these packers paid into the yards company

to build the pens and other yards equipment, but it was probably less than $500,000. They evidently received in cash from the people of Oklahoma City more than they paid into the stockyards company.

St. Louis National Stock Yards Co.—The St. Louis National Stock Yards Co. was organized in 1872 with a capital stock of $1,000,000. Morris & Co. located a plant there in 1889. Morris & Co. and Swift & Co. by 1893 had secured control of the stockyards company, but owing to the fact that the Commission was able to locate only a few of the records of the yards company it is unable to say just how these two packers secured control of the yards. Early in 1893, of the $1,250,000 of the stock outstanding the Morrises held $496,800 and the Swifts $370,200. That year the stockyards company gave to Swift & Co. $100,000 cash as a bonus. Later that year the capital stock of the yards was increased to $2,500,000, that is doubled.

In 1896 the capital stock of the yards was increased to $4,000,000. This increase in capital stock, as well as the previous one in 1893, was a stock bonus based on appreciation of the earning power of the yards, as were most of [fol. 1781] the stock increases at other yards. Then in 1900 the capital stock of the company was further increased to $5,000,000. In 1901 Armour received 20 acres of land from the yards, and at that time Armour & Co. acquired $300,000 of the company's stock, and in 1903 the yards gave Armour & Co. a cash bonus of $388,000.

The packers (excluding the Allerton interest) in 1916 held 70.1 per cent of the stock in the St. Louis National Stock Yards Co.—Morris, $1,503,600; Swift, $1,195,500; Armour, $300,000; and Wilson, $[illegible],500.

St. Joseph Stock Yards Co.—In 1895 a small stockyards and two small packing plants were in operation at St. Joseph. The parties interested in the stockyards succeeded in inducing Swift & Co. to establish a larger packing plant there. So in 1896 the St. Joseph Stock Yards Co. was organized and incorporated with a capitalization of $500,000, with Swift & Co. the majority stockholder. It is not known whether this stock was in whole or in part a gift to Swift & Co.

In 1897—the year after its organization—the stock of the yards was raised $750,000 by cash subscription, and in 1899 it was raised an additional $250,000 by cash subscription. Swift & Co. contributed its pro rata share to these cash subscriptions—about $540,000. But about the same time Swift & Co. received $480,000 cash bonuses from the stockyards company, which would make Swift & Co.'s net cash subscription to the stock only about $60,000. In 1901 the capital stock was raised an additional $150,000 by cash subscription, of which Swift & Co. paid its share. In 1907 the stockyards company declared a stock dividend of $850,000, of which Swift & Co. received about $459,000. So Swift & Co. paid only a small net amount for its $1,324,500 stock in the St. Joseph Stock Yards Co., besides having its packing-house site given to it by the yards company.

In 1897 the St. Joseph Stock Yards Co. gave to Morris & Co. $260,000 cash, part of which was probably invested by Morris & Co. got its pro rata share of the $850,000 stock dividend. So Morris & Co.'s $739,000 stock in the St. Joseph Stock Yards Co. cost little net cash.

St. Paul Union Stock Yards Co.—In 1897 the owners of the St. Paul Union Stock Yards Co. gave to Swift & Co. as an inducement for locating a packing plant there $1,000,000 stock in the stockyards company. This was done by increasing the capital stock of the yards from $1,000,000 to $2,000,000 through a declaration of a stock dividend.

[fol. 1782] In 1916 the owners of the St. Paul Union Stock Yards Co. gave to Armour & Co., as an inducement for locating a plant there, $500,000 of the yards company's stock. This was done by declaring a 25 per cent stock dividend, which through the stockholders was turned over to Armour & Co. At the same time Armour & Co. received an additional bonus of $100,000 of the yards stock and $400,000 in cash from the citizens of St. Paul, part of which stock the citizens bought from Swift & Co.

So Swift & Co. did not pay anything for the $974,500 stock which it holds in the St. Paul Union Stock Yards Co. Armour & Co. bought only $9,000 of the $609,000 which it holds in that yards company, but Armour & Co. received an additional $400,000 cash bonus from the citizens of St. Paul.

Sioux City Stock Yards Co.—The $400,000 of stock of

the Sioux City Stock Yards Co. owned by Armour & Co. was given as a bonus in 1903. In 1893 the Cudahy Packing Co. was given a bonus of $200,000 of the stock of the Sioux City Yards, and since that date has apparently sold $65,900 of that stock and still holds $134,100. In addition to receiving all their stock in the stockyards gratis, both Armour and Cudahy were given packing-house sites at Sioux City. The Swifts own $1,693,900 of the voting stock of the Sioux City yards, which was apparently bought. The stock has proved to be a good investment for the Swifts, and it was evidently acquired as an investment because Swift & Co. at the time of the acquisition of the stock had no packing plant at Sioux City.

Milwaukee Stock Yards Co.—The Milwaukee Stock Yards Co. opened for business in 1905. Originally these yards were owned by the National Packing Co. In 1912 they were conveyed to Swift & Co., together with the Plankinton Packing Co., as a result of the liquidation of the National Packing Co. The Milwaukee Stock Yards' capital was increased from $10,000 to $200,000 in 1916 through a stock dividend of $190,000.

Salt Lake Union Stock Yards Co.—In September, 1916, the Salt Lake Union Stock Yards Co. gave to the Cudahy Packing Co. as a bonus for locating a plant at those yards $25,000 of its capital stock. As an additional inducement for locating a plant there the citizens of Salt Lake City, associated under the name of the "Industrial Co.," gave to the Cudahy Packing Co. a packing plant valued at about $100,000 and a $25,000 bonus, $14,000 of which was paid in stock of the stockyards company by the stockholders of the yards company.

The Salt Lake Union Stock Yards Co., in order to fulfill its obligation to the Cudahy Packing Co., increased its authorized capital stock from $100,000 to $250,000 and declared the additional capital stock "fully paid-up treasury [fol. 1783] stock," to be sold by the company or to be given to the stockholders as stock dividends. It was out of this additional capital stock the $25,000 was given to the Cudahy Packing Co., and $50,000 to the old stockholders, $14,000 of which the stockholders gave to the Cudahy Packing Co. In addition, the yards company sold stock to the

amount of $19,600 for cash at par, making a total outstanding capital stock of $194,600.

Wichita Union Stock Yards Co.—The Wichita Union Stock Yards Co. opened for business in 1887 with a capital stock of $200,000. In November, 1906, it had an authorized capital stock of $600,000.

The following extract from a contract between the Wichita Union Stock Yards Co. and the Cudahy Packing Co. illustrates the method and negotiations by which the Cudahy Packing Co., in November, 1906, acquired its first interest in these yards:

First party (Wichita Union Stock Yards Co.) further agrees that it will transfer on the corporate books of first party and deliver to second party one-sixth of its entire capital stock. Said transfer to be made and said stock dividend to the Cudahy Packing Company on the 17th day of November, 1906, or in a reasonable time thereafter.

In consideration whereof

The second party—The Cudahy Packing Co.—on its part agrees:

(a) To continue the operations of said packing plant for a period of ten years from the date on which it shall take possession of said plant under the said contemplated purchase.

(b) Second party further agrees that for the period of ten (10) years in which the second party agrees to continue the conduct of said packing business in Wichita, Kansas, at said packing plant, and for a further period of ten years thereafter all purchases of hogs, cattle, or sheep made by the second party for use in connection with the conduct of the business of said packing plant at Wichita, Kansas, shall be made from the stockyards of said first party, and shall be delivered and weighed through said stockyards of first party at Wichita, Kansas, provided, however, that a sufficient supply of stock of the proper grade and quality for the operation of said packing plant can be procured at the yards of said first party at Wichita, Kansas. In case said second party shall purchase stock for use in its packing plant at Wichita from other stockyards while there is an adequate supply of stock of the proper grade and quality at the yards of first party in

Wichita, Kansas, then said first party shall be entitled to its regular charge for handling said stock, whether same is delivered through its yards or not. * * *

[fol. 1784] As a result of this contract with the Cudahy Packing Co. the Wichita Union Stock Yards Co. increased its authorized capital stock to $700,000 and gave to the Cudahy Packing Co. $111,566.66 of its stock.

In November, 1908, the yards company gave to the Cudahys in consideration for increasing their packing plant capacity an additional bonus of $300,000 of its capital stock which was made by increasing its capital stock to that amount—making an outstanding capitalization of $1,000,000. At this time the city of Wichita also gave to the Cudahy Packing Co. free water and sewerage facilities.

In November, 1909, the yards company again increased its outstanding capital stock $400,000—making the outstanding capitalization $1,400,000. Of this $400,000 there was distributed as a stock dividend $150,000 and $250,000 was sold to the stockholders for $130,000 in cash—an average of $52 per share.

The Cudahys admit that they now own $584,100 of the stock of the Wichita Union Stock Yards Co. At least $473,300 of it was given to them free of cost and the balance if bought, was secured for much less than par. The yards company now carries on its books as an asset "packing-house contracts" $516,666, which are the contracts it has with Cudahy Packing Co. and with the Jacob Dold Packing Co. It is not known whether or not Dold received any of the stock in these yards in return for the contract.

Through Organization of New Companies.—In three instances the big packers have used the method of organizing new companies to acquire control of stockyards which are already in operation. It is an inexpensive method of acquiring control of yards as the examples here given show.

Kansas City Stock Yards Co.—The Kansas City Stock Yards Co. of Missouri was organized in 1871 with a capitalization of $100,000. Up to 1887 its capitalization had increased to $2,500,000. In October of that year its capital was increased to $4,040,000 of which $1,515,000 was a stock dividend, $505,000 was new subscription. In 1890 a stock dividend of $404,000 was paid. In 1892 Armour was given

a stock bonus of $500,000 and the real estate of the yards company was appreciated that amount. In 1907 a joint legislative committee of Kansas made the following statement in reference to the increase of the capitalization of the Kansas City Stock Yards Co.:

The records show that during twenty-six years of consecutive business the company paid on the capital actually invested in the business an average of 32½ per cent annually in cash dividends to stockholders and 34½ per cent in stock and real estate dividends to stock holders, or a total of 67 per cent in dividends was paid each year for twenty-six years. At various times during the twenty-six years the company was recapitalized, and in each instance two shares of new stock were given for one of the old. [fol. 1785] This record also shows that hardly two and one-half million dollars has been paid by the stockholders in cash to the treasurer of the company; that the balance of the outstanding stock (or five million dollars) is the capitalization of earnings, or the amount that the real estate is presumed to have increased in value during this time.

The testimony shows that since the last reorganization the company has issued $1,500,000 in bonds, and during this time its capitalization has been raised one and one-half millions, or to $9,000,000, and that the bonds are being retired and stock substituted in their stead.

By 1912 the Kansas City Stock Yards Co. had increased its outstanding capital stock to $8,160,000. Up to that time each of the Big Five had a little interest in the yards company but their combined interest was comparatively small. At that time Edward Morris, Sr. conceived a plan whereby he succeeded, at little cost to himself, in gaining control of the Kansas City stockyards property. His plan is fully set forth in the following letters which, October 24 and 30, 1912, passed between him and Kidder, Peabody & Co.:

October 24, 1912.

Messrs. Kidder, Peabody & Co.,
115 Devonshire Street, Boston, Mass.

Dear Sirs: I am proposing to organize a corporation under the laws of the State of Maine under the name of "Kansas City Stock Yards Company of Maine," for the purpose of acquiring all or a substantial majority of the

stock of the Kansas City Stock Yards Company of Missouri.

The new corporation will have an authorized capital stock of $11,500,000 of which $9,000,000 par value will be preferred stock and $2,500,000 par value will be common stock; both the common and preferred shares to be of the par value of $100 each.

The preferred stock will be entitled to 5% cumulative dividends, payable quarterly, the first dividend to be payable February 1st, 1913. The preferred stock will also be preferred to the extent of par and accrued dividends in case of liquidation but will have no voting power, except in case of failure to pay two consecutive dividends on the preferred stock, in which event it shall thereafter have full voting powers until all accrued and unpaid dividends have been paid in full. No mortgage or other encumbrances shall be placed upon the property of the new corporation without the consent of at least two-thirds in interest of the preferred stockholders.

[fol. 1786] I propose to offer to the stockholders of the Kansas City Stock Yards Company of Missouri the opportunity to exchange each share of stock which they own in the Missouri corporation for one share of the preferred stock of the new Maine corporation, and I propose to pay to each stockholder of the Missouri corporation, who elects to make such exchange, the sum of $10 in cash for each share so exchanged. This offer is to be conditional upon not less than seventy-five percent. in interest of the stockholders of the Missouri corporation exchanging their stock in accordance with this offer, provided, however, I may at my option make the exchange if a less number of stockholders elect to exchange their stock.

The amount of preferred stock of the Maine corporation to be issued in the first instance will be limited to the amount of stock of the Missouri corporation which is exchanged in accordance with the above offer.

Of the $2,500,000 of common stock to be issued by the Maine corporation, I propose to take and pay for $1,250,000 par value at $50 per share in cash, and will cause the remaining $1,250,000 par value to be offered for subscription at $50 per share to such of the stockholders of the Missouri corporation as elect to exchange their stock for preferred stock of the Maine corporation on the basis of

one (1) share of the Maine corporation for every seven (7) shares of the Missouri corporation. Where the number of shares owned by any one individual is not divisible by seven, if the excess number of shares owned by him is four or more he shall have the right to subscribe for one (1) additional share of stock. If the excess number of shares is less than four (4) he shall have no right to subscribe in respect of the excess number of shares. I propose that the taking of this remaining $1,250,000 par value of common stock at $50 per share shall be underwritten, for which I propose to pay an underwriting commission of $62,500.

I desire to secure your services in procuring the consent of the stockholders of the Kansas City Stock Yards Company of Missouri to the exchange of stock herein proposed, and if you will undertake the matter, I will pay to you the sum of $25,000 in case not less than seventy-five per cent in interest of the stockholders elect to make the exchange, or if I elect to make the exchange with a less percentage of the stockholders consenting thereto, and I will pay you in addition the sum of seventy-five cents per share for every share of the stock of the Missouri corporation which is exchanged in addition to the seventy-five per cent hereinbefore mentioned.

The proceeds of the common stock of the Maine corporation will be used by me for the following purposes:

To pay the sum of $10 to each of the stockholders of the Missouri corporation who elects to make the exchange; to the payment of the underwriting commission of $62,500; to the payment of your compensation, and to the payment of all legal and other expenses incurred in connection with the carrying out of this proposition, and the balance remaining will be paid into the treasury of the Maine cor- [fol. 1787] poration, so that the entire amount of common stock of the Maine corporation and the entire amount of preferred stock to be issued in the first instance will be issued as fully paid in exchange for the stock of the Missouri corporation which is exchanged in accordance with this offer, and in addition the net amount of cash remaining from the proceeds of the common stock which is to be paid into the corporation as hereinbefore stated.

The opportunity to exchange the stock hereinbefore pro-

vided for will remain open until December 2nd, 1912, unless the time for such exchange is extended by me.

If you undertake to arrange for the exchange of the stock on my behalf, I agree from time to time to provide you with such preferred stock of the new Maine corporation, such amount of cash and such amount of common stock of the new Maine corporation as may be required to be issued and paid to the stockholders of the Kansas City Stock Yards Company of Missouri.

If the foregoing plan should not be carried out because a sufficient number of stockholders of the Kansas City Stock Yards Company of Missouri fail to consent thereto I will reimburse you for all legal expenses which you may have incurred in the premises.

Yours very truly, Edward Morris.

October 30, 1912.

Edward Morris, Esq.,
Chicago, Ill.

Dear Sir: We acknowledge the receipt of your favor of October 24, relative to our acting in connection with the proposed exchange of stock of the Kansas City Stock Yards Company of Missouri for stock of the Kansas City Stock Yards Company of Maine and will act for you in the matter upon the terms stated in your letter.

We understand that since your letter of October 24 was written, the following modifications have been agreed to by you:

First. Stockholders in Kansas City Stock Yards Company of Missouri shall have the right to subscribe for fractions of a new share of common stock and the right to subscribe to fractions of the new shares shall be assignable.

Second. As we are to act as depositary, we are to be paid the usual fees of a depositary in addition to the other compensation provided for in your letter of October 24.

Third. If not less than 75 per cent in interest of the stockholders of the Kansas City Stock Yards Company of Missouri have deposited their stock with us on or before December 2, 1912, you will, at our request, extend the time

for making exchanges of stock for a period of not exceed-
[fol. 1788] ing six months.

Very truly yours, —— ——.

October 31, 1912, Kidder, Peabody & Co. issued to the stockholders of the Kansas City Stock Yards Co. of Missouri the following circular:

To the stockholders of the Kansas City Stock Yards Co. of Missouri:

The directors of your company have unanimously approved the following plan for the exchange of stock in your company for the stock of a proposed new company to be known as the "Kansas City Stock Yards Company of Maine," having a capitalization of $11,500,000, divided as follows:

Common Stock (par value of $100 each)	$2,500,000
Preferred stock (par value of $100 each)	9,000,000

Entitled to 5 per cent cumulative dividends quarterly, the first dividend to be payable February 1, 1913. The preferred stock will also be preferred to the extent of par and accrued dividends in case of liquidation, and will have no voting power except in case of failure to pay two consecutive dividends on the preferred stock, in which event it will thereafter have full voting powers until all accrued and unpaid dividends have been paid in full. Provision will be made to the effect that no mortgage or other encumbrance shall be placed on the property of the Maine corporation except with the consent of at least two-thirds in interest of the preferred stockholders.

Stockholders of the Kansas City Stock Yards Company of Missouri may exchange each share of stock in the Missouri corporation for one (1) share of the preferred stock of the new Maine corporation and $10 in cash, and such of the stockholders of the Missouri corporation as elect to assist this offer may subscribe to one share of the new common stock of the Maine corporation at $50 per share for each seven (7) shares in the Missouri corporation owned by them and deposited.

Rights to subscribe for new common stock will not be assignable, except that rights to subscribe to fractions of one new share may be purchased or sold so as to enable the holder to subscribe for one full share.

The amount of preferred stock of the Maine corporation to be issued in the first instance will be limited to the amount of stock of the Missouri corporation which is exchanged in accordance with the above offer.

We mention that the entire issue of common stock has been subscribed for and underwritten, payable in cash at $50 per share, which insures the successful placing of the common shares in case the present shareholders do not avail of the offer.

The cash proceeds of the common stock will be applied in the first instance to the payment of the $10 per share to be paid to the stockholders of the Missouri corporation, to the payment of an underwriting commission of 5 per cent on the $1,250,000 of common stock which is offered for [fol. 1789] subscription as above stated, and to the payment of the other expenses of carrying out the proposed plan, including the compensation of the bankers, and the balance will be paid into the treasury of the Maine corporation.

The entire amount of preferred and common stock of the new Maine corporation to be issued in the first instance will be issued as fully paid for the stock of the Missouri corporation which is exchanged and the cash to be paid into the Maine corporation, as above stated.

The directors of the Kansas City Stock Yards Company of Missouri and the largest stockholders of that Company have already agreed to deposit their holdings in exchange for the preferred stock of the new Maine corporation and to subscribe for the full quota of common shares to which they are entitled.

We enclose herewith form of consent to exchange of stock and subscription to common stock of the Maine corporation. Stockholders who desire to avail themselves of the opportunity to exchange their stock should sign the enclosed assent and forward it to the undersigned, together with their certificates of stock of the Missouri corporation indorsed in the blank. They will receive in exchange there-

for our negotiable receipt. Such of the stockholders as elect to exchange their stock and desire to subscribe for the new common stock, should also fill out the subscription agreement.

Unless at least 75 per cent in interest of the stockholders of the Missouri company have deposited their stock for exchange with us on or before December 2, 1912, we may, at our option, be relieved from all liability hereunder by returning to the depositing stockholders the stock deposited by them.

In case the plan is declared operative we shall, upon receipt of the stock of the Maine corporation, be prepared to retire our receipts, issuing therefor such an amount of preferred shares and such an amount of common shares in the Maine corporation, plus balance due in cash, to respective depositing shareholders, as receipts call for.

No charge will be made to depositors.

Kidder, Peabody & Co.,
115 Devonshire St., Boston, Mass.

Boston, Oct. 31, 1912.

Accompanying and printed as a part of the above circular was the following statement:

We, the undersigned, directors of The Kansas City Stock Yards Company of Missouri, having carefully considered the offer of Kidder, Peabody & Co., set out in their circular under date of Oct. 31, 1912, and being unanimously of the opinion that is for the best interests of our shareholders [fol. 1790] to accept the same, have agreed to deposit our shares (except qualifying shares) and have subscribed to such shares of the common stock of the Kansas City Stock Yards Company of Maine as we are entitled to; and we recommend the same action on the part of all stockholders.

Charles F. Adams, Charles F. Morse, Walter Nunnewell, Francis L. Higginson, Eugene V. R. Thayer, C. Minot Weld, Frank H. Damon.

Some of the stockholders of the Missouri company objected to reli-quishing their proportion of control of the

yards property. Below is a sample of Kidder, Peabody & Co.'s reply to such objectors:

November 29, 1912.

John A. Chapman, Esq., Agent,
1212 Chicago Stock Exchange Bldg.
Chicago, Ill.

Dear Sir: Acknowledging your letter of November 27, and replying categorically to your questions, we are informed by interests identified with the board of directors.

1. The assets of the Maine corporation in the beginning will consist of the deposited stock of the Kansas City Stock Yards Co. of Missouri and some cash in bank derived from the sale of common stock. The stock of the Missouri corporation deposited in exchange for stock of the Maine corporation will, we understand, be transferred to the Maine corporation.

2. You are correct in stating that each seven shares of the old company is to have the right to subscribe to one share of the common stock of the new company, and that this provides for the issuance of slightly more than one-half of the proposed issue of common stock of the new company. The balance has been sold at $50 per share on the same terms to new interests, which the management firmly believe will stimulate the business and make it certain that the property will earn a sufficient amount to insure dividends on the new preferred and common shares equal at least to the rate of dividend you are receiving on your present holdings. They inform us at the present time that they have heretofore earned a 6 per cent dividend on the stock, except that for the six months ending June 30, 1912, the earnings were $30,000 less than the amount of dividend paid. Since that time the earnings have been showing a little better.

[fol. 1791] 3. The only basis on which a depositing shareholder can subscribe to the new issue of common stock is that outlined in our circular, namely, one share of common for every seven shares of old stock deposited.

4. The cash proceeds of the common stock—$2,500,000 at $50 a share—amount to $1,250,000. The first charge of $10 a share to the present outstanding shares of the Kansas

City Stock Yards Co. of Missouri amounts to some $880,000, the second charge (an underwriting commission of 5 per cent to underwrite approximately one-half the common capital to be offered to the depositing shareholders, amounting to about $1,250,000 par value) amount to $62,500. In addition to that our counsel fees, bankers' fees, and expenses incident to deposit of the stock, it is expected all of this is accomplished that approximately $250,000 would be paid into the treasury of the Maine corporation.

5. Regarding the position of a nondepositing stockholder, a stockholder in the old company is, of course, under no obligation to deposit his stock, but the management believe that under the proposed arrangement the old stock represented by the new preferred will be on an absolutely permanent 5 per cent basis, and the stockholders who avail themselves of the privilege of taking the new common stock to which they are entitled will eventually receive more than their present dividends on the old stock in dividends on both classes of the new stock and be able to dispose of their new shares (should they so desire) in a broader market than they have had for the old stock. Should these conditions materialize, there may be some question as to the future basis of exchange for the stock of the old company.

6. We are informed that the reasons for this proposed exchange are similar to those in respect to the Chicago Junction and Union Stock Yards Co. of Chicago, namely, to cement with the company large interests active in using the property and insuring their being domiciled at this particular point for the transaction of their business in the future as in the past.

Very truly yours, (Signed) Kidder, Peabody & Co.

In accordance with Morris's plan the Kansas City Stock Yards Co. of Maine was incorporated on December 26, 1912. By April 5, 1913, through Kidder, Peabody & Co., the holders of $7,930,400 of the common stock of the Missouri company had exchanged their holdings for $7,930,400 of the preferred stock in the Maine company plus $793,304 in cash. In this exchange the holders of the Missouri company's stock could have bought $1,132,900 (one-seventh of $7,930,400) of the common stock of the Maine company for $566,450 ($50 per share), but they actually bought only

$1,055,900, for which they paid $527,950 ($50 per share). For its service in this matter Kidder, Peabody & Co. was paid $39,328.

[fol. 1792] Subsequent to April 5, 1913, there was an additional $61,100 of the common stock of the Missouri company exchanged for the same amount of preferred stock of the Maine company plus $6,110 cash. This made the outstanding preferred stock of the Maine company, $7,991,500 and left $168,500 of the common stock of the Missouri company yet unacquired by the Maine company. This remaining $168,500 common stock of the Missouri company was bought for cash by the Maine company, for part of which it paid $125 per share.

Edward Morris and others bought $1,444,100 of the common stock of the Maine company for $722,050 ($50 per share), which, together with the $1,055,900 of stock given in exchange for stock in the old company, brought its outstanding common stock up to $2,500,000. On May 1, 1916, the Kansas City Stock Yards Co. of Missouri was liquidated and its property was taken over by the Kansas City Stock Yards Co. of Maine. The bonds of the old company were assumed by the new company.

Thus the Morrises succeeded in gaining control of the Kansas City Stock Yards Co. It is known that Edward Morris personally bought $1,250,000 of the common stock of the new company (50 per cent of the total voting stock) at a net cost of $562,500—he paid $625,000 and received an underwriting fee of $62,500. Morris & Co. also received some of the common stock in the new company by exchanging its holdings in the old company. This gave the Morrises control of the new company.

The list of the holders of the common stock of the Kansas City Stock Yards Co. of Maine furnished the Commission by the company as of June 30, 1917, disclosed very little direct holding of the stock by the Morrises. Practically all the Morris holdings stood on the books in the names of others, such as E. V. R. Thayer, of New York; R. A. Hitchings, of Boston; and Martin H. Foss, of Chicago. The Commission was able to find only $1,065,800 (or 42.6 per cent of the total) of this stock accredited to the Morrises, so it is doubtful if all the Morris holdings were identified.

From the viewpoint of the yards company the reorganization increased the outstanding capital stock $2,331,550—from $8,160,000 to $10,491,500—and placed less than $250,000 cash in the company. From the $1,250,000 which was paid for the common stock of the new company was deducted: the $799,414 paid to the holders of stock in the old company, who exchanged for preferred stock in the new company; the organization expenses of the new company as well as the Morris $62,500 underwriting commission; the $39,328 Kidder, Peabody & Co. fee; and the $185,000 or more paid for the stock in the old company, which was bought by the new company.

[fol. 1793] Jersey City Stock Yards Co.—The stockyards at Jersey City, N. J., are a part of the terminal equipment of the Pennsylvania Railroad Co., and the yards facilities are owned by that railroad. The yards are leased by the railroad company to the Jersey City Stock Yards Co., an operating company.

The first Jersey City Stock Yards Co. was organized February 27, 1873, by Samuel W. Allerton and George W. Gregory. This company leased the yards for a period of 30 years. February 12, 1903, the lease was renewed for an additional 10 years.

Before the expiration of this second lease in 1913 the Pennsylvania Railroad through Allerton made an effort to identify Armour & Co. and if possible Swift & Co. with its yards at Jersey City in order to increase the business of that railroad by getting these two packers to ship their live stock to the East over the Pennsylvania. At the same time that Allerton was negotiating with Armour & Co. in reference to these yards, Morris & Co. through A. W. McLaren was endeavoring to lease the yards. The Pennsylvania Railroad had been getting $25,000 a year rental for its Jersey City stockyards and this was the figure at which they were offered Armour & Co. Morris & Co. offered $50,000 a year for the lease, but its offer was not accepted, and the yards went to Armour & Co. at $25,000.

The reason the Pennsylvania Railroad leased its yards to Armour & Co. instead of Morris & Co. although the latter company offered double the rent paid by Armour & Co. is set forth in a number of letters that passed between these

parties at that time. These letters are given as Exhibit 3, pages 282-296.

Having completed its arrangement with the Pennsylvania Railroad, Armour & Co. incorporated the Jersey City Stock Yards Co. for $500,000 and opened the yards for business under the new control February 12, 1913. The entire $500,000 capital stock was issued to the following:

R. C. Bonham, Ridgewood, N. J. (president)	$ 20,000
R. C. Bonham, trustee	296,900
Kate Allerton Johnstone, Chicago	50,000
H. A. Chetham, Chicago	90,000
Ira F. Brainard, Pittsburgh, Pa.	32,500
Thomas A. Hughes, Jersey City, N. J.	10,000
Lee S. Harvey, Jersey City, N. J. (secretary)	300
L. H. Hersey, Jersey City, N. J. (treasurer)	300
Total	500,000

[fol. 1794] Armour & Co. admit owning $297,500 of this stock and Swift & Co. admit owning $90,000 of it. The Armour stock stands in the names of Bonham, Harvey, and Hersey; the Swift stock in the name of Chetham.

After the beginning business the Jersey City Stock Yards Co. operated six months before any money was paid for capital stock. At the expiration of six months the earnings were sufficient to pay a dividend of $42,000. Following the declaration of this dividend $100,000 was paid the company for capital stock and the additional $400,000 capital stock was issued for "property" which property was the contract with the railroad company.

Armour & Co.'s $297,500 stock cost a net investment of only $34,500, which is 11.6 per cent of its holdings. Swift & Co.'s $90,000 required a net investment of only $10,440.

The net earnings of the Jersey City Stock Yards Co. from February 12, 1913, to December 31, 1916, four years, were $594,764. During these four years dividends amounting to $342,000 were paid to stockholders and the other

$252,746.14 of earnings remained in the business. Of this dividend Armour & Co. received $178,500 (exclusive of the first dividend, which was used as part payment for the stock) and Swift & Co. received $54,000 (exclusive of the first dividend). In other words, within four years after these two packers obtained control of the yards they realized in dividends their original investment of $44,940 and $187,560 in addition.

Chicago Stock Yards Co.—The history of the Chicago yards and of the deals by which the packers secured their bonuses and by which Armour & Co. acquired a stock interest in the Maine company is so remarkable that a separate chapter (Chapter V) is given to this subject.

Direct Results of Big Packer Control of Stockyards

Section 11.—Packer yards' services, charges, and profits.

Yards Services.—The big packers' assertion that they offer superior facilities and services at the stockyards controlled by them is not sustained by evidence. The yard facilities of their stockyards have generally been expanded since acquisition by them, but the expansion in facilities have been in most cases only to the extent absolutely necessary to take care of the increased live-stock receipts, in other cases the expansion of facilities has been totally inadequate. There has been much dissatisfaction and criticism on the part of live-stock commission men and shippers as to the poor facilities and services which are given at the stockyards controlled by the big packers.

At virtually all the large stockyards there is complaint on the part of the live-stock producers and commission [fol. 1795] men that the stock-yards companies do not employ a sufficient number of employees to unload and handle the animals through the yards. At some of the yards, as at Omaha, a part of this work has to be done at the expense of the commission firms. The stockyards company receives its regular yardage charges for the work, even though the services are not performed by it. Also, at the large yards there is a wide complaint on the part of both producers and commission men that the stockyards do not have adequate weighing facilities to take care of the heavy business. As a result, the producers suffer losses

because of the long wait of the animals before they can be weighed up to the buyers.

A complaint which is found at practically all stockyards is that the yards are not kept clean. No doubt this condition in the past two years has been partly due to the general shortage of labor. But the complaint runs back for several years at Denver, Omaha, St. Louis and Chicago. Another complaint at some of the packer controlled yards is that there are not a sufficient number of pens to take care of the incoming animals.

The following report of a committee of the Omaha Live Stock Exchange sets forth the complaints of the exchange against the facilities and services of the Omaha stockyards which is controlled by Armour:

Omaha Live Stock Exchange Committee Report

At the regular October meeting of the exchange held Friday, October 5, 1917, the following resolutions were unanimously adopted and were immediately presented to Mr. Buckingham:

"Moved that the railroad and stockyards committee be instructed to see Mr. Buckingham and demand immediately relief from the congested conditions in the cattle yards. If such relief can not be obtained immediately, the committee shall take up the situation with Mr. Dunham at Chicago at once."

No reply having been received from Mr. Buckingham, and no particular improvement in service, your committee instructed Secretary Stryker, who was then in Chicago, to arrange with Mr. Dunham, president of the Omaha Stock Yards Co., for a conference with him in Chicago at his early convenience. This conference was arranged for Saturday, October 13. Mr. Dunham called Vice President, General Manager Buckingham and Traffic Manager Shellberg of the stockyards into Chicago to be present.

At the outset President Tagg outlined in a general way the desire of the exchange and its membership to work with the stockyards company in the upbuilding of the Omaha market. He showed that for 12 months period beginning [fol. 1796] September 1, 1916, and ending August 31, 1917, exchange members spent 9,191 days in the country solicit-

ing for the Omaha market. This would be equivalent to 25 men out every day in the year above mentioned. He suggested the stockyards company employ solicitors with the view to protecting the interests of this market and preventing if possible much live stock being diverted to other competitive markets. He pointed out to Mr. Dunham that our yards were not large enough for the runs we are attempting to handle and the shippers to this market were losing large sums of money on account of delays in the yards. Another point made by Mr. Tagg was that we need more buying competition and suggested securing another packing house in addition to those already at Omaha. He mentioned also the serious harm which had been done the Omaha market by semiembargoes placed upon this market by representatives of the stockyards company within the past few weeks, explaining that much business had been diverted from the Omaha market to other markets on this account.

Mr. Anderson, chairman of the railroad and stockyards committee, following Mr. Tagg, outlined briefly the work of his committee during the past eight months, the agreement made between the committee and the yard company, and the changes to be effected in the service. He suggested that commission men had done their part in effecting these changes but that the yard company had seemed unable to take up their share of the burden. He pointed out benefits to all concerned (on) account of the new system of weighing in the cattle yards, suggesting at the same time, however, that unless the yard company shall make arrangements to take live stock away from the scales after weighing, the improvement effected by the commission men would be of little of no avail.

At about this state of the conference Mr. Dunham made the statement that the Omaha yards represented a personal investment of Mr. J. O. Armour, who realizing the importance of Omaha as a market center, invested his money in the Omaha house and yards as a personal venture. He, Mr. Dunham, stated perhaps he had been partially to blame in not having kept up with the growth of this market; that it was his intention not to jeopardize the interests of the Omaha market in favor of another market.

He mentioned the difficulty of securing labor and touched strongly on suggestions of the Government that no large sum of money be spent at this time in promoting projects that could very comfortably wait until the conclusion of the war. He again stated in this connection, however, that it was not his intention to hamper the growth of this market and that if mistakes had been made in the past they must be remedied. He mentioned among other matters that commission men continually employed the yard company's best employees. This was answered to the effect that if the yard company paid its employees more money they would be able to keep them.

Mr. Will H. Wood next took up the conditions at the several cattle scales during the week just past, showing in detail when these scales were opened in the morning, when [fol. 1797] the first draft was weighed, when the first men showed up at the scales, the delays during the day, and, in fact, a pretty complete report of the several scales performances. He laid particular emphasis on the fact that we must have more men and more pens at the Omaha yards.

Mr. H. H. Roberts, of the committee, suggested that not only were there delays now, but that there was congestion and delay in the winter time; that they were serious delays in delivering cattle to commission men. He made the further point that if there were more pens in the yards it would require less labor to handle the stock. At this point Mr. Buckingham suggested there would be less delay if commission men would get their cattle from the chutes, which was their plain duty.

In answer to a question of Mr. Tagg the secretary made the statement that while there were a number of pens in the sheep barn, which had been cemented for hog yarding, there were not as many pens in the present hog yards proper as were used for hog purposes in 1890 and 1891.

Secretary also mentioned a number of improvements which could be temporarily installed; more pens on the south side of the yards, more pens to the west of the yards, temporary cattle pens in the hog yards, and the construction of additional chutes, pointing out that Omaha was not as well supplied with unloading chutes as many of its competitors.

Taken as a whole your committee feels considerable good was accomplished. Mr. Dunham met the committee in a very pleasant manner, intimating very plainly he wanted to know if things were not going satisfactorily at Omaha. He stated that if he heard no complaints from Omaha, he might consider the market was on the down grade, but as long as complaints were coming in he knew the business men at Omaha were alive to the situation. In answer to this particular phase of the situation, Mr. Anderson explained, somewhat in detail, the position of our people. He stated that every member of the exchange was back of the complaint at hand, that the membership was in earnest and intended ascertaining, if possible, if there was any remedy for the serious losses to our shippers and our membership (on) account of inadequate facilities and the lack of cooperation on the part of the stockyards company's management.

Mr. Dunham, in conclusion, stated that it was exceedingly difficult to do any kind of work this year, but that he expected to remedy any defects which might develop. Your committee feels that no efforts must be left neglected in bringing about a decided increase in facilities at this market and that Mr. Dunham's suggestion *be* desired to be kept informed of conditions at this point be taken advantage of.

Respectfully submited, W. B. Tagg, Frank Anderson, Will H. Wood, H. H. Roberts, A. F. Stryker, Sam Wertheim.

[fol. 1798] The things thus complained of were not remedied as is shown by the following subsequent report of the railroad and stockyard committee of the Omaha Exchange:

March 13, 1918.

Omaha Live Stock Exchange.

Gentlemen: Your railroad and stockyard committee had a meeting with the manager and superintendent of the stockyard company on March 9 regarding their service, prospective improvements, etc. Your committee maintained the position of mutual interest and desires to work in harmony, but that our members were insisting upon

something tangible being done at once, and assurance given that necessary improvements would be made during this spring and summer. The manager stated that the company was doing all they could do, expressed himself as being desirous of giving good service, but at the same time said it was only a question of time before the commission men would be obliged to take all of the stock from the chutes in order to have proper service.

The stockyard company admit they do not deliver any of the hogs, but do deliver between 50 and 60 per cent of the cattle and 90 per cent of the sheep to the pens of the commission men.

The manager would not say what improvements would be made and refused to give an opinion until after his return from the western live-stock meeting in April.

We told him these conditions had prevailed for years and the business interests and patrons of this market had been put off in this and similar ways for years until the range season was upon us when it was impossible to do anything, and after admitting that the company had ample funds, land, etc., and that he did not believe the Government would interfere with any needed improvements, he still refused to give us any satisfaction. Your committee told him of their meeting with the railroad representatives in Omaha on the 2d when arrangements were made for the earlier arrival of the live stock at the yards. He agreed this would help them very much; however, he would not agree to deliver all of the cattle but would do the best he could.

Your committee presented facts, figures, and statements that did not admit of argument, showing there was sufficient stock in the States actually tributary to the Omaha market to supply 50 to 100 per cent more stockyard, packing-house, and buying facilities than we now have, and that because of their failure to provide these necessities this trade has been and still is diverted to other markets where the supply is not equal to their demand, creating higher prices and giving the four packers doing business at Omaha a decided, unwarranted, and unnecessary advantage.

After your committee has again gone over the situation with Mr. Buckingham we expect to take this matter up with

the president of the stockyard company, and if we do not receive the actual and bona fide relief we ask and know [fol. 1799] this market should have we ask permission to go to the State Railway Commission, Government authorities, or take such other action as may seem right or necessary to secure the rights and justice for the patrons of this market and ourselves.

Very respectfully submitted.

C. A. Mallory, F. Anderson.

The following letters and reports show that the service and facilities of the Denver Union Stock Yards Co. in 1917 were very bad:

Chicago, February 2, 1917.

Mr. L. F. Swift,
Office.

In recent conversation with Mr. de Ricqles at Denver, regarding stockyards matters generally, my attention was called unofficially to a condition at the Denver stockyards which contributed to the death of four steers, the property of the American Live Stock & Loan Co., resulting in a claim for the value of the animals and an unnecessary feed at Cheyenne, which was declined by Mr. Shoemaker.

I requested Mr. de Ricqles to give me his office file, which I promised him would not be allowed to pass out of our possession.

Mr. de Ricqles can prove by competent testimony that the yards were in such a condition that the cattle could not lie down and rest for a period of more than 24 hours. When the cattle were finally loaded in clean, dry cars they attempted to lie down from exhaustion, trampling one another to the extent that four head were killed.

He can prove by additional testimony that the cattle were in bad condition passing Wellington, only a few miles distant from Denver, and that their condition was such they had to be unloaded at Cheyenne, incurring an unnecessary feed bill of $53.95.

Mr. de Ricqles made claim against the stockyards company but his allegations were denied and the claim declined. The file was turned over to counsel for the American Live Stock & Loan Co., with instructions to file suit for

the recovery of the actual value of the steers and injury to the balance, not claimed in the original demand. The suit will not be prosecuted, Mr. de Ricqles feeling that the controversy with the Denver Stock Yards Co. and the financial loss involved has become submerged in the larger questions now before the stockyards and packing interests and the live-stock people. He will always feel, however, that the Denver Stock Yards Co. have not given the consideration his claim deserves.

As a claim officer of the Santa Fe I can say that Mr. de Ricqles was the largest individual shipper of live stock on the Santa Fe System, handling more than 1,000 cars per [fol. 1800] annum, and yet I do not recall to exceed two claims filed by his company during the past five years. He is always found to be fair and, in my judgment it would be a mistake for the Denver Stock Yards Co. not to pay the claim referred to herein. Pursuant to instructions regarding live-stock matters at yards such as Denver, I recommend that you request Mr. Armour to instruct the immediate payment of the claim as filed, $219.95.

F. S. Brooks, (Transportation Department of Swift & Co.).

FSB: GB

The American Live Stock and Loan Company
Union Stock Yards,

Denver, Colo., June 19, 1917.

Mr. J. Ogden Armour,
208 South La Salle Street, Chicago, Ill.

Dear Mr. Armour: In connection with the situation here at the stockyards during the month of May. I feel that it is of the utmost importance that some action be taken so as to prevent a recurrence of the conditions that existed during May and also so that the details of operation be improved.

For your information I am inclosing herewith a copy of a letter that was written to me by the manager of our commission company at the stockyards. That company handles our cattle while in transit, and I have read this

letter carefully and it is correct. Possibly some other matters could be added to it, such as the trouble we have about getting a correct in-and-out count on our cattle, which should not exist, and other details that I will not trouble you with. Such complaints as this includes have in the past been the basis of a great deal of the trouble that we have had with shippers, and it results in sentiment being created against the enterprise and, as we have often talked, much of the animosity of shippers can be directly traced to bad conditions in the stockyards or thoughtless action on the part of the buyers, and I am sure of your earnest desire to eliminate these things. I am writing to you in the nature of an appeal to secure your assistance in making it impossible for such conditions to again exist in Denver as we have just been through.

[fol. 1801] For your information I am attaching three little photographs that I took myself on Sunday, May 27, in the active part of the stockyards where cattle were constantly being unloaded, loaded and handled generally in the alleys and so forth. These photographs will show you without any further remarks just what it looked like at the end of the month. As these alleys and pens were all paved, you can realize what the conditions were. I have talked to the management about these things quite often, but their point of view and idea of what proper service consists of is so entirely different from my point of view that I do not believe that anything is gained by my going to them about it further.

I understand that something over 300 cattle were turned over to the Union Rendering Works during May in Denver, and while, of course, some of these cattle were crippled or dead on arrival, others died in the yards because of their failure to get an opportunity to rest and of the abuse they received.

I hope you will feel that I am writing this letter in the most friendly and sincere way and that these frank statements are not meant to be unkindly, but simply to put the matter in such shape that its seriousness will be fully understood. As you know, the Federal Trade Commission will commence its investigation about July 2 and it is just this sort of stuff that gives some of our radicals ammunition to shoot at the packers. I have commenced

to feel that some of those in charge of this investigation are not seeking constructive results, but rather looking for fireworks and advertising. To date it has not been suggested by the attorney of the market committee that I appear as a witness.

I have absolute confidence in the promises that you and Mr. Swift made about taking care of the defaults in the management and I feel that there is no occasion for me to do more than call your attention to these things and, in view of the fact that Mr. Swift has mentioned this matter in Denver to you, I am taking the liberty of sending him a copy of this letter that I am writing to you and also a copy of the letter from Mr. Monson, the manager of our commission company.

Yours truly, A. E. de Rieqles.

Enclosures.
AEdeR-W.

[fol. 1802] J. Ogden Armour, Chicago

November 8, 1916.

L. F. Swift, Esq.,
Swift and Company, Chicago.

My Dear Mr. Swift: I have your favor of even date. Yes; this is a very serious complaint and I have forwarded your letter out to Shoemaker. We had Shoemaker here the other day and we told him to go over the stockyards and see how much it would cost to enlarge them, as we think this has to be done. But, of course, this complaint is one of many and I will see that the matter is taken up with Mr. Shoemaker. I don't know whether Shoemaker is big enough to run this job or not, but I think we should give him an opportunity, and if he isn't we ought to get somebody who can run it. I agree with you that we should not have these complaints. Of course, we have to enlarge the yards out there and when we get the estimate the matter will be taken up with you. But Colorado is growing and I think the yards should be put in shape to take care of all the stock that comes into it and in a proper manner, too.

Yours very truly, J. Ogden Armour, B.

The following letters from Swift & Co.'s files show that the facilities at the St. Paul Union Stock Yards were inadequate to take care of the business:

South St. Paul, Minn., Oct. 19, 1916.

Mr. W. Leavitt, Chicago, Illinois.

Dear Sir: Answering your letter of October 13, the yards are badly congested on Mondays. Commission men have no room to sort and their cattle are yarded all over the stockyards, any place they can find an empty pen. They have to turn a bunch of cattle into the alley and sort them, and after selling let them run back together again.

We have not enough scales to handle weighing, commission men often waiting hours after their cattle are sold to get a turn.

The Stock Yard Co. have put a rule in force not to unlock any cattle on Sunday for commission men owing to the commission men wanting to sort and taking up more pens.

[fol. 1803] The reason for the weighing being so low is on account of so many different owners to a load of cattle.

Cattle are yarded here Monday in chute pens and other pens without mangers, some loads of cattle being yarded in pens that would not comfortablly hold a dozen cattle.

Hoping this answers your letter fully,

(Signed) L. E. Daubney.

(Pencil note:) All the above has been corrected.

St. Paul Union Stockyards Co.,
So. St. Paul, Minn., 10/13/1916.

Mr. Louis F. Swift,
Union Stock Yards, Chicago, Ill.

Dear Sir: I have your telegram directing me not to turn away any stock from these yards.

On Sunday, Sept. 24th, we had reports of 967 cars to come in here. We took in 855 cars and were badly overcrowded as a result. The balance of the cars were fed

at New Brighton or the Twin City Yards. We felt it would be better policy at that time to ask the lines to hold out the stock billed to Chicago commission firms for fear that the last stock to arrive would be billed to So. St. Paul firms and we would not have any room for it. We will not divert any more. We did not divert any except Sundays, when reports showed more in sight than we were able to handle. I hardly think we will have any trouble the balance of the season in that respect.

Yours respectfully, (Signed) St. Paul Union Stockyards Co., By Wm. Magivny, President.

WM-A

Yards Charges.—That the large stockyards companies charge more for the services they perform than is necessary is shown by the large profits these yards companies make. The charge which seems most exorbitant is that for feed. Stockyards companies have a monopoly in supplying shippers and traders with hay and grain at the yards. The prices they charge for this feed are generally in excess of the market prices outside the yards. For example, on April 1, 1918, the St. Louis National Stock Yards Co. was charging $2.25 per bushel for corn, while [fol. 1804] on that date the same quality of corn could be bought outside the yards for $1.41 to $1.45 per bushel.

The high feed charges make it very costly for shippers to hold their animals in the yards from one day to another for better prices.

The following letters taken from the files of Armour & Co. in reference to the charges by the Omaha stockyards shows the packers' attitude toward stockyards charges:

March 21, 1917.

Mr. Buckingham: Saw Mr. U. G. Powell, rate expert of the Nebraska State Railway Commission, at Lincoln yesterday. Talked with him regarding an increase on our corn rate, with the understanding that such increase was to be but temporary, our rate to be put back to $1 per bushel just as soon as these high prices subsided. He told me that with the present commission, with Hall as chairman and the new man, Vic. Wilson, both of a similar character, so far as "protection for the general public," that

he felt that if we asked for such increase we would simply be opening up a channel for these two gentlemen to insist on valuation of the yards proper, and, in other words, to go into every detail of the operation of the stockyards as a whole.

He stated that the commission, as they now stand, are absolutely against any sort of temporary relief, and that if anything whatever was done, that it was certain to be worked out on the basis of an arbitrary amount, say 25 cents per bushel over cost, and that this arbitrary would have to be used at all times in the future, even though the cost plus the arbitrary brought the selling price below $1.

Mr. Powell intimated that the new commissioner, Wilson, seemed to have two corporations in particular on his mind, they being the Union Pacific and the stockyards, and that an application from us would simply give him an opportunity to initiate us with his idea of stockyards regulation.

I spoke of the prevailing feed charges at other stockyards, and also the price we were now paying for corn, and Powell said that on the face of it, there was no question but what we were entitled to more money for this commodity, but, on the other hand, said that if the matter was brought up it would be for the purpose of ascertaining whether or not an excess profit was not being made from some other commodity, or through some other department of the yards. He rather felt that from the fact that during 1916 we were enabled to pay an additional two per cent dividend that an investigation would show that while corn was showing a loss that some of the other departments were showing too great a profit, and that the investigation would have a tendency to cut down revenues from some departments and increase the corn revenue, but [fol. 1805] in the end would give us no greater net revenue. In other words it has been the contention of the commission that our accounts should be so outlined that they might be able to determine just what net revenue we are deriving from each department, and in this manner determine whether or not the charges we make for any specific commodity or service is giving a proper return on the investment of that particular department. The commission insists that owing to the net showing from the entire stockyard operation in 1916, that if we are showing a loss in

corn that some other department must be contributing too greatly and should be regulated as to charge.

Also talked with Powell regarding making our State switching rates the same as our interstate rates. Said he could see no particular reason for not having them the same, but rather felt that there would be considerable opposition from the grain men if an attempt was made to increase the rate from $2 to $3 unless the railroads would agree to absorbing the entire charge. He seemed very much concerned as to whether it would be our intention to increase the switching on live stock, but I informed him that such a change was not contemplated at this time.

You probably know that just at this time the Nebraska commission are fighting out a decision of the Interstate Commerce Commission through the Supreme Court, and Powell intimated that from the showing made that the decision in this case by the Supreme Court would straighten out the matter of jurisdiction of these two regulating bodies, and that the Nebraska commission would be successful in the case at the final outcome. Powell and the commission have been spending considerable time in this particular case and naturally feel a little bit unkindly toward any orders of the Interstate Commission. I noticed that he did not feel inclined to place very much credence to the fact that the rates were given us by order of the commission.

Just as I was getting on the train at Lincoln for Omaha, I noticed the chairman of the commission, Hall, running around the Burlington passenger depot, making various notes regarding trains. He was evidently gathering information which any of his clerks could have picked up for him, but you probably know his peculiarities and desire to have "first-hand" information.

After talking this matter of corn rates over with Powell, unless we wish to open up the subject of investigation and valuation of the entire yards, and also the changing of our accounts to coincide with the views of the commission, I gathered from Powell that he really felt the best thing to do was to allow things to stand as they are.

W. H. Schellberg.

[fol. 1806] South Omaha, Nebr., December 26, 1916.

Mr. R. J. Dunham,

President of Omaha Union Stock Yards Co., Chicago.

Dear Sir: We have withdrawn our application to the railway commission for an increase in the price of corn, this after conference with the rate expert, Powell, who seemingly felt that to press the application at this time was inadvisable. Henry Clarke leaves the commission January 1st, his place being taken by Vic Wilson, of Stromsburg, an extremist, who will probably insist on the physical valuation of all public-service corporations before increases of any kind are permitted. It was felt that if we insisted on the increase that the order would be based on a sliding scale, allowing us about twenty-five cents over and above the cost of the corn. We probably could prevail on the commission to make this as high as thirty cents, but at that in the long run we would lose by the arrangement. For the eleven months ending November 30th the average cost of our corn was 72 cents and our gross revenue was on the basis of $1.10 because of the "creep." This latter figure, of course, the commission knows nothing about, but in the event of a check of our books to arrive at the actual expense of the handling of the corn would bring it out, and this check Powell had been instructed by the chairman of the commission to make.

Last year's crop of corn was unusually light and bulky, which explains the "creep."

Between the new commissioner, Mr. Wilson, and Edgar Howard, the new lieutenant governor, who has always been unfriendly to the stockyards, we may have more legislative trouble than usual, although the high prices, not only of live stock but all farm products, will probably have the effect of making the farmers more lenient toward the yards, than otherwise.

Yours truly, E. Buckingham, Vice President & General Manager.

The Denver Union Stock Yards is an Armour-Swift company, but Armour runs the yards. The following letter from the files of Swift & Co. shows that in August, 1917, when Armour increased the charge for corn for $2 to $2.75,

Traynor, the assistant to Louis F. Swift, was apprehensive that such action might arouse criticism:

[fol. 1807] Chicago, August 11, 1917.

Mr. F. S. Brooks: I notice that on August 13th the Denver Stock Yards will increase its price for corn from $2.00 to $2.75. Think that large increases like this are inadvisable. It would have been much better to have gradually worked price up in advance of 25c. Were we consulted by the Armour people?

Wm. B. Traynor.

EM

The following letters from the files of Armour & Co. indicate that the big packers work together in reference to stockyards charges:

South Omaha, Nebr., November 13th, 1916.

Mr. R. J. Dunham, President,
Chicago, Illinois.

Dear Sir: Returned home this morning. Put in one day last week at St. Joseph yards; one day at Kansas City, and spent the latter part of the week at Excelsior Springs. I have yours of November 7th about the price of corn:

At Sioux City they are charging $1.25; at St. Joseph they are charging $1.25, and Barkley thought unless the price of corn went about $1 he was not inclined to increase over $1.25. Collett is charging $1.25, and would like to increase to $1.50, but is not inclined to do so at present. I think he would be glad to do so if St. Joseph would increase to $1.50. We will make application to the commission one day this week for the increase to $1.50—rather doubt their granting this, but feel sure they will give us $1.25. If I could say to the commission the other markets are charging $1.50, it would no doubt make them more willing to give us the higher rate.

Yours truly, E. Buckingham, Vice President and General Manager.

November Twenty-Fourth, 1917.

Mr. E. Buckingham,
Union Stock Yards Co., Omaha, Nebs.

Dear Sir: For your information, we have authorized Mr. Shoemaker, at Denver, to raise his price on hay from $30 to $35, effective December 1st.

[fol. 1808] In this connection, I was talking with Swift & Company this morning, and they tell me they have raised their price at St. Joseph to $35, and although Sioux City is still on a $30 basis, they expect to raise the price there very shortly. You of course know that Chicago charges $35 for hay and $40 for alfalfa.

Very truly yours, G. S. Bailey, (Private secretary to J. O. Armour.)

Yards profits.—It has already been shown that the yards now controlled by the big packers, aside from giving large cash gifts to the packing companies, donated to the packers large blocks of their capital stock and have from time to time increased their capital stock by declaring large stock dividends. Moreover, it would appear that all these yards have charged a sufficient amount for their services to pay regularly reasonable dividends on their increased capital and in addition to put aside considerable surpluses.

Section 12.—Packers' use of yards' monopolies.

Control of the stockyards by the big packers gives them the full use of all the yards' monoplies described on page 20 of this chapter. The most important of these yards' monopolies are: Control over the dead-animal rendering business; power over the yards' banking business; power over packing-house sites and appurtenances thereto; and power over facilities used by the livestock commission men and traders. These powers are derived from their control over the stockyards companies, and they make use of each of them either to gain large profits or to maintain their direction of the meat-packing industry.

Dead-animal-rendering business.—Among the monopolies found at practically all the big packer stockyards is that of yard rendering companies, which take all the animals that arrive dead at the yards or die after arrival. The

rendering done at the yard plants consists in cooking dead animals, after the removal of the hides, in kettles or tanks and recovering therefrom tallow, grease, and tankage, products which are important material for use in the manufacture of soap and fertilizer.

These rendering companies are usually owned by the big packing corporations or individual members of packer families and their more important employees. Thus the Union Rendering Co., of St. Paul, is owned by Swift & Co. The St. Joseph Rendering Co. is not incorporaated, but is operated as a division of the St. Joseph Stockyards Co., [fol. 1809] which is controlled by Swift. At the other large packing centers—Sioux City, Omaha, St. Louis, Kansas City, and Chicago—members of the packer families and their employees hold all or nearly all the stock.

These companies are:

At Chicago—The Globe Rendering Co., capital stock $2,000,000, owned as follows: Morris interests, $1,157,700; Swifts; $225,300; Arthur Meeker, vice president of Armour & Co., $200,000; Wilson, $50,000; and most of the balance held by those affiliated with or employed by the big packers.

At Kansas City—The Standard Rendering Co., capital stock, $1,000,000, owned as follows: Morris interests, $606,300; Wilson, $175,000; Swifts, $75,000; Arthur Meeker, vice president of Armour & Co., $50,000; Cudahys, $50,000; and the balance ($43,700) held by those affiliated with these packers.

At Omaha—The Union Rendering & Refining Co., capital stock, $100,000, owned as follows: Swifts, $34,000; Morris, $20,000; Armours, $8,000; Cudahys, $15,000; and most of the balance ($23,000) held by employees of these packers.

At East St. Louis—The East St. Louis Rendering Co., capital stock, $240,000, owned as follows: Morris interests, $179,500; Swifts, $60,000; and the balance ($500) held by five qualifying directors of the company.

At Sioux City—The Iowa Rendering Co., capital stock $25,000, owned as follows: Swifts, $6,200; Armour interests, $6,200; Cudahys, $5,900; and the balance held by those affiliated with these interests.

Globe Rendering Co.—The Globe Rendering Co. gets all dead animals in the Chicago stockyards. This company was incorporated August 10, 1908, under the laws of Maine. On September 1, three weeks after incorporation, the rendering company entered into a contract with the Union Stockyards & Transit Co. by which the rendering company received "the sole and exclusive right to collect all dead animals found upon the premises and within the limits of the property and plant of the transit company aforesaid." The contract is for 15 years and expires Sep- [fol. 1810] tember 1, 1923.

The schedule returned by the company shows that of the $2,000,000 outstanding only $200,000 was issued for cash. The balance ($1,800,000) was given to the stockholders, issued against "property." In the schedule as returned, real estate, machinery, and fixtures, motor trucks, and inventory all appear under these heads in the statement of resources and liabilities as of date of December 29, 1917. Aside from these, the statement of resources has an item listed as "property," the amount of which is $1,835,191.93. A letter was sent to the Globe Rendering Co. for a statement of what was represented by this "property" item. The property item of $1,835,191.93 does not include any tangible "property" but represents only "good will," as shown by the following correspondence:

May 22, 1918.

Globe Rendering Co.,
357 Exchange Building, Union Stock Yards, Chicago, Ill.

Gentlemen: The receipt of Schedule A of the Federal Trade Commission, duly filled out by officials of the Globe Rendering Co., is duly acknowledged. The commission desires further information in regard to certain items covered in the schedule. You are therefore requested to furnish list of real estate acquired during the last five years and cost thereof, also buildings erected and cost thereof. It is also desired that the item "Property," which amounts to about $1,800,000 in round numbers for several years, be further explained as to what it covers. The form of statement submitted indicates that it does not include real

estate, machinery and fixtures; or inventory, as those items appear separately. The commission directs that the information be mailed not later than May 27.

Yours very truly, Federal Trade Commission, Francis Walker, Chief Economist.

Chicago; June 3, 1918.

Mr. Francis Walker,
Federal Trade Commission, Washington, D. C.

Dear Sir: In reply to your letter of May 22, wish to say that on September 14, 1917, we acquired from the Union Rendering Co. 444.18 acres farm and pasture land surrounding plant, at a total cost of $66,627. No new buildings have been erected on this property. [fol. 1811]

The "Property" item shown on our statement, amounting to $1,800,000 represents good will and does not include any tangible property.

Yours truly, Globe Rendering Co., Paul A. Dett, Secretary.

On the books of the board of assessors of Cook County, as of May 1, 1917, the land of the Globe Rendering Co. is carried at $32,652; improvements on land, $1,800; and personal property, $3,500; or a total of $41,956 for total real estate and personal property. The law requires such returns to be at full value. The company has acquired real estate costing $66,627 since May 1, 1917. On the books of the company the real estate is carried at $77,534.10; the buildings at $1,171.26; and machinery and fixtures, $66,517. It is clear that the $200,000 paid in was enough to cover land, equipment, and a sufficient amount of working capital. The greatest asset of the company is undoubtedly the contract for the monopoly of dead animals, which appears to constitute the $1,835,191 "property" listed in its statement of resources. It seems evident that the capital was increased to make dividends declared seem smaller.

The record of earnings and dividends for the five years (1913-'17) is as follows:

	Earnings	Per cent on cash paid in	Per cent on paper capital	Dividends
1913	$134,360.88	72	7.2	$140,000
1914	101,201.43	51	5.1	60,000
1915	86,517.13	43	4.3	120,000
1916	148,160.38	74	7.4	140,000
1917	222,394.82	111	11.1	140,000

The average annual dividend for these five years was $120,000, which is 60 per cent on amount paid in and 6 per cent on paper capital.

[fol. 1812] Standard Rendering Co.—The Standard Rendering Co. of Delaware, jointly owned by all of the Big Five, has been the monopoly rendering company of the Kansas City stockyards since its organization in 1908. Previously the Standard Rendering Co. of Maine, acquired in 1908 by this new Delaware company, and the Peet Bros. Co. of Kansas City, Kans., had been competing in the purchasing of dead animals, in these yards, and according to commission men at this market this competition resulted in satisfactory prices for dead animals. But in 1908 the rendering business of Peet Bros. was purchased by the new Standard Rendering Co. in connection with which deal a $50,000 good-will bonus was paid Peet Bros.

The present Standard Rendering Co. is capitalized at $1,000,000, owned as follows: Morris family, $606,300; Swifts, $75,000; Cudahys, $50,000; Thomas E. Wilson or Wilson & Co. (Inc.), $175,000; and Arthur Meeker, vice president of Armour & Co., $50,000; the balance being held by employees and others affiliated with these packers.

The following letter and other data secured show that about 90 per cent of the capital stock of the Standard Rendering Co. like that of the Globe Rendering Co. represents the capitalization of earning power based on monopoly and does not represent investment of any kind:

Standard Rendering Company,

850 Live Stock Exchange Bld'g.,

Kansas City, U. S. A.

August 16th, 1918

Federal Trade Commission,
Washington, D. C.

Re Standard Rendering Company, Your W. W. B.

Dear Sirs: Answering your letter, as nearly as the writer can ascertain, the facts are that in January, 1918 (1908) the present company (which is a Delaware corporation) acquired all of the assets, stocks, bonds, bills receivable, merchandise, contracts, contract rights, and all other property, tangible and intangible, of the Standard Rendering Company (a Maine corporation), which had a capital stock of $1,000,000, and the Delaware corporation paid therefor $1,000,000, of which $2,500 was in cash and $997,500 in stock of the Delaware corporation; that from such information as the writer has been able to dig up it would appear that included in the assets acquired were stock and bonds of the value of $1,000; a fund of $20; construction and equip- [fol. 1813] ment items of the value of $90,009.28; horses, wagons, and harness of the value $12,768.89; accounts receivable $7,598.51 less accounts payable $5,976.63, leaving a balance of $1,621.88; inventory $25,444.11, and that the property account is debited with $860,540.04, which the writer believes represented the value of contract rights and of good will. There was also a cash balance received from the sale of stock amounting to $8,595.80, all of which items together made the full capital stock of $1,000,000.

The foregoing is all the information that the writer has been able to get together.

Trusting it will fully answer your purposes, we are,
Yours very truly, Standard Rendering Company,
P. E. Prater, Mgr.

On its $1,000,000 capital stock, $860,540.04 of which its manager admits represents "contract rights and good will,"

the Standard Rendering Co. has paid the following dividends.

		Per cent.
1912	$ 80,000	8
1913	80,000	8
1914	30,000	3
1915	80,000	8
1916	100,000	10

Shippers at Kansas City complain that they are not receiving a fair price for their dead animals. These dividends on stock 90 per cent overcapitalized would seem to justify this complaint.

Union Rendering & Refining Co.—The Union Rendering & Refining Co. owned jointly by the Swifts, Morrises, Armours, and Cudahys—the four big packers at Omaha—has for many years monopolized the dead animals at the Omaha stockyards. The company is capitalized at $100,000, only $20,000 of which was issued for cash. The balance, $80,000, represents stock dividends. The net earnings of the company averaged over $13,000 a year from 1912 to 1917.

Although Swift & Co. has controlled the Union Rendering & Refining Co., the following letter shows the community of big packer interest in its management:

[fol. 1814] October 26, 1915.

H. A. C.

Mr. H. O. Edwards,
Swift and Company,
South Omaha, Nebr.

Union Rendering and Refining Company

Dear Sir: Referring to the results of the Union Rendering and Refining Company.

I do not believe this company shows as good results as some other companies, with the same prospects.

I believe Morris' people as a rule understand the rendering business and have better success than the average. What do you say about having the management turned over to them for the year 1916?

Awaiting your reply.

Yours respectfully, Louis F. Swift.

Dict. LFS.
ED

East St. Louis Rendering Co.—The St. Louis National Stock Yards Co. is controlled by the Morris interests. The dead-animal business is monopolized at this market by the East St. Louis Rendering Co., also controlled by the Morris interests. This monopoly company is another example of noteworthy profits and dividends.

The East St. Louis Rendering Co. was incorporated November 30, 1903, with a capital of $12,000. In January, 1905, a 100 per cent cash dividend was paid. According to a statement made by the treasurer of the company to an agent of the Commission subsequent earnings accumulated until July 12, 1909, when the surplus was sufficient to enable the company to increase its capital stock from $12,000 to $240,000 without the investment of additional cash. It does not appear that the earning in four years could have been $236,000, as is indicated by this explanation of the treasurer. It is more probable that a large part of the $240,000 represents the capitalization of good will or of the earning power of the company based on monopoly as is the case at the Chicago and Kansas City yards, where the Morris interests also control the rendering companies. [fo'. 1815] The East St. Louis Rendering Co. has paid the following dividends on the capital stock thus expanded:

	Per cent.
1911	20
1912	18
1913	21
1914	6
1915	30
1916	30
1917	36

The earnings of the company for the past five years are as follows:

1913	$49,784.00
1914	34,425.03
1915	64,403.76
1916	82,936.84
1917	86,156.69

The surplus on December 29, 1917, was $67,914.

The Swifts own $60,000 of the capital stock of the East St. Louis Rendering Co. The following letter to the president of Swift & Co. from its East St. Louis plant manager is an admission that the prices paid for dead animals by this rendering company are only about 25 per cent of what "they are worth":

Swift & Company,

National Stock Yards, Ill.,

St. Clair Co.

Chicago, July 20, 1917.
May 3, 1916.

Mr. L. F. Swift, President,
Chicago, Ill.

Dead Hogs

Dear Sir: On April 11th, 1912, after some discussion (which was instituted by Mr. Collett, then vice president of the stock yards), you instructed us to let the stock yards company have, for the rendering company, all of our dead hogs which die in our holding pens and those that arrive dead in Sioux City shipments.

The rendering company are allowing us 1¼c. per lb. for the dead, and we figure, on the present grease market, they are worth 4¼ to 5c per lb.

For one year we had 243 dead, weighing 50,300 lbs. On [fol. 1816] this volume and with the present high prices for grease, they are making $1,500 per year on these hogs.

We question if it would be advisable to ask the yards company for more money, as if it were granted to us they would also have to raise the allowing price on the dead

to country shippers, but we wanted to put this matter up to and get your opinion as to whether or not it would now be satisfactory for us to tank our own dead.

Will you kindly advise?

Yours respectfully, Swift & Company, Per F. A. H.

Manager's Dept.
FAH:EN

The letter following shows that Armour & Co. was unwilling to accept these unfair prices and arranged to tank "their own hogs." The producers and shippers, because of the monopoly arrangement, are compelled to accept the prices offered by the rendering company:

Swift & Company,

National Stock Yards, Ill.,

St. Clair Co.

May 26, 1916.

Mr. Louis F. Swift, President,
Chicago, Ill.

Dead Hogs

Dear Sir: Answering your letter of May 15th.

This is to advise Armour & Company, starting to-day, are tanking their own hogs which die in the pens or which arrive dead in direct shipments.

Understand Armour & Company requested the Stock Yards Company to give them more for the dead hogs and the yards company advised they were unable to do so, and accordingly, Armour & Company started to-day to tank their dead hogs.

Yours respectfully, Swift & Company, Per ——— ———.

Manager's Dept.

FHA:EN
c/c to Mr. G. F. Swift, jr.

[fol. 1817] Iowa Rendering Co.—The Swifts, who control the Sioux City Stock Yards, also control the Iowa Rendering Co., which has a monopoly of all the dead animals at

these yards. The profit results of this monopoly are indicated in the following letters:

Chicago, July 20, 1917.

Mr. Edward F. Swift,

Second Floor.

Referring to the attached.

You and Mr. Louis F. Swift each own 31 shares, par value $100.

Dividends have been paid by the company recent years as follows:

January, 1916, special dividend, 50 per cent.
November, 1916, special dividend, 50 per cent.
Year 1916, regular quarterly dividend, 20 per cent per annum.
April, 1917, special dividend, 50 per cent.
January, 1917, regular quarterly dividend, basis 20 per cent per annum.
April, 1917, regular quarterly dividend, basis 20 per cent per annum.

Will it be satisfactory to you to pay special dividend of 50 per cent?

Wm. B. Traynor.

Chicago, Ill., July 21, 1917.

Mr. R. F. Murray,
Secretary The Sioux City Stock Yards Co.,
Sioux City, Iowa.

Iowa Rendering Co. capital stock tax

Dear Sir: Replying to yours of the 18th instant in regard to the Iowa Rendering Co.

If the rendering company made an average of 63 per cent per year for five years from their rendering operations, it would be correct to consider the fair value of the capital stock as $630 per share and make your return on this basis.

Yours truly, L. F. Swift.

JGS:FP
cc-L. F. Swift.

[fol. 1818] St. Paul Union Stockyards Company
South St. Paul, Minn., May 7, 1917.

Mr. Louis F. Swift,
Union Stock Yards, Chicago, Ill.

Dear Sir: Answering your favor of the 1st inst. relative to my stock in the Iowa Rendering Company at Sioux City. Inasmuch as this stock earned $116 a share last year and is going stronger than that so far this year, I have not been looking very hard for a buyer. I gave several years of work to that institution when I was in Sioux City with the idea that I would help build up something that would be profitable to me in later years. I would therefore not care to dispose of my stock unless I could get enough for it so that the money invested in some other direction would bring me returns somewhere near commensurate to the returns I am getting now. I have 175 shares of St. Paul Union Stockyards Company stock which earned last year about $2,537.50. My 37 shares of Iowa Rendering Company stock earned last year $4,292.00. I will put these two together in an offer at $45,000.00. This offer is subject to prior sale of any part, and in any event will be good only until May 15th.

Yours respectfully, Wm. Magwny.

St. Paul Union Stock Yards Co.—Commission contract.—The big packers' monopoly of dead animals is made possible through control of the stockyards. This is illustrated in the following form of contract signed by all commission men who are permitted to operate in the St. Paul stockyards. This agreement, among other things, enforces the rendering monopoly.

Form 97. 300 3-17 Rep.

These articles of agreement, made and entered into this ..... day of ....., 19.., by and between St. Paul Union Stock Yards Co., a corporation duly created and organized under the laws of the State of Minnesota, hereinafter called the first party, as party of the one part, and ....., hereinafter called the second party, as part of the other part:

Witnesseth, That for and in consideration of the agreements of the second party herein contained, the first party hereby grants permission to the second party to establish and conduct the business of buying and selling live stock at the yards and upon the premises of the said first party, at South St. Paul, Minn., and also agrees to lease to said second party office space in the Exchange Building of the said first party, located in its yards at South St. Paul, upon the terms and conditions fixed and determined by the lease therefor executed between the parties hereto, when space shall be available.

The second party hereby agrees to establish and conduct the business of buying and selling live stock in the yards and upon the premises of the said first party at South St. Paul, Minn.

It is agreed that all live stock consigned to, delivered to, or in possession of said second party may be yarded [fol. 1819] and fed by said first party, and said first party shall have and receive therefor the rate and price established by said first party. And said first party shall at all times and under all circumstances have the right to direct the location and pens in which any live stock may be kept at said stockyards.

The said second party agrees to collect for said first party, free of expense, all the charges of said first party for yardage and feeding, together with freight and all other charges due said first party, or for which said first party shall be liable or holden upon all live stock received at the yards of said first party and consigned to or forwarded by said second party, or that may be turned over to said second party at said stockyards, whether the same is or is not consigned to said second party and to promptly pay the same over to said first party whenever demanded, hereby agreeing to personally so promptly pay to said first party on demand all such sums or charges, whether collected or otherwise made from other parties or not.

And the said second party hereby agrees to hold said first party harmless and to protect it against any and all claims that may be brought against it by reason of loss or mixing of live stock during the hours when the pens are unlocked and the live stock therein contained is delivered to said second party.

It is further agreed that all animals that may arrive dead at or that may die in the stockyards of said first party and consigned to or in charge of said second party shall be sold and disposed of as directed by the said first party, as to manner, price, and purchaser.

The said second party agrees to promptly indemnify the said first party for any damages that may occur by reason of the said first party having accepted and executed the orders of the said second party or the agents thereof for the handling or delivery of live or dead animals in the stockyards of the said first party, or for any damages that may occur by reason of the said first party having delivered to the said second party or the agents thereof any live stock in said yards, authority for which delivery is based upon the representations or requests made by the said second party or the agents thereof to the said first party.

The said second party hereby agrees, in conducting the said business of buying and selling live stock, to conform to, observe, and obey all the by-laws, rules, regulations, and contracts of the said first party now or hereafter made or promulgated, relating to or governing the transaction of business at or through the stockyards of said first party. [fol. 1820] The said second party agrees to furnish a bond in the sum of five thousand ($5,000) dollars for the faithful performance of this contract, with sureties, all to the satisfaction of said first party, and to furnish additional bond from time to time whenever said provided bond shall become inadequate or unsatisfactory to said first party.

It is further agreed that said second party shall begin business as herein stipulated on the _____ day of _____, 19__, and shall continue under this contract until the _____ day of _____, 19__, unless this contract be sooner rescinded by the mutual consent of the parties hereto. And it is further expressly agreed by the parties hereto that the said first party may cancel this contract upon thirty (30) days' written notice should said second party violate any of the terms hereof.

And it is further agreed that the said second party shall not sell nor assign any interest in this contract or in the business carried on thereunder without the written consent of the said first party indorsed hereon.

In witness whereof the said first party has caused these

presents to be signed by its president and attested by its secretary, and its corporate seal to be hereto affixed, and the said second party has _____ at South St. Paul, Minn., the day and date first above written.

St. Paul Union Stock Yards Co., By ——— ———, President.

Attest: ——— ———, Secretary.

Stockyards Banks and Cattle Loan Companies.—The business of loaning money on cattle is one of the activities of every stockyards market. At these market centers millions of dollars are loaned to producers and feeders of cattle, the cattle being assigned as security for such loans. Loans are usually made through the stockyards banks and cattle loan companies for periods of six months and the interest rate varies from 6 to 8 per cent.

Almost all the banks and cattle loan companies in or beside the stockyards controlled by the big packers are owned and operated by them, and inasmuch as they control stockyards handling over 75 per cent of the cattle bought and sold at all the stockyards they consequently are in an advantageous position with respect to handling live-stock credit.

With the exception of Kansas City the only banks, and in most cases the only cattle loan companies, operating in the big packer stockyards are those owned and controlled by the same packer or packers who control the yards. For instance, at St. Paul, Fort Worth, and Denver, [fol. 1821] where the yards are jointly owned by Swift and Armour, the banks and cattle loan companies are jointly controlled by these same interests. At St. Joseph and Sioux City Swift controls the yards and likewise controls the only banks and cattle loan companies in these yards. At East St. Louis the Morris interests control both the yards and the banking and cattle loan facilities.

The business of loaning money on cattle is of such a nature that it can not be entirely monopolized by any one interest at any one yard. Loans may be negotiated by agents representing companies outside the yards. However, the extent of this independent business is compara-

tively small, so that the banks and cattle loan companies established in the yards have a preponderating influence.

While the packers practically have all the business of loaning money on cattle at all the stock yards they control, it is noticeable that they do not operate cattle loan companies in the stockyards independently owned nor to any extent at other points. It would seem to follow that it is their control of the stock yards that enables them to dominate the live-stock credit at their yards.

The big packers' power over these banking facilities through control of the stockyards is illustrated at the St. Louis National Stock Yards. These yards are controlled by the Morris interests and the only bank permitted within the yards is the National Stock Yards National Bank, which is likewise controlled by the Morrises. This bank advertises as "the largest bank in Illinois outside of Chicago." Its deposits on March 4, 1918, were over $18,000,000 and its loans and those of the National Cattle Loan Co. affiliated with it were over $17,000,000. The volume of the banking business is made secure through a lease dated April 1, 1914, between the stockyards and the bank. This lease expiring May 1, 1928, stipulates that it is upon the express condition that during the term of the lease or any extension thereof "the lessor will not lease any of its property at the National Stock Yards, or any interest therein, to any person, firm, or corporation doing a banking business or allow such business to be conducted therein by any person, firm, or corporation other than the lessee, it successors or assigns."

Consequently when the Drovers National Bank was recently organized at East St. Louis to compete with the Morris bank it could not secure a location within the stock yards. It was compelled to locate at a point one-half mile from the Exchange Building. Practically all of the business of the new bank is with commission men and other [fol. 1822] stockyards patrons, whose offices are in the Exchange Building.

It is evident from the correspondence that the packers have been aggressive in organizing these financial institutions or acquiring an interest in them. The following letters from their files show the effort made by Armour to

acquire a substantial ownership in the bank and loan company at the St. Paul yards:

April 18, 1916.

Mr. Louis F. Swift,
Swift & Co., Chicago, Ill.

Dear Sir: In compliance with your message to-day, I could not meet Mr. Hill until 2:30 this afternoon. He had a great deal to say in reference to the proposed Belt Line and how much good it was going to do South St. Paul and how much good Professors Smith and Crane had done to build up the northwest and the live-stock interests, and finally said that he did not think he should be asked to give up 50 per cent of his holdings in the Cattle Loan Company and Bank, but he finally agreed that he would give up one-third.

His holdings are now 990 shares, he having given ten shares of his stock to Mr. J. J. Toomey, his private secretary. This would make 330 shares that he is willing to give up. I told him that I did not know how arrangement could be made under such circumstances, as the other party would probably want $100,000 worth of stock. This would leave 170 shares beside the $500 increased capital to be raised. I told him I thought it would be practically impossible to get the stockholders to contribute any portion of this. He claimed that he thought they ought to, etc.

He evidently wished to convey the idea that he had been quite a factor toward building up the live-stock business since he came into the bank, and I think he wants to have as large an interest as anyone.

This is the best proposition I could get out of him, and await your further instructions.

Yours respectfully, Swift & Company, Per J. S. Bangs.

Manager's Office.

Chicago, April 21, 1916.

J. O. A.:

Our cable and other efforts indicate that 95 per cent of the stockyards stockholders have signed their waivers for increase of capital.

The other 5 per cent we are working on, but in several cases the stock is trusteed and the trustees are hard to get at, and their powers are limited, and various other reasons.

About the suggestion of Mr. Hill to sell one-half of his stock of the Bank and Cattle Loan Company, which would be $50,000.

[fol. 1823] He suggests that he thinks this is too much, and that he should only sell 33-1/3 per cent, or $33,000.

I inclose you memorandum showing how this would make it on both the Bank and Cattle Loan Company, and you will note the percentage.

L. F. S.

St. Paul Stock Yards Bank:	Per Cent	St. Paul Cattle Loan Co.:	Per Cent

Swift	22.85	Swift	26.74
Hill	19.06	Hill	19.06
Miscellaneous	34.29	Miscellaneous	30.40
	100.00		100.00

May 2, 1916.

Louis F. Swift, Esq.,
Swift & Company, Chicago.

My Dear Mr. Swift: Of course I would like to have 50 per cent of Mr. Hill's holdings in the bank, but under the circumstances I am willing to accept 33-1/3 per cent if you can not do better for us.

Yours very sincerely, J. Ogden Armour.

Law Offices of Albert H. & Henry Veeder,
76 West Monroe Street, Chicago, July 21, 1916.

J. O. Armour, Esq.,

c/o Armour & Company,
Union Stock Yards, Chicago.

Dear Sir: Referring to correspondence between yourself and Mr. Louis F. Swift, which confirms an arrangement Mr. J. S. Bangs made with Mr. J. J. Hill before the latter's death, whereby you were to have one-third of Mr. Hill's holdings in the Bank and Cattle Loan Company at South St. Paul at book value: Will say that Mr. Hill's death is very unfortunate in this matter.

Mr. Louis Hill takes the position that it will be impossible for him to carry out the arrangement made with his father, because, in the first place, the estate is in the court's hands for one year, and after that time the consent of the other nine heirs must be obtained; and that he was unwilling to present the matter to them and undertake to get their consent, owing to his being so very busy with other matters; but that he is perfectly willing to contribute his proportion, when he obtains his distributive share in his [fol. 1824] father's estate, and has no objections to the matter being put before the other heirs.

If there is anything that I can do in this matter, or if you desire me to assist your legal department in any way in this matter, I shall be happy to be of service.

Sincerely yours, Henry Veeder.

July 24, 1916.

My Dear Meeker: I am surprised at the attitude Mr. Louis Hill is taking. I should think any arrangement their father made before his death would be absolutely binding on the estate and I can not understand it and this don't suit me and we will not stand for it.

You can so advise Mr. Hill, either through Mr. Urion or Mr. Faulkner, and if necessary I will take matter up when I come back to Chicago.

I certainly would think that Mr. Hill would not take the position he has just because his father died. If this is

going to be his attitude I feel sorry for his career; and I don't believe it will be his attitude, either.

Yours truly, J. Ogden Armour, H.

Mr. Arthur Meeker,
Armour & Company, Chicago, Ill.

Packing-House Sites and Appurtenances Thereto.—In addition to owning or controlling most of the important stockyards in the country, the big packers, through their land-development companies, also own or control practically all the land which is suitable for packing-house sites near those yards. The independent packer who desires to locate a packing plant at one of these big packer stockyards can not get a suitable site for his plant unless the big packer consents to lease or sell land to him. The big packer stockyards, as a matter of fact, with few notable exceptions, have neither leased nor sold to the independents who desired packing-house sites for businesses of any considerable extent.

The big packers' monopoly of desirable packing-house sites at the principal stockyards, and their refusal to sell, has forced the independents who desired to locate at those markets to build their plants outside of the stockyards—in some cases 2 and 3 miles away. It is found that the independents who thus locate their plants are given little consideration from the stockyards companies in the way of spur-tracks, driveways to get the live stock from the yards to their plants and other yard conveniences which are afforded by the yards companies to the plants of the big [fol. 1825] packers. Principally because of these facts, most of the larger independent packing plants are located in rural districts or at smaller markets where the big packers have little or no control over the stockyards and packing-house sites.

At Chicago there are several more or less independent packers such as the John Agar Co. Jacob Dold & Co. has a packing plant at Wichita which was established before the Cudahy Packing Co. gained control of the Wichita Union Stock Yards Co. At Sioux City the Midland Packing Co. is now building a large plant. (How the site for the Midland company was secured from the Sioux City Stock Yards Co. will be shown later. See pages 77-79.)

Practically all the other large independent packing plants are located at the smaller markets or in the country: Jacob Dold & Co., at Buffalo; Cincinnati Abattoir Co., Cincinnati; John Morrell & Co., Ottumwa, Iowa; Geo. A. Hormel & Co., Austin, Minn.; Kingan & Co., Indianapolis; Hammond-Standish & Co., Detroit; Parker-Webb & Co., Detroit; Jacob F. Decker & Sons, Mason City, Iowa; Rath Packing Co., Waterloo, Iowa; Cleveland Provision Co., Cleveland, Ohio; Ogden Packing & Provision Co., Salt Lake City, Utah; Frye & Co., Seattle, Wash.; Carstens Packing Co., Tacoma, Wash.; and Hauser Packing Co., Los Angeles, Cal.

That generally the most important independent packing plants are not located at the stockyards controlled by the big packers is shown by the map facing page 27. The map gives the location, size, and ownership of each of the stockyards markets and of each of the interstate packing plants.

Several years ago there were several large independent packing plants at the big packer yards, but they have been absorbed by the big packers, as is shown in Chapter III, page 145, and in Table 62, pages 237-256 of Part I of this report.

Just how the big packers use their control over packing-house sites and appurtenances thereto to keep large independent plants from developing at the large yards can best be shown by examining the exact situation which exist at some of these yards.

At Sioux City, where Swift & Co. control the stockyards, Armour & Co. and the Cudahy Packing Co. own desirable packing-house sites on which are located their plants. In 1917 two independent interstate packing companies, the R. Hurni Packing Co. and Statter & Co. also owned small packing-house sites on which were located plants. The stockyards company leased sites to two very small local slaughterers, who killed only a few animals each week.

[fol. 1826] The Sioux City Stock Yards Co. furnished to both Armour & Co. and the Cudahy Packing Co., without cost to them, lanes or chutes for driving their stock directly from the stockyards pens to their plants and spur railroad tracks so they could load their dressed meats directly from their plants to the cars. At the same time the stockyards company refused to furnish either Hurni,

Statter or the local slaughterers, lanes or chutes for driving their animals from the stockyards pens to their plants, and refused to permit Hurni to construct at his own expense a spur track to his plant, and also refused to sell Statter additional land necessary for the enlargement of his plant.

In regard to the desired land or chute for his animals Statter said to a representative of the Commission:

For a number of years I have been compelled to drive my cattle and hogs through the main street of this district against all the traffic. We need a runway along the river bank. This could be built easily with no disadvantage to anyone. Smith Bros. and Sacks (the local slaughterers) could use the chute. From time to time I tried to get a driveway, but Mr. Eaton (president of the stockyards company) always refused. Why aren't we small packers entitled to some consideration? We are in the stockyards competing daily. It isn't so much a matter of the amount of stuff we buy as it is that we are in the game making a competing market. We help make this competitive market, but the small packer has to fight for his life.

R. Hurni & Co. had been operating at the Sioux City yards for many years and was located on a site adjoining the yards. Hurni, because of his proximity to the stockyards pens did not desire a lane or chute but asked only permission to cut a gate in the yards fence through which to drive the animals directly to his plant, but the stockyards company refused permission to allow the gate to be cut so Hurni was compelled to send stock around through the main street referred to by Statter. On this subject Hurni's attorney testified before the Commission as follows:

Question. Was it possible, or would it have been possible to have permitted Hurni to have had those hogs driven from the hog house (in the stockyards) to his plant without going into the street?

Answer. Personally, I never had the matter of getting hogs into his plant from the stockyards up with the officers; but I did have the matter of getting cattle into his plant from the stockyards up, and tried to get them to make provision for a gate. One of the stockyards alleys

runs immediately back of the Hurni plant and he wanted to get a gate from that alley into his plant so that the stock would not have to be taken through Chambers Street, but they refused to do that.

[fol. 1827] Question. The yards in which the cattle are fed for sale surround the Hurni plant on three sides, do they not?

Answer. That is true; yes, sir.

Question. And a gate into the Hurni plant would have been an easy matter to have placed on any one of the three sides?

Answer. Well, any one of two sides.

Question. That would have been a matter of a few dollars putting a gate in there?

Answer. Just a very slight expense; yes, sir.

Question. For how long a period of time did Mr. Hurni endeavor to secure the privilege of having that gate put in?

Answer. I don't know that personally. He made an effort to get it 10 years ago, and he never got it.

Question. Has the Cudahy plant one?

Answer. It has.

Question. Has the Armour plant one?

Answer. It has.

Hurni was never able to induce the terminal railways company, which is controlled by the stockyards company, to permit the construction of a spur track over to his plant so he would not have to haul his finished products from the plant through the streets to load them on the cars. This haul made an extra cost of $30 a car in addition to unduly exposing his products to the weather. Hurni appeared several times before the city council with a petition asking for a franchise to construct the track, and each time officials of the stockyards company appeared before the council in opposition and succeeded in preventing the issuing of the franchise.

Hurni's attorney testified before the Commission in regard to this matter as follows:

Question. Did Hurni make any effort at any time to secure the privilege of a spur track from his plant to the terminal railroad?

Answer. He had tried from time to time during the last 10 years to get a spur track in order to serve his plant.

Question. What is the distance from his plant to the terminal railroad?

Answer. About three blocks, on Chambers Street.

Question. And how did he get his product to the terminal railroad in the absence of a spur track?

Answer. He had to haul it with wagons to a car that was switched in on Prospect Street.

Question. And what was the expense per wagon load that, do you know?

Answer. I could not tell you that, Mr. Heney.

Question. You don't remember or recall what Mr. Hurni claimed it to be?

Answer. I don't remember except in a general way that he considered it a matter of very essential importance that he have a spur track, and said he could not meet [fol. 1828] competition and could not handle the meat advantageously by having to haul it the distance he had to haul it from his packing plant to the car, which made additional handling and additional expense.

Question. And in warm weather that was quite a serious——

Answer (interrupting). It was a serious disadvantage; yes, sir.

Question. Who had the granting of the spur track?

Answer. The Sioux City Terminal Co.

Question. And the Sioux City Terminal Co. was controlled by whom?

Answer. By the stockyards company.

Question. And who controlled the stockyards company at that time? Do you know?

Answer. Well, during the time I speak of it was controlled by the Armours and Cudahys and——

Question (interrupting). And Swift?

Answer. And Swift.

On June 16, 1917, partly because of the failure of his health, Hurni sold his packing plant to the Sioux City Stock Yards Co., which is controlled by Swift & Co. The yards company leased the Hurni packing plant to Swift & Co., and within less than a week the gate leading to the

plant for which Hurni had pleaded was cut, and within less than a month the stockyards company secured from the city council a franchise to build the spur track to it. The following letter of July 13, 1917, from F. L. Eaton, president of the Sioux City Stock Yards Co., to L. F. Swift, explains the action of the city council in this matter:

Office of President,
Sioux City, Iowa, July 13, 1917.

Mr. L. F. Swift,
Union Stock Yards, Chicago, Ill.

Dear Sir: Regarding the tracks at the Hurni packing house, we asked the council to pass an ordinance giving us the right for that track and also give us the necessary rights of way for the total track changes which we anticipate. We had a meeting with the council and discussed the matter, and they seemed ready to grant everything we wanted and just as we asked, except the track to the packing house. The mayor had opposed granting the track to Hurni, and feels that to grant it to us now would make him liable to censure; therefore he asks us to change the location of the track north of the packing house and swing it 14 feet west of the proposed line, which carries it into the stockyards property and off the street for about 400 feet. It makes a slight reverse curve and is not as good for us as to run it straight down the side of the street. One member of the council, who was rather disposed to side with the mayor, said he would like to know the feeling of the live stock exchange; so at the meeting yesterday the matter was laid over until to-morow (Saturday) when it [fol. 1829] will be taken up again, and in the meantime I have a resolution from the live stock exchange and a petition signed by about 90 men doing business at the yards asking the council to grant this right of way just as we asked for. We can get the right of way as the mayor outlines without any question, and may have to take that, although we will try to get exactly what we want as long as there seems the possibility of doing so.

I wired you yesterday, asking you to hold up the crossing, because if we have to take the mayor's line, it will

require a slightly different angle on the crossing, but we should know to-morrow what we will require.[1] * * *

Yours truly, ——— ———, President.

FLE-C

To a representative of the Commission an official of the stockyards company explained its objection to the building of the spur track for Hurni by claiming that the volume of R. Hurni & Company's business would not justify the investment by the railway company; but that as Swift & Co. promised to increase the business threefold, the spur was constructed for the latter company. No enlargements of the old Hurni plant have been made as yet.

In the early part of 1917, H. Statter, the slaughterer mentioned above, because of his local influence, succeeded in forcing the Sioux City Stock Yards Co. to sell him additional land to permit him to grow. There was introduced in the Iowa Legislature the "Thompson bill," which provided that the Iowa Railroad Commission be given power to regulate stockyards charges within the State. Statter was influential in support of the bill. The Sioux City Stock Yards Co. promised to sell him land for expansion of his plant and he withdrew his support of the Thompson bill, which then died in the committee. The following letter of April 18, 1917, from F. L. Eaton to L. F. Swift states the case clearly:

The Sioux City Stock Yards Co.,
Sioux City, Iowa, April 18, 1917.

Mr. L. F. Swift,
Union Stock Yards, Chicago, Ill.

Dear Sir: Referring to your letter of April 13th, regarding proposition of Mr. Statter, Mr. Statter has several [fol. 1830] times intimated that any proposition he made to me would not be acted upon favorably, and that he could do better by going straight to the Chicago people, and I, therefore, asked him to put his proposition in writing, and I would submit it just as he proposed it; and, in fact, I dictated my letter of April 7th to you in Mr. Statter's

[1] The omitted part of this letter refers to the prospective location of a hay barn by the stockyards company.

presence, and have refrained from saying anything further on the subject until after receiving your letter of the 13th. This much in explanation of the way in which the proposition was submitted.

When the Thompson bill was before the legislature, Mr. Statter was its most ardent supporter, and his attorney, Mr. Salinger, had more influence than any other person from Sioux City. It looked very doubtful as to our ability to kill this bill because the sentiment had been worked up among the commission men that Statter and Hurni were not being allowed to grow, and that same argument was used in Des Moines. We were able to curtail the activities of the Hurni people, but in the case of Statter we found it necessary to make the plain statement in Des Moines before the committee that, if Mr. Statter needed more ground to grow upon, we would be glad to let him have it, because we wanted more business, and finally, with that assurance upon our part, Statter and his attorney, Salinger, withdrew their support of the bill, and it died in committee.

I am, therefore, anxious that Mr. Statter shall have an opportunity to secure such ground as he may need to enlarge his packing business but, of course, I have been careful to say to him that we would have to be assured that he was so organized that he could conduct a business that would warrant the use of the amount of ground which he might desire. I have seen Mr. Salinger to-day, and prefer to talk with him, as he is rather more reasonable in his views than Mr. Statter, but Mr. Salinger says that while he is preparing to reorganize Mr. Statter's company and can sell a lot more stock, that it will be impossible to do that without assurances that they could have the ground needed. I suggested to him that, while the Stock Yards Company were unwilling to give an option of three years, they might possibly be willing to give an option for a short time, within which time Mr. Statter could make his reorganization, and I suggested six months. Mr. Salinger thought that would be short as times were now, but that possibly they might get through in one year.

I do not see how we would have any use for this ground within a year, nor can I see how it could be put to any better advantage so far as the stockyard business is con-

cerned, than to have a larger packing house built upon it, and I further believe it would be good policy for the stockyards company at this time to show to the livestock people and to the townspeople an inclination to encourage Statter to increase his plant.

[fol. 1831] Mr. Salinger asked that we submit some proposition to him as to what we would be willing to do, and I suggest for your consideration something like the following:

Agreed to sell Mr. Statter the land north of him for $1,250 and to sell him the land west of him that he desires, provided he shows us that he will have capital enough to carry on his business; that he will erect within a certain definite time a packing plant on the ground now owned by him or the ground agreed to be sold to him, which shall have a capacity of not less than 100 cattle and 500 hogs daily, purchasing his stock at the stockyards or paying yardage on all bought outside except such hogs as he uses in his serum plant, and which he is not permitted to buy at the stockyards; that we hold the ground subject to his purchase for one year; that at any time within the year, at his request we will agree with him as to a price, or failing to agree, will accept a price fixed by three real estate men, each party selecting one and the two selecting a third.

I fully agree with you that the preferred stock of this company is nothing that the stockyards company should take, and I told him when his proposition was submitted that I did not believe it would be considered, but I also intimated that, if we sold him the property, we would not demand the entire purchase price in cash, but would carry a part of it for a short time as a lien upon the property.

Under the conditions that are now existing here, I believe it would be well for us to make some such sort of a proposition as I have outlined, and would be glad to have you advise me what kind of a proposition would meet with your approval. If we can agree with him upon some sort of a proposition soon, it would be a good move for us to make.

Yours truly, F. L. Eaton, President and General Manager.

FILE C

As a result of securing this packing-house site Statter in March, 1918, reorganized the Statter & Co. into the Midland Packing Co. with an authorized capital stock of $1,000,000 common and $2,500,000 preferred. Fred C. Sawyer, manager of pork packing department of Swift & Co., resigned his position with Swift & Co. and became president of the Midland Packing Co., and on January 29, 1919, held more than 20 per cent of the issued voting stock of the company. The other large holders of the voting stock are: H. Statter and his attorney, B. I. Salinger; C. H. Burlingame; John L. Weldon; and D. H. Brennan. The Midland Packing Co. is constructing a large modern packing plant.

Eaton stated in the letter quoted above:

I fully agree with you that preferred stock of this company is nothing that the Stock Yards Co. should take, and I told him when his proposition was submitted that I did [fol. 1832] not believe it would be considered.

At Fort Worth where Armour and Swift control the Fort Worth stockyards and the surrounding land, they have not only repeatedly refused to permit independent packers to establish packing plants there but also declined to allow either Morris or Sulzberger to build plants at those yards. The citizens of Fort Worth and vicinity have several times asked Armour and Swift to allow other packers to come to Fort Worth, but Armour and Swift have on each occasion declined to do so on the ground that there were not sufficient hogs at the market to support another packing plant. They could not make the same claim in reference to cattle, because such a large percentage of the receipts have to be shipped to other centers to be slaughtered.

At St. Paul, after Swift & Co., and Armour & Co. had received bonuses to locate plants at the yards, a smaller packing concern, J. T. McMillan & Co., was invited to locate there also, but no bonus was offered, and the conditions proposed were such that the move would have been unprofitable for the independent and would have forced it into an agreement for apportioning the purchases of hogs, as, according to a representative of the independent plant, Swift & Co. demanded that they agree to buy not over a certain stipulated proportion of the hogs offered each day,

that being the agreement between Swift & Co. and Armour & Co. The small packer did not accept the proposition.

At Witchita, Kans., the Jacob Dold Packing Co., which works in an agreement for purchasing hogs with the Cudahy Packing Co., has a site adjacent to the stockyards which was acquired before Cudahy came to Wichita, but Cudahy controls all the other sites there. An informant stated to an agent of the commission as follows:

There is not any possibility for any competitive packing company to get in and acquire ground suitable for a plant or to get a runway for cattle in a convenient location in the vicinity of the stockyards without obtaining the consent of the Cudahy Packing Co., or Mr. Cudahy.

At Oklahoma City, Morris and Wilson control all available packing-house sites in and near the stockyards. No other packer could establish a plant there without their permission.

The letter following by Paul D. Cravath, counsel for Sulzberger & Sons Co., to Henry Veeder, shows the measures taken by a big packer to get control of the most available packing-house site remaining in New York:

[fol. 1833]

Cravath, Henderson & De Gersdorff,
52 William Street, New York,
New York, May 26, 1911.

Confidential.

Dear Veeder: The Sulzbergers have just been in to see me about several matters preparatory to my departure for Europe. They mentioned, among other things, a piece of property fronting on East River and extending from 46th to 47th Streets, which is behind the property on First Avenue which the S. & S. Company owns. The river-front property in question has been occupied by Kane & Wright, dealers in manure, whose lease expires in 1913. The Goelet estate, which owns the property, is now seeking a new lessee. The property can be leased for about $15,000 a year plus taxes, and could be sublet to the manure concern for a fraction of that amount. The Sulzbergers have reason to fear that this property may be leased as the site of a new packing plant. Indeed, they have reason for suspecting that the Josephs are considering a venture in that

direction, apparently realizing that their tenure of office with the Butchers Company, New York Butchers Dressed Beef Co., may not last indefinitely. Mr. Sulzberger thinks it would be wise to lease this property and get it out of the market as it is the most available, indeed, they think the only very available site for a packing plant in the packing house district. They do not feel like undertaking the burden alone as they have no possible use for the property.

Max Sulzberger when he goes to Chicago will talk to Mr. Swift about the advisability of arranging a lease of this property in the interest of all concerned.

I am writing you simply to give you the situation and to give you my impression that it is probably worth while to lease the property.

Very sincerely yours, Paul D. Cravath.

Henry Veeder, Esq.,
125 Monroe Street, Chicago, Illinois.

1 P.

The property in question, on expiration of the lease in 1913, was leased for 10 years by the Goelet estates in part to F. F. and W. A. Kane, and in part to the Turtle Bay Investors Co., which company on April 14, 1916, was merged with Sulzberger & Sons Co.—now Wilson & Co., Inc.

Thus, with the control of the packing-house sites the big packers enjoy an economic advantage over the small independents, and upon occasion these advantages are employed [fol. 1834] to the detriment of the development of competition and even to the point of forestalling development by taking over a packing-house site for which they acknowledge they have no use.

Section 13.—Power to Restrain Development of Additional Markets.

It is regarded as an economic loss to transport animals for slaughter from the wide producing area to a few large markets as is now done, rather than to slaughter the animals nearer the areas of production. This fact is indicated in the following letter from the files of Swift & Co.:

Edward F. Swift,
Chicago, October 31, 1916.

Messrs. Louis F. Swift, Edward F. Swift:

We are, whenever necessary in order to get them killed, shipping live cattle from St. Paul to Chicago. Mr. Chaplin advises as against killing the same cattle at St. Paul this increases their dressed Chicago cost about 29c. per cwt.

Armour and Wilson have both shipped considerable cattle from Chicago to Kansas City. Mr. Chaplin advises as against killing the same cattle at Chicago; this increases their dressed Chicago cost 92½c. per cwt.

Armour has also shipped from St. Paul to St. Joseph. Mr. Chaplin advises as against killing the same cattle at St. Paul this increases their dressed Chicago cost 79½c. cwt.

Wilson has also shipped live cattle from St. Louis to Kansas City. Mr. Chaplin advises as against killing the same cattle at St. Louis; this increases their dressed Chicago cost 59½c. cwt.

(signed) Charles H. Swift.

It is here developed that to ship an animal weighing 1,000 pounds from St. Paul to Chicago to be slaughtered there is a loss of $1.59½. To ship the same sized animal from Chicago to Kansas City to be slaughtered there is a loss of $5.08. To ship one from St. Paul to St. Joseph to be slaughtered gives a loss of $3.27¼.

With the present farm production of live stock as contrasted with the former range production, and with the present densities of population, a comparatively small market has about as constant supply of live stock the year [fol. 1835] around as the large markets and in addition the advantage of a local demand for a greater percentage of its meat products.

But the big packers, with their present control over the large stockyards, are opposed to the development of a great number of smaller markets. By keeping the markets limited to a few large ones they are enabled to keep them "in line" through their centralized buying organizations, but it would be much harder for them to keep a great num-

ber of markets in line. Their control of the few markets also gives them the power to control the policy of a large percentage of their competitors and to prevent others from coming into the field.

The big packers because of this attitude also use their power to prevent the development of additional stockyards markets. In some cases they buy them out and either use them for their own advantages or close them down. In at least one case two of the big packers brought pressure to bear on a railroad company to induce it to close down a competing stockyards. The following letter from the files of Swift & Co. shows the attitude of the big packers toward competing stockyards.

Swift & Company,

Stockyards Station,

Ft. Worth, Texas

April 30, 1912.

Mr. L. F. Swift,

Swift & Company, Chicago, Ill.

Dear Sir: Referring to report on Hodge yards of April 29th.

We find at Hodge this morning at 8:30, 50 cars of cattle, principally stockers for northern pastures; 6 decks of sheep billed for Oklahoma City from Big Canyon Range Company, Sanderson, Texas; and they are expecting from 20 to 30 decks through here from same company next Sunday. There are also several trains of cattle expected through those yards this afternoon.

We have succeeded fairly well on the sheep through Hodge. In the past ten days we have bought 61 single-deck cars there and shipped here, and have bought them all worth the money, and are showing good results on them.

Attached copy of letter is self-explanatory. We have a machine here that we are using for solicitors that we will take for this purpose, arranging with solicitors to handle [fol. 1836] his business otherwise for the time being.

We have had a young man making a trip over Hodge yards two or three times a day, and we will have him do

this, and also whenever there is anything there of interest, get a sheep buyer if sheep, a cattle buyer if cattle, a calf buyer if calves, and he can get them up there to see the stuff and back in half an hour.

It seems to be quite the scheme to bill stuff for Oklahoma City or Kansas City and scoot it around through these yards. For instance, I referred to 16 cars billed for Oklahoma City yesterday from south Texas, directly in our territory, and here are Morris and S. & S. both buying cattle here on this market, and still working to get these cattle from our territory for Oklahoma City market, sending them within a mile and a half of our yards.

We have got to keep our eye peeled on these little outside markets and stockyards or we will get hurt with them in time. I referred you to a new stockyard being built on the Rock Island R. R. the other day. It is claimed in every way possible that the Rock Island has nothing to do with it; that a man named Zimmerman is building the dipping vat. We remember all the claims that were made when the Katy yards at Hodge were built—probably not just of this description, but of a similar nature—and now we see the result. They run thousands of cars through there that we could do business on here on this market if they were out of the road. I suggested to you the other day that perhaps it was an opportune time to take a step to get them out of the road. We are naturally located for practically all the live stock of the Southwest. If we could concentrate it here and did not have so many of these little side issues, Oklahoma City and other little yards, it would make a wonderful market, one, I believe, that would dumfound you, yourself.

Yours truly, J. B. Googins, (Swift's Fort Worth Manager.)

In Chapter 6 of Part II of its report on private car lines the Commission explained fully how Armour and Swift brought pressure to bear on the Missouri, Kansas & Texas Railway Co. to force that company to close the Hodge stockyards referred to in the above letter. These packers wanted the Hodge yards closed because they were competing with the Fort Worth stockyards; they succeeded in getting them closed and thus eliminated the competition.

[fol. 1837] In 1914, there were three stockyards at El Paso, Tex.—one owned by Morris & Co., one on the El Paso & Southwestern Belt Line operated by an independent company, and a third on the Galveston, Harrisburg & San Antonio and Texas & Pacific Railroads. At that time Morris & Co., secured a tract of and adjoining all the railroad which enter El Paso and organized the El Paso Union Stock Yards Co., with a capitalization of $100,000, and made contracts with the various railroads entering the city which gave the Morris yards preference in receipts of live stock at that center. The following is a clause of the contract between the El Paso Union Stock Yards Co. and the Texas & Pacific Railway Co. which is similar to a clause in the contracts with the other railway companies:

The railway agrees and obligates itself to deliver all live stock transported by it to El Paso for delivery thereat or with the intent of further transportation of the same, except shipments not requiring feed or rest, to said "Yards" at its said stockyards, for care, handling, and attention while waiting further transportation or delivery, unless otherwise instructed by the owner or person in control of same.

This contract is apparently designed to take away most of the business from the other stockyards at El Paso and to give Morris the greater part of the stockyards business.

As soon as the yards at El Paso were completed the Morrises proceeded to induce commission firms at the large markets to open offices at El Paso. This is shown by the following letter:

Morris & Company,
Union Stockyards, Chicago

March 10, 1915.

Mr. Norris Broaddus
Kansas City, Kans.

Dear Sir: I find we have a very nice little yard at El Paso and we are putting up an Exchange Bldg., which will be finished shortly. Clay Robinson are going into it immediately and think Cassidy will open up an office in the near future. Besides these we have several local people opening up offices. Believe this will be a growing market and

would like very much to have any good strong commission firm coming into El Paso. If you hear of any please let [fol. 1838] me know.

Would appreciate your working on this.

Yours very truly, Edward Morris, Jr.

The following letters indicate that Armour and Swift were ready to take an interest in the El Paso yards as soon as it was apparent that those yards would interfere with the Fort Worth Stock Yards:

March 11, 1915.

Mr. Arthur Meeker,
Packing House.

Referring to the attached: In and of itself I see no particular value in our having any interest in El Paso. From an earning standpoint I think there is not much value there, and if at some future time the situation becomes harmful to any of our interests we can better take the matter up then, in the light of circumstances existing at that time, than to decide upon any policy at the moment.

R. J. Dunham.

March 16, 1915.

Mr. L. F. Swift,
U. S. Yards.

Dear Mr. Swift: With reference to the enclosed, how do you feel about our going to El Paso?

Yours very truly, (Signed) Arthur Meeker.

Chicago, March 16, 1915.

Mr. Arthur Meeker,
Armour & Company,
Union Stockyards, Chicago.

Dear Mr. Meeker: Answering your note of even date, and returning attached correspondence, I feel a good deal as Mr. Dunham does.

Don't think the El Paso connection is important for the Ft. Worth stockyards, but if it proves to be important at

some future time, think we can take action then just as well as we could now.

[fol. 1839] In other words, think it better to wait awhile and see what develops than it is to agree to any plan of action now.

Yours very truly, Louis F. Swift.

MSB

After getting control of the Crescent City Stock Yards Co., at New Orleans, the Morrises then acquired the other competing stockyards at that city as is shown by the following letter:

New Orleans, La., April 21, 1917.

Mr. G. C. Shepard,
The Cudahy Packing Co.,
Chicago, Ill.

Dear Sir: We are mailing you to-day's Time-Picayune, on page seven of which you will note that Morris & Co. have also purchased the Union Stockyards; this is in addition to the Crescent City stockyards of which the articles in the papers covered. This gives Morris & Co. all of the stockyard facilities in the city.

The Crescent City stockyards were at the old Crescent City plant, just across the parish line; The Union Stock Yards were a new enterprise that was recently permitted by the city at or near the butchers' abattoir, which is within the city limits. This eliminates any possible competition in the stockyard matter, as Morris seems to have taken them all in.

Yours truly, The Cudahy Packing Co. of La. (Ltd.),
W. H. Arnold.

WHA/E

Armour secured control of the Birmingham stockyards in 1915, and used them to his own advantage, as is shown by the following letters from the files of Swift & Co.:

Chicago, Oct. 16, 1915.

Mr. C. P. White,
Mgr. Swift & Company, Birmingham, Ala.

Dear Sir: Have your letter Oct. 13th, with reference to the live-cattle market in Birmingham; also in regard to

Armour & Company having an option running for five years on the Birmingham stockyards.

Please continue to keep me posted what you hear in regard to this proposition. Would like to know whatever develops.

[fol. 1840] Also would like to know at your convenience about what their facilities are at the Birmingham stockyards—general condition of their buildings, pens, etc., whether new or old or up to date.

Awaiting your reply,

Yours truly, Charles H. Swift.

HCC-AG

Copy L. F. S., E. F. S., C. H. S., G. F. S., jr., H. H. S., W. L.

Birmingham, Nov. 4, 1951.

Mr. Charles H. Swift,
Chicago, Ill.

Dear Sir: Replying to your letter of Oct. 16th in regard to Birmingham stockyards.

Wish to advise that the buildings and pens at these yards are new, having been built within the last year, and they have facilities for taking care of thirty to forty cars.

They are at present getting the majority of cattle coming into Birmingham and a large per cent of the cattle is being bought by Armour's local manager and shipped to East St. Louis, although we are mable to get any information as to what prices these cattle are costing.

Yours respectfully, Swift & Company, Per C. P. W.

CPW/FS

So long as the big packers retain their present control over stockyards, and enjoy the present advantages from the ownership and operation of private car lines and branch houses, there is little promise that additional live-stock

marketing centers will develop unless the big packers themselves own and develop them. In order to make a stockyards successful as a market, it must attract live stock; to attract live stock there must be buyers at the yards who will buy the live stock which is offered for sale. The big packers, as a rule, buy little at yards in which one or more of them are not financially interested, and in the case of new independent yards they would use their power in other ways to prevent the development of the yards.

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF COLUMBIA

To All to Whom These Presents Come, Greeting:

UNITED STATES OF AMERICA,
District of Columbia, ss:

Be it remembered, That in the District Court of the United States for the District of Columbia, at the City of Washington, in said District, at the time hereinafter mentioned, among others was the following proceeding, to wit:

[fol. 1844] Filed Apr. 12, 1921. Morgan H. Beach, Clerk.

IN THE SUPREME COURT OF THE DISTRICT OF COLUMBIA

Equity No. 37623

UNITED STATES OF AMERICA

vs.

SWIFT AND COMPANY AND OTHERS, Defendants

TO THE HONORABLE JUSTICES OF THE ABOVE-ENTITLED COURT:

Now comes Swift and Company (Ill.), Swift and Company (W. Va.), Swift and Company, Inc. (Ky.), Swift and Company Ltd. (La.), Swift and Company (Me.), Swift Beef Company (Me.), United Dressed Beef Company of New York, J. J. Harrington and Company, Inc., Bimbler Company, The G. H. Hammond Company, Omaha Packing Company, Plankinton Packing Company, Sturtevant & Haley Beef & Supply Company, E. K. Pond Packing Company, Van Wagenen and Schickhaus Company, Western Packing Company, Hammond Beef Company, Omaha Meat Company, A. Canfield Commission Company, H. C. Derby Company, Metropolitan Hotel Supply Company, Vermont Supply Company, The Hotchkiss Beef Company, New England Dressed Meat & Wool Company, North Packing & Provision Company, The Sperry & Barnes Company, John

P. Squire & Company, (Me.), John P. Squire & Company, Inc. (Mass.), John P. Squire & Company, Inc. (R. I.), Springfield Provision Company, White, Pevy and Dexter Company, Louis F. Swift, Edward F. Swift, Charles H. Swift, Gustavus F. Swift, Jr., Harold H. Swift, Alden B. Swift, George H. Swift, Laurence A. Carton, Frank S. Hayward, Charles A. Peacock, Wilfred W. Sherman, Wellington Keavitt, John M. Chaplin, William B. Traynor, Western Meat Company, Oakland Meat & Packing Com-
[fol. 1845] pany, Nevada Packing Company and Fred L. Washburn, defendants in the above entitled cause, by their solicitors, and respectfully represent to the Court:

Sioux City Stockyard Company

Located at Sioux City, Iowa;
Authorized Capital Stock: Preferred, 15,000 shares of the par value of $100 per share; Common, 15,000 shares, of the par value of $100 per share;
Issued and Outstanding Capital Stock: Preferred, 14,607 shares; Common 13,876 shares;
Owned by these defendants, or some of them: Preferred, 9,407 shares; Common 7,455 shares;

St. Paul Union Stock Yards Company

Located at South St. Paul, Minnesota;
Authorized Capital Stock: Common 50,000 shares of the par value of $100 per share;
Issued and Outstanding Capital Stock: Common, 25,000 shares;
Owned by these defendants, or some of them: Common 9,205 shares.

St. Joseph Stock Yards Company

Located at St. Joseph, Missouri;
Authorized Capital Stock: Common, 25,000 shares of the par value of $100 per share;
Issued and Outstanding Capital Stock: Common, 25,000 shares;
Owned by these defendants, or some of them: Common, 13,329 shares.

Fort Worth Stock Yards Company

Located at Fort Worth, Texas;
Authorized Capital Stock: Common, 30,000 shares of the par value of $100 per share;
Issued and Outstanding Capital Stock: Common, 27,500 shares;
Owned by these defendants, or some of them: Common, 9,075 shares.

[fol. 1846] The Denver Union Stock Yards Company

Located at Denver, Colorado;
Authorized Capital Stock: Preferred, 10,000 shares of the par value of $100 per share; Common, 15,000 shares of the par value of $100 per share;
Issued and Outstanding Capital Stock: Preferred, 4,000 shares; Common, 15,000 shares;
Owned by these defendants, or some of them: Preferred, none; Common, 7,500 shares.

Kansas City Stock Yards Company

Located at Kansas City, Missouri;
Authorized Capital Stock: Preferred, 90,000 shares of the par value of $100 per share; Common, 25,000 shares of the par value of $100 per share;
Issued and Outstanding Capital Stock: Preferred 79,915 shares; Common 25,000 shares;
Owned by these defendants, or some of them: Preferred, 371 shares; Common 53 shares.

St. Louis National Stock Yards

Located at East St. Louis, Illinois;
Authorized Capital Stock: Common 50,000 shares of the par value of $100 per share;
Issued and Outstanding Capital Stock: Common, 43,000 shares;
Owned by these defendants, or some of them: Common, 10,820 shares.

Union Stock Yards Company of Omaha, Ltd.

Located at Omaha, Nebraska;
Authorized Capital Stock: Common, 75,000 shares of the par value of $100 per share;
Issued and Outstanding Capital Stock: Common, 74,963 shares;
Owned by these defendants, or some of them: Common, 1,596 shares.

Bourbon Stock Yard Company

Located at Louisville, Kentucky;
Authorized Capital Stock: Common, 13,000 shares of the par value of $100 per share;
Issued and Outstanding Capital Stock: Common, 13,000 shares;
Owned by these defendants, or some of them: Common, 1,615 shares.

[fol. 1847] Newark Stock Yards

Located at Newark, New Jersey;
Authorized Capital Stock: Common, 500 shares of the par value of $100 per share;
Issued and Outstanding Capital Stock: Common, 500 shares;
Owned by these defendants, or some of them: Common, 475 shares.

Milwaukee Stock Yards Company

Located at Milwaukee, Wisconsin;
Authorized Capital Stock: Common, 2,000 shares of the par value of $100 per share;
Issued and Outstanding Capital Stock: Common, 2,000 shares;
Owned by these defendants, or some of them: Common, 2,000 shares.

Brighton Stock Yards Company

Located at Brighton, Massachusetts;
Authorized Capital Stock: Common, 100 shares of the par value of $100 per share;
Issued and Outstanding Capital Stock: Common, 100 shares;
Owned by these defendants, or some of them: Common, 61 shares.

Portland Union Stock Yards Company

Located at North Portland, Oregon;
Authorized Capital Stock: Common, 1,500 shares of the par value of $100 per share;
Issued and Outstanding Capital Stock: Common, 1,500 shares;
Owned by these defendants, or some of them: Common, 731 shares;

The Cleveland Union Stock Yards Company

Located at Cleveland, Ohio;
Authorized Capital Stock: Common, 12,500 shares of the par value of $100 per share;
Issued and Outstanding Capital Stock: Common 12,500 shares;
Owned by these defendants, or some of them: Common, 1,000 shares.

[fol. 1848] That the capital stock of each and every stock yard terminal railroad, in which these defendants, or any of them, have any interest, is owned in each case by some one of said stock yard companies, as hereinafter set forth, and none of these defendants has any direct or other interest in said stock yard terminal railroad companies, except through the ownership of stock in said stock yard companies so owning said stock yard terminal railroads. Said stock yard terminal railroads are as follows:

Sioux City Terminal Railway Company

Located at Sioux City, Iowa;
Authorized Capital Stock: Common, 3,000 shares of the par value of $100 per share;

Issued and Outstanding Capital Stock: Common, 2,000 shares.

All of said outstanding shares of stock are owned by the said The Sioux City Stock Yards Company.

St. Paul Bridge and Terminal Railway

Located at South St. Paul, Minnesota;

Authorized Capital Stock: Common, 5,000 shares of the par value of $100 per share;

Issued and Outstanding Capital Stock: Common, 20 shares;

All of said Outstanding Shares of stock are owned by said St. Paul Union Stock Yards Company.

St. Joseph Belt Railway Company

Located at South St. Joseph, Missouri;

Authorized Capital Stock: Common, 5,000 shares of the par value of $100 per share;

Issued and Outstanding Capital Stock: Common, 4,000 shares.

All of said outstanding shares of stock are owned by said St. Joseph Stock Yards Company.

Fort Worth Belt Railway Company

Located at Fort Worth, Texas;

Authorized Capital Stock: Common, 4,000 shares of the par value of $100 per share.

[fol. 1849] Issued and Outstanding Capital Stock: Common, 4,000 shares;

All of said shares of stock are owned by said Fort Worth Stock Yards Company, through the means of Trustee.

Kansas City Connection Railroad

Located at Kansas City, Missouri;

Authorized Capital Stock: Common, 10,000 shares of the par value of $100 per share;

Issued and Outstanding Capital Stock: Common, 10,000 shares.

All of said shares of stock are owned by said Kansas City Stock Yards Company.

East St. Louis Junction Railroad Company

Located at East St. Louis, Illinois;
Authorized Capital Stock: Common, 5,000 shares of the par value of $100 per share;
Issued and Outstanding Capital Stock: Common, 5,000 shares;
All of said shares of stock are owned by said St. Louis National Stock Yards.

That these defendants, saving and reserving unto themselves, and each of them, the benefit of exceptions to those portions of the Court's memorandum of decision filed herein on the 4th day of January, 1921, and holding that the ownership of stock by these defendants in the said public stockyard market companies falls within the purview of the anti-trust laws, and has the effect to restrain interstate commerce and tends to create a monopoly of a line of commerce, and that the Court has the power to enforce the injunction entered in this cause by receivership and sale of the stock-holdings of the defendants in public stockyard market companies and stockyard terminal railway companies, and to that portion of said memorandum which disapproves of the plan presented by these defendants on the 26th day of October, 1920, and to that portion of the said memorandum which holds that unless the defendants were able to propose a plan which would meet the require-
[fol. 1850] ments of the said memorandum, the Court would appoint officers to take title to the stock of the defendants, and to hold the same subject to the order of the Court until suitable arrangements could be made to have it disposed of in accordance with the terms and purposes of the decree, and farther saving and reserving unto themselves, and each of them, benefit of exceptions to the memorandum decision of the Court filed herein under date of March 2, 1921, disapproving that certain plan of defendants filed under date of February 7, 1921, which plan provided for the disposition and divestment of their respective interests in the several public stockyard market companies and stockyard terminal railway companies named in the Bill of Complaint herein exhibited, in which they, or any of them, have an interest, the said defendants

now respectfully submit for the approval of this Honorable Court the following plan for the disposition of the stock held and owned by them and representing their interest in said public stockyard market companies, and in said stockyard terminal railway companies.

Deposit of Stock

These defendants, within thirty days from and after the date of the approval of this plan by the Court, shall deliver to the Illinois Trust & Savings Bank, of Chicago, Illinois, hereinafter referred to as the Trust Company, all evidence of stock ownership in said stockyard companies above mentioned (which includes the interest of these defendants in stockyard terminal railroad companies owned by said stockyard companies) upon negotiable receipts of said Trust Company therefor, except such of said stocks as may be now pledged. As to any of such stock as may be now pledged, the defendants will execute and deliver to said Trust Company an order signed by the defendant owning such pledged stocks, directing the pledgees thereof [fol. 1851] to deliver the certificates of stock held by the pledgee to said Trust Company in exchange for its negotiable receipt. In the event that any pledgee shall fail to exchange such pledged stock for the negotiable receipt of said Trust Company and such pledged stock shall thereafter be released from said pledge, the pledgor thereof shall, upon such release, deliver the certificate of stock to said Trust Company, in exchange for its negotiable receipt.

Said depositary shall enter its appearance in this cause so as to be subject to the jurisdiction of the Court in the discharge of its duties as such depositary.

In connection with deposit of said shares of stock, defendants shall enter into an escrow agreement with said Trust Company, the terms of which shall be in accordance with the provisions of this plan and the decree entered herein on the 27th day of February, 1920, and all such stock delivered to the said Trust Company shall be held by it in escrow thereunder until disposed of by said Trust Company as hereinafter provided.

Within sixty days after the Court's approval of this plan the Trust Company shall make a report to the Court,

furnishing to the Attorney General of the United States and to these defendants each a copy thereof, showing the amount of stock deposited with it pursuant to the provisions hereof, and also the orders delivered to it by these defendants on the pledgees, showning the amount of the stock covered by such orders and the names of the pledgees; and it shall be the duty of the Trust Company to make additional reports as the Court may direct, or as may be requested of it either by the Attorney General or these defendants.

As and when any of the said stock shall have been sold, pursuant to this plan and the sale approved by the Court, the depositary shall, in exchange for its receipt, deliver the proper certificates of stock to the purchaser thereof. [fol. 1852] If any pledgee of stock accepting the negotiable receipt of the said Trust Company shall find it necessary to foreclose the loan for which such receipt is held as collateral said Trust Company shall, upon proof thereof, and surrender of said receipt, deliver to such pledgee the certificate or certificates of stock represented thereby and said defendants will request the pledgee to give to the Court and the Attorney General full information as to its final disposition of such stock.

The Swift and Armour groups of defendants assume the duty and obligation of making provision for the compensation of and expenses incurred by said Trust Company in the performance of its duties hereunder, and in such manner as that said compensation and expenses will not be or in any way constitute a lien upon either the certificates of stock deposited with it or the negotiable receipts issued against the same os the stock represented thereby.

Upon the sale of all of said stock or on termination of this plan by order of the Court or otherwise, the said Trust Company shall be discharged of all its powers and duties under this plan and all certificates of stock or other evidences of ownership then held by said Trust Company hereunder shall be forthwith returned to the defendant depositing the same therewith, upon surrender of the receipts issued by said depositary therefor.

Individual Trustees

Upon the approval of this plan by the Court, these defendants will execute and deliver to Henry W. Anderson, of Richmond, Virginia, and George Sutherland, of Salt Lake City, Utah, as trustees, powers of attorney, irrevocable during the time this plan remains in effect, authorizing said trustees jointly to vote all of the stock of said [fol. 1853] defendants in said last mentioned stockyard companies and stockyard terminal railroad companies, or such portion thereof as from time to time shall remain unsold pursuant to this plan.

Said individual trustees shall be charged with the duty of acquainting themselves with the conduct and operation of said stockyard companies and stockyard terminal railroads, but shall not vote said stock so as to interfere with the management and conduct of said public stockyard market companies or the stockyards operated by them, or said stockyard terminal railroads, unless both of said trustees shall be of the opinion that said stockyards or stockyard terminal railroads, or some of them, are being used in violation of the anti-trust laws of the United States, or the decree herein.

In case said trustees shall disagree as to the voting of said stock, they, or either of them, or the petitioner, or the defendants, may apply to the Court for an order directing how said stock shall be voted, with the right of either party hereto to be heard and to except to the order of the Court and to appeal therefrom.

It shall be the duty of said trustees to keep themselves informed as to the progress made in the sale of the stock in accordance with this plan and report the same to the Court as and when directed by it, or upon their own initiative, and with such recommendations and suggestions as they may deem proper.

The said trustees, in the performance of their duties hereunder shall not be liable, except for willful misconduct on their part.

Said trustees shall be subject to removal by the Court, in its discretion. If any vacancy in said trusteeship occur, [fol. 1854] because of the removal or otherwise of said Henry W. Anderson, the Court shall appoint as his suc-

cessor a suitable person nominated by the petitioner; and if such vacancy shall occur because of the removal or otherwise of said George Sutherland, the Court shall appoint as his successor a suitable person nominated by the Armour and Swift groups of defendants.

Each individual trustee shall receive compensation at the rate of Ten Thousand Dollars ($10,000) per annum, and his reasonable and proper expenses, to be approved by the Court and paid by the Armour and Swift groups of defendants.

Upon the sale of all of said stock, or upon the termination of this plan, by order of Court, or otherwise, the said trustees shall be discharged of all their powers and duties under this plan.

Report of Sales

These defendants will proceed with due diligence to sell the aforesaid stock owned by them, as hereinbefore detailed, and they will make reports of sales to the Court from time to time, furnishing copies thereof to the depositary and to the individual trustees, stating in said reports the name or names of said proposed purchaser or purchasers, the number of shares proposed to be purchased by them, the price to be paid and the terms and conditions of such proposed sales. They shall attach to said reports affidavits of the proposed purchasers, setting forth that such proposed purchaser is making the purchase for himself and not for any of the defendants in this action, and that none of said defendants has any interest whatever in said purchase; in what manner, if any, said proposed purchaser is connected with or related to, by blood or marriage, any of the individual defendants in this action, and what connection, if any, he has with, or what interest, if any, he has in any of the corporation defendants in this action, [fol. 1855] and also that he is not acting for or on behalf of any of the defendants or in concert, agreement or understanding with any of such defendants. The form of such affidavit is hereto annexed as a part hereof.

No sales of said stock will be consummated until the same have been approved by the Court.

General

If, before sale of the said stock of any of the public stockyard companies hereinbefore mentioned, a reorganization of such company shall be effected by a majority of the stockholders thereof, whereby it shall become necessary and desirable to exchange any shares of the stock of said company so reorganized for shares or securities of any such reorganized corporation, the defendants shall have the right to make such exchanges and the shares or securities received in exchange shall thereafter be subject to all the provisions of this plan for sale by these defendants, as were the shares of stock surrendered in lieu thereof.

Each purchaser of stock in stockyard companies, wherein defendants in this cause hold controlling interest, shall agree, as a condition of the purchase and holding of said stock by himself, his personal representatives or assigns, that said stock shall be voted to effectuate the provisions of Paragraph Thirteenth of the Consent Decree herein entered.

In the event sales of any stock shall be sold by these defendants on the installment plan, the purchaser thereof shall have the right to vote said share or shares of stock either in person or by proxy, provided such proxy shall not be given to or voted by any of these defendants.

These defendants will, upon the request of the Attorney General of the United States, furnish him any information which he may request as to their progress in the sale and disposition of said stock and generally in the execution [fol. 1856] of this plan.

Time for Completion of Sales

These defendants, and each of them, will proceed with due diligence, in the manner herein provided, and in accordance with the provisions of this plan, to sell their respective interests in the hereinabove described stockyard market companies, and stockyard terminal railroad companies, at fair and reasonable value, and in case the same cannot be so disposed of within one year from the date of the approval of this plan, said defendants may make a showing to this court of the diligence used and the best offers received for said stocks, and may obtain from the

Court such extensions of time as the Court may prescribe for the disposition of the same.

The approval of this plan shall not be construed so as to deprive these defendants of the right to petition or move the Court at any time for a modification hereof.

Termination

The Court shall have the power to terminate this plan, or any part hereof, on being convinced, after hearing, that these defendants are not proceeding with promptness and vigor in disposing of said stocks hereunder.

Wherefore, these defendants pray that an order be entered in this cause approving the plan herein set forth for divesting these defendants of their ownership or interests, as aforesaid, in said public stockyard market companies and said stockyard terminal railroads.

Dated at Washington, D. C. this 12th day of April, A. D. 1921.

(Sgd) Chas. A. Douglas, (Sgd) Conrad H. Syme, (Sgd) Henry Veeder, Attorneys for the Swift Group of Defendants.

IN THE SUPREME COURT OF THE DISTRICT OF COLUMBIA

Equity No. 37623

UNITED STATES OF AMERICA, Plaintiff

vs.

SWIFT & COMPANY, ET AL., Defendants

Order Appointing Trustee

This cause came on for further hearing on the application of the Swift defendants for a further extension of time in which to dispose of their interests in public stockyard market companies and stockyard terminal railroads in compliance with paragraph 2 of the Consent Decree entered herein

on February 27, 1920, and with the order entered January 31, 1931; and upon the cross-complaint on the United States asking for the appointment of a trustee to take the custody of the stock holdings of the Swift defendants in public stockyard market companies and stock yard terminal railroads, for the purpose of disposing of the same under the direction of the Court in compliance with the Consent Decree; and counsel for the Swift defendants having consented to the appointment of a trustee as aforesaid, it is hereby

Ordered, Adjudged, and Decreed:

1. That the application of the Swift defendants for a further extension of time be, and it is hereby, denied;

2. That the Swift defendants be, and they are hereby, directed forthwith, to assign and transfer, absolutely and [fol. 1865] unconditionally, all shares of stock held by them, or any of them, of which they are required to divest themselves by paragraph 2 of the Consent Decree, to the trustee hereinafter named, in trust, for the purposes hereinafter described; provided that as to such of said shares of stock as may now be pledged, the defendants shall execute and deliver to the Trustee an order signed by the defendant owning such pledged stocks directing the pledgee thereof to deliver the certificates representing such shares of stock held by the pledgee to the Depositary, hereinafter named, in exchange for negotiable receipts. Upon receipt of said certificates the Depositary shall forthwith cause the certificates to be transferred into the name of the Trustee and retain the same in its possession until the further order of the Court. In the event that any pledgee shall fail to exchange such pledged stock for the negotiable receipts of the Depositary and such pledged stock shall thereafter be released from said pledge, the pledger thereof shall, upon such release, deliver the certificate representing said shares of stock to the Depositary in exchange for its negotiable receipts, as provided in paragraph 3 hereof with respect to shares of stock that are not now pledged. If any pledgee of shares of stock, accepting the negotiable receipt of the Depositary, shall find it necessary to foreclose the loan for which such receipt is held as collateral, the Depositary shall, upon proof thereof and surrender of said receipt,

deliver to such pledgee the certificate or certificates representing such shares of stock;

2. That the certificates representing the above described shares of stock which are not now pledged, shall be depos- [fol. 1866] ited forthwith for safekeeping with the First Union Trust Company, Chicago, Illinois, which is hereby designated as Depositary hereunder. In exchange for said certificates of stock the Depositary shall issue its negotiable receipts to the beneficial owners thereof as the Trustee shall designate them to it in writing, but shall not deliver the said certificates of stock out of its possession, except upon the further order of this Court. Said negotiable receipts shall be issued by said Depositary subject to all the provisions of the Decree entered in this cause on February 27, 1920; and subject to the power of the Trustee to sell the stock represented by said receipts in the manner and under the conditions provided in this Order and subject also to all other powers and limitations created or imposed by this Order. Said receipts shall contain appropriate provisions reciting the conditions under which they are issued, and the form of said receipts shall be submitted to and approved by this Court prior to issue. By consenting to act as such, the Depositary shall become a party to this cause and be subject in all respects to the further order of this Court.

4. That Harry S. New be, and he is hereby appointed as Trustee with the power and duty of disposing of the shares of stock referred to in paragraph 2 hereof, or any part thereof, subject to the approval of this Court, as quickly as may be; the beneficial owners to be entitled to suggest prospective purchasers. No sale shall be consummated until approved by the court, and until it shall be established to the satisfaction of this Court that the purchaser is making the purchase for himself and not for any of the defendants herein, and that none of the defendants has any interest whatever in the purchase; that the purchaser is in no manner connected with or related to any of the indi- [fol. 1867] vidual defendants herein; and that he is not acting for or on behalf of any of the defendants herein or in concert, agreement, or understanding with any of them;

5. That, except as provided in paragraph 3 hereof, until finally disposed of, the Trustee shall vote the said stock and otherwise exercise all rights incidental to absolute ownership thereof, independent of any control by any of the Swift defendants, except the right to retain dividends, if as and when declared, for his own use and benefit; and shall perform such other acts in the premises as may from time to time be directed by this Court. The Trustee shall direct the Stockyards Companies to pay all cash dividends to the defendants as he shall designate them. Upon the sale of any of said stock by the Trustee pursuant to the approval of this Court, the net proceeds thereof, as determined by the Order of this Court, shall be deposited with the Depositary and distributed by it to the owner or holder of the negotiable receipts for the stock so sold. Dividends in the form of stock shall be deposited with the Depositary subject to the same terms and conditions as the other shares of stock held hereunder;

6. That the Trustee shall be paid as compensation in full for all services rendered as Trustee at the rate of Ten Thousand Dollars per annum payable in equal quarterly instalments. The Trustee shall file with the Court quarterly hereafter a verified statement of the amount of compensation due him and the expenses necessarily incurred by him in the administration of this trust, which, upon approval of the Court, shall be paid by the defendant Swift & Company. The trustee shall be subject to removal by the Court in its discretion and in the event of his removal or in the event of his death, resignation, or inability to act, the Court shall appoint his successor. That the De- [fol. 1868] positary shall receive such compensation for its services and expenses in the performance of its duties hereunder as may be agreed upon by the Depositary and defendants;

7. That the Trustee shall be accountable for action hereunder only in proceedings in this cause, and shall not be liable for any loss or default unless resulting from gross negligence or wilful misconduct; and any further order of this Court entered upon notice to the Trustee and to the United States and to the Swift defendants shall be full protection in any action taken pursuant thereto;

8. That within thirty days hereafter the Trustee shall report to the Court whether all the above described shares of stock have been transferred to him as Trustee and have been deposited with the Depositary as hereinbefore provided, and as to any such shares of stock as shall not have been transferred to him or deposited with the Depositary as provided herein, the Trustee shall describe fully the situation with reference to such stock and shall seek the further instructions of this Court with respect thereto;

9. That the Trustee shall report to the Court semi-annually and upon further order of the Court, the facts in respect to the administration of the trust herein described, and shall make such recommendations as he may deem advisable in respect thereof and in respect to the carrying out of the provisions of paragraph 2 of the Consent Decree;

10. That the Trustee may make application to the Court at any time for such further orders or directions as may be necessary or proper in connection with the administration of his trust; and jurisdiction of this cause is hereby retained for the purpose of making such other and further orders or taking such other action, if any, as may be necessary or appropriate to the carrying out and enforce-[fol. 1869] ment of this order and of paragraph 2 of the Consent Decree;

11. That the defendants are not to be deprived by any of the provisions of this order from the right to divest themselves of all ownership or interest in public stockyard market companies, in accordance with the provisions of the Decree of 1920, under any plan or plans which may hereinafter be approved by this Court.

Dated June 16, 1932.

(Sgd) Jennings Bailey, Justice.

Consented to:

(Sgd) Frank J. Hogan,
Counsel for Swift defendants.

(Sgd) John Lord O'Brian,
The Assistant to the Attorney General.

be, and the same is hereby confirmed and approved.

[fol. 1875] Further ordered and decreed, That the First National Bank of Chicago, formerly the First Union Trust and Savings Bank, the designated depositary of said shares of stock, shall deliver unto the purchaser, the United Stockyards Corporation, certificates for the aforesaid shares of capital stock now standing in the name of Harry S. New, Trustee, and in the names of the other individuals hereinabove named as holders of certain of said shares in exchange for the net proceeds of said sale, namely, $6,279,787, which sum represents the purchase price of all of said shares of capital stock as is shown in the petition aforesaid.

Further ordered and decreed, That no director, officer or employee of Swift and Company, while such director, officer or employee, shall be a director, officer or employee of United Stockyards Corporation after the sale of the shares of capital stock hereinabove specifically described shall have been completed.

(sgd) Jennings Bailey, Justice.

Consented to:

H. E. C. John Dickinson (sgd), Assistant United States Attorney General.

Consented to:

Frank J. Hogan, Nelson T. Hartson (sgd), Attorneys for Defendant Swift and Company.

[fol. 1876] AUTHENTICATION

District Court of the United States for the District of Columbia:

I, CHARLES E. STEWART, Clerk of the said Court, do hereby certify that the writing annexed to this certificate is a true copy of original on file and of record in said Court in this cause.

Witness my hand and the seal of said Court, this 28th day of July, 1938.

(sgd.) C. E. Stewart, Clerk, By ——, Ass't. Clerk. (Seal.)

I, O. R. LUHRING, Presiding Justice of said Court, do hereby certify the foregoing attestation by Charles E. Stewart, Clerk of the said Court, to be in due form.

Witness my hand this 28th day of July, 1938.

(Sgd) O. R. Luhring, Presiding Justice.

I, CHARLES E. STEWART, Clerk of said Court, hereby certify that the Honorable O. R. Luhring, whose genuine signature is subscribed to the foregoing certificate, was at the time of signing and attesting the same, Presiding Justice of said Court, duly commissioned and qualified.

Witness my hand and the seal of said Court, this 28th day of July, 1938.

[fol. 1878] (Filed Jun. 15, 1937. Charles E. Stewart, Clerk)

IN THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLUMBIA

Equity No. 37623

UNITED STATES OF AMERICA, Plaintiff,

vs.

SWIFT & COMPANY, ET AL., Defendants

ORDER APPOINTING TRUSTEE

This cause came on for further hearing on application of the United States of America for the appointment of a trustee to succeed Harry S. New, deceased, who was appointed and acted as trustee herein pursuant to the order of this Court dated June 16, 1932; and the Court being advised in the premises it is hereby

Ordered:

1. That John Walsh be and he hereby is appointed trustee upon the same trusts and with all the powers and duties of the trustee as provided in the order of this Court dated June 16, 1932; and under the terms thereof;

2. That the certificates representing all the shares of stock referred to in paragraph 2 of the order of June 16, 1932 which have remained unsold shall continue to be held in the custody of the depositary designated in the order dated July 22, 1932, supplementing the order appointing trustee entered June 16, 1932; subject to the instructions of the trustee with the approval of the Court;

3. That the compensation of the trustee in full for all services rendered as trustee shall be at the rate of Four Thousand Dollars ($4,000.00) per annum, to be paid quarterly, together with expenses incurred by said trustee, in the manner provided in the order of June 16, 1932.

(sgd) Jennings Bailey, Justice.

M169P346

Dated: June 15th, 1937.

Consented to:

Frank J. Hogan by Hartson, For the Swift Defendants.

[fol. 1879] AUTHENTICATION

INTERSTATE LIVESTOCK RATE INCREASES AND DESTINATION TERMINAL ALLOWANCE INCLUDED IN THE RATE

Line No.	
1	INTERSTATE LIVESTOCK RATE INCREASES
2	Interstate rates on livestock prescribed by the Interstate Commerce Commission in Livestock - Western District Rates, Docket 17000 Part 9, 176 I.C.C. 1, have been increased as follows:
3	5 Per cent increase, Ex Parte 123, 266 I.C.C. 41.
4	3 Per cent increase, Ex Parte 148, 248 I.C.C. 545: suspended 255 I.C.C. 357, 256 I.C.C. 502, 258 I.C.C. 455 and 259 I.C.C. 159 to December 1, 1945 and for six months after legal termination of the war, 264 I.C.C. 702.
5	15 Per cent increase, Ex Parte 162, 266 I.C.C. 537.
6	*10 Per cent interim increase, Ex Parte 166.
7	*20 Per cent interim increase, Ex Parte 166. (Supersedes increase shown in line 6.)
8	*Under Ex Parte 166 the increase is added to the total transportation charge and not to the rate.
9	DESTINATION TERMINAL ALLOWANCE
10	In Docket 24847, Chicago Live Stock Exchange v. Santa Fe et al., the Interstate Commerce Commission found the destination terminal allowance under the rate scales prescribed in Livestock - Western District Rates to be $10.80 per car and the following is the application of the subsequent rate increases thereto:
11	$10.80 increased 5 per cent equals $11.34 per car.
12	$11.34 increased 15 per cent equals $13.04 per car.
13	$13.04 increased 20 per cent equals $15.65 per car.

Accounting Department,
February 24, 1948.

~~I.C.C. 29809~~
Def. Ex. 53
Parts I and II

DEFENDANT'S EXHIBIT NO. 53

This exhibit includes maps of blueprints of the rail facilities and packing plants at each of the points named in paragraph VII of the complaint in I.C.C. Docket No. 29809 except the following:

Chippewa Falls, Wisconsin
Milburn, Illinois
Fort Atkinson, Wisconsin
Frankfort, Indiana
Peoria, Illinois
So. St. Paul, Minnesota
Terre Haute, Indiana
Sioux City, Iowa

With the exception of Sioux City at these eight points named above no packer receives any rail shipments of livestock at its plant. This fact is shown on Defendants' Exhibit 12.

A blueprint of the facilities at Sioux City, Iowa was introduced separately as Defendants' Exhibit_____.

These maps show:

1. Rail facilities at these points.
2. Location of any packing plant which takes rail deliveries of livestock at its plant.

THE DIRECT MARKETING OF HOGS

(Prepared in the Bureau of Agricultural Economics)

Foreword

The marked expansion in the direct marketing of hogs in the last decade gave rise to a number of troublesome questions and problems to which the Bureau of Agricultural Economics for some time has been giving attention. These questions took on added importance in connection with programs considered under the Agricultural Adjustment Act and the Secretary of Agriculture requested that the study be completed as soon as possible. Additional funds for this purpose were provided by the Agricultural Adjustment Administration, and the research staff of the Bureau was augmented with specialists made available through the courtesy of State agricultural colleges in the leading hog-producing States. Generous cooperation was received throughout the study from various types of marketing agencies, slaughterers, and producers.

The study shows that the development of direct marketing of hogs is associated with the expansion and shifts in the areas of corn and hog production and with the decentralization of the packing industry. Its growth has been facilitated by the extension of good roads and the rise of motor transportation as well as by more favorable freight rates on hog products than on live hogs. The lower labor costs usually found in smaller cities and towns also have contributed to the decentralization of the packing industry and to the growth of direct marketing.

Direct marketing has not lowered the general level of hog prices, nor has it operated to reduce returns to producers. The sharp decline in hog prices in recent years was due to the drastic reduction in consumer income associated

with the decline in the general price level, and to reduced foreign demand for American hog products. It has not reduced competition for hogs. There are no fixed price differences between public markets and interior points. A rise or decline in hog prices is at least as likely to occur first at interior points as at public markets. Direct marketing has not increased marketing costs nor widened the margins between prices of hogs and prices of hog products, nor has it deprived public markets of supplies of the various qualities of hogs sufficient for registering prices for the different grades. In general, the study shows that direct marketing has not operated to the disadvantage of hog producers. It does point out, however, that direct [fol. 2139] marketing has substantially reduced the number of hogs received for sale at public markets which has adversely affected the interests of stockyard operators and market agencies at some public markets.

While there are some regional and local differences, they are matters of degree and do not alter the main conclusions.

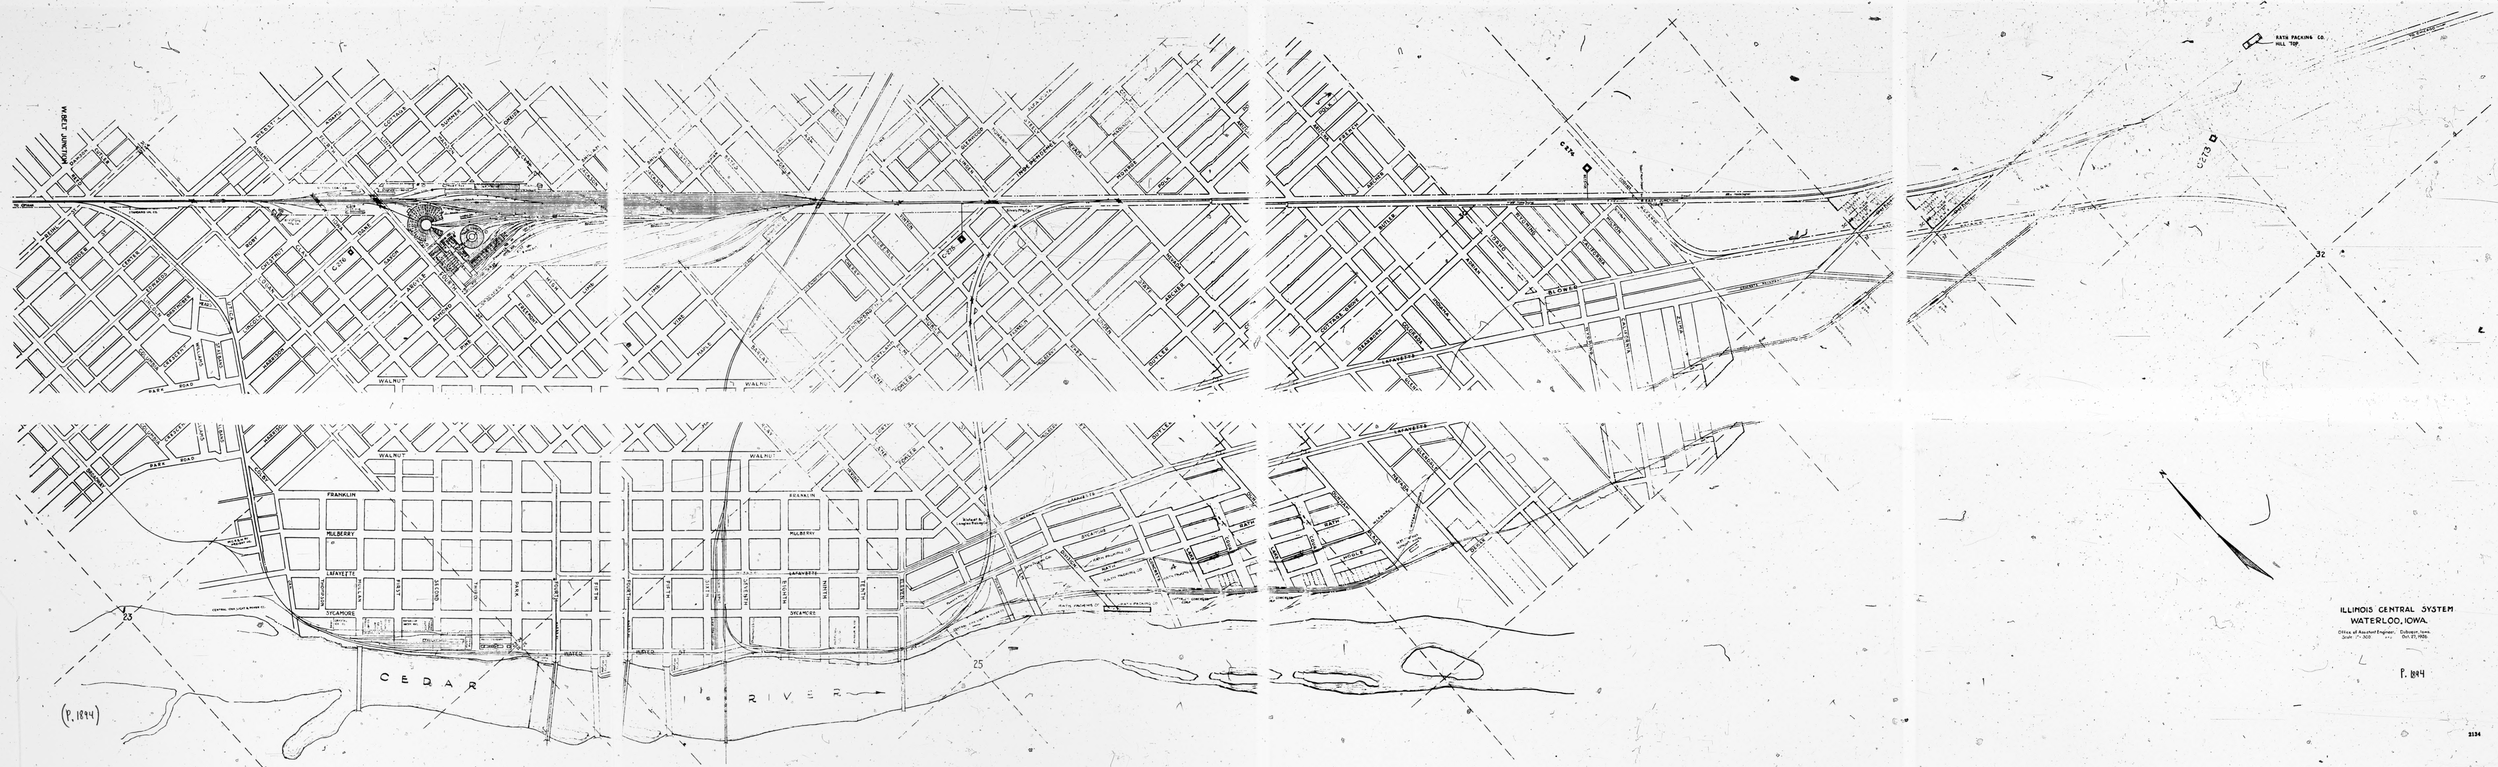
While the conclusion is thus reached that direct marketing does not operate to the disadvantage of producers, the study does show that some practices in hog marketing generally should be corrected and that additional services should be provided. Recommendations covering these points are contained in the following report.

Nils A. Olsen, Chief, Bureau of Agricultural Economics.

Summary, Conclusions, and Recommendations

Direct marketing of hogs, or of any other class of livestock, for slaughter, is sale to slaughterers at places other than recognized public-stockyard markets where generally the services of livestock commission agents are utilized by the sellers and where the privilege of trading in livstock is equally available to all who wish to buy or sell.. Direct sales may be made to the sluaghterer or his agent in the localities where the livestock is produced, at some point not recognized as a public market, or the sale may be made on delivery to the slaughtering place. The term "direct marketing" also applies to the movement of stockers, feed-

ers, and breeding stock, with transfer of ownership through sale other than at public stockyards. This study, however, deals primarily with the direct marketing of slaughter hogs.



This method of marketing for commercial slaughter is as old as hog marketing itself and is much older than public stockyards. In recent years it has grown rapidly, direct purchases of hogs having increased from 12,802,000 hogs, or 24 percent of the total of federally inspected slaughter in 1923, to 20,708,000, or 44 percent of the total in 1933. Meanwhile, the number of cattle sold direct increased from 10 percent to 17 percent of the total slaughtered under Federal inspection, calves from 14 to 26 percent, and sheep and lambs from 15 to 21 percent. Slaughter under Federal inspection, it should be noted, represents a large part of all slaughter. It represented nearly 64 percent of all hogs slaughtered in 1933, 61 percent of cattle and calves, and 80 percent of sheep and lambs.

One result of the growth of direct marketing is that an increased volume of hogs moving from producer to slaughter is diverted from public markets instead of going through them, thus causing a decline in the volume of business at these markets. It is apparent, especially with respect to some public markets, that this tends to reduce the profits and impair the investment in plant, equipment, and trained personnel of public stockyards, some of which have served, and have been an important part of, the livestock industry of this country for more than half a century.

The growth of direct marketing has raised a number of questions of wide importance to packers, owners of public stockyards, commission men, and others interested in live- [fol. 2140] stock marketing, and especially to hog producers. Among these are the following:

Are hogs of higher quality bought direct, and are those of lower quality shipped to public markets? If so, does the lower average price of the latter establish the price at which the better hogs are bought direct? Has the level of hog prices been reduced by the increase in direct marketing?

Is competition effective among buyers? The term "effective competition" is here assumed to mean that individual buyers, in order to get the requisite volume of hogs for slaughter, are obliged to pay the producer a price substantially as high as justified by the level of prices at which

hog products can be sold, and that this price to the producer would be at least as favorable as the price he would get, after deducting transportation costs, yardage, fees, commissions, and other charges, as a result of the competition that would prevail among slaughterers, if public-market packers bought substantially all their hogs at public markets.

Another important question is whether direct marketing weakens competition at public markets and depresses the level of hog prices at these markets, and thereby results in lower prices to producers both for the hogs that are sold direct and for those sold at public markets.

The Growth of Direct Marketing

The significance of recent developments and present trends in direct marketing can perhaps be studied to best advantage against the background of historical change, especially those changes that are related to and are parts of the economic development of the country, and particularly of its livestock industry. These changes in marketing must also be considered in relation to such factors as transportation facilities and rates, accessibility of slaughtering and meat-distributing centers to producing areas, shifts in areas of principal production and their distance from the main centers of consumption, and relative advantages of rival processors and of competing distributors seeking to operate their respective businesses as profitably as possible.

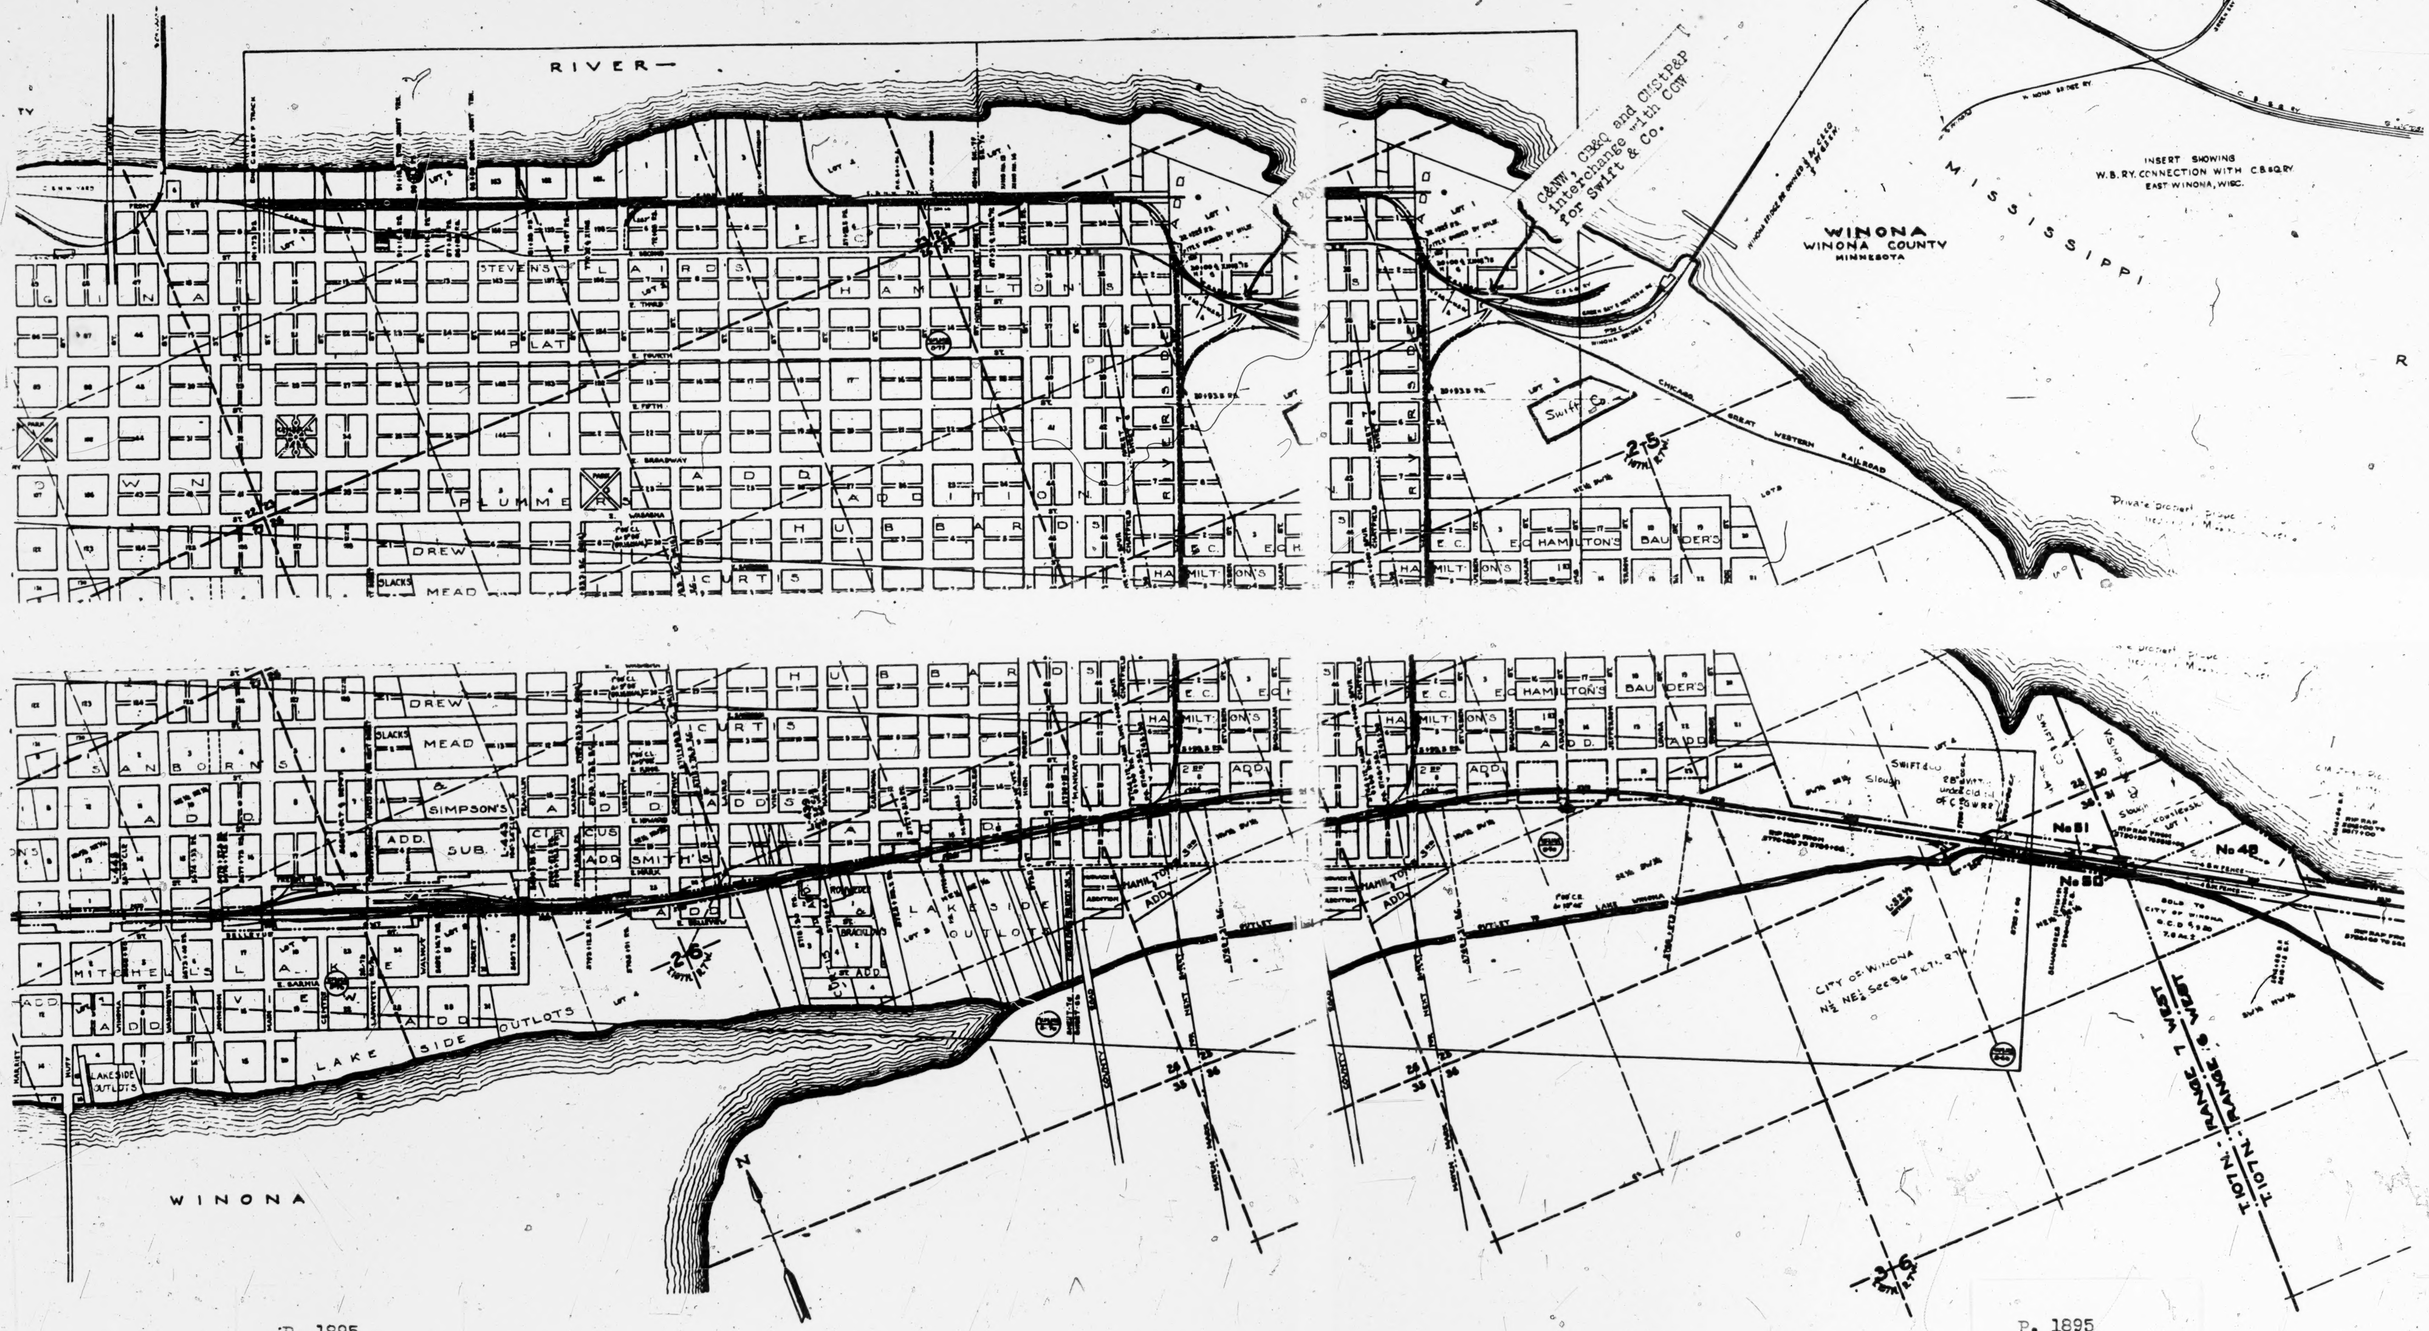
The "drover" and the early slaughtering plants.—Before the development of railroads, livestock was usually driven to market or place of slaughter. If the producer found the distance too great, or his animals for sale too few in number, or the risk of "driving" them too big, he ordinarily could sell them to a "drover." The drover's functions and services were gradually modified with changing conditions, until today his nearest counterpart is found in the local buyer. This and other methods of livestock marketing in common use before the Civil War constituted "direct marketing" within the now-common meaning of this term.

As the distance over which livestock could be moved on foot advantageously was necessarily limited, slaughtering

plants were established in most of the trading centers in or near the principal areas of livestock production. In a sense, the counterpart of these plants today is found in the "local packers." Certain centers, Cincinnati for example, that were especially well located with respect to river transportation and centers of livestock production, soon ceased to be strictly local and became important packing centers.

[fol. 2141] Railroad transportation and the rise of large livestock centers.—As railroad transportation came into extensive use about 1850 for the movement of livestock, a fundamental change took place in organization and channels of livestock marketing. Important centers developed for transportation, trade, and industry of many kinds, and, among these, the business of slaughter and trade in livestock. These centers also became important in banking and credit, wholesale distribution, recording of prices and market movements, and dissemination of trade information—all of which were necessary functions in the expanding livestock industry.

The handling of rapidly growing numbers of live animals for packing plants at these centers required business organization, physical facilities, and trained personnel, on a scale beyond that of any center in earlier years. Enterprising business men set about to meet these requirements. Hence, the establishment of the Chicago public stockyards, which began operation in 1865, those of Kansas City, in 1871, those in Sioux City, in 1884, and most of the other principal public markets before 1900. Since that year many others have been organized until there are now 100 listed public stockyards, but more than half of these centers are relatively small in point of number of livestock handled.



Along with the rise of public-market packers and public stockyards, another market agency came into prominence—the commission agency, the primary function of which is to serve as agent for the livestock shipper in effecting the sale of his stock, or to act as purchasing agent for those who wish to buy at the public markets.

Continued importance of the small packers.—Even with their great size and dominant influence, the large livestock and meat-packing centers by no means had the whole field to themselves. For example, in the decade 1860-69, before

records show packing operations in Sioux City, an annual average of 213,000 hogs was slaughtered (commercially) in Iowa; and in the first decade (1890-99), after the decade in which the Sioux City public market began operation (1884), of the 1,548,000 hogs slaughtered in Iowa 79 percent were slaughtered outside of Sioux City. The further fact that 65 percent of Iowa's slaughter in 1920-29, and nearly 75 percent in 1930-33, were slaughtered outside of Sioux City is at least indicative of the fact that the "smaller" centers and the "local" packers have throughout played a large part in the hog-slaughtering industry in that State.

A similar situation, but perhaps of lesser extent, has prevailed in other parts of the Corn Belt, indicating that in both the handling and the processing of hogs the large stockyards and the packing plants at public-market centers have had, throughout their history, a substantial amount of competition from the smaller marketing agencies and packing plants located near, or within, the principal areas of hog production.

Early beginning, but recent problem-status of direct marketing.—The "local" or interior packers not only handled in the aggregate a considerable part of the commercial slaughter of hogs over many years but for the most part they have obtained their supply of hogs by direct purchase since the very beginning of commercial slaughter. Yet direct marketing of hogs did not become a matter of market controversy and public concern until after the large packers, whose principal plants are located at or near the public stockyards, began about a decade ago to get a sub- [fol. 2142] stantial part of their supply of hogs for those plants by direct purchase in the hog-producing areas, principally in the western part of the Corn Belt. The direct purchases of hogs by packers increased from 12,802,000 head in 1923 to 20,708,000 in 1933, or from 24 percent to nearly 44 percent of federally inspected slaughter in those years. There was a substantial increase in direct purchasing of cattle and calves, and of sheep and lambs, but not nearly so great as occurred in the direct buying of hogs.

Reasons for Increased Direct Marketing in Recent Years

The principal reasons for the rapid increase in direct marketing of hogs in recent years may be found in the com-

petitive situation as between local or interior packers on the one hand and public-market packers on the other, associated with the expansion of corn and hog production in the western Corn Belt. The chief reasons for this competitive situation are found in the transportation developments, both rail and motor truck, as they affect convenience and costs of moving livestock direct and through public markets and of transporting live animals as compared with livestock products; in comparative labor costs among packers in different areas; in differences between direct and public-market channels with respect to costs of marketing including shrinkage, commission charges, yardage fees, and other marketing costs; and in producer preferences, which play a part in the farmer's choice of market outlet.

The general trend of corn acreage in the United States from 1909 to 1933 showed no significant change, averaging about 101,500,000 acres. Material variation from this average occurred in certain years. The most significant change in corn production in this period was the rapid expansion in the five States comprising the northwestern Corn Belt, where acreage increased from about 21,600,000 acres in 1908 to 34,000,000 in 1932, an increase of 60 percent. An important decrease took place in Missouri and Kansas and in the eastern Corn Belt. Some decrease also occurred in certain areas outside of the Corn Belt. As shifts in corn production for the most part result in similar shifts in hog production, the rapid expansion in both, in the northwestern Corn Belt, is of direct significance in relation to interior slaughter in that area and is indirectly important with respect to the growth of direct marketing.

Transportation and Direct Marketing

Direct marketing has been facilitated by certain conditions in the transportation situation, especially with respect to truck transportation, railroad concentration privileges, and comparative freight charges on hogs and hog products.

Truck transportation.—The development of motor-truck transportation has contributed to the growth of direct marketing by making interior packing plants and concentration yards conveniently available to a much larger number

of producers than would be the case if hogs were transported by rail. Truck transportation appears to be best adapted to comparatively short hauls, and this is relatively more advantageous to concentration yards and local packing plants, which are usually nearer the source of supply than to the public markets and public-market packers. The [fol. 2143] information at hand indicates that in recent years more than 50 percent of the hogs received at interior packing plants and concentration yards were moved by truck. Since trucks are more economical and convenient for short distances than for longer hauls, their increased use has encouraged the development of concentration points and stimulated movement of hogs direct from farms to concentration yards and interior packing plants, most of which are located closer to producers than are the public markets.

Railroad concentration privileges.—Transit privileges, especially concentration privileges, have enabled public-market packers to buy hogs at local points for shipment direct to their plants at public-market points more advantageously than if these transit privileges were not available. Under existing market practices, this tends to aid public-market packers in their competition with interior packers through direct purchases of hogs. These privileges are likewise available to persons operating through the public markets, but thus far apparently they have not been in a position to make much use of these concentration privileges.

In the area west of the Mississippi River, the freight-rate structure includes concentration privileges which permit changes in the make-up and ownership of the shipment of hogs at points between origin and destination, and at the same time allows the through rate from original loading point. The number of concentration yards in the western Corn Belt has increased from 19 in 1920 to 195 in 1933. Concentration yards provide facilities near the source of supply where hogs of different kinds can be bought, assembled, and sorted, and then reshipped with more economical loading on the basis of the through rate from original shipping point to destination.

The freight-rate advantage derived from concentration privileges may be illustrated by considering a single-deck shipment of hogs from Granville, Iowa, destined to Chi-

cago and stopped at Cedar Rapids for concentration. The hogs move on the local rate to Cedar Rapids, where they may be sold and the make-up of the shipment changed before shipment to Chicago. The charge for the shipment from Cedar Rapids to Chicago, however, is the difference between the local rate from Granville to Cedar Rapids and the effective through rate from Granville to Chicago. Hence the hogs are moved in this manner from Granville to Chicago at the through car-lot rate between these points. If it were not for concentration arrangements, it would be necessary for the shipper to pay the effective local rates from Granville to Cedar Rapids and from Cedar Rapids to Chicago, if the shipment were stopped en route, rather than the through rate from Granville to Chicago. This through rate is about 21 cents per hundred pounds less than the two local rates combined.

Comparative freight charges on hogs and hog products.—The relationship of freight rates among regions and between hogs and hog products has become an important factor in the growth of direct marketing in that the relationship has been and is relatively favorable for packers whose plants are in the western Corn Belt. Interior packers in this area usually purchase most of their hogs direct. In the entire period since 1910, freight charges on shipments from the western Corn Belt eastward have been greater for a given weight of live hogs than for the products derived therefrom. Also the margin between the [fol. 2144] freight charge on hogs and that on hog products widened somewhat after the pre-war period. For example, in the years from 1925 to 1929, the freight charge on 100 pounds of live hog from Des Moines to New York was about 25 cents greater than the freight charge on the hog products obtained from 100 pounds of hog, whereas in the years from 1910 to 1914 it was about 19 cents higher.

Partly because freight rates in this country generally do not increase proportionately with distance, and partly because of relatively low rates on hog products from the northwestern Corn Belt, particularly interior Iowa points, to the Mississippi River, the freight charge per ton-mile on eastern movements of hog products from the western Corn Belt is lower than the freight charge per ton-mile on similar movements from the region east of the Mississippi

River. As a result of these lower freight charges per ton-mile and the proximity of the packers in the western Corn Belt to the surplus hog supply, these packers have certain competitive advantages in supplying eastern markets with hog products, as compared with packers who are located in the east or intermediate between the western Corn Belt and the east and who buy hogs from the western surplus areas. Such advantages contributed to the increase in hog slaughter in certain areas west of the Mississippi River.

Specific differences in freight rates are numerous and complex. In Official Territory, that is from Chicago and Mississippi River points east and from the Ohio and Potomac Rivers north, rates on fresh pork per 100 pounds are higher than rates on the same weight of hogs, while rates on cured pork and lard per 100 pounds are about the same as on 100 pounds of hogs.

In Western Trunk Line Territory, from interior Iowa points to Chicago, the freight rate per 100 pounds on fresh pork is the same as for 100 pounds of cured pork, and considerably lower than the rate on live hogs. The result is that hog products obtained from 100 pounds of hogs can be moved from Des Moines to Chicago for about one-half as much as the rate per 100 pounds on hogs. In the same territory the freight charge on hog products from Omaha to Chicago is 62 percent of the rate per 100 pounds on hogs. In the official territory, however, from Chicago to New York for example, the charge for hog products obtained from 100 pounds of hogs equals 82 percent of the rate per 100 pounds of hogs. Through rates from interior Iowa points to points east of Chicago also reflect the relatively low rates on products from these points to Chicago and the Mississippi River.

On the other hand, on all movement of hogs and hog products from the Corn Belt westward, the rate on live hogs per 100 pounds is less than half the rate on fresh and cured pork and on lard per 100 pounds. The freight charge from Omaha to San Francisco on the hog products obtained from 100 pounds of hogs is 58 percent greater than the rate on live hogs per 100 pounds. This encourages the shipment of live hogs instead of hog products to the Pacific coast.

Freight charges, however, are only one of the cost factors involved in the processing and distribution of hogs and hog products. Several factors in addition to transportation charges, such as the growth of hog production in the western Corn Belt, which itself may have been influenced in part by the freight-rate structure, have been favorable for the expansion of the packing industry in that area.

[fol. 2145] Wage Costs and Direct Marketing

A comparison of wages in the packing industry since 1914 shows that wage costs have been materially lower in the States where the interior packing industry is relatively more concentrated, as compared with those in the States where plants located at public markets are of predominating importance in the total slaughter. Moreover, the difference in wage costs increased in the period of rapid expansion in the interior packing industry and in direct marketing. These comparisons of wage costs are particularly striking as between Iowa, where most packing plants are located at interior points, and Illinois, where most of the packing operations are conducted at public-market points. It appears, therefore, that differences in wage costs, like differences noted in transportation charges, have directly favored the growth of interior packing and thus indirectly encouraged direct marketing.

Cost to Packers of Hogs Bought Direct and at Public Markets

As packers at all times no doubt endeavor to sell their hog products for as much as possible and to buy their required supply of live hogs as cheaply as possible, it follows that comparative costs to them of hogs bought direct and at public markets have an important bearing on the growth of direct marketing. Comparative returns to producers for hogs sold through these channels also have a bearing on its growth.

Cost of hogs bought direct consists of the price paid at the point of purchase and the cost of getting the hogs from that point to the slaughtering plant. Cost of hogs bought at public markets consists of the price paid at the market plus the costs of buying and of transferring them to the plant. Returns to the producer consist of the price he gets

MATTHEW BENDER & COMPANY MB 53

MICRO CARD

TRADE MARK ®

1612

at the point of sale, less transportation and marketing charges, if any, to that point.

Findings from cost records on 673,300 hogs.—Detailed cost records were obtained covering 673,300 hogs bought by packers who get their supply both direct and at public markets. The average cost to packers of hogs of the more desirable butcher weights was greater when bought direct than when purchased at public markets. Although lightweight, unfinished hogs and heavy packing sows cost on an average somewhat less when bought direct than when bought at public markets, the average cost of all hogs bought direct was higher.

Why Public-Market Packers Increased Direct Buying

The somewhat higher cost of hogs bought direct by public-market packers than of hogs bought by them at public markets suggests that factors other than the relative cost of hogs were taken into consideration in their buying operations. These factors are indicated partly by statistical evidence and partly by general reasoning based upon trends in the livestock industry during the period of rapid increase in direct marketing.

Slaughter of hogs under Federal inspection reached an all-time peak of about 53,000,000 head in 1923 and 1924. Largely because of the low price which resulted from this huge volume, hog production and slaughter declined sharply in the following 2 years. This decrease, however, was not distributed proportionately among all packers but occurred very largely at the plants located at public-market points, [fol. 2146] with very little decline in slaughter operations of the interior packers.

This created, for the public-market packers located at some market points, a serious business problem, arising not only from a large loss in actual volume of operations but also because of a loss in their relative position in the packing industry.

The public-market packers had apparently three possibilities of increasing their actual and maintaining their relative volume of operation. One way was to build up the price of hogs at some public markets, particularly at Chicago, in an effort to attract a relatively larger volume

to these points. This, as a practical business matter, had important limitations. To have done so would have meant bidding up the price of hogs arriving at these markets from areas other than those where interior packer competition was important. This, however, would not have improved the competitive position of the public-market packers unless they could have operated on margins that were smaller than those of the interior packers or sell their product at higher prices than those obtained by the latter group. Had the packers attempted to attract a larger volume of hogs to some public-market points, Chicago for example, it is not at all certain that they would have been able to accomplish this purpose since the competitive advantages under which interior packers operate probably would still have enabled them to maintain or even to increase their operations.

The second possibility open to the public-market packer was that of acquiring or building interior plants in the northwestern Corn Belt and expanding operations at plants already owned in that area, and thus meeting the interior packer on his own ground. Although this was done to a considerable extent, it could not entirely solve the problem since there were still the plants at public-market points to be operated. So long as these plants were operated at all, they had to be operated at a fairly economical capacity, and they were too valuable to be abandoned and replaced with corresponding capacity at interior points. Hence, the third possibility was to buy hogs direct in the territory of the interior packers for shipment to the public-market plants. This course was followed extensively, as is shown by the figures on market movements and slaughter.

Slaughter by public-market packers whose plants were at market points in the eastern Corn Belt declined 5,800,000 head from 1924 to 1926, or 33 percent. Public-market packers in the southwestern Corn Belt lost nearly 2,500,000 head, or 41 percent; those in the northwestern Corn Belt, 1,700,000, or 21 percent, making a total loss to public-market packers in the Corn Belt as a whole of nearly 10,000,000 head, or 31 percent.

Meanwhile, that is from 1924 to 1926, the slaughter of interior packers in the eastern Corn Belt declined 200,000

head, or 12 percent, and that of the interior packers in the southwestern Corn Belt declined nearly 500,000 head, or 21 percent. But during this period of reduction in hog slaughter, both by public-market packers and by some interior packers, the interior packers in the northwestern Corn Belt actually increased their operations, although the increase was not large. The significant fact is that interior packers in that area more than held their own despite the large decrease in total slaughter.

[fol. 2147] To meet their loss in volume, both relative and actual, in the face of increasing operations of interior packers in the northwestern Corn Belt, the public-market packers resorted to direct buying as a means of competing with the interior-market packers in their own territory. This is shown by the different trends in volume of hogs received direct at Chicago and volume consigned for sale at the Chicago public market. The total of all hogs received at Chicago, both for sale and direct, decreased from 9,400,000 in 1928 to 7,400,000 in 1932. The number of hogs consigned for sale at the Chicago public market declined from 7,600,000 in 1928 to 4,300,000 in 1932, a decline of 43 percent, while direct receipts increased from 1,800,000 to 3,100,000 an increase of 72 percent. In 1933, there was an increase of about 18 percent in total receipts at Chicago but the number of hogs consigned for sale (which included nearly 1,000,000 sows and pigs sold to the Government in connection with the Federal emergency hog reduction program) increased only 8 percent and was only about 60 percent as large as the number consigned for sale in 1928.

From 1926 to 1933, the slaughter at interior plants in Iowa continued to increase each year regardless of cyclical changes in hog production. The increase was from 2,800,000 head in 1926 to 4,700,000 in 1933. This is representative of the trend in interior slaughter in the northwestern Corn Belt as a whole and is of special significance when considered in relation to the increase in the direct receipts by packers at Chicago.

That the increase in direct buying during the last 5 or 6 years was stimulated by a competitive situation that caused a sharp decline in receipts of hogs consigned to some public markets for sale is further suggested by the fact that

this decline preceded the marked increase in volume of direct purchases by public-market packers.

Cost of Marketing Hogs Direct and at Public Markets

The relative price paid for hogs at different markets, as already suggested, is not in itself a conclusive indication of relative net returns to producers from hogs sold direct and at public markets. The costs incurred in marketing through either method must be deducted from the cost of hogs to packers. Hence special attention was given in this study to cost of marketing hogs direct and at public markets.

The establishment of a large number or concentration yards and of additional interior packing plants undoubtedly has enlarged the total investment in marketing facilities and has tended to increase the number of persons engaged in the movement or hogs from farms to consumers. Although this development involved some duplication of existing facilities, the physical capacity of which was already adequate, it would not necessarily add to the total costs of marketing unless the total charges of the earlier established facilities were not reduced and the charges of those later established added to this total. This, however, is not the case. The growth of the new facilities has reduced both the volume of business and the gross revenue of many of the older establishments, since these have not increased their unit charges to compensate for reduced volume. Hence the question of whether total marketing costs have been increased or decreased depends largely upon the relative costs of the old method as compared with those of the new.

[fol. 2148] Costs at concentration yards.—If the farmer sells at a privately owned concentration yard, from which place the hogs are in turn sold "direct" to a packer, the concentration yard performs the same function as a local dealer who assembles hogs. Private dealers or truckers may, on the other hand, buy from farmers and in turn sell at concentration yards, from which place the hogs are moved direct to a packer. The concentration yard, in this case, represents an additional link in the marketing chain, if the hogs otherwise would have been sold by the local

p. 1996
From Card 36

dealer direct to the packer. The operating margin taken by the concentration yard on such transactions represents an added cost in marketing, except as the concentration yard may perform some specific functions such as assembling in volume which permits more advantageous sorting and selling, more economical loading, etc. On the other hand, if the dealer who assembled the hogs locally had sold them at a public market, the concentration yard to an important extent would have taken the place of such market. If the concentration yard is owned by a packer, hogs are bought by him there instead of at a public market. The cost of selling at public markets is substantially higher than the margin taken by operators of concentration yards, and these costs must be deducted from the proceeds of the hogs before remittance is made to the seller.

Costs at public markets.—The costs of feeding, the selling commission, yardage, and other incidentals at important markets in the Corn Belt for the period 1931-33 were found to average about 20 cents per hundredweight, varying among individual markets from 19 cents to 23 cents. In the same period the average cost of operating concentration yards was about 8 cents per hundredweight, varying from 2.6 cents to 27.7 cents for individual concentration yards. The cost of handling hogs locally by cooperative livestock shipping associations and local dealers in the Corn Belt averaged about the same as for the concentration yards.

The route from producer to packer is on an average shorter and the cost of handling is usually less when hogs are sold direct than when sold through public markets. Although hogs sold direct for slaughter at a public-market plant are shipped substantially the same distance as if they were consigned for sale at the public market, their movement is more direct in the sense that they usually pass through fewer hands. Hogs sold direct to interior packers are as a rule shipped over much shorter distance than are hogs sold at public markets. When hogs are sold and delivered by producers themselves at the packing plant, no costs are deducted for marketing. If the farmer sells the hogs to a local dealer or trucker the handling charges must be deducted from the price paid by the packer. These

charges are substantially the same whether the hogs are sold direct or at a public market.

Shrinkage.—Shrinkage may be due to excretions or to loss in tissue weight. Tissue shrinkage represents a marketing cost, but excretory shrinkage does not. Tissue shrinkage in transit represents a marketing cost which tends to vary directly, but not in proportion, to the time hogs are in transit and until slaughtered. It appears that tissue shrinkage begins early in the period in transit and continues until hogs are slaughtered. The rate at which tissue shrinks tends to be greater during the earlier transit period. The rate of tissue shrinkage is higher for hogs of light weight than for hogs of heavy weight. To keep [fol. 2149] tissue shrinkage at a minimum, hogs should be moved from the farm to the slaughtering plant in the shortest possible time.

Comparative returns to producers.—As hogs bought direct cost packers somewhat more than hogs bought at public markets and as it is found that the cost of marketing hogs direct is less than through public stockyards, it follows that on the whole producers realize more on hogs marketed direct.

Somewhat higher returns to producers for hogs sold direct are also suggested by the results of certain studies of the records of livestock shipping associations made by State marketing specialists and others. These data are not conclusive, because they do not cover broadly the field of direct selling.

Producers' Preferences

A questionnaire pertaining to direct marketing was mailed to 68,900 producers of hogs in 15 States, and replies were received from nearly 12,500.

The preferences expressed by producers for different types of market outlets are of interest in connection with the increased sale of hogs direct, especially in the past decade. Of 10,500 expressions of producer preference, 36 percent favored public stockyards, 23 percent preferred selling to local buyers, 11 percent to packing plants, 21 percent through cooperative shipping associations, and

about 3 percent to concentration yards and buying stations, and the same percentage preferred selling at auctions. Only 3 percent of those answering this question reported that they had no preference. It should not be assumed, however, that these percentages do, or ought to, measure the exact preferences of producers as between marketing direct or at public markets, since 44 percent of the reporting producers expressed preference for marketing agencies that consign a part of their hogs to public markets and sell a part direct.

The reason most frequently given for preferring a specified market outlet was, naturally enough, that "returns are better." This answer might have been due to the belief that prices received were higher or selling expenses lower, or both, on sales through the favored market channel. This reason—"better returns"—was given by nearly two-thirds of the farmers who favored direct sale to packing plants and by one-fourth of those who favored public stockyards. Of those who gave the latter preference, 36 percent cited "more competition" as their reason, and this reason was also given by 20 percent of those who favored auctions.

Local dealers, packing plants, and concentration yards, in the order named, were judged by the reporting producers as "the most convenient." The greater convenience, they said, lay in the fact that hogs could be moved by truck to these markets, that the seller knew the price in advance, and that the shrinkage was less. Other reasons, given by many for selling through channels other than public stockyards, were "small lots sold to better advantage", "better service", and possibility of "control of sales and price." Of those who favored public markets, 4 percent gave as reason their own opposition to direct marketing.

[fol. 2150] Direct Marketing in Relation to Prices of Hogs, Competition, and Market Differentials

The summary points thus far presented suggest three principal conclusions: (1) That certain fundamental factors related to location of the principal areas of hog production and to the development of truck transportation, freight rates, transit privileges, etc., have helped to strengthen

the competitive position of "interior" packers as against public-market packers, (2) that the latter have been induced to enter the fields of direct buying and of slaughter in the interior, not only under competition from interior packers for hogs, but also because costs of moving hogs from local points to packing plants at public-market centers on the whole is less through direct channels than through public stockyards and commission agencies because the cost of shipping the products is less than that of moving live animals and because of lower labor costs in the interior packing industry, and (3) that at a given general level of hog prices, the producers appear to get at least as much, and perhaps somewhat more, for hogs sold direct than for those sold at public markets.

These conclusions, however, do not apply directly to the issue of whether direct buying weakens the price-recording function of public markets; nor have they answered the question as to whether direct marketing causes a lower level of prices than would otherwise have prevailed at public markets where a part of the packer's supply is bought and, in turn, gives an opportunity for similar price decline at interior points where he gets the remainder of his hogs. In short, the above conclusions do not answer the question: Has the increase in direct marketing caused prices to be lower than they otherwise would have been?

These basic issues call for a consideration of such questions as these: What, after all, determines the level of hog prices? Is competition among slaughterers and marketing agencies effective enough to cause them to pay a price to the producer that reflects substantially the level of prices they receive for hog products? Have margins between prices of live hogs and prices of hog products at wholesale and retail in recent years widened at such times and in a manner suggesting that the widening may have been due to the rapid growth of direct marketing?

Factors Determining Hog Prices

The chief factors causing hog prices to change in this country during the last 20 years have been: (1) Changes in the buying power of domestic consumers, (2) variations in hog production, (3) changes in the charges for process-

ing and distribution, and (4) changes in foreign demand for American hog products. Statistical evidence indicates that changes in hog prices in recent years have been due to causes other than changes in marketing methods including the rapid growth of direct marketing.

Buying power of domestic consumers.—The demand for hog products is highly competitive, as the consumers are numerous, their actual requirements variable for pork and other meats, and the possibilities many for substituting one kind of meat for another in the diet. Hog production, likewise, is highly competitive, for hog producers are numerous [fol. 2151] and the volume of production is variable in response to several factors, especially the quantity and price of feed and the market price of hogs. Whatever the quantity of hogs produced for market, it must be disposed of at a price within a comparatively short period. The retail and wholesale markets, where hog products are sold for domestic consumption and export, are the meeting place of the forces of supply and demand in establishing the level of prices.

Changes in the aggregate retail value of hog products consumed in this country are closely related to the changes in the level of incomes of consumers. In periods of relatively stable consumer income, this retail value has tended to be about the same whether the quantity of hog products consumed was large or small. In other words, at a given level of demand, a decrease or an increase in the quantity of hog products sold has resulted in about a corresponding rise or fall in composite retail prices.

Export demand for hog products.—The value of hog products exported is affected chiefly by consumer purchasing power in importing countries, the quantity of domestic exports of hog products, and the volume of foreign-produced supplies in foreign markets. The quantity of domestic exports depends chiefly upon the volume of hog production in this country and abroad, and upon the various governmental restrictions on imports of hog products. Such restrictions have been of increasing importance during the last 3 years.

Influence of charges for processing and distribution.—The total amount paid for hogs over a period as long as a

marketing season depends largely on what is left of the retail value of hog products consumed after deductions for aggregate charges for processing and distribution. The level of retail prices of hog products for any period represents the total retail value of hog products consumed, divided by the quantity consumed of such products. Since changes in incomes of consumers largely determine the changes in the aggregate retail value of hog products, retail prices of these products are affected chiefly by the level of incomes of consumers and the quantity of hog products consumed.

During the last 20 years a material increase in processing and distributing charges has occurred and the spread between prices of hogs and retail prices of principal hog products has widened materially. Most of the increase in this spread occurred from 1917 to 1921, but the spread continued wide from 1922 to 1931. In 1932 and 1933 the spread declined considerably, but in both of these years retail prices of hog products were still much higher relative to their pre-war level than were hog prices and the spread between hog prices and hog-product values was much greater than prior to the World War.

Influence of wages, freight rates, rents, etc., on margins.—The changes in the spread between hog prices and retail prices of hog products have been closely associated with the changes in wages, freight rates, rents, and other items which are involved in processing and distributive charges. Sharp increases in these items occurred from 1917 to 1920, and further but less rapid increases took place from 1921 to 1930, after which a considerable decline occurred. In addition to the increases in the above items, the number of processing and distributive services for hogs and hog products also has increased, thus adding to the total charges for processing and distribution. These increased costs, however, may have been offset in part by certain improvements and economies in processing and distribution.

[fol. 2152] Direct marketing and operating margins.—In this study, consideration of margins was confined to the question of whether the rapid increase in direct marketing during recent years has caused significant changes in the margins, especially in the margins required by slaughterers.

The level of consumer demand, as already indicated, determines the aggregate retail value of hog products whether the amount sold is relatively large or small. The price of hogs is in the main determined by the volume of market hogs in relation to the amount that is left of the aggregate retail value after deducting margins taken by slaughterers and distributors. It follows, therefore, that the increase in direct marketing of hogs could not have significantly affected hog prices to producers unless it caused distributors and packers to take a greater or a lesser margin than they would have taken otherwise.

Although the margins between hog prices and prices of hog products are wider than before the World War, they are not wider than a decade ago, before the great increase in direct marketing began. From the standpoint of time of occurrence, the widening of spread between hog prices and retail prices of hog products and the growth of direct marketing have not been closely associated. Most of the widening of the spread occurred prior to 1921, whereas most of the rapid growth in direct marketing has occurred since 1925. It is also noteworthy that the spread was reduced somewhat from 1931 to 1933 as some of the costs involved in processing and distribution of hogs and hog products, such as wages and rents, were reduced. On the other hand, the proportion of hogs marketed direct showed a further increase during this period. In short, the general trend of margins between hog prices and prices of hog products in the last few years has been downward, whereas the trend of direct marketing has been decidedly upward.

It is not to be inferred from this inverse relationship of recent trends in direct marketing and packer margins that this method of marketing has caused this decline in margins. There is no reason to suppose that such economies as have been indicated in handling hogs through the direct, compared with the public-market, channels are sufficient to affect noticeably the margins between retail and wholesale prices of all hog products and the prices of live hogs. The decline in margins from 1931 to 1933 may be accounted for, as indicated above, by reductions in wages and certain other operating charges occurring in the depression. It has not been possible in this study to measure precisely

the influence of each of the various factors that may have influenced margins. But statistical evidence bearing directly on margins in the processing and handling of hog products leads to the general conclusion that direct marketing has not caused a widening of margins.

Trends of margins in other products.—Certain indirect evidence tending toward the same conclusion is derived from a study of margins between farm prices and retail prices of other food products in which direct marketing either plays a small part or is absent altogether.

The widening of the spread between prices of raw products and prices of finished products in the post-war period as compared with pre-war period has not been confined to hogs and hog products, but has been an important characteristic of price movements of nearly all farm products utilized for food and of retail food prices. In the case of cattle prices and retail prices of beef, the spread has followed the same general trend as the spread between hog [fol. 2153] prices and prices of hog products. A somewhat similar situation also has prevailed in the case of wheat prices and retail prices of bread. Available evidence indicates that the predominating factors responsible for the changes in the spread between hog prices and retail prices of hog products were not related to the changes in method of marketing hogs, including the growth of direct marketing.

Competition for Hogs

The nature of competition for hogs and the question whether the degree of competition at one period is greater or less than at another involve rather complex questions. The principal statistical evidence as to whether competition has decreased with the growth of direct marketing is obtained by comparing the margins between prices paid by packers for hogs and the composite wholesale prices of hog products to determine whether these margins have widened in recent years when direct marketing has increased. Since the principal factors determining changes in the wholesale prices of hog products are changes in supplies of hogs and in the level of consumer incomes, neither of which are related to the methods by which hogs are marketed, the measurable effect (if any) of changes in

marketing methods upon competition for hogs should show in the margins between hog prices and composite wholesale prices. As before discussed, these margins do not indicate any lessening in this competition.

Another approach to the subject is to consider the nature of competition for hogs, especially the factors tending to increase or decrease this competition, and whether these factors are likely to be affected by changes in the methods by which hogs are marketed. Such a consideration cannot be in terms of statistical analysis for the subject does not lend itself to statistical treatment, but must be in descriptive terms and based upon reasoning from known facts or valid assumptions to what seem to be logical conclusions.

In the case of hogs, which are produced and ready for market within a limited period, and which must be largely sold within that period, competition is the relative willingness or desire of different packers to take a part of this supply as offered, but in such proportions that all of them together clean up the total supply offered. The prices paid are the composite judgment of what these hogs are worth at present or at anticipated future prices obtainable for hog products. Each packer knows about what hogs are worth to him in relation to prices he is getting for hog products and to his costs of operation and distribution, and he tries to buy hogs below this indicated value in order to obtain a profit or to buy at price at least not above this value in order to avoid losses. The difference between products prices and operating margins sets the upper limit of the prices that will be paid for hogs over any considable period although for short periods hog prices may be higher than the indicated current "cut-out" value of products.

The supply of hogs is offered at many places and in many different ways, and the number of packers seeking hogs at these different places varies greatly. But the mobility of the supply of hogs and hog products as reflected in variations in hog receipts and price differentials among markets is such that the total number of hogs at all places represents a composite supply, and all slaughterers seeking to buy hogs at any one or a number of places are in effect buying in competition with many other slaughterers.

[fol. 2154] The price level resulting from this competition is evidenced by the published quotations on hogs at many points, mostly public markets. These points are not price-determining points but only price-registering points, and there is no one basic price-determining point.

Although hog prices are largely determined by the prices obtainable for hog products, and these products prices are not affected by the methods by which hogs are marketed, it might be that changes in these methods might affect the proportion of the value of hog products going to hog producers if these changes should increase the costs to producers of moving hogs from farms to packers, or should reduce packer competition for hogs so that packers are able to widen the margin between hog prices and hog-products prices to cover increased processing and distribution costs or to increase profits.

This study, however, shows that direct marketing has tended to reduce rather than to increase the actual costs of moving hogs from farms to packers and hence is to be considered generally advantageous unless it has tended to reduce packer competition for hogs and to increase packer margins. A detailed study of packer competition at public markets and at interior buying points leads to the conclusion that the factors determining and limiting the competition are substantially the same at both and are little changed regardless of the place where hogs are bought.

But there is a marked difference in the character of competition at public markets and at interior buying points. At public markets the competition is for a supply of hogs that is physically present, largely out of the control of the producers, and under the necessity of early sale. At interior buying points it is a competition to draw hogs, that are still under the control of the producer, to different points. Competition at public markets is more apparent than at interior points since relatively large numbers of buyers and sellers in personal contact are readily observable at the former, while at the latter the chief evidences of competition are the posted prices and the telephone or personal requests being received for bids on hogs. But to the producer at home, with hogs for sale, the latter competition is more useful since he is in a stronger position

opposite the buyer with his hogs still at home than he would be if they were at a public market and had to be sold.

Certain lines of evidence are significant, as for instance the number and variety of market outlets for hogs, the extent to which the volume of hogs of the different grade classifications consigned to public markets is sufficient to afford a reasonable opportunity for those markets to establish price quotations reflecting the supply of and demand for hogs of the various grades, and the extent to which prices are kept substantially in line among the various markets and indicate the relation between receipts and prices at different markets.

Market outlets available to producers.—Replies received from 12,500 producers of hogs show that on an average the individual producers had available to them 4 market outlets. The average number of market outlets in the 12 States designated as the Corn Belt exceeded slightly the average for the 15 States, while in the 3 States of Oklahoma, Kentucky, and Tennessee, the average was about 3. An analysis of the replies suggests that these averages may be an understatement, as in many instances it was apparent that the number of outlets where the producer [fol. 2155] usually sold hogs, as well as the number of markets available, were not all reported. For example many of the producers did not name public markets as available outlets, although it is definitely known that these producers were within areas where such markets are available.

The extent to which the different market outlets are actually utilized was shown by 9,500 producers, who reported that they marketed 629,200 hogs in 1933. These hogs were disposed of through the different market outlets as follows: Public stockyards, nearly 45 percent; local buyers, 22 percent; local packers, 14 percent; cooperative shipping associations, nearly 11 percent; concentration yards and buying stations, 6 percent; and auctions, 2.6 percent. Substantially the same distribution appeared for 1932, in which year the same producers marketed 604,000 hogs through these channels. It appears, therefore, that not only do the producers have several market outlets available, but these outlets are widely used, some of course more

Recent information from another source, showing the number of outlets used by producers, has become available through records filled out by signers of corn-hog contracts. These records, tabulated for representative townships in most of the Corn Belt States, show that the number of outlets available to the hog producers are relatively large and well distributed. In very few of these Corn Belt townships did any single agency handle over 50 percent of the hogs sold. In the 37 townships where more than 50 percent was handled by any one agency, these agencies included local buyers in 15 townships, packing plants in 18, concentration yards in 2, and auctions and public markets in 1 township each. These tabulations and the reports furnished by producers answering the questionnaire are in substantial agreement as to the number of market outlets available.

Producers' source of market information.—The producers' means and frequency of obtaining livestock market information are significant in considering competition. Of the 11,350 farmers who reported on this question, 84 percent obtained market information through daily papers, 56 percent by radio, and 15 percent by telephone. A substantial number also received market information through weekly papers, daily and weekly mail reports, and through other sources.

In the dissemination of this information the Market News Service of the Bureau of Agricultural Economics plays an important part, but the effectiveness of these and other channels of information would be much greater, the study indicates, if a reasonable uniformity of grade classification were used in the various hog markets. This would give the producer a better basis for judging what he might expect for his lot of hogs, especially the producer who is in a position to know approximately how his hogs would grade according to the generally recognized standards.

Quality of hogs at various types of markets.—If various types of markets, particularly the public markets, are to reflect adequately the level of prices at a given time through price quotations at these markets, it is significant to note whether the volumes of hogs in each of the various grades of hogs received at public markets were substantially dif-

ferent relative to the volumes and grades of those received at other markets. A group of qualified hog graders visited various markets in the course of this study and graded nearly 200,000 hogs. Of these, nearly 108,000 were graded [fol. 2156] at 29 public markets, slightly under 69,000 at 45 packing plants, more than 16,000 at 42 concentration yards, and nearly 6,000 at 16 auctions—in all 132 market outlets distributed over the 15 leading hog-producing States. The classification made was limited to butcher hogs, packing sows, and miscellaneous, of which the distribution was, respectively, 92.8, 3.3, and 3.9 percent. Of the nearly 92,000 hogs included in this differentiation at public stockyards, 92 percent were butcher hogs, or practically the same as the average for all types of markets.

In grading the hogs received at the various markets, 15.4 percent graded Choice at public markets as compared with 15.6 percent at the interior points where this grading was done. The public-market hogs graded 50.7 percent Good as against an average of 51.1 percent Good of all the other markets. At the public markets 30.4 percent graded Medium and 3.5 percent Cull, as against an average of 30.9 and 2.4 percent, respectively, for the interior points.

Because of the outstanding importance of the Chicago market, a special check was made of the grades of hogs received as direct purchases and for sale at the public stockyards at that market where 56,051 hogs were graded, of which 36,150 were public-market hogs and 20,901 direct purchases.

The percentage distribution of the hogs consigned for sale was—

	Percent
Choice	19.3
Good	41.7
Medium	33.8
Cull	5.2

whereas of the hogs bought direct the percentages were—

	Percent
Choice	15.5
Good	40.9
Medium	40.9
Cull	3.7

The distribution of the receipt of hogs at various markets by grades varied somewhat among regions. The above summary, at least so far as the sample included in this study is concerned, shows that public markets received about the same proportion of hogs of the different grade classifications as were received at the other types of markets. Of the hogs graded at Chicago, 61 percent of the public-market hogs graded Good and Choice as against 56 percent of the hogs bought direct by packers.

It is possible that the grade distribution of the hogs graded in the particular period when this survey was made may have been influenced somewhat by differences in market movements affected by the then-prevailing feed situations. Nevertheless, no evidence was found indicating that hogs of better grades are being concentrated in the channels of direct marketing, and that public markets receive a preponderance of low-grade hogs. Moreover, it appears that hogs of the better grades are received in sufficient numbers at the different public markets to establish price quotations registering the level of prices on these grades.

Differentials in price among markets.—Prices paid for hogs at individual interior markets in Iowa and southern Minnesota are not based on a fixed differential measured from Chicago, or from some other public market. Data covering the 3-year period 1931-33 showed that the price [fol. 2157] changes from day to day more frequently at public markets than at interior markets. When prices at these markets change on the same day, such change may not be of the same amount, and not always in the same direction.

The differential in price between pairs of markets, whether public or interior, are more likely to change from one day to the next than to remain the same. However, competition operating among the different markets prevents the price at an individual market from being out of line over any considerable period.

Prices at the different interior packing plants in Iowa and southern Minnesota move together from one day to the next more closely than do prices at each of the plants with prices at Chicago or Sioux City. The average day-to-day change in differentials for these interior packing-plants is

greater when measured from Chicago or Sioux City than when measured from plants in their own group.

Although there is close relation between prices quoted at some markets and prices at other markets, no one market actually determines the price for hogs sold at other markets in this area. The equilibrium of the composite supply and composite demand at all markets marks the level of hog prices. There is no fixed relationship between prices at any market, and prices at other public markets or at interior points. Data show that a rise or a decline in hog prices is as likely to appear first at the interior markets as at the public markets.

The changing relationship between supply and demand forces at a given market, whether public or private, may cause the price at such market to be temporarily out of line with other markets, and this happens at Chicago as well as elsewhere. This sets in motion market forces which tend to restore the equilibrium by shifting the supply of, or the demand for, hogs from one market to another. In correcting one abnormal price relationship, other differences are likely to occur and similar forces to correct these are in turn set in motion. Although price relationships have a tendency to gravitate toward a certain point, they are continually affected by the changing forces of supply and demand and consequently these relationships are in a constant state of flux.

Relationship between receipts and prices at different markets.—The receipts of hogs at a given market are normally different for different days of the week. Receipts of hogs direct to packers at Chicago were more uniform in volume from day to day than were hogs consigned for sale at that market. The volume of hogs consigned for sale as well as those received direct by packers were largest on Monday, but direct receipts averaged smallest on Tuesday, whereas the receipts of hogs consigned for sale were smallest on Saturday. Receipts of hogs at interior markets in Iowa and southern Minnesota were largest on Saturday. The part of the Saturday's receipts at concentration yards that were forwarded to Chicago reached that market on Monday, which accounts for the high direct receipts at Chicago on that day.

Prices paid at Chicago on Monday when receipts were normally large were fully as high as the average for the week. The price at Chicago on Saturday when market receipts were very small tended to be as low as on any day in the week; but this price was not reflected to interior buying points on that day. The heavy receipts at interior [fol. 2158] markets on Saturday were purchased at prices which were as high as, or higher, than the average for the week.

Volume of hog receipts on each day in the week tends to have a normal relation to volume of receipts on any other day, but the normal for any day may be materially different from the normal for other days. Differences in volume of receipts at public markets on any day in the week, as compared with receipts on any other day, do not cause price differences as between the days for which the comparison is made. A material increase or decrease in receipts on any day from the day's normal, tends to cause an inverse change in prices for that day.

As the differentials among markets are not wide as a rule over any considerable period, except for differences that may be explained by transportation charges and other fundamental factors, it is concluded that competition among markets, public and direct, is sufficiently effective to prevent prices over any considerable period in any market or area from being materially out of line with the general level of hog prices as determined by the broad forces of demand and supply.

In connection with the effect of the increase in direct marketing on the relation of packer demand to supply at the public markets, it should be noted that while direct purchase of a given volume of hogs by packers reduces by that amount their demand for hogs at public markets, it is equally true that over a period of time the supply of hogs coming to public markets is correspondingly reduced.

Conclusions

This study shows that the growth of direct marketing of hogs and of other livestock is due to causes which are closely associated with the economic development of the country and particularly of its livestock industry. It is shown that

the sharp decline in the level of hog prices since 1926 has been due to the drastic reduction in consumers' income incident to the depression and to the decline in foreign demand for American hog products.

It does not appear that direct marketing has restricted competition among slaughterers and distributors and enabled them to exact a wider margin. In fact, the principal widening in margins occurred prior to the years of rapid increase in direct marketing and was not confined to hogs or to meat animals generally, but appeared also with respect to other products outside of the influence of direct marketing of livestock. The conclusion that direct marketing has not caused a widening of the margins between the price of a given weight of live hogs and the wholesale or the retail price of the products derived therefrom is also supported by the fact that these margins declined materially during recent years of rapid increase in direct marketing. This decline, however, was due largely to reductions in labor charges and in some other costs during the depression.

Data on price differentials among markets show that no one market, nor any particular type of markets, sets the level of hog prices for all markets. The distribution of the volume of hogs consigned to public markets among the different grade classifications was shown to be approximately the same as of the hogs marketed direct; that is, the public markets on the whole were not receiving more than their proportionate share of low-grade hogs. This, together with the fact that no one market or group of markets sets the price for all markets, leads to the con- [fol. 2159] clusion that the growth of direct marketing has not impaired the price-registering function of the public markets nor caused the prices at the interior markets to be lower than if direct marketing had not increased.

Moreover, this study shows that the growth of direct marketing has not caused the returns to producers of hogs to be less than they would have been otherwise.

Although this study shows that the growth of direct marketing has not been to the disadvantage of the producer, it also shows that there is need for correction of some practices and the development of additional services to improve the marketing of hogs.

Recommendations

(1) The method of pricing hogs in vogue at certain direct-buying points in some areas by means of a "board" price which is posted and made generally known, together with a variable "add" to this price, which is not publicly announced, leads to confusion and uncertainty regarding the price situation and may readily be developed into a deceptive or discriminatory practice. This method should be modified or replaced by one that makes generally known to all sellers the range of prices that are being offered and being paid for different grades of hogs.

(2) The practice of "filling" hogs by feeding before selling should be discontinued at all markets, except such feeding as may be advisable for humanitarian reasons. The practice is wasteful of feed, increases marketing costs, reduces the value of the animals for slaughter, and tends to lower rather than to increase total net returns to producers.

(3) The practice of docking "piggy" sows and stags to partially offset their undesirable characteristics as slaughter animals is not an equitable method of accomplishing this end, and the practice should be eliminated in all markets. Such animals should be sold and bought on their merits at actual weights, as is now done in the case of cattle and sheep.

(4) Scale facilities and weighing by the buyers of hogs at interior marketing points should be subject to such supervision as will give general confidence that sellers' interests are fully protected.

The above-recommended actions and the correction of any other undesirable practices might be effectuated in part by mutual agreements or common consent among buyers and sellers and/or by such further enlargement of the powers and facilities of the Packers and Stockyards Administration as may be needed to give this agency the necessary authority to accomplish these ends.

(5) It is further recommended that uniform grade standards for trading in hogs be adopted for use at all types of markets. This would facilitate the sale of hogs on the basis of quality and would eliminate the confusion arising from

the use of many systems of grading and of grade terms that differ from market to market. Since the adoption of standard grades for hogs and their application (sorting and selling by grades) through voluntary agreement is unlikely, and the grading of hogs by official graders under mandatory requirements would entail considerable addition to marketing costs, an intermediate plan is suggested. Selling and buying on grades would not be compulsory, but if trading is done on the basis of grades, Federal standards [fol. 2160] alone should be used under Federal supervision, and all price quotations on grades should be in terms of these Federal standards. This would require additional legislative authority.

(6) Extension of the Federal Market News Service is suggested. The service now maintained in the Iowa and southern Minnesota direct-marketing area should be strengthened, and a similar service is particularly needed in other important direct-marketing areas, especially in the eastern Corn Belt, where information regarding supply, demand, and prices paid is at present quite inadequate to allow producers to choose the best outlets available. The general adoption of uniform grades would provide a better basis for quoting and reporting prices of hogs.

[fol. 2161]

Chapter 8

Competition for Hogs

In view of the marked changes that have occurred during the last decade in the methods by which, and in the channels through which, hogs are marketed the question arises as to whether there have been any resulting significant changes in the degree of competition for hogs.

The nature of competition for hogs and the question whether the degree of competition at one period is greater or less than at another are rather complex. The principal statistical evidence as to whether competition has decreased with the growth of direct marketing is obtained by comparing the margins between prices paid by packers for hogs and the composite wholesale prices of hog products, to determine whether these margins have widened during recent years when direct marketing has increased. Since

the principal factors determining changes in the wholesale prices of hog products are changes in supplies of hogs and in the level of consumer incomes, neither of which are related to the methods by which hogs are marketed, the measurable effect, if any, of changes in marketing methods on competition for hogs should show in the margins between hog prices and composite wholesale prices. These margins do not indicate any lessening in this competition.

Another approach to the subject is to consider the nature of competition for hogs, especially the factors tending to increase or decrease this competition, and whether these factors are likely to be affected by changes in the methods by which hogs are marketed. Such a consideration cannot be set forth in terms of statistical analysis, for the subject does not lend itself to statistical treatment, but must be in descriptive terms and based upon reasoning from known facts or valid assumptions to what seem to be logical conclusions. This chapter is devoted to an analysis of the competition for hogs from this point of view.

How the Price Level of Hogs is Determined

Different Series of Hog Prices

There is a difference between the general level of hog prices paid by packers and the prices that producers receive for their hogs. The price received by the individual producer is the difference between the price paid by the packer who buys his hogs and the charge for getting those hogs to the packer. There is a considerable range in the prices paid by packers for hogs, these differences being principally determined by the factor of transportation. In general, the further removed the packer is from the centers of deficit production (or of surplus consumption) the lower the price paid. There is also a considerable variation in the costs of getting hogs to the packer, which costs must be deducted from the packers' price of hogs to give the net price to the producer. These costs are those for transportation and marketing services. The further the hogs are moved the higher the transportation deduc- [fol. 2162] tions, but in general this is about offset by the higher packer price. Differences in cost of marketing

charges, such as yardage, commissions, and insurance, tend to increase or decrease the net returns to producers.

There are two general levels of hog prices in common use. The one is the average cost of hogs, at the plant, for all packers; the other is the average price received by producers for hogs sold. Each of these prices is reported monthly by the United States Department of Agriculture. The former is a more exact price since it is definitely weighted by actual purchases of all kinds of hogs, being based on returns from packers who slaughter a large proportion of the commercial supply of hogs.

There is also a general level of hog prices based on the average daily, weekly, and monthly costs of hogs to packers and shippers at specified markets. Since Chicago is the largest hog market and since the headquarters of the large national packers are located there, Chicago prices are most commonly used. These individual market records are the only ones available giving the short-time fluctuation in hog prices. While the actual monthly averages of these various series of prices are different, for purposes of showing relative changes from month to month or year to year, it makes little difference which is used.

Nature of Packer Competition

The cost of hogs to packers represents the composite judgment of all packers as to the value of hogs as raw material for the production of hog products based on the current prices of these products and the anticipated value at some future period. This "cost" price evolves from the competition of all packers for a current supply of hogs offered for sale. Most packers have their individual judgments as to what hogs are worth; these judgments are based on the current cut-out value of hogs (obtained by multiplying the current wholesale prices of the principal hog products by the proportion which each product constitutes of the total carcass) and on opinions as to the future value of hog products that are to be processed for future sale. These opinions as to future values in turn are based on information as to future hog supplies, supplies of hog products in storage, prospective supplies and prices of competing foods and future consumer demand.

For the purpose of this study the questions of how this competition of all packers for a current supply of hogs finally is reflected in a day-to-day and week-to-week price of hogs to producers and whether changes in the methods of marketing hogs may affect this competition and resulting price are of primary importance. Hence a rather detailed consideration of the way in which this competition operates is desirable.

Two Basic Assumptions

As a beginning of this consideration two broad assumptions are made. The first is that packers, as a whole, at all times try to sell hog products for the highest prices obtainable that will enable them to move the current supply for sale. The second is that packers at all times try to buy hogs at the lowest prices at which their currently needed supply can be obtained. Profits in the hog-packing industry come from the margin between the amount received from hog products sold and the cost of hogs. Profits [fol. 2163] are realized only when this margin is larger than all costs of processing and distributing hog products.

From the first assumption it follows that, by and large, the total amount obtained for a given amount of hog products over a shorter or longer period is about all that could be obtained if that supply is to move into consumption. Hence this amount sets the upper limit of the value of the hogs furnishing the supply of products. This upper limit could be little changed regardless of how the supply of hogs was obtained. The part of this value of hog products that is paid out for hogs processed depends on the margin taken from the total value for processing and distributing costs and profits. The size of the margin depends largely on the level of such costs and on the competition among packers for the supply of hogs available.

Factors Influencing Packers' Buying Policies

Although the second assumption was that all packers try to buy hogs as cheaply as they can, this inclination is restrained by the necessity of getting hogs for slaughter; and the fact that all packers face this necessity results in a competition for the available supply that finally deter-

mines the level of prices paid. In determining their buying operations individual packers have a variety of conflicting interests that must be considered. There is a plant that must be kept operating at an efficient capacity to keep down processing charges per unit, an established trade that must be kept supplied with various products, branded products the standards of which must be maintained, contracts that must be carried out, an overhead and selling organization that cannot be readily adjusted to changing volume. All of these make it desirable, if not absolutely necessary, that a regular supply of hogs be at hand for processing. On the other hand, products must be sold in a highly competitive market, operating and other costs must be covered, profits must be made or at least losses must be avoided. Hence the constant urge to keep down the cost of hogs. But if, as a result of the urge, the margin between hog prices and products prices becomes wider than normal with possibility of increased profits, each packer usually seeks to increase his part of this profit by buying more hogs. As a result of the pull of these various influences, the number of hogs bought and the price to be paid is finally established. These decisions of many packers, reacting to these various influences, finally establish the short-time level of hog prices, and these decisions constitute what is commonly called competition for hogs.

Extent of Competition

This competition is not confined to any particular point or group of points but, generally speaking, is working wherever hogs are processed for wholesale distribution. It is most obvious in areas where hog production is large and packing plants are numerous. It is least obvious where hog production is small and where the movement into commercial channels is limited. The price level resulting from the competition is evidenced by the published quotations on hogs at many points, mostly stockyard markets. But the competition that results in these quoted prices is not confined to any one market or group of markets, but it is at work constantly wherever hogs are bought for commercial processing.

[fol. 2164] Thus, although there are price quotations at

many widely scattered points, such as Buffalo and Chicago and Denver and Los Angeles, the general level of prices at these points is not determined by the competition of buyers for the supplies at these points, nor by the haggling between buyers and sellers. These markets are simply the registering points for the results of this competition that is Nation-wide, and the relative effects of buying and selling at these points on the price level of hogs are only about in the proportion that the numbers bought are to the total bought.

Public Markets as Price Registering Points

It is true that certain of these markets have been considered by some as "basic markets", the most important of these being Chicago. But Chicago is not a basic market in the sense that hog values for the country are determined there. It is such a market, partly because its position in the transportation system and in the current of livestock traffic is such that prices at other points in the surplus-hog area can be most readily related to it, partly because it is the location of the principal organized market where hog products are traded in for both spot and future delivery, and partly because the general buying instructions for all the plants of the large national packers emanate from there. It is therefore the most important center for market information registering changes in the level of hog prices. This level is determined by broad forces of supply and demand discussed elsewhere in this report. The fact that Chicago is the most important registering point of hog prices does not make it the determinant of the level of hog prices.

Admittedly the observable indications of competition are most in evidence where large groups of buyers and sellers meet and haggle over the price to be paid, and undoubtedly there are occasions when this haggling affects temporarily the trend of prices, but these markets are individually price-registering and not price-determining points. If there were no such organized trading points where representatives of buyers and sellers meet and sell large numbers of hogs on inspection, and if all hogs moved direct to packers, there would undoubtedly be basic price-registering points, and

the level of hog prices to packers would be substantially the same as they are under the present system. There might be less hour-to-hour and day-to-day and even week-to-week fluctuations than now prevail at present markets, but this would not change the level of hog prices. For the primary factors in determining the price level of hogs are the present and prospective wholesale values of hog products and the competition among buyers for the available supply of hogs to be converted into these products. These are factors over which neither individual producers nor sales representatives of producers have any control.

Price Determination of Other Products

There are other important agricultural products, with widely distributed production, which move from surplus-production areas to large consuming centers, much as do hogs, but for which there are no established markets similar to the large stockyards markets. Among these are butterfat and poultry.

Butterfat.—Because of its character butterfat must be processed near the point of production although in the "concentrator" areas it is moved fairly long distances. [fol. 2165] Hence commercial-butter supplies are manufactured in many relatively small units, and butter from these creameries is widely distributed. Butterfat is sold by producers either directly to local creameries or to produce houses which are agents for large centralized creameries or are independent buyers with several competing outlets. The price paid for butterfat is determined by the price of butter at large consuming centers. There are no large butter markets, however, to which relatively large proportions of creamery-butter supplies are consigned for sale on buyer's inspection, although there are important produce markets in all large cities through which supplies of butter are distributed, and there are organized exchanges where butter is sold for spot and future delivery. As with hog products, prices of butter are determined largely by present and probable future supplies and by the level of consumer incomes. Methods by which butterfat is marketed have no effect on these price-determining factors. Daily butter prices are prices that will remove the supply offered

from the market either for immediate use or for storage. There are a number of important price-registering markets which tend to be price-basing markets for the industry, but the level of butter prices is not determined at these markets; it is determined by the Nation-wide demand in relation to the supply.

Poultry.—Poultry as a material for human food is similar to hogs, and production is even more widespread than is that of hogs. But marketing methods are quite different. Excepting at New York City and Chicago, there are no large central poultry markets to which live poultry is consigned by producers for sale, nor except at Chicago are there organized poultry exchanges. Poultry is largely sold by producers to local produce buyers, or delivered direct to produce houses, or sold to itinerant buyers. Local and itinerant buyers are either agents for nearby produce houses, or they ship to produce merchants in more distant consumer markets. These merchants either buy live poultry from country buyers on bids or handle it on consignment. Live poultry shipped to consuming points is largely consumed at the points where received. Local produce houses are much like interior hog-packing plants. Most of the commercial supplies of dressed poultry are produced at these plants, and such dressed poultry is widely distributed by the same methods and to a large extent by the same organizations that distribute pork products.

The general level of poultry prices is determined largely by supplies, the prices of competing products, and the level of consumer incomes. Short-period prices are those at which supplies offered can be moved into consumption or to storage. To some extent, however, live-poultry prices are more localized than are prices of dressed poultry. Prices paid for poultry by local produce houses and at country-buying points reflect prices as quoted at produce markets in large consuming centers. Poultry prices at produce houses and at country points are subject to fewer day-to-day fluctuations than are hog prices, although there is sharp competition for supplies in the areas of large production.

Value of Public Livestock Markets

These descriptions of the marketing methods for other products similar to hogs are given to indicate that the existence of large consignment markets is not necessary for establishing the price level of such products and to [fol. 2166] show that methods of marketing have little influence on the general market level of prices for such products.

It does not follow from this, however, that these organized livestock markets where hog prices are registered do not have an important place in the livestock-marketing system. Such markets, where actual prices being paid can be readily ascertained and given quick and widespread publicity, are of undoubted value to livestock producers. They tend to hold all markets in close line with the general price level and to keep producers and local marketing agencies informed as to whether prices offered by local buyers, by interior packers, or at different public markets are comparable. Large numbers of different weights and qualities of hogs are assembled at these markets where slaughterers in deficit-producing areas can obtain the kind of hogs they want. Such markets are especially useful in the cattle industry since the classes and grades of cattle are so numerous and varied and the wants of different kinds of buyers are so different that cattle must be sold largely on inspection.

Effect of Changes in Marketing Methods on Hog Prices

If it be accepted that the general level of hog-products prices is not affected by the methods by which hogs are marketed, is it not possible that changes in these methods may affect the proportion of this price that goes to hog producers? In other words, is the margin between hog-products prices and the prices received by farmers for live hogs likely to be increased by changes in methods of marketing hogs? The answer to this question involves a determination (1) of whether these changes have resulted in an increase in the actual costs to the farmer of moving hogs from farms to packers and (2) whether they have reduced packer competition for hogs so that packers are able

to widen the margin between hog prices and products prices to cover either increased distribution costs or profits.

Three Important Changes in Methods

During recent years the three notable changes in these methods have been the shift from rail transportation to truck transportation, the rapid growth of local auction markets to which hogs are brought for sale to buyers of all kinds, and the decrease in the proportion of hogs slaughtered that are consigned to stockyards markets for sale and a corresponding increase in the proportion bought by interior packers and by large local concentration markets for shipment direct to packers located at stockyards markets or elsewhere.

As regards all three of these changes it may be observed that when new methods of merchandising or marketing have tended to replace old, and this tendency grows over a period of years, it is fair to assume that the new methods have certain distinct advantages over the old that cause increasingly larger numbers of persons to adopt these new methods. In the case of marketing methods these advantages may be in saving of time, in reducing risks, in convenience, in reduced costs, or in increased returns.

Motor-truck transportation.—The shift from rail to motor-truck transportation has apparently been only indirectly a factor in causing the increase in direct marketing since the proportion of livestock moved by trucks has increased as rapidly at stockyards markets as at interior [fol. 2167] packing plants or concentration yards. Although there is difference of opinion as to whether it has reduced actual out-of-pocket costs in most cases, there seems little doubt but that it has materially saved time and reduced risks and is often much more convenient.

The increase in commercial trucking of hogs apparently tended to increase the number of local selling outlets, since many of these truckers have become buyers on their own account, as well as transportation agencies. This has brought the hog market direct to the farmer's door and relieved him of all the work involved in getting hogs to local railroad points. To the extent that the trucker pays the same price at the farm that the local dealer does at

the railroad, it has reduced labor cost but not out-of-pocket cost if the farmer can deliver the hogs to the local dealer without cash expense.

The increase in trucking also has increased the number of larg-scale outlets in many cases. Since motor trucks are not restricted as to routes, as are railroads, many communities that were formerly limited to the market outlets readily reached by the available railroad facilities now have additional outlets because these communities can be reached directly by trucks or because loading points on railroads going direct to these points can be reached at little or no added cost of local haul.

Since there is no apparent direct effect of increase in trucking upon the degree of packer competition for hogs and since it has not added to marketing costs, and since it has had other advantages, this changed market method has not tended to reduce the proportion of the wholesale value of hog products paid to producers for hogs.

Local auction markets.—Local auction sales where large numbers of hogs as well as other livestock are assembled and sold have increased rapidly in many Corn Belt States during the last few years and especially during 1934. To a considerable extent these periodic sales have tended to replace farm auction sales. In general the livestock sold is made up of young or unfinished animals or breeding stock, and few fat cattle or hogs are included. During the last 2 years many stock pigs have been distributed in this way.

Such method of sale in general does not appear to offer additional advantages for the marketing of slaughter hogs in areas of large production and may have some disadvantages. In sections where hog production is on a considerable scale and there are a number of local buyers or nearby outlets for hogs it hardly seems probable that the prices paid at the auction will be any higher than those offered elsewhere, and costs of getting hogs to the buyer and market risks will be increased. In sections, however, where hogs are produced on a limited scale and local buyers are few or lacking the assembling of hogs in large enough numbers to attract outside buyers can prove and has proved to be distinctly beneficial. Since these sales can have no

effect on general packer competition for hogs their utility must be judged largely by local conditions.

Growth of direct marketing.—The third change in marketing methods is the decreased proportion of slaughter hogs consigned for sale at stockyards markets and the corresponding increase in direct marketings. Under another section are discussed the relative costs of marketing hogs sold at public stockyards and sold direct to packers or packer-buying points. This discussion indicates that direct selling has tended to decrease rather than increase mar- [fol. 2168] keting costs; thus of itself it would tend to increase the proportion of the packer's price received by farmers.

Hence it appears that the shift to direct marketing has been advantageous to producers, unless this shift has resulted in a decrease in packer competition for hogs and an increase in the margin between the price level of hog products and the level of hog prices to packers that more than offsets this decrease in marketing costs. Whether there has been such a decrease in competition is the crux of the question as to whether direct marketing has been beneficial or detrimental to hog producers. It is desirable, therefore, to examine the whole question of packer competition for hogs both at public markets and at interior points to determine whether it is probable that a shift of buying from the former to the latter would tend to reduce this competition and make it possible for packers to widen the margin between the prices of hog products and of hogs.

The conclusion was reached earlier in this section that the general price level of hogs is not determined at any one market or group of markets but that it arises from a Nation-wide competition of packers, wherever located, and that the results of this competition are registered in changing daily, weekly, and monthly prices at different markets. But it does not follow that the degree of competition could not be altered by marked shifts in the channels through which hogs are moved from producers to packers.

Character of Competition at Public Markets

There is a material difference among public markets in the character of the competition for the hogs received. At

some markets there are 3 general types of buying for slaughter, at others only 2, and at some only 1. At markets where there are 3 types of buying there are buyers for some or all of the four national packers, some of whom have plants located at most important stockyards markets, buyers for local packers who have plants only at this market, and shipper-buyers who buy hogs on order from packers located elsewhere. The Chicago market is typical of this kind of market. At markets where there are 2 types of buying there are buyers either for national packers or for independent packers, one or the other of which types—but not both—have plants located at these points, and shipper buyers. The South St. Paul market is of this type. The 1-buyer type markets are those where one packer (either national or local) takes the bulk of the supply and at which few, if any, hogs are bought by shipper buyers. These markets are relatively small and are located usually in deficit-production areas and mostly in States on either the Atlantic or the Pacific coast.

Obviously competition seems greatest at markets where there are numerous buyers. A commission salesman who has a number of buyers with whom he can dicker before selling would appear to have a better chance of getting a higher price than when he has only a limited number and in some markets only one. At markets where there are many buyers it doubtless often seems that a good salesman may get the better of a buyer and sell hogs above the market, but the reverse also occurs, and the result of such sales on the average market price is negligible. But since the value of hogs for slaughter is determined by the value of hog products and since all packers are selling products [fol. 2169] in much the same market it is not to be expected that for any length of time hogs will be bought at prices out of line with product values. Hence a large number of buyers at a given market of itself offers little possibility of keeping hog prices at that market high relative to other markets. If this were not so there would be a tendency for hogs to move to the markets where buyers were most numerous and away from other markets. As a matter of fact the fluctuations in the differentials between markets is kept small.

It might be argued (and has been) that the markets at which there are numerous buyers of all kinds set the price pace for all other markets—that they establish the level of prices, and other markets simply follow. The Chicago market, especially, has been often cited as the price-determining point. Undoubtedly the day-to-day changes in hog prices at Chicago are an important element in influencing buyer and seller attitude at other livestock markets and at other points where hogs are bought for slaughter. The reasons have been pointed out elsewhere.

To the extent that some of the four national packers are important or dominating buyers at different stockyards markets it is to be expected that those markets will be affected by the buying policies of these packers as reflected in market reports from Chicago. For this reason a somewhat detailed consideration of the competitive buying situation at Chicago may be useful.

Competition for hogs at Chicago public market.—Three of the four large national packers have plants at the Union Stock Yards in Chicago and buy a considerable part of their hog supplies on that market. They also bring to these plants relatively large numbers of hogs bought at country points, and the proportion of such hogs to the total handled at Chicago has been increasing during recent years. There are a number of fairly large local packers having plants at the stockyards who usually buy all of their hogs on the market. A fairly large proportion of the Chicago market receipts are bought by order buyers for shipment to packers at other points, nearly all of these hogs moving east of Chicago, and these order buyers operate regularly on the market. In addition, relatively large numbers of speculative buyers are regular operators on the market. These speculators largely buy loads of mixed hogs for sorting and odd lots of hogs to be assembled into larger lots. When they think the market is likely to advance during the day or if they are offered hogs at a price that seems attractive, they also buy hogs to be resold without sorting.

Usually buyers for local packers, order buyers, and speculative buyers are the first on the market, and their bids tend to establish the early trend of prices as compared with those prevailing at the close of the previous day. The first two types of buyers usually want hogs of fairly defi-

nite weights and grades and are not interested in mixed lots, and their bids are mostly for the better grades of butcher hogs of most weights. The early operations of speculative buyers are governed to a considerable extent by their forecast of how the day's market may develop, based on receipts, attitudes of small local packers and order buyers, large packer attitude the previous day, conditions in the provision markets, etc.

The orders received by order buyers are usually to buy specific kinds of hogs at a price not to exceed a set price limit. In establishing their price limits the eastern packers who place these orders are governed by conditions in the [fol. 2170] wholesale pork market, especially by the demand for fresh pork, the relative prices of hogs at different markets the previous day, changes in quotations in the futures provision market, and other facts tending to indicate what hogs are worth and where they are the cheapest.

Instructions to small local packer buyers represent the management's judgments as to what hogs are worth, based on about the same kind of information as that influencing eastern packers but usually with more intimate knowledge of conditions in the speculative provision market and in the country-wide situation. As these buyers go through the hog alleys and make offers on the kind of hogs suitable to them, commission salesmen get their cues as to how the market is likely to go, and they either sell or hold for higher prices. Thus the early trend of the market is established.

Later the national packer buyers come into the market with instructions as to how hogs should be bought. These instructions are based on information coming from branch houses at all wholesale meat markets in all the leading consumer centers as to the previous day's business and opening conditions of the current day, on conditions in the futures provision market, on the day's supplies of hogs at leading markets and the cumulative supply for the week, on the "cut-out" of hogs slaughtered in recent days, on purchases and prices at country buying points the previous day, and on the attitude of each organization toward the future trend of hog-products prices. If these instruc-

tions are in substantial agreement with the early trend of prices that trend will dominate the day's market; if they are contrary to this opening trend then the later trend is likely to be different from the opening if the day's receipts are to be cleaned up.

Obviously all buyers who are on the market try to buy hogs as cheaply as they can regardless of what their instructions are. But it soon becomes apparent what the general attitude of the buying side is, and the market usually quickly adjusts itself to this attitude. The urge to buy as cheaply as possible, however, is less prevalent with order buyers than with packer buyers. Order buyers are paid a commission for buying, and the ordering packer is not in close touch with the market. If orders can be filled within the price limit set, the buyer has no immediate incentive to buy below this price. But since his business depends on future orders coming to his market and to him, the better he can serve his client the better he insures future business.

Position of salesmen in the market.—Confronting these different kinds of buyers in the market are a large number of hog salesmen representing the commission firms to whom the supply of hogs for sale has been consigned. There is a wide variation among these salesmen in the number of hogs they have for sale, and there is no agreed policy among them as to what the trend of prices of hogs should be. They are paid a commission for their services which is unrelated to the price at which hogs are sold. Hence they have no actual interest, as salesmen, in the price level of hogs. Their chief concern is to sell the hogs consigned to them in line with the market so that their customers will be satisfied. Undoubtedly their attitude is to get the best price they can, but they are faced with conflicting situations. When the first buyers make their appearance they must have decided what their offering price shall be and then must reach a conclusion from the first [fol. 2171] bids as to how the day's market will develop, and whether to sell at once or await later developments. Not all salesmen reach the same conclusions and first sales may be below what most salesmen have had in mind as obtainable. The rest then have to decide whether these first sales were too low and hold for higher prices or revise

their own ideas of prices obtainable. Out of the various decisions of individual salesmen develops the trend of the market.

It is to be noted, however, that the position of the selling side is relatively weak compared with the buying side. It is not probable that packers will pay for hogs more than they expect to get for the products after deducting processing and other costs. It is true that at certain times packers' judgments as to the future value of hog products to be cured and stored will be such that they will pay somewhat more than the cut-out value based on current prices of products, but over the greater part of the crop season these current prices are much the more important factor in determining what hogs are worth. On the other hand, having been produced and delivered at the market, hogs must be sold, and there are no corresponding factors setting a lower limit below which hogs will not be sold. Hence, commission salesman, having no ownership interest in the product, usually will not risk having to carry hogs over from day to day in an effort to raise the level of hog prices.

The most that salesmen can do is to sense the change in demand for hogs from the attitude of buyers in the market and adjust asking prices to this changing demand. Actually the price level of hogs is determined by the competition of packers for the available supply offered, and the desire of producers or efforts of salesmen have practically no effect on the price level. Salesmen can bring about short-time fluctuation around the price level however, by taking advantage of changing volumes of receipts and by bringing into play an expanding demand for hogs somewhat sooner than it might otherwise become effective. The position of salesmen is fairly similar to that of an auctioneer at a public sale. The auctioneer, if a sale must be made, cannot control the prices of the things he sells. The estimated value to buyers is what sets the price. But he can at times take advantage of the competitive attitude of different buyers to get a higher price than would have been paid if he had not been able to stimulate this latent competition.

Competition for Hogs Bought Direct

Competition among packers for hogs bought direct from producers or producing areas is not visibly manifest as is the competition among packer buyers at public markets where a number of buyers for different packers are all operating in the same way in the same place at the same time. The fact that this competition is not thus manifest does not justify a conclusion that it does not exist or is less effective in its results on the prices received by producers for hogs than is packers' competition at the public markets.

One marked difference between packer competition at public markets and at interior points is that at public markets this competition is for a supply of hogs that is physically present and largely out of the control of the producer, while at interior points it is competition in drawing hogs from producers to different plants. The first [fol. 2172] is a competition to buy hogs that must be sold; the second is a competition to draw hogs that may or may not be sold, depending on the prices offered.

Types of large-scale country buying.—In general there are three types of large-scale country buying. The first is that on the part of interior packers, who buy hogs delivered at their plants from producers, or from local buyers or shipping associations who assemble hogs, or from truckers who buy hogs from producers; or they may also have concentration or buying points located elsewhere where hogs are bought from the same sources and at which delivery is made. The second type of buyers are those for packers located at public markets (or at points so far removed from the area of production that the hogs must be moved by rail) who have established buying yards at which hogs are received. Purchases are made from the same groups of sellers as are those of interior packers. The third type of buyers are the operators of independent concentration yards or assembly plants who buy hogs for their own account and resell them where they can get the highest prices, either consigning them to public markets or selling to packers variously located, at the highest price obtainable. A variant of the third type is found in cooperatively operated concentration points that receive hogs from shipping

associations, sort and sell at the most advantageous point, and charge a fee for the service.

With each of these three types the hogs are bought at a fixed delivered price and are delivered to this point. Another type of buying is buying on track, where car lots of hogs are bought at the point of shipment and moved on order to packing plants without passing through concentration yards. Such buying is done by packer buyers at concentration yards and by independent buyers.

Evidences of competition at country buying points.—The competition among these large-scale country buyers is evidenced by the prices offered by them for hogs. These offers are bids for hogs to be delivered, or board prices (with adjustments) for hogs delivered without a bid price being first received. These prices reflect not only the competition among these buyers operating in a given area but also the competition between buyers in this area and public markets available to the area. In order to attract the number of hogs he requires, each buyer must offer a price that is at least as advantageous as prices offered by other direct buyers in the area, and the level of prices in the area of all buyers must be high enough to keep the hogs from going to public markets.

In the case of independent interior packers the prices they can pay for hogs are based upon the prices they are obtaining currently for hog products in relation to their respective operating costs, influenced somewhat by their forecasts of future prices for products to be cured or stored. The prices they do pay are such as they expect will bring them the desired number of hogs, but these prices will not exceed for any considerable period the prices they can pay. Buying policies of interior packing plants owned by large national packers, since general buying policy is controlled more or less by the central buying department, doubtless reflect the country-wide product-price situation more nearly than do those of independent packers whose distribution is more localized. But since the market for products tends to be countrywide, owing to the facility with which such products can be moved long distances, all interior packers, [fol. 2173] except those whose business is entirely local or intra-State, are selling in much the same general market as are national packers.

Prices paid at packer-controlled concentration yards are such as must be paid within their respective areas to bring to them the volume of hogs desired. Buying at such points maintained by large national packers may be influenced by other conditions than the actual worth of the hogs as measured by the value of products. These points might be maintained in order to establish a relatively high level of hog prices in certain areas to counteract competitive advantages of other kinds that interior packers in this area may have. To maintain such a legel of prices the hogs bought might be processed at smaller profit margins or without profit, but with compensating advantages from operations elsewhere.

If interior packers, because of the freight-rate relationship between live hogs and hog products, or because of smaller operating costs resulting from lower levels of wages and salaries, were able to process hogs and distribute hog products to eastern consumer markets at a lower cost than could packers located at some public markets, these advantages could be reflected either in a relative large operating profit or in an advantageous selling position for distributing an increased output.

Packers with plants less advantageously located might meet this situation in several ways. They might abandon these plants and establish or acquire plants in the advantageous area; they might attempt to draw hogs to the public market or markets, the volume of which had been most seriously affected by the increase in slaughter at interior packing plants, by bidding up prices at these particular markets; or they might buy hogs direct at relatively high prices in those areas and thus improve their competitive situation in distributing markets as well as increase their volume of slaughter. The competitive situation as above outlined apparently did prevail in the post-war period, and the national packers have attempted to meet it by the first and third methods indicated.

The third type of large-scale country buying, that by operators of independent concentration yards or buying points, is to a considerable extent speculative buying. These operators buy hogs of mixed grades, both car lots and truck lots, sort them into uniform grades, and sell these graded lots on offers direct to packers variously located, but mostly

east of Chicago. What they cannot sell direct they consign to the public markets that they consider the best outlets for different weights and grades of hogs. To some extent, however, they buy on orders by first asking for bids on certain grades of hogs and then buying hogs to fill these orders, if they can do so and make a profit. Often in doing this they buy mixed hogs and sort them to get the number of the grades desired and then consign the remainder to public markets, in which case the final outcome of the operation depends on the returns from the hogs thus consigned. When such yards are operated cooperatively or as a part of a cooperative selling organization and a fee is charged, the operators are not country buyers but only an expanded type of shipping association.

The prices that such operators pay are not influenced directly by the value of hog products. The operators buy hogs as cheaply as they can in competition with other large-scale country buyers in order to resell, either after sort [fol. 2174] ing or without sorting. Their operations are comparable, in part, with those of speculative buyers at public markets and in part with those of local country buyers who buy hogs within a limited area for resale or consignment.

In areas where two or more of these three types of large-scale country buying prevail the competition among them is plainly evident in the efforts they make to obtain hogs. This evidence is not that of buyers in person actually bidding against each other for different lots of hogs, but is in the form of quoted and posted prices which they will pay for hogs delivered to them. Sellers of hogs, whether shipping associations, local country buyers, or producers, can negotiate directly with all of them, and compare the highest price offered with the quoted prices at available public markets and then make what appears to be the most advantageous disposition.

In areas in which only one such country buyer operates, sellers of hogs have only the choice of accepting this one bid or shipping to a public market. Over the greater part of the heavy hog-producing areas of the Corn Belt two or more such buyer outlets are available. In the less intensive production areas only one such buyer may be found, and often

such areas are far removed from public markets. Few producers ever have enough hogs to sell at one time to make a carload, or even a truckload, and the total yearly volume of shipments is not sufficient to justify the regular operations of a local dealer or shipping association. Producers, of necessity, must accept such bids as may be made, but this situation is not less advantageous because of the presence of this buyer than it would be if he were not operating.

The foregoing description of the character of competition at these various types of large-scale markets leads to the conclusion that the basic factors determining and limiting the competition are the same at all of them; hence is little affected by changes in the proportion of the hog supply that moves through each. On the side of the packer buyers the upper limits of the prices they will pay over any considerable period are set by the composite value of the products derived from hog slaughter minus the charges for processing and distributing these products. Since there is this upper limit to the prices that will be paid and there are no corresponding cost factors setting a limit below which hogs will not be sold, the position of the seller is relatively weak as compared with that of the buyer, and it is the weakest when large supplies of hogs are for sale that are largely out of the control of the sellers.

Competition at Country Points

Thus far the discussion of competition has been largely devoted to competition among different types of markets and buyers at or for these markets, but there is another type of competition which is more in evidence to most producers of hogs. This is the competition at local buying points which reflects this larger competition to farms with hogs to sell.

Alternative selling methods.—Hog producers with hogs to sell in general have two alternatives: either they can sell at a price known before the hogs are delivered or they can consign their hogs and take whatever price may be received at the point where the hogs are sold minus costs of shipping and marketing. Sales to local buyers, to interior packers, and to concentration points are of the first

type; shipment to public markets and through shipping [fol. 2175] associations are of the second type. So far as the individual producer is concerned, his preference as between public markets and direct selling is reflected in his choice between consignment to a public market for his own account or sale by himself to an interior packer or to a concentration point operated by a packer. Since local country buyers, including truckers, shipping associations, and independent concentration points, all can and many of them do utilize both kinds of outlets, the producer selling to these cannot know what will be the ultimate market destination of his hogs.

The rapid growth of motor-truck transportation has increased materially the range of choice among markets of individual producers. When most of the supply of hogs moved by rail generally, producers with less than a carload of hogs were limited to a choice of two outlets—they could sell to a local country buyer or they could ship through a shipping association. At the present time they can send truck or less-than-truck loads of hogs for sale on their own accounts to a public market, to interior packers, or to concentration points. More than ever before, producers are in a position to decide what type of selling they prefer.

Factors influencing farmers' choice of outlets.—Decisions among these different available outlets are influenced by a variety of considerations. The most important is whether hogs will net more a day or two later at a public market than the offered prices for them by any one of the several outlets from which offers are requested. The price at the public market may be either up or down by the time the hogs can be delivered there for sale, and the producer must take the risk of the decline. If different producers had hogs for sale at frequent intervals during the year, it is probable that the number of times the market would go down in the interim between the time when arrang-ments for shipment were made and the time when the hogs were sold would be offset by the number of times the market advanced. But with producers who sell hogs only a few times in the year, there is no certainty of such offsets. Hence the seasonal trend of prices may affect decisions. During the periods of seasonal declines, sales at a known price would be preferable, but during the periods of sea-

sonal advances a better change of profiting by the market change would be offered by consignment.

But even though the farmer were willing to take the chance of the market fluctuation, he may still prefer to sell at the offered price because it may be high relative to what the public-market price is at the time; also because he cannot tell in advance of the sale the exact price his hogs would bring on the market. Likewise farmers who sell hogs only at infrequent intervals do not have the data needed to determine what the net price from consignment may be, since from the market price must be deducted the costs of transportation and marketing and the loss from shrinkage; while from the offered price only transportation and shrinkage would have to be considered, or shrinkage alone if the sale were at a nearby point where he could make delivery himself, or neither of these if sale were made to a trucker at the farm. Hence, undoubtedly, farmers who sell infrequently usually prefer to sell at a known price.

Distance from a public market is also a consideration. Farmers who are located within a short trucking distance of such a market, where the transportation cost is rela- [fol. 2176] tively small, will tend to consign to the market more generally than will farmers located a considerable distance away. The nearby farmers are more familiar with the public market and have more direct contacts with it and can get their hogs to it quicker. Also direction from a public market is doubtless of material influence. The general movement of hogs over most of the Corn Belt is from west to east, and price differentials between markets are from east to west. Hence, a farmer whose closest public market is 75 miles or more to the west would be moving his hogs against the current of hog traffic if he shipped to the market, while if the market were to the east he would be moving with the traffic. Hogs are trucked much farther if the movement is east than if the movement is west.

Some farmers, doubtless, are influenced in their choice of an outlet by their attitude toward direct marketing. If they believe that direct marketing is detrimental to the whole marketing system, they may consistently consign to a public market or through a shipping association that

consistently consigns, or they may sell to a public-market trucker, and make little use of large-scale direct outlets.

The convenient availability of different outlets is doubtless one of the most important factors in most farmers' decisions. This brings up the question as to whether the recent changes in marketing methods have tended to increase or decrease the number of outlets generally available. As previously indicated, there can be no doubt but that the shift from rail to motor-truck transportation has tended to increase the number of outlets conveniently available in the principal hog-producing areas. To the extent that the growth of direct marketing has resulted from or has been accompanied by an increase in the number of interior packers and concentration points, with no resulting decrease in public markets, undoubtedly the number of large-scale outlets has been increased. Since none of the large or intermediate-sized public markets in the Corn Belt and few if any elsewhere have ceased operations within the last decade, there has been an increase in these large-scale outlets.

Changes in Number of Local Outlets

There is little available information to indicate whether there has been a change in the total number of local outlets (country buyers and shipping associations). There has been a rather sharp decrease in the number of shipping associations during the last 5 years and this decrease has been most marked in the areas where large-scale country buying has shown the greatest increase. During the period 1916-25 when cooperative shipping associations were increasing rapidly in number there was undoubtedly a material decrease in the number of local hog buyers. Whether that number has tended to increase with the decline in the number of shipping associations cannot be determined from any available information.

The decrease in the number of shipping associations has resulted, to a large extent, from the increase in truck transportation. In areas within a short trucking distance of a public market the necessity for consolidating small lots of hogs into car lots has been eliminated, and this function of the shipping association has disappeared. To the

extent that farmers used shipping associations to reduce local buyers' margins, this is now done by direct delivery at the public market. The growth of direct marketing may [fol. 2177] also have been a factor in the decline in the number and in the average volume of business of shipping associations. Prior to about 1926 most shipping associations consigned their hogs to public markets, and were slow to avail themselves of the direct-market outlets. Hence as the volume of hogs going to these direct markets increased the volume available to the shipping associations declined.

As motor-truck transportation expanded, commercial truckers more and more became hog buyers both on their own account and as agents or preferred buyers for interior packers and concentration yards. The increase in the number of such buyers has probably more than offset the certain decrease in the number of shipping associations and any probable decrease in local country-point buyers.

In the principal hog-producing areas there has never been any lack of local outlets for hogs. One of the leading causes of the growth of shipping associations was the belief that there were too many country buyers, who were being supported by their profits from handling livestock, principally hogs. As shipping associations increased, the total number of these intermediary marketing agencies doubtless declined; and as shipping associations, in turn, have declined, their operations have been taken over partly by truck buyers, but largely by farmers who have dispensed with any intermediary because of available motor-truck transportation.

Number of all market outlets.—Although there are no available data indicating exactly whether the number of all market outlets has changed during the past decade during which direct buying has expanded greatly, there is information as to the number of such outlets available at the present time.

Hog producers who signed contracts under the hog-production control program of the Agricultural Adjustment Administration were required to furnish evidence as to the disposals of the 1932 and 1933 pigs raised by them, in establishing their base-production figures. These "sup-

porting-evidence" records include the names of the buyers in addition to the dates and the number sold. To get information as to how these pigs were disposed of, typical counties in the nine most important Corn Belt hog-producing States and in Kentucky were selected. A number of factors were considered in selecting these counties, such as types of farming, volume of hog production, location of public markets, location of other large-scale markets such as interior packing plants and concentration yards, and location within areas concerning which the question of the competitive situation had been raised.

One or two counties were selected in each State except in Iowa, where four counties were selected. A sample of the contract farmers well distributed over the county was taken in all counties. In some States all the data for one township in each county were recorded and sample data for other townships, and the record shown in table 26, covers over 5,000 producers in 197 townships in 18 counties, and the sales record covers over 500,000 hogs. The agencies to which or through which sales were made were listed, and these were separated into different types such as public market, packing plant, concentration yards, public auction, local buyer, shipping association, and miscellaneous.

[fol. 2178]

Table 26.—Producers and agencies buying hogs in selected townships in representative counties in principal Corn Belt States and in Kentucky

State	Counties	Townships	Producers	Hogs	Agencies buying [1]
	Number	Number	Number	Number	Number
Ohio	2	2	212	36,144	431

Kentucky	1	1	111	12,273	344
Total	18	197	5,005	528,275	.....

[1] Includes all the buyers of any kind who bought hogs from producers. Each figure is the sum of township totals without the elimination of duplications.

As finally tabulated the number of hogs disposed of through these various agencies by townships were obtained, and for each township the percentage handled by each of the five leading agencies, classified as to type in order of importance, was computed (table 66). It was found that a relatively large number of hogs in all areas were sold by producing farmers to other than the principal agencies listed. This included a large number sold from one farmer to another and considerable numbers sold to town butchers and other town residents either for slaughter or taken on account by merchants and professional men. Since these supporting evidence records did not include disposition of hogs other than those raised by the producer himself (or at least they were not supposed to), they do not show the final disposition of the hogs sold from one farmer to another, but it is fairly assumable that these hogs were disposed of through about the same agencies as were the hogs the farmer raised. Doubtless many of the hogs taken on account were afterwards sold to local buyers, except when delivery was of dressed hogs.

These records show that a number of agencies were utilized for the disposal of hogs in all townships in all counties and that in very few of them (37 out of 197) did any one agency handle over 50 percent of the hogs. In the 37 townships where over 50 percent was handled by one agency these agencies were local buyers in 15 townships, packing plants in 18 townships, concentration yards in 2 townships, auctions in 1 township, and public markets in 1 township.

In general these records agree with the reports of individual farmers made direct to the United States Department of Agriculture, showing the number of market outlets used by them in marketing their hogs. The producer was asked to state the number of public stockyards, packing plants, concentration yards and buying stations, local livestock buyers, auction markets, and cooperative shipping associations through which he could conveniently sell hogs, the object being to get some idea of the number of outlets available to the producer and some indication as to the local competition for his hogs. The answers to this

the Corn Belt the number of market outlets per reporting producer averaged 4.0 and in the three States outside the Corn Belt the number averaged 3.3. The highest average number of outlets for individual States were in Indiana, [fol. 2179] Ohio, and Iowa, and the lowest average number in Oklahoma, Tennessee, and Kentucky. From 1 to 5 market outlets were reported by slightly more than 75 percent of the farmers in each of the three Corn Belt areas and by 85 percent outside the Corn Belt. About 1 percent of the farmers reported 16 or more available outlets.

1959

This question on number of outlets for hogs was often incompletely answered. Frequently the different types of outlets named in the questionnaires were checked instead of the actual number of available outlets of each type being given; in these cases each type of outlook checked was counted as one outlet. Public stockyards, or other markets which were known to be available in the locality of the reporting producer, were often not even checked. In many instances it was apparent that the number of outlets reported represented the outlets through which the producer customarily sold hogs instead of the number of outlets available. However only the outlets actually reported were tabulated even in cases where it was apparent that all available outlets had not been reported on the questionnaire. Consequently the number of available outlets as presented in table 27 represents an understatement.

EXHIBIT No. 57

WINSTON STRAWN & SHAW

First National Bank Building
Chicago 3

September 4, 1947.

Mr. Sidney C. Murray,
General Counsel,
New York Central Lines,
1236 La Salle Street Station,
Chicago 5, Illinois.

Dear Sir:

In response to a telephone inquiry made by us last week, Mr. W. C. Douglas, Assistant Vice President of the River Road and the New York Central, stated that neither of those companies planned to offer any evidence or to take any other steps to defend the complaint in Swift & Company vs. The Atchison, Topeka & Santa Fe Railway Company, et al., I. C. C. Docket 29809. In this complaint Swift is asking the Interstate Commerce Commission to compel the line-haul carriers and the River Road to deliver livestock at its plant at rates which do not exceed those charged for delivery of livestock to the unloading pens of The Union Stock Yard and Transit Company of Chicago.

If the request of Swift is granted, and the other packers demand and are accorded similar treatment (which may be anticipated), the effect will be substantially to destroy the business of the Yard Company.

In Article VI of the lease from the Yard Company to Chicago Junction Railway Company dated December 1, 1913, the Junction agreed "to conduct, manage, and operate the line of railroad by this instrument demised, and in so far as possible the same to conduct in such manner as will tend to the benefit, advantage, and behoof of the business and affairs of the Yards." In the lease of May 19, 1922, by the Junction to the River Road (see Art. III,

Sec. 2, and Art. IX), the River Road and the New York Central undertook to perform the above-quoted covenant of the Junction in the earlier lease.

Most of the evidence necessary to defend the Swift complaint and the power to raise the necessary issues for the determination of all the questions involved are in the possession of the River Road. We believe that if this evidence is adduced, and if the proper issues are raised by [fol. 2182] that road, the case can be successfully defended.

It is our considered opinion that the River Road and the Central are obligated under the terms of the foregoing provision of the lease of 1913 to defend this case and to take every other step appropriate to prevent irreparable injury to the Yard Company, and that any failure to do so will be a breach of this covenant of the lease.

Yours truly, (Signed) Winston, Strawn & Shaw.

[fol. 2184] EXPLANATION

Items 1 to 15 inclusive show the locomotives on the property in May, 1922, whereas Item 14 shows locomotives purchased thereafter.

Item 1—These engines were the heavy road power type equipped with pilot trucks, and originally acquired for hauling trains of railroad fuel from Grant Coal Mining Co. Terre Haute, Ind., to the Union Stock Yards for distribution to the various railroads. After World War No. 1 this traffic moved via other routes, and as these engines were not suitable for general yard operation, they were sold in 1925.

Item 2—These engines were of extremely light weight with limited tractive effort and small water capacity but suitable to the general run of work, and were, therefore, sold in 1924.

Items 3 to 8 inclusive—These locomotives were of what is known as "saturated steam" type, and because of their limited tractive effort were disposed of following the purchase of U-3 type locomotives in 1923-1924.

Items 9 to 12 inclusive—refer to engines known as "super heated steam" type, some of which were modernized in 1924 to 1927. They were suitable for light work, and a number of them were disposed of with the arrival of Diesel electric engines in 1936.

Item 13—covers 14 B-62 type engines obtained while the property was under U. S. Railroad Administration during World War 1. They are of a heavier type and greater tractive effort than the B-61 engine.

Item 14—represents 11 U-3 type 8 wheel switch engines purchased by the C. R. & I. following its acquisition by the New York Central as well as 12 Diesel electrics.

One of the greatest factors to determine the number of locomotives required to adequately man the property lies in the operating practices as between 1922 and 1948. On January 3, 1922, there were 71 crews working and it required 56 locomotives for them, because at that time all crews were considered independent assignments, and started and ended their tour of duty at the engine ter-

minal. In mid 1925 agreements were entered into with the Train Service Organizations whereby the carrier was permitted to assign crews to go on and off duty in the operating district in which they worked, so that one steam locomotive was in continuous service from 20 to 22 hours, and engine herder crews supplied a fresh locomotive before the expiration of a 24 hour period and returned the old engine back to the engine terminal for supplies. With the purchase of Diesel engines, three shift crews were kept in continuous service in many other districts where water tanks were not located as a Diesel can be kept in continued service for 96 hours before requiring supplies, so that on January 2, 1948, 72 crews were worked and only 36 locomotives were required because 48 of these crews were in continuous service in the various operating districts and required only 16 locomotives, whereas in 1925 there were only 21 crews in continuous service.

UNITED STATES DEPARTMENT OF AGRICULTURE

Office of the Solicitor
Washington 25, D. C.

March 19, 1948.

Mr. W. P. Bartel, Secretary
Interstate Commerce Commission
Washington 25, D. C.

Dear Mr. Bartel:

Subject: Docket No. 29809—*Swift & Co.* v. *AT&SF Ry. et al.*

At the hearing in the above-captioned docket the Examiner authorized counsel for the Secretary of Agriculture to supply for the record, within twenty days following the close of the case, copies of certain tariffs on file in the Department of Agriculture incident to its administration

of the Packers and Stockyards Act. We enclose the Commission's copy, and are mailing a copy also to Examiner Diamondson and to the parties of record.

If this item is assigned an exhibit number, we would appreciate your so informing us.

Sincerely yours, /s/ Charles W. Bucy, Associate Solicitor.

Enclosure

OF CHICAGO

SCHEDULE OF CHARGES

ISSUED JUNE 9, 1938 **EFFECTIVE JUNE 13, 1938**

Issued by
O. T. HENKLE, Vice President and General Manager
The Union Stock Yard and Transit Company of Chicago,
Chicago, Illinois

Vice President & General Manager

1969

SECTION 1

YARDAGE CHARGES:

The following yardage charges will be made on all live stock received at these yards:

Cattle	45c per head
Calves (400 lbs. or under)	*35c per head

*(With a maximum of $24.50 for single-deck car, or $49.00 for a double-deck car; other species in car to pay regular yardage charges in addition.)

Hogs	15c per head
Sheep and/or Goats	10c per head
Horses and Mules	50c per head

A service and weighing charge, equal to one-half of the above yardage, will be assessed on all live stock weighed over our scales the second and successive times.

(R-W) The following charges will be made, in addition to the regular yardage charge, on live stock delivered at these yards in other than railroad cars.

(R) Horses and/or Mules	15c per head
(R) Cattle	10c per head
(R) Calves (400 lbs. or under)	5c per head
(R) Hogs	5c per head
(R) Sheep and/or Goats	5c per head

SECTION 2

FEED AND FEEDING CHARGES:

The charge for feed at this market will be the cost delivered at this stock yards plus the following amounts:

(R) Corn	55c per bushel measure
(R) Tame Hay	60c per cwt.
(R) Prairie Hay	60c per cwt.
(R) Oats	35c per bushel measure
(R) Alfalfa	60c per cwt.

All feed charges shall be divisible by 5 and such charges will be amended when the margin between the cost and sale price of feed varies 5c from the margins specified above.

Horses and Mules:—Horses and Mules arriving after 6:00 p. m., 50 cents for that day, and $1.00 per day for each day thereafter.
—Horses and Mules arriving before 6:00 p. m., $1.25 for the first day, and $1.00 per day for each day thereafter.
—Horses and Mules stopping enroute for feed, water and rest in barns, $1.00 per head, per day or fraction thereof.
—Mules stopping en route for feed, water and rest in pens, 65c per head per day or fraction thereof.

SECTION 3

BEDDING:

The charge for straw bedding in pens at this market will be the cost delivered at this stock yards plus the following amounts:

(R) Straw bedding in pens 60c per cwt.

All charges for straw bedding in pens shall be divisible by 5 and such charges will be amended when the margin between the cost and sale price of straw varies 5c from the margin specified above.

Sand bedding, not exceeding 4 inch in depth	$2.00 per deck
(R) Straw bedding in cars	1.25 per cwt.

SECTION 4

DIPPING AND SPRAYING:

All dipping and spraying is subject to the supervision and regulation of the Bureau of Animal Industry, U. S. Department of Agriculture.

The Stock Yards Company is not responsible for loss of or damage to live stock occasioned by or resulting from dipping or spraying.

"R"—Reduction "W"—Wording Changed

The necessary dipping and spraying material and use of the facilities at the dip and spray and the labor are included in the charges for dipping and spraying, which are as follows:

Dipping Sheep and/or Goats	10c per head, minimum, $5.00*
Spraying Hogs	10c per head.

*The minimum charge for dipping will not apply when one or more owners dip 50 head or more from one charging

Spraying Motor Trucks	$1.00 each
Spraying Wagons	75c each.

SECTION 5

IMMUNIZING HOGS:

The Stock Yards Company furnishes facilities, the veterinary service, and the necessary labor required in immunizing hogs, all of which is subject to the supervision and regulation of the Bureau of Animal Industry, U. S. Department of Agriculture.

Only serum and virus manufactured under Government supervision is used. The Stock Yards Company is not responsible for loss of or damage to hogs occasioned by or resulting from vaccination, and does not guarantee immunity to the hogs vaccinated.

Charges are as follows:

Serum	1½c per cubic centimeter for the serum used
Virus	1½c per cubic centimeter for the virus used

The above charges include the use of the facilities, veterinary service, and the necessary labor of taking temperatures and vaccinating the hogs.

SECTION 6

CATTLE TESTING:

Cattle are tested for tuberculosis and other diseases by the U. S. Bureau of Animal Industry or by veterinarians under the direction of the State Veterinarian of the State of Illinois.

This Company is not responsible for loss of or damage to stock moving to and from the testing facilities, or in process of testing, or as a result of the test, or for the efficacy of the test.

For the use of equipment, when services and tags are provided by the regulatory body making the test, no charge.

When tags are furnished, and affixed, by employees of this Company, the charge is 10 cents per head.

If special equipment in barns is desired, the use of such facilities and all services in connection therewith will be charged for under special agreement.

SECTION 7

CLEANING AND DISINFECTING:

When it is necessary to clean and disinfect any portion of these yards by reason of movement in, or through, the yards of live stock exposed to or infected with a contagious disease, the owner of such exposed or infected live stock will be required to pay for such disinfecting as follows:

Chutes	$2.50 each
Pens (single)	2.50 each
Pens (double)	4.00 each
Alleys	.40 per hundred square feet

For disinfecting cleaned cars, trucks, trailers or other vehicles, actual cost of labor and material used plus twenty (20) per cent for supervision.

For use of facilities and water for washing trucks, the following charges will apply: —

Trucks under 2-ton capacity	25c
Trucks 2-ton capacity or over	50c

SECTION 8

BRANDING:

Various state laws require that all animals shipped into the state for feeding purposes must be branded.

This company is not responsible for loss of or damage to stock moving to or from the branding station, or in process of branding, or as a result of branding.

For the use of facilities and labor a charge of 25c per head per iron will be made.

1971

SECTION 9

SPECIAL SALES:

This Company maintains special stables and pavilions for sales of pure bred live stock. The use of such facilities and all services in connection therewith will be charged for under special agreement made in advance of their use.

SECTION 10

SPECIAL SERVICES:

Special services not ordinarily or usually required in the handling of live stock will be charged for under special agreement made in advance.

SECTION 11

Any firm, corporation, or individual by themselves or their employees, detected using unfair, dishonest or fraudulent practices will be denied the privileges of these Stock Yards, treated as a trespasser and dealt with accordingly.

SECTION 12

LOADING ACCESSORIAL SERVICES

The service of loading carloads of live stock when performed by this Company does not include the cost of partitioning cars, or the tying of bulls. Where these accessorial services are required, arrangements must be made by the owner or his agent sufficiently in advance of the loading time so that arrangements may be made therefor at charges to be agreed upon.

SECTION 13

REMOVING PARTITIONS OR TEMPORARY DECKS

When it is necessary to remove partitions or temporary decks in unloading cars containing live stock, the following charges will be assessed:

REMOVING PARTITIONS, 50 cents each, subject to a minimum of $1.00 per car.
REMOVING TEMPORARY DECKS, $2.50 per car.

SECTION 14

CERTIFICATES OF LOADING OR UNLOADING

Upon request of the owner, his agent, or the carrier handling the shipment this Company will furnish loading or unloading certificates. A charge of twenty-five (25) cents per each certificate will be made. When it is necessary to have a notarial seal affixed, the notarial fee will be collected in addition to the 25 cent charge.

SECTION 15

SPRINKLING OR DRENCHING STOCK CARS

A charge of twenty-five (25) cents per deck will be made for sprinkling or drenching stock cars, the charge to apply each time the service is performed before, during or after loading. This company will not be liable for injury to or death of animals drenched or sprinkled.

SECTION 16

SPRINKLING HOGS IN THE SHIPPING DIVISION

A charge of twenty-five (25) cents per pen will be made for sprinkling animals held in the shipping division awaiting loading. This company will not be liable for injury to or death of hogs as the result of sprinkling.

No.
JAN 4 - 1937

The Union Stock Yard & Transit Company

OF CHICAGO

SCHEDULE OF CHARGES

ISSUED AUGUST 24, 1936

The effective date of this tariff was postponed to November 2, 1936 by order of the Secretary of Agriculture in Docket 472 and was later voluntarily postponed by the Union Stock Yard and Transit Company of Chicago to January 1, 1937.

Issued by
O. T. HENKLE, Vice President and General Manager
Union Stock Yard & Transit Co. of Chicago
CHICAGO, ILLINOIS.

1977

SECTION 1

YARDAGE CHARGES:

The following yardage charges will be made on all live stock received at these yards:

(A) Cattle	40c per head
(A-W-R) Calves (400 lbs. or under)	30c per head
(A) Hogs	14c per head
(A-W) Sheep and/or Goats	9c per head
(A) Horses and Mules	40c per head

Yardage charges named above do not include yarding from scales, after sale, on outbound shipments by rail.

A service and weighing charge will be made and collected on all live stock weighed over our scales the second and successive times as follows:

(A) Cattle	20c per head
(A) Calves (400 lbs. or under)	15c per head
(A) Hogs	7c per head
(A-W) Sheep and/or Goats	4½c per head

(A-W) The following charges will be made, in addition to the regular yardage charge, on live stock delivered at or shipped from these yards in other than railroad cars: (On outbound shipments the charge will not be assessed in shipments destined to points within the corporate limits of the City of Chicago.)

(A-N) Horses and/or Mules	25c per head
Cattle	15c per head
Calves (400 lbs. or under)	7c per head
Hogs	7c per head
(W) Sheep and/or Goats	7c per head

SECTION 2

FEED AND FEEDING CHARGES:

Feed used in these yards will be charged for at the following prices:

Corn	$1.75 per bushel measure
Tame Hay	1.80 per cwt.
Prairie Hay	1.80 per cwt.
Oat	1.10 per bushel measure
Alfalfa	1.80 per cwt.

Horses and Mules:—Horses and Mules arriving after 6:00 p. m., 50 cents for that day, and $1.00 per day for each day thereafter.

—Horses and Mules arriving before 6:00 p. m., $1.25 for the first day, and $1.00 per day for each day thereafter.

—Horses and Mules stopping enroute for feed, water and rest in barns, $1.00 per head, per day or fraction thereof.

—Mules stopping en route for feed, water and rest in pens, 65c per head per day or fraction thereof.

SECTION 3

BEDDING:

Straw	$1.20 per cwt. (in pens)
Straw	1.35 per cwt. (in cars)
(A-W) Sand Bedding, not exceeding ¼ inch in depth	2.00 per deck

SECTION 4

DIPPING AND SPRAYING:

All dipping and spraying is subject to the supervision and regulation of the Bureau of Animal Industry, U. S. Department of Agriculture.

The Stock Yards Company is not responsible for loss of or damage to live stock occasioned by or resulting from dipping or spraying.

The necessary dipping and spraying material and use of the facilities at the dip and spray and the labor are included in the charges for dipping and spraying, which are as follows:

(A-W) Dipping Sheep and/or Goats	10c per head, minimum, $5.00 *
(A) Spraying Hogs	10c per head, minimum $5.00 *

*The Minimum charge for dipping or spraying will not apply when one or more owners dip or spray 50 head or more from one chargeing (N).

Spraying Wagons	75c each
Spraying Motor Trucks	$1.00 each

1978 HISTORICAL

SECTION 5

IMMUNIZING HOGS:

The Stock Yards Company furnishes facilities, the veterinary service, and the necessary labor required in immunizing hogs, all of which is subject to the supervision and regulation of the Bureau of Animal Industry, U. S. Department of Agriculture.

(W) Only serum and virus manufactured under Government supervision is used. The Stock Yards Company is not responsible for loss of or damage to hogs occasioned by or resulting from vaccination, and does not guarantee immunity to the hogs vaccinated.

Charges are as follows:

Serum	1½c per cubic centimeter for the serum used
Virus	1½c per cubic centimeter for the virus used

The above charges include the use of the facilities, veterinary service, and the necessary labor of taking temperatures and vaccinating the hogs.

SECTION 6

CATTLE TESTING:

Cattle are tested for tuberculosis and other diseases by the U. S. Bureau of Animal Industry or by veterinarians under the direction of the State Veterinarian of the State of Illinois.

(W) This company is not responsible for loss of or damage to stock moving to and from the testing facilities, or in process of testing, or as a result of the test, or for the efficacy of the test.

For the use of equipment, when services and tags are provided by the regulatory body making the test, no charge.

When tags are furnished, and affixed, by employees of this Company, the charge is 10 cents per head.

If special equipment in barns is desired, the use of such facilities and all services in connection therewith will be charged for under special agreement.

SECTION 7

CLEANING AND DISINFECTING:

(W) When it is necessary to clean and disinfect any portion of these yards by reason of movement in, or through, the yards of live stock exposed to or infected with a contagious disease, the owner of such exposed or infected live stock will be required to pay for such disinfecting as follows:

Chutes	$2.50 each
Pens (single)	2.50 each
Pens (double)	4.00 each
Alleys	.40 per hundred square feet

(N) For disinfecting cleaned cars, trucks, trailers or other vehicles, actual cost of labor and material used plus twenty (20) per cent for supervision.

For use of facilities and water for washing trucks, the following charges will apply: —

Trucks under 2-ton capacity	25c
Trucks 2-ton capacity or over	50c

SECTION 8

BRANDING:

Various state laws require that all animals shipped into the state for feeding purposes must be branded.

This company is not responsible for loss of or damage to stock moving to or from the branding station, or in process of branding, or as a result of branding.

(A-W) For the use of facilities and labor a charge of 25c per head per iron will be made.

SECTION 9

SPECIAL SALES:

This company maintains special stables and pavilions for sales of pure bred live stock.

(W) The use of such facilities and all services in connection therewith will be charged for under special agreement made in advance of their use.

SECTION 10

SPECIAL SERVICES:

(W) Special services not ordinarily or usually required in the handling of live stock will be charged for under special agreement made in advance.

SECTION 11

Any firm, corporation, or individual by themselves or their employees, detected using unfair, dishonest or fraudulent practices will be denied the privileges of these Stock Yards, treated as a trespasser and dealt with accordingly.

1979

SECTION 12

OUTBOUND SHIPMENTS

A charge of $3.00 per car, exclusive of the loading charge, will be made on all outbound movements for services rendered beyond the scale facilities. The charge will be made against the carrier receiving the outbound haul on such shipments.

INBOUND SHIPMENTS

A charge of $3.00 per car, exclusive of the unloading charge will be assessed against and collected from each railroad delivering a car of live stock at the unloading platforms of this Company, as compensation to this Company for the service of counting the animals, notifying consignee of arrival, furnishing a list of dead and crippled animals to the railroads, furnishing weights on directs, collecting and remitting freight charges on such live stock and furnishing with respect thereto, as the railroad's agent, such services and facilities as the railroad is required to furnish in making delivery of such live stock to consignee thereof.

SECTION 13

LOADING ACCESSORIAL SERVICES (N)

The service of loading carloads of live stock when performed by this Company does not include the cost of partitioning cars, or the tying of bulls. Where these accessorial services are required, arrangements must be made by the owner or his agent sufficiently in advance of the loading time so that arrangements may be made therefor at charges to be agreed upon.

SECTION 14

REMOVING PARTITIONS OR TEMPORARY DECKS (A-N)

When it is necessary to remove partitions or temporary decks in unloading cars containing live stock, the following charges will be assessed:

REMOVING PARTITIONS, 50 cents each, subject to a minimum of $1.00 per car.
REMOVING TEMPORARY DECKS, $2.50 per car.

SECTION 15

CERTIFICATES OF LOADING OR UNLOADING (A-N)

Upon request of the owner, his agent, or the carrier handling the shipment this company will furnish loading or unloading certificates. A charge of twenty-five (25) cents per each certificate will be made. When it is necessary to have a notarial seal affixed, the notarial fee will be collected in addition to the 25 cent charge.

SECTION 16

SPRINKLING OR DRENCHING STOCK CARS (A-N)

A charge of twenty-five (25) cents per deck will be made for sprinkling or drenching stock cars, the charge to apply each time the service is performed before, during or after loading. This company will not be liable for injury to or death of animals drenched or sprinkled.

SECTION 17

SPRINKLING HOGS IN THE SHIPPING DIVISION (A-N)

A charge of twenty-five (25) cents per pen will be made for sprinkling animals held in the shipping division awaiting loading. This company will not be liable for injury to or death of hogs as the result of sprinkling.

IN THE UNITED STATES DISTRICT COURT FOR THE NORTHERN DISTRICT OF ILLINOIS, EASTERN DIVISION

Civil Action File No. 50-C-1017

SWIFT & COMPANY,

Plaintiff,

vs.

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION, ET AL.,

Defendants

STATEMENT AS TO JURISDICTION

In compliance with Rule 12 of the Rules of the Supreme Court of the United States, as amended, Swift & Company, plaintiff-appellant, submits herewith its statement particularly disclosing the basis upon which the Supreme Court has jurisdiction on appeal to review the judgment of the district court entered in this cause.

Opinion Below

The District Court wrote no opinion. A copy of its findings of fact, conclusions of law, and final order dismissing the complaint are attached hereto as Exhibit A.

Jurisdiction

(a) This is an action, brought pursuant to 28 U. S. C. (1948 revision) 1336, 1398, 2284, and 2321-2325, to enjoin,

set aside, and annul a report and order of the Interstate Commerce Commission.

(b) The final order of the three-judge district court dismissing the complaint was entered on June 21, 1951. A petition for appeal was presented herewith and allowed on July 26, 1951.

(c) The jurisdiction of the Supreme Court to review this decision by direct appeal is conferred by 28 U. S. C. (1948 revision) 1253 and 2101(b).

(d) The following decisions, among many others, sustain the jurisdiction of the Supreme Court to review the judgment on direct appeal in this case: *Swift & Co.* v. *United States*, 316 U. S. 216; *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169; *United States* v. *U. S. Smelting, R. & M. Co.*, 329 U. S. 186; *Henderson* v. *United States*, 339 U. S. 816; *United States* v. *Rock Island Co.*, 340 U. S. 419; *United States* v. *Champlin Refining Co.*, 341 U. S. 290.

Questions Presented

All the points raised in the Assignment of Errors are presented by this appeal, but the major issues may be formulated as follows:

1. Whether the Interstate Commerce Commission may lawfully deny service at the line-haul rate to a single shipper at its own sidetrack in respect of a single commodity, on the ground of asserted interference with and disruption of terminal transportation operations, and still permit the identical service at a high additional charge.

2. Whether the Interstate Commerce Commission may lawfully sanction a high additional charge for switching service in respect of a single commodity to a particular sidetrack, which service it asserts would lead to interference with and disruption of terminal transportation operations, where it refrains from prohibiting such switching service

altogether, where it cancels as "not just and reasonable" a proposal by a carrier to exempt that particular commodity from transportation altogether, and where it permits the identical service by the same carrier without such additional switching charge in respect of the same commodity consigned to a stockyards on the same line of railroad, a few city blocks distant from the same sidetrack.

3. Whether the Interstate Commerce Commission had legal power to enforce a covenant between a railroad and a stockyards, the effect of which, in terms and as herein applied, was to require the railroad to deny normal transportation service to a shipper at its sidetrack of one commodity only except at a high additional charge, in consequence of which the shipper would become obliged either to accept and pay for nontransportation service from the stockyards which it neither desired nor requested but without which it could not obtain the shipments which it owned, or else become obliged to incur additional substantial expense to obtain the shipments by truck.

4. Whether the Interstate Commerce Commission properly treated the Chicago Junction Railway as an independent carrier when that carrier had been leased by The New York Central Railroad Company, in the face of Section 1(3)(a) of the Interstate Commerce Act which defines a "railroad" as "all the road in use by any common carrier operating a railroad, whether operated under a contract, agreement, or lease."

5. Whether inadequate motive power on the part of a leased carrier can justify discrimination against a single shipper in respect of a single commodity on the grounds of asserted congestion in terminal operations, where that carrier's motive power had been decreased by 45 per cent. in the preceding twenty-five years.

6. Whether congestion at a terminal justifies factual

discrimination against a single shipper in respect of a single commodity at a particular sidetrack, which discrimination would otherwise be prohibited by the plain language of Sections 1(4), 1(5), 1(9), 2, 3(1), and 15(5) of the Interstate Commerce Act.

7. Whether an extra switching charge for delivering a particular commodity at a particular shipper's sidetrack can be justified on the ground of the increased congestion of terminal facilities which such deliveries would involve, where such extra switching charge is not demanded for other commodities to the same sidetrack or to any commodities at other sidetracks in the same terminal area, nor for the same commodity delivered to a stockyards a few city blocks beyond the same sidetrack.

8. Whether an extra switching charge for delivering a particular commodity at a particular shipper's sidetrack can be justified on the ground that, if such deliveries are permitted without such extra switching charge, other shippers of the same commodity might thereafter make demand for similar service to their sidetracks.

Statutes Involved

This appeal involves the interpretation of numerous sections of the Interstate Commerce Act, as amended (49 U. S. C. 1 *et seq.*), particularly Sections 1(4), 1(5), 1(9), 1(10), 1(11), 2, 3(1), and 15(5).

Statement

This controversy arises out of the attempt of Swift & Company, plaintiff-appellant, to receive its own livestock at its own sidetrack in Chicago at the normal line-haul rates prescribed by the Interstate Commerce Commission for that commodity.

As a result of the order of the Interstate Commerce

Commission here in question, which the District Court refused to set aside, Swift at Chicago now can receive its own livestock, averaging 6489 carloads of livestock per year—"direct" shipments purchased by Swift for which no stockyards services are necessary, since Swift is prepared to receive them at its own plant—in one of three ways:

(1) It can—and does—receive these shipments at its own unloading pens at 2320 South Halsted Street, on a sidetrack connected with the Chicago, Burlington & Quincy Ry. Co., at flat Chicago line-haul rates, without the addition of switching or terminal charges, regardless of the identity of the line-haul carrier bringing the shipment to Chicago. But receipt at this location requires further transportation of the livestock, by motor vehicles, to Swift's meat packing plant, and such additional transportation costs Swift about $50,000 a year (as of the time of the hearing).

(2) Swift could consign its direct shipments to itself at the Union Stock Yards in Chicago, but consignment to that point involves the payment of yardage charges for non-transportation services, simply to march the stock through the Stock Yards into its own plant, i. e., for permission to recover its own animals from the stockyard pens. These charges range from $16.25 per car on cattle to $18.75 per car on a single-deck carload of sheep, and aggregate, for the shipments here involved, about $129,000 a year.

(3) Swift could consign its direct shipments to itself at its own sidetrack in the packinghouse area in Chicago. This method involves the payment of an extra switching charge of $28.80 per car as of the time of the hearing, since increased to $36.00 per car, in excess of what Swift now pays for precisely the same delivery of all other classes of freight to the same or adjacent sidetracks. At the present

rate, this comes to $233,604 a year for Swift's average annual shipments of livestock.

The present proceeding was begun by Swift before the Commission to secure an order which would require delivery by the twenty-odd railroad defendants—line-haul carriers serving Chicago—of Swift's direct shipments of livestock to Swift's sidetrack, which was connected with the rails of the Chicago Junction Railway, at the same line-haul rates and charges under which the railroad defendants deliver livestock to the unloading pens of the Union Stock Yards upon the rails of the Chicago Junction Railway, a few city blocks beyond Swift's sidetrack, and at the same line-haul rates and charges applicable to the delivery of all line-haul freight other than livestock to the same Swift sidetrack.

The proof before the Commission established the following undisputed facts:

The defendant Union Stock Yard & Transit Co. of Chicago (hereinafter called the Union Stock Yards), or a company holding its stock, is the owner in fee of the property of the Chicago Junction Railway. The latter carrier is, pursuant to the Commission's approval thereof in 1922, leased to and operated by the defendant New York Central. See *Chicago Junction Case*, 71 I. C. C. 631. The New York Central in its lease undertook to perform a covenant contained in the earlier lease from the Union Stock Yards to the Chicago Junction Railway, by which the latter agreed "to conduct, manage and operate the line of railroad by this instrument demised, and insofar as possible, the same to conduct in such manner as will tend to the benefit, advantage, and behoof of the business and affairs of the yards." This covenant is still recognized as being in force, and was the basis for the Union Stock Yards' demand that the New York Central defend the proceeding before the

Commission, which the Central would not otherwise have done (Ex. 57; see 274 I. C. C. at 577).

At present, the line-haul rates to Chicago are treated by the carriers as including delivery of all line-haul carload traffic (except livestock) upon the many industrial sidetracks connected with the Junction rails and served only by Junction motive power. This is effected by an arrangement by which the Junction receives a division of the line-haul rate. The balance of that rate is retained by the line-haul carrier which transports the car from its point of origin to Chicago and thence to its connection with the Junction track. Interstate shipments of livestock consigned to the stockyards are delivered by the line-haul carriers to the unloading chutes of the Union Stock Yards, also reached only by the Junction rails, without the addition of any switching charge in addition to the line-haul rates. In this proceeding, Swift sought an order which would similarly make the line-haul livestock rates to Chicago apply to shipments of its own "direct" livestock delivered to its own sidetrack which is similarly connected only to the Junction rails.

The relative location of the Junction yards, the Union Stock Yards, and Swift's private sidetrack is shown on a map, derived from exhibits before the Commission, which is marked Exhibit B, and is attached hereto and made a part of this Statement.

In making deliveries of interstate livestock to the pens of the Union Stock Yards, the loaded cars consigned to those yards follow precisely the same rail movement, from the several line-haul carriers' break-up yards in the Chicago area to the eastern limits of the Junction's Ashland Avenue yards, for precisely the same distance, as would be followed by Swift's shipments to its private sidetrack. Beyond this point, as the map, Exhibit B, shows, the dis-

tance to Swift's sidetrack on the Junction is somewhat less than to the Stock Yards' unloading pens, so that the total distance over which the livestock would be transported to Swift's sidetrack would normally be slightly less than to the Stock Yards' pens. But for this slightly shorter journey, Swift must under the Commission's ruling pay an extra switching fee of $36 per car over and above the amount paid by a consignee at the Stock Yards.

The line-haul carriers and the Junction move loaded freight cars from the outer break-up yards to the industries on the Junction tracks in three ways:

(i) Switching movement of livestock cars only, destined to the Stock Yards;

(ii) Switching movement of dead freight only, consigned to industry tracks on the Junction;

(iii) Combined "trains"—and a "train" means any movement of an engine with one or more cars attached—consisting of livestock for the Union Stock Yards and dead freight for industry sidetracks on the Junction. In this instance, the dead freight is set out at the Junction's Ashland Avenue yards by the line-haul switching engine, which then proceeds with the livestock cars to the Stock Yards, while the dead freight is switched by Junction motive power to the proper industry sidetracks on its line. This latter movement, by the switching engines of both the Junction and the line-haul carriers, is precisely the same movement as would be given a carload of livestock consigned to Swift's sidetrack.

If the prayer of Swift's complaint before the Commission had been granted, switching engines would proceed to the eastern end of the Junction's Ashland Avenue yards, as at present, with cuts of cars containing (a) dead freight for Junction sidetracks, (b) livestock for the Swift sidetrack, and (c) livestock for the Union Stock Yards. At the eastern end of the Ashland Avenue yards, the dead freight

and the livestock for the Swift sidetrack would be pushed onto one of the Junction receiving tracks and left there for subsequent delivery by Junction motive power, while the line-haul switching engine would proceed immediately to the Stock Yards with the livestock consigned there. As to cuts of cars containing only livestock for the Stock Yards, there would be no change in the present practice; viz., direct delivery by line-haul switching engines. Swift livestock would, of course, have to await delivery to its sidetrack, which would be later in time than livestock delivery to the Stock Yards; but Swift does not object to such later delivery.

The Commission dismissed the complaint in a report appearing at 274 I. C. C. 557. It treated the Junction as an independent railroad, pointed out that that carrier's motive power—which had decreased during the period of its lease by the New York Central by 45 per cent. (Ex. 58)—was presently being operated to capacity—and, on the assumption that other packers would likewise desire the same relief sought by Swift, concluded that (274 I. C. C. at 568) "any attempt by the Junction to make deliveries of livestock generally to packers or to transport an amount of livestock substantially greater than complainant's present needs, would result in serious disruption of operations and services and serious delays in the delivery of livestock." On that footing it dismissed the complaint—which had been based on Swift's present needs.

Commissioner Alldredge dissented (274 I. C. C. at 576-583) on several grounds: He was of opinion that the enforcement of the covenant between the Stock Yards and the Junction, which had been assumed by the New York Central, was condemned by *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169; that it was the obligation of the Junction's lessor to operate Swift's sidetrack without discrimination by reason of the command of Section 1(9);

"that the singling out of livestock as the exclusive type of freight which will not be accorded the switching service without extra charge is not only unjust and unreasonable, under sections 1(4) and 1(5)(a) of the act, but unduly and unreasonably prejudicial under section 3(1)"; and that if, by reason of the service sought, an increased congestion of yard operations and facilities would result, then, in accordance with familiar principles, the additional cost should be distributed over all traffic flowing through the yards and not be charged in its entirety to a single commodity consigned to a single shipper.

At the same time, the Commission required cancellation of schedules filed by the Junction—which had been protested by Swift and others, and suspended pending decision—whereby the Junction proposed to exempt livestock from the traffic which it would transport, and proposed further to cancel the application on livestock of all switching charges thereon, except to the Union Stock Yards. This proposal the Commission found to be "not just and reasonable" (274 I. C. C. 576).

The latter aspect of the case—Investigation and Suspension Docket No. 5543—has not been questioned. But Swift brought the present action to enjoin, set aside, and annul the report and order of the Commission in the main proceeding, Docket No. 29809.

The line-haul carriers, defendants in the Commission proceeding, as well as certain of the intervenors before the Commission, intervened in the action.

The three-judge district court made findings of fact—which, after enumerating the parties and their contentions and interests, simply set forth the findings of the Commission—and also made conclusions of law, which are generalized and do not enunciate any principles peculiar to the Interstate Commerce Act.

The court thereupon dismissed the complaint—but it wrote no opinion setting forth the reasons why it did so.

The Questions Are Substantial

The effect of the ruling below is that for the delivery of its own livestock to its own sidetrack on its own property, Swift must pay $36 per car in excess of what is paid for precisely the same delivery of all other classes of freight to the same or adjacent sidetracks, and similarly in excess of what is paid for all other livestock delivered to the unloading pens of the Union Stock Yards, distant a few city blocks, after following exactly the same movements through the Chicago outer terminals as would be used in delivery of cars of livestock to Swift's sidetrack. Such a ruling, obviously, sanctions precisely the kind of discriminatory practices which congressional legislation over a period of more than sixty years has sought to extirpate root and branch. *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, 175, and cases there cited.

Appellant contends, and proposes to argue, that the result below rests, not on administrative judgment or on technical expertise, but on a disregard of statutory provisions and legal rules which, but for the proceedings below, would have been considered as established without question.

1. The Commission said (274 I. C. C. at 568) that "the conclusion is warranted that a substantial movement of livestock by the Junction would adversely affect efficient and expeditious terminal operations generally and that operations would be disrupted if much of the large movement of livestock to the stockyards area and the return movement of the empty cars, were performed by the Junction." Terminal operations might be regarded as a subject peculiarly within the competence of the Commission, so that a court would perhaps hesitate before enjoining a Commission order which prohibited livestock movements

into a particular area generally, even though the traffic which is thought to disrupt terminal operations in this instance comes to only 20 carloads a day. But the Commission did not order any such prohibition; indeed, it specifically categorized as "not just and reasonable" the Junction's proposal to exempt livestock (other than that consigned to the Union Stock Yards) from the traffic which that carrier would transport. Moreover, the Commission justified a switching charge of $36 a car for this "disruptive" traffic, with the result that Swift is in a position, in case it desires to spend $233,604 a year, for the purpose, "seriously [to] interfere with, delay and disrupt terminal transportation operations and the movement of livestock generally"—and under the rulings below, such a course would be perfectly lawful. Such a conclusion, plainly, makes neither good sense nor good law. If what Swift sought was against the public interest, it should not be permitted at any price.

2. The truth of the matter is, of course, that the pecuniary interest of the Union Stock Yards in the Junction, protected by a covenant which the rulings below have enforced, has here been permitted to deprive Swift of a service to which it would otherwise be entitled. The present record demonstrates that the Junction has been managed and operated—with the sanction of the Commission and of the district court—so as to assure a direct and uninterrupted movement of livestock to and from the Union Stock Yards under trackage contracts, while at the same time it has exacted a high additional switching charge for the transportation of livestock to any consignee not using the services of the Stock Yards. Such a course of conduct comports squarely with the covenant in question to "conduct, manage, and operate the line of railroad [the Junction], and insofar as possible the same to conduct in such manner as will tend to the benefit, advantage, and behoof of the busi-

ness and affairs of the yard." But such a course of conduct is clearly inconsistent with the responsibility of a common carrier to serve all patrons indiscriminately within the limits of its capacity. And the enforcement of this covenant by the Commission and the district court runs afoul of the hitherto well-settled rule that prejudicial discriminations may not be frustrated by private contracts, regardless of the date of their execution. *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169; *Philadelphia, B. & W. Co.* v. *Schubert*, 224 U. S. 603; *Louisville & N. R. Co.* v. *Mottley*, 219 U. S. 467.

3. Throughout its report, which now stands approved by the district court, the Commission treats the Junction as an independent carrier, and predicates the underlying assumption of congestion and disruption of terminal facilities, thought to follow from the granting of Swift's prayer for relief, on the inadequacy of Junction's present motive power. This approach to the case at bar involves two demonstrable errors of law.

First, by treating the Junction as an independent carrier, the Commission flies in the face of Section 1(3)(a) of the Act, which defines "railroad" as "all the road in use by any common carrier operating a railroad, whether owned or operated under a contract, agreement, or lease." Consequently, as a matter of law, the Junction must be treated as a part of the New York Central. It may not be inappropriate to recall that the Supreme Court recently had occasion to enforce this identical statutory definition against the same parent carrier. *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169.

Second, and in any event, a carrier may not excuse discriminatory service on the ground of inadequate facilities. Any lingering doubts as to the soundness of that proposition were, assuredly, dispelled by *Mitchell* v. *United States*, 313 U. S. 80. To the extent that the motive power of the

Junction—consisting of 47 engines at the time of hearing as against 86 engines in 1925 (Ex. 58)—is inadequate to deal with the traffic now flowing through its yards, Sections 1(10) and 1(11) of the Act, without more, require the carrier to remedy the deficiency.

4. It is clear that, since Swift's track is already connected and in operation in the handling of cars containing freight other than livestock, the conditions prescribed in Section 1(9) of the Act have been met, so that it is the plain duty of the Junction to operate that track for all kinds of traffic, livestock included. See *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169; *Cleveland, etc., Ry.* v. *United States*, 275 U. S. 404. And, assuming that the Commission is correct in its conclusion that Swift's proposed livestock shipments of 20 cars a day would in fact "seriously interfere with, delay, and disrupt terminal transportation operations and the movement of livestock generally," then, obviously, the cost of whatever additional burden such shipments involve should be equitably distributed over all traffic flowing through the terminal and not be charged in its entirety to a single commodity shipped to a single consignee. To single out livestock consigned to Swift's sidetrack as the exclusive type of freight which will not be accorded the switching service without a high extra charge is unjust and unreasonable in violation of Sections 1(4) and 1(5)(a) of the Act, as well as unjustly discriminatory and unduly prejudicial in violation of Sections 2 and 3(1).

5. The Commission concluded (274 I. C. C. at 572) that, "if complainant's demand for the delivery service at the line-haul rates were granted, there would result demands from other packers requiring defendants to render like service to an amount and volume which together with such service rendered complainant would seriously interfere with, delay, and disrupt defendants' terminal operations in carrying livestock to the Union Stock Yard and in making

deliveries of other freight to the industries on the Junction's lines."

But a carrier has no right to deny service now on the ground that in the future its capacities may be overtaxed. Denial of service by the carrier can be justified "if his coach be full"—and only then. Even in that event, under the Act as well as at common law, the carrier must treat all shippers fairly, and may not discriminate against a particular patron. *Pennsylvania R. Co.* v. *Puritan Coal Mining Co.*, 237 U. S. 121.

6. The present case involves an obvious discrimination against shipments of livestock consigned to Swift's sidetrack in favor of shipments of livestock consigned to the Union Stock Yards. It is no answer to say that the packers, including this appellant, were once instrumental in furthering the business of the Yards. They were thereafter required by the command of the antitrust laws to divest themselves of their interest in all stockyards. See *Swift & Co.* v. *United States*, 276 U. S. 311, 328; *United States* v. *Swift & Co.*, 286 U. S. 106, 111. It would be strange indeed if the removal of a restraint on interstate commerce were now to be made the means of justifying a discrimination in interstate commerce.

7. Reversal of the ruling below is not foreclosed by any decision of the Supreme Court. In *Swift & Co.* v. *United States*, 316 U. S. 216, where the yardage fees charged on shipments consigned to Swift at the Union Stock Yards were held to be outside the jurisdiction of the Commission, the present issue was expressly reserved; the Court said (316 U. S. at 227),

> "It does not appear, however, that the existence or adequacy of alternative facilities for delivery at other points is particualrly important in the case, because the shipments involved are consigned to the packers

at the Union Stock Yards by their own choice. It does not appear that they are demanding an increase of other facilities, and the case has not been considered in that light."

Nor is *Atchison, T. & S. F. R. Co.* v. *United States*, 295 U. S. 193, determinative of the present controversy. In that case, as the Court later explained (*Union Stock Yard & T. Co.* v. *United States*, 308 U. S. 213, 219), "the Commission's order directing the discontinuance of appellant's yardage charge to consignees was set aside on the sole ground that the Commission's findings failed to show that the service for which the charge was made was any part of the loading or unloading services, or otherwise a service which the rail carrier was bound to furnish."

8. The ruling below is at variance with a long course of decisions which in the past have construed the Interstate Commerce Act in the light of its purpose of wiping out discriminations of all kinds. The questions presented are substantial, are obviously of public importance, and cannot be disposed of on an examination of the appeal papers. Probable jurisdiction should therefore be noted, and the cause set down for argument.

Respectfully submitted.

EXHIBIT A

IN THE UNITED STATES DISTRICT COURT FOR THE NORTHERN DISTRICT OF ILLINOIS, EASTERN DIVISION

Civil Action File No. 50-C-1017

SWIFT & COMPANY, *Plaintiff*,

v.

UNITED STATES OF AMERICA and INTERSTATE COMMERCE COMMISSION, *Defendants*

FINDINGS OF FACT AND CONCLUSIONS OF LAW

The court finds:

1. Swift and Company, the plaintiff herein, operates a large meat packing plant in Chicago, Illinois, located adjacent to the Union Stock Yards, and is served by the rails of the Chicago Junction Railway. The defendants are common carriers by railroad engaged in the transportation of livestock to Chicago. The Union Stock Yard and Transit Company of Chicago, The Chicago Livestock Exchange, the Chicago Traders Livestock Exchange, the National Livestock Producers Association, the Chicago Producers Commission Association, and the United States Department of Agriculture were permitted to intervene as intervening defendants.

2. The complaint as amended was filed with the Interstate Commerce Commission on July 29, 1947, and was docketed by said commission as No. 29809, Swift & Company v. Atchison, Topeka and Santa Fe Railway Company, et al.

3. The complaint alleged that the rates, charges and practices in connection with the delivery of direct shipments of livestock, in carloads, transported from points in States other than Illinois, for delivery to plaintiff's plant in Chicago, Illinois, were and are unreasonable, unduly prejudicial to livestock as a commodity, and unduly prejudicial to plaintiff, and preferential to its competitors at points in Illinois, Iowa, Nebraska, Missouri, Kansas, Minnesota, Wisconsin and Indiana.

4. In the complaint the commission was asked to prescribe reasonable rates, charges, rules, regulations, or practices including joint through rates between the line-haul defendants and the Chicago Junction Railway and the Chicago River & Indiana Railroad Company, under which the carrier-defendants would be required to afford delivery of plaintiff's direct carload shipments of livestock upon the industrial sidetrack serving plaintiff's plant in the stock yards area in Chicago, and under which said rates and charges would not exceed the line-haul rates on livestock to Chicago.

5. Answers to the complaint were filed by the carrier defendants; numerous parties representing the Union Stock Yards and producers, buyers and sellers of livestock intervened in opposition to the complaint; the United States Department of Agriculture also intervened as an interested party under its administration of the Packers and Stock Yards Act, 1921, 42 Stat. L. 159. Full hearings were held before an Examiner of the commission, briefs were filed, and the Examiner's proposed report was issued. Exceptions and replies to exceptions were filed, and the proceeding was orally argued before the entire commission. On July 6, 1949, the commission issued its report, 274 I. C. C. 557, a copy of which was annexed to and made a part of the complaint herein as Exhibit B.

6. All of the shipments involved in this case are "direct" carload shipments of livestock consigned to plaintiff for processing at its Chicago plant. "Direct" shipments of livestock are those purchased by a meat packer in producing areas and shipped to his plant for processing and distribution. The term "direct" is used in railroad and stock yard terminology to distinguish this class of livestock from livestock consigned by producers or others to commission men at a public livestock market for sale upon such market.

7. This method of sale by producers direct to meat packers has increased in recent years until, at the time of the hearing before the commission, approximately 64 percent of the hogs, 25 percent of the cattle, 40 percent of the calves, and 39 percent of the sheep and lambs marketed to meat packing plants having federal inspection are shown by

reports of the Department of Agriculture to have been sold direct by producers to such meat packing plants.

8. The shipments of directs here involved to plaintiff's Chicago meat packing plant averaged 6,489 carloads of livestock per annum during the five years immediately preceding the hearing before the commission. These directs are now shipped to certain unloading pens owned by plaintiff, at 2320 South Halsted Street, Chicago, on a sidetrack connected with the rails of the Chicago, Burlington & Quincy Railroad Company. Deliveries of livestock to this sidetrack are made at the flat Chicago rates. From said location, such livestock are moved by plaintiff by motor vehicle through city streets a distance of two and one-half or three miles. Plaintiff had to expend about $50,000 per annum, as of the time of the hearing, for maintenance and operation of motor vehicles used exclusively to transport such livestock from the unloading pens at 2320 South Halsted Street to its plant in the stock yard area.

9. Among other things, the commission found:

> "We find (1) that in the circumstances presented the published switching charges in addition to the line-haul rates will not be unreasonable or otherwise unlawful for the transportation of livestock for delivery on the private sidetracks to be constructed by complainant, which will connect with the Junction, provided that the tracks to be constructed will be adequate for deliveries by the Junction at its ordinary operating convenience and without interruption or interference and (2) that establishment of joint rates for the transportation of this traffic is not necessary or desirable in the public interest."

10. The commission further found:

> "The issue presented is whether or not complainant is entitled to have direct shipments of livestock delivered by the Junction without a charge in addition to the line-haul rates on a private siding at a plant which it proposed to construct in the stock yard area in Chicago."

11. The commission further found:

"In the determination of the issues raised in this proceeding, it is necessary to consider the track layout of the Junction, and the present operations thereover in the handling of so-called dead freight, which term includes perishable and all other freight other than livestock; the method by which livestock has for many years been handled by the line-haul carriers to the Union Stock Yards; the physical operations that would be necessary if the Junction were required to make private-track delivery of livestock, as sought by complainant; and also, in order to avoid undue preference and prejudice, if it were required to make similar deliveries to complainant's competitors.

"All facts relating to the existing custom and practice of making deliveries of livestock and also facts and circumstances leading up to that custom and practice, as well as the effect of the proposed practice on the interests of the carriers, the public, and other shippers, are relevant."

12. The commission further found that the switching charge of the Junction for switching livestock from junctions with connecting lines to plaintiff's plant and other points on the Junction rails, at the time of the hearing, was 4.8 cents per 100 pounds or $28.80 based on the minimum of 60,000 pounds. That carrier, however, has never, except in an emergency handled ordinary livestock in switching service. That traffic is at present, and for many years past, has been handled at Chicago entirely by the line-haul carriers.

13. In its report the commission stated that the Chicago switching district is approximately 40 miles in length and from 7 to 15 miles wide, being served by 35 railroads. The report also states that the two lines referred to as the Junction are exclusively switching lines and together operate 224.35 miles of track within the Chicago switching district, connecting with 27 railroads, that the majority of the 499 industries with private sidings located in the stock yard

district are served solely by the Junction. The two switching lines referred to as the Junction also maintain 11 team tracks and 3 freight stations and together serve 653 industries with 823 sidetracks.

14. The commission further found that the Ashland Avenue Yards of the Junction handled an average of 726,144 loaded and empty cars per annum during the years 1945, 1946, and 1947, that those yards are located in a densely developed industrial part of the city of Chicago, and that there is no land available for the expansion of those yards or the building of additional facilities nearby for the interchange and classification of traffic.

15. The commission further found that approximately 63 percent of the trains of the trunk line carriers going to the Union Stock Yards carry livestock exclusively, that these trains move over eastbound track 1103 directly to the unloading chutes of the Union Stock Yards, that the unloading consumes only a few minutes per car, and that the empties are then moved directly back to the line-haul carriers' home yards over westbound tracks 1102 or 1104. Carriers, such as the Rock Island, which approach the Union Stock Yards from the east, haul their livestock directly to those yards without passing through the Ashland Avenue Yards.

16. The commission further found that since the line-haul carriers must use the same eastbound track into the Union Stock Yards, any delay to a train on that track results in "piling up" trains of other lines seeking ingress to the Union Stock Yards. Frequently as many as four trains must wait to enter this track as a result of its being blocked at the east end. Delays are necessarily experienced also because of "set-outs" made by consolidated trains, consisting of livestock and dead freight and these delays would be multiplied under the delivery practice proposed by plaintiff. In a consolidated train the dead freight is on the head and behind the engine. The cars of livestock are cut off and left standing at the eastern end of the eastbound running track while the line-haul carriers' engine sets dead freight on one of the nine receiving tracks in the south yard. This operation blocks the running track until the engine returns

and hauls livestock into the Union Stock Yards.

17. The commission further found:

> "Under the Federal law, livestock may be confined in cars for not more than 28 hours without unloading for watering and feeding unless the shipper requests in writing that the time be extended to 36 hours. In practically all cases, stock arriving at Chicago has only a limited time within which it must be unloaded from the cars in order to avoid violation of the 28-hour law. The outer yards of the line-haul carriers, from which runs are made to the Union Stock Yards, contain very limited feeding, watering and rest facilities. Many stock runs are made with but one or two cars per train. Under the present practice of handling directly to the unloading chutes in the Union Stock Yards, it is unnecessary to unload the stock for water, feed, and rest at some intermediate location on the Junction. In fact, facilities for that purpose do not exist on that line."

18. The commission further found that the measure of transportation services rendered shipments of live animals is substantially greater than that accorded dead freight. Livestock cannot be switched in the same manner as other freight. In the ordinary and usual course of classifying dead freight, by the Junction, the engine pushes a string of cars along a track leading to the classification tracks. Uncoupled cars are "kicked" or given impetus to roll freely through a switching lead onto the proper classification track. Manifestly, if livestock were so handled it would result in injury to the animals by being thrown against the ends or sides of cars or knocked down. Cars of livestock must necessarily come to rest without rough shocks or jolts.

19. The commission further found:

> "Under the present practice, followed since the inauguration of services to the Union Stock Yards in the interest of expeditious centralized delivery, the yards of the Junction are not burdened with livestock cars either loaded or empty. It clearly appears that any attempt by the Junction to make deliveries of livestock

generally to packers or to transport an amount of livestock substantially greater than complainant's present needs, would result in serious disruption of operations and services and serious delays in the delivery of livestock. * * * There can be longer trains and greater movement of livestock by the line-haul carriers to the stockyards, but the conclusion is warranted that a substantial movement of livestock by the Junction would adversely affect efficient and expeditious terminal operations generally and that operations would be disrupted if much of the large movement of livestock to the stockyards area and the return movement of the empty cars, were performed by the Junction."

20. The commission further found that the present method of delivering livestock in Chicago is reasonable and lawful and the only practical method of delivering livestock in the stock yards area.

21. The commission further found that numerous difficulties would confront carrier-defendants if required to make delivery of livestock at plaintiff's plant, the basic difficulty being that such method of delivery is not adapted to carrier-defendant's service, tracks and yards, as specially designed and developed, along with the city's intensive development, for the performance of the centralized delivery service rendered at Chicago. For some 70 years the method of conducting terminal operations in the stock yards district has been for the line-haul carriers, using Junction tracks, to carry all shipments of livestock to the stock yards and make deliveries there, and for the Junction to perform the switching and spotting of other freight for the packers and many other industries in the area. As a result, the Junction's main tracks, its yards and subyards and their tracks, are peculiarly designed and fitted for the operations and service described, and any change, particularly as contemplating deliveries of livestock to the plants of the packers, would, as might be expected and as is shown, require a conflicting use of such yards and tracks and subject carrier-defendant's operations to interference and delays. This method of terminal operation, including the planning and

building of rail and stock terminal facilities, have resulted, in large part, from the action of the Chicago packers, including plaintiff.

22. The commission further found that although "cars of livestock consigned to plaintiff could be handled in consolidated trains by grouping such cars at the head of the train with the cars of dead freight intended for setout in the south yard, nevertheless, because of difficulties peculiar to livestock traffic, such handling would, it appears, affect adversely the line-haul carriers' operations in carrying livestock to the stockyards."

23. The commission, in its report, stated that the need for such difference in service as regards plaintiff's livestock and the effect thereof would extend to the service in the south yard and beyond, that taking into account periods of peak movements and maximum use, the south yards are used to capacity with no space for construction of additional tracks and that any additional burden would adversely affect all other interests served by the Junction.

24. The commission also found that using the Junction's classification tracks for livestock would result in cars of livestock being blocked in between cars of dead freight and that such cars of livestock would have to be "dug out" for a special run to plaintiff's plant. The commission's report further states:

> "Indeed, it appears that in some instances, immediately upon arrival of a consolidated train including cars of livestock for complainant, the Junction might have to make a special run to deliver the cars at the latter's plant. As above mentioned in practically all cases, livestock arriving at Chicago has only a limited time left before it must be unloaded to avoid violation of the law governing watering and feeding; the Junction has no facilities for watering or feeding anywhere on its lines and such facilities of the kind as are maintained by the line-haul carriers are very limited. While these conditions—all necessitating promptly handling of the traffic—are suited to the practice, long followed, of making deliveries of all shipments of livestock at the stockyards, they are not, it is evident, at all suited

to the plant delivery service sought by complainant in the performance whereof the cars of livestock would have to be switched and otherwise intermingled with cars of dead freight which latter, it appears, may, in the case of perishable freight, require nearly a full day for movement through the yards to points of delivery, and in the case of other dead freight, nearly 32 hours."

25. The commission further found that even if the factor of limited time within which to unload in order to observe the law were rendered unimportant or eliminated, the cars of livestock for delivery at plaintiff's proposed plant would, if handled in regular course and not by special runs, have to be switched, classified, set out, and otherwise handled together with cars of dead freight. Because cars of livestock and any cars of dead freight handled along with them cannot be switched in the usual expeditious manner, there would result numerous interferences and delays. Trains of livestock moving over track 1103 to the stock yards would be delayed; there would be interferences and delays in the south yard and from that yard to and through the base yards. There would be the additional delay involved in controlling the cars in their movement over the descending grade to the proposed plant. The commission's report states:

"Having in mind the congested condition of yards and tracks, it is clear that the attempt to make plant delivery through and over them of even 18 cars of livestock daily would considerably delay and burden defendants' operations. Moreover, although it is shown that complainant's direct shipments of livestock average 18 cars a day, such average necessarily includes days when the shipments exceeded 18 cars. Also it appears that the number of complainant's direct shipments of livestock in proportion to the number bought at the stockyards has been steadily increasing and the testimony of complainant's witnesses affords ground for the belief that that condition will continue."

26. The commission also found that in the event plaintiff's demands were granted, other packers would be entitled to the same delivery service at the same rates if they provided the necessary facilities, and that such other packers would be under great competitive compulsion to provide such facilities. The commission's report states:

> "Nevertheless, it is our best judgment, and we, therefore, so find and conclude, that, if complainant's demand for the delivery service at the line-haul rates were granted, there would result demands from other packers requiring defendants to render like delivery service in an amount and volume which together with such service rendered complainant would seriously interfere with, delay, and disrupt defendants' terminal operations in carrying livestock to the Union Stock Yard and in making deliveries of other freight to the industries on the Junction's lines."

27. The commission further found that interference with the movement of livestock to the stock yards is a serious concern not only of the carrier-defendants but also of producers and livestock marketing agencies who desire expeditious movement of livestock and continued functioning of the public market in a manner that is adequate for their needs. The commission's report states:

> "We may, however, disapprove the inauguration of a continuing practice of delivering livestock directly to packers in circumstances where, as we have found would be the case here, such practice would seriously interfere with, delay, and disrupt terminal transportation operations and the movement of livestock generally. The proposed complete exemption of livestock from transportation by the Junction under any circumstances is not justified. There is no warrant, however, for a conclusion that the establishment of joint rates as desired by complainant is necessary or desirable in the public interest."

28. The commission also found:

"The transportation services, conditions, and circumstances connected with deliveries at the Omaha plant pens are substantially dissimilar from those connected with the delivery here sought. There, the unloading chutes are on the rails of a line-haul carrier, outside the stockyard congested area, and the delivery made by that carrier is nothing more than a simple switch, at carrier's ordinary operating convenience and without interruption or interference from connecting line engines, as all of the switching is under the control of and performed by the Burlington. The transportation services, conditions, and circumstances connected with deliveries by the line-haul carriers at the unloading chutes of the Union Stock Yards, as hereinbefore described, also are substantially dissimilar from the private track delivery sought."

29. The commission also found that the line-haul rates on livestock to Chicago apply only to deliveries served by the line-haul carriers and not to deliveries of livestock by the Junction. The commission's report states:

"The line-haul rates on livestock to Chicago are Commission-prescribed rates. In Chicago Livestock Exch. v. Atchison, T. & S. F. Ry. Co., 219 I.C.C. 531, 545, 546, we said that the 'line-haul carriers operate over the tracks of the Chicago Junction to the Union Stock Yards and make delivery there thereby making these yards their own terminals.' We pointed out that in prescribing the rates on livestock to Chicago, among other markets, there was specifically taken into consideration as an element 'the rendition of terminal service in connection with the transportation of livestock,' and there was included what was considered 'sufficient to cover such terminal services under a normal operation as well as to cover the unloading and loading of livestock at public stockyards,' but we did not there consider what the services would be in con-

nection with deliveries of livestock by the Junction on private industrial tracks. That carrier did not then and does not now perform such services."

30. With reference to its prior reports in Baltimore Butchers Abattoir & Live Stock Co. v. Philadelphia B. & W. R. Co., 20 I.C.C. 124, Swift & Co. v. Baltimore & Ohio R. Co., 266 I.C.C. 55, and Neuhoff Packing Co. v. L. & N.R. Co., 268 I.C.C. 271, the commission found that "Deliveries to private industrial tracks at those points (Baltimore, Maryland, Cleveland, Ohio, and Nashville, Tennessee) did not require substantial modification of terminal operations and interferences with established operations in a manner required at Chicago for such deliveries, and did not involve, as at Chicago, serious disruption of operations. There is no showing of a similarity in any respect of the services required and circumstances affecting services."

31. The commission further found, with respect to the points alleged to be preferred in plaintiff's complaint before the commission:

> "There is no showing that services as desired will result in a situation similar to that at a point or points alleged to be preferred."

32. The commission further found, with respect to a contractual relationship asserted to exist between the Union Stock Yards and the Chicago Junction, that the lease of the Chicago Junction to the Chicago River & Indiana, a subsidiary of the New York Central, in 1922, completely divested the Union Stock Yards of operation and control of the terminal railroad. The commission's report states:

> "The operation of the Chicago Junction is subject not only to the provisions of the Interstate Commerce Act but also to the conditions imposed by the Commission in the Chicago Junction case, supra. Those conditions were particularly intended to insure that the Chicago Junction and the Chicago River & Indiana

out special advantage favoring the New York Centra but the conditions were and are broad enough to in hibit operation of the Chicago Junction to the specia advantage and interest of the Union Stock Yards."

33. The commission further found that "the evidenc affords no basis for a conclusion that the terminal charg of the Junction in addition to the line-haul rates is unrea sonable for deliveries of livestock to the proposed plant, con sidering services and modifications of services that woul be required for the desired deliveries and the effect o terminal operations generally of performing such deliver service to the proposed plant."

34. The commission further found:

"The published switching charge is appropriate fo any switching that may occur of cars of livestock t complainant's proposed plant. It does not appear tha the maintenance of a switching charge for livestoc will have any detrimental effect upon terminal opera tions."

35. On the same date as that on which its report wa issued, the commission issued an order dismissing the com plaint. And, as

Conclusions of Law

1. The commission's order was made after full hearin upon adequate findings supported by substantial evidenc and in accordance with the applicable law.

2. The commission had evidence before it sufficient t sustain its findings.

3. The findings made by the commission are adequate t support its order dismissing the complaint.

4. The order of the commission was within its statutor authority, was not arbitrary or capricious or based upo mistake of law or misapplication of proper statutory stan dards.

5. Plaintiff is not entitled to any of the relief praye

Appeal from the United States District Court for the Northern District of Illinois

---

MEMORANDUM FOR APPELLANT IN OPPOSITION TO THE MOTIONS TO AFFIRM

Pursuant to Rule 7, paragraph 3, of the Rules of this Court, Swift & Company, appellant, files this statement opposing the motions to affirm. The interveners' motion was served on August 9, 1951, the Interstate Commerce Commission's motion on August 11.

By way of preliminary, appellant notes that the United States, by not joining in these motions, concedes that the questions presented by the appeal are substantial. Of course such a concession admits nothing as to the merits. But an analysis of the two motions, in the light of what is said therein as to the issues raised and argued in appel-

lant's jurisdictional statement, and perhaps more particularly in the light of what is not said therein as to those issues, underscores both the substantiality of this appeal and the soundness of the Government's position respecting it. For this case simply bristles with issues which the moving appellees either evade or else do not even mention.

I. NEITHER MOTION DEALS WITH TWO GLARING ERRORS OF LAW APPARENT ON THE FACE OF THE COMMISSION'S REPORT.

A. At the outset, appellant pointed out that although the Commission rested its approval of the extra switching charge of $39.24* per car here in question on the ground that the livestock shipments sought by Swift without such charge would "adversely affect efficient and expeditious terminal operations generally and that operations would be disrupted," the Commission not only failed to prohibit such livestock shipments altogether, but specifically categorized as "not just and reasonable" the proposal of the Chicago Junction Railway to exempt livestock (other than that consigned to the Union Stock Yards) from the traffic which that carrier would transport. We pointed out that Swift was accordingly left free, if it chose to spend $233,604 a year for the purpose, since increased to $254,628.36, "seriously [to] interfere with, delay and disrupt terminal transportation operations and the movement of livestock generally," and that such a course would be perfectly lawful under the rulings below. We argued that this result, "plainly, makes neither good sense nor good law."

Faced with this obvious infirmity in the rulings sought to be reviewed, those who now urge that no substantial questions are here presented pursue different courses.

---

*The amount of the switching charge was $28.80 at the time of the proceedings before the Commission and $36 at the time of the hearing below. After the appeal was allowed, the charge was increased by 9% in consequence of *Ex parte No. 175*, decided by the Commission August 2, 1951, and thus is now $39.24.

The interveners take refuge in silence, apparently in the view that the facile approach of "Out of sight, out of mind" not only avoids perplexities but also demonstrates their insubstantiality.

The Commission at least deals with the point. It says that "While the charge was entirely reasonable for the service the Commission knew it would be availed of when Swift had special need to have livestock moved in that way."

This is frank to the point of cynicism. This amounts to saying that the Commission knew that the charge was so high that Swift would never avail itself of the service, or, in plain English, that the Commission was enforcing a penalty in a situation where it had specifically ruled that an unequivocal prohibition was "not just and reasonable."

We doubt if the files of this Court will disclose a similar admission of covert regulation by any administrative agency, of any similar instance of a regulatory body forbidding indirectly what it frankly admits it cannot forbid directly. Even if this were the only issue in the case, it would be sufficient to call for extended argument. But it is far from being the only substantial issue on this appeal.

B. Appellant also pointed out, what is indeed apparent from inspection of the Commission's report, that it rested its dismissal of Swift's complaint, which had been based on Swift's present needs, on the ground that, if Swift's demand for the delivery of livestock at the line-haul rate were granted, "there would result demands from other packers requiring defendants to render like delivery service in an amount and volume which together with such service rendered [Swift]" would result in disruption (274 I. C. C. at 572). Appellant argued that "a carrier has no right to deny service now on the ground that in the future its capacities may be overtaxed," and pointed out that, even in cases of extreme congestion, all shippers were entitled to equality of treatment. *Pennsylvania R. Co.* v. *Puritan Coal Mining Co.*, 237 U. S. 121.

The Commission's report does not in our view answer these contentions adequately, and neither motion deals with them at all—unless the Commission's belated suggestion "that Swift has the preference in Chicago" because of its ownership of the sidetrack on the Chicago, Burlington & Quincy line can be thought to bear on the point.

Here again, we submit, silence, however dignified, does not establish insubstantiality.

II. UNITED STATES v. BALTIMORE & O. R. CO., 333 U. S. 169, REQUIRES REVERSAL OF THE RULINGS BELOW RATHER THAN AFFIRMANCE ON MOTION.

Appellant contends that the governing precedent here is *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, which declared unlawful a very similar discrimination at the Cleveland Stock Yards. This contention, also, is differently treated in the two motions. But in this instance it is the Commission which takes refuge in silence, while the interveners attempt to distinguish the cited case.

Actually, the Cleveland Stock Yards case is far closer to this one than the interveners' motion indicates. There, as here, Swift's sidetrack was physically connected with the carrier's main track.[1] There, as here, the carrier was prepared to deliver livestock at Swift's sidetrack upon payment of a substantial additional charge. There, as here, Swift as well as other packers were denied switching service as to livestock although given it as to other commodities.[2] There, as here, the discrimination was rested

[1] The Commission errs in its motion when it speaks of "Swift's proposed private side track." The track is in operation today (274 I. C. C. at 559, 563; see Exs. 2-8; Tr. 33, 37-39, 44-45, 47, 49-51). It is only the new plant and two stub tracks which are to be located on this sidetrack which are "proposed" (274 I. C. C. at 563). Needless to say, that plant could easily have been built during the many months (July 28, 1947-February 6, 1950) that this case was before the Commission.

[2] Interveners are in error when they say that in the Cleveland case "The defendant carriers continued to perform that service for appellant's competitors while refusing it to appellant." As this Court's opinion points out (333 U. S. at 174), "in 1938 the railroads ceased delivering livestock to the sidings of Swift *and other packers served by Spur No. 245*, although they have under agreement with Stock Yards continued to use the spur for delivery of all other kinds of commodity shipments to these sidings." (Italics added.)

on a contract between the carrier and the particular stockyards involved, by the terms of which the stockyards were to benefit at the expense of the consignee. The circumstance that in the Cleveland case that contract was exalted to the point of invoking constitutional protection for its provisions, see 71 F. Supp. 499, while in this case it was invoked to force the railroad interveners to oppose the shipper's complaint before the Commission (Ex. 57), is obviously a distinction of no more importance than the circumstance that the earlier case arose in Ohio while the present one concerns Illinois.

Indeed, the principal difference between the two cases is that in the Cleveland situation the Commission properly found that there had been a violation of, *inter alia*, Section 1(9) of the Interstate Commerce Act, while in the present case the Commission refused to find any such violation. It is doubtless for this reason that *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, is nowhere discussed in the Commission's motion to affirm.

The obvious similarity of the two cases, far from reflecting any such insubstantiality in the present appeal as would call for affirmance without argument,[3] all but suggest the appropriateness of a reversal on the motion papers. Cf. *United States* v. *Steffan*, 338 U. S. 902. But, in any event, the similarity of the facts and the dissimilarity of the results establish that appellant's contentions based on *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, are substantial by any standard.

---

[3] Significantly enough, the carriers in the Cleveland Stock Yards case filed a motion to affirm on the ground that the district court's conclusions of law there (R. 185-189, No. 223, Oct. T. 1947; see opinion, 71 F. Supp. 499) "are so sound and logical in the application of elementary principles that reasonable minds can come to no other conclusion" (Motion, p. 3). This Court, however, noted probable jurisdiction, and, after argument, reversed. 333 U. S. 169.

III. NEITHER MOTION EXPLAINS HOW THE FACTOR OF CONGESTION CAN LEGALIZE AN OTHERWISE UNLAWFUL DISCRIMINATION.

If there is any rational factual difference between this case and *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, it must be in the circumstance that there is more congestion at the Chicago Junction Railway's yards here than there was at the Cleveland Stock Yards there. But to concede this difference still does not justify what was done here, where the cost of separating particular freight out of a congested freight yard has been assessed in its entirety against a single commodity consigned to a single shipper.

Movants' endeavor to rest the discrimination on the peculiar nature of livestock fails for a number of reasons. After all, livestock is not a novel subject of rail carriage. Its nature was duly considered when the Commission fixed the present basic rates thereon (*Livestock—Western District Rates*, 176 I. C. C. 1), besides which the Commission has twice specifically ruled that the rates on livestock include normal terminal services. *Omaha Live Stock Exch.* v. *Chicago & N. W. Ry. Co.*, 178 I. C. C. 1, 14; *Chicago Live Stock Exch.* v. *Atchison, T. & S. F. Ry. Co.*, 219 I. C. C. 531, 542.

Moreover, and this is of the essence here, at least 37% of the livestock consigned to the Union Stock Yards arrives there in consolidated trains (*i. e.*, intermingled with dead freight), so that switching and "set outs" are necessary to get that livestock to the Union Stock Yards. See 274 I. C. C. at 561-562. Yet neither the Union Stock Yards nor their consignees are subjected to the $39.24 a car switching charge in respect of that 37% so switched. Furthermore, considerable switching of livestock takes place earlier, since—although the Commission significantly fails to advert thereto—it is the fact that even the trains destined to the Union Stock Yards which consist of livestock exclusively are made up at the several line-haul carriers'

break-up yards from mixed trains arriving at Chicago.[4] Yet, although both the Commission's report and its motion to affirm expound at some length the delicate nature of livestock, neither undertakes to demonstrate that the livestock proposed to be switched to appellant's siding is any more fragile than the livestock which is presently being switched out of consolidated trains, sometimes twice within the Chicago switching district, for delivery at the Union Stock Yards. It is at this point that the attempt to justify the discrimination to which appellant is subjected by the rulings below breaks down completely.

Undoubtedly, the Chicago Junction handles a large volume of traffic. But the record strongly suggests, if indeed it does not compel, the inference that the congestion now relied upon to justify the discrimination practiced against appellant is a consequence of the fact that the Chicago Junction's motive power has been reduced by 45% since it was leased by the intervener-appellee New York Central. It is for that reason that appellant urges that the Junction must be considered as a part of the New York Central, as required by Section 1(3)(a) of the Act; why appellant invokes Sections 1(10) and 1(11), which together require the carrier to render adequate switching service; and why appellant argues that the case in this aspect is governed by the rule of *Mitchell* v. *United States*, 313 U. S. 80, to the effect that inadequacy of facilities does not legalize a discriminatory practice.

The only answer attempted by movants to any of the foregoing is the Commission's comment in its motion that "The assumption that the use of any number of engines over 47 would slow down deliveries is much more logical

---

[4] The railroad interveners' operating witnesses testified, without contradiction or dispute, to the switching of livestock cars which takes place, at the break-up yards and in many instances at localities outside of Chicago as well, before any trains are moved to the Union Stock Yards. See Tr. 549 (C. B. & Q.), 587-589 (C. & N. W.), 611, 612-613 (C. R. I. & P.), 650-651 (C. M. St. P. & P.), 678-679 (A. T. & S. F.). Counsel for the railroad interveners called witnesses from only 5 carriers out of the 22 he represented in order to avoid repetitiousness (Tr. 672).

it would seem, then that an additional number would facilitate switching and relieve congestion." This notion, that more motive power means less switching service, appears to have been newly generated for purposes of the motion to affirm. It is perhaps not surprising that this bit of forensic invention is not based on anything in the Commission's report and that it is actually contradicted by the record. For the Superintendent of the Chicago Junction testified that that carrier did not have sufficient engines to take care of all of the industrial placement of cars (Tr. 422), and further (Tr. 424), "I know we have been trying to get some additional Diesel equipment. We want at least five of them if we can get them."

No decision of this Court even remotely suggests that congested facilities can legalize a discrimination otherwise unlawful. To the contrary, *Mitchell* v. *United States*, 313 U. S. 80, establishes that inadequacy of facilities does not justify discrimination, and that, where discrimination is palpable, "there is no room * * * for administrative or expert judgment with respect to practical difficulties" (313 U. S. at 97, *per* Hughes, C. J.)

The circumstance that, as the national economy continues to expand, more and more terminals are becoming congested and those already congested are becoming increasingly so, demonstrates the public importance of the congestion issue here, and serves additionally to underscore its substantiality.

IV. BY RELYING ON THE INTEREST IN "EXPEDITIOUS CENTRALIZED DELIVERY", THE RULINGS IGNORE THE VERY DIFFERENT INTERESTS PROTECTED AND SOUGHT TO BE ENFORCED BY THE INTERSTATE COMMERCE ACT, AND THUS EFFECTUATE AT APPELLANT'S EXPENSE A DISCRIMINATORY COVENANT BETWEEN CARRIER AND STOCKYARDS.

The Commission's report rests in substantial part on the supposed interest in the "expeditious centralized delivery" of livestock at the Union Stock Yards (274 I. C. C. at 568). This euphemism cloaks the circumstance that the Commission's ruling requires appellant to pay $39.24 a car more for livestock consigned to its own siding than commission merchants and other packers pay for livestock consigned to the Stock Yards, a few city blocks distant—and 37% of the latter shipments, as has been noted, arrive in consolidated trains, intermingled with dead freight, and so require switching before final delivery. Thus the Commission is forcing "expeditious centralized delivery" at the Yards—and consequently is enforcing the covenant (Ex. 57) which requires the Chicago Junction to be operated "in such manner as will tend to the benefit, advantage, and behoof of the business and affairs of the yards." For while consignees at the Stock Yards obtain the switching service at no increase over the line-haul rate, consignees at private sidetracks must either pay $39.24 per car additional or else, willy-nilly, pay yardage fees at the Stock Yards—fees which, be it noted, the Commission is without power to regulate. *Swift & Co.* v. *United States*, 316 U. S. 216.

It is no answer for the Commission now to say that "the lease of Junction to the River Road [New York Central subsidiary] completely divested the stockyards of operations and controls of the terminal railroad." The fact that the Stock Yards invoked the covenant and thereby forced the intervener railroads to defend the present proceeding,

which they would not otherwise have done (Ex. 57), supplies indisputable proof that the covenant is still very much alive, and that in fact the Stock Yards still exercise a significant residue of control over the operations of the Junction and its lessor. And the Commission, by giving effect to the interest in "expeditious centralized delivery" at the Stock Yards, is, despite protestations to the contrary, actually enforcing that covenant.

The vice of the rulings below is that they ignore the plain provisions of the Interstate Commerce Act. That statute says nothing of "expeditious centralized delivery". To the contrary, it provides in Section 1(9) that, after a switch connection is in operation, and appellant is operating one here, it then becomes the duty of the carrier to "furnish cars for the movement of such traffic to the best of its ability without discrimination in favor of or against any such shipper." The statute thus protects expeditious *decentralized* delivery at private sidetracks. The Commission's bland disregard of the statutory command accordingly emphasizes, from still another aspect, the substantiality of the present appeal.[5]

---

[5] Interveners exhume the old canard that the packars, who once made the Union Stock Yards their own terminal, are now in substance to be estopped by their prior conduct. This argument ignores the controlling circumstance that, after the packers were divested of all financial interest in any stockyards by the antitrust decree (see *Swift & Co.* v. *United States*, 276 U. S. 311, 328; *United States* v. *Swift & Co.*, 286 U. S. 106, 111), more than one stockyards, thus free from the packers' control, has sought to exact fees for unwanted services. Thus, in *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, the Cleveland Stock Yards began to assess yardage fees on livestock passing over its Track 1619 at about the time of divestiture. See R. 34, No. 223, Oct. T. 1947. A similar insistence on imposing yardage fees at Chicago for services not desired by the consignees of direct shipments is reflected, not only in this case, but also in *Atchison, T. & S. F. Ry. Co.* v. *United States*, 295 U. S. 193; *Armour & Co.* v. *Alton R. Co.*, 312 U. S. 195; and *Swift & Co.* v. *United States*, 316 U. S. 216.

V. THE DISCRIMINATION APPROVED AND PERPETUATED BY THE RULINGS BELOW CANNOT BE WAVED ASIDE BY CALLING THIS A "RATE" CASE.

Both motions assert, in substantially similar language, that this is a "rate" case, "that the lawfulness of a particular rate or rates is a matter for the informed judgment of the Commission, and the determination of that expert body will not be disturbed if supported by substantial evidence of record."

But this is a too facile verbalism, and a thoroughly misleading one. For almost every unlawful discrimination involves an inequality in rates, and so is, in the movants' view, a "rate" case.

Thus, in the Cleveland Stock Yards case (*United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169), all that was involved was a rate; the stockyards there was perfectly willing to have the carrier move livestock over its Track 1619, provided only that someone paid it the equivalent of a yardage fee. Indeed, the carriers paid such fees on such shipments for a number of years (R. 34, No. 223, Oct. T. 1947). The controversy arose when the carrier refused any longer to absorb such yardage fees as part of the line-haul rate for delivery of livestock to Swift's Cleveland siding. After the Cleveland Stock Yards case was docketed in this Court, the Commission vigorously opposed the carriers' motion to affirm the judgment in that case (see Memorandum in Opposition, &c., No. 223, Oct. T. 1947), although on the Commission's present theory that would have been a "rate" case too.

Appellant here attacks the switching charge itself as discriminatory, quite apart from its amount. Or, in other words, as this Court early recognized (*Interstate Commerce Commission* v. *Baltimore & O. R. Co.*, 145 U. S. 263, 277), "a charge may be perfectly reasonable under section 1, and yet may create an unjust discrimination or an

unreasonable preference under sections 2 and 3." The present cause would be a "rate" case only if appellant's arguments were limited to a contention of unreasonableness in violation of what is now Section 1(5) of the Act; but of course their reach is far broader.

Indeed, the short answer to movants' present contention is what the Commission itself said in its report here (274 I. C. C. at 559):

> The issue presented is whether or not complainant is entitled to have direct shipments of livestock delivered by the Junction without a charge in addition to the line-haul rates on a private siding at a plant which it proposes to construct in the stockyard area in Chicago.

On the Commission's own statement of the basic issue, therefore, it is obvious that this is no "rate" case, and that the present contention to the contrary (which, assuredly, was formulated rather tardily), is wholly untenable.

VI. THE ISSUES RAISED REQUIRE REVIEW.

Appellant has shown, somewhat summarily, that the discrimination here practiced and sanctioned runs counter to principles and decisions long considered settled, of which *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, is simply the latest, and factually perhaps the closest.

Both motions to affirm, however, insist at some length that the discriminatory switching charge now under attack is foreclosed by the ruling in *Atchison, T. & S. F. Ry. Co.* v. *United States*, 295 U. S. 193. In truth, however, the switching charge issue did not even lurk in that record after it reached the courts. It is true that in the proceeding before the Commission (*Hygrade Food Products Corp.* v. *Atchison, T. & S. F. Ry. Co.*, 195 I. C. C. 553), the switching charge was sustained, but Hygrade did not question that phase of the Commission's action. It was the carriers and the Union Stock Yards that sought to set aside the

Commission's order in respect of the yardage fees. The switching charge was therefore simply not in issue in the judicial proceedings. See answer of Hygrade, R. 50-54, Nos. 606-607, Oct. T. 1934. Consequently, both the statement of the interveners, that "this appeal involves the same questions before the Court" in 295 U. S., and of the Commission, that "The holding as to the reasonableness of the rate was not questioned or disturbed by the Supreme Court on appeal," are at best thoroughly misleading—though indeed they emphasize the movants' strong present disinclination to submit that same switching charge to the scrutiny of this Court.

Appellant has already pointed out in its jurisdictional statement that the present issues were expressly reserved in *Swift & Co.* v. *United States*, 316 U. S. 216, 227.

It is not, however, necessary to prolong the discussion; we submit that we have sufficiently shown that this case presents something to discuss. The Solicitor General, who has refrained from filing a motion to affirm, evidently agrees. Consequently, unless the Court is of opinion that its own recent decision in *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, calls for summary reversal, this case should be set down for argument.

Respectfully submitted,

Opinions below	1
Jurisdiction	1
Questions presented	2
Statutes involved	5
Statement	6
A. The economics of direct shipments of livestock	7
B. Means open to appellant for receipt of direct shipments of livestock	11
(i) Consignment to Omaha Packing Co. sidetrack—$50,000 annually for additional trucking	11
(ii) Consignment to Union Stock Yards—$129,000 annually for services neither appropriate to nor desired for livestock already owned by the consignee	12
(iii) Consignment to own sidetrack—$254,000 annually for switching charges	13
C. Scope of the switching charge in question	15
(i) Inapplicability to livestock consigned to Union Stock Yards	15
(ii) Inapplicability to other commodities delivered at Swift's sidetrack	16
(iii) Switching charge not dependent on distance between Chicago Junction yards and line-haul carriers' break-up yards	16
D. Transportation of livestock to consignees in the stockyards district	17
(i) Route followed and switching performed	17
(ii) Percentage of mixed trains; incidence of trains composed of one and two cars of livestock	20
(iii) Transportation of livestock to Swift's Omaha Packing Co. plant	21
E. Congestion on Chicago Junction tracks	21

Page

F. Factors other than volume of traffic contributing to congestion on Chicago Junction tracks 23

(i) Decline in Chicago Junction's motive power since its lease by appellee New York Central ... 24

(ii) Effect of 1946 labor agreement 24

(iii) Operations of line-haul carriers on Chicago Junction tracks 25

(iv) Refusal of Chicago Junction to grant additional trackage rights 26

(v) Union Stock Yards rules directed at dead freight 26

G. Covenant in Chicago Junction lease and its invocation by Union Stock Yards 27

H. Evidence bearing on effect of granting appellant's prayer for relief 29

(i) Effect of appellant's shipments alone 29

(ii) Position of the other packers 30

(iii) Evidence as to congestion and disruption 33

I. Proceedings before the Commission and in the court below 35

Summary of argument 38

Argument 48

I. The Commission's report shows on its face that the high additional switching charge, assessed only against livestock delivered to sidetracks, bears no relationship whatever to the cost of the switching service rendered; that this charge was intended and understood to operate as a penalty; and that by upholding it the Commission was covertly sanctioning precisely the same prohibition against sidetrack delivery of livestock which, when proposed to be done directly, the Commission in the same report held to be "not just and reasonable" 50

A. The Commission's findings are inadequate to support the high additional switching charge assessed only against livestock delivered to sidetracks, and the evidence shows clearly that this charge bears no relationship whatever to the cost of the switching service rendered in such deliveries 50

Page

B. The high additional switching charge assessed only against livestock delivered to sidetracks was intended as, and understood to be, a prohibitive penalty 56

C. By upholding the switching charge on livestock, the Commission was covertly sanctioning precisely the same prohibition against shipment of livestock which, when frankly proposed by the railroad, the Commission in the companion case held to be "not just and reasonable" 58

D. Being a penalty and not a compensatory exaction, the high additional switching charge assessed only against livestock delivered to sidetracks is unreasonable *per se* and therefore illegal 60

II. The high additional switching charge assessed only against livestock delivered to sidetracks violates numerous provisions of the Interstate Commerce Act... 63

A. The switching charge violates Section 3(1) of the Act because it is unduly and unreasonably prejudicial to livestock 63

B. The switching charge violates Section 2 of the Act because it results in different rates for shipments of the same commodity, over the same line, for the same distance, under the same circumstances of carriage 69

(i) As a matter of fact, this case involves like and contemporaneous service under the same circumstances of carriage 70

(ii) As a matter of law, Section 2 applies to all deliveries in the same terminal or switching district 72

(iii) As a matter of law, the existence or nonexistence of trackage contracts can not justify or excuse violations of Section 2..... 76

(iv) Where discrimination is plain, there is no room for "expertise" 78

C. The switching charge violates Section 1(9) of the Act because it prevents the switch at appellant's sidetrack from being operated without discrimination 80

Page

D. No decision of this Court sanctions the present switching charge, and *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, specifically condemns it 83

III. Neither present nor future congestion justifies or renders lawful a charge otherwise discriminatory..... 90

A. The burden of congestion must be borne equitably by all users of congested facilities and may not be assessed in its entirety against a single commodity consigned to a single shipper 91

B. In any event, a carrier is not permitted to refuse service now on the ground that in the future its facilities may become overcrowded; and there is no substantial evidence to support the Commission's finding that the other packers would immediately make like demands for sidetrack delivery of livestock 95

C. The Commission's finding that appellant's shipments of livestock, averaging 18 cars daily, would considerably delay and burden the railroads' operations, is not supported by substantial evidence.. 99

IV. The Commission failed to alleviate the congestion on which it relied to justify the high additional switching charge assessed only against livestock delivered to sidetracks, although the Commission was amply empowered to do so, and although that congestion was shown by the record to be in substantial measure due to the appellees' own acts rather than to the volume of livestock traffic 105

A. The present record proves that, in fact, the congestion on the rails of the Chicago Junction is in substantial measure due to the appellees' own acts rather than to the volume of livestock traffic..... 105

B. The Commission failed to alleviate the existing congestion although it was amply empowered to do so 109

(i) Inadequate provision of motive power..... 109

(ii) Labor agreement which impairs efficiency.. 111

(iii) Obstructive rules of the Union Stock Yards 112

(iv) Refusal of Chicago Junction to grant trackage rights 112

(v) Virtual anarchy on the Chicago Junction tracks 113

Page

V. Both the high additional switching charge assessed only against livestock delivered to sidetracks, and the congestion on which the Commission relies to justify that charge, rest on and are perpetuated by a discriminatory and illegal covenant, still in force and still given effect by the parties thereto, whereby the New York Central agrees to operate the Chicago Junction for "the benefit, advantage, and behoof of the business and affairs" of the Union Stock Yards 117

A. The covenant in the lease of the Chicago Junction, which requires the appellee New York Central to operate the Chicago Junction for "the benefit, advantage, and behoof of the business and affairs" of the Union Stock Yards, is illegal on its face.... 118

B. The present record proves indisputably that, by virtue of the covenant in the lease of the Chicago Junction property, the Union Stock Yards still exercise a substantial measure of control over the operations by the New York Central of the Chicago Junction 121

C. The present record demonstrates that the illegal covenant continues and perpetuates the existing congestion, which is the sole factor relied upon by the Commission to justify the discriminatory switching charge 124

D. Despite its protestations to the contrary, the Commission in its ruling is, in fact, enforcing the illegal covenant between the Union Stock Yards and the New York Central to the detriment of the present appellant 128

E. Neither the fact that the present system of delivering livestock at Chicago has long been in effect nor the circumstance that appellant had a financial interest in the Union Stock Yards prior to 1920 precludes it from obtaining appropriate relief in this proceeding 134

Conclusion 141

IN THE

Supreme Court of the United States

OCTOBER TERM, 1951

No. 282

SWIFT & COMPANY, *Appellant*,

v.

THE UNITED STATES OF AMERICA, INTERSTATE COMMERCE COMMISSION, ET AL.

On Appeal from the United States District Court for the Northern District of Illinois.

BRIEF FOR THE APPELLANT

OPINIONS BELOW

The district court wrote no opinion. The majority and dissenting views to the report of the Interstate Commerce Commission (R. 57-89) appear at 274 I. C. C. 557.

JURISDICTION

The final judgment of the three-judge district court was entered on June 21, 1951 (R. 210). The petition for appeal was presented and allowed on July 26, 1951 (R. 210-211). The jurisdiction of this Court rests on 28 U. S. C. (Supp. IV) 1253 and 2101(b). Probable jurisdiction was noted on October 15, 1951 (R. 228).

QUESTIONS PRESENTED

The principal questions presented by appellant's assignment of errors (R. 212-217), may be formulated as follows:

1. Whether the Interstate Commerce Commission's ruling that the extra switching charge for livestock delivered to appellant's sidetrack was reasonable can be supported, in the absence of any findings of fact or evidence relative to the reasonableness of such charge by comparison with other commodities delivered to the same sidetrack, or by comparison with livestock delivered to the Union Stock Yards, a few city blocks beyond said sidetrack.

2. Whether the Interstate Commerce Commission may lawfully sanction a high additional charge for switching service in respect of a single commodity to a particular sidetrack, which service it asserts would lead to interference with and disruption of terminal transportation operations, where it refrains from prohibiting such switching service altogether, where it cancels as "not just and reasonable" a proposal by a carrier to exempt that particular commodity from transportation altogether, and where it permits the identical service by the same carrier without such additional switching charge in respect of the same commodity consigned to a stockyard on the same line of railroad, a few city blocks distant from the same sidetrack.

3. Whether the extra switching fee for livestock delivered to appellant's sidetrack violates Section 1(5) of the Interstate Commerce Act, because it bears no relationship to the cost of the switching involved, and was designed and understood to be a penalty to prevent indirectly the precise kind of livestock deliveries which the Interstate Commerce Commission refused to permit the carrier concerned to discontinue directly.

4. Whether the extra switching fee for livestock delivered to appellant's sidetrack, which is not exacted in respect of

any other commodity delivered to the same location, violates Section 3(1) of the Interstate Commerce Act because unduly and unreasonably prejudicial to livestock.

5. Whether the extra switching charge for livestock delivered to appellant's sidetrack violates Section 2 of the Interstate Commerce Act, because, by comparison with livestock delivered to the Union Stock Yards, distant only a few city blocks, it results in different rates for shipments of the same commodity, over the same line, for the same distance, and under the same circumstances of carriage.

6. Whether the extra switching charge for livestock delivered to appellant's sidetrack violates Section 1(9) of the Interstate Commerce Act, because, not being assessed in respect of other commodities delivered there, nor in respect of livestock delivered to the Union Stock Yards, distant only a few city blocks, it prevents the switch at appellant's siding from being operated without discrimination.

7. Whether either present or future congestion at a terminal justifies factual discrimination against a single consignee in respect of a single commodity at a particular sidetrack, which discrimination would otherwise be prohibited by Sections 3(1), 2, and 1(9) of the Interstate Commerce Act.

8. Whether an extra switching charge for delivering a particular commodity at a particular shipper's sidetrack can be justified on the ground of the increased congestion of terminal facilities which such deliveries would involve, where such extra switching charge is not demanded for other commodities to the same sidetrack or for any commodities at other sidetracks in the same terminal area, nor for the same commodity delivered to a stockyards a few city blocks beyond the same sidetrack.

9. Whether an extra switching charge for delivering a particular commodity at a particular shipper's sidetrack

can be justified on the ground that, if such deliveries are permitted without extra switching charge, other shippers of the same commodity might thereafter make demand for similar service to their sidetracks.

10. Whether, on the whole record, there was substantial evidence to support the Interstate Commerce Commission's finding that appellant's direct shipments of livestock, averaging some 18 cars daily, would result in disruptive congestion in terminal operations in the Chicago stockyards area.

11. Whether the Interstate Commerce Commission erred in relying on the Chicago Junction's dwindling motive power, its settlement of a labor controversy with its employees, and its trackage arrangements with line-haul carriers, to justify the high additional fee for switching service to the appellant's sidetrack in respect of livestock only.

12. Whether the Interstate Commerce Commission erred in failing to take steps within its power to alleviate the existing congestion.

13. Whether the Interstate Commerce Commission had power to, and whether it did, enforce a covenant whereby the carrier leasing the Chicago Junction undertook to operate that road for "the benefit, advantage, and behoof of the business and affairs" of the Union Stock Yards, the effect of which, as reflected by the present record, was to require the Chicago Junction to deny normal transportation service to the appellant at its sidetrack of one commodity only, except at a high additional charge, in consequence of which appellant would become obliged either to accept and pay for non-transportation services from the Yards which it neither desired or requested but without which it could not obtain the shipments of this one commodity which it owned, or else become obliged to incur additional substantial expense to obtain those shipments by truck.

14. Whether the Interstate Commerce Commission unlawfuly preferred delivery of livestock to the Union Stock Yards over delivery of livestock to appellant's sidetrack, and whether in so doing it in fact enforced the covenant above-mentioned.

15. Whether the Interstate Commerce Commission erred in giving controlling weight to shipping practices at the Union Stock Yards which originated at a time when appellant and other packers were financially interested in those Yards, and before appellant and the other packers were required by suit under the antitrust laws to divest themselves of all stockyards holdings.

STATUTES INVOLVED

The pertinent provisions of the Interstate Commerce Act and related statutes involved on this appeal are set out in Appendix A, *infra*, pp. 142-149.

STATEMENT

The present controversy arises out of the attempt of the appellant, Swift & Company (hereinafter called Swift), to receive its own livestock at its own sidetrack in Chicago at the normal line-haul rates prescribed by the Interstate Commerce Commission for that commodity.

Swift filed a complaint with the Commission against the Chicago Junction and some twenty-odd line-haul carriers serving Chicago (R. 50-56). In that complaint it sought an order which would require those carriers to deliver Swift's direct shipments of livestock—*i. e.*, animals purchased by Swift in the producing areas, shipped to its plant for processing, and owned by it during transit—to its own sidetrack, which was connected with the rails of the Chicago Junction Railway, at the same flat line-haul rates under which the railroad defendants deliver livestock to the unloading pens of the Union Stock Yard and Transit Company of Chicago (hereinafter referred to as Union Stock Yards), also located upon the rails of the Chicago Junction Railway, only a few city blocks beyond Swift's sidetrack, and at the flat line-haul rates which are similarly applicable to the delivery of all line-haul freight other than livestock to the same Swift sidetrack.

The relative location of Swift's private sidetrack, the Union Stock Yards, and the tracks of the Chicago Junction Railway, is shown on a map, Appendix B, p. 150, *infra*.[1]

After Swift's complaint was filed, the Chicago Junction Railway filed schedules proposing (R. 59) "to specifically exempt livestock from the traffic which it will transport and to cancel the application on livestock of all switching charges published by it, except to and from chutes and sidings at the Union Stock Yards." Upon protest by Swift and others, the operation of the proposed schedules was

---

[1] This map is derived from Ex. 1, R. 1040 (map showing Swift's proposed new plant); Ex. 2, R. 1041 (map showing Chicago Junction tracks within stockyards area); and Ex. 14, R. 1092 (map of Ashland Avenue yards, Chicago Junction Ry.).

suspended. Thereafter the Commission after proceedings which are detailed below, *infra*, pp. 35-37, determined Swift's complaint and the Investigation and Suspension case on the same record. It filed a report, and entered an order dismissing Swift's complaint and requiring cancellation of the Chicago Junction Railway's suspended schedules.

The Chicago Junction took no further steps to put its schedules into force, but Swift brought an action pursuant to 28 U. S. C. (Supp. IV) 1336, 1398, 2284, and 2321-2325, to enjoin, set aside, and annul the Commission's report and order in the complaint case (R. 1-90). The carriers, the Union Stock Yards, and certain other interested parties intervened as defendants (R. 97-138). The district court dismissed the complaint (R. 210), without opinion, and this appeal followed.

The basic facts of record, as hereinafter set forth, are substantially undisputed; the differences between the parties relate primarily to the deductions and conclusions to be drawn from those facts, particularly with reference to future consequences of proposed action.

A. The economics of direct shipments of livestock.

As has been indicated, the only shipments of livestock herein involved are the so-called direct shipments, being livestock purchased by Swift in the producing areas and owned by it prior to rail transportation, as distinguished from livestock owned and shipped by producers to the Union Stock Yards at Chicago for sale there on commission. The latter shipments are not in issue here, though the difference between them and the direct shipments reflects the economic factors and conflicts which underlie the legal issues in this case.

Three salient trends condition the present controversy.

First, in the years following the First World War, the packing industry became greatly decentralized. Plants

were established in the regions where livestock was actually produced, and, in order to meet this competition, existing Chicago packers decentralized also, and reduced their Chicago operations correspondingly (R. 390-398, 407, 1006-1010, 1026-1028; see Ex. 55 at R. 1897-1928). Swift, which had three pork packing plants in Chicago in 1920, now has only one there (R. 403, 1009), and kills only half a million hogs annually in Chicago as against two million previously (R. 1019). By way of replacement, however, Swift now has four packing plants in Iowa (R. 395-396), and some 35 all told throughout the country (R. 415-416). This trend is not restricted to Swift alone, but affects all of Chicago. Cudahy now has no packing plants there (R. 376). Total slaughtering in Chicago declined from 14,028,431 head of livestock in 1923 to 7,522,397 in 1947, or a decrease of 46.4% (Ex. 43 at R. 1654-1657), while slaughtering in the producing regions has risen correspondingly (R. 390; Ex. 55 at R. 1910).

Second, over the same period there has been a phenomenal rise in direct marketing of livestock, *i. e.*, in livestock being sold directly by the producer to the packer, rather than being consigned to a public stockyards for sale on commission. This rise is attributable, basically to "the economics of the packing houses located elsewhere than at the terminal markets" (R. 1016), which bought their livestock in the producing regions; after that, the Chicago packers had to do likewise in order to remain competitive (R. 1006-1010, 1026-1028). Here are the comparative figures showing percentage of direct sales to total sales (R. 1011, 1026; Ex. 55 at R. 1899):

	1923	*1946*
Hogs	24.0%	64.4%
Sheep	14.63%	41.8%
Calves	13.98%	40.7%
Cattle	10.4%	25.5%

The larger packers make their direct purchases at buying stations in livestock territory (R. 391, 415, 718). The producers are able to bargain with assurance because of their access to market quotations which are made available by radio several times during the day (R. 848-849, 854-855, 865, 876, 879).

Both of these trends substantially reduced the business of the appellee Union Stock Yard and Transit Company of Chicago. Receipts of cattle, calves, hogs, and sheep at the Union Stock Yards, which aggregated 18,475,818 head in 1923 (Ex. 46 at R. 1848), had fallen to 6,646,705 head in 1947 (Ex. 43 at R. 1679; Ex. 26, not printed). This is a decline of 64%.[2]

And third, the large packers, including Swift, which prior to 1920 had been financially interested in the Union Stock Yards, were required by the antitrust decree of that year (Par. "Second" in Sub-Ex. 62 of Ex. 42, R. 1458, 1460) to divest themselves of their holdings in the Yards. The result was that Swift became, as one witness put it (R. 738), "a competitor that originally was one of our partners."

The present record contains voluminous evidence bearing on the relative advantages and disadvantages to all concerned of direct versus commission purchasing of livestock (R. 390-417, 708-824, 847-891, 908-930, 943-951, 1005-1031). Undoubtedly each producer sells "just where I think possibly I can get the most money" (R. 848); in this, as in other activities, "the end of the trail is the pocketbook" (R. 881). It may be that (R. 814) "the greatest mistake that a great many livestock producers are making today is in assuming that they are competent to do their own livestock selling", *cf.* also R. 715, 753, though an of-

---

[2] It is suggested in the record that the figures for 1945 and 1946 were not normal, because of OPA and black market conditions obtaining in those years (R. 730, 738). Actually, however, the receipts in those years were higher than in 1947, as follows:

	Head of livestock	*Decline from 1923*
1945	8,011,008	56.7%
1946	7,181,865	61.1%

ficial summary prepared by the United States Department of Agriculture indicates that direct sales result in higher prices paid the producer (Ex. 55 at R. 1908, 1913, 1915). Undoubtedly, that is one reason for the increase in direct sales, since the producer is obviously under no compulsion to market his livestock through any particular channel.

The commission men charge the packers with having "evaded the market by going out and intercepting hogs in the country" (R. 757); the packers say that unless they buy livestock in the country they will be unable to continue operations (R. 1006-1010, 1013, 1026-1028). It would seem, then, that it is to the advantage of both producers and packers to deal directly, but to the disadvantage of the commission men. For to the extent that direct purchases increase, commission purchases (and commissions thereon) decline; as an officer of one of the interveners testified (R. 744), "Any facilitating of this [direct] movement of livestock, anything that tends to encourage it by making it more profitable or less expensive or anything of that kind would contract,—would tend to contract or reduce the volume coming to the market for sale." This in turn would reduce commissions earned at public stockyards.[3] And counsel for the Union Stock Yards said of the prayer of Swift's complaint seeking sidetrack delivery of livestock at the line-haul rate (Ex. 57, R. 1961):

> If the request of Swift is granted, and the other packers demand and are accorded similar treatment (which may be anticipated), the effect will be substantially to destroy the business of the Yard Company.

The foregoing facts are set forth, not because the economic conflict presents a justiciable issue, but simply to

---

[3] The same witness, an official of the appellee Chicago Live Stock Exchange, which is an association of commission men, testified (R. 753):

> Q. That percentage of directs even to Chicago has been constantly growing over the years, hasn't it?
>
> A. Unfortunately, yes.

show how that conflict affects the interests and influences the alignment of the non-rail interveners in this case.

B. Means open to appellant for receipt of direct shipments of livestock.

At the present time, and in the present posture of this case, Swift can receive its direct shipments of livestock, which average 6489 carloads per year (R. 69, 199), in three ways:

(i) *Consignment to Omaha Packing Co. sidetrack—$50,000 annually for additional trucking.*

Swift can, and presently does, receive all direct shipments of livestock at the pens of the Omaha Packing Company, a wholly owned subsidiary, on a sidetrack connected with the appellee Chicago, Burlington & Quincy Ry. Co. Such livestock, in accordance with the Commission's decision in *Chicago Live Stock Exc.* v. *Atchison, T. & S. F. Ry. Co.*, 219 I. C. C. 531, 546, 547 (Fdg. 10), 548, is delivered to those unloading pens at the flat Chicago line-haul rate, without the addition of switching or terminal charges (R. 67), and this is so regardless of the identity of the line-haul carrier which brings the shipment to Chicago (R. 286, 836-838, 842-843).[4]

But the Omaha Packing Co. plant pens are some 2½ miles distant from Swift's present meat packing plant, in

---

[4] Ever since the Commission's decision in *Omaha Packing Co.* v. *Chicago, M. & St. P. Ry. Co.*, 37 I. C. C. 378, livestock had been delivered to the Omaha Packing Co. sidetrack on the Burlington rails at the line-haul rate plus the same additional terminal charge then exacted in respect to livestock deliveries to the Union Stock Yards. That charge was held to be neither unreasonable nor unlawful in *Livestock—Western District Rates*, 176 I. C. C. 1, 122-124 (1932) and again in *Chicago Live Stock Exc.* v. *Atchison, T. & S. F. Ry. Co.*, 197 I. C. C. 463 (1933). It was not until the further hearing in the latter case, *Chicago Live Stock Exc.* v. *Atchison, T. & S. F. Ry. Co.*, 219 I. C. C. 531, 546-548, decided in 1936, that the terminal charge was held to be unreasonable for deliveries both to the Union Stock Yards and to the Omaha Packing Co. sidetrack on the Burlington.

consequence of which further transportation of the livestock, by motor truck through the city streets, becomes necessary. Such additional transportation, as of the time of the hearing before the examiner, cost Swift about $50,000 a year for the quantity of livestock here involved (R. 67-68).

(ii) *Consignment to Union Stock Yards—$129,000 annually for services neither appropriate to nor desired for livestock already owned by the consignee.*

A second available method for the receipt of direct shipments would be for Swift to consign those shipments to itself at the Union Stock Yards. This method involves only payment of the flat line-haul rate to the carrier concerned, but requires Swift, in respect of all livestock so consigned, to pay yardage charges for non-transportation services, simply to march the livestock through the Union Stock Yards into its own packing plant, *i. e.*, for the privilege of recovering its own animals from the stockyard pens (R. 68, 387-388, 426, 428-429).

These yardage charges range from $16.25 per car on cattle to $18.75 per car on a single-deck carload of sheep (R. 68), and aggregate, for the shipments here involved, about $129,000 a year (Cmplt., par. 10(b), R. 19; admitted, R. 104, 128).

The yardage charge is uniform for each animal of the same species arriving by rail (R. 986), and entitles that animal to (a) "the use of a very extensive system of alleys, streets, underpasses, runways, inclines, bypasses and overhead viaducts, all frequently divided by fences and gates for keeping various lots of animals from becoming mixed" (*id.*); (b) "to the use of pens for as many days as it may remain in the yards, without any limit" (*id.*); (c) "to one weighing" (R. 987); and (d) to the recording by yard employees of all changes in the animal's location (*id.*); and moreover (e) "covers a proportional share of the many general expenses connected with the maintenance and op-

eration of the stockyard" (R. 987-988). See also R. 424-426. Thus the yardage fee covers services appropriate and necessary for animals consigned to the Union Stock Yards for sale on commission to a purchaser there. However, with respect to direct shipments, already owned by the ultimate consignee, who desires prompt delivery of his livestock and who is prepared to receive them at his own plant, only a limited use of the runways (Ex. 2, R. 1041; Ex. 61, not printed) is required, and the other services are neither needed nor desired (R. 264). But this Court held in *Swift & Co.* v. *United States*, 316 U. S. 216, sustaining the Commission's order in *Swift & Co.* v. *Alton R. Co.*, 238 I. C. C. 179, that rail transportation ended with the unloading of the livestock at the Union Stock Yards, and that the Commission lacked jurisdiction to regulate the yardage fees thereafter assessed.

(iii) *Consignment to own sidetrack—$254,000 annually for switching charges.*

Swift now has a private sidetrack, which is connected to the rails of the Chicago Junction Railway by a switch presently in operation (R. 65, 268, 270-271, 276-277; Exs. 2-4, 6, 8, R. 1041-1045). At this location, Swift proposes to build a new packing plant, to replace existing obsolescent and inadequate facilities, which will have substantial facilities for unloading livestock brought by rail, as well as adequate holding pens (R. 65; see Ex. 1, R. 1040).

But for the delivery of its own livestock at this sidetrack over the switch now in operation, Swift must pay the extra switching charge which is in issue in this case, and which is presently $39.24 per car [5]—*i. e.*, $39.24 per car in excess of

[5] The following is the history of the Chicago Junction switching rate on livestock consigned to sidetracks since February 1, 1921:

(a) On February 1, 1921, a tariff of the Chicago Junction Railway (the Chicago River and Indiana R. Co., Lessee) published a proportional switching rate of 2¢ per 100 lbs., subject to a minimum weight of 60,000 lbs. Thus the switching charge was $12.00 per car, and it stood at that level at the time the *Hygrade* litigation began (*Hygrade Food Products Corp.* v. *Atchison, T. &*

what Swift now pays for the identical delivery of all other classes of freight to the same sidetrack (R. 288-289, 370), and similarly $39.24 per car in excess of the line-haul rate for delivery of livestock to the Union Stock Yards, distant a few city blocks from the same sidetrack. See *infra*, pp. 15-17. The result is that if Swift employed this third method, and consigned to its own sidetrack all of its direct shipments of livestock, it would pay on the average $254,628.36 per year under the Commission's order and the ruling of the court below.

S. F. Ry. Co., 195 I. C. C. 553, sustained, *Atchison, T. & S. F. Ry. Co.* v. *United States*, 8 F. Supp. 825 (S. D. N. Y.), reversed, *Atchison, T. & S. F. Ry. Co.* v. *United States*, 295 U. S. 193.

(b) On September 20, 1933, the rate became 3¢ per 100 lbs., and $18.00 per car pursuant to *Switching Rates in Chicago Switching District*, 177 I. C. C. 669.

(c) On January 19, 1939, the rate became 3¼¢—$19.50 per car—in consequence of *Fifteen Percent Case, 1937-38*, 226 I. C. C. 41.

(d) On March 18, 1942, the rate became 3½¢—$21.00 per car—pursuant to Commission approval in *Increased Railway Rates, Fares, and Charges, 1942*, 248 I. C. C. 545 (Ex Parte No. 148).

(e) On May 15, 1943, the rate again became 3¼¢ per 100 lbs. and $19.50 per car, in consequence of a ruling in which the authority in the original report, 248 I. C. C. 545, was suspended. *Increased Railway Rates, Fares, and Charges, 1942*, 255 I. C. C. 357.

(f) On July 1, 1946, the rate rose to 3.7¢ per 100 lbs. and $22.20 per car, pursuant to *Increased Railway Rates, Fares, and Charges, 1946*, 264 I. C. C. 695 (Ex Parte No. 162).

(g) On January 1, 1947, the rate became 4¢ and $24.00 per car, in consequence of *Increased Railway Rates, Fares, and Charges, 1946*, 266 I. C. C. 537; this was the rate when the present complaint was filed with the Commission (R. 52).

(h) On October 13, 1947, the basic rate remained 4¢, but the charge based on that rate was increased 10%, making the cost per car $26.40; this followed from *Increased Freight Rates, 1947*, 269 I. C. C. 33 (Ex Parte No. 166).

(i) On January 5, 1948, the charge superimposed on the basic 4¢ rate was increased to 20%. *Increased Freight Rates, 1947*, 270 I. C. C. 81. This made the switching charge $28.80 per car, which is where it stood when the present proceeding was heard by one of the Commission's examiners (R. 60, 232, 289, 838).

(j) On May 6, 1948, the rate became 5½¢ per 100 lbs. and $33.00 per car. *Increased Freight Rates, 1947*, 270 I. C. C. 93.

(k) On May 11, 1948, the rate was reduced to 5¢ per 100 lbs. and $30.00 per car; this was published voluntarily by the carriers in an effort to comply

C. Scope of the switching charge in question.

As has been indicated, the switching charge of $39.24 per car now in issue applies only to livestock consigned to sidetracks such as Swift's, located on the tracks of the Chicago Junction Railway (R. 288-289, 370).

(i) *Inapplicability to livestock consigned to Union Stock Yards.*

There is no similar switching charge on livestock consigned to the Union Stock Yards (R. 289), which are also located on the Chicago Junction, and this is so notwithstanding the circumstance that the distance from the several railroad appellees' break-up yards to the Ashland Avenue yards of the Chicago Junction is precisely the same whether a particular car of livestock is consigned to the Union Stock Yards or to Swift's sidetrack (R. 283), and notwithstanding the circumstance that the distance from the Ashland Avenue yards to the Union Stock Yards is

---

with the Commission's order in 270 I. C. C. 93, *supra*, as it was thought that the 5½¢ rate did not comply.

(l) On July 12, 1948, in another effort by the carriers to comply with 270 I. C. C. 93, the rate became 5¼¢ per 100 lbs. and $31.50 per car.

(m) On January 11, 1949, the basic rate remained 5¼¢, but it was increased by 6%, making the charge per car $33.39. *Increased Freight Rates, 1948*, 272 I. C. C. 695 (Ex Parte No. 168).

(n) On September 1, 1949, the rate was increased to 6¢ per 100 lbs. and $36.00 per car. *Increased Freight Rates, 1948*, 276 I. C. C. 9. This was the rate in effect at the time of the proceedings in the district court. (Complaint, pars. 4(a), 8(a), 8(b), 10(a), 15, 20, R. 2, 11, 13, 18, 25, 28; Statement as to Jurisdiction, pp. 5, 8, 11, 12.)

(o) On August 28, 1951, the 6¢ rate became subject to a 9% increase, pursuant to Commission approval in *Increased Freight Rates, 1951*, 281 I. C. C. 557 (Ex Parte No. 175). This made the switching charge $39.24 per car, which was the rate in effect while this brief was being written.

Addendum: On January 14, 1952, Divisi - 2 of the Commission (Commissioners Aitchison, Splawn, Alldredge, and Mahaffie) commenced hearings in supplemental proceedings in Ex Parte No. 175 to consider the railroads' contentions that increased costs require that the full 15% increase therein requested, which was granted only in part in 281 I. C. C. 557, be now granted to the extent then denied.

somewhat longer than from the Ashland Avenue yards to the Swift sidetrack (R. 284, 684-685; and see map, Exhibit B, *infra*, p. 150).

Moreover, when livestock is delivered at the Union Stock Yards, the line-haul carriers absorb an unloading charge of $2.08 per double-deck car and $1.73 per single-deck car, while when livestock is delivered at private sidetracks, as at Swift's Omaha Packing Co. plant or at the proposed new plant, all unloading costs are borne by the consignees and not by the carriers (R. 301). This follows from the terms of Section 15(5) of the Interstate Commerce Act (*infra*, p. 145), and from the Commission's ruling in *Omaha Packing Company* v. *Atchison, T. & S. F. Ry. Co.*, 66 I. C. C. 44, applying that provision.

(ii) *Inapplicability to other commodities delivered at Swift's sidetrack.*

There is no switching charge on any commodity other than livestock delivered at Swift's sidetrack; such other commodities are delivered at the flat line-haul rate (R. 286, 370). Commodities so delivered without switching charge include (Ex. 10, at R. 1058-1060) live poultry, eggs, fresh fruits, meats, and vegetables, liquid milk, dressed poultry, ice, butter, and cheese—among a host of others.

(iii) *Switching charge not dependent on distance between Chicago Junction yards and line-haul carriers' break-up yards.*

The Chicago Switching District is over forty miles in length, from seven to fifteen miles wide, and over 600 square miles in extent; within its boundaries are over 4,000 private industries served by thirty-five railroads and more than 5,000 miles of track. See *Switching Rates in Chicago Switching District*, 177 I. C. C. 669, 675-676, 712-713; and see map, Ex. 9, R. 1046.

Subject to certain restrictions, not otherwise shown in the record, all carload freight transported to Chicago by the line-haul carriers is delivered to any industrial location within the Chicago Switching District at the flat Chicago line-haul rates without the addition of other switching or terminal charges, and this is so regardless of the distance between the line-haul carriers' break-up yards and the industrial siding in question (R. 280-283, 286-288, 298-299, 368-369).

Thus eggs, for instance, consigned to Swift's sidetrack from distant break-up yards, such as the Bensenville Yard of the Milwaukee Road and the Proviso Yard of the Chicago & North Western, both in the northwest portion of the Switching District, or from the Burr Oak Yard of the Rock Island in the southwest portion, involve no greater transportation expense to the shipper than if they were consigned there from reasonably adjacent yards, such as the Western Avenue Yard of the Burlington, the Corwith Yard of the Santa Fe, or the 47th Street Yard of the Wabash (R. 280-283).

But livestock transported over the same distances, long or short, involves the $39.24 switching fee for each car (R. 288-289, 370)—not for the entire movement, but only for the switching done by the Chicago Junction in moving the car in question from its own Ashland Avenue yard to the Swift sidetrack (R. 838). See map, Ex. 9, R. 1046, and map, Appendix B, *infra*, p. 150, for the relative distances involved.

D. Transportation of livestock to consignees in the stockyards district.

(i) *Route followed and switching performed.*

Consolidated trains containing livestock and dead freight arrive at the several carriers' outer break-up yards in the Chicago Switching District (R. 609, 634-635, 649-650, 675-676, 692). Only rarely does any train carrying livestock exclusively arrive at those yards (*cf.* R. 609, 634, 649, 675,

692). Frequently some switching has already occurred before the trains reach Chicago (R. 634-635, 649, 675-676). On arrival, the cars of livestock and dead freight are separated at the break-up yards, those reflected in the record being the following: the Hawthorne Yard of the Burlington, entrance at Clyde, the yard being 9.3 miles distant from the Ashland Avenue Yards of the Chicago Junction (R. 609); the Proviso Yards of the Chicago & North Western, 18 miles distance (R. 69); the Burr Oak Yards of the Rock Island, 14 miles away (R. 70, 650); the Bensenville Yards of the Milwaukee Road, some 27 miles away (R. 69); and the Corwith Yard of the Santa Fe, 3 miles away (R. 692-693).[6] Similar separations occur at the break-up yards of the other line-haul carriers.[7]

The loaded freight cars then are moved to consignees on the Chicago Junction's tracks in three ways:

(*a*) Trains of livestock cars only, destined to the Union Stock Yards, are hauled directly to those yards by a line-haul carrier's engine (R. 62-63, 70). When the train comes from the west, the engine goes over east-bound track 1103 to the unloading chutes. While the cars are being unloaded, the engine cuts off, passes around the train, couples on to the other end, and then hauls the empty cars over west-bound tracks 1102 or 1104 to the line-haul carrier's break-up yard (R. 62-63). These trains, of livestock cars only, do not pass through the Junction's Ashland Avenue yards (R. 63, 70).

(*b*) Trains of dead freight only, consigned to industry tracks on the Junction, are delivered by the line-haul carriers to the 9 receiving tracks in the Ashland Avenue south yard; under the terms of a labor agreement, set forth in greater detail below, pp. 24-25, such cars may not be de-

---

[6] The figure "5" at line 29 of R. 69 is a misprint, as appears from inspection of the original record and from line 5 of 274 I. C. C. 567; they show "3 miles".

[7] Counsel for the railroad appellees called operating witnesses from only 5 carriers out of the 22 he represented in order to avoid repetitiousness (R. 687).

livered elsewhere. After delivery, and after completion of the necessary inspection and carding by the Junction, the cars are switched at intervals by Junction break-up crews to the adjoining classification tracks for regrouping and movement to base yards serving the respective operating districts (Ex. 13, R. 1091). There the cars are reclassified and switched to team tracks or to the private sidings of the consignees. (R. 61.)

(*c*) Consolidated trains consisting of livestock for the Union Stock Yards and dead freight for industry sidetracks on the Junction, are handled as follows (R. 63): In such trains, the dead freight is on the head and behind the engine. The cars of livestock are cut off and left standing at the eastern end of the east-bound running track while the line-haul carrier's engine sets the dead freight on one of the 9 receiving tracks in the Ashland Avenue south yard. The engine then returns and hauls the livestock to the Union Stock Yards. The line-haul engine then disposes of the empty livestock cars as in (*a*) above, while the dead freight is switched by Junction motive power to the proper industry sidetracks as in (*b*).

(*d*) If livestock were to be delivered to Swift's sidetrack, the initial movement, from the point of origin to the line-haul carrier's break-up yard to the stockyards area, would be precisely the same as for livestock destined for the Union Stock Yards (R. 283-285, 476-478, 480-483, 505, 506-507, 684-685). Thereafter, consolidated trains would proceed to the eastern end of the Ashland Avenue Yards, as at present, with (1) livestock for the Union Stock Yards, (2) dead freight for Junction sidetracks, and (3) livestock for the Swift sidetrack. At that point, the dead freight and the livestock for the Swift sidetrack would be pushed onto one of the Junction receiving tracks and left there for subsequent delivery by Junction motive power, while the line-haul switching engine would proceed immediately to the Stock Yards with the livestock consigned there. The sub-

sequent delivery of Swift's livestock to its own sidetrack would be effected just as dead freight is delivered there now (R. 66-67, 238-239).

(ii) *Percentage of mixed trains; incidence of trains composed of one and two cars of livestock.*

A train, in railroad parlance, means any movement of an engine with one or more cars attached (R. 674, 945). To the extent, therefore, that short trains are involved, the percentage of trains does not accurately reflect the volume of livestock carried.

The record indicates that approximately 63% of the trains of the line-haul carriers going to the Union Stock Yards handle livestock exclusively (R. 62). The record also indicates that, in order to comply with the Federal law limiting the time that livestock may be confined in cars without unloading for watering and feeding (45 U. S. C. 71-74; *infra*, pp. 147-149), many trains going to the Union Stock Yards which carry livestock exclusively are composed of only one or two cars (R. 64).

The record shows the shipments of short-time livestock over a test period of about three weeks (Ex. 45, R. 1681-1842): 80% of the trains involved contained only one or two cars, with the consequence that, in respect of those short-time shipments, 80% of the trains carried only about 56% of the short-time livestock.[8] The short-time trains in question, which averaged 1.96 cars per train, amounted to 46.2% of the total livestock receipts at the Union Stock Yards during the test period (R. 825). Thus more than one-third of the livestock received at the Union Stock Yards in that time arrived in trains averaging less than two cars of livestock per train. The present record does not permit of more exact computations, nor does it indicate how far the cited percentages can be accurately projected. But the

[8] Ex. 45, R. 1681-1842, lists 574 trains, aggregating 1124 cars. Of these 574 trains, 292 contained only a single car.

figures are believed sufficient to establish that the incidence of short trains, required to comply with the 28-hour law, is so high that, although 63% of the trains going to the Union Stock Yards handle livestock exclusively, substantially less than 63% of the livestock destined there arrives in such trains. Or, otherwise stated, well over 37% of the livestock consigned to the Union Stock Yards arrives in consolidated trains.

(iii) *Transportation of livestock to Swift's Omaha Packing Co. plant.*

Livestock consigned to Swift's Omaha Packing Co. plant pens on the sidetrack off the Burlington lines, averages some 18 or 20 cars every day in the aggregate (R. 69, 75). Around 45% of these shipments arrive via the Burlington, while the balance originate on other lines (Ex. 36, R. 1161). And the Commission found (R. 69) "that the blocking out in outer yards of direct shipments consigned to the Omaha plant pens is a minor operation which, except as to the Burlington, averages but one or two cars per day, or less, for the individual lines." None of the shipments consigned to Swift at its Omaha Packing Co. plant move through the Ashland Avenue yards of the Chicago Junction (R. 70).

E. Congestion on Chicago Junction tracks.

The Ashland Avenue yards of the Chicago Junction handled an average of 726,144 loaded and empty cars per annum during 1945-1947 (R. 60), and now receive an average of about 1000 loaded cars per day (R. 61). But the record shows that the number of cars of livestock transported over the Chicago Junction's tracks to the Union Stock Yards has markedly decreased since 1920.

In the early 1920s, over 250,000 cars of livestock were transported annually to the chutes of the Union Stock Yards, with a high in 1923 of 303,228 cars (Ex. 46 at R. 1845). After that time the number declined; here are the

figures for the last three years shown (Ex. 46 at R. 1846; Ex. 28, R. 1117; R. 996):

YEAR	CARLOADS	DECREASE SINCE 1922 PER CENT	DECREASE SINCE 1922 CARLOADS
1945	83,457	72.4	219,771
1946	65,139	78.5	238,089
1947	53,561	82.3	249,667

The Chicago Junction's trackage has remained the same since 1909, including the single running track, No. 1103, from west to east (R. 62, 461, 523). Since all line-haul carriers must use the same east-bound track into the Union Stock Yards, any delay to a train on that track results in a piling up of other trains. Frequently, as many as four trains must wait to enter this track because of blockage at the east end. Delays are also experienced because of "set outs" made by consolidated trains; in the case of such trains, the livestock remains on the single east-bound running track while the engine puts the dead freight on another track, and this blocks the running track until the engine returns and hauls the livestock into the Union Stock Yards. (R. 62-63.) On occasion this blocks eight or ten lines bringing trains from the west (R. 489). Moreover, the line-haul engines coming to Ashland Avenue from the west must pull through to the east end to leave the cars of dead freight, while those reaching it from the east must pull through to the west to leave the dead freight and then return over the single east-bound track (R. 63, 70, 452-453, 512-513, 649-650, 658-659, 669).

The Commission found that, during a test period in December 1947, the time per car consumed between delivery to the Junction of 511 cars of perishable freight and 1570 cars of other dead freight, by connecting lines at the Ashland Avenue south yards, and actual or constructive placement at sidetracks on the Junction, was 23 hours 30 minutes for perishable freight and 31 hours 48 minutes for other dead freight (R. 68).

The evidence bearing on the effect of the foregoing operations on transportation of livestock to sidetracks is set out below, pp. 29-34, after the evidence dealing with the other factors relevant to congestion has been summarized.

F. Factors other than volume of traffic contributing to congestion on Chicago Junction tracks.

Briefly, the rail system now known as the Chicago Junction Railway was originally operated by the appellee Union Stock Yard and Transit Company of Chicago as a portion of its livestock receiving facilities. After this Court's decision in *United States* v. *Union Stock Yard*, 226 U. S. 286, the management of the railroad and the stockyards portions was separated, see *Union Stock Yard Co.* v. *United States*, 308 U. S. 213, 215-216, and in 1922 the railroad portion, then as now named the Chicago Junction Railway, was, with the approval of the Interstate Commerce Commission, leased by a wholly owned subsidiary of appellee New York Central Railroad Company. See *Chicago Junction Case*, 71 I. C. C. 631.[9] Since that time the Chicago Junction has been operated as a part of the New York Central System, though Union Stock Yards still owns the fee of the railroad facilities. See *Union Stock Yard Co.* v. *United States*, 308 U. S. 213; see also, for full details of the corporate structure of the Stock Yards interests, *Chicago Stock Yards Co.* v. *Commissioner of Internal Revenue*, 129 F. 2d 937 (C. C. A. 1), reversed on other grounds *sub nom. Helvering* v. *Stock Yards Co.*, 318 U. S. 693.

A. 7); *Railroad Trainmen* v. *Baltimore & O. R. Co.*, 331 U. S. 519; *Baltimore & O. R. Co.* v. *Chicago River & Indiana R. Co.*, 170 F. 2d 654 (C. A. 7).

(i) *Decline in Chicago Junction's motive power since its lease by appellee New York Central.*

The Commission found (R. 68) that "The present motive power of the Junction is being operated to capacity," and listed the 35 steam and 12 Diesel engines owned by that carrier. Of the former, 11 are of a type that do not lend themselves readily to industrial work, being too heavy for sharp curves (R. 68). Moreover, 14 of the remaining engines were received from the U. S. Railway Administration during World War I, and thus are at least 30 years old (R. 525).

The record reveals a gradual shrinkage in the Chicago Junction's motive power since it was leased by the New York Central, as follows (Ex. 58, R. 1963-1965):

1923	77 engines
1925	86 engines
1935	64 engines
1940	47 engines.

The Chicago Junction's Superintendent testified that his road did not have sufficient engines to take care of all the industrial placement of cars (R. 524; see also R. 547, 555), and further (R. 525-526), "I know we have been trying to get some additional Diesel equipment. We want at least five of them if we can get them."[10]

(ii) *Effect of 1946 labor agreement.*

Prior to January 1946, the several line-haul carriers delivered their freight cars to the various yards of the Chicago Junction. Thus cars for Armour and Co. were delivered at 47th and Peoria Streets, while lines from the east

[10] See also the testimony of the Rock Island's operating witness (R. 656), "One thing, for example, that undoubtedly is going to add to our troubles is the inadequate supply of switch engines and crews on the Rock Island and other line haul carriers today"; and that of the Milwaukee's (R. 680): "We have an acute shortage of power and men * * *."

and south delivered freight at the Oakley Avenue Yard, or at Loomis Street, or to the Ashland Avenue north yard. None of this freight went through the crowded Ashland Avenue receiving or classification facilities. Similarly, empty cars for loading hogs and sheep eastbound were placed in the North Yard by the eastern lines. But this arrangement, under which cars were delivered by the line-haul carriers to at least four different yards of the Junction, was abrogated by a demand of the Junctions employees. In order to avert a threatened strike by those employees, the Junction agreed that all of the foregoing traffic would be received at the Ashland Avenue south yard, which has but one running track to the east, and that is the arrangement now in effect. (R. 463-464, 515-517; see also R. 443, 494, 527, 539, 699.)

In 1947, the first full year after this change took effect, the Junction used 3800 more crews, each of 5 men (R. 64), in moving its traffic with no increase in the number of cars handled (R. 518-519). Moreover, the restriction of classification work to Chicago Junction employees results in delays farther back; as the Junction's Assistant Superintendent testified (R. 539), "foreign line crews are delayed waiting to set cars out in our receiving yard due to our inability to classify them quickly enough to avoid these delays."

The record also reflects other delays in making shipments by reason of restrictive labor agreements (R. 635, 639-640, 660-661).

(iii) *Operations of line-haul carriers on Chicago Junction tracks.*

The line-haul carriers operate over the Chicago Junction's tracks by virtue of trackage rights (R. 62), exercised, as the Commission found (R. 64), in the following manner:

> During a test period from December 1 to 7, 1947, inclusive, there were 1,171 foreign crews moving on the Junction's rails or an average of 167 crews per day.

> The average time each crew was on the Junction's tracks was 3 hours 12 minutes. A crew consists of three members in addition to the engineer and fireman. The are no restrictions by the Junction limiting the time within which connecting lines may deliver freight on Junction tracks. They are privileged to and do operate over the Junction's rails at their convenience for the purposes stated above and may be on those tracks at all hours of the day or night.

(iv) *Refusal of Chicago Junction to grant additional trackage rights.*

Mr. R. G. Raasch, Chairman and Tariff Publishing Agent of the Illinois Freight Association, who testified to the existence and scope of the foregoing trackage rights (R. 839, 842), indicated their limitations as well. He said (R. 840):

> If the stock were to be moved to the proposed new facilities of Swift & Company, the trunk line carriers do not now have and would not have trackage rights to run into such location with their own engines and crews as they now do at the Union Stock Yards. The trunk line carriers have been advised by the Chicago Junction Railway that they would not be permitted to make such deliveries by use of their own power. * * * Trackage rights would not be granted for that purpose, and it would be necessary for the trunk lines to make such deliveries to the Chicago Junction Railway at the interchange tracks in the Ashland Avenue Yard.

(v) *Union Stock Yards rules directed at dead freight.*

The rules of the Union Stock Yards forbid the line-haul carriers, which bring cars of livestock directly into the chutes there, see p. 18, *supra*, from pulling into those chutes with any cars loaded with dead freight (R. 664, 668-669). The effect of these rules on operations was testified to as follows by one of appellees' operating witnesses (R. 668):

* * * If I had a man leaving Burr Oak of [on?] a 96 with one car of U. S. livestock and one car for C. P. T. [Chicago Produce Terminal?], I have got to set either one of those cars out at our [Rock Island] 47th Street Yard before entering the C. J. tracks and then either let this engine go over and deliver the U. S. Yards stock, unload it and come back and pick up C. P. T. or have another engine there to take that one car of stock over to the yards and unload it and bring the empty back.

Q. Is that a requirement of the C. J. or is—your own operating practice?

A. No, sir, it is an operating requirement of the Stockyards people, U. S. Y. & T. I certainly would like to cancel it if I could. It would save me a lot of trouble.

G. Covenant in Chicago Junction lease and its invocation by Union Stock Yards.

After Swift had filed its complaint with the Commission, and after the several railroad defendants had answered,[11] counsel for the Union Stock Yards addressed the following letter to counsel for the New York Central (Ex. 57, R. 1961-1962):

WINSTON STRAWN & SHAW
First National Bank Building
Chicago 3

September 4, 1947.

Mr. Sidney C. Murray,
General Counsel,
New York Central Lines,
1236 La Salle Street Station,
Chicago 5, Illinois.

Dear Sir:

In response to a telephone inquiry made by us last week, Mr. W. C. Douglas, Assistant Vice President of the River Road and the New York Central, stated that neither of those companies planned to offer any

[11] The file in I. C. C. Docket No. 29809, the complaint case, indicates that the railroad defendants filed answers on various dates in August, 1947.

evidence or to take any other steps to defend the complaint in Swift & Company vs. The Atchison, Topeka & Santa Fe Railway Company, et al., I. C. C. Docket 29809. In this complaint Swift is asking the Interstate Commerce Commission to compel the line-haul carriers and the River Road to deliver livestock at its plant at rates which do not exceed those charged for delivery of livestock to the unloading pens of The Union Stock Yard and Transit Company of Chicago.

If the request of Swift is granted, and the other packers demand and are accorded similar treatment (which may be anticipated), the effect will be substantially to destroy the business of the Yard Company.

In Article VI of the lease from the Yard Company to Chicago Junction Railway Company dated December 1, 1913, the Junction agreed "to conduct, manage, and operate the line of railroad by this instrument demised, and in so far as possible the same to conduct in such manner as will tend to the benefit, advantage, and behoof of the business and affairs of the Yards." In the lease of May 19, 1922, by the Junction to the River Road (see Art. III, Sec. 2, and Art. IX), the River Road and the New York Central undertook to perform the above-quoted covenant of the Junction in the earlier lease.

Most of the evidence necessary to defend the Swift complaint and the power to raise the necessary issues for the determination of all the questions involved are in the possession of the River Road. We believe that if this evidence is adduced, and if the proper issues are raised by that road, the case can be successfully defended.

It is our considered opinion that the River Road and the Central are obligated under the terms of the foregoing provision of the lease of 1913 to defend this case and to take every other step appropriate to prevent irreparable injury to the Yard Company, and that any failure to do so will be a breach of this covenant of the lease.

Yours truly,

WINSTON, STRAWN & SHAW.

Thereafter, the New York Central and the River Road separately appeared by counsel and defended the complaint case before the Commission's examiner (R. 250), and, in due course, the New York Central and the River Road intervened and filed answers in the action brought in the court below (R. 97-124). Also, after the foregoing letter was written, the Chicago Junction on November 19, 1947,[12] proposed specifically to exempt livestock from the traffic which it will transport and to cancel the application on livestock of all switching charges published by it, except to and from chutes and sidings at the Union Stock Yards (R. 59).

H. Evidence bearing on effect of granting appellant's prayer for relief.

The evidence relative to the possible effect of granting Swift's prayer for relief covers what is factually the most controversial aspect of the present case. But even this aspect can be broken down to show the uncontradicted elements.

(i) *Effect of appellant's shipments alone.*

The Commission found that (R. 74-75), "Having in mind the congested condition of yards and tracks, it is clear that the attempt to make plant delivery through and over them of even 18 cars of livestock daily would considerably delay and burden defendants' operations." A discussion of the evidence of record, if any, bearing on this finding would necessarily be argumentative, and hence it is postponed to Point III C, pp. 99-104, below.

The Commission then went on to consider the possibility that other packers would be entitled to the same relief, and proceeded to deal with the case on the basis of congestion believed to result on that footing (R. 76). The following sections set out the evidence of record reflecting the attitude of the other packers, the assumptions underlying the

[12] This date appears in the file of the Commission's Investigation and Suspension Docket No. 5543.

railroad witnesses' prognostications of threatened congestion, and the direct testimony as to such congestion.

(ii) *Position of the other packers.*

Since before 1915, Swift has used the Omaha Packing Co. sidetrack on the Burlington line and has received and unloaded its direct shipments of livestock there at the same rate applicable to deliveries of livestock to the Union Stock Yards, except for absorbing the expenses of unloading. See *Omaha Packing Co.* v. *Chicago, M. & St. P. Ry. Co.*, 37 I. C. C. 378; *Omaha Packing Co.* v. *Atchison, T. & S. F. Ry. Co.*, 66 I. C. C. 44; *Chicago Live Stock Exc.* v. *Atchison, T. & S. F. Ry. Co.*, 219 I. C. C. 531, 546-548. No other packer has seen fit in all the intervening years to acquire a similar siding off the tracks of a line-haul carrier,[13] use of which would necessarily involve the construction and maintenance of adequate holding pens.[14]

In the so-called "egress" cases, dealing with the packers' demands for receipt of direct shipments of livestock consigned to themselves *at the Union Stock Yards* without payment of yardage fees, only one small packer was at first concerned. *Hygrade Food Products Corp.* v. *Atchison, T. & S. F. Ry. Co.*, 195 I. C. C. 553; *Atchison, T. & S. F. Ry. Co.* v. *United States*, 295 U. S. 193. In the next attempt on the part of a packer to obtain free egress for its own animals, Armour & Company at first pursued an independent course in the courts, see *Armour & Co.* v. *Alton R. Co.*, 312 U. S. 195, and later joined with Swift in the proceeding which Swift had commenced before the Commission. *Swift & Co.* v. *Alton R. Co.*, 238 I. C. C. 179; see *Swift & Co.* v. *United States*, 316 U. S. 216, 217-218. The basis of the

[13] This circumstance caused the Commission to assert (I. C. C. Motion to Affirm, p. 13) that "it would appear that Swift has the preference in Chicago."

[14] Note the requirement imposed by the Commission in this case as a prerequisite to delivery *with* the switching charge (R. 81), "provided that the tracks to be constructed will be adequate for deliveries by the Junction at its ordinary operating convenience and without interruption or interference * * *."

complaint of Swift and Armour was that, since they owned the livestock being shipped, they were entitled to claim their animals free from any exaction in the nature of yardage fees; their position was, in substance, that a consignee should not be subject to any extra charge for the use of the terminal.

But the rulings were adverse to the plaintiffs; the substance of the holdings in the cited cases was that transportation ended with the arrival of the livestock at the Union Stock Yards, and that yardage fees thereafter imposed were for non-transportation services which the Commission was without power to regulate. This Court none the less pointed out (316 U. S. at 227)—

> It does not appear, however, that the existence or adequacy of alternative facilities for delivery at other points is particularly important in the case, because the shipments involved are consigned to the packers at the Union Stock Yards by their own choice. It does not appear that they are demanding an increase of other facilities, and the case has not been considered in that light.

Having failed in its effort to strike down the yardage fees assessed against its direct shipments consigned to the Union Stock Yards, Swift turned its attention to the switching charge assessed on direct shipments consigned to its own sidetrack, and brought the present complaint before the Commission, attacking the high additional switching charge assessed only against livestock delivered to sidetracks.[15] This time Swift stood alone. Armour & Company

[15] The complaint as amended also contained a prayer (R. 56) for the establishment of joint through rates between the line-haul carriers and the Chicago Junction. The merits of that prayer turn in part on the difference between the absorption of a switching rate by the line-haul carrier, which is the general practice throughout the country, and a division of the joint rate, which is the practice in Chicago (R. 293-294, 295, 843-845). Since, however, the basic issue in the present controversy, is, on the Commission's own statement (R. 59), the legality of the switching charge, and since in our view a joint rate which included the switching charge would be equally illegal, we have thought it conducive to clarity to omit all further reference to the establishment of joint rates.

entered an appearance in the related Investigation & Suspension case, but not in the complaint case.[16] And no other packer, large or small, intervened in either aspect of the present case, on either side, before the Commission or in the court below. On the issues now in litigation, Swift still stands alone.

The following is the evidence in the present record directly bearing on the probability of the other packers making similar demands for plant deliveries of livestock at the line-haul rate.

All seven railroad operating witnesses who gave expert testimony as to the consequences which in their view would follow the making of plant deliveries assumed that they would be faced with demands from "all the packers" and that the present proceeding involved all direct shipments of livestock to Chicago (R. 488, 493, 539, 540-541, 544, 548, 618, 636, 640-641, 655, 657, 679, 680, 684, 699). All of these witnesses who were questioned on the point admitted that they had no knowledge whether the other packers would or would not make similar demands, and admitted moreover that they had made no inquiries on that score (R. 514-515, 553, 646-647, 666, 684, 704).

The only evidence in the record tending affirmatively to indicate that the other packers would join in Swift's demand (R. 739, 928, 988) came from witnesses hostile to Swift: Park, the representative of the commission men selling livestock on the Chicago market (R. 708-710), who also testified to the sharp economic conflict between direct sales and commission sales (R. 744, 753); Heinemann, an expert retained by the Union Stock Yards (R. 423, 944), whose associations (R. 908) likewise had an adverse inter-

---

[16] See R. 251-252: "Mr. Blanchard: Mr. Examiner, I appear in the nature of a special appearance here; Mr. Paul E. Blanchard, representing Armour & Company. * * * We are interested primarily in the I. & S. case. * * * I will enter an appearance in the I. & S. case but not in the formal case unless from the development of the facts and the evidence here it appears that we have some interest in the formal case at a later time. At the present time we know of no such interest."

est (R. 944); and O'Connor, General Manager of the Union Stock Yards (R. 982).

No appellee called any witness connected with any packer, large or small, to adduce direct testimony of what such other packers' attitude might be.

On the basis of the foregoing the Commission concluded (R. 75-76) and found (R. 76) "that, if complainant's demand for the delivery service at the line-haul rates were granted, there would result demands from other packers requiring defendants to render like delivery service * * *."

(iii) *Evidence as to congestion and disruption.*

As has been indicated, every one of the seven railroad operating witnesses who testified as to the effect of the granting of Swift's demand based his answer on the assumption that all the other packers would similarly require and receive plant delivery. *Supra*, p. 32. All of the answers, moreover, because of the circumstance that, in fact, the Chicago Junction has never delivered livestock except at the Union Stock Yards (R. 60), were based not on actual experience but on hypothesis. Indeed, one operating witness frankly said (R. 647), "We are here somewhat on a clairvoyant adventure."[17]

The Chicago Junction witnesses testified, on the assumption of existing operating conditions and on the basis of all direct shipments going to sidetracks, that an additional 1 to 8 hours would be required before cars could be set for unloading (R. 64).

The other witnesses, also on the foregoing assumptions, testified to the congestion which they believed would follow (R. 618-627, 636-645, 655-664, 678-683, 699-703).

---

[17] The Superintendent of the Chicago Junction likewise testified (R. 469, 490): "If the proposed method were employed it would mean conditions I will have to visualize, it never actually having occurred." * * * "Not having done it I don't know, nor do they know, just how they would handle a consolidated train."

The Commission found that it would be physically possible to make the desired delivery to Swift, and in its report detailed at some length the procedure for such delivery (R. 66-67, 72-74). Laying considerable stress on the circumstance that livestock can not be "kicked" (R. 72-73), the Commission concluded that direct deliveries of direct shipments of livestock "would result in serious disruption of operations and services and serious delays in the delivery of livestock" (R. 71); that "a substantial movement of livestock by the Junction would adversely affect efficient and expeditious terminal operations generally and that operations would be disrupted if much of the large movement of livestock to the stockyards area and the return movement of the empty cars, were performed by the Junction" (R. 71); that while "any cars of livestock consigned to [Swift] could be handled in consolidated trains by grouping such cars at the head of the train with the cars of dead freight intended for set-out in the south yard, nevertheless, because of difficulties peculiar to livestock traffic, such handling would, it appears, affect adversely the line-haul carriers' operations in carrying livestock to the stockyards" (R. 72); that "there would result demands from other packers requiring defendants to render like delivery service in an amount and volume which together with such service rendered complainant would seriously interfere with, delay, and disrupt defendants' terminal operations in carrying livestock to the Union Stock Yard and in making deliveries of other freight to the industries on the Junction's lines" (R. 76); and that "the inauguration of a continuing practice of delivering livestock directly to packers" in these circumstances "would seriously interfere with, delay, and disrupt terminal transportation operations and the movement of livestock generally" (R. 77).

I. Proceedings before the Commission and in the court below.

As has been indicated above in general terms, Swift brought this complaint before the Commission against twenty-five common carriers by rail serving Chicago (R. 50-56), presenting primarily the issue (R. 59) "whether or not [Swift] is entitled to have direct shipments of livestock delivered by the Junction without a charge in addition to the line-haul rates on a private siding at a plant which it proposes to construct in the stockyard area in Chicago."

The Union Stock Yards, and numerous parties representing commission men and buyers and sellers of livestock intervened in opposition to the complaint. The United States Department of Agriculture also intervened. (R. 198.)

Thereafter, as has also been indicated, the Junction proposed to cancel all tariffs on livestock, except to and from chutes and sidings at the Union Stock Yards. Operation of the proposed schedules was suspended on protest by Swift and Armour, who appeared as protestants (R. 254) in the I. & S. proceeding, which was heard on the same record with the complaint case.

The case was extensively heard before an examiner (R. 248-1039) and argued orally before the Commission (R. 58). The Commission filed a comprehensive report (274 I. C. C. 557; R. 57-81), concluding with the findings that "in the circumstances presented the published switching charges in addition to the line-haul rates will not be unreasonable or otherwise unlawful for the transportation of livestock for delivery on the private sidetracks to be constructed by complainant, which will connect with the Junction, provided that the tracks to be constructed will be adequate for deliveries by the Junction at its ordinary operating convenience and without interruption or interference," and that "the proposal to specifically exempt livestock from the traffic which will be transported by the Junction at Chi-

cago and to cancel the application on livestock of switching charges, except to and from chutes and sidings at the Union Stock Yards at that point, is not just and reasonable" (R. 81).

An order was accordingly entered dismissing the complaint and requiring cancellation of the suspended schedules (*ibid.*).

Commissioner Alldredge dissented (R. 81-89) on several grounds: He was of opinion that the covenant between the Stock Yards and the Junction, which had been assumed by the Junction, and which the correspondence (Ex. 57, set out *supra*, pp. 27-28) indicated (R. 82) "is recognized as still in force and effect and of some controlling importance," brought the case within the condemnation of *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169. "It is difficult to escape the conclusion," wrote Commissioner Alldredge, "that the pecuniary interest of the owners of the stockyards in these terminal facilities has been permitted to work itself out in such manner as to deprive Swift of a service to which it would ordinarily be entitled" (R. 83). He concluded that it was the obligation of the Junction's lessor to operate Swift's sidetrack without discrimination by reason of the command of Section 1(9) of the Act (R. 86); "that the singling out of livestock as the exclusive type of freight which will not be accorded the switching service without extra charge is not only unjust and unreasonable, under sections 1(4) and 1(5)(a)[18] of the act, but unduly and unreasonably prejudicial under section 3(1)" (R. 87); and that if, by reason of the service sought, an increased congestion of yard operations and facilities would result, then, in accordance with familiar principles, the additional cost should be distributed over all traffic flowing through the yards and not be charged in its entirety to a single commodity consigned to a single shipper (R. 89).

---

[18] Section 1(5)(a) was renumbered Section 1(5) by Sec. 1 of the Act of August 2, 1949, c. 379, 63 Stat. 485.

The Chicago Junction took no action to set aside the Commission's order in the I. & S. case requiring cancellation of its proposed schedules.

Swift, however, after its petition for rehearing had been denied (R. 90), brought the present action in the District Court for Northern Illinois against the United States and the Interstate Commerce Commission to set aside the Commission's order (R. 1-90). All of the carriers who had been defendants before the Commission, with the exception of the Chicago Junction, intervened as defendants (R. 97-98). The Union Stock Yards and four groups of commission men and livestock traders who had been interveners before the Commission also intervened in the action (R. 124, 131, 134-135).[19] The district court, three judges sitting (Duffy, Circ. J.; Sullivan and Igoe, D. JJ.), dismissed Swift's complaint (R. 210), but without writing any opinion. It made findings of fact which, after setting out the parties to the action and their interests and contentions (Fdgs. 1-8, R. 197-199), simply set forth, either in summary or by direct quotations, the facts found by the Commission (Fdgs. 9-34, R. 199-209). The latter findings, with the exception of a single proposed finding which was omitted (No. 25, R. 192), were taken verbatim from those suggested by the railroad interveners (R. 185-195). The court also made five generalized conclusions of law (R. 209), likewise taken verbatim from those suggested by the railroads (R. 195), none of which however enunciated any principles peculiar to the Interstate Commerce Act, as amended.

This appeal followed (R. 210-228).

---

[19] The Chicago Live Stock Exchange is an organization of commission men (R. 709-710). The Chicago Traders Live Stock Exchange is an organization of dealers and order buyers buying and selling livestock on their own account (R. 786-788). The National Live Stock Producers Exchange and the Chicago Producers Commission Association are cooperative associations engaged in selling and buying livestock for their own members and others (R. 803, 772-773).

SUMMARY OF ARGUMENT

I.

A. The Commission's finding that the high additional switching charge assessed only against livestock delivered to sidetracks is not unreasonable is without the support either of subsidiary findings or of evidence. There are no findings, and there is no evidence, as to the difference in cost between switching livestock to Swift's sidetrack, which costs $39.24 per car more than the line-haul rate, and the cost of switching perishables or fragile goods to the same sidetrack, both of which are delivered at the flat line-haul rate. Similarly, there are neither findings nor evidence as to the difference in cost between switching livestock to Swift's sidetrack, which incurs the $39.24 per car switching charge, and switching livestock out of consolidated trains for delivery at the Union Stock Yards; the latter operation incurs no switching charge, although it requires the carrier to bear the cost of unloading, and although it involves well over 37% of all livestock shipped by rail to the Union Stock Yards.

B. Such necessary subsidiary findings and such evidence are both lacking because the switching charge was never based on cost of service, but was fixed at its present level in order to preclude sidetrack delivery of livestock from ever being asked or rendered. The Commission, which found that even Swift's direct shipments would delay and burden the carriers if delivered to its plant sidetrack, and which found that sidetrack delivery of the direct shipments of all the packers would result in interference, delay, and disruption in terminal operations; went on to find that the maintenance of the present switching charge would not have any detrimental effect upon such operations. In other words, the Commission recognized that the high additional switching charge assessed only against livestock delivered

to sidetracks will prevent disruption because it will prevent such deliveries, *i. e.*, the Commission recognized that the charge operates as a prohibitive penalty.

C. If the Commission had determined that it was essential to efficient and expeditious terminal operations to prohibit altogether livestock shipments into the Ashland Avenue yards of the Chicago Junction, this case would be very different. But when the Chicago Junction proposed that very step, the Commission condemned the proposal as "not just and reasonable." Thus appellant is free to cause "disruption" if it will pay the price, and the Commission is itself doing indirectly precisely what it refused to permit the carrier to do directly.

D. Since the switching charge here in question is a penalty, bearing no relation to the cost of the services rendered, it is unreasonable *per se* as a matter of law, and thus violates Section 1 (5) of the Interstate Commerce Act.

II.

Apart from its unreasonableness, the high additional switching charge assessed only against livestock delivered to sidetracks violates numerous other provisions of the Act.

A. It violates Section 3 (1) because it is unduly and unreasonably prejudicial to livestock. A long line of cases establishes that it is unlawful for common carriers to exclude a particular commodity from the traffic which they will transport, and of course there is no difference between outright exclusion and a prohibitive penalty. Both result in an illegal disadvantaging of the particular commodity.

The circumstance that livestock requires handling different from that accorded dead freight does not justify the result reached here. Over 37% of the livestock destined to the Union Stock Yards comes out of consolidated trains and so undergoes quite as much switching as the livestock con-

signed to appellant's sidetrack, yet it is not subjected to the additional switching charge. Neither is there any switching charge on any other commodities, fragile or perishable or otherwise, consigned to the identical sidetrack. The 28-hour law, which applies to all livestock shipments by rail throughout the country, has been held not to justify a similar discrimination against livestock. Finally, the Commission has specifically ruled that the line-haul rates cover all transportation services necessary to deliver livestock at sidetracks, and that such services subject the carrier to less expense in two respects (unloading and reloading in transit, and unloading at destination) than do similar deliveries of livestock to public stockyards.

B. The high additional switching charge assessed only against livestock delivered to sidetracks violates Section 2 because it results in different rates for shipments of the same commodity, over the same line, for the same distance, under the same circumstances of carriage.

As a matter of fact, the shipment of livestock to the Union Stock Yards and to appellant's sidetrack both involve like and contemporaneous service under the same circumstances of carriage, since both shipments follow the same rail movement from point of origin to point of destination. Over 37% of the livestock consigned to the Union Stock Yards is switched quite as much as any car of livestock consigned to appellant's sidetrack. And the yardage fees exacted at the former location are for non-transportation services, as held in *Swift & Co.* v. *United States*, 316 U. S. 216, and so are not related to "the matter of carriage" with which Section 2 deals.

In view of the repeated rulings on the point, Section 2 applies to all deliveries within the same terminal or switching district as a matter of law. Also as a matter of law, the existence or non-existence of trackage contracts—*i. e.*, the circumstance that the delivery of livestock to the Union Stock Yards is made by the line-haul carriers' engines un-

der trackage contracts, while the delivery of livestock to appellant's sidetrack would be made by engines of the Chicago Junction—can not justify or excuse violations of Section 2. Where the discrimination is as plain and as palpable as in this case, there is no room for "expertise" as to which carrier's engines perform the final switching operation.

C. The high additional switching charge assessed only against livestock consigned to sidetracks violates Section 1 (9) of the Act because it prevents the switch at appellant's sidetrack from being operated without discrimination. All the requirements of the statute have been complied with. The interest protected by Section 1 (9)—and ignored by the Commission—is that of expeditious *decentralized* delivery.

D. No decision of this Court sanctions the present high additional switching charge assessed only against livestock delivered to sidetracks. It was not in issue in the judicial proceedings decided by *Atchison, T. & S. F. Ry. Co.* v. *United States*, 295 U. S. 193; and in *Swift & Co.* v. *United States*, 316 U. S. 216, there were considered only direct shipments consigned by the packers to themselves at the Union Stock Yards by their own choice.

The controlling precedent here, and the one which condemns the present charge, is *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169; the facts in the two cases are the same in every relevant particular. The Commission, reaching a diametrically opposed result in this case because the removal of the present obvious discrimination is thought to result in disruption, is espousing the dogma of Railroad Statics. But for the rulings under review, there is no support for any such reasoning to justify the continuance of a discriminatory charge.

III.

The decisions of this Court, in an unbroken line, condemn the Commission's justification of discrimination on the stated grounds of congestion, inconvenience, and long-continued practice.

A. The burden of congestion must be borne equitably by all users of congested facilities, and may not be assessed in its entirety, as is done in this case, against a single commodity consigned to a single shipper. The rulings on this point since the time of the Commission's creation simply restate the common law standard that a carrier must accord equal treatment to all patrons.

B. *A fortiori*, a carrier has no right to deny service now on the ground that in the future its capacities may be overtaxed. Until "his coach be full", the carrier may not refuse service. On the whole record in this case, there is no substantial evidence to support the Commission's finding that, if this appellant obtained the relief sought, the other packers would request similar service. The examiner found to the contrary; there was not a word of evidence from any packer's official on the point; and the Commission's rationalizations as to competitive compulsion ignore completely the circumstance that no other Chicago packer has ever acquired what Swift has had for over 35 years, a sidetrack directly off the rails of a line-haul carrier.

C. Nor is there, on the whole record, substantial evidence to support the Commission's finding that the sidetrack delivery of Swift's direct shipments standing alone would considerably delay and burden the railroads' operations. Such shipments are less than 2% of all the traffic now flowing through the Chicago Junction's Ashland Avenue yards, and could moreover have been absorbed several times over in recent years by the decline in rail shipments of livestock to the Union Stock Yards during that period. Furthermore, all of the evidence as to congestion and disruption

was predicated on the assumption of sidetrack delivery of all of the packers' direct shipments, and not a single operating witness testified to what he believed would happen if only this appellant's shipments were so delivered.

But appellant's argument does not rest on the infirmities of the two findings just examined. Even if those findings are taken at face value, even if Swift's shipments alone will produce congestion, even if all the other packers follow Swift in demanding similar service, even if the combined influx of all the direct shipments produces more congestion, still those facts can not and do not excuse discrimination. The removal of discrimination is and has been the primary purpose of the Interstate Commerce Act. That aim, under the decisions, can not be frustrated either by inadequacy of facilities, or by practical difficulties, or by conflicting interests of owners of track, or by equivalent discrimination caused other groups, or by long-continued practice. The categorical command of the Act may not be so watered down.

IV.

A. The volume of rail receipts of livestock at the Union Stock Yards has decreased in the last 25 years by more than 80%, or some quarter of a million carloads annually. The record does not show the extent of the increase of other traffic on the rails of the Chicago Junction, but it does show five other factors, attributable to appellees' acts and not to the volume of traffic, which contribute materially to the congestion which is relied upon to justify the discrimination here complained of.

(i) The motive power of the Chicago Junction has decreased by some 45% since its lease by the New York Central, and is stated by the Junction's operating personnel to be inadequate.

(ii) A labor agreement signed by the Chicago Junction requires 3800 more train crews, each composed of 5 men, in

order to move the same volume of traffic theretofore carried, and moreover forces more cars into the Ashland Avenue yards.

(iii) The rules of the Union Stock Yards forbid the line-haul carriers from pulling into its chutes any car loaded with dead freight, a factor which is shown to add to those carriers' difficulties in delivering consolidated trains containing both livestock and dead freight.

(iv) The Chicago Junction has granted the line-haul carriers trackage rights to deliver livestock to the Union Stock Yards, but refuses them trackage rights to deliver livestock at Swift's sidetrack.

(v) The line-haul carriers' crews may and do operate over the Chicago Junction's rails without regulation and without any limitation as to time or hours.

B. The Commission failed to alleviate the existing congestion although it was amply empowered to do so.

(i) Sections 1 (10) and 1 (11) of the Act empower the Commission to require the Chicago Junction to provide sufficient suitable switching locomotives to effect all necessary switching. Moreover, since the Junction is under lease by the New York Central, Section 1 (3) (a) of the Act makes it a part of the Central as a matter of law; and indeed the Commission approved that lease in 1922 because, *inter alia*, it would insure to the Junction's shippers the assistance of an interested trunk line in times of car shortage.

(ii) The Junction can not rely on a labor agreement to justify a violation of the Interstate Commerce Act, any more than an employer can rely on a labor agreement to justify a violation of the Sherman Antitrust Act. *Allen Bradley Co. v. Union*, 325 U. S. 797.

(iii) The obstructive rules of the Union Stock Yards are condemned by the decisions which hold that the owner of a piece of track may not require the using carrier to refuse

to transport a particular class of merchandise over it. *E.g., United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169.

(iv) The Commission's power to correct discrimination, in the face of a contention that the carrier concerned lacked the necessary trackage rights, has been unquestioned since *United States* v. *Pennsylvania R. Co.*, 266 U. S. 191.

(v) There are ample precedents for the Commission's power—and duty—to correct the anarchic conditions obtaining on the tracks of the Chicago Junction. The circumstance that the Commission not only takes no corrective action, but in fact specifically puts forward those conditions as a reason for continuing the present discrimination, shows the extent to which it carries its devotion to the philosophy of Railroad Statics.

V.

The heart of this case is the covenant whereby the New York Central agrees to operate the Chicago Junction for "the benefit, advantage, and behoof of the business and affairs" of the Union Stock Yards.

A. That covenant is an undertaking to favor a particular patron, consequently it is a covenant to discriminate, and therefore it is illegal on its face. *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169. It is not saved by the clause, "in so far as possible", even if that clause be construed as "in so far as *legally* possible". Since there are no legal discriminations under the Act, such a construction would render it nugatory; and the record shows that the parties to the covenant did not treat it as meaningless.

B. The covenant was invoked under threat of cancelling the Central's lease of the Junction. Thereafter, the Central proceeded to defend appellant's complaint before the Commission, which it would not otherwise have done, and thereafter, also, the Junction proposed to cancel all switching

tariffs on all livestock not consigned to the chutes of the Union Stock Yards. Thus, far from being divested of control over the Junction, as the Commission asserted, the Union Stock Yards is shown on this record to be still exercising a substantial element of control over the Junction's operations.

C. More than that, the covenant continues and perpetuates the existing congestion. The Central is under no incentive to improve operating practices, because, to the extent that it does so and facilitates sidetrack delivery of livestock, that circumstance disadvantages the business and affairs of the Union Stock Yards—in violation of the covenant. In the light of the operating practices disclosed by the record, the covenant appears as what it is, not simply an abstract generalization, but as the unifying factor of an effective combination in restraint of trade.

D. Despite its protestations to the contrary, the Commission's ruling, in fact, enforces the illegal covenant between the New York Central and the Union Stock Yards to the detriment of the present appellant. For, under the decision below, the Chicago Junction is, with the sanction of the Commission, managed and operated so as to assure a direct and uninterrupted movement of livestock to and from the Union Stock Yards under trackage contracts, with consequent benefit and advantage to the business and affairs of the Yards by reason of the yardage fees assessed on livestock so delivered, while at the same time the Junction is permitted to exact a high additional switching charge for the transportation of livestock to any consignee on its rails not using the services of the Yards. No other conclusion is fairly possible when the five obstructive factors discussed under Point IV are viewed in their setting. However much the Commission may have minimized the covenant, its ruling in fact enforces it, perpetuates the congestion, and consequently perpetuates the discriminatory switching charge which that congestion was held to justify.

E. The circumstance that the present system of delivering livestock at Chicago has long been in effect does not insulate it against change when, as here, it is shown to violate the Interstate Commerce Act. Neither contract nor long-continued custom can justify a practice that the statute was designed to suppress. Nor do difficulties involved in the correction of a long-standing discrimination operate as a valid reason against corrective action. The doctrine of Railroad Statics must yield to the primary Congressional purpose of removing inequalities and preferences; discrimination does not attain legitimacy through prescription.

The circumstance that this appellant was once financially interested in the Union Stock Yards and so contributed to the existence of the present physical arrangement is of no moment now, after Swift has been divested of those interests by an antitrust decree. The interests of the Union Stock Yards and of this appellant are now divergent. In any event, there is no estoppel against the assertion of rights under the Interstate Commerce Act; and, preeminently, the removal of a restraint on interstate commerce can not justify the continuance of a discrimination in interstate commerce.

ARGUMENT

The questions involved in this appeal concern primarily the Interstate Commerce Commission's errors in the application of rules of law, and the Commission's inability to perceive the effect of a discriminatory covenant whose existence and terms are unquestioned. Only secondarily, despite the apparent complexity of the record under review, does this appeal involve controverted questions of fact, and even in that realm there is no dispute as to any present, existing fact; the differences between the parties turn on predictions of the possible future effects of action yet to be taken.

Appellant's case rests on the asserted illegality of the high additional switching charge, amounting to $39.24 per car, which is exacted in respect of livestock delivered to its own siding over a switch connection which is now and has long been in active operation. That charge is not imposed on any other commodities delivered to the same siding, nor on livestock delivered to the Union Stock Yards, a few city blocks away.

We contend, first, that this high additional switching charge, which is assessed only against livestock delivered to sidetracks, is unreasonable in and of itself, in violation of Section 1 (5) of the Interstate Commerce Act, because it was imposed and understood to operate as a penalty, to prevent sidetrack delivery of livestock—although the Commission expressly declined to permit the carrier concerned to refuse sidetrack delivery of livestock altogether. Point I, *infra*, pp. 50-62.

We contend, next, that the high additional switching charge assessed only against livestock delivered to sidetracks is discriminatory and prejudicial, in violation of numerous provisions of the Interstate Commerce Act (Point II, *infra*, pp. 63-89), and that the congestion which is the Commission's sole reliance for approval of the discriminatory charge can not as a matter of law justify such palpable violations of the Act. Point III, *infra*, pp. 90-104.

We go on to analyze the operation of the Chicago Junction Railway (the carrier on whose tracks both appellant's sidetrack and the Union Stock Yards are located), show that the congestion relied upon to justify discrimination is in fact the result of the appellees' own acts rather than of the volume of livestock traffic involved, and point out how the Commission has failed to relieve the congestion although possessed of ample and effective powers to do so. Point IV, *infra*, pp. 105-116.

Finally, we draw attention to the undisputed evidence which shows that the covenant whereby the New York Central agrees to operate the Chicago Junction for "the benefit, advantage, and behoof of the business and affairs" of the Union Stock Yards is still in full force and effect. We show how this covenant operates to discourage improved operating conditions or reduced congestion, since any step facilitating sidetrack delivery of livestock would disadvantage the business of the Union Stock Yards, in violation of the covenant; that it is this covenant which is the focal point of the discrimination that infects the high additional switching charge, here under attack, which is assessed only against livestock delivered to sidetracks; and, finally, that the Commission's ruling, which sanctions that charge, is in consequence enforcing the covenant—which, being discriminatory, is obviously illegal. Point V, *infra*, pp. 117-141.

We proceed now to the step-by-step development of the foregoing contentions.

I. THE COMMISSION'S REPORT SHOWS ON ITS FACE THAT THE HIGH ADDITIONAL SWITCHING CHARGE, ASSESSED ONLY AGAINST LIVESTOCK DELIVERED TO SIDETRACKS, BEARS NO RELATIONSHIP WHATEVER TO THE COST OF THE SWITCHING SERVICE RENDERED; THAT THIS CHARGE WAS INTENDED AND UNDERSTOOD TO OPERATE AS A PENALTY; AND THAT BY UPHOLDING IT THE COMMISSION WAS COVERTLY SANCTIONING PRECISELY THE SAME PROHIBITION AGAINST SIDETRACK DELIVERY OF LIVESTOCK WHICH, WHEN PROPOSED TO BE DONE DIRECTLY, THE COMMISSION IN THE SAME REPORT HELD TO BE "NOT JUST AND REASONABLE."

We direct attention at the outset to the switching charge itself, now amounting to $39.24 per car of livestock, which has been sustained as reasonable by the Commission. Quite apart from all its other infirmities, which are discussed at length below, we contend that this is not a *bona fide* charge for services rendered; that it was and is known to be a penalty, designed to prohibit indirectly what the Commission refused to permit the Chicago Junction to prohibit directly; and that it was upheld on grounds which patently reflect those conclusions.

A. The Commission's findings are inadequate to support the high additional switching charge assessed only against livestock delivered to sidetracks, and the evidence shows clearly that this charge bears no relationship whatever to the cost of the switching service rendered in such deliveries.

The sole finding of the Commission as to the quantum of the switching charge was (R. 80):

> The evidence affords no basis for a conclusion that the terminal charge of the Junction in addition to the

line-haul rates is unreasonable for deliveries of livestock to the proposed plant, considering services and modification of services that would be required for the desired deliveries and the effect upon terminal operations generally of performing such delivery service to the proposed plant.

There are no findings whatever as to the cost of the "services and modification of services that would be required." Accordingly, it follows, without more, that the Commission's ultimate finding lacks the support of those basic subsidiary findings which are requisite to its validity. *Florida* v. *United States*, 282 U. S. 194; *United States* v. *Baltimore & O. R. Co.*, 293 U. S. 454; *United States* v. *Chicago, M. St. P. & Pac. R. Co.*, 294 U. S. 499; *Interstate Commerce Commission* v. *Mechling*, 330 U. S. 567; *New York Cent. R. Co.* v. *United States*, 99 F. Supp. 394 (D. Mass.), affirmed, 342 U. S. 890; *Tennessee Valley Authority* v. *United States*, 96 F. Supp. 409 (N. D. Ala.); *Palmer* v. *United States*, 75 F. Supp. 63 (D. D. C.).

This is not a matter of the *elegantia juris*, *cf. Yonkers* v. *United States*, 320 U. S. 685, 695; *Beaumont, S. L. & W. Ry.* v. *United States*, 282 U. S. 74, 86-87, this is an insistence that there be basic findings of subsidiary facts to lend rational support to the ultimate conclusion. For without such findings of subsidiary facts, the administrative agency's ultimate conclusion is not shown to have been rationally arrived at; it may have been—and frequently is—simply the recording of a predetermined administrative fiat; and assuredly it lacks the foundation of reason—without which agency action is merely arbitrary.

The books are full of instances where extra charges imposed by the Interstate Commerce Commission have been set aside on review because unsupported by subsidiary findings which would demonstrate the reasonableness of the imposition in question. Thus, in the *Mechling* case, this Court said (330 U. S. 581, 583)—

> * * * the extra service must fit the extra charge * * * To justify increasing the reshipping rates of ex-barge grain the Commission would have to make findings supported by evidence to show how much greater is the cost to the eastern roads of reshipping ex-barge grain than of re-shipping ex-lake or ex-rail grain moving from the same localities and requiring the same service as does the ex-barge grain.

So, in the recent case involving grain rates to Baltimore (*New York Cent. R. Co.* v. *United States*, 99 F. Supp. 394 (D. Mass.), affirmed, 342 U. S. 890, where the Commission's order was set aside for, *inter alia*, lack of sufficient findings, Judge Magruder said (99 F. Supp. at 401):

> * * * the Commission does not fulfill its duty, in a case such as the present one, if it does no more than state as its ultimate conclusion that "the proposed schedules have not been shown to be just and reasonable". * * * As stated in United States v. Pierce Auto Freight Lines, Inc., 327 U. S. 515, 533, an ultimate finding is not enough in the absence of a basic finding to support it. * * * And these basic findings should be clearly stated and identified as such, so that the reviewing court will not be groping in the dark as to the grounds for the Commission's ultimate conclusion.

Similarly, in *Palmer* v. *United States*, 75 F. Supp. 63 (D. D. C.), where the district court set aside an order of the Commission increasing the per diem charge for foreign freight cars, one of the bases for such action was the lack of essential findings. On this point Judge Prettyman said (75 F. Supp. at 76):

> The contention of Commission counsel, and of counsel for the intervening-defendant railroads, that the order involved can be sustained as an order fixing compensation in the wholly remunerative sense, is quickly disposed of. * * * There are no findings of fact upon which the order could rest, if upon that theory. Such findings are wholly missing. The court could not possibly tell from the findings whether the order, if it pur-

> ported to fix only remuneration for car ownership, was fair and reasonable, or was unfair, unreasonable, and arbitrary. No findings of underlying facts which might be used as standards for that determination are in the report. We think it clear that the Commission neither intended to, nor did, rest its order upon that theory, and we doubt its ability to do so.

The Commission did not in the foregoing case appeal from the judgment setting aside its order.

And, in another case where an Interstate Commerce Commission order was set aside for want of basic findings (*Tennessee Valley Authority* v. *United States*, 96 F. Supp. 409 (N. D. Ala.)), the court specifically pointed out, *id.* at 415, that—

> No effort was made to sift the understatements and overstatements and to translate them, clearly and unambiguously, into terms of actual difference in cost involved in switching ex-barge and ex-rail freight.

In that instance, likewise, the Commission did not appeal the adverse ruling of the district court.

On the basis of the foregoing authorities, it would be necessary, in order to justify the switching charge in the present case as to amount (*i. e.*, its reasonableness under Section 1(5) of the Act), for the Commission to make findings as to the difference in cost between switching livestock to Swift's sidetrack, which involves such a charge, and the cost of switching perishables or fragile goods to the same sidetrack, both of which are delivered at the flat line-haul rates. The Commission would also be required to make findings as to the difference in cost between switching livestock to Swift's sidetrack, and switching livestock out of consolidated trains to the Union Stock Yards; the latter operation involves no switching charge, requires the carrier to bear the cost of unloading, and covers well over 37%, see pp. 20-21 *supra*, of all livestock shipped by rail to the Union Stock Yards.

Without findings of this nature, there is no support for the Commission's conclusion that the high additional switching charge assessed only against livestock delivered to sidetracks is not shown to be unreasonable. That conclusion stands simply as an arbitrary *ipse dixit*. And appellant's argument under this heading can not fairly be characterized as insistence on empty formalism, *cf. Yonkers* v. *United States*, 320 U. S. 685, 698, for the compelling reason that it is impossible for anyone on this record to make the necessary subsidiary findings which are absent from the Commission's report. The evidence shows that the real reason for the Commission's failure to find subsidiary and basic facts is that such facts are simply nonexistent.

There is evidence in the record that the handling of livestock is similar to the handling of perishables generally (R. 619, 706-707). And eggs, notably, like livestock, require special care in handling. The Commission's reports demonstrate that at some points the damage claims in respect of egg shipments aggregate on occasion almost 60% of the revenue derived from their carriage. See *New York Mercantile Exchange* v. *Baltimore & O. R. R. Co.*, 36 I. C. C. 156, 158-159. A proceeding now pending before the Commission shows that during the year 1947 claim payments at four terminal cities for eggs damaged in transit came to 41.7% of the total freight charges for that commodity, and at New York were 50.5% of the total freight charges.[1] But the delivery of eggs and other perishables to Swift's sidetrack involves no switching charge (Ex. 10 at R. 1058-1060), and yet such delivery is effected in precisely the same manner as the physical delivery of livestock to the same sidetrack, which costs $39.24 a car extra.

---

[1] See sheets 9-10 of the Examiners' Report in *Special Regulations—Eggs*, I. C. C. Docket No. 30030, and *Damage Tolerance on Shell Eggs*, I. C. C. I. & S. Docket No. 5792, argued before the Commission on October 26, 1951. These findings were not excepted to by any of the parties, and the issue in the consolidated proceeding is whether the carriers' proposed percentage limitation of liability rule is lawful in the face of Section 20(11) and other sections of the Interstate Commerce Act.

Similarly, it can not be disputed that when livestock arrives at the Union Stock Yards in consolidated trains, and over 37% does so arrive, considerable switching is necessary within the Chicago Switching District before such delivery can be effected, *supra*, pp. 17-19. And there is no evidence in this record even remotely suggesting that the livestock so shipped in consolidated trains is any less fragile or any more sturdily fashioned than the livestock which Swift seeks to receive at its own sidetrack, similarly free of a switching charge.

There is not a syllable of evidence in this record supplying proof of the expense of switching a car of livestock to Swift's sidetrack, as compared with the expense incident to switching a carload of eggs there. Similarly, there is not a shred of testimony among all the voluminous data presented to the Commission showing the expense of switching a car of livestock to the Union Stock Yards out of a consolidated train sent to the Ashland Avenue yards of the Chicago Junction, by comparison with the cost of switching the car a few blocks in the other direction, to Swift's sidetrack.[2]

---

[2] The "cost studies" included in Exhs. 50-52 (R. 1856-1867) do not consider or show line-haul rates; they set up no comparative costs of switching services; and they only purport to show switching costs within the Chicago Switching District for the two carriers having by far the longest haul from their break-up yards to the stock yards area (R. 952-971, 976-982). (The distance from the Milwaukee's Bensenville Yard to the Union Stock Yards is 27 miles, from the Proviso Yards of the Chicago & North Western it is 18 miles (R. 69).) The engine hour costs are divided into the number of cars in the switching movement to get the cost per car. This, obviously, shows (a) nothing as to the difference in the costs of switching a car of eggs to Swift's sidetrack as compared with the cost of switching a car of livestock to the same sidetrack, and (b) nothing as to the difference in cost of switching a car of livestock to the Union Stock Yards as compared with switching a car of livestock to Swift's sidetrack.

It was said in the Commission's Motion to Affirm (p. 10) that "the record reveals (Exhibit 50-52) that the carriers receive no revenue on the basis of the line-haul rates that would allow them to pay the switching charge." This comment misapprehends both the contents of the cited exhibits and the direction of appellant's argument, which on this point is based on Assignment of Error 31, R. 216.

The short of the matter is that the Commission's negative conclusion as to the lack of showing of unreasonableness of the high additional switching charge of $39.24 per car, assessed only against livestock delivered to sidetracks, is not only unsupported by any subsidiary findings on which that ultimate conclusion can be rested, it is likewise unsupported by any evidence in this record, or—we submit with assurance—by any evidence which could be adduced in any other proceeding.

Of course we do not for a moment concede that any additional switching charge assessed only against livestock delivered to sidetracks, however reasonable in and of itself, however well supported by evidence and subsidiary findings, could possibly be lawful. Even a reasonable charge so limited would be unjustly discriminatory and unduly prejudicial in violation of numerous provisions of the Interstate Commerce Act, as we go on to show under Point II, *infra*, pp. 63-89. But we think it is highly significant that no appellee up to now has undertaken to defend the reasonableness *per se* of the high additional switching charge now in question, either by pointing out the existence of the criteria which would establish such reasonableness, or by reasoned argument in support of that charge's present level. This pointed omission serves both to introduce—and to underscore—our next contention, *viz.*, that the present switching charge was and is designed as a penalty, rather than as an honest fee measured by the cost of services to be rendered.

B. The high additional switching charge assessed only against livestock delivered to sidetracks was intended as, and understood to be, a prohibitive penalty.

The reason why the Commission's finding as to the reasonableness of the amount of the high additional switching charge assessed only against livestock delivered to sidetracks is unsupported either by subsidiary findings or by evidence as to the cost of the switching service involved

in such delivery is not hard to find: That amount, now $39.24 per car, was not and is not based on cost of service, but was and is placed thus high in order that this kind of service would never be demanded. It was intended to be and is a prohibitive penalty, to preclude such service ever being asked or rendered. And the Commission's report shows on its face that the Commission itself fully understood and appreciated—and approved—this aspect of the switching charge.

As we have shown, the Commission found that the delivery to Swift of "even 18 cars of livestock daily"—the average of Swift's direct shipments—"would considerably delay and burden defendants' operations" (R. 74-75). Moreover, the Commission placed great stress on the circumstance that plant delivery of livestock to packers generally "would seriously interfere with, delay, and disrupt terminal transportation operations and the movement of livestock generally." See pp. 33-34, *supra*. To the extent that the Statement herein and the Commission's report fail to convey the full details of the disruption thought by certain of the witnesses to result from compliance with the anti-discrimination provisions of the Interstate Commerce Act, the intervening appellees' briefs will doubtless, as they did in the court below, supply any lurid touches that may have been overlooked. The significant point for present consideration is that the Commission, which found that the claimed disruption would occur, made no move to preclude its occurrence. Instead, it found (R. 80-81):

> The published switching charge is appropriate for any switching that may occur of cars of livestock to complainant's proposed plant. *It does not appear that the maintenance of a switching charge for livestock will have any detrimental effect upon terminal operations.*

We have ourselves italicized the last sentence, because it proves our point: Maintenance of a high additional switching charge assessed only against livestock consigned to sidetracks will prevent disruption because it will keep live-

stock from being shipped to sidetracks. Plainly, therefore, the switching charge operates as a prohibitive penalty, and the Commission knew it and so stated. The truth of our contention that the present switching charge of $39.24 per car of livestock is not an honest charge, measured by the cost of services rendered, is thus established by the Commission's report itself.

C. By upholding the switching charge on livestock, the Commission was covertly sanctioning precisely the same prohibition against shipment of livestock which, when frankly proposed by the railroad, the Commission in the companion case held to be "not just and reasonable".

We recognize, of course, that terminal operations may well be regarded as a subject peculiarly within the competence of a body "appointed by law", "informed by experience", and dedicated to the public interest in the removal of unlawful discriminations. Consequently, if the Commission had, in furtherance of the National Transportation Policy, *infra*, p. 142, "to promote safe, adequate, economical, and efficient service," determined that it was essential to "efficient and expeditious terminal operations generally" (R. 71) to prohibit altogether livestock shipments into a particular area, we should have a very different case. A court might well hesitate before setting aside such an order. But no such order is involved here.

To the contrary, when the Chicago Junction Railway proposed to take the precise step which would avoid the disruption which was testified to and which the Commission found would result in interference, delay, and disruption in terminal transportation operations, the Commission denied the Junction permission to do so.

The Junction proposed (R. 59) "to specifically exempt livestock from the traffic which it will transport and to cancel the application on livestock of all switching charges published by it, except to and from chutes and sidings at the Union Stock Yards." In other words, the Junction

undertook to prohibit entirely the precise kind of traffic which on the Commission's reasoning would result in disruption, and to restrict itself to its existing method of delivering livestock, *viz.*, to the chutes of the Union Stock Yards. Did the Commission seize upon this opportunity to prevent the possibility of destructive disruption? It did not. It said (R. 77) that "The proposed complete exemption of livestock from transportation by the Junction under any circumstances is not justified." It pointed out (R. 80) that "The Junction provides for switching charges on 'all carload freight.' That provision, without qualification, includes livestock. There is therefore a holding out by the Junction to switch livestock to and from industries, sidings, team tracks, and districts listed in the tariff." And, accordingly, the Commission found (R. 81),

> that the proposal to specifically exempt livestock from the traffic which will be transported by the Junction at Chicago and to cancel the application on livestock of switching charges, except to and from chutes and sidings at the Union Stock Yards at that point, is not just and reasonable.

The result of the foregoing is that the Commission in this case is enforcing a penalty—"It does not appear that the maintenance of a switching charge for livestock will have any detrimental effect upon terminal operations"—in a situation where it has specifically ruled that an unequivocal prohibition is "not just and reasonable."

It follows that, if Swift cares to spend $254,628.36 annually—6489 cars a year at $39.24 per car—it is entirely free "seriously [to] interfere with, delay, and disrupt terminal transportation operations and the movement of livestock generally" (R. 77)—and, under the order of the Commission and the ruling of the court below, such a course would be perfectly lawful. That conclusion, obviously, makes neither good sense or good law. If what Swift sought was against the public interest, it should not be permitted at any price.

The Commission's report does not, doubtless because it can not, face this inherent infirmity in the orders made. The court below, ignoring repeated admonitions of this Court,[3] wrote no opinion to explain or justify the result, an omission which is the more disturbing where, as here, the case comes to this Court on direct appeal as of right, without any further sifting or clarification of the issues involved. The intervening appellees ignored the inconsistency in their motion to affirm. And the position of the Commission's legal representatives, as disclosed in this Court, is even more tongue-in-cheek than the Commission's original report.[4]

D. Being a penalty and not a compensatory exaction, the high additional switching charge assessed only against livestock delivered to sidetracks is unreasonable per se and therefore illegal.

The present case will not be the first instance where the courts have prevented the Interstate Commerce Commission from doing indirectly what it could not lawfully do directly.

In *Interstate Commerce Commission* v. *Mechling*, 330 U. S. 567, one of the grounds on which the setting aside of the Commission's order was affirmed was that the regulatory agency had attempted to produce indirectly a result which Congress had forbidden to be done directly. In the language of this Court (330 U. S. at 577-578)—

> Recognizing that it could not require these barge carriers to raise these inbound rates which it accepted as reasonable, the Commission has here approved an order which would bring about the same prohibited

---

[3] *Cleveland, etc., Ry.* v. *United States*, 275 U. S. 404, 414; *Beaumont, S. L. & W. Ry.* v. *United States*, 282 U. S. 74, 86-87, and cases there cited.

[4] "The Commission will not, and should not be required to resort to legalistic thinking as a substitute for the application of reason to practical problems. While the charge was entirely reasonable for the service the Commission knew that it would be availed of when Swift had special need to have livestock moved in that way." I. C. C. Motion to Affirm, p. 19.

result by raising the railroad rates charged by eastern roads for ex-barge grain shipments east from Chicago. Congress has forbidden this.

In *Palmer* v. *United States*, 75 F. Supp. 63 (D. D. C.), already cited in another connection, where the court had under consideration the Commission's order in *Increased Per Diem Charge on Freight Cars*, 268 I. C. C. 659, the issue was whether, wholly apart from fixing reasonable remuneration for car ownership—*i. e.*, the charge that the using carrier must pay the owning carrier for the use of the latter's cars—the Commission had power to increase the established per diem charge so as to make that charge an instrument of regulation to control the prompt movement and return of foreign freight cars. The district court, *per* Prettyman, Circ. J., held that the Commission had no such power, saying *inter alia* (75 F. Supp. at 67, 68, 75):

> While the determination of proper compensation is a phase of the regulation of use, it is a specific power with definite characteristics and limitations. It is not an elastic concept adaptable in amount for use for other regulatory purposes. • • •
>
> • • • • •
>
> The penalty or incentive characteristic of the per diem is merely an inherent quality of a charge based upon time. Reference to that quality is not equivalent to saying that a rental can, by a prohibitive amount, be made an instrument of compulsion. An inherent quality of its reasonable amount is one thing, but an indefinite expansibility of its amount for regulatory purposes is quite another.
>
> In the second place, in its ordinary and generally-accepted meaning, "reasonable compensation" does not include amounts in addition to actual remuneration. The term is a widely-used and familiar expression, not unlike expressions such as reasonable salaries, reasonable rents, reasonable prices. We know of no departure from the concept that they are based on an equivalence with the thing or service given. "Reasonable compen-

> sation for use," does not convey a prohibitory or regulatory idea.
>
> * * * * *
>
> We hold that the statutory authority to fix reasonable compensation for the use of cars does not empower the Commission to establish, solely for general car-service regulatory purposes, rentals in excess of any purported reasonable recompense to the owner.

The Commission did not appeal the adverse judgment in the case cited; which is to say, it confessed correctness.

The considerations outlined in the *Mechling* and *Palmer* cases are fully applicable here. The Commission lacks the power to approve an admittedly unreasonable charge, since to do so would violate Section 1(5). Here it is not necessary to argue the rate level, since the Commission's own report (R. 80-81) frankly admits that the high additional switching charge assessed only against livestock delivered to sidetracks is a penalty. Hence that charge is unreasonable *per se,* and illegal. Indeed, the present case is more flagrant than those just discussed, for here the Commission itself has, in the same report, specifically declined to sanction directly the precise step of preventing all sidetrack delivery of livestock which, with the same breath, it is now sanctioning indirectly through the approval of an excessively high switching charge. We doubt if the files of this Court, or, indeed, the history of American administrative law, will disclose a similar admission on the part of any regulatory agency of the kind of covert regulation undertaken in this case and now sought to be defended.

II. THE HIGH ADDITIONAL SWITCHING CHARGE ASSESSED ONLY AGAINST LIVESTOCK DELIVERED TO SIDETRACKS VIOLATES NUMEROUS PROVISIONS OF THE INTERSTATE COMMERCE ACT.

Our next point is that the switching charge of $39.24 per car, which is assessed only against livestock delivered to sidetracks, in addition to being unreasonable—or, *arguendo*, even assuming it to be reasonable standing alone[5]—is discriminatory and prejudicial in violation of numerous sections of the Act.

A. The switching charge violates Section 3(1) of the Act because it is unduly and unreasonably prejudicial to livestock.

The present switching charge violates Section 3(1) of the Act (*infra*, p. 145), because it subjects livestock consigned to Swift's sidetrack to an undue prejudice as compared with other species of traffic consigned to the same point, in violation of the provision that carriers shall not subject "any particular description of traffic" to such a disadvantage. Livestock consigned to Swift's sidetrack from any point must pay a switching charge of $39.24 a car in addition to the line-haul rate, while all other freight consigned to the identically same track, including eggs and perishables, pays only the line-haul rate, without more, regardless of what switching may have been involved within the Chicago Switching District.

---

[5] It was early recognized that "a charge may be perfectly reasonable under section 1 [now Section 1(5)], and yet may create an unjust discrimination or an unreasonable preference under sections 2 and 3." *Interstate Commerce Comm.* v. *Baltimore & O. R. Co.*, 145 U. S. 263, 277.

Accord: "Both rates may lie within the zone of reasonableness and yet involve unjust discrimination." *American Express Co.* v. *Caldwell*, 244 U. S. 617, 624. "Both rates may lie within the zone of reasonableness and yet result in undue prejudice." *United States* v. *Illinois C. R. Co.*, 263 U. S. 515, 524.

As we have shown, the switching charge on livestock so consigned is not based on the need for expeditious handling, for perishables are not subject thereto, nor is it based on fragility, as eggs likewise are delivered free from any switching charge. We have also shown that the switching charge was intended to prevent, and was found by the Commission to be effective for the purpose of preventing, the shipment of livestock to Swift's sidetrack.

The result is a clear violation of Section 3(1), as it has long been settled that railroads can not lawfully single out and exclude a particular commodity from the traffic transported by them as common carriers over their lines to a particular destination. *Louisville & Nashville R. Co.* v. *United States*, 238 U. S. 1; *Louisville & Nashville R. Co.* v. *United States*, 242 U. S. 60, 74; *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169; *Interstate Stock-Yards Co.* v. *Indianapolis U. Ry. Co.*, 99 Fed. 472, 493 (C. C. D. Ind.). As this Court said in the case first cited (238 U. S. at 19):

> Having made the Yard a facility for many purposes and to many patrons, such railroad facility is within the provisions of § 3 of the statute which prohibits the facility from being used in such manner as to discriminate against patrons and commodities. The carriers cannot say that the Yard is a facility open for the switching of cotton and wheat and lumber but cannot be used as a facility for the switching of coal. Whatever may have been the rights of the carriers in the first instance; whatever may be the case if the Yard was put back under the protection of the proviso of § 3, the Appellants cannot open the Yard for most switching purposes and then debar a particular shipper from a privilege granted the great mass of the public. In substance that would be to discriminate not only against the tendering railroad, but also against the commodity which is excluded from a service performed for others.

Obviously there is no difference in substance between an absolute refusal to deliver livestock at the line-haul rate,

such as was involved and condemned in *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, and a refusal to deliver livestock except upon payment of a prohibitive—and admittedly effective—penalty, which is the situation here. In either event, livestock is being subjected to an illegal disadvantage.

The only portions of the Commission's report which even bear on Swift's contention that livestock as a commodity was being subjected to undue prejudice and disadvantage are those which suggest (R. 65) that "The measure of the transportation services rendered shipments of live animals is substantially greater than that accorded dead freight," those stressing the delicate nature of livestock (R. 73), and those dealing with the carriers' obligations under the Federal 28-hour law (45 U. S. C. 71-74, *infra*, pp. 147-149) (R. 64).

There are several answers to these suggestions.

First. 37% of the trains carrying livestock to the Union Stock Yards—which means substantially more than 37% of the livestock so carried, see pp. 20-21, *supra*—are consolidated trains, carrying livestock and dead freight, with the result that switching and "set outs" are necessary to get that livestock to the unloading chutes (R. 62-63). Yet neither the Union Stock Yards nor its consignees are subjected to the $39.24 per car switching charge in respect of the livestock so switched.

Moreover, considerable switching of livestock takes place long before any livestock reaches the Chicago Junction's tracks. For, although the Commission significantly failed to advert thereto, it is the fact that even the trains for the Union Stock Yards which consist of livestock exclusively are made up at the several line-haul carriers' break-up yards from mixed trains arriving at Chicago (R. 609, 634-635, 649-650, 675-676, 692). In many instances, too, considerable switching takes place before arrival in the Chicago Switching District (R. 634-635, 649, 675-676). But, while the Commission's report expounds at some length the

delicate nature of livestock and the need for special handling in connection therewith (R. 73), that report nowhere undertakes to explain why or in what respect the livestock proposed to be switched to Swift's sidetrack is so much more fragile than those remarkably sturdy animals which the carriers switch out of consolidated trains, sometimes twice within the Chicago Switching District, for delivery at the Union Stock Yards or to the carriers' team tracks in Chicago (Ex. 17, R. 1101-1102), that the former involves an additional charge of $39.24 for each car so switched, while the latter costs nothing beyond the line-haul rate. Nor does the record reflect any data as to the relative stamina of the two groups of livestock, although the Commission has ruled that the livestock destined to Swift's sidetrack must pay the switching fee, while the livestock consigned to the Union Stock Yards or to the carriers' team tracks, does not.

Second. It is also the fact that other fragile and perishable commodities, notably eggs and live poultry, also require a substantially greater measure of transportation services than that accorded other dead freight. See p. 54, *supra*, for the statistics relative to the staggering extent of claims for damages to egg shipments. But such other commodities are not subjected to any switching charge when delivered to the same Swift sidetrack (Ex. 10 at R. 1058-1060).

Third. With respect to the 28-hour law, that law—or its predecessor—has been specifically held not to justify a Section 3(1) discrimination against livestock. See *Interstate Stock-Yards Co.* v. *Indianapolis U. Ry. Co.*, 99 Fed. 472, 483, *supra*. Moreover, every delivery of livestock throughout the land is subject to the 28-hour law, whether the animals being carried are consigned to the Union Stock Yards, to Swift's sidetrack at the Omaha plant in Chicago, to the several carriers' team tracks in Chicago (Ex. 17, R. 1101-1102), or to the sidetracks at the many packing plants throughout the entire country which are listed in Exhibits 10 and 12 (R. 1063-1069, 1083-1090).

Fourth. There is a longer technical answer which is equally conclusive.

In *Omaha Live Stock Exc.* v. *Chicago & N. W. Ry. Co.*, 178 I. C. C. 1, 14, and again in *Chicago Live Stock Exc.* v. *Atchison, T. & S. F. Ry. Co.*, 219 I. C. C. 531, 542, the Commission specifically declared that the basic livestock rates which it prescribed and which are now in effect (plus general increases subsequently authorized) were placed by it on a level adquate to compensate for the receipt, line-haul transportation, and delivery of livestock to all points. The Commission on these occasions said (178 I. C. C. at 14):

> Those rates have been designed, not only to afford uniformity and equality as between shippers and as between markets, but they have also been designed to cover, not only line-haul service, but also terminal service involving both receipt of shipments at points of origin and their delivery at destination.

And again (219 I. C. C. at 542)—

> * * * the through rates prescribed in the latter proceeding [*Livestock—Western District Rates*, 176 I. C. C. 1] were designed to cover the cost of normal terminal services, including unloading charges.

Next, carriers need not pay for the service of unloading livestock delivered to a private sidetrack, while they are required to absorb such charges, out of the line-haul rate, in respect of livestock delivered at a public stockyards such as the Union Stock Yards; this follows from the terms of Section 15(5) of the Act, *infra*, p. 145. Moreover, the Commission has held that the railroads are not required, without extra charge, to unload and reload livestock at intermediate points as required by the 28-hour law when destined for delivery to a private sidetrack. *Cudahy Packing Co.* v. *Atchison, T. & S. F. Ry. Co.*, 234 I. C. C. 569. This has the effect of relieving the carriers of the cost of an intermediate service in respect of deliveries of livestock to pri-

vate sidetracks which the carriers must assume in the transportation of livestock to public stockyards. And, finally, the Commission has specifically held that the line-haul rates on livestock are adequate to cover delivery to Swift's sidetrack at the Omaha Packing Co. location on the rails of the Burlington. *Chicago Live Stock Exc.* v. *Atchison, T. & S. F. Ry. Co.*, 219 I. C. C. 531, 546, 547 (Fdg. 10), 548.

The result is that, under the Commission's own rulings, there are specific findings that (1) the line-haul rates are intended to and do cover all transportation services necessary to the delivery of livestock to private sidetracks, and (2) that such transportation services involve less expense to the carrier than do similar shipments to public stockyards, in two respects, *viz.*, unloading and reloading in transit, and unloading at destination. Consequently, the Commission's attempts on general principles to justify the switching charge here in question, which is directed solely against livestock delivered to sidetracks, breaks down completely, and the discrimination against livestock as a commodity is revealed in all its stark inequality.

We do not now urge a further violation of Section 3(1), to the effect that the carriers discriminate against appellant with respect to delivery of livestock at points on their lines other than Chicago. To pursue this contention would involve inquiry as to whether conditions at these other points, where one or more of the railroad appellees here effect delivery of livestock at the flat line-haul rate to the sidetrack of the packer concerned, are similar to or different from those obtaining at Chicago. We call attention here to these other sidetrack deliveries of livestock without switching charges simply to show that what Swift is seeking in this case is no novelty, but that on the contrary the delivery of livestock to the sidetracks of meat packing companies is the normal practice throughout the United States. See Ex. 10 (at R. 1063-1069), offered by appellant, and Ex. 12 (R. 1083-1090), introduced by the railroad appellees, which together include substantially all of the important meat pack-

ing points in the nation, with the sole significant exception of the packing plants on the rails of the Chicago Junction. The consignees at all of these points get what Swift is seeking here, *viz.*, sidetrack delivery of livestock at the line-haul rate.

B. The switching charge violates Section 2 of the Act because it results in different rates for shipments of the same commodity, over the same line, for the same distance, under the same circumstances of carriage.[6]

Section 2 of the Act (*infra*, pp. 144-145) forbids rebates and similar devices and likewise forbids the receipt of different compensation "for doing * * * a like and contemporaneous service in the transportation of a like kind of traffic under substantially similar circumstances and conditions * * *".

The construction of this provision was fixed soon after its passage. See *Wight* v. *United States*, 167 U. S. 512, 518, where the Court said:

> It was the purpose of the section to enforce equality between shippers, and it prohibits any rebate or other device by which two shippers, shipping over the same line, the same distance, under the same circumstances of carriage, are compelled to pay different prices therefor.
>
> It may be that the phrase "under substantially similar circumstances and conditions," found in section 4 of the act, and where the matter of the long and short haul is considered, may have a broader meaning or a wider reach than the same phrase found in section 2. It will be time enough to determine that question when

[6] Interveners contend (Motion to Affirm, p. 7, n. 4) that appellant can not raise here any issue under Section 2 because that provision was not mentioned in the complaint before the Commission. But the Commission's report states clearly that the legality of the switching charge is the issue (R. 59), and Section 2 obviously bears thereon. Consequently, interveners' contention is completely disposed of by the undoubted proposition that it is not necessary to plead law in a proceeding before the Commission. *Chicago, R. I. & P. Ry. Co.* v. *United States*, 274 U. S. 29, 36-37; *Swift & Co.* v. *Baltimore & O. R. Co.*, 266 I. C. C. 55, 56.

it is presented. For this case it is enough to hold that that phrase, as found in section 2, refers to the matter of carriage, and does not include competition.

The foregoing standard represents the settled rule for the interpretation of Section 2, both in the decisions of this Court (*Interstate Commerce Comm.* v. *Alabama M. R. Co.*, 168 U. S. 144, 166; *Interstate Commerce Comm.* v. *Baltimore & O. R. Co.*, 225 U. S. 326, 341-342; *Seaboard Air Line Ry. Co.* v. *United States*, 254 U. S. 57, 62) and in the rulings of the Commission (*Import Rates on Manganese Ore*, 25 I. C. C. 663, 668; *Pacific Lumber Co.* v. *Northwestern P. R. R. Co.*, 51 I. C. C. 738, 760; *Lawrenceville Cooperage Co.* v. *Akron, C. & Y. Ry. Co.*, 226 I. C. C. 773, 781-782; *R. C. Williams & Co., Inc.* v. *New York Central R. Co.*, 269 I. C. C. 297, 300).

We propose to show that, as a matter of fact, the transportation of livestock to the Swift sidetrack for the line-haul rate plus $39.24 per car switching fee, while similar transportation of the same commodity to the Union Stock Yards is made at the line-haul rate without any switching fee, involves a like and contemporaneous service under the same circumstances of carriage. Thereafter we will go on to show that, as a matter of law, nothing in this record justifies the resultant discrimination.

(i) *As a matter of fact, this case involves like and contemporaneous service under the same circumstances of carriage.*

First. About half of the livestock arriving at the Union Stock Yards by rail represents direct shipments, already owned by the consignees, and is consigned there because such consignees prefer to accept delivery through those facilities (Ex. 28, R. 1117). Among such consignees are Armour & Company, Wilson & Company, and some 20 or so others who, like Swift, operate meat packing plants in or adjacent to the Stock Yards areas, and so are competitors of Swift (R. 947-948; Ex. 29, R. 1118-1121).

Second. A car of livestock consigned to one of Swift's competitors at the Union Stock Yards, and one consigned to Swift at its private sidetrack, follow precisely the same rail movement from point of origin, to the several line-haul carriers' break-up yards in the Chicago Switching District, to the eastern limits of the Junction's Ashland Avenue yards, for precisely the same distance (R. 283-285, 476-478, 480-482, 505, 506-507, 684-685). Beyond this point, as the map, Exhibit B (*infra*, p. 150) shows, the distance to Swift's sidetrack on the Junction is somewhat less than to the Union Stock Yards' unloading pens, also on the Junction; so that the total distance over which the car of livestock would be transported to Swift's sidetrack from point of origin would normally be slightly less than the distance over which a competitor's car of livestock would be transported to the Union Stock Yards from point of origin. But for this slightly shorter journey, Swift must under the Commission's ruling—now sustained by the court below—pay an extra switching fee of $39.24 per car over and above the amount paid by its competitors at the Union Stock Yards.

Third. As has already been pointed out in the discussion of Section 3(1), substantially over 37% of the livestock arriving at the Union Stock Yards by rail arrives in consolidated trains; such livestock requires additional switching and "set outs" beyond the simpler operation involved in delivering to the same point trains containing livestock exclusively; and even as to the latter deliveries, substantial switching is involved before and after arrival in the Chicago Switching District. See pp. 17-21, *supra*. Yet there is no switching charge for the livestock delivered to Swift's competitors at the Union Stock Yards, whether in consolidated trains or otherwise, while cars proposed to be delivered to Swift at its own sidetrack a few city blocks distant, are subject to such a charge in the amount of $39.24 per car.

Fourth. The services performed at the Union Stock Yards in respect of livestock consigned there, for which yardage fees are charged and paid, are not comprehended within "carriage" or "transportation" by rail. In *Chicago Live Stock Exc.* v. *Atchison, T. & S. F. Ry. Co.*, 219 I. C. C. 531, the Commission held that the carriers were required to deliver livestock at the pens of the Union Stock Yards on the Junction rails without any terminal charge in addition to the line-haul rates (which latter had previously been prescribed in *Livestock—Western District Rates*, 176 I. C. C. 1). Subsequently, the Commission ruled that the transportation of direct shipments of livestock "ends when the livestock has been unloaded into the unloading pens at the Union Stock Yards" (*Swift & Co.* v. *Alton R. Co.*, 238 I. C. C. 179, 196), and this Court held, sustaining the Commission, that it had "properly decided that transportation ended when the livestock reached the unloading pens" at the Union Stock Yards. *Swift & Co.* v. *United States*, 316 U. S. 216, 231. Since Section 2 relates only to "the matter of carriage", see *Wight* v. *United States*, *supra*, 167 U. S. at 518, it follows that any yardage charges paid after transportation has ended are not factors which may properly be considered in determining whether the carriers are providing that equality of rates for like services which Section 2 enjoins upon them.

(ii) *As a matter of law, Section 2 applies to all deliveries in the same terminal or switching district.*

The foregoing facts bring the present case squarely within the decisions which hold that Section 2 applies to all deliveries within the same terminal or switching district. *Seaboard Air Line Ry. Co.* v. *United States*, 254 U. S. 57, sustaining the Commission's report in *Richmond Chamber of Commerce* v. *Seaboard A. L. Ry.*, 44 I. C. C. 455; *Albers Bros. Milling Co.* v. *Great Northern Ry. Co.*, 256 I. C. C. 491; *Minneapolis Traffic Assn.* v. *Chicago & N. W.*

Ry. Co., 266 I. C. C. 729; *Williams Lime Mfg. Co.* v. *Southern Ry. Co.*, 279 I. C. C. 561.

The *Richmond* case involved a situation where, when freight was received at a point served by any two or more of the carriers concerned, the switching charge was absorbed if the freight was delivered on the line of either, but not if delivery was to an industry served only by a non-competitive carrier. The Commission found that these practices involved an unlawful discrimination under Section 2, saying (44 I. C. C. 455, 464-466):

> Section 2 is primarily directed against discrimination between shippers located in the same community. It is aimed to put all shippers within a switching district upon a substantial equality. * * *
>
> * * * where the industries are situated within the switching district of the same city and are substantially equidistant from the respective interchange tracks, we are of the opinion that the service which the line-haul carrier renders, whether the traffic is ultimately destined to industry B or industry C, is like service within section 2. It is the line-haul movement which that section primarily contemplates. Where the short delivery service within the switching district is substantially the same in either instance, we are of the opinion that the line-haul carrier is receiving a greater compensation from one shipper than from another for a like service when it absorbs the switching charges of one switching line and not those of another.

That determination was sustained by this Court in *Seaboard Air Line Ry. Co.* v. *United States*, 254 U. S. 57, 62, the Court saying:

> We are of the opinion that the Commission was correct in regarding the service in question as a like and contemporary service rendered under substantially similar circumstances and conditions, and amply sustained as matter of law in *Wight* v. *United States*, 167 U. S. 512 * * *.

Here, as in the *Richmond* case, Swift and the Union Stock Yards are on the lines of the same carrier, the Chicago Junction, and within the same switching district; and the distance from the interchange point to Swift's sidetrack is slightly less than to the Stock Yards pens (*supra*, pp. 15-16). Application of the *Richmond* rule, therefore, would have produced a result quite the opposite of that actually reached by the Commission in the present case.

The *Richmond* rule, *viz.*, that Section 2 applies to all deliveries within the same switching district, was followed by the Commission in *Albers Bros. Milling Co.* v. *Great Northern Ry. Co.*, 256 I. C. C. 491; it was followed by the Commission in *Minneapolis Traffic Assn.* v. *Chicago & N. W. Ry. Co.*, 266 I. C. C. 729, 768; and it was again applied by the Commission, after its ruling in the present case, in *Williams Lime Mfg. Co.* v. *Southern Ry. Co.*, 279 I. C. C. 561. Thus, so far as the Interstate Commerce Commission is concerned, the *Richmond* rule is law everywhere except on the tracks of the Chicago Junction when livestock is being delivered to sidetracks.

In the *Williams Lime Mfg. Co.* case, to take the latest example, complaint was made because the defendant carriers failed to accord the flat Knoxville rates on inbound shipments of coal, and outbound shipments of lime, crushed stone, and cement, to and from complainant's plant at South Knoxville, while according such rates to other industries within the Knoxville industrial area. The Commission found that there was no undue prejudice in violation of Section 3(1), and further found that the rates were not unreasonable in violation of Section 1(5). But it found that there was none the less an unjust discrimination in violation of Section 2, because (279 I. C. C. at 566):

> The Southern receives its published charge for switching Louisville & Nashville line-haul traffic to industries at present accorded Knoxville rates and it is entitled to reasonable compensation for such service, but since the service performed to and from complainant's plants is shown to be substantially the same

as that performed for the Louisville & Nashville in connection with like traffic on which the Southern's charge is absorbed by the Louisville & Nashville, there is no sound basis for greater charges on the complainant's traffic than on like traffic accorded the Knoxville rates. See *Albers Bros. Milling Co.* v. *Great Northern Ry. Co.*, 256 I. C. C. 491, at pages 498 and 499.

An order was entered accordingly.

Barringer & Co. v. *United States*, 319 U. S. 1, is not to the contrary. That case dealt with tariffs which eliminated a loading charge on cotton moving from points in Oklahoma to certain points on the Gulf of Mexico, while retaining it on cotton moving to the Southeast. The question was whether the Commission erred in refusing to set aside those tariffs. See *Loading Cotton in Oklahoma*, 248 I. C. C. 643. Since the cotton shipments involved were destined to different rate territories, and moved over different railroads at different rate levels to reach their destinations, the case obviously did not involve the Section 2 situation of "shipping over the same line, the same distance, under the same circumstances of carriage" (*Wight* v. *United States*, 167 U. S. 512, 518, *supra*). Therefore, while the *Barringer* case is authority for the proposition that the rates there considered were not unduly prejudicial in violation of Section 3(1), anything therein said as to the effect of Section 2 is, we submit with deference, mere dictum.

In view of the Commission's rulings, cited above, pp. 72-73, to the effect that Section 2 applies to all deliveries within the same terminal or switching district, and its other line of cases, holding that Section 2 does not apply where the deliveries in question have been over different lines (*Philadelphia Commercial Traffic Mgrs.* v. *Baltimore & O. R. R. Co.*, 104 I. C. C. 173, 177; *Richfield Oil Corp. of N. Y.* v. *Central R. Co. of N. J.*, 232 I. C. C. 505; *Gar Wood Industries, Inc.* v. *Alton & S. R.*, 263 I. C. C. 611, 616; *Mobile Traffic Assn.* v. *Georgia & F. R.*, 266 I. C. C. 483, 488; *R. C.*

Williams & Co., Inc. v. *New York Central R. Co.*, 269 I. C. C. 297, 300), it follows that the Commission's standards for the applicability or otherwise of Section 2 have hardened into fixed rules to such an extent that deviation from those rules for the purposes of a particular case involves the exercise, not of an informed discretion, but of arbitrary action contrary to law.

We submit, therefore, that the present case, which involves deliveries within the same switching district after movements over the same lines, falls within Section 2 as a matter of law.

(iii) *As a matter of law, the existence or non-existence of trackage contracts can not justify or excuse violations of Section 2.*

The only possible distinction in this record between the physical delivery of livestock to Swift at its own sidetrack and to Swift's competitors at the Union Stock Yards is that, under trackage agreements, the movement from the east end of the Ashland Avenue yards to the chutes of the Union Stock Yards is performed by motive power of the line-haul carrier, while to the Swift sidetrack it is performed by motive power of the Junction. (R. 60, 72.)

We submit that, under well-settled principles, the mere fact that the Junction elects to permit line-haul carriers to effect delivery from the eastern end of the Ashland Avenue yard to the Union Stock Yards by their own motive power, for a trackage charge, while with respect to deliveries of the identical commodity to Swift's sidetrack, it agrees with the line-haul carriers to perform the switching service by Junction motive power, is not sufficient to take the resultant disparity rates out of the anti-discrimination rule laid down by Congress in Section 2.

For, obviously, no voluntary agreement can be permitted to justify discrimination or to relieve carriers from the substantive requirement of equal treatment of shippers prescribed by Section 2 and a multitude of other provisions of

he Interstate Commerce Act. *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, and cases there cited. And rackage agreements are simply voluntary agreements between carriers under which one carrier is permitted to perate its motive power and move its cars over the tracks f another carrier. Consequently, as the Commission itelf has pointed out, "Trackage arrangements have been onsidered by the Commission in a number of cases, in one of which have we ever allowed the contracting carriers under cover thereof to work unjust discrimination gainst shippers or localities." *Huerfano Coal Co.* v. *Colorado & S. E. R. R. Co.*, 41 I. C. C. 657, 659, citing many rulngs. Or, as was said in *Benton Coal Mining Co.* v. *Chicago, B. & Q. R. R. Co.*, 63 I. C. C. 396, 399: "We have epeatedly held that trackage arrangements can not be sed as a cloak to cover unjust discrimination."

This Court's holdings are to the same effect. In *United tates* v. *Pennsylvania R. Co.*, 266 U. S. 191, it was specifically held that neither the existence nor the absence of rackage rights could justify an unjust discrimination therwise prohibited by Section 2. And in the recent case f *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, was ruled that a railroad, operating over a portion of rack owned by another, could not justify discriminatory ractices in reliance on the covenant to discriminate conained in the very trackage agreement pursuant to which used the track segment in question.

It is no answer for the appellees to urge that Swift may onsign its livestock to the Union Stock Yards and there e free of the $39.24 per car switching charge. For then s livestock would be subject to yardage fees, which are ot included in transportation and which the Commission as no power to regulate. *Swift & Co.* v. *United States*, 16 U. S. 216. And of course, when Swift seeks delivery o its own sidetrack, delivery to the Union Stock Yards ould not be a good delivery. *North Penn. Railroad* v. *Commercial Bank*, 123 U. S. 727. The essential vice of the

Commission's ruling is that, through the operation of the high switching charge, it enforces delivery of livestock to the Stock Yards, the owner of the Junction property, thus enriching the Union Stock Yards & Transit Co. by the collection of fees for stockyards services which are neither necessary nor desired where a consignee is in a position to take delivery on his own sidetrack. Consequently, from still another aspect, the Commission again does indirectly what would not be lawful if done directly.

To the extent that delivery of livestock at Swift's sidetrack requires Swift to bear the cost of unloading, while when livestock is delivered at the Union Stock Yards the carriers are required to absorb that cost, the ensuing differentiation results from the terms of Section 15(5) of the Act (*infra*, p. 145), and so is lawful. But beyond that, the discrimination whereby Swift must pay $39.24 more per car of livestock than its competitors do, where both ship from the same point of origin, over the same distance (except that to Swift's sidetrack the distance is slightly less) and under identical circumstances of carriage except for the ownership of the final switching engine, is clearly unlawful by reason of Section 2.

(iv) *Where discrimination is plain, there is no room for "expertise".*

The minutiae of the car movements over the last few city blocks of the aggregate distance involved are obviously immaterial, and are disposed of by what this Court said in *Mitchell* v. *United States*, 313 U. S. 80, 97:

> On the facts here presented, there is no room * * * for administrative or expert judgment with respect to practical difficulties. It is enough that the discrimination shown was palpably unjust and forbidden by the Act.

Here, as in the *Mitchell* case, the Commission has been guilty of pushing into view the burdens which the render-

ing of equal treatment might place on the carriers, and of putting out of view the palpable discriminations visited upon the users of the carriers' facilities. In both instances, the Commission's reports reflect an "expertise" that concentrated primarily on finding reasons for continuing clear and obvious discriminations.[7] Contrariwise, neither here (R. 58-81) nor in the *Mitchell* case (229 I. C. C. 703) do the majority views to the Commission's reports indicate the slightest zeal for wiping out what this Court has over many years repeatedly characterized as the principal target of the Interstate Commerce Act—"the evil of discrimination". *Louisville & N. R. Co.* v. *United States*, 282 U. S. 740, 749-750; *Merchants Warehouse Co.* v. *United States*, 283 U. S. 501, 512; *Mitchell* v. *United States*, 313 U. S. 80, 94; *New York* v. *United States*, 331 U. S. 284, 296; *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, 175; *Shreveport Rate Case*, 234 U. S. 342, 356. Indeed, the Commission's report in the present case and the contentions now made in its support echo the arguments, made by the Commission and rejected by this Court in *Henderson* v. *United States*, 339 U. S. 816, to the effect that "the railroads know best", and that factual determinations by the Commission as to what is and what is not discrimination are unassailable.[8]

---

[7] In the *Mitchell* case, the Commission concluded (*Mitchell* v. *Chicago, R. I. & P. Ry. Co.*, 229 I. C. C. 703, 711):

> * * * we find that the present colored-passenger coach and the pullman drawing room meet the requirements of the act; and that, as there is comparatively little colored traffic, and no indication that there is likely to be such demand for dining-car and observation-parlor car accommodations by colored passengers as to warrant the running of any extra cars or the construction of partitions, the discrimination and prejudice is plainly not unjust or undue. Only differences in treatment that are unjust or undue are unlawful and within the power of this Commission to condemn, remove, and prevent.

[8] See Brief for the Interstate Commerce Commission in the *Henderson* case, No. 25, Oct. T. 1949:

> On the sole basis of equal treatment, the Commission has long been regarded by the courts as possessed of an informed judgment, needed for such decisions. (p. 58) * * * Only a vivid imagination could discover

C. The switching charge violates Section 1(9) of the Act because it prevents the switch at appellant's sidetrack from being operated without discrimination.[9]

Section 1(9) of the Interstate Commerce Act (*infra*, pp. 143-144) provides in pertinent part that

> Any common carrier subject to the provisions of this part, upon application of * * * any shipper tendering interstate traffic for transportation, shall construct, maintain, and operate upon reasonable terms a switch connection with any * * * private side track which may be constructed to connect with its railroad, where such connection is reasonably practicable and can be put in with safety and will furnish sufficient business to justify the construction and maintenance of the same; and shall furnish cars for the movement of such traffic to the best of its ability without discrimination in favor of or against any such shipper.

All of the requirements laid down in the statute have been complied with. The switchtrack in question is now and has been in operation for many years (R. 65, 268, 270-

---

inequality in the treatment accorded colored interstate passengers as revealed by this record. (p. 59)

* * * * *

It is to be supposed that the carrier knows its business, what is economically best, and what the vast majority of its patrons prefer in equipment and service. (p. 67) * * * At least experienced and informed railroad officials regard segregation as essential to their business, in order to keep peace and order between the races. (p. 68)

* * * * *

Questions of violations of the Act and equality of treatment require decisions under the facts of each case, a function exclusively for administrative action, here the Commission. As long recognized by this Court, review of such fact decisions is very limited, and where there is a rational basis for the administrative judgment, courts do not interfere. (pp. 102-103).

[9] Although Section 1(9) was not specifically cited in the complaint before the Commission, it is available here for the reason set out in footnote 6, p. 69, *supra*: It is not necessary to p[illegible] law before the Commission, any more than before a court.

271, 276-277; Exs. 2-4, 6, 8, R. 1041-1045); it has been used for shipments of all dead freight, including perishables, to and from the Swift plant. That circumstance alone establishes that it furnishes sufficient traffic, besides which the livestock proposed to be transported in addition averages nearly 20 cars a day.[10] And Swift duly made application to have the switch operated without discrimination (Ex. 10 at R. 1047-1048).

Or, as Commissioner Alldredge said (R. 86),

> Inasmuch as Swift's track has already been connected and is proposed to be operated in the handling of cars containing other kinds of freight than livestock, it seems conclusive that all the conditions set forth in section 1(9) have been met. In that event, it is the duty of the Chicago River and Indiana Railroad Company to operate the track for all kinds of traffic, including livestock, without discrimination. That is clearly the obligation of the statute.

And, the learned Commissioner might have added, that is precisely how the Commission has construed the statute in every case—save this one alone—and notably in *Swift & Co.* v. *Baltimore & O. R. Co.*, 266 I. C. C. 55, where it required the carriers, who were delivering every commodity except livestock over an existing sidetrack to Swift's plant at Cleveland, to operate the switch to that sidetrack without discrimination, and to deliver livestock as well. The Commission's order in that case was sustained by this Court in *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, reversing the district court, which had enjoined enforcement of the order. *Baltimore & O. R. Co.* v. *United States*, 71 F. Supp. 499 (N. D. Ohio).

A similar ruling was made by the Commission in *Trojan Scrap Iron Corp.* v. *Boston & M. R.*, 270 I. C. C. 727, where the railroad refused to provide transportation to and from

---

[10] Twenty cars a month was held sufficient traffic to support an order directing the railroad to perform switching service in *Trojan Scrap Iron Corp.* v. *Boston & M. R.*, 270 I. C. C. 727, 730.

industries on Front Street in Troy, N. Y., "because it regards the operation over the Front Street track as difficult and expensive." *Id.* at 728. The railroad made a considerable showing of operating difficulties, see 270 I. C. C. at 728-729, but the Commission held that neither practical operating difficulties nor congestion could excuse the refusal to switch loaded cars to the track in question. Indeed, in the case of *City of Milwaukee* v. *Chicago & N. W. Ry. Co.*, 279 I. C. C. 521, decided after the ruling complained of here, the Commission required the Milwaukee road to provide switching service to the city's harbor terminal even though such service involved crossing the North Western road's right-of-way, in the face of the latter's refusal to grant permission therefor. Except in the present case, accordingly, the Commission has never been in doubt as to its power to compel carriers to comply with the requirements of Section 1(9).

But it is contended by the appellees here that Swift is complaining only of the measure of the charge, which, they assert, is irrelevant to Section 1(9) (see answer of railroad interveners, par. XXXVI, R. 120), and, moreover, that since Swift can receive livestock at its sidetrack upon payment of the switching fee, there is no violation of the statutory provision (I. C. C. Motion to Affirm, p. 21; Interveners' Motion to Affirm, p. 10).

Such an interpretation of Section 1(9) would effectually eliminate that provision from the law. Under that view, a railroad might indeed operate a switch connection, but, by a discrimination of $100 per car between shippers—or, for that matter, of $39.24 per car—close the connection to a particular shipper just as effectively as if the switch connection itself had been physically torn up. The statute simply does not permit of any such reading. And, moreover, the words in Section 1(9), "without discrimination", are not modified by any of the elastic adjectives such as "undue" or "unreasonable" that are to be found in Section 3(1) of the Act.

Nor does the contention just set forth fully measure the extent of the Commission's disregard of the plain provisions of the Interstate Commerce Act. The Commission's report rests in substantial part on the supposed interest in the "expeditious centralized delivery" of livestock at the Union Stock Yards (R. 71). But Section 1(9) says nothing of "expeditious centralized delivery." To the contrary, it provides that, after a switch connection is in operation, and the one here in question has been operated for years, it then becomes the duty of the carrier to "furnish cars for the movement of such traffic to the best of its ability without discrimination in favor of or against any such shipper." The statute thus protects expeditious *decentralized* delivery at private sidetracks—a command which the Commission, and the court below, have completely disregarded.

Looking to the provisions of the Interstate Commerce Act as a whole, it is plain that Section 1(9) was intended in the nature of a charter of liberty for the owner of a private sidetrack, affording him direct access to the rail network of the nation. In its earlier decisions, particularly the one dealing with the discrimination practiced against the present appellant at Cleveland (*Swift & Co.* v. *Baltimore & O. R. Co.*, 266 I. C. C. 55), the Commission gave effect to this underlying purpose. The same can be said of its later rulings (*Trojan Scrap Iron Corp.* v. *Boston & M. R.*, 270 I. C. C. 727; *City of Milwaukee* v. *Chicago & N. W. Ry. Co.*, 279 I. C. C. 521). Only in the present case has the Commission failed in its duty of enforcing the purpose—and the plain provisions—of Section 1(9).

D. No decision of this Court sanctions the present switching charge, and United States v. Baltimore & O. R. Co., 333 U. S. 169, specifically condemns it.

Apart from the question whether present or future congestion can render lawful a discrimination as obvious as the one here involved—a matter which we discuss at length

under Point III, *infra*, pp. 90-104—we contend that no decision of any court (other than the ruling under review) gives any sanction to the high additional switching charge assessed only against livestock consigned to sidetracks, and that, to the contrary, it is specifically condemned by this Court's recent decision in *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169.

1. Appellees' position appears to be that the legality of the present switching charge was affirmatively sustained in *Atchison, T. & S. F. Ry. Co.* v. *United States*, 295 U. S. 193. Thus, the Commission says (I. C. C. Motion to Affirm, p. 20):

> The issues involved in this appeal are the same as were before the Court in *Atchison, T. & S. F. Ry.* v. *United States*, 295 U. S. 193, in which the Court only reversed the Commission insofar as it failed to make adequate findings in support of its order with respect to the yardage charges assessed by Union.

And further (I. C. C. Motion to Affirm, pp. 9-10):

> This charge, now said to be prohibitive and assessed as a penalty, is the identical charge, subject to certain general increases, which the Commission held to be reasonable in *Hygrade Food Products Corp.* v. *Atchison T. & S. F. Ry. Co.*, 195 I. C. C. 553 (1933). The holding as to the reasonableness of the rate was not questioned or disturbed by the Supreme Court on appeal in *Atchison T. & S. F. Ry. Co.* v. *United States*, 295 U. S. 193 (1935).

The interveners, likewise, assert that "this appeal involves the same questions before the Court in *Atchison, Topeka & Santa Fe Railway Co.* v. *United States*, 295 U. S. 193," saying (Motion to Affirm, pp. 7-8):

> As shown by the Commission's report in that case (*Hygrade Food Products Corp.* v. *Atchison, T. & S. F. Ry. Co.*, 195 I. C. C. 553) the Hygrade Company, a Chicago packer with a plant located in the same area as appellant's packinghouse, filed a complaint with the Commission alleging, among other things, that the pub-

lished switching charge in addition to the line-haul rates for delivery of livestock at its private track, was unreasonable, discriminatory, prejudicial and preferential. (195 I. C. C. at 553.) The switching charge attacked in that case was the identical charge assailed by appellant in this proceeding, subject only to authorized general rate increases since that time, and the Commission so found. (274 I. C. C. 557 at 573.) The Commission found in that case, as it has in this proceeding, that "the assailed switching charge on carloads of livestock placed for delivery at complainant's plant is not shown to be unreasonable or otherwise unlawful." (195 I. C. C. 553 at 558.) On appeal to this Court, the Commission's finding as to the lawfulness of the switching charge was specifically noted in language that leaves no doubt as to the similarity between that proceeding and this. The Court stated:

> "Consignee sought free delivery in cars switched into its plants, but the Commission found the switching charge not unreasonable" (295 U. S. 193 at 200).

The most charitable characterization of the appellees' contention that the issue involved in the present case has already been before this Court is that it involves a bizarre misreading of the earlier controversy.

For the question of the legality of the switching charge was simply not in issue in the judicial proceedings. Before the Commission, Hygrade attacked both the switching charge and the yardage fees. The Commission's ruling was adverse to Hygrade on the switching charge, and in its favor on the yardage fees. The railroads and the Union Stock Yards then sued to set aside the Commission's order in respect of the yardage fees, see *Atchison, T. & S. F. Ry.* v. *United States*, 8 F. Supp. 825 (S. D. N. Y.), but Hygrade, although it intervened in the suit, did not seek affirmative relief in respect of the switching charge. See Hygrade's answer, R. 50-54, Nos. 606-607, Oct. T. 1934. The question of the legality of the switching charge, therefore, did not even lurk in the record when the case reached the courts, and indeed all that was actually decided by this Court was

that the Commission's findings were inadequate to support its order as to the yardage fees. To say, therefore, that the *Atchison* case in 295 U. S. involved the same questions as this case does is simply to make an assertion that is demonstrably not so.

2. Thereafter, when the yardage fee question was again squarely raised, the Commission completely reversed itself, *Swift & Co.* v. *Alton R. Co.*, 238 I. C. C. 179, and when that ruling in turn came before this Court, in the so-called "Egress Case", the Commission's order was sustained. *Swift & Co.* v. *United States*, 316 U. S. 216. But in the later proceeding, the only question passed upon concerned shipments consigned to Swift and other packers at the Union Stock Yards, and the issue involved in the present case was expressly reserved. The Court said (316 U. S. at 227):

> It does not appear, however, that the existence or adequacy of alternative facilities for delivery at other points is particularly important in the case, because the shipments involved are consigned to the packers at the Union Stock Yards by their own choice. It does not appear that they are demanding an increase of other facilities, and the case has not been considered in that light.[11]

3. The controlling precedent here, in our view, is *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, which declared unlawful a very similar discrimination at the Cleveland Stock Yards.

There, as here, Swift's sidetrack was physically connected with the carrier's main track. There, as here, the carrier was prepared to deliver livestock at Swift's sidetrack upon payment of a substantial additional charge levied on livestock alone. Here that charge is demanded by a terminal carrier, there it was demanded by the Cleveland

[11] The Commission had similarly disclaimed passing on any question involving requests for delivery elsewhere than at the Union Stock Yards. See *Swift & Co.* v. *Alton R. Co.*, 238 I. C. C. 179, 189.

Stock Yards which owned a segment of the track that connected Swift's sidetrack with the main line. In the Cleveland case, the line-haul carrier had for a number of years paid the extra charge to the Stock Yards (R. 34, No. 223, Oct. T. 1947), while here the line-haul carriers have never paid such a charge and refuse to do so now (Ex. 10 at R. 1047-1052, 1073).

There, as here, Swift as well as other packers were denied switching service as to livestock although given it as to other commodities.[12]

There, as here, the discrimination was effected and sought to be justified by a contract between the carrier and the particular stockyards owning part or all of the physical tracks involved. In the Cleveland case, the agreement between the Stock Yards and the New York Central, which granted the latter "the free and uninterrupted use" of the Stock Yards' track, included a clause, "except for competitive traffic a charge for which use shall be the subject of a separate agreement"—and "competitive traffic" meant livestock. Here the Union Stock Yards, owner of the fee of the Chicago Junction, leased that property on condition that the lessor agree "to conduct, manage, and operate the line of railroad by this instrument demised, and insofar as possible, the same to conduct in such manner as will tend to the benefit, advantage, and behoof of the business and affairs of the Yards" (Ex. 57, R. 1961). Here,

---

[12] The interveners do not present the full facts of the Cleveland case when they say (Motion to Affirm, p. 10), "The defendant carriers continued to perform that service for appellant's competitors while refusing it to appellant." That statement is correct only as to certain of Swift's Cleveland competitors—Long Dressed Beef Co., Lake Erie Provision Co., and Ohio Provision Co.—who had sidetracks connected directly with the main line of the New York Central. But those of Swift's competitors such as Koblenzer Co., who, like Swift, could be reached only via the segment of track owned by the Cleveland Stock Yards, were treated just as Swift was. As this Court's opinion points out (333 U. S. at 174), "in 1938 the railroads ceased delivering livestock to the sidings of Swift *and other packers served by Spur No. 245*, although they have under agreement with Stock Yards continued to use the spur for delivery of all other kinds of commodity shipments to these sidings." (Italics added.)

as there, accordingly, the carriers undertook to act in the interest of the stockyards-landlord at the expense of the consignees, by refusing to deliver livestock at the consignees' sidetrack except upon payment of a substantial additional fee not demanded in respect of any other commodity.

It would be difficult, we submit, to find two cases which are closer on their facts—and equally difficult to find two which are farther apart in their results. For while in the Cleveland case the Commission specifically found violations of, *inter alia*, Sections 3(1) and 1(9) of the Interstate Commerce Act (*Swift & Co.* v. *Baltimore & O. R. Co.*, 266 I. C. C. 55), here the Commission refused so to find, and referred to that and similar decisions only to distinguish them. It said (R. 79):

> Deliveries to private industrial tracks at those points did not require substantial modification of terminal operations and interferences with established operations in a manner required at Chicago for such deliveries, and did not involve, as at Chicago, serious disruption of operations. There is no showing of a similarity in any respect of the services required and circumstances affecting services.[13] There is no showing that services as desired will result in a situation similar to that at a point or points alleged to be preferred.

Neither the Commission's report nor its Motion to Affirm undertakes to discuss or analyze the Cleveland Stock Yards case in this Court, *United States* v. *Baltimore & O. R. Co.*,

---

[13] The finding in this sentence is almost diametrically opposed to the Commission's finding on the same point in an earlier case. *Chicago Live Stock Exc.* v. *Atchison, T. & S. F. Ry. Co.*, 219 I. C. C. 531, 538:

> Although these facts do not establish that the terminal operations at the points mentioned [E. St. Louis, S. St. Paul, Sioux City, Omaha, St. Joseph, Milwaukee, Indianapolis, Kansas City] are identical with those at Chicago, it is clear that the character of the services rendered and the charges at the compared points do not vary greatly.

333 U. S. 169.[14] Since the Commission does not in any sense question the principles of law there laid down, it must follow that, in the Commission's view, an obvious discrimination violating numerous specific provisions of the Act is perfectly lawful whenever the removal thereof would involve "substantial modification of terminal operations and interferences with established operation" or "serious disruption of operations" (R. 79). Such an approach, assuredly, exalts the *status quo* of discrimination far beyond any level it has hitherto attained, and enacts, not Social Statics (*cf.* Holmes, J., in *Lochner* v. *New York*, 198 U. S. 45, 75), but a species of Railroad Statics. It is sufficient to say that, but for the rulings under review, no trace of any authority to support such a doctrine can be found in the books. To the contrary, as this Court prophetically pointed out about a generation ago (*Skinner & Eddy Corp.* v. *United States*, 249 U. S. 557, 568, *per* Brandeis, J.), "Transportation conditions are not static."

The Commission's ruling on this aspect of the case is plainly wrong in its interpretation of the governing Act, and so is not saved by appellees' attempts to clothe the result in the language of discretion. For, as the railroad appellees' chief of counsel significantly pointed out some years back (Kenneth F. Burgess, *Federal Regulation of Railway Management and Finance*, 37 Harv. L. Rev. 705, 743),

> The Commission must act within the statute of its creation, conforming its decisions to the power therein contained, and arbitrary action by it can not be sustained on the ground that its action is purely discretionary.

---

[14] Interveners, after quoting from the Commission's report the quoted statement that "There is no showing of a similarity in any respect of the services required and circumstances affecting services," argue that our reliance on the Cleveland case "thus utterly disregards the fact that dissimilar situations produce different results" (Motion to Affirm, p. 11). We submit that we have sufficiently demonstrated the similarity between the two cases.

III. NEITHER PRESENT NOR FUTURE CONGESTION JUSTIFIES OR RENDERS LAWFUL A CHARGE OTHERWISE DISCRIMINATORY.

The burden of the Commission's report, and of the arguments which have been made in its support, is that to accord to Swift the non-discriminatory service to which it would otherwise be entitled under the plain provisions of the Interstate Commerce Act set out and discussed above, pp. 63-83, would (R. 77) "seriously interfere with, delay, and disrupt terminal transportation operations and the movement of livestock generally", and, also, that it would involve changes in a method of delivering livestock which has been in effect for many decades. In short, it is sought to justify discrimination on the ground of congestion, inconvenience, and long-continued practice.

No authorities are cited for the proposition that these factors, or any of them, will justify a course of conduct otherwise discriminatory, and we are confident that none can be found. The rulings under review stand alone. For up to now the law has always been that the circumstance that a particular practice has been long continued does not render it immune if in law or in fact such practice is later held violative of the Interstate Commerce Act. *Merchants Warehouse Co.* v. *United States*, 283 U. S. 501; *Louisville & N. R. Co.* v. *United States*, 282 U. S. 740; *American Express Co.* v. *United States*, 212 U. S. 522. Up to now the law has always been that the possibility of disruption does not remotely justify discrimination. *Interstate Commerce Commission* v. *Mechling*, 330 U. S. 567. And up to now the law has always been that inadequacy of facilities does not legalize a discriminatory rate or practice, and that, where discrimination is palpably unjust and forbidden by the Act, "there is no room * * * for administrative or expert judgment with respect to practical difficulties." *Mitchell* v. *United States*, 313 U. S. 80, 97. Nor does the fact that a carrier does not own tracks or trackage rights justify it in discriminating against particular patrons.

United States v. *Pennsylvania R. Co.*, 266 U. S. 191, 198-199; *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169.

To the contrary, a carrier must supply adequate facilities to the extent that it is able to do so, see Sections 1(10) and 1(11), *infra*, p. 144, and, to the extent that it is unable with the exercise of reasonable energy and diligence to do so, its available facilities must be equitably prorated.

A. The burden of congestion must be borne equitably by all users of congested facilities and may not be assessed in its entirety against a single commodity consigned to a single shipper.

It was early recognized that "Most of the provisions of the Interstate [Commerce] Act but re-enact the common law and supply some new, while saving all the old remedies." *Larrison* v. *Chicago & Grand Trunk Ry. Co.*, 1 I. C. C. 147, 149 (1887); *cf. Arizona Grocery* v. *Atchison Ry.*, 284 U. S. 370. And the common law of carriers laid down the rule of equality of treatment. The carrier was bound to receive all goods and passengers, up to the limit of his capacity. Angell, *Carriers* (2d ed. 1851) sec. 124; *New Jersey Steam Navigation Co.* v. *Merchants' Bank*, 6 How. 344, 382-383; *Riley* v. *Horne*, 5 Bing. 217, 220-221: "He *must* take what is offered to him to carry to the place to which he undertakes to convey goods, if he has room for it in his carriage." [Italics in original.] It was only when the tender was beyond his capacity that the carrier was excused from failure to serve. Chitty, *Carriers*, *23; Angell, *Carriers* (2d ed. 1851) sec. 125; Hutchinson, *Carriers* (1st ed. 1880) secs. 114, 296; *Lovett* v. *Hobbs*, 2 Show. 127. The law exacted from the carrier only what was reasonable, but required in turn that he be reasonable in the treatment of his patrons; even at common law, preferences were illegal, and the carrier was obliged to carry for all alike. Hutchinson, *Carriers* (1st ed. 1880) sec. 297; Chitty, *Carriers*, *25; *McDuffee* v. *Railroad*, 52 N. H. 430; *Messenger* v. *Pennsylvania R. R. Co.*, 36 N. J. L.

407; *cf. New England Express Co.* v. *Maine Central Railroad Co.*, 57 Me. 188.

The same rules were carried over into the administration of the Interstate Commerce Act, and were specifically recognized by the Commission in one of its earliest reports. See *Riddle, Dean & Co.* v. *New York, L. E. & W., etc., R. R. Cos.*, 1 I. C. C. 594, 603, 604, where the Commission said:

> It is the duty of a common carrier to provide adequate equipment for the business of his line; if in time of special pressure some one must wait, the annoyance must be distributed with all possible equality. * * * The common carrier has no right to select either goods or customers.

But for the report now under review, that has been the settled doctrine applied by the Commission.

The principle of equality has been most contested in situations of car shortages, when the available supply of cars of a particular class has been insufficient to meet the demands of shippers therefor. Where the carrier's regulation for such situations has been disregarded by the carrier itself, with resultant discrimination, the injured shipper has been held entitled to sue for damages as at common law: *Pennsylvania R. Co.* v. *Puritan Coal Co.*, 237 U. S. 121; *Illinois Cent. R. R.* v. *Mulberry Coal Co.*, 238 U. S. 275; *Pennsylvania R. R.* v. *Sonman Coal Co.*, 242 U. S. 120. Where, however, it is the reasonableness of the carrier's rule which is attacked, the shipper must resort to the Commission in the first instance. *Morrisdale Coal Co.* v. *Pennsylvania R. Co.*, 230 U. S. 304; *Midland Valley R. R.* v. *Barkley*, 276 U. S. 482.

The Commission over the years devoted considerable time and study to the problem of car shortages, laying down first one formula and then another. See *Assigned Car Cases*, 274 U. S. 564, *passim*. Eventually it devised a rule designed "to improve the service and to prevent any mine (including one operated by a railroad) from securing, at the particular time, more than its ratable share of the

aggregate available coal transportation facilities" (*id.*, at 573), and that rule was sustained in the case cited. There is no suggestion in the careful opinion in the *Assigned Car Cases* that any other reasonable plan for attaining the same result would have been held unlawful or unauthorized, but, assuredly, nothing in that decision—nor in any other ruling of this Court that we have found—suggests in the slightest degree that the Court would have been willing to sanction an inequitable rule simply because discrimination represented the easier course.

The purported basis for justifying the present switching charge is that the congestion in the stockyards area on the tracks of the Chicago Junction is such that non-discriminatory service should not be rendered. This has the effect of assessing the entire cost of the congestion against a single commodity consigned to a single shipper. We submit that such a result is plainly illegal, that it is without precedent, and that it is condemned by every decision under the Act. Or, as Commissioner Allredge put it below (R. 88-89)—

> The action of the majority in authorizing an extra switching charge to deliver livestock at Swift's plant, on the ground that such additional compensation is justified by reason of an increased congestion of the yard operations and facilities, introduces a novel idea into the field of railroad regulation. Under such a theory the tendering of shipments of any kind to a railroad in excess of the capacity of its regular train schedules might well give rise to the assessment of an extra charge on the surplus shipments. The terminals of railroads and other agencies are subject to periods of congestion, particularly at the larger centers, which frequently occasion overtime work or the employment of additional help to restore normal conditions. While embargoes are often employed as an aid in overcoming difficulties of this kind, there is no record of an attempt to resort to the use of extra transportation assessments as a recompense to the carriers for the extra costs entailed. It is familiar practice, for instance, for carriers to run extra busses or passenger trains out of various terminals on week ends to take

care of overflows of passengers. If pursued to its ultimate conclusion, the principle which the majority here enunciates would authorize the charging of additional compensation to the overflow passengers. Such an idea is too closely akin to a punitive measure to be just and reasonable. A search of the authorities reveals no warrant of law for such action. As a matter of fact, it is condemned by the decision cited and quoted from in the preceding paragraph hereof. [*Pennsylvania R. Co* v. *Puritan Coal Mining Co.*, 237 U. S. 121.]

There is no more justification for assessing an extra charge against Swift for the switching of livestock in this instance than there would be for charging additional compensation over and above the line-haul rates on all traffic passing through the yards in question. If the handling of a heavy volume of traffic through the yards with Swift's livestock cars added should actually contribute to a higher rather than a lower cost per car, which is doubtful to say the least, then the additional cost should be distributed over all traffic flowing through the yards rather than be charged to one shipper alone.

Under the contrary theory, espoused by the Commission, the tendering of shipments of any commodity to a carrier, in excess of its current capacity, would give rise to an extra charge in respect of the surplus shipments. But for the rulings under review, no such proposition has yet been suggested for railroad traffic. Embargoes are frequently issued in instances of congestion, *e. g.*, against export traffic to particular port cities because of accumulations at those terminals beyond the capacity of vessels to transport and so clear the terminals. But in such instances no extra charge has ever been assessed, either against the traffic which was moved, or against the traffic which was delayed.

During the late war, the Government issued many priority orders for the immediate or preferred movements of essential defense materials. Such orders, clearly, were made necessary only by congested conditions; for, obviously, if the railroads could have transported all traffic

promptly as offered, there would have been no need for priority orders. But there was never any extra charge assessed, either for the traffic given preference under the priority order, or for the traffic which contributed to the congestion that necessitated such an order.

Similarly, passenger coaches are frequently overcrowded, at rush hours and during holiday seasons. But it has never yet been suggested that such conditions of congestion authorize the assessment of an extra charge on the passenger who, forced to stand in the aisle, produces the overcrowding.

The short of the matter is that the theory underwritten by the Commission in the present case, *viz.*, that where there is congestion, all of the cost thereof may be assessed against the additional traffic, is not only repugnant to the substantive antidiscrimination provisions of the Interstate Commerce Act, it is contrary as well to accepted custom and practice.

The only reply to any of the foregoing, whether in the Commission's report or in the briefs of the several appellees, is the argument *ab inconveniens;* and under the rulings of this Court already cited, that is insufficient.

B. In any event, a carrier is not permitted to refuse service now on the ground that in the future its facilities may become overcrowded; and there is no substantial evidence to support the Commission's finding that the other packers would immediately make like demands for sidetrack delivery of livestock.

A fortiori, a carrier has no right to deny service now on the ground that in the future its capacities may be overtaxed. Denial of service by the carrier can be justified "if his coach be full"—and then only. As this Court said *Pennsylvania R. Co.* v. *Puritan Coal Co.*, 237 U. S. 121, 133:

> The common law of old in requiring the carrier to receive all goods and passengers recognized that "if

> his coach be full" he was not liable for failing to transport more than he could carry. Hutchinson on Carriers, 146; *Lovett* v. *Hobbs*, 2 Shower, 127; *Riley* v. *Horne*, 2 Bing. 217; *Peet* v. *Ry.*, 20 Wisconsin 594. The same principle is applicable to those who transport freight in cars drawn by steam locomotives. The law exacts only what is reasonable from such carriers—but, at the same time, requires that they should be equally reasonable in the treatment of their patrons. In case of car shortage occasioned by unexpected demands, they are bound to treat shippers fairly, if not, identically.

This rule is apparently not controverted by the appellees but its application rests on two issues which must now be canvassed, the first being whether, if Swift's demand were granted, the other packers would join Swift and insist on similar switching service. The Commission found that (R. 76) "if complainant's demand for the delivery service at the line-haul rate were granted, there would result demands from other packers requiring defendants to render like delivery service * * *". Commissioner Alldredge thought this was a mere "speculative possibility" (R. 88).

In resolving this difference, consideration must necessarily be given to the standard of review. This Court has held, *Riss & Co* v. *United States*, 341 U. S. 907, that Sections 5, 7, 8, and 11 of the Administrative Procedure Act (5 U. S. C. 1004, 1006, 1007, 1010) apply to proceedings before the Interstate Commerce Commission. And Section 10(e)(B)(5), *infra*, pp. 146-147, specifically provides for setting aside agency findings that are "unsupported by substantial evidence in any case subject to the requirements of sections 7 or 8." Accordingly, the test here is whether, on the whole record, there is substantial evidence to support the Commission's findings now in question. *Universal Camera Corp.* v. *Labor Board*, 340 U. S. 474; *Labor Board*

v. *Pittsburgh S. S. Co.*, 340 U. S. 498; *Baltimore & O. R. Co.* v. *United States*, 100 F. Supp. 1002, 1006 (S. D. N. Y.).[15]

We recognize, of course, that the Commission is bound to look to the future, see *United States* v. *Detroit Navigation Co.*, 326 U. S. 236; *New York Cent. R. Co.* v. *United States*, 99 F. Supp. 394, 404-405 (D. Mass.), affirmed, 342 U. S. 890, since, obviously, one facet of its expertise lies in its ability to make reasonably accurate prognostications of events yet to come. That is true of every specialist within the field of his own specialty. The doctor proceeds on the basis that a particular course of therapy will induce certain reactions in the patient. The lawyer asks particular questions of a witness with an eye to the witness' answers several questions hence. The general plans a campaign with reference to his enemy's capabilities and potential future actions. And the wise judge writes an opinion mindful of the applicability of his language to controversies still distant.

But the judge is not possessed of the doctor's skills, nor the general of those of the lawyer. And while undoubtedly the Interstate Commerce Commission, through long exposure to the problems of the railroads, may be able to make a more accurate and hence more expert assumption as to the effect of one of its orders on the operations of railroads than, let us say, the American Meat Institute, it is not possessed of any specialized competence as to the future intentions of companies engaged in the slaughtering and processing of livestock. The expertise of the Interstate Commerce Commission does not extend to the mental processes of directors of meat-packing plants. As to that, it is restricted to the particular record before it. And in the present case, on the whole record, there is no sub-

[15] The cases just cited demonstrate that, since the effective date of the Administrative Procedure Act, earlier decisions as to the scope of judicial review of orders of the Interstate Commerce Commission are no longer law, and —depending on the point of view—are of only historical, reminiscent, or nostalgic interest.

stanfial evidence to show that the other packers in fact contemplate asking for the same kind of sidetrack delivery that Swift is demanding in the present proceeding.

No single packer intervened on Swift's side here, either before the Commission or in the district court. Swift's largest competitor, which some years earlier had intervened as a co-plaintiff in the egress case (*Swift & Co. v. United States*, 316 U. S. 216, 217-218), specifically disclaimed any interest in this case (R. 252). There was not a word of direct testimony from any representative of that or any other meat-packing company as to its course in the event that Swift were ultimately successful. Three hostile witnesses, representing interests admittedly adverse to any system of livestock delivery that would be free from the yardage fees of the Union Stock Yards and the commissions of the middlemen selling animals there, testified to their belief that the other packers would make the same demand for competitive reasons (*supra*, pp. 32-33). But even these witnesses did not undertake to explain how it was that, although Swift for at least thirty-five years has had a sidetrack and unloading facilities directly on the rails of a haul-line carrier at its Omaha Packing Co. plant (R. 265-266, 363, 836), a circumstance which the Commission has characterized in this Court as "the preference in Chicago" (I. C. C. Motion to Affirm, p. 13), not a single one of Swift's competitors in all that period has seen fit to construct or acquire a similar facility. This is the stubborn fact which undercuts all of the Commission's labored rationalizations (R. 75-76) about competitive compulsion.

The Examiner, who saw and observed the witnesses, proposed a report as follows (R. 241):

> The assumption that all direct shipments to complainant and to all the other packers in the Chicago district would have to be set out in the Ashland Avenue yards is not warranted on this record. Other packers were represented at the hearing but failed to indicate that they were in any way dissatisfied with the delivery

presently afforded them through the Union Stock Yards or that they would demand private track delivery if such delivery was furnished complainant, or that they had or could provide facilities therefor.

The likelihood that Swift's competitors will join in making similar demands, therefore, is simply a "speculative possibility", as Commissioner Alldredge rightly pointed out (R. 88), and is not supported in this record by that quantum of proof which the law now requires of the finding of an administrative agency.

Thus the assumption on which the operating witnesses rested their dire predictions, the rock on which they built their prophesy of total breakdown, is shown to be without existence in fact. Their conclusions in consequence are no more than what one of them frankly admitted them to be (R. 647), "a clairvoyant adventure." And the Commission's conclusion, which reflected their testimony, is correspondingly without foundation.

C. The Commission's finding that appellant's shipments of livestock, averaging 18 cars daily, would considerably delay and burden the railroads' operations, is not supported by substantial evidence.

The Commission found (R. 74-75) that, "Having in mind the congested condition of yards and tracks, it is clear that the attempt to make plant delivery through and over them of even 18 cars of livestock daily would considerably delay and burden defendants' operations." The dissenting Commissioner was of opinion that the limits of the carriers' capacity had not been reached on the basis of Swift's cars alone (R. 88-89). The examiner made no finding at all on that point (R. 230-247), so that obviously nothing turns on factors of credibility. And analysis of the record demonstrates that the Commission's finding, quoted above, does not rest on evidence.

(1) To begin with, more than 1000 loaded cars per day are received in the Chicago Junction's Ashland Avenue

yards (R. 61). Inasmuch as Swift's direct shipments of livestock average less than 20 loaded cars per day (R. 74-75), the Commission is thus finding as a fact that a 2% increase in traffic "would considerably delay and burden defendants' operations." This is an amazing conclusion which necessarily generates disbelief even on its face.

(2) But a first reading can not hope to measure the degree of disbelief which will follow an examination of the undisputed evidence. The record establishes that, in fact, the actual livestock traffic now passing over the rails of the Chicago Junction has been decreasing to such an extent that, if Swift's direct shipments had been added thereto, the total livestock traffic on the Chicago Junction would, for each of the last three years available, still have been substantially less than the total of such traffic for each of the immediately preceding years. In other words, the addition of Swift's direct shipments would not have made up the natural decline in the total of all livestock shipped to the Union Stock Yards by rail.

Here are the indisputable figures from the record:

Year	Swift's Direct Shipments of Livestock in Carloads (Ex. 36, R. 1161)	Decrease from Preceding Year in Carloads of Livestock to U. S. Y. (Ex. 28, R. 1117; Ex. 46, R. 1846)
1945	5021	12217
1946	4204	18318
1947	6393	11578[16].

In other words, the Commission in its finding ignores the incontrovertible fact that the decline in rail shipments of livestock would have been more than ample, several times over, to absorb the amount of the additional shipments which Swift was sending to its Omaha plant location during

---

[16] Livestock shipments to the Union Stock Yards in carloads for the last four calendar years, as shown by the cited exhibits, were as follows:

1944	95,674
1945	83,457
1946	65,139
1947	53,561

this period. This fact alone is sufficient to undermine the finding now under consideration.

(3) The switching involved in routing Swift's present direct shipments to the Omaha Packing Co. plant was found by the Commission to be "a minor operation" (R. 69). The operating witnesses had similarly characterized it (R. 641, 651, 663-664, 666). But the Commission went on to find that delivery at the Omaha Packing Co. plant pens was different from delivery at Swift's present sidetrack, saying (R. 78):

> The transportation services, conditions, and circumstances connected with deliveries at the Omaha plant pens are substantially dissimilar from those connected with the delivery here sought. There, the unloading chutes are on the rails of a line-haul carrier, outside the stockyard congested area, and the delivery made by that carrier is nothing more than a simple switch, at carrier's ordinary operating convenience and without interruption or interference from connecting line engines, as all of the switching is under the control of and performed by the Burlington.

However, the Commission did not go on to explain how the "minor operation" at the Omaha Packing Co. location, even when transferred to the present sidetrack (which for purposes of argument under this heading we take to be "substantially dissimilar") could assume such proportions that it "could considerably delay and burden defendants' operations." The gap between premise and conclusion—we had more accurately said "yawning gulf"—is assuredly not spanned by the testimony of the operating witnesses. For all of their testimony as to congestion was predicated on the assumption that all of the packers would seek sidetrack delivery of all their direct shipments (*supra*, p. 32). There was not a word of testimony from any of the seven operating witnesses, even in the realm of opinion and conjecture, as to the effect on the Chicago Junction's operations of delivering only Swift's direct shipments to Swift's sidetrack. That subject was simply not explored on the record.

(4) When the Commission came to consider the operating problem involved in making delivery of cars of livestock direct to Swift's sidetrack, it said (R. 74):

> Indeed, it appears that in some instances, immediately upon arrival of a consolidated train including cars of livestock for complainant, the Junction might have to make a special run to deliver the cars at the latter's plant.

This was one of the factors relied upon to support the finding now under discussion. But the Commission in thus calling attention to the factor of special runs seems conveniently to have overlooked the large number of similar special runs now being made to the Union Stock Yards, many of which, as it found (R. 64), "are made with but one or two cars per train." Just how many appears from Ex. 45 (R. 1681-1842): During a test period of three weeks, over one third of the total livestock deliveries by rail to the Union Stock Yards were brought there by trains of one and two cars (*supra*, p. 20). But what is usual and regular for deliveries to the Union Stock Yards becomes a most unusual matter when deliveries to this appellant come into question.

It follows from all of the foregoing that the Commission's finding that Swift's shipments alone would result in burdensome congestion lacks the support of substantial evidence. Indeed, the circumstance that the examiner made no finding on the question either way strongly suggests that this "finding" was an afterthought on the part of the Commission, and that it was inserted in the interest of supplying logical consistency, and, perhaps, of adding a modicum of literary grace to the report. But, up to now at any rate, the *elegantia juris* can not do substitute for evidence when the results of the administrative process are subjected to judicial review.

The result is that both of the subsidiary findings on which the Commission rested its conclusion that the grant-

ing of the non-discriminatory service which Swift sought would result in delays, disruptions, and congestion, are shown to be without foundation on the evidence: The finding that all the other packers would immediately follow Swift rests not on evidence, but on an economic rationalization which ignores an economic fact of 35 years' standing; and the finding that Swift's shipments alone would result in congestion is shown to be a last-minute addition to the Commission's report, unsupported by any substantial evidence whatever.

We do not need, however, to rest our argument on the obvious infirmities of those two subsidiary findings. For present purposes our position is not impaired even if we assume *arguendo* that it is true that Swift's shipments alone will produce congestion, that every other packer, large and small, will immediately "me-too" in the event of Swift's success, and that the combined influx of all direct shipments of livestock now transported to Chicago by rail will in fact produce the congestion and disruption envisaged by the Commission.

Because, after all, the proposition that congestion and disruption may justify discrimination, the view that the practical difficulties incident to compliance will excuse violations of law, amount to no more than the argument of inconvenience. The basic aim of the Interstate Commerce Act, as this Court has iterated and reiterated, is the removal of every species of discrimination. *Shreveport Rate Case*, 234 U. S. 342, 356; *Louisville & N. R. Co.* v. *United States*, 282 U. S. 740, 749-750; *Merchants Warehouse* v. *United States*, 283 U. S. 501, 512; *Mitchell* v. *United States*, 313 U. S. 80, 94; *New York* v. *United States*, 331 U. S. 284, 296; *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, 175. That aim would be but lip-service if the Commission were now to be permitted to grant dispensations from the command of the Act each time that the discrimination complained of were effected in a crowded terminal. There are many busy, crowded, congested terminals in this country—and there will be more congestion rather than less as the

national economy continues to expand. The course of Congressional legislation since 1887 lends no support to the notion that the imperative of the statute has been watered down to "no discrimination except in circumstances of congestion," and the Act in terms makes no exceptions on that ground. The command of the Act is categorical—and has been so read by this Court. Neither inadequacy of facilities (*United States* v. *Pennsylvania R. Co.*, 266 U. S. 191) nor practical difficulties (*Mitchell* v. *United States*, 313 U. S. 80) nor conflicting interests of owners of trackage (*United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169) nor equivalent discrimination caused other groups (*Henderson* v. *United States*, 339 U. S. 816) can justify a discrimination otherwise forbidden by the Interstate Commerce Act. The Commission can point to nothing which sustains the present ruling other than its own fiat in this case—and that is obviously insufficient.

IV. THE COMMISSION FAILED TO ALLEVIATE THE CONGESTION ON WHICH IT RELIED TO JUSTIFY THE HIGH ADDITIONAL SWITCHING CHARGE ASSESSED ONLY AGAINST LIVESTOCK DELIVERED TO SIDETRACKS, ALTHOUGH THE COMMISSION WAS AMPLY EMPOWERED TO DO SO, AND ALTHOUGH THAT CONGESTION WAS SHOWN BY THE RECORD TO BE IN SUBSTANTIAL MEASURE DUE TO THE APPELLEES' OWN ACTS RATHER THAN TO THE VOLUME OF LIVESTOCK TRAFFIC.

A. The present record proves that, in fact, the congestion on the rails of the Chicago Junction is in substantial measure due to the appellees' own acts rather than to the volume of livestock traffic.

Department of Agriculture statistics show that in 1947 the Union Stock Yards of Chicago still led all other public markets in the country in total receipts of livestock and in salable receipts of livestock (*i. e.*, excluding direct shipments).[17]

Even so, however, rail shipments of livestock to the Union Stock Yards have vastly decreased in the last quarter of a century. Here are the figures in carloads, showing the percentage of decrease from the high in 1923 (Ex. 46 at R. 1845-1846; Ex. 28, R. 1117):

[17] Ex. 26, not printed. In 1947 Chicago led in total and salable receipts of cattle and in total receipts of hogs; South St. Paul was highest for total and salable receipts of calves; St. Louis National Stock Yards (at East St. Louis) was first in salable receipts of hogs; Fort Worth was highest for salable sheep and lambs; and Denver highest in total sheep and lambs. The following 1947 figures may be of interest:

Public Market	*Total Receipts*	*Salable Receipts*
Chicago	6,646,705	4,811,918
Omaha	5,941,166	4,299,166
St. Louis Nat. S. Y.	5,243,683	4,020,680
South St. Paul	5,091,924	4,525,580

Year	Carloads	Decrease since 1923 Carloads	Percentage
1923	303,228		
1945	83,457	219,771	72.4%
1946	65,139	238,089	78.5%
1947	53,561	249,667	82.3%

It is therefore obvious that the volume of livestock shipments, far from contributing to the congestion on the rails of the Chicago Junction, would, if standing alone, have substantially eliminated it.

The record contains no figures from which the increase in other traffic on the Chicago Junction during the corresponding period, testified to in general terms by some of the witnesses (R. 501, 526, 950), can be accurately measured.[18] But the record does reveal at least five factors, not in any sense attributable to volume of traffic, which contribute materially to the congestion on which the appellees rely to deny delivery of livestock to Swift at the line-haul rate. These factors are:

(i) Inadequate provision of motive power.

(ii) Labor agreement which impairs efficiency.

(iii) Obstructive rules of the Union Stock Yards.

(iv) Refusal of Chicago Junction to grant trackage rights.

(v) Virtual anarchy on the Chicago Junction tracks.

---

[18] In the *Chicago Junction Case*, 71 I. C. C. 631, 633, decided in 1922 on a record presumably reflecting earlier statistics, the Commission said:

> Besides serving the stockyards and Packingtown, the Junction performs terminal service for all the carriers in reaching the Central manufacturing district, which as an institution has been in existence for about 15 years and has 180 industries, producing a tonnage of over 100,000 carloads per year and 100,000 tons per year of less-than-carload freight.

These figures are not comparable with the findings as to the present traffic of about "1,000 loaded cars per day" of non-livestock traffic (R. 61), since tons are not related to carloads. The amount of the Chicago Junction's non-livestock traffic over the years was not developed in the present case.

(i) As was pointed out in the Statement, *supra*, p. 24, there has been a gradual but on the whole steady decrease in the Chicago Junction's motive power since that road was leased by the New York Central. Whereas in 1925, the Chicago Junction had 86 engines, in 1940 it had only 47 (Ex. 58, R. 1963-1965), and of those 47, 11 are of a type that do not lend themselves readily to industrial work (R. 68), while 14 more were received from the U. S. Railway Administration during World War I, more than 30 years ago (R. 525). The Superintendent of the Chicago Junction admitted frankly that the supply of engines was insufficient to take care of all industrial placement (R. 524, 547, 555), and expressed his desire for at least five additional Diesel engines (R. 525-526). Obviously, then, an increase in the Chicago Junction's motive power would appreciably alleviate the existing congestion on its tracks.[19]

(ii) We also pointed out in the Statement, *supra*, pp. 24-25, that whereas prior to 1946, the various line-haul carriers had themselves placed freight cars in the various yards of the Chicago Junction, that road, in order to avert a threatened strike, agreed with its employees that in the future all such traffic would be received at the Ashland Avenue south yard, which has but one running track to the east. Under this arrangement, the Chicago Junction now uses 3800 train crews, each of five men, over and above what it employed previously, but with no increase in the traffic handled (R. 518-519), with the consequence that the crews of the line-haul carriers are delayed awaiting classification of the cars by the Junction (R. 539) and with the further consequence that the sole running track to the Ashland Avenue yard from the east is badly blocked, frequently

---

[19] In its Motion to Affirm, the Commission said (p. 21) that "The assumption that the use of any number of engines over 47 would slow down deliveries is much more logical it would seem, than that an additional number would facilitate switching and relieve congestion." This notion, that more motive power means less switching service, being directly contradicted by the testimony of the Chicago Junction's Superintendent (R. 525-526), will no doubt be abandoned in the Commission's brief on the merits.

tying up as many as four trains (R. 63). It is therefore plain that the new labor agreement, the existence of which the Commission noted without more (R. 61), makes a substantial contribution to the existing congestion.

(iii) We likewise pointed out in the Statement, *supra*, pp. 26-27, that the rules of the Union Stock Yards forbid the line-haul carriers, which bring cars of livestock directly into the chutes there, from pulling into those chutes trains containing any cars loaded with dead freight; and we pointed out, from the testimony of one of appellees' operating witnesses, Superintendent Heide of the Rock Island, how line-haul operations have been impeded by enforcement of these rules. As Mr. Heide said (R. 668), "I certainly would like to cancel it if I could. It would save me a lot of trouble." Surely here is the most expert type of expert testimony in support of Swift's contention that factors other than the volume of traffic combine to create the congestion relied upon to justify the discrimination assailed in this proceeding.

(iv) We also pointed out in the Statement, *supra*, p. 26, that the line-haul carriers do not now have trackage rights to make direct deliveries of livestock to Swift's sidetrack, and that they had been advised by the Chicago Junction that no trackage rights will be granted for that purpose (R. 840). There is no suggestion in the record that this refusal is predicated on the possibility of further congestion.

(v) Finally, we pointed out in the Statement, *supra*, pp. 25-26, quoting from the Commission's report (R. 64), that the line-haul carriers' crews may and do operate over the Chicago Junction's rails without any limitation as to time or hours, and that an average of 167 foreign crews per day are on those tracks at all hours of the day and night. It is not at all far-fetched to characterize such a method of

operation as virtual anarchy.[20] The only rule which seems to be observed is that, if possible, collisions shall be avoided. Obviously such a state of affairs contributes mightily to the congestion which obtains on the Chicago Junction's rails.

B. The Commission failed to alleviate the existing congestion although it was amply empowered to do so.

The Commission had ample power under the law to correct every one of the operating practices above considered which contribute so substantially to causing the congestion on which it relied to justify the discriminatory switching charge here assailed.

(i) *Inadequate provision of motive power.* Sections 1(10) and 1(11) of the Interstate Commerce Act clearly require the Chicago Junction to provide sufficient suitable switching locomotives to effect all necessary switching to private sidetracks on its rails. They provide—

> (10) The term "car service" in this part shall include the use, control, supply, movement, distribution, exchange, interchange, and return of locomotives, cars, and other vehicles used in the transportation of property, including special types of equipment, and the supply of trains by any carrier by railroad subject to this part.
>
> (11) It shall be the duty of every carrier by railroad subject to this part to furnish safe and adequate car service and to establish, observe, and enforce just and reasonable rules, regulations, and practices with respect to car service; and every unjust and unreasonable rule, regulation, and practice with respect to car service is prohibited and declared to be unlawful.

---

[20] "Anarchy" is defined in Webster's *New International Dictionary* as "absence of regulating power in any sphere; confusion or disorder, in general"; and in the *American College Dictionary*, as "a state of society without government or law; * * * confusion in general; disorder."

These provisions have in the past been held by the Commission to require carriers to supply adequate placement of cars on private sidetracks. See *King Stone Co.* v. *Chicago, I. & L. Ry. Co.*, 160 I. C. C. 245; *Train Service on Northern Pacific*, 112 I. C. C. 191, 194. And, even in the absence of those rulings, the unambiguous provisions of the statute should have impelled the Commission to direct the Chicago Junction to supply the deficiency in switching engines to take care of all the industrial placement of cars, a deficiency which that carrier's Superintendent frankly admitted (R. 524, 525-526).

Moreover, since the Chicago Junction is under lease to the New York Central, so that, by virtue of Section 1(3)(a) of the Act, defining "railroad" as "all the road in use by any common carrier operating a railroad, whether owned or operated under a contract, agreement, or lease," the Chicago Junction is as a matter of law a part of the New York Central. To rest its decision as the Commission did (R. 68), on the circumstance that "The present motive power of the Junction is being operated to capacity," not only ignores the plain command of Sections 1(10) and 1(11), but likewise ignores the relation of parent and subsidiary, and the circumstance that the amount of motive power available to the Chicago Junction rests in the discretion and control of the New York Central. Thus Section 1(3)(a) of the Act is also brushed aside by the Commission, although that very section was but recently enforced against the same parent carrier by this Court in *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169—sustaining the Commission's ruling in *Swift & Co.* v. *Baltimore & O. R. Co.*, 266 I. C. C. 55.

On its face, the steady decrease in the Junction's motive power since its lease by the New York Central would seem to reflect the stock pattern of a subsidiary being milked by its parent. The facts are not in dispute; the figures are in writing (Ex. 58, R. 1963-1965), and were produced by counsel for the Central (R. 1036-1037). Yet the Commission

does not mention that decrease at any point in its report, although one of the grounds for approving the New York Central's lease of the Chicago Junction was that it would "insure to the shippers of the Junction * * * the assistance of an interested trunk line in times of car shortage * * *." *Chicago Junction Case*, 71 I. C. C. at 638. The Commission's devotion to the dogma of Railroad Statics, and its apparent blindness to everything but the existing *status quo* of rail operations, is perhaps nowhere more clearly demonstrated.

(ii) *Labor agreement which impairs efficiency.* Similarly, the Commission's report refers to the restrictive labor agreement (R. 61), and stops there.

It is of course true that the Commission as such has no jurisdiction over labor disputes or rail wages or conditions of labor. If a carrier chooses to sign a feather-bedding agreement with a union with consequent impairment of operating efficiency, that concerns primarily the parties and the agencies created by the Railway Labor Act. But if a carrier relies on such an agreement to justify even in part a discrimination otherwise forbidden by the Interstate Commerce Act, then the Commission is directly concerned.[21] It is settled that a business concern can not rely on its agreements with a labor union when charged with a violation of the Sherman Antitrust Law. *Allen Bradley Co.* v. *Union*, 325 U. S. 797. We think that the rationale of that case is broad enough to condemn reliance by a carrier on an agreement with its labor force when charged with a violation of the Interstate Commerce Act. And we submit, therefore, that the Commission should have held that the existence or non-existence of labor agreements did not

[21] The line-haul carriers have contended that the labor agreement now in question is violative of Condition No. 3 imposed by the Commission, and on that ground sued to enjoin the carrying out of the labor agreement. See *Baltimore & O. R. Co.* v. *Chicago Junction Ry. Co.*, 156 F. 2d 357 (C. C. A. 7); *Railroad Trainmen* v. *Baltimore & O. R. Co.*, 331 U. S. 519; *Baltimore & O. R. Co.* v. *Chicago River & Indiana R. Co.*, 170 F. 2d 654 (C. A. 7).

qualify in the slightest degree the carrier's statutory obligation not to discriminate against a particular commodity or against a particular consignee.

The Commission's treatment of the labor agreement emphasizes, from still another aspect, its disinclination to strike down any discrimination when such action would involve the slightest disturbance of existing arrangements.

(iii) *Obstructive rules of the Union Stock Yards.* The rule of the Union Stock Yards, which prevents even a single car of dead freight from resting on its tracks, is obviously designed to facilitate shipment of livestock to its own chutes and to burden such shipments destined elsewhere—and the rule functions according to plan. The record shows how it impedes rail operation—and the record shows that the Commission, here again, neither noticed nor remedied the obstruction.

Yet there are ample precedents which condemn such practices, and which hold that a portion of track used by a common carrier can not be closed to a particular class of merchandise. Just as the rails can not be closed to livestock (*Louisville & Nashville R. Co.* v. *United States*, 238 U. S. 1; *Louisville & Nashville R. Co.* v. *United States*, 242 U. S. 60, 74; *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169), so by a parity of reasoning they can not be closed to non-livestock. And the same rule applies regardless of the ownership of the track segment in question, as this Court held but recently in *United States* v. *Baltimore & O. R. Co., supra.*

But, here again, however, the Commission accepted the existing regulation as inevitable and immutable—and took no step either to strike down the consequent obstruction or to alleviate the resultant congestion.

(iv) *Refusal of Chicago Junction to grant trackage rights.* The refusal of the Chicago Junction to grant trackage rights to the line-haul carriers to deliver livestock to Swift's sidetrack (R. 840), while granting them such rights

to deliver livestock to the chutes of the Union Stock Yards (R. 62) would seem to be a discrimination too obvious for discussion. In the past the Commission has repeatedly ruled that carriers may not, under the cover of trackage arrangements, work unjust discriminations against shippers or localities. *Huerfano Coal Co.* v. *Colorado & S. E. R. R. Co.*, 41 I. C. C. 657, 659, and rulings there cited; *Benton Coal Mining Co.* v. *Chicago, B. & Q. R. R. Co.*, 63 I. C. C. 396, 399. And this Court has specifically characterized as "unsound" the contention "that a preference granted certain shippers served by a carrier by virtue of the ownership of tracks or trackage rights over other shippers not reached by the carrier, because it does not own tracks or trackage rights which would enable it to reach them, cannot warrant a finding of undue discrimination * * *." *United States* v. *Pennsylvania R. Co.*, 266 U. S. 191, 198-199.

Today the Commission has the same legal power to halt discrimination which is rested on an absence of trackage rights that it had then. But in the present case the Commission did not even notice this obvious discrimination, much less strike it down.

(y) *Virtual anarchy on the Chicago Junction tracks.* Of course it is not the function of this Court to run a railroad or to tell a railroad how it should be run. But it is the function of this Court to direct the Commission to observe and comply with the rules of law enacted by Congress to eliminate discrimination. And it is plain that the policy of Congress "to promote safe, adequate, economical, and efficient service" (National Transportation Policy, *infra*, p. 142) has been implemented by adequate grants of power to enable the Commission to correct the chaotic mode of operation which congests the tracks of the Chicago Junction, and under cover of which it practices the discrimination spread at large upon the present record.

The Commission not only has ample power to bring a semblance of order out of the existing chaos, it has in fact taken a whole series of essentially similar corrective actions in the past. We quote some of the instances catalogued by one of the most sympathetic observers of the Commission's work (III-A Sharfman, *The Interstate Commerce Commission* (1935) 57, 59, 60-62, 66):

> The Commission's authority over service is now essentially coextensive with its rate-making power even under normal conditions; and in emergency situations it exercises a jurisdiction so sweeping, in the interest of general transportation needs, as virtually to dominate the movement of property by rail and the utilization of its instrumentalities. Nominally, aside from authority to require the joint use of terminals when deemed practicable and in the public interest, the duties of the carriers and the powers of the Commission are restricted to "car service"; but since the term "car service", as employed in the statute, embraces the use, control, supply, movement, distribution, exchange, interchange, and return of all vehicles—including cars, locomotives, and special equipment—and the supply of trains, it is obvious that all physical instrumentalities as well as all important service relationships, between carriers and shippers and amongst the carriers themselves, are thereby subjected to the Commission's jurisdiction. The initiative in furnishing safe and adequate service and in maintaining just and reasonable arrangements rests in the roads; but on complaint or on its own motion, the Commission may, after hearing, prescribe the rules, regulations, and practices that shall govern. In performing this normal regulatory task, however, the Commission has avoided formal proceedings as far as possible. From the beginning, it has achieved its ends very largely through coöperation with the carriers. * * * (p. 57.)
>
> * * * * *
>
> The Commission, in coöperation with the carriers and shippers and their representatives, seeks continuously not only to stimulate improvement in operating efficiency, but "to eliminate misunderstandings and se-

> cure the best possible distribution of cars and the freest practicable movement of traffic" [citing *Annual Report*, 1923, p. 54]. (p. 59.)
>
> * * * * *
>
> Merely by way of illustration, among numerous other service difficulties adjusted by the Commission in various parts of the country and with respect to various types of traffic, reference may be made to the relief of the freight congestion in Florida, to the development of a car-distribution plan for the movement of grapes from California, to the removal of congestion of the Belt Railway of Chicago [citing *Annual Report*, 1927, p. 38] and at the ports of Houston, to the adjustment of differences with regard to the handling of livestock [citing, *inter alia*, *Annual Report*, 1929, pp. 47-48], the weighing of vegetables, and demurrage and storage. Through such activity in matters of car service, the Commission is removing maladjustments and promoting movement of traffic, composing service differences and facilitating efficiency and economy of operation. (pp. 60-62.)
>
> * * * * *
>
> In sum, then, the Commission is asserting a large measure of affirmative control over railroad facilities and transportation service, both under normal conditions and in emergencies, not only by maintaining equitable relationships between carriers and shippers and as amongst the carriers themselves, but by promoting efficiency of operation and the free movement of traffic. (p. 66.)

No adequate legal reason is apparent on the face of the Commission's report—or elsewhere—why the Commission could not have taken like action in the present case "to promote * * * efficient service" (see National Transportation Policy), in the crowded yards of the Chicago Junction, with a view to alleviating the congestion there.

In fact, however, not only has the Commission not instituted corrective action, it has relied on the anarchic conditions obtaining on the rails of the Chicago Junction to justify the continuation of the discrimination involved in

this case. For, in differentiating the switching service now accorded Swift in respect of its direct shipments of live-stock at the Omaha location, which is rendered at the flat line-haul rate, from the switching service at Swift's plant sidetrack, which now carries the high additional charge of $39.24 per car, the Commission says (R. 78):

> The transportation services, conditions, and circumstances connected with deliveries at the Omaha plant pens are substantially dissimilar from those connected with the delivery here sought. There, the unloading chutes are on the rails of a line-haul carrier, outside the stockyard congested area, and the delivery made by that carrier is nothing more than a simple switch, at carrier's ordinary operating convenience and without interruption or interference from connecting line engines, as all of the switching is under the control of and performed by the Burlington.

Thus inequality is defended and perpetuated by invoking and exalting anarchy. Devotion to the dogma of Railroad Statics could hardly be carried further.

V. BOTH THE HIGH ADDITIONAL SWITCHING CHARGE ASSESSED ONLY AGAINST LIVESTOCK DELIVERED TO SIDETRACKS, AND THE CONGESTION ON WHICH THE COMMISSION RELIES TO JUSTIFY THAT CHARGE, REST ON AND ARE PERPETUATED BY A DISCRIMINATORY AND ILLEGAL COVENANT, STILL IN FORCE AND STILL GIVEN EFFECT BY THE PARTIES THERETO, WHEREBY THE NEW YORK CENTRAL AGREES TO OPERATE THE CHICAGO JUNCTION FOR "THE BENEFIT, ADVANTAGE, AND BEHOOF OF THE BUSINESS AND AFFAIRS" OF THE UNION STOCK YARDS.

We come now to the heart of the case, to the covenant whereby the New York Central agrees to operate the Chicago Junction for "the benefit, advantage, and behoof of the business and affairs" of the Union Stock Yards, which the latter company invoked to require the appellee New York Central to defend Swift's complaint before the Commission, upon pain of terminating that carrier's lease of the Chicago Junction (Ex. 57, R. 1961-1962). We propose to demonstrate, first, that this covenant is illegal on its face, and, next, that, as the present record shows, that covenant still enables the Union Stock Yards to exercise a substantial measure of control over the operations of the Chicago Junction. We next go on to show that, by reason of this covenant, the Chicago Junction and its parent carrier, the New York Central, not only have no incentive to correct the operating practices which contribute to the congestion, but on the contrary are necessarily forced to continue the existing congestion—which, as this record shows, operates in favor of the Union Stock Yards and against shippers who desire to receive livestock at their own sidings. Thus the covenant is not simply an agreement *in vacuo*, it is an undertaking fully implemented which operates as an effective combination in restraint of trade. Therefore the Commission is in fact, despite its protestations to the con-

trary, enforcing a discriminatory covenant which perpetuates the congestion on which alone rests the justification for the switching charge herein assailed. And of course neither the covenant, nor the congestion, nor the discrimination attain to legitimacy simply because the present practices have been long continued.

A. The covenant in the lease of the Chicago Junction, which requires the appellee New York Central to operate the Chicago Junction for "the benefit, advantage, and behoof of the business and affairs" of the Union Stock Yards, is illegal on its face.

We turn for the text of the covenant in question to the communication of the party invoking it (Ex. 57, R. 1961-1962), *viz.*:

> In Article VI of the lease from the Yard Company to Chicago Junction Railway Company dated December 1, 1913, the Junction agreed "to conduct, manage, and operate the line of railroad by this instrument demised, and in so far as possible the same to conduct in such manner as will tend to the benefit, advantage, and behoof of the business and affairs of the Yards." In the lease of May 19, 1922, by the Junction to the River Road (see Art. III, Sec. 2, and Art. IX), the River Road and the New York Central undertook to perform the above-quoted covenant of the Junction in the earlier lease.

This is, on its face, a covenant to favor a particular patron of the leased road. It is, therefore, a covenant to discriminate, and as such it is illegal on its face. It is condemned by Sections 1(5), 1(9), 2 and 3(~~1~~) of the Interstate Commerce Act. It is also condemned—to cite only a single instance—by *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, which likewise dealt with a carrier's discrimination against a shipper which, as here, was rested on a covenant to discriminate, made between the carrier and the owner of a portion of its track. In that case, the

New York Central agreed with the Cleveland Stock Yards to make a separate charge for "competitive traffic" passing over Track 1619; here the New York Central has agreed with the Union Stock Yard and Transit Company of Chicago to operate the Chicago Junction for "the benefit, advantage, and behoof of the business and affairs of the Yards." In the Cleveland case, the "competitive traffic" at which the covenant was directed was admitted to be livestock; here "the benefit, advantage, and behoof of the business and affairs" of the Union Stock Yards requires that all direct shipments of livestock be discouraged, because—and we quote from the letter written by counsel for the Union Stock Yards (Ex. 57, R. 1961)—

> If the request of Swift is granted, and the other packers demand and are accorded similar treatment (which may be anticipated), the effect will be substantially to destroy the business of the Yard Company.

That is to say, if Swift and the other packers succeed in obtaining livestock delivered at their own sidetracks on the Junction rails, so that they are no longer required, in respect of their direct shipments, to pay yardage fees to the Union Stock Yards for non-transportation services, the Union Stock Yards' business will be substantially destroyed. If Swift alone succeeds, the Union Stock Yards' business will not be impaired, because Swift's direct shipments are now consigned, not to the Union Stock Yards, but to Swift's Omaha Packing Co. plant on the Burlington. None the less, to the extent that the Chicago Junction and its lessee succeed in preventing sidetrack delivery of direct shipments of livestock to any consignee, they will in most instances be funnelling such traffic into the chutes of the Union Stock Yards, subjecting it to yardage fees, exacted for services inappropriate to and unnecessary for direct shipments, see pp. 12-13 *supra*, and consequently not desired —and such conduct will comport squarely with the New

York Central's covenant "to conduct, manage, and operate" the Chicago Junction "in such manner as will tend to the benefit, advantage, and behoof of the business and affairs of the Yards."

Right there is the focal point—and the source—of the discrimination which infects this entire controversy.

It was argued in the District Court, on behalf of the Commission and the United States, that the clause in the covenant, "in so far as possible", must be construed to mean "in so far as it is legally possible", on the principle that, where two constructions of a written contract are possible, preference will be given to the one which does not result in a violation of law, citing *Great Northern Ry. Co.* v. *Delmar Co.*, 283 U. S. 686, 691.

Several answers to this too facile approach come readily to mind. One is that made by Commissioner Alldredge below (R. 85):

> The illegality of this covenant is not, as was contended on oral argument, self-corrective through the operation of the qualifying phrase "insofar as possible." The daily conduct of a common carrier's business cannot be supervised by governmental authority so as to safeguard the public interest against the observance of such a covenant, whether qualified as indicated or left entirely unqualified. Its effects may be subtle and indirect and their impact may be felt by shippers located hundreds of miles from the locale of the carrier's operations and who could not, for this reason, be expected to trace the source of their difficulties. A covenant of this character is so diametrically opposed to the public duties and obligations of a common carrier that no vestige of it should be allowed to remain. It is unlawful per se.

Another answer is that, if the covenant is construed in the manner suggested by the Government and the Commission below, it would be meaningless. An agreement to effect a preference to the extent that a preference is legally possible, as applied to matter and activities subject to the

Interstate Commerce Act, is a contradiction in terms; there are no lawful preferences, there are no lawful discriminations, within that field. The covenant in question is either illegal or nugatory—and this record is replete with proof that the parties thereto did not regard it as being without meaning or effect.

B. The present record proves indisputably that, by virtue of the covenant in the lease of the Chicago Junction property, the Union Stock Yards still exercise a substantial measure of control over the operations by the New York Central of the Chicago Junction.

In its report, the Commission asserted that the Union Stock Yards were completely divested of all control over the terminal railroad once it was leased, saying (R. 80),

> The effect of the leases was to completely divest the Union Stock Yards of operation and control of the terminal railroad, the Court saying [in *Union Stock Yard Co.* v. *United States*, 308 U. S. 213, 216-217] that by ceasing to operate or control its railroad directly or indirectly, the Union Stock Yards restricted its transportation service to the loading or unloading of livestock as specified in its tariff.

And the Commission in this Court (I. C. C. Motion to Affirm, pp. 17-18) repeats the assertion of complete divestiture of control.

The record, however, completely undermines the Commission's position on this point; and, as the evidence is in documentary form, it is not subject to dispute.[22] The letter

---

[22] On behalf of The Chicago Live Stock Exchange and Chicago Traders Live Stock Exchange, intervening appellees, there was offered a deposition by Guy L. Gladson, Esq., a member of the firm of Winston, Strawn & Shaw, and one of the writers of Exhibit 57 (R. 1961-1962). This deposition, not having been before the Commission, was excluded by the District Court (R. 149).

(a) Such exclusion was plainly right; a long line of cases holds that, when administrative orders are attacked in the courts, evidence which was not before the administrative agency may not be received. *National Broadcasting Co.* v. *United States*, 319 U. S. 190; *Shields* v. *Utah Idaho R. Co.*, 305 U. S.

already referred to (Ex. 57, R. 1961-1962), which invoked the covenant to induce action on the part of the New York Central contrary to that which that carrier had originally contemplated, did not restrict itself to abstract expression of opinion. It was not a mere suggestion. It was a threat, clearly, unequivocally, and precisely phrased in lawyers' language. Counsel for the Union Stock Yards wrote (Ex. 57 at R. 1962),

> It is our considered opinion that the River Road and the Central are obligated under the terms of the foregoing provision of the lease of 1913 to defend this case and to take every other step appropriate to prevent irreparable injury to the Yard Company, and that any failure to do so will be a breach of this covenant of the lease.

This was intended to mean, and meant, "If the New York Central will not act for the benefit, advantage, and behoof of the business and affairs of the Stock Yards by defending Swift's complaint before the Commission, their lease of the Chicago Junction, approval of which entailed so much litigation,[23] will be terminated, and we will thereupon

---

177; *Acker* v. *United States*, 298 U. S. 426; *Tagg Bros.* v. *United States*, 280 U. S. 420; *United States* v. *Louisville & N. R. Co.*, 235 U. S. 314. The only exceptions—instances of alleged confiscation (*Baltimore & O. R. Co.* v. *United States*, 298 U. S. 349), and situations where the jurisdiction of the administrative agency is challenged (*United States* v. *Idaho*, 298 U. S. 105)—are not involved in the present case on any footing.

(b) Moreover, Mr. Gladson did not deny writing the letter, but only sought to explain the circumstances that led to its being written (R. 141-144); his deposition, even if admissible, would therefore amount to no more than confession without avoidance.

(c) And finally, counsel for the appellant was prepared, had the deposition been admitted, to rebut Mr. Gladson's testimony. See the following excerpts from pp. 27 and 40 of the proceedings of February 27, 1951 (Designated (R. 221, item 6) but not printed, R. 226, see item II D): Mr. Rynder: "* * * * we are prepared at this session this morning, to rebut the testimony offered by Mr. Gladson in that deposition." * * * "I don't want to conclude without again reminding you that we would desire to rebut this evidence, if it is admitted."

[23] See note 9, page 23, *supra*.

lease this valuable property to one of the New York Central's competitors."

Whereupon the New York Central proceeded to defend Swift's complaint before the Commission (R. 250), and, thereafter, to defend Swift's complaint against the Commission in the District Court (R. 97-124). Nor was this the only step that the New York Central took lest it be considered to have broken its covenant to operate and manage the Chicago Junction for the "benefit, advantage, and behoof of the business and affairs" of the Union Stock Yards.

After the date of the letter in question, the Chicago Junction filed a new tariff, under which it proposed "to specifically exempt livestock from the traffic which it will transport and to cancel the application on livestock of all switching charges published by it, except to and from chutes and sidings at the Union Stock Yards" (R. 59). The earlier arrangement had long been in effect, but, obviously, if it were cancelled, so that livestock could not be delivered at all at the sidetrack of Swift or any other packer on the Junction tracks, even with the high additional switching charge, then the business and affairs of the Union Stock Yards would be correspondingly benefited and advantaged. Whatever else the New York Central might be charged with, whatever provisions of the Interstate Commerce Act it might be violating, it was determined not to breach its covenant to manage and operate the Chicago Junction for the "benefit, advantage, and behoof" of the Union Stock Yards.

For the Commission to assert, therefore, in the face of this uncontroverted—and incontrovertible—evidence, that the Union Stock Yards have been completely divested of control over the Chicago Junction, is on a par with asserting that black is white, war is peace, and slavery is freedom.

Actually, of course, the vice of the covenant goes far deeper than the two instances of patent control just dissected. Neither of those involved a continuing wrong. In

the first instance noted, as it happened, the new tariff was cancelled (R. 81); and of the second it is doubtless sufficient to say that the litigation in question has not yet finally terminated in the Union Stock Yards' favor. The truly dangerous feature of the covenant, the feature which makes it a continuing wrong, is that it can always be invoked whenever the Union Stock Yards feel that their business is falling off, upon pain of cancellation of the lease, and that it thus is a means of insuring inefficiency whenever inefficiency is necessary to protect that business. And, in fact, as we shall now show, that is precisely what has happened in the past and what is happening right now.

As we showed at length in Point IV, *supra*, pp. 105-109, the congestion on which the Commission relied to justify the discrimination here practiced is in substantial measure the result, not of mere volume of traffic, but of the several appellees' own acts. And, in view of the covenant, of the undertaking which the Union Stock Yards does not hesitate to seek to enforce, there is not only no incentive for the Chicago Junction and the New York Central to improve matters, but, on the contrary, these carriers have every inducement to continue the present inefficient and wasteful practices so that the congestion continues—with the consequence that sidetrack delivery (which produces no revenue for the Union Stock Yards) is denied, and with the further and ultimate consequence that the business of the Union Stock Yards will be benefited and advantaged rather than substantially destroyed.

C. The present record demonstrates that the illegal covenant continues and perpetuates the existing congestion, which is the sole factor relied upon by the Commission to justify the discriminatory switching charge.

The New York Central's covenant "to operate and manage" the Chicago Junction "for the benefit, advantage, and behoof of the business and affairs of the Yards," shown here to be invoked under pain of cancellation of its valuable

lease, and the actual management and operation of the Chicago Junction, as disclosed in the present record, shed mutual illumination upon each other. When the covenant and the operating practices are viewed together, as they must be, the covenant is seen for what it is, not simply an abstract generalization, but the linchpin of an effective combination in restraint of trade; and the operating practices are revealed, not as fortuitous, Topsy-like developments, but as a closely knit, interlocking arrangement which effectively precludes any deliveries of livestock other than deliveries funnelled into the chutes of the Union Stock Yards (in respect of which the Yards can and does assess yardage fees, whether or not the shipments in fact require the services for which those fees are exacted).

It is clear that the New York Central, lessee of the Chicago Junction, is under no incentive either to dissipate the congestion or to improve operating conditions; and that assertion rests, not on conjecture, but on the present record.

The Chicago Junction's superintendent testified that his road's track layout at the time of the hearing before the examiner was the same as in 1909, that no new tracks had been added in the intervening nearly 40 years (R. 461, 523). And the Commission found (R. 60) that "There is no land available for the expansion of those [Ashland Avenue] yards or the building of additional facilities nearby for interchange and classification of traffic."

Yet in 1922, when the Commission was passing on the propriety of the New York Central's proposed lease of the Chicago Junction, one of the grounds underlying its approval was the possibility of linking the Chicago Junction's facilities with those of the New York Central's wholly-owned subsidiary, the Indiana Harbor Belt Railroad. At that time the Commission said (*Chicago Junction Case*, 71 I. C. C. 631, 634-635, 638):

> The Junction properties are incapable of expansion so as to afford adequate facilities for interchange and

classification, since the district in which they lie is highly developed and intensively used, whereas the Harbor Belt has or can acquire additional space for the building of yards. The inner and outer properties are therefore complementary and in no sense competitive, but can only be operated to the best advantage by bringing them under common control. This expansion at outlying points would permit the inner group to extend further its team-track facilities and enable a more expeditious use of the less-than-carload facilities of the stockyards group. The gain to shippers on the Junction would be found in the greater accessibility of the outer-belt facilities of the Harbor Belt and the expansion of inner facilities made possible by the removal of outer-belt facilities from the inner district. Inbound traffic, for example, would be brought first to outer classification yards on the Harbor Belt and there made up into trains for the 12 districts served by the inner lines. Other services now performed by the Junction in the congested area would be performed on the outer belt, to the great relief of the present Junction facilities.

* * * * *

* * * The Central's terminal facilities are relatively inadequate as compared with competitor eastern trunk lines, but the Central controls extensive facilities for classification and interchange which are complementary to the Junction properties. The stronger competition and the connection between the Junction properties and the Harbor Belt facilities which would thus be brought about, would not only insure to the shippers of the Junction the necessary expansion and elasticity of facilities, together with the assistance of an interested trunk line in times of car shortage, and other emergencies, but would also remove congestion from the closely hemmed-in district served by the Junction and thus open facilities for expedition in the handling of traffic in and out, and also for handling traffic from one part of the city to another.

It is clear from the record in this case that the New York Central did not avail itself of the advantages pointed out by the Commission in 1922; and the answer why it did not

do so is to be found in the covenant. For, bound as it is under threat of losing the Junction lease to operate the Junction "for the benefit, advantage, and behoof of the business and affairs of the Yards," the Central has every incentive to leave matters just where they are, to continue the existing slapdash methods of operation, and to perpetuate the existing congestion. Because, to the extent that the yards of the Chicago Junction remain congested, there exists under the ruling of the Commission justification for the discriminatory switching charge on livestock, and for denying Swift's request; and we have it from the Union Stock Yards' counsel (Ex. 57, R. 1961) that "If the request of Swift is granted, and the other packers demand and are accorded similar treatment * * * the effect will be substantially to destroy the business of the Yard Company."

Here, in a nutshell, is the Q. E. D. for the proposition that the covenant is illegal; here is the fully spelled-out chain of reasoning supporting Commissioner Alldredge's acute observation (R. 83):

> It is difficult to escape the conclusion that the pecuniary interest of the owners of the stockyards in these terminal facilities has been permitted to work itself out in such manner as to deprive Swift of a service to which it would ordinarily be entitled. The conduct, management, and operation of these facilities so as to assure a direct and uninterrupted movement of livestock, under trackage contracts, to and from the stockyards and to exact a substantial switching charge for the transportation of livestock to any industry not using the services of the stockyards seems to me to comport squarely with the covenant of the lease to "conduct, manage, and operate the line of railroad * * * in such manner as will tend to the benefit, advantage, and behoof of the business and affairs of the yards." This, however, is clearly inconsistent with the responsibility of a common carrier to serve all patrons indiscriminately within the limits of its capacity.

It is not necessary at this juncture to analyze the anti-trust precedents relating to railroads in order to ascertain

the full extent to which they fit the present facts. For it is clear that, since the present combination touches matters under the jurisdiction of the Interstate Commerce Commission, Section 16 of the Clayton Act (15 U. S. C. 26) prohibits an immediate action under the antitrust laws by the appellant against any of the present appellees. *Central Transfer Co.* v. *Terminal R. R.*, 288 U. S. 469. Indeed, even after relief should be had in the present proceeding, a treble-damage action under the antitrust laws would lie only if the "Discriminatory privileges and payments given by a carrier to a consignor or consignee" are "the symptoms or incidents of an enveloping conspiracy with its own illegal ends." *Terminal Warehouse Co.* v. *Pennsylvania R. Co.*, 297 U. S. 500, 511; *id.* at 515-516. We need not explore these intriguing by-ways further at this time; sufficient to each case is the discrimination thereof. It is enough for present purposes that the covenant in question, and the combination which it links together, result in a violation of the Interstate Commerce Act.

D. Despite its protestations to the contrary, the Commission in its ruling is, in fact, enforcing the illegal covenant between the Union Stock Yards and the New York Central to the detriment of the present appellant.

In its report, as has been indicated, the Commission asserted (R. 80) that "The effect of the leases was to completely divest the Union Stock Yards of operation and control of the terminal railroad," and further—

> The operation of the Chicago Junction is subject not only to the provisions of the Interstate Commerce Act but also to the conditions imposed by the Commission in the *Chicago Junction Case* [71 I. C. C. 631]. Those conditions were particularly intended to insure that the Chicago Junction and the Chicago River & Indiana should be operated as neutral terminal carriers, without special advantage favoring the New York Central but the conditions were and are broad enough to inhibit operation of the Chicago Junction to the special advantage and interest of the Union Stock Yards.

In this Court, the Commission repeated the substance of the foregoing (I. C. C. Motion to Affirm, pp. 17-18), and also specifically said (*id.*, p. 17) that "Neither the Commission's order nor the decision of the [District] Court was based in any respect on the questioned covenant, and while it was in effect refusing to recognize by failing to give any effect to the covenant, the Commission expressly held that the operation of the Junction was subject to the conditions imposed by the Commission itself and the Interstate Commerce Act."

The intervening appellees, after referring to the portions of the Commission's report above noted, say of the covenant (Motion to Affirm, p. 9), that "It has no relation to the reasonableness or lawfulness of the published charges."

In view of what the present record reveals it is of course apparent that the quoted comments reflect either an almost incredible naivete, or else a complete disregard of facts.

We have already, *supra*, pp. 121-124, pointed out the demonstrable fallacy of the Commission's view that, after their lease of the Chicago Junction, the Union Stock Yards were completely divested of all further control of that road. The Yards' threatening letter to the lessee New York Central, the action taken by the New York Central in consequence thereof with respect to defending the present proceeding, and the further action taken by the Chicago Junction to cancel its switching tariff on livestock destined anywhere than to the Union Stock Yards, combine to establish conclusively the control which the Union Stock Yards can and does exercise whenever its business is threatened. It speaks volumes for the Commission's attitude towards and perception of the facts that the Union Stock Yards' letter, the authenticity of which is unquestioned,[24] is not even mentioned in its report, and that the Commission accordingly

[24] The accuracy of the exhibit was conceded at the hearing (R. 1038) and is admitted by the pleadings (Par. VIII of railroad interveners' answer, R. 102-103; Par. 9 of Union Stock Yards' answer, R. 128; amended answer of Chicago Live Stock Exch. et al., R. 133).

did not perceive the obvious connection between that letter and the subsequent cancellation of the switching charge, which became the subject of the I. & S. proceeding.

The clause in the Commission's report which says of the conditions imposed in the *Chicago Junction Case* (71 I. C. C. at 639-641) that they (R. 80)—

> were and are broad enough to inhibit operation of the Chicago Junction to the special advantage and interest of the Union Stock Yards—

can only have reference, among all of the 17 conditions imposed, to No. 9, as follows (71 I. C. C. at 640):

> 9. Shippers served by the Junction and River Road shall be entitled to the same basis of switching charges as prevails in the Chicago switching district generally, and no attempt shall be made to establish any different basis of local or connecting-line switching charges than that which prevails in the Chicago switching district generally for the same or similar service under substantially similar conditions.

We are not prepared to disagree with the Commission's conclusion (R. 80) that the quoted condition was and is "broad enough to inhibit operation of the Chicago Junction to the special advantage and interest of the Union Stock Yards." But on the basis of the present record we do assert with confidence that the quoted condition, far from being enforced, is wholly nullified by the Commission's action in the present case. For, under the ruling now being reviewed, the Chicago Junction is, with the sanction of the Commission and of the court below, managed and operated so as to assure a direct and uninterrupted movement of livestock to and from the Union Stock Yards under trackage contracts, with consequent benefit and advantage to the business and affairs of the Yards by reason of the yardage fees assessed on livestock so delivered, while at the same time the Chicago Junction is permitted to exact a high additional switching charge for the transportation

of livestock to any consignee on its rails not using the services of the Union Stock Yards.

No other conclusion is fairly possible when it is remembered that trackage rights are granted the line-haul carriers for delivery of livestock to the Union Stock Yards and denied the line-haul carriers for delivery of livestock to private sidetracks; that the rules of the Union Stock Yards forbidding cars with dead freight on its tracks combine with the labor agreement consented to by the Chicago Junction to render more difficult the ultimate delivery of all freight to private sidetracks on the Chicago Junction's rails; that the dwindling motive power of the Junction has impaired that carrier's ability to make prompt industrial deliveries; that the anarchic passage of foreign crews over the Chicago Junction's rails contributes its part to the congestion and blockage there; and that the congestion resulting from all of these factors is relied upon by the Commission to justify the high additional switching charge on livestock consigned to private sidetracks.

The consequence of the Commission's ruling is that it forces delivery of livestock into the Union Stock Yards, which are thereupon free to assess yardage fees for stockyards services to direct shipments, for which shipments such services are neither appropriate nor necessary nor desired; and, since those services are performed after transportation has ended, the Commission is without power to regulate them. *Swift & Co.* v. *United States*, 316 U. S. 216. This funnelling the Commission cloaks under the euphemism of the supposed interest in "expeditious centralized delivery" (R. 71). Apart from the point that the Act recognizes no such interest, but on the contrary protects the consignees' right to expeditious *decentralized* delivery, Section 1(9); see p. 83, *supra*, the Commission's concern for the business of the Union Stock Yards is such that where one consignee of livestock—the present appellant—has succeeded in acquiring a sidetrack on the rails of a line-haul carrier, where it can receive its direct shipments

free from the imposition of yardage fees for unwanted services, the Commission characterizes that circumstance as a "preference" (I. C. C. Motion to Affirm, p. 13).

It will not be necessary to repeat here what has already been said above, pp. 109-116, as to the Commission's failure to deal with, or indeed even to recognize, the factors attributable to the appellees which contribute to the congestion, nor to reiterate, what is indeed implicit in the Commission's report, that in its view the discriminatory switching charge is justified and legalized by the congestion.

The sum of the present arguments, without repeating those factors, is that, however much the Commission may have minimized the covenant in its report, its ruling in fact enforces it, perpetuates the congestion, and in consequence perpetuates the discriminatory switching charge which that congestion was held to justify. It is no answer for the Commission now to say (I. C. C. Motion to Affirm, p. 17) that the Commission's order was not "based in any respect on the questioned covenant", or that the Commission refused to recognize the covenant by failing to give any effect to it; such a contention only underscores that body's utter failure to perceive the operation and effect and essential vice of that agreement. Indeed, it is a striking commentary on the insensitivity of the Commission to such an obvious discriminatory restraint that only one out of the eight Commissioners who considered the present case had sufficient perception to appreciate the true relationship of the covenant here in question to the discrimination of which this appellant complained.

It is undisputed and indisputable that the covenant whereby the New York Central agrees to operate and manage the Chicago Junction for "the advantage, benefit, and behoof of the business and affairs" of the Union Stock Yards is still in existence; that this covenant was invoked by the Union Stock Yards after Swift filed its present complaint with the Commission, under threat of cancelling the New York Central's lease of the Chicago Junction; and that the New York Central and its subsidiary thereupon

took steps which they would not otherwise have taken, and which operated to the detriment of this appellant and to the benefit and advantage of the business and affairs of the Union Stock Yards.

It can not fairly be disputed that this same covenant will be similarly invoked in the future, and that under the Commission's ruling below, which finds nothing improper therein, the New York Central will be under strong compulsion to comply with its terms in order to preserve its own valuable interest in the Chicago Junction property. Nor can it fairly be disputed that, while the covenant remains in force with the Commission's approval, it removes every incentive which might otherwise impel the New York Central to improve operating conditions on the Chicago Junction tracks. For to the extent that such improvements are effected and congestion is lessened, sidetrack delivery of livestock will be facilitated; but when that happy upland of optimum efficiency is attained, then, according to the Union Stock Yards, their own business will be substantially destroyed. They would thereupon, necessarily, once more invoke the covenant, and the vicious circle would thereby start on still another round. Actually, however, not only is there no incentive to improvement, but our analysis of the factors contributing to the congestion shows how the covenant is in fact the common and vitalizing element of an effective combination to restrain trade with the appellant at its sidetrack, to its detriment, but for the benefit, advantage, and behoof of the Union Stock Yard and Transit Co. at the latter's yards a few city blocks distant. For to the extent that sidetrack delivery of livestock is prevented, or rendered difficult, or made more expensive, the livestock is inevitably diverted to the chutes of the Union Stock Yards, where it is subjected to yardage fees which the Commission can not regulate and which are exacted for services wholly inappropriate to and unnecessary for direct shipments and in consequence not desired by the consignee.

The consequence is that the covenant perpetuates the existing congestion, which in turn is the foundation on

which the legality of the otherwise discriminatory switching charge is bottomed. As long as that charge remains in effect, livestock is forced into the Union Stock Yards, to the benefit, advantage, and behoof of that company's business, and can not be delivered at private sidetracks because of the prohibitive penalty involved in the present additional switching charge of $39.24 per car.

That is why appellant asserts that the Commission's ruling has the effect of enforcing the covenant in question.

E. Neither the fact that the present system of delivering livestock at Chicago has long been in effect nor the circumstance that appellant had a financial interest in the Union Stock Yards prior to 1920 precludes it from obtaining appropriate relief in this proceeding.

The Commission's report throughout places heavy emphasis on the circumstance that delivery of livestock at Chicago to the chutes of the Union Stock Yards has long been in effect, and that the railway network in the Packingtown portion of that city has developed around that method of delivery. See R. 72-74. But an unbroken line of decisions here establishes that the circumstance that a particular practice has been long continued does not insulate it against change if in fact or in law such a practice is later held to violate the terms of the Interstate Commerce Act. *Merchants Warehouse Co.* v. *United States*, 283 U. S. 501; *Louisville & N. R. Co.* v. *United States*, 282 U. S. 740; *American Express Co.* v. *United States*, 212 U. S. 522. It makes no difference whether the challenged practice is rested on contract (*Philadelphia, Baltimore & Washington R. Co. v. Schubert*, 224 U. S. 603; *Los Angeles Switching Case*, 234 U. S. 294; *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169), even on contract made for peculiarly worthy and long antecedent consideration (*Louisville & N. R. Co.* v. *Mottley*, 219 U. S. 467); or whether the practice rests on long continued and unquestioned custom (*Louisville & N. R. Co.* v. *United States*, 282 U. S. 740; *American Express Co.*

v. *United States*, 212 U. S. 522), or even on earlier and different rulings of the Commission (*Merchants Warehouse Co.* v. *United States*, 283 U. S. 501). All these are false foundations for a practice where adherence to the statute calls for its suppression. Cf. *Terminal Warehouse Co.* v. *Pennsylvania R. Co.*, 297 U. S. 500, 507. There is no estoppel against the assertion of rights under the Interstate Commerce Act. *Los Angeles Switching Case*, 234 U. S. 294, 312-313.

Thus the course of decision in this Court cuts the ground from under still another justification advanced by the Commission to support its ruling in this case, the fact of long continued practice. Nor does the circumstance that correction of the long-standing discriminatory practice may be difficult operate as a valid reason against such corrective action. *Interstate Commerce Comm.* v. *Mechling*, 330 U. S. 567. As the Court there said (330 U. S. at 579-580):

> Related to the question just discussed, is the Commission's contention here that permitting reshipping rates for ex-barge grain to remain equal to the rates for ex-rail and ex-lake grain will cause "incurable chaos" in and disrupt the national rail rate structure which reflects many interrelated conditions governing the transportation of grain from west of Chicago to eastern markets. * * * The possibility of such a disruption does not remotely justify discriminations against barge traffic which actually deprive shippers and the barge companies of the inherent advantages of water transportation guaranteed to them by Congress.

So here: The possibility of disrupting conditions of terminal operation does not remotely justify the discrimination which deprives this appellant of rights under Sections 1(9) and 2 and 3(1) of the Interstate Commerce Act which have been guaranteed by Congress.

Here again, the philosophy of Railroad Statics must yield to the primary Congressional purpose of removing inequalities and preferences. Discrimination does not attain legitimacy through prescription.

It is contended, particularly by the intervening appellees (Motion to Affirm, pp. 3-4, n.2) that it was the packers, including Swift, who contributed to the existence of the present physical arrangement, quoting a sentence from this Court's opinion in *Swift & Co.* v. *United States*, 316 U. S. 216, 230: "It was the packers themselves who suppressed the competitive yards and alternative facilities for unloading their stock."

The history of livestock deliveries in Chicago, including the development of the Union Stock Yards, has been commented on at length in at least four opinions of this Court. *United States* v. *Union Stock Yard*, 226 U. S. 286, 296-301; *Adams* v. *Mills*, 286 U. S. 397, 410-414; *Union Stock Yard Co.* v. *United States*, 308 U. S. 213, 215-216; *Swift & Co.* v. *United States*, 316 U. S. 216, 227-231. But no opinion of this Court has yet considered the significant and far-reaching change which was effected in the Chicago stockyards problem by the antitrust decree entered against, *inter alia*, this appellant, which required Swift to divest itself of all its financial interests and stock holdings in all public stockyards. See par. "Second" of Sub-Ex. 62 of Ex. 42, R. 1458, 1460.[25] By reason of this decree, which required all the packers to convey their stockyards holdings to trustees for an ultimate disposition which was necessarily long delayed (see Sub-Exs. 74-78 of Ex. 42, R. 1611-1637), the situation at Chicago and elsewhere was completely altered. Swift's interests no longer coincided with those of any stockyards. At Cleveland, for instance, the Cleveland Stock Yards began to assess yardage fees on all livestock passing over its tracks to Swift's Cleveland plant at about the time that the Stock Yards securities were sold to outsiders. *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169; see R. 34, No. 223, Oct. T. 1947. At Chicago, in the words of one witness (R. 738), Swift became "a competitor that originally was one of our partners." The result exemplifies

[25] Swift made a determined but eventually completely unsuccessful attempt to set aside certain terms of the decree in question. See *Swift & Co.* v. *United States*, 276 U. S. 311; *United States* v. *Swift & Co.*, 286 U. S. 106.

what this Court, speaking through Mr. Justice Brandeis, predicted over thirty years ago: "Transportation conditions are not static; the oppressor of today may tomorrow be the oppressed." *Skinner & Eddy Corp.* v. *United States*, 249 U. S. 557, 568. And the consequence has been "a long struggle involving the meat packers, the railroads, and the Union Stock Yard and Transit Company of Chicago," see *Armour & Co.* v. *Alton R. Co.*, 312 U. S. 195, of which the present case is the latest episode.

If, therefore, the fact of Swift's pre-1920 participation in the development of livestock delivery in Chicago, and in the rise of the Union Stock Yards, is at all relevant in the present connection, it must be on some basis, not yet completely articulated in detail, of estoppel.

To the extent that the argument of any of the appellees rests upon estoppel, formal or otherwise, it is of course untenable. *Los Angeles Switching Case*, 234 U. S. 294. To the extent that the argument in favor of the *status quo* falls short of setting up an estoppel, it is if possible even less tenable. In the court below, see R. R. Brief, pp. 56-57, the railroad appellees said of the voluminous documents embraced in Exhibit 42 (R. 1174-1638) that they

> evidence a course of conduct by the packers extending over a period of many years, which was largely responsible for the physical facilities which now make Swift's demands extremely unreasonable and physically impossible.
>
> *This material is not offered to establish any technical estoppel against the packers. It is offered to show that through a long period of years, and until very recently, the packers believed that the delivery of livestock in the public yards constituted the reasonable and lawful method of delivering livestock in the stockyards area. Its primary purpose is to show that the packers not only acquiesced, but actively participated in a particular development of this industrial area and of the structure of the railroad plant which serves it, with the result that under the existing physical conditions the customary method of making delivery to the stockyards has become the only reasonable and practi-*

cal method of making delivery within the stockyards area. [Italics in original.]

This argument involves a number of obvious infirmities. For one thing, it completely (though conveniently) overlooks the many factors other than the volume of traffic which contribute to the existing congestion on the Chicago Junction's tracks. That circumstance, assuredly, renders the argument untenable. For, just so long as the Chicago Junction's motive power is inadequate and continues to dwindle, so long as that carrier disables itself by a labor agreement from rendering efficient service, so long as that carrier discriminates in its granting and withholding of trackage rights, so long as that carrier permits foreign engines and crews to roam at large on its tracks without even a pretense at regulation, and so long as the Union Stock Yards' obstructive rules add to the difficulties of making deliveries, it will take more than simple assertion to establish the truth of the railroad appellees' proposition that "under the existing physical conditions the customary method of making delivery to the stockyards has become the only reasonable and practical method of making delivery within the stockyards area."

For another, the foregoing argument completely, and again conveniently, ignores the discriminatory covenant whereby the lessee of the Chicago Junction is bound to operate that road for "the benefit, advantage, and behoof of the business and affairs" of the Union Stock Yards. For, unless the New York Central sees to it that livestock *is* delivered to the Union Stock Yards and is not delivered to sidetracks, the Union Stock Yards derive no revenue from the operation. Thus, in order to comply with the covenant, the New York Central is bound to discourage sidetrack delivery. It does so, *inter alia*, by asserting that stockyards delivery, which subjects livestock to the payment of non-transportation charges, is the sole practical means for delivery of that commodity.

Yet, significantly enough, when Swift was still availing itself of this same allegedly "only reasonable and practical method of making delivery", by consigning its direct shipments to itself at the Union Stock Yards, it was the same railroads, represented by the same counsel, which insisted that such delivery should be subjected to yardage charges for non-transportation services, so that the consignee would in effect be obliged to ransom his own property. See Brief on behalf of appellees Alton Railroad Co. et al., in No. 595, Oct. T. 1941, *Swift & Co.* v. *United States*, 316 U. S. 216, 217, filed by Kenneth F. Burgess and Douglas F. Smith, Esqs.[26] That is to say, (a) the railroads argued in the egress case that the consignee shipping his own livestock to the Union Stock Yards should not be permitted to receive that property without paying yardage charges for unwanted non-transportation services; (b) the railroads now argue here that the delivery of livestock at the Union Stock Yards is "the only reasonable and practical method of making delivery within the stockyards area"; but (c) the railroads have yet to point out any means whereby the consignee of of direct livestock at Chicago may obtain his property at his own sidetrack at the flat line-haul rate, which is the method and rate universally applicable everywhere else in the country (Ex. 10 at R. 1063-1069; Ex. 12, R. 1083-1090). To the contrary, the railroads assert (Motion to Affirm, p. 11) that "What appellant seeks here is a basis

[26] Swift's complaint in the egress case before the Commission was brought against 23 railroads (R. 24-25, No. 595, Oct. T. 1941). Seventeen of these, plus the Chicago River and Indiana Railroad, intervened and answered in the district court (R. 62-65, 70-74, No. 595, Oct. T. 1941). Fourteen of these same intervening railroads are now parties to the present cause (R. 97-98), and the other four are represented as follows: (a) The Alton Railroad, an intervener in the egress case, was merged in 1947 with the Gulf, Mobile & Ohio R. R. Co. (see *Moody's Manual, Railroads, 1951*, p. 463), which is an appellee here. (b) The Cleveland, Cincinnati, Chicago & St. Louis Ry. Co., and the Michigan Central, both of which were interveners in the egress case, are both leased by the New York Central (*id.* pp. 1051, 1054), an appellee here. (c) The Pere Marquette, an egress case intervener, was merged in 1947 with the Chesapeake & Ohio (*id.*, p. 745), an appellee here. Thus every railroad interest represented in the egress case is represented in this case.

of rates for private track delivery that would place it in a preferred position over any other Chicago packer desiring that character of service."

The common denominator in all of these contentions made by the railroads is that they require the conclusion that direct shipments of livestock at Chicago must go to the Union Stock Yards and must there be subjected to yardage fees. This result, obviously, inures to the "benefit, advantage, and behoof of the business and affairs of the Yards." Thus the very terms of the arguments made by the railroads in the egress case and in this case constitute additional proof of the paralyzing effect on commerce of the covenant between the Union Stock Yards and the lessee of the Chicago Junction.

Finally, the quoted argument completely fails to explain how the particular development of an industrial area, or the structure of a particular railroad plant, or the part which particular consignees have played in such development or in producing such a structure, can justify or excuse, or sanction or grant dispensation from palpable discriminations in violation of a statute, here the Interstate Commerce Act, whose primary target for over two generations has been the evil of discrimination.

What the railroad appellees are saying boils down to this—and we submit it as an accurate paraphrase of the quotation from their district court brief just set out—that since Swift and the other packers, through their one-time interest in the Union Stock Yards, participated in bringing about the present situation, they are bound thereafter to accept it without complaint after they had been divested of that interest by command of the Sherman Antitrust Law, however much the continuation of that situation involves demonstrable discriminations in violation of the Interstate Commerce Act. This amounts in substance to a contention that the removal of a restraint on interstate commerce justifies the continuance of a discrimination in interstate commerce. That proposition, obviously, is not law—and

yet in substance it underlies the Commission's report, the district court's approval thereof, and the arguments now made here in support of both.

CONCLUSION

For the foregoing reasons, the judgment of the court below should be reversed, with directions to set aside the order of the Interstate Commerce Commission, and to remand the proceeding to that body with instructions to proceed according to law, and in conformity with the opinion of this Court.

Respectfully submitted.

FEBRUARY 1952.

APPENDIX A

Pertinent Statutory Provisions

1. National Transportation Policy (Act of Sept. 18, 1940, 54 Stat. 898)

It is hereby declared to be the national transportation policy of the Congress to provide for fair and impartial regulation of all modes of transportation subject to the provisions of this Act, so administered as to recognize and preserve the inherent advantages of each; to promote safe, adequate, economical, and efficient service and foster sound economic conditions in transportation and among the several carriers; to encourage the establishment and maintenance of reasonable charges for transportation services, without unjust discriminations, undue preferences or advantages, or unfair or destructive competitive practices; to cooperate with the several States and the duly authorized officials thereof; and to encourage fair wages and equitable working conditions;—all to the end of developing, coordinating, and preserving a national transportation system by water, highway, and rail, as well as other means, adequate to meet the needs of the commerce of the United States, of the Postal Service, and of the national defense. All of the provisions of this Act shall be administered and enforced with a view to carrying out the above declaration of policy.

2. Interstate Commerce Act, as Amended, Part I (49 U. S. C. 1 *et seq.*).

Sec. 1. (3) (a) The term "common carrier" as used in this part shall include all pipe-line companies; express companies; sleeping-car companies; and all persons, natural or artificial, engaged in such transportation as aforesaid as common carriers for hire. Wherever the word "carrier" is used in this part it shall be held to mean "common carrier". The term "railroad" as used in this part shall include all bridges, car floats, lighters, and ferries used by or operated in connection with any railroad, and also all the road in use by any common carrier operating a railroad, whether owned or operated under a contract,

agreement, or lease, and also all switches, spurs, tracks, terminals, and terminal facilities of every kind used or necessary in the transportation of the persons or property designated herein, including all freight depots, yards, and grounds, used or necessary in the transportation or delivery of any such property. The term "transportation" as used in this part shall include locomotives, cars, and other vehicles, vessels, and all instrumentalities and facilities of shipment or carriage, irrespective of ownership or of any contract, express or implied, for the use thereof, and all services in connection with the receipt, delivery, elevation, and transfer in transit, ventilation, refrigeration or icing, storage, and handling of property transported. The term "person" as used in this part includes an individual, firm, copartnership, corporation, company, association, or joint-stock association; and includes a trustee, receiver, assignee, or personal representative thereof.

* * * * *

(5) All charges made for any service rendered or to be rendered in the transportation of passengers or property as aforesaid, or in connection therewith, shall be just and reasonable, and every unjust and unreasonable charge for such service or any part thereof is prohibited and declared to be unlawful.

* * * * *

(9) Any common carrier subject to the provisions of this part, upon application of any lateral, branch line of railroad, or of any shipper tendering interstate traffic for transportation, shall construct, maintain, and operate upon reasonable terms a switch connection with any such lateral, branch line of railroad, or private side track which may be constructed to connect with its railroad, where such connection is reasonably practicable and can be put in with safety and will furnish sufficient business to justify the construction and maintenance of the same; and shall furnish cars for the movement of such traffic to the best of its ability without discrimination in favor of or against any such shipper. If any common carrier shall fail to install and operate any such switch or connection as aforesaid,

on application therefor in writing by any shipper or owner of such lateral, branch line of railroad, such shipper or owner of such lateral, branch line of railroad, may make complaint to the commission, as provided in section 13 of this part, and the commission shall hear and investigate the same and shall determine as to the safety and practicability thereof and justification and reasonable compensation therefor, and the commission may make an order, as provided in section 15 of this part, directing the common carrier to comply with the provisions of this section in accordance with such order, and such order shall be enforced as hereinafter provided for the enforcement of all other orders by the commission, other than orders for the payment of money.

(10) The term "car service" in this part shall include the use, control, supply, movement, distribution, exchange, interchange, and return of locomotives, cars, and other vehicles used in the transportation of property, including special types of equipment, and the supply of trains, by any carrier by railroad subject to this part.

(11) It shall be the duty of every carrier by railroad subject to this part to furnish safe and adequate car service and to establish, observe, and enforce just and reasonable rules, regulations, and practices with respect to car service; and every unjust and unreasonable rule, regulation, and practice with respect to car service is prohibited and declared to be unlawful.

* * * * * *

SEC. 2. If any common carrier subject to the provisions of this part shall, directly or indirectly, by any special rate, rebate, drawback, or other device, charge, demand, collect, or receive from any person or persons a greater or less compensation for any service rendered or to be rendered, in the transportation of passengers or property, subject to the provisions of this part, than it charges, demands, collects, or receives from any other person or persons for doing for him or them a like and contemporaneous service in the transportation of a like kind of traffic under substantially similar circumstances and conditions, such common carrier

shall be deemed guilty of unjust discrimination, which is prohibited and declared to be unlawful.

SEC. 3.(1) It shall be unlawful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever: *Provided, however,* That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description.

* * * * *

SEC. 15.(5) Transportation wholly by railroad of ordinary livestock in carload lots destined to or received at public stockyards shall include all necessary service of unloading and reloading en route, delivery at public stockyards of inbound shipments into suitable pens, and receipt and loading at such yards of outbound shipments, without extra charge therefor to the shipper, consignee or owner, except in cases where the unloading or reloading en route is at the request of the shipper, consignee or owner, or to try an intermediate market, or to comply with quarantine regulations. The commission may prescribe or approve just and reasonable rules governing each of such excepted services. Nothing in this paragraph shall be construed to affect the duties and liabilities of the carriers now existing by virtue of law respecting the transportation of other than ordinary livestock, or the duty of performing service as to shipments other than those to or from public stockyards.

3. SECTION 10 OF THE ADMINISTRATIVE PROCEDURE ACT (5 U. S. C. 1009).

JUDICIAL REVIEW

SEC. 10. Except so far as (1) statutes preclude judicial review or (2) agency action is by law committed to agency discretion—

(a) RIGHT OF REVIEW.—Any person suffering legal wrong because of any agency action, or adversely affected or aggrieved by such action within the meaning of any relevant statute, shall be entitled to judicial review thereof.

* * * * *

(c) REVIEWABLE ACTS.—Every agency action made reviewable by statute and every final agency action for which there is no other adequate remedy in any court shall be subject to judicial review. Any preliminary, procedural, or intermediate agency action or ruling not directly reviewable shall be subject to review upon the review of the final agency action. Except as otherwise expressly required by statute, agency action otherwise final shall be final for the purposes of this subsection whether or not there has been presented or determined any application for a declaratory order, for any form of reconsideration, or (unless the agency otherwise requires by rule and provides that the action meanwhile shall be inoperative) for an appeal to superior agency authority.

* * * * *

(e) SCOPE OF REVIEW.—So far as necessary to decision and where presented the reviewing court shall decide all relevant questions of law, interpret constitutional and statutory provisions, and determine the meaning or applicability of the terms of any agency action. It shall (A) compel agency action unlawfully withheld or unreasonably delayed; and (B) hold unlawful and set aside agency action, findings, and conclusions found to be (1) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law; (2) contrary to constitutional right, power, privilege, or immunity; (3) in excess of statutory jurisdiction, authority, or limitations, or short of statutory

right; (4) without observance of procedure required by law; (5) unsupported by substantial evidence in any case subject to the requirements of sections 7 and 8 or otherwise reviewed on the record of an agency hearing provided by statute; or (6) unwarranted by the facts to the extent that the facts are subject to trial de novo by the reviewing court. In making the foregoing determinations the court shall review the whole record or such portions thereof as may be cited by any party, and due account shall be taken of the rule of prejudicial error.

4. FEDERAL TWENTY-EIGHT HOUR LAW (45 U. S. C. 71-74).

Sec. 71. Transportation of animals; time of confinement; unloading for rest and feeding; unloading sheep

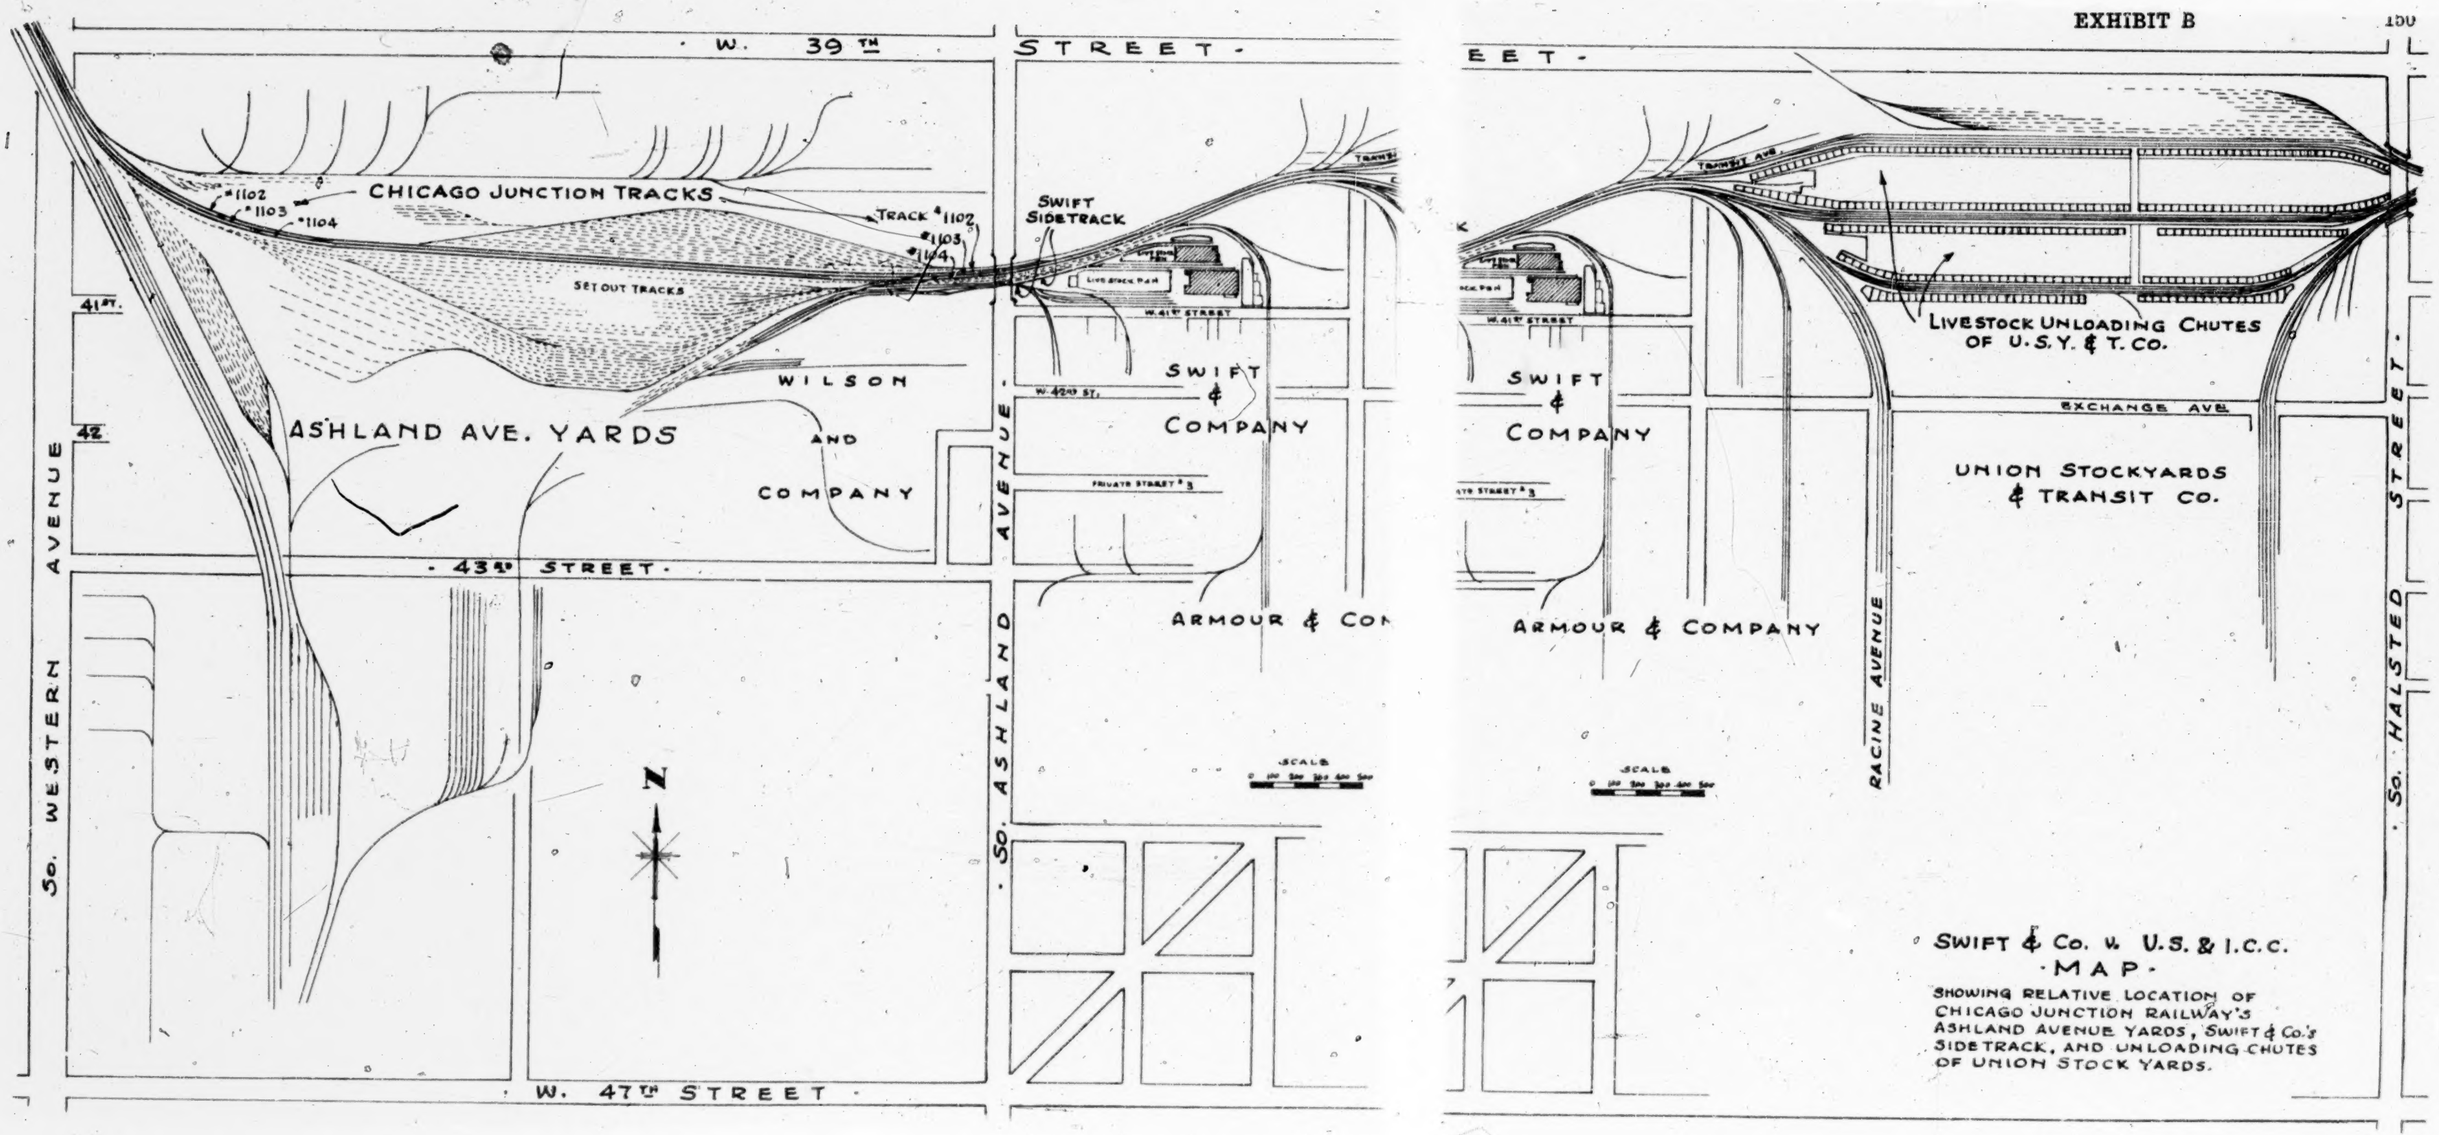
No railroad, express company, car company, common carrier other than by water, or the receiver, trustee, or lessee of any of them, whose road forms any part of a line of road over which cattle, sheep, swine, or other animals shall be conveyed from one State or Territory or the District of Columbia into or through another State or Territory or the District of Columbia, or the owners or masters of steam, sailing, or other vessels carrying or transporting cattle, sheep, swine, or other animals from one State or Territory or the District of Columbia into or through another State or Territory or the District of Columbia, shall confine the same in cars, boats, or vessels of any description for a period longer than twenty-eight consecutive hours without unloading the same in a humane manner, into properly equipped pens, for rest, water, and feeding, for a period of at least five consecutive hours, unless prevented by storm or by other accidental or unavoidable causes which cannot be anticipated or avoided by the exercise of due diligence and foresight: *Provided*, That upon the written request of the owner or person in custody of that particular shipment, which written request shall be separate and apart from any printed bill of lading, or other railroad form, the time of confinement may be extended to thirty-six hours. In estimating such confinement, the time consumed in loading and unloading shall not be considered, but the time dur-

ing which the animals have been confined without such rest or food or water on connecting roads shall be included, it being the intent of this chapter to prohibit their continuous confinement beyond the period of twenty-eight hours, except upon the contingencies hereinbefore stated: *Provided*, That it shall not be required that sheep be unloaded in the nighttime, but where the time expires in the nighttime in case of sheep the same may continue in transit to a suitable place for unloading, subject to the aforesaid limitation of thirty-six hours.

Sec. 72. Animals unloaded to be fed and watered by or at expense of owner; lien

Animals so unloaded shall be properly fed and watered during such rest either by the owner or person having the custody thereof, or in case of his default in so doing, then by the railroad, express company, car company, common carrier other than by water, or the receiver, trustee, or lessee of any of them, or by the owners or masters of boats or vessels transporting the same, at the reasonable expense of the owner or person in custody thereof, and such railroad, express company, car company, common carrier other than by water, receiver, trustee, or lessee of any of them, owners or masters, shall in such case have a lien upon such animals for food, care, and custody furnished, collectible at their destination in the same manner as the transportation charges are collected, and shall not be liable for any detention of such animals, when such detention is of reasonable duration, to enable compliance with section 71 of this title, but nothing in this section shall be construed to prevent the owner or shipper of animals from furnishing food therefor, if he so desires.

Sec. 73. Penalty for failure to comply with law; when provisions for unloading not to apply



Any railroad, express company, car company, common carrier other than by water, or the receiver, trustee, or lessee of any of them, or the master or owner of any steam, sailing, or other vessel who knowingly and willfully fails

to comply with the provisions of sections 71 and 72 of this title shall for every such failure be liable for and forfeit and pay a penalty of not less than $100 nor more than $500: *Provided,* That when animals are carried in cars, boats, or other vessels in which they can and do have proper food, water, space, and opportunity to rest the provisions in regard to their being unloaded shall not apply.

Sec. 74. Penalty recoverable by civil action; duty of district attorneys to prosecute

The penalty created by section 73 of this title shall be recovered by civil action in the name of the United States in the district court holden within the district where the violation may have been committed or the person or corporation resides or carries on business; and it shall be the duty of United States attorneys to prosecute all violations of this chapter reported by the Secretary of Agriculture or which come to their notice or knowledge by other means.

OCTOBER TERM, 1951.

No. 282

SWIFT & COMPANY, *Appellant*,

v.

THE UNITED STATES OF AMERICA, INTERSTATE COMMERCE COMMISSION, ET AL.

On Appeal from the United States District Court for the Northern District of Illinois.

APPELLANT'S REPLY BRIEF.

The several appellees have filed five briefs, aggregating 304 pages of statement, argument, and mixed statement-cum-argument. In order to avoid burdening the Court with any repetition of what we have already said in our main brief, and in order to compress this reply brief within reasonable compass, we are restricting it to new matter presented by the appellees, concentrating attention on the issues which are essential, and pointing out those misstatements which seem most imperatively to require correction.

In general, we follow herein the outline and the roman numeral headings of our main brief, although the captions of those headings vary in phraseology from those previously employed.

I. THE SWITCHING CHARGE IS A PENALTY AND HENCE UNREASONABLE AND ILLEGAL.

A. The switching charge is in fact assessed only against livestock delivered to sidetracks on the Chicago Junction.

We pointed out in our Statement (Swift Br. 11, 15-17), that the switching charge of $39.24 per car now in issue applied only to livestock consigned to sidetracks such as Swift's located on the tracks of the Chicago Junction; that it was inapplicable to any other commodity delivered to the same sidetracks; and that it was likewise inapplicable to livestock delivered to the Union Stock Yards or to Swift's Omaha Packing Co. pens on the rails of the Burlington.

These basic and fully documented facts are not questioned by any of the intervening appellees.

The Government, however, challenges our statement, saying (Br. 54):

> But, as pointed out in the Commission report here (R. 80), the switching charge is one applying on "all carload freight." It is because the tariff provision is thus unqualified that it includes livestock, but, for the same reason, it includes and applies to any dead freight as to which joint rates have not been established, or specific charge published. Certainly, as so applying on both dead freight and livestock, it cannot be logically assumed that the switching charge is, or ever was, one made purposely high to force deliveries of livestock at the public yards instead of at the plants of the packers.

The quoted contention completely misapprehends the record in the case. The fact of the matter is that, while the switching charge *per se* is general, it is actually applied only as set forth in our original brief, so that it is payable only in respect of livestock consigned to sidetracks on the Chicago Junction. This is apparent from the undisputed testimony on the tariff and rate situation:

The line-haul carriers publish rates to Chicago in their tariffs and refer therein to a tariff of Agent R. G. Raasch

which provides for the application of such line-haul rates within the Chicago Switching District. Reference to the Raasch tariff shows that, with respect to dead freight, the flat Chicago rate includes a delivery on the sidetracks of the Junction (as well as of other lines in the switching district). The Junction is a party to the Raasch tariff under rules of tariff publication prescribed by the Commission, and its local switching tariff has no application to the delivery of such line-haul traffic. All interstate carload freight, other than livestock, destined to or forwarded from the meat packing industries in the stockyards area is so treated by tariff publications, and it is accordingly delivered, or accepted and transported, at the flat line-haul rates from or to the various destinations. (R. 285-289.) And see the list of commodities which are given delivery at all industrial locations in the Chicago Switching District at the line-haul rate, Ex. 10, at R. 1057-1060. See also R. 297-299, explaining the exhibit.

The method whereby the Junction is compensated for its delivery service was clearly explained by the publisher of the terminal tariff, Agent R. G. Raasch (R. 843-846): The Junction receives from the line-haul carrier—not from the consignee or shipper—a division of the line-haul rate to Chicago. The Junction's share of that rate, at the time of the hearing, was a minimum division of $18.90 per car, which is to be compared with the switching charge, at that time, of $28.80 per car (R. 78, 87, 846).[1] But the consignee is required to pay only the line-haul rate in respect of all deliveries other than livestock consigned to sidetracks on the Chicago Junction (R. 285-289). The defendants before the Commission—the intervening appellees here—failed to show, in all of the present voluminous record, a single instance of the assessment of the Chicago Junction's switch-

[1] If the increase in the division has kept pace with the increase in the switching rate—and this is assumption only, as the point has not been verified—then the present comparison would be, switching charge, $39.24; division, $25.74.

ing charge on "all carload freight" on any interstate shipment other than livestock to or from a Junction sidetrack. The Government's conclusion (Br. 54), quoted above, p. 2, is therefore simply not so.[2]

B. The Commission's refusal to establish joint rates amounted, in the circumstances of this case, to approving an existing discrimination.

The preceding section will have served to explain why it was that Swift, in its amended complaint before the Commission (R. 56), prayed for the establishment of joint through rates between the line-haul carriers and the Chicago Junction in respect of livestock delivered to its sidetrack. It did so because, although switching rates are generally absorbed by the line-haul carriers throughout the country, in Chicago the practice has been to compensate the terminal carrier by a division of the through rate (R. 293-295, 843-845).

It is true that, as the Chicago Live Stock Exchange says (Br. 21-22)——

> The Commission has no power by order directed against a line-haul carrier alone to require such line-haul carrier to extend the rate published by it to Chicago (as a point on its own line) to a delivery not on its line—that being the effect of an order requiring the absorption of a switching charge—in the absence of a finding of unjust discrimination and undue prejudice, that is, in the absence of proven violations of section 2 or 3(1) of the Act.

But this rule has no application to the prayer of Swift's amended complaint. If the Chicago & North Western, for example, chose to confine the application of its Chicago rate to sidetracks on its own line in Chicago, it could not be re-

[2] The journey through the mechanics of the tariffs just undertaken also demonstrates the complete factual incorrectness of the Government's further statement (Br. 31) that "The line-haul rates do not include compensation for such switching".

quired to effect a delivery, at that rate, on a New York Central sidetrack. That much follows from the rule invoked by the Chicago Live Stock Exchange. But when the Chicago & North Western extends the application of its Chicago rate by a joint-rate arrangement (as in connection with dead freight), or by a trackage arrangement (as with livestock to the stockyard sidetracks), so as to effect a delivery at its Chicago rate on the line of the New York Central (the lessee of the Junction), then, we submit, it is required to give equal and like treatment to both consignees A and B on the New York Central tracks; and it may not decide that it will serve consignee A at the flat Chicago rate and consignee B at the Chicago rate plus $39.24 for a like service.

The Commission's finding (R. 81) "that establishment of joint rates for the transportation of this traffic is not necessary or desirable in the public interest", and the contentions of several appellees (C. L. S. Ex. Br. 12, 22-27; R. R. Br. 87-88) that this finding involves a determination under Section 15(3) of the Act that the granting of Swift's prayer would not be in the public interest, must be viewed against the tariff background just set out.

Where the establishment of joint rates is sought as an inducement for additional traffic, as, for example, joint rates on grain from Fargo, North Dakota, to Louisville, Kentucky, over the tracks of several connecting carriers, then the judgment of the Commission that the public interest does not require such rates is ordinarily conclusive.

If, similarly, the Commission in this case had removed the discrimination complained of by some method other than the establishment of joint rates, obviously its judgment would be unassailable. But where, as here, the Commission refuses to establish joint rates for one commodity delivered to sidetracks when similar joint rates are available for the same commodity delivered a few blocks away, and are also available for the delivery of every other commodity, then its finding amounts to a determination that

the public interest is served by continuing the resulta discrimination.

We recognize, of course, that the expression "public i terest" is an elusive variable of uncertain, flexible, a elastic content. But whatever the term may mean, it mu reflect at the very least a meaning consistent with rath than opposed to the substantive anti-discrimination pr visions of the Interstate Commerce Act. Consequentl when, as here, violations of that Act have been establishe the Commission can not be heard to say that to redre those violations "is not necessary or desirable in the pu lic interest" (R. 81). The removal of "the evil of di crimination", the principal target of the Interstate Co merce Act over the years, is of the essence of any fai minded concept of "the public interest."

C. The switching charge is a penalty because it is directe against a single commodity.

Apart from all the other considerations already ca vassed at length, the high additional switching charge he in question, assessed only against livestock delivered t sidetracks, is a penalty because it is directed at a sing commodity—and the Commission and this Court so held i the Cleveland Stock Yards case.

The Commission in that case said (*Swift & Co.* v. *Balt more & O. R. Co.*, 266 I. C. C. 55, 66):

> In fact, regardless of the amount of compensatio specified by the Stock Yards for the use of its track fo the carriage of livestock, the very singling out of live stock for the requirement of special compensation fro the railroad shows that the provision is properl classed as a penalty provision, that is, one designe to secure yardage charges on livestock billed and mov ing to complainant's siding, either from complainant or from the railroad engaged in hauling the traffic.

And this Court said, sustaining the Commission's report (*United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, 174, 175):

> After notice and hearing the Commission concluded that the railroad's refusal to carry livestock to Swift violated several provisions of the Interstate Commerce Act. It was found to violate § 3 (1) because of the discrimination against a single commodity, livestock * * *
>
> The Commission's findings of fact are not challenged. There can be no doubt that those facts found would constitute a violation of the sections referred to if Spur No. 245 were wholly owned by the railroad.

And the Court went on to hold that the railroad's non-ownership of the track in question did not vary the parties' rights under the Interstate Commerce Act.

As we point out below, pp. 12-13, these aspects of the Cleveland case have up to now escaped the notice of all appellees hereto.[3]

II. THE SWITCHING CHARGE VIOLATES NUMEROUS PROVISIONS OF THE INTERSTATE COMMERCE ACT.

A. Swift amply met the burden of proof of showing that the rates assessed for delivery of livestock to its sidetrack were unreasonable, unjustly discriminatory, and unduly prejudicial.

It is asserted in numerous of the appellees' briefs (Govt. Br. 40-41; R. R. Br. 90-92; C. L. S. Ex. Br. 28; N. L. S. P. Assn. Br. 30-31) that Swift failed to bear the burden of showing that the rates for delivery of livestock to its sidetrack (line-haul rates plus $39.24 per car) were unreasonable, unjustly discriminatory, and unduly prejudicial.

These assertions disregard undisputed facts of record.

Swift showed that the carriers charged $39.24 more to deliver a carload of livestock than to deliver a carload of

[3] The railroads say (R. R. Br. 93) that, "In characterizing the rate as a penalty, Swift is simply resorting to epithet." We wonder whether, if they had been aware of the Commission's characterization just quoted above, they would similarly have criticized the Commission's analysis.

dead freight, at the same time, and with the same engine movement, to the Swift sidetrack, thereby establishing a discrimination against livestock and a violation of Section 3(1). Swift further showed that of two cars of livestock starting at the same point of origin, moving over the same line-haul rails, in the same train, to the break-up yards in Chicago, switched over the same tracks in Chicago to the Junction connection, and then placed on Junction tracks within a few city blocks of each other, one would be delivered at the flat line-haul rate, while the other would be charged $39.24 additional. Without more, this established a violation of Section 2.

The foregoing would leave open but one question, the compensatory character of the line-haul rates on livestock which had been prescribed by the Commission in *Livestock —Western District Rates*, 176 I. C. C. 1, and which are still in effect (subject to subsequent general increases). On that question we relied on the Commission's statements that those rates were adequate to cover the line-haul carriage plus terminal service plus unloading at the stockyards. *Omaha Live Stock Exc.* v. *Chicago & N. W. Ry. Co.*, 178 I. C. C. 1, 14; *Chicago Live Stock Exc.* v. *Atchison, T. & S. F. Ry. Co.*, 219 I. C. C. 531, 546. By that showing, coupled with the fact that a delivery to the Swift sidetrack would relieve the carriers of the cost of unloading, Swift had established without more that the line-haul rate plus $39.24 per car to its sidetrack was unreasonable and unlawful,[4] quite apart from the unreasonable-because-a-penalty phase discussed at Swift Br. 56-62.

Swift has therefore amply sustained its burden of proof. Indeed, we venture to assert that far less proof of discrimination was held sufficient to set aside the order considered

---

[4] If a cost study would justify higher rates *both* for the stockyard delivery and the Swift sidetrack delivery, doubtless the Commission should approve it. But in that case the stockyards and commission merchants would probably not be in the case as interveners on the side of the railroads.

in *Interstate Commerce Commission* v. *Mechling*, 330 U. S. 567. *Cf. Alabama Great S. R. Co.* v. *United States*, 340 U. S. 216, 227.

It is no answer for the several appellees now to urge that the Commission's use of the words "substantially dissimilar" (R. 78) to dispose of the foregoing indisputable discriminations has the effect of legalizing them beyond the possibility of further review (Govt. Br. 48-49; R. R. Br. 26, 91, 92-93, 102, 105; C. L. S. Ex. Br. 18, 36; N. L. S. P. Assn. Br. 19-22, 29-30, 33). "To rest upon a formula," wrote Mr. Justice Holmes,[5] "is a slumber that, prolonged, means death." To rest every case of alleged discrimination on the Commission's finding of "substantially dissimilar" is to close one's eyes to actualities, and is a practice which, if prolonged, will mean the end of any effective effort to wipe out discriminations in interstate commerce. The record in this case, and the reliance placed by the appellees on "substantially dissimilar", proves that the assertion last made is not in any sense far-fetched.

B. The switching charge violates Section 1(9) of the Act because it is applied only to deliveries of livestock over appellant's switch and not to such deliveries over the Union Stock Yards' switch.

(1) The gravamen of Swift's complaint under Section 1(9) is that, when livestock is delivered over the Switch leading to Swift's sidetrack, such delivery costs $39.24 per car more than the line-haul rate, while when livestock is delivered over the switch leading to the unloading chutes of the Union Stock Yards, a few city blocks distant, the delivery is effected at the flat line-haul rate. Obviously, this condition violates the command of the statute that the switch connection shall be operated "without discrimination in favor of or against any such shipper." We are therefore at a loss to understand the assertion of the Chi-

[5] "Ideals and Doubts", in *Collected Legal Papers*, 303, 306.

cago Live Stock Exchange (Br. 40) that "The instant pr ceeding involves no question of discriminatory service. For, even on the most conceptualistically nice distinctio between "service" and "rates", it is plain that to switc a car over one sidetrack for $39.24 more than to switch a identical car to another sidetrack nearby involves a di crimination in service.

(2) The Government's argument under this provisio although not based on the rates vs. service distinctio seems to rest on the verbal fascination inherent in the wo "terminal". The Government says (Br. 27): "The Unio Stock Yards * * * has been held by this Court to be terminal, and terminal delivery cannot be equated wit private sidetrack delivery." And again (Br. 48): "Thi Court has said that a carrier cannot exact an extra charg for the use of a terminal [citing *Covington Stock Yard Co.* v. *Keith*, 139 U. S. 128, 135-136]. It hardly follows tha a carrier may not exact an extra charge from one wh chooses not to use the terminal and who desires and re ceives private sidetrack delivery."

It is really amazing that the Government should b unaware that a private sidetrack is equally a terminal, a this Court, sustaining the Commission, long since held. Se *Associated Jobbers of Los Angeles* v. *Atchison, T. & S. F Ry. Co.*, 18 I. C. C. 310, sustained in *Los Angeles Switchin Case*, 234 U. S. 294. This Court said, speaking through Hughes, J. (as he then was), 234 U. S. at 307:

> The Commission found that these spur tracks were portions of the terminal facilities of the carriers with whose lines they connected, being distinguished from mere plant facilities * * *. Each of the spurs here considered, said the Commission, is, in a real sense, a railroad terminal at which the carrier receives and delivers freight.

The Commission in that case had found—and we sum marize to shorten the discussion—that delivery of carload traffic upon private sidetracks had largely supplanted de-

livery through carriers' freight houses or team tracks; that each of these sidetracks had, in effect, become a railroad terminal at which the carrier receives and delivers freight; that there were then (in 1910) literally hundreds of thousands of such tracks in this country, and that it would be difficult to conceive any system for conducting the vast volume of our heavy traffic without the spur track; that it would be manifestly unfair to treat the industrial spur as a plant facility for shippers' convenience; and that it had become a necessity to both the carrier and shipper under modern conditions of business and transportation.

To the extent, therefore, that there is magic in the word "terminal", it sheds its aura not only over the unloading chutes of the Union Stock Yards, but, equally, upon every private switchtrack and over the railroads' team tracks (Ex. 17, R. 1101-1102) as well. The Government's contention to the contrary is plainly unsound.

Moreover, if the last sentence in Section 15(5) of the Act—"Nothing in this paragraph shall be construed to affect * * * the duty of performing service as to shipments other than those to or from public stockyards"—means anything at all, it means, at the very least, that carriers may not treat a sidetrack consignee as *caput lupinum*, outlawed from the normal protections against discrimination.[6]

---

[6] The Government is of course clearly in error in saying (Br. 47) that "By Section 15(5) of the Interstate Commerce Act, Congress has stipulated for stockyards delivery at the line-haul rate * * *." That provision required carriers to absorb the expenses of *unloading* at public stockyards, see *Omaha Packing Co.* v. *Atchison, T. & S. F. Ry. Co.*, 66 I. C. C. 44; *Cudahy Packing Co.* v. *Atchison, T. & S. F. Ry. Co.*, 234 I. C. C. 569; *cf. Adams* v. *Mills*, 286 U. S. 397, *passim*, but it has nothing whatsoever to do with the line-haul rate. Indeed, the Commission for many years sanctioned a terminal charge in addition to the line-haul rate for all deliveries of livestock made to the Union Stock Yards. *Livestock—Western District Rates*, 176 I. C. C. 1, 122-124; *Chicago Live Stock Exc.* v. *Atchison, T. & S. F. Ry. Co.*, 197 I. C. C. 463.

C. Analysis is of the appellees' arguments further demonstrates the controlling nature of the Cleveland Stock Yards case.

In response to our argument (Swift Br. 83, 86-89) that the Cleveland Stock Yards case, *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, is controlling, and condemns the high additional switching charge here in question, which is assessed only against livestock delivered to sidetracks, each of the five briefs filed by appellees attempts to distinguish the cited case (Govt. Br. 28, 44-47; R. R. Br. 107-109; N. S. Y. Br. 41; C. L. S. Ex. Br. 15, 35, 40-45; N. L. S. P. Assn. Br. 27-29). Yet not a single one of the five briefs sees fit to mention one of the critical portions of that decision, *viz.*, the statement in the opinion that the New York Central's refusal to carry livestock was a violation of Section 3(1) of the Act. See 333 U. S. at 174, 175, quoted *supra*, p. 7.

That portion of the Cleveland case of course disposes of the contention of the Chicago Live Stock Exchange (Br. 34-35), that, on the footing that "'Livestock is not competitive with dead freight'", a practice directed solely against livestock is not violative of Section 3(1). Moreover, the Chicago Live Stock Exchange (Br. 35) ignores the portion of the Commission's report in the Cleveland case quoted above, p. 6, 266 I. C. C. at 66, which held that the singling out of livestock as the subject of special compensation branded the charge as a penalty provision. Similarly, that appellee's argument (C. L. S. Ex. Br. 15, 41) that the Cleveland case related only to rates and not to services misapprehends the issues there; the Cleveland Stock Yards wanted yardage fees, and were perfectly content to let livestock pass over Track 1619, so long as those fees were paid; and indeed the railroad in that case paid those fees for a number of years. See 266 I. C. C. at 61.

But the prevailing distinction attempted to be made of the Cleveland case by the appellees is that it somehow involved a restoration of a long-standing practice of de-

livery, that the gravamen of Swift's complaint there was the disturbance of customary method, and that the Commission and this Court restored the *status quo*. See Govt. Br. 46; R. R. Br. 107-109; C. L. S. Ex. Br. 45; N. L. S. P. Assn. Br. 27-29.

The short answer to this bizarre suggestion is that it finds support neither in the record of the Cleveland case (No 223, Oct. T. 1947) nor in the Commission's report, nor in this Court's opinion. And no such contention was put forth either in the several appellants' briefs in that case, or in the oral argument made by counsel for the prevailing side. The basic issues were, first, whether there was present discrimination, and, second, whether the non-ownership of the track segment excused the railroad's failure to comply with the provisions of the Interstate Commerce Act. The notion that the rationale of *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, reflects a rudimentary recognition of the beatitudes of Railway Statics is, however viewed, wholly fanciful.

III. CONGESTION NO JUSTIFICATION FOR DISCRIMINATION.

A. None of the cases cited by appellees support—or even suggest—the proposition that congestion or inadequacy of facilities or the possibility of disruption may justify an otherwise unlawful discrimination within the identical terminal area.

We argued (Swift Br. 90-91, 103-104, 134-135) that neither present nor future congestion, nor inadequacy of facilities, nor long-continued practice, could justify a course of conduct otherwise discriminatory. We pointed out that no judicial or administrative authorities, other than the rulings under review, supported the ground advanced by the Commission to justify the discrimination here complained of.

That vacuum of authority is certainly not filled by anything in the 300-odd pages of briefs filed by the appellees.

That mountainous mass of argumentative matter yields up, on the point now in question, only one tiny forensic mouse, *viz.*, a statement by the railroads (R. R. Br. 110) that—

> Congestion and other like factors affecting the character of the service and the measure of the rates necessary to compensate therefor have been considered in countless cases. *St. Louis Chamber of Commerce* v. *B. & O. R. R. Co.*, 57 I. C. C. 639 at 646; *Illinois Brick Co.* v. *Director General*, 73 I. C. C. 215 at 217; *Illinois Brick Co.* v. *Director General*, 102 I. C. C. 64 at 66; *Mississippi Valley Iron Co.* v. *C. & N. W. Ry. Co.*, 104 I. C. C. 243 at 245-246; *Carload Traffic in Chicago District*, 174 I. C. C. 111 at 116; *Sonken-Galamba Corp.* v. *Chicago & A. R. Co.*, 181 I. C. C. 229 at 247; *Switching Fruits and Vegetables at Baltimore, Md.*, 201 I. C. C. 689 at 695 and 697.

None of the cases cited supports the quoted proposition. Thus, in *St. Louis Chamber of Commerce* v. *Baltimore & O. R. Co.*, 57 I. C. C. 639, the Commission approved a rate on coal from nearby Illinois mines to St. Louis, Missouri, 20 cents per ton higher than the rate from the same mines to East St. Louis, Illinois. To reach the former point the coal had to be transported a greater distance than to East St. Louis, across a Mississippi River bridge, and be delivered on the line of another carrier in St. Louis, Missouri. There is no suggestion in the report that a higher rate might be charged from the Illinois mines to another delivery in East St. Louis, on the same terminal tracks. Yet that factor would be necessary for the decision to be in point here.

The other six cases all have the same infirmity with respect to the proposition now urged by the appellees. For example, *Mississippi Valley Iron Co.* v. *Chicago & N. W. Ry. Co.*, 104 I. C. C. 243, involved a difference in rates on iron ore from Ironwood, Michigan, to Carondelet, Missouri, compared with the rate to Granite City, Illinois. The latter point is in the East St. Louis, Illinois, switching district, the former in the St. Louis, Missouri, switching district. The haul to the former point was longer, involved crossing

the Mississippi River, and delivery in another industrial area. The Commission held there was no violation of Section 2 of the Interstate Commerce Act. Obviously this was true, because the two hauls were to two different industrial areas, separated by the greatest river in the United States. There is in the decision no suggestion that a higher rate could be charged to consignee A, in Granite City, Illinois, on a sidetrack of the Pennsylvania Railroad, than to consignee B, in the same city, and likewise on a nearby sidetrack of the Pennsylvania. Only such a holding, which the Commission has never made except in the present case, would render apposite the decisions now cited by the railroads.

In short, those authorities amount only to this, that congestion is a factor properly to be considered in determining the reasonableness of given rates to different points in different terminal districts. That is very different from relying on congestion to justify a difference in rates to points within a few city blocks of each other in the same terminal district.

Similarly, the Government's first point (Br. 29) is that "In determining the issues raised in the proceedings, it was essential that the Commission consider the lay-out of yards and tracks of the Junction; the Junction's present operations in handling dead freight; the method by which livestock had for many years been handled by the line-haul carriers to the stockyards; and the physical operations that would be necessary if the Junction were required to make private-track delivery of livestock". Of course it was necessary for the Commission to consider these factors. But it was illegal for the Commission to go on to decide that any of these factors, singly or collectively, could legalize what would otherwise constitute violations of the Act. And moreover, since "the discrimination shown was palpably unjust and forbidden by the Act", "there is no room * * * for administrative or expert judgment with respect to practical difficulties." *Mitchell* v. *United States*, 313 U. S. 80, 97.

B. The record disproves the railroad appellees' contention that the service demanded by Swift can not be performed.

The railroad appellees repeatedly refer to the delivery sought by Swift as "an extremely difficult and impractical operation" (R. R. Br. 10, 32, 57; *cf.* R. R. Br. 31, 50, 74). They then speak of "operating difficulties of an insuperable character" (Br. 31); next, warming to their task, they say that "the evidence * * * proves the Swift proposal to be a physical and practical impossibility" (R. R. Br. 65; *cf.* R. R. Br. 49); and finally, apparently on the theory that overstatement is the best defense, they speak of "the undisputed evidence which shows that the proposed operation cannot be performed" (R. R. Br. 119).

While the statement last quoted can not fairly be criticized for reflecting any lack of exuberance, it is demonstrably inaccurate.

First. The Commission, far from finding that the delivery sought was impossible, specifically cancelled the proposal of the Chicago Junction to eliminate such delivery altogether (R. 81), and further specifically found that such delivery was physically possible (R. 72).

Second. While the Commission found that even the delivery of Swift's direct shipments alone, averaging 18 cars of livestock daily, "would considerably delay and burden defendants' operations" (R. 75), we pointed out that this finding lacked the support of substantial evidence (Swift Br. 99-102).

Third. We could—and doubtless should—have added that the Examiner had specifically found, in great detail, not only that sidetrack delivery of Swift's direct shipments was physically feasible, but also that the Junction's protestations of difficulty were not well founded. The Examiner said (R. 238-239)—and we set forth this excerpt in full because of its importance——

> The Junction contends that it has no classification tracks available for assignment to livestock or any

space in its yards where such tracks could be constructed. It asserts that it would have to maintain a standby service so that a switching engine could immediately pick up a set out car or cars on the running track and make a special trip to the private side track of complainant. However, as hereinbefore shown, livestock can be and is handled in consolidated trains with other freight and there is no apparent reason why direct shipments consigned to complainant could not be placed on an interchange track for subsequent removal to complainant's plant. The Junction contends that if it has to make delivery of livestock to complainant, the cars would have to be grouped by the line-haul carriers in a convenient place in the train with other freight intended for set out in the South Yard and thereafter an engine and crew would segregate the livestock from the dead freight and make a special run to reach the private tracks of complainant. It asserts that as livestock arrives at all hours over many trunk-line carriers this would entail a difficult and expensive operation. This assertion is not borne out by the facts of record. Dead freight for delivery to complainant is set out by the Junction on track 19 in the South Yard, which track is assigned for the classification of loaded cars consigned to complainant. Subsequently, those cars are switched by Junction power to the Damen Avenue Yard, which adjoins the South Yard and is just west of complainant's present and proposed plants. The Damen Avenue Yard has 15 tracks with a capacity of 550 cars. After arrival in that yard complainant issues instructions to spot the cars for unloading at designated locations in its plant area. No reason appears why livestock could not also be placed on an assigned track in that yard and the run made, at carrier's ordinary operating convenience, to complainant's plant without undue difficulty or delay. The switching operation that would be necessary to reach the proposed unloading chutes after leaving Damen Avenue Yard would be as follows: The engine would pull the cars over auxiliary track 1105 to the clearance point of the entrance switch to the facility east of Ashland Avenue. At that point the engine would uncouple and proceed around the train. While so engaged the cut of cars would have

to be controlled by air, as there is a descending grade east from Ashland Avenue to the proposed plant. The engine would then recouple and shove the cars downgrade and around a curve to the unloading chutes. This operation would differ from the present method of switching dead freight or empty cars into this district only in that for the latter operation no air is used although the danger is always present of cars breaking off on the descending grade and rolling freely for a short distance before striking standing cars. Manifestly, that contingency would have to be avoided in handling cars of livestock. Cars made empty could be returned to the Loomis Yard when for eastern or southern connecting lines or to the North Yard when for western connections, which procedure is presently followed by the Junction in handling empty cars other than livestock cars.

The foregoing findings proposed by the Examiner are of particular significance, not simply because of his normal opportunity to "hear and observe the witnesses", but because of what the present record reflects as to the nature of that opportunity. It is clear that most of the railroad operating witnesses on their direct examination were reading from prepared statements;[7] and all may have been.[8] Thus only the Examiner was in a position fully to appreciate the weight to be accorded these witnesses' opinion evidence as to future possibilities, and to judge whether and to what extent their testimony reflected simply a written conclusion prepared in advance by the particular wit-

---

[7] Starbuck of the Burlington (R. 609); Stein of the Chicago & North Western (R. 646); Heide of the Rock Island (R. 649, 652); Kiesele of the Milwaukee (R. 683); and Clousing of the Santa Fe (R. 691, 698).

[8] It is not clear whether Sorensen or Kinsella of the Chicago Junction similarly testified from a prepared statement, although the reporter's repeated references to "(Continuing)" throughout the testimony (R. 438, 440, 442, 446, 450) would seem to indicate that the latter witness at least was doing so.

ness or by a third party. Moreover, the Examiner, accompanied by counsel for all the parties, made an inspection of the actual operations of the Chicago Junction. See R. 503. The Examiner's conclusions quoted above are therefore not only fully entitled to the great respect normally given such determinations, they deserve in this case to be treated as well-nigh conclusive.

It follows, therefore, that the railroads' reference (R. R. Br. 119) to "the undisputed evidence which shows that the proposed operation cannot be performed" is simply not based on the present record, however much it may exemplify the zeal and hyperbole of resourceful advocacy.

IV. BEARING OF APPELLEES' ACTS CONTRIBUTING TO THE CONGESTION.

A. Analysis of congestion made to show unsoundness of Commission's reasoning.

Chicago Live Stock Exchange argues (Br. 45) that "The Swift complaint did not pray for relief with respect to the adequacy of facilities and service on the Junction and the fact the Commission issued no order to require additional facilities or services does not invalidate its order of dismissal of Swift's rate complaint"; and further (Br. 45-46) that "appellant argues that the Commission's order of dismissal of Swift's rate complaint should be set aside because the Commission failed to require such added facilities and service by the Junction as might be necessary to handle livestock in switching service to private siding."

These contentions completely misapprehend the direction of the arguments under our Point IV (Swift Br. 105-116). It was this:

The Commission justified its refusal to strike down the discrimination proved on this record because of the congestion on the tracks of the Chicago Junction, and in its report noted some of the factors which contributed to that congestion, *viz.*, the capacity operation of the Junction's motive power (R. 68), a restrictive labor agreement which im-

paired that road's efficiency (R. 61), and the unregulated operation of foreign train crews on the Junction's tracks (R. 64).

Our argument was that these factors were within the Commission's power to correct, but that the Commission failed to exercise its power to alleviate the congestion; and we also called attention to two other factors contributing to the congestion, also within the Commission's corrective power, but here unnoticed by it, *viz.*, the discriminatory granting and withholding of trackage rights, and the unlawful rule of the Union Stock Yards directed against dead freight. In other words, our contentions were not in the nature of prayers for independent affirmative relief, they served to establish the unsoundness of the Commission's justification for continuing the discrimination.

Our contentions also showed, of course, a whole series of overt acts implementing the combination in restraint of trade reflected by the covenant between the Union Stock Yards and the lessee of the Chicago Junction (Ex. 57, R. 1961-1962).

B. The railroads' attempt to establish the adequacy of Chicago Junction's motive power is effectively contradicted by that carrier's operating heads.

The railroad appellees (R. R. Br. 115-117) attempt to rationalize the decline in the Chicago Junction's motive power by arguing, *inter alia*, that a similar decline has taken place on all roads. But, in their endeavor to disprove our assertion that the Junction's supply of engines was insufficient to take care of all industrial placement (Swift Br. 24, 107), they quote only a portion of the relevant testimony. Since it is not extensive, we set forth all of it here.

Superintendent Kinsella (R. 524, 525-526):

> Q. And you think the Diesel is more efficient in the industrial places?
>
> A. I think so, yes. I think it has better lateral activity and it can get around shorter turns and side clearances.

Q. Have you sufficient Diesels to take care of all of the industrial placements of cars?

A. No, sir, no, sir, we have not.

* * * *

Q. Have you additional motive power on order at the present time?*

A. I can not answer on whether or not it is on order, but I know we have been trying to get some additional Diesel equipment. We want at least five of them if we can get them.*

Q. Five additional Diesels?*

A. Yes.*

Assistant Superintendent Sorensen (R. 555):

Q. Your assumption is, I take it, that the railroads have been able to obtain their normal requirements of freight cars, locomotives, steel for rail, etc., during the war and since?*

A. In so far as the Chicago Junction is concerned we have had sufficient cars. Our locomotive supply has been from time to time inadequate.*

The questions and answers marked with asterisks, which of course prove our original contentions as to the inadequacy of the Junction's motive power, are neither printed nor referred to in the railroad appellees' brief.

V. THE COVENANT TO DISCRIMINATE IS ENFORCED BY THE RULINGS BELOW.

The Government argues (Br. 35-36) that appellant's contentions that the discriminatory covenant forces "packers, like Swift, to use the Union Stock Yards and pay them for unwanted and unnecessary services" are "grievances" that "have no place in this case". In support of that argument it cites the portion of the Egress Case opinion (*Swift & Co. v. United States*, 316 U. S. 216, 232-233) which says that neither the Commission nor the Court "can assume that the charges or practices of [the Union Stock Yards] are unfair or unreasonable, that it is charging for services that

are not performed or facilities not used, or that it is imposing on consignees unnecessary services"; and which goes on to point out that the Secretary of Agriculture is the regulatory forum to hear and determine grievances arising in public stockyards. The Government accordingly concludes (Br. 36) that "the charges imposed by Union Stock Yards have no bearing whatever on this case."

This attempt to make cavalier disposition of one of the gravest issues in the case, however convenient it would be for the Government's purposes, does not withstand examination of the issues considered in the Egress Case. There, as the Court specifically pointed out (*Swift & Co.* v. *United States,* 316 U. S. 216, 227) "the shipments involved are consigned to the packers at the Union Stock Yards by their own choice. It does not appear that they are demanding an increase of other facilities, and the case has not been considered in that light."

Moreover, the discriminatory covenant whereby the New York Central agrees to operate the Chicago Junction for the "benefit, advantage, and behoof of the business and affairs" of the Union Stock Yards (Ex. 57, R. 1961-1962) had not come to light when the Egress Case was under consideration. That covenant had not then, so far as this appellant was aware, been invoked to force the Central and the Junction to take action which they would not otherwise have taken. Nor had the operations of the Junction been analyzed to show how they implemented the terms of the covenant. Consequently, while the Court in the Egress Case could not assume that the Union Stock Yards were "imposing on consignees unnecessary services" (316 U. S. at 233), here that allegation does not rest on assumption, but is proved to the hilt.

Moreover, the circumstance that the Secretary of Agriculture has regulatory powers over rates for stockyards services, an obviously pertinent factor when "the shipments involved are consigned to the packers at the Union Stock Yards by their own choice" (316 U. S. at 227), is completely irrelevant when shipments are consigned elsewhere, and

when their consignment to the Union Stock Yards is sought to be avoided. The Union Stock Yards are described by one witness (R. 919) as "a magnificent hotel for livestock." Swift happens not to desire hotel accommodations for its animals, being prepared and desiring to receive them at home, and it is therefore no answer to its present demand to say that there is available an agency which regulates the rates charged by hotels.

The short of the matter is that, on familiar principles, the language of the Egress Case is "to be read in the light of the facts of the case under discussion" (*Armour & Co.* v. *Wantock*, 323 U. S. 126, 132-133), and that accordingly this language is not in any sense dispositive of the present controversy, where different relief is sought, and where the purposes and practices of the Union Stock Yards and of those covenanting with it have been laid bare and established by proof.[9]

The Government's only other references to the discriminatory covenant (Br. 51), "that the Commission's decision is not in any respect whatsoever based on the contract clause in question," and (*id.*) that "The Commission not only gave it no weight at all in reaching its conclusion, but on the contrary rejected the suggestion that it had any significance," serve only to emphasize our strictures (Swift Br. 132) concerning the Commission's "utter failure to perceive the operation and effect and essential vice of that agreement."

We do not propose to restate—or repeat—our argument under this heading, which assuredly is not met by anything in any of the intervening appellees' briefs. But we venture the observation that the Government, which in cases under the Sherman Law and in cases involving the conspiracy provisions of Title 18 of the U. S. Code is astute to per-

---

[9] The several appellees' repeated and voluminous quotations from the opinion in the Egress Case would seem to indicate that the admonition in *Armour & Co.* v. *Wantock, supra*, which indeed simply restated what Chief Justice Marshall first expressed in *Cohens* v. *Virginia*, 6 Wheat. 264, 399, still bears repetition.

ceive and point out the interrelationship, the effect, and the evil consequences of concerted action, seems singularly unconcerned over the revelations contained in the present record. We have spoken of the covenant (Swift Br. 133) as "the common and vitalizing element of an effective combination to restrain trade with the appellant at its sidetrack, to its detriment, but for the benefit, advantage, and behoof of the Union Stock Yard and Transit Co. at the latter's yards a few city blocks distant"; and we employed that language advisedly. The Government does not undertake specifically to deny that the record reveals the existence of such a combination, yet its position in the case appears to be that the public interest is better served by its endeavor to support a single and obviously ill-advised ruling of a regulatory body than by the slightest attempt on its part to deal with or even recognize the "effective combination in restraint of trade" (Swift Br. 46, 117, 125, 133) whose operations we analyzed at length and in detail.

The result is that the Government's argument in this case is andabatarian, recalling the hoodwinked gladiator of old, who, forced to fight in a helmet without eye-holes, struggled blindfold in ignorance of the location or even of the identity of his true enemy.

VI. THE UNION STOCK YARDS' ECONOMIC ACCUSATIONS ARE DISPROVED BY THE GOVERNMENT'S IMPARTIAL STUDIES CONTAINED IN THIS RECORD.

The Union Stock Yards level an apparently grave accusation at Swift, saying (Br. 21),

> The ultimate purpose of Swift's effort to obtain an advantage over market stock is the destruction of the public market at Chicago as the price-determining market of this country.

This allegation is further documented as follows (U. S. Y. Br. 22, 23, 24):

> The handling of livestock by the Junction to packing plants on its line, as Swift well knows, would seriously disrupt and delay the handling of market stock to the Union Stock Yards; and the deterioration in transportation service to the Yards, as Swift also well knows, would inevitably result in the destruction of the market.
>
> * * * * *
>
> The destruction of the Chicago market as the price-determining market of the country would put Swift in a more advantageous position in dealing directly with the livestock producers * * *.
>
> * * * * *
>
> If Swift can destroy the Chicago market as the price-determining market, it will also be able to improve its competitive position over many of the smaller packers in Chicago, which do not have, and probably could not afford to establish, buying stations and organizations in the country.

We recognize, of course, that the economic conflicts implicit in the present controversy are not for judicial resolution. But we think it may be of interest to set forth the true facts, if only as an index to the accuracy of the allegations hurled against us. The fact of the matter is that every economic premise relied on by the Union Stock Yards is directly contrary to the conclusions reached, not by hired "experts," but by the U. S. Department of Agriculture in "The Direct Marketing of Hogs", a publication prepared in its Bureau of Agricultural Economics, and included in this record (Ex. 55, R. 1897-1960).[10]

First. This official study specifically states (R. 1935) that "Chicago is not a basic market in the sense that hog values for the country are determined there. * * * The fact that Chicago is the most important registering point of hog prices does not make it the determinant of the level of hog prices." And the same is true of other points, mostly pub-

[10] Only a small portion of the cited exhibit was actually printed. See R. 223, item D(2)(b).

lic markets, where price quotations are published. "These points are not price-determining points but only price-registering points, and there is no one basic price-determining point" (R. 1921; see also R. 1926). Prices are determined by the competition of the packer for the available supply offered (R. 1946), and the basic price-determinating factors are the same everywhere (R. 1951). The public market at Chicago no more determines prices than the rooster crowing in the barnyard determines the time of sunrise.

Second. The public market at Chicago—*i. e.*, salable livestock consigned to the Union Stock Yards—has declined from 17,469,160 head in 1923 to 4,811,918 head in 1947 (Ex. 43 at R. 1646-1649); this is a decrease of 72.5%.[11] To the extent that this tremendous decline involves a "destruction" of what is still the largest public livestock market in the country, see Ex. 26, not printed and Swift Br. 105, it is simply a reflection of the economic factors summarized in Swift Br. 7-11 and analyzed in detail in Ex. 55. The fact of the matter is that, as the mounting percentage of direct sales shows, sale of livestock on consignment to a public market is an obsolescent means of marketing under present-day conditions (*cf.* R. 1939).

Third. The statement last made is based on the demonstrable fact that direct selling is more desirable for the producer:

(1) The producer gets a larger return from direct as opposed to commission selling (R. 1908, 1913, 1915).

(2) Direct selling reduces marketing costs (R. 1921).

---

[11] This is more than the 64% decline in the Union Stock Yards' total receipts over the same period (Swift Br. 9), because while direct shipments were only 5.5% of the total receipts at that market in 1923, they amounted to 27.7% of the total in 1947 (Ex. 43 at R. 1646-1649, 1679; Ex. 46 at R. 1848). The 1947 percentage of direct shipments by rail was of course higher than the percentage of total direct shipments, see Ex. 28, R. 1117, for obvious reasons.

(3) The competition at interior points is more favorable to the seller than at public markets. "At public markets the competition is for a supply of hogs that is physically present, largely out of the control of the producers, and under the necessity of early sale. At interior buying points it is a competition to draw hogs, that are still under the control of the producer, to different points. * * * [T]o the producer at home, with hogs for sale, the latter competition [*i. e.*, posted prices and telephone or personal requests for bids] is more useful since he is in a stronger position opposite the buyer with his hogs still at home than he would be if they were at a public market and had to be sold" (R. 1921-1922; see also R. 1947, 1951).

(4) Bearing on the foregoing is a little realized but undoubted fact, *viz.*, that the commission men on the public market "are paid a commission for their services which is unrelated to the price at which hogs are sold. Hence they have no actual interest, as salesmen, in the price level of hogs. Their chief concern is to sell the hogs consigned to them in line with the market so that their customers will be satisfied. * * * Hence, commission salesmen, having no ownership interest in the product, usually will not risk having to carry hogs over from day to day in an effort to raise the level of hog prices." (R. 1945, 1946.)

Fourth. The producer, being more than ever free to select his own method of marketing (R. 1952), will of course employ the means most favorable to his own interest. That direct selling continues to be that means is shown in the increases in that method *after* 1933, the last year shown in the study from which the foregoing analysis has been taken.[12]

12

	Percentage of Direct Sales to Total Sales	
	1933 (R. 1899)	1946 (R. 1011, 1026)
Hogs	44%	64.4%
Sheep	21%	41.8%
Calves	26%	40.7%
Cattle	17%	25.5%

Fifth. Apart from the above, the Union Stock Yards' new-found solicitude for the public market and for the small packer is not, on this record, particularly convincing.

For one thing, the Yards' revenues depend, not upon a sale made on its premises, but on an egress therefrom. *E. g.*, R. 428. Whether the animal has been bought by the packer from a producer in Iowa, or from a commission man in Chicago, makes not a penny of difference to the Union Stock Yards' revenues.

Next, even the smaller packers are in fact able to purchase direct shipments in the country for consignment to themselves at the Union Stock Yards. See Ex. 29, R. 1118-1121.

And, finally, it is only when the Union Stock Yards apprehends losing all direct shipments—from the larger packers—shipments that have no connection with the public market in Chicago, that it considers its business threatened with destruction. Ex. 57, R. 1961.

In short, the Union Stock Yards' concern is what one would normally expect it to be, *viz.*, a solicitude single to itself and its own business.

We repeat, we recognize that this Court is not a tribunal to resolve the competitions of the market. But if economic accusations are to be bandied about, they should be based on fact, rather than fly in the teeth of impartial and objective studies. We have, therefore, thought it worth while to set forth the facts so that the accusations quoted at the beginning of this section could be recognized and evaluated for what they actually are.

VII. THERE IS NO ESTOPPEL AGAINST THE ASSERTION OF RIGHTS UNDER THE INTERSTATE COMMERCE ACT.

Appended to the railroad appellees' brief is a facsimile copy of the cover and all 64 pages of a brief filed with the Interstate Commerce Commission on behalf of the Omaha Packing Company, in the case of *Hygrade Food Products*

Corp. v. *Atchison, T. & S. F. Ry. Co.*, 195 I. C. C. 553, and signed by two of this appellant's present counsel. It was written in March 1932, three years before the *Hygrade* case was argued in this Court, *sub nom. Atchison, T. & S. F. Ry. Co.* v. *United States*, 295 U. S. 193; ten years before this Court heard argument in the Egress Case, *Swift & Co.* v. *United States*, 316 U. S. 216; and just twenty years before the hearing in the case at bar.

Moreover, when that brief was written, early in 1932, transportation conditions in the stockyards area were vastly different. In 1931, the last full year then available, 196,443 cars of livestock had been shipped by rail to the Union Stock Yards (Ex. 46 at R. 1845), whereas in 1947, the last year shown on the present record, such shipments had fallen to 53,561 cars (Ex. 28, R. 1117). Otherwise stated, rail shipments of livestock to the Union Stock Yards at the time of the earlier brief were 366% of similar shipments for the latest available year now reflected in evidence.[13]

We are at a loss to understand what legitimate purpose is now sought to be served by the reproduction of this twenty-year old document, or by the repeated references thereto and quotations therefrom which interlard the railroad appellees' brief in this case.

If the intended purpose is the setting up of an estoppel, obviously that attempt is foredoomed to failure; there is no estoppel against the assertion of rights under the Interstate Commerce Act. *Los Angeles Switching Case*, 234 U. S. 294, 312-313.

If the railroads' purpose is to score debating points on the basis of what, read in a different context twenty years

---

[13] The railroads (R. R. Br. 14, 37) speak of the rail shipments of livestock to the Union Stock Yards as "averaging 76,920 cars per year for the five years preceding the hearing before the Commission." If the average for the five years preceding the filing of the *Hygrade* brief were similarly used, the figure for that period would be 220,155 carloads per year (Ex. 46 at R. 1845). This is 286% of the shipments relied on by the railroads now.

later, may be apparently inconsistent with later arguments in other litigation involving vastly changed conditions, then the answer is that appellant does not propose to waste its time—nor, preeminently, the time of the Court—by indulging in such trivia.

We assume, of course, that the brief in question has not been exhumed simply to furnish material for an extended argument *ad hominem*.

CONCLUSION.

For the foregoing additional reasons, the judgment of the court below should be reversed, with directions to set aside the order of the Interstate Commerce Commission, and to remand the proceeding to that body with instructions to proceed according to law, and in conformity with the opinion of this Court.

Respectfully submitted.

No. 282

In the Supreme Court of the United States

OCTOBER TERM, 1951

SWIFT AND COMPANY, APPELLANT

v.

THE UNITED STATES OF AMERICA, INTERSTATE COMMERCE COMMISSION, ET AL., APPELLEES

APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE NORTHERN DISTRICT OF ILLINOIS

MOTION OF THE INTERSTATE COMMERCE COMMISSION TO AFFIRM

In the District Court of the United States for the Northern District of Illinois, Eastern Division

Civil Action No. 50–C–1017

SWIFT AND COMPANY, APPELLANT

v.

UNITED STATES OF AMERICA AND INTERSTATE COMMERCE COMMISSION, ET AL., APPELLEES

MOTION TO AFFIRM

Appellee, Interstate Commerce Commission, pursuant to Rule 12, paragraph 3, of the Revised Rules of the Supreme Court of the United States, moves that the final judgment and decree of the District Court be affirmed.

This is a direct appeal from the final order and decree entered on June 21, 1951, by a district court of three judges specially constituted pursuant to Sections 2284 and 2325, Title 28 of the United States Code, dismissing appellant's complaint which sought to set aside an order made by the Interstate Commerce Commission on July 6, 1949. Appeal was allowed on July 26, 1951, and appeal papers were served on July 30, 1951.

967327—51——1

Appellant (hereinafter referred to as Swift), by complaint filed before the Commission, alleged in substance that the rates, charges and practices in connection with direct shipments[1] of livestock in carloads from points outside Illinois for delivery to its plant in Chicago are unreasonable; and unduly prejudicial to livestock as a commodity, and also to appellant, and preferential of its competitors in Illinois and in several western states; in violation of Sections 1 and 3 of the Interstate Commerce Act.[2] Swift asked the Commission to

[1] Shipments consigned directly to packers and not offered for sale in the public market.

[2] Section 1 (4) provides: "It shall be the duty of every common carrier subject to this part to provide and furnish transportation upon reasonable request therefor, and to establish reasonable through routes with other such carriers, and just and reasonable rates, fares, charges, and classifications applicable thereto; * * *."

Section 1 (5) makes unlawful every unjust and unreasonable charge.

Section 3 (1) provides: "It shall be unlafful for any common carrier subject to the provisions of this part to make, give, or cause any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic, in any respect whatsoever; or to subject any particular person, company, firm, corporation, association, locality, port, port district, gateway, transit point, region, district, territory, or any particular description of traffic to any undue or unreasonable prejudice or disadvantage in any respect whatsoever; *Provided, however*, That this paragraph shall not be construed to apply to discrimination, prejudice, or disadvantage to the traffic of any other carrier of whatever description."

prescribe reasonable rates and charges, including joint through rates between line-haul railroads, serving Chicago, and Chicago Junction Railway [3] (hereinafter called Junction). Such would require railroads to deliver carload shipments of livestock upon Swift's proposed private side track (served by Junction through its Ashland Avenue yards and located in close proximity to the Union Stock Yards) at rates and charges that would not exceed those for delivery at the unloading pens of the Union Stock Yards which were assessed on the bases of the line-haul rate without the payment of any charge for switching.[4]

The principal issue in proceedings before the Commission, as well as in the District Court, was therefore, whether Swift was entitled to have direct shipments of livestock delivered by the Junction, on a private siding at a plant which Swift proposed to build, without any charge in addition to the line-haul rates.

Swift's proposed plant is to be located on the tracks of the Junction which has, and for many years has had, on file with the Commission a tariff providing for a switching charge for the delivery of a carload of livestock to private plants in the area of the Union Stock Yards (herein-

[3] This is the railroad receiving cars from line-haul carriers at Chicago for delivery to consignees in the switching district.

[4] The Union Stock Yards is a public livestock terminal at Chicago which receives shipments of livestock for any and all consignees, including Swift, if it so desires.

after called Stockyards). The line-haul carriers perform no switching service in the stockyards area and have never delivered any livestock at any place in the area other than at the Stockyards.[5] They have running rights thereto over the tracks of the Junction, the only railroad serving the yards. The Junction has never, except in an emergency, handled livestock in switching service, but its tariff covering switching of livestock provides a rate in the event the service is furnished.[6]

In deciding that the appellant is not entitled to private plant delivery without the payment of the switching charge published by Junction and that the published charge was and is not unreasonable the Commission made the following finding (pp. 575–6 of its report), which is clearly supported by substantial evidence as hereinafter shown:

> The evidence affords no basis for a conclusion that the terminal charge of the Junction in addition to the line-haul rates is unreasonable for deliveries of livestock to the proposed plant, considering services and modification of services that would be required for the desired deliveries and the effect upon terminal operations generally

[5] Except Swift's shipments received via Burlington at the Omaha plant.

[6] The Commission also denied the petition of Junction to be allowed to discontinue the availability of this service by the cancellation of pertinent tariffs.

> of performing such delivery services to the proposed plant.

This subsidiary finding is followed by the ultimate finding:

> We find (1) that in the circumstances presented the published switching charges in addition to the line-haul rates will not be unreasonable or otherwise unlawful for the transportation of livestock for delivery on the private sidetracks to be constructed by complainant, * * *.[7]

As indicated above, Junction does not handle livestock, except in an emergency, and all such stock destined to packing houses within the stockyard area, is delivered to the Stockyards by the

---

[7] These and the other findings of the Commission are based upon evidence adduced at the Commission hearing which shows that Swift's proposed plant will be located in the small compact area of Chicago, known as "Packingtown" (Tr. 39), which includes the plants of 13 or more other packers (Tr. 122). It is probably one of the most congested industrial areas in the world. The flow of the raw materials and supplies necessary to the operation of the industries in the stockyard area, and the outbound movements therefrom, depend on the ability of the railroads to furnish efficient service (Tr. 333–35; 693). The Junction Railway, the switching line providing the sole connection between some 22 line-haul carriers and approximately 500 industries located in the stockyards area and vicinity, is the funnel through which a tremendous volume of tonnage must be moved, consisting of hundreds of thousands of cars of dead freight, perishables, and empties. These include cars of dead freight consigned to packing houses and the empties and carloads of packing house products shipped from the packers' plants within the areas (Tr. 297).

line-haul carriers. After unloading, the stock is delivered to the packers in the area by means of an extensive system of overhead viaducts, runways and tunnels owned, operated and maintained by the Stockyards. The evidence is uncontradicted that Junction's Ashland Avenue Yard, the only yard available for receipt and interchange of all freight consigned for private plant delivery, is scarcely able to accommodate any increase of cars over those already being handled and that there is no space available for expansion of the yard.[8]

[8] The line-haul railroads are able to serve only the Stockyards and have no access to any other industry in the area (Tr. 297–98; 443); while all livestock is delivered exclusively by the line-haul carriers, all other freight moving to or from the stockyards area is handled by Junction, being interchanged by it with the trunk lines.

All freight destined to industries on the Junction must be interchanged between the line-haul carriers and Junction at the Ashland Avenue Yard (Tr. 297–8). Also all livestock going to the stockyards must pass through this yard. This is accomplished by the means of three main running tracks (Tr. 365) over which trains may pass through and move to and from the Ashland Avenue Yard. One of these tracks provides the sole means of ingress for the line-haul carriers to reach the Stockyards, and is available and used only for all eastbound traffic (Tr. 590). These three main running tracks form the line dividing the Ashland Avenue yard into two parts known as the North Yard and the South Yard, each serving a particular function. The 24 tracks of the North Yard are used exclusively for traffic outbound from industries on the Junction. The South Yard, consisting of 33 tracks, receives, classifies and handles all freight destined to industries on the tracks of Junction. Of these only 9 are available as receiving tracks and all freight destined to

The average annual movement of livestock to the Stockyards is approximately 77,000 cars.[9] This means a total of 154,000 livestock cars, loaded and empty, are handled over Junction's tracks by the line-haul carriers.[10] None of that number is attributable to Swift; it receives all of its directs, averaging about 6,500 cars annually, at the facilities of its subsidiary, the Omaha Packing Co., located on the Burlington Railroad, about 2½ miles from the stockyards and outside the stockyards area, from whence the stock is transported to its plant in the stockyards area by truck.[11] Swift is the only large packer having a plant located on the rails of a line-haul carrier in Chicago.

Many trains carrying livestock to Chicago also carry some dead freight and perishables. At the line-haul carriers' base yards the livestock and dead freight are separated and livestock is consolidated, by awaiting the arrival of other trains for additional cars, so as to avoid making more than one run to the stockyards if one would

---

industries on the Junction must funnel through these nine tracks (Tr. 320–21; 327; 443). Both the North and South Yards are used to capacity (Tr. 455). The Ashland Avenue Yard serves the busiest and most crowded rail operation in the Chicago area (Tr. 693; 33–35). It is hemmed in on all sides and there is no room for expansion (Tr. 301; 478–9).

[9] Of this number approximately 31,000 were direct shipments.

[10] (Tr. 18–20).

[11] (Tr. 557–62).

suffice.[12] This method of handling is usually employed unless it is necessary to make a rush delivery of a car or some cars in order to avoid violating the 28-hour law.[13]

This present method of delivery of livestock and handling of dead freight has been developed through many years of experience with the result that a high degree of efficiency has been attained through coordination and synchronization of movements of the various types of freight, and any change in delivery practice, such as is proposed by Swift would prove injurious of that efficiency and result in congestion and delay. The tremendous growth of industry in the stockyards area has resulted in rail operations being conducted to their full capacity with only a narrow margin between the present efficient operation and a condition which would render difficult the

---

[12] (Tr. 459; 593; 652–53).

[13] 45 U. S. C. Sec. 71 prohibits confinement of cattle, etc., for more than 28 hours without unloading for resting, watering, and feeding.

About 63 percent of the trains going to the stockyards handle livestock exclusively and do not have to stop on the main running eastbound track to make setouts of dead or perishable freight at Ashland Avenue Yard. The other 37 percent stops to make such setouts (Tr. 363), and while so engaged other trains seeking entrance to the stockyards must await the completion of the setting out operations as the line-haul train, engaged in doing this leaves its livestock cars on the main running track of the Junction while the dead freight cars are set off (Tr. 366–69).

orderly flow of freight through the Ashland Avenue Yard.[14]

In the event Swift or any other packer is accorded private plant delivery of its livestock at the line-haul rate, without the addition of a switching charge, the line-haul carriers would be required to absorb the switching charge of Junction. This charge, now said to be prohibitive and assessed as a penalty, is the identical charge, subjected to certain general increases, which the Commission held to be reasonable in *Hygrade Food Products Corp.* v. *Atchison, T. & S. F. Ry. Co.*, 195 I. C. C. 553 (1933). The holding as to the reasonableness of the rate was not questioned or disturbed by the Supreme Court on appeal in

[14] If Swift's 6,500 cars or 13,000 cars per annum (loaded and empty, averaging 18 cars per day loaded or 36 loaded and empty) are to be added to the volume of traffic and interchanged with Junction and worked through the Ashland Yard (and they would have to be interchanged and worked), there would be required a quantum of service in making private side track delivery of livestock, which would entail additional and a different type of switching as well as modification of existing services to alleviate at least in part the resulting congestion and delays to all deliveries (Tr. 445, 455, 478–79, 590, 614–17). Working these cars would involve their careful placement, for such livestock cars cannot be handled ("kicked" or shoved to rest) like dead freight (Tr. 452). Later, these cars would have to be "dug out" of the yard from between cars of dead and perishable freight (Tr. 626–27) so delivery may be made to Swift's private plant.

Atchison, T. & S. F. Ry. Co. v. *United States*, 295 U. S. 193 (1935).[15]

It is submitted that it would be unlawful for the packers or any one else to be accorded a service for which they do not pay, and the record reveals (Exhibits 50–52) that the carriers receive no revenue on the basis of the line-haul rates that would allow them to pay the switching charge.[16]

---

[15] The court reversed the Commission's order respecting the imposition of yardage charges for lack of proper finding of fact.

[16] In speaking of the switching charge the Commission stated (p. 574 of its report) that:

"The line-haul rates on livestock to Chicago apply only to deliveries served by the line-haul carriers. The Junction participates in certain joint rates on perishable and other dead freight out of which it receives for switching, a division of 3.15 cents per 100 pounds, minimum 60,000 pounds, which generally differs from and is lower than its local switching charge. In those instances in which the Junction does not participate in joint rates on dead freight, it collects its local switching charge. It does not appear that there are any joint rates on livestock from points in western trunk-line or southwestern territories in which the Junction is shown as a participating carrier.*

"The line-haul rates on livestock to Chicago are Commission-prescribed rates. In *Chicago Livestock Exch.* v. *Atchison, T. & S. F. Ry. Co.*, 219 I. C. C. 531, 545, 546, we said that 'the line-haul carriers operate over the tracks of the Chicago Junction to the Union Stock Yards and make delivery there thereby making these yards their own terminals.' We pointed out that in prescribing the rates on livestock to Chicago, among other markets, there was specifically taken into consideration as an element 'the rendition of terminal service in connection with the transportation of live stock,' and there was included what was considered 'sufficient to cover such terminal services under

The Supreme Court has held in numerous cases that the lawfulness of a rate is a matter for the determination of the Commission, whose judgment thereon will not be disturbed if supported by substantial evidence. *Interstate Commerce Commission* v. *Union Pacific R. Co.*, 222 U. S. 541; *Western Paper Makers' Chemical Company* v. *United States*, 271 U. S. 268; *Mississippi Valley Barge Line Co.* v. *United States*, 292 U. S. 282; *Swift & Co.* v. *United States*, 316 U. S. 216; *Ayrshire Corp.* v. *United States*, 335 U. S. 573. In view of the foregoing it is submitted that there is no substantial question involved with respect to the issue of the reasonableness of the switching charge here challenged, which is the fundamental issue of the case.

Swift contends that livestock as a commodity is subjected to undue prejudice and disadvantage because dead freight and perishables are interchanged by the line-haul carriers with Junction for delivery on the private tracks of the consignees at the line-haul rate without the payment of the switching charge, while such a

---

a normal operation as well as to cover the unloading and loading of livestock at public stockyards,' but we did not there consider what the services would be in connection with deliveries of livestock by the Junction on private industrial tracks. That carrier did not then and does not now perform such services."

*The Commission found (p. 576) that the establishment of joint rates on livestock as requested by Swift was not necessary or desirable in the public interest.

charge is or will be made when livestock is switched. As hereinbefore pointed out, the evidence adduced at the Commission hearing is convincing that livestock cannot be handled as easily as dead freight. It cannot be "kicked" onto a side track as other freight because of injury to the stock and livestock is subject to the Federal 28-hour law and must receive special handling often in order to prevent a violation of that law.[17] It is obvious that the transportation characteristics of livestock are quite different from those of dead freight. In *Swift and Company* v. *United States, supra,* p. 227, the court recognized this fact where it stated:

> This transportation is of a special kind of property on the hoof, which calls for special handling in the interest of economy, safety, sanitation, and health.

It seems clear, therefore, that there is no basis for Swift's charge that livestock, as a commodity, is subjected to undue prejudice and disadvantage. In view of the foregoing it is insisted that this is not a substantial issue, as the law is well settled that it is the Commission's function to determine the reasonableness of a rate and its orders will not be set aside if they are within the Commission's powers and are supported by substantial evidence. *Interstate Commerce Commission* v. *Union Pac. R. Co.*, 222 U. S. 541.

[17] (Tr. 600–601).

Swift further contends that the switching charge, in addition to the line-haul rate, applied on livestock for private plant delivery, is unduly prejudicial to Swift and preferential of its competitors in midwestern states, including Illinois and Chicago, which is said to be in violation of Section 3 of the Act.

Swift now has and has had the right to have its direct shipments of livestock consigned to it at the public stockyards in Chicago without the payment of any transportation charge other than the line-haul charge. No railroad delivers livestock at any other place, except to Swift itself at its Omaha plant, and perhaps occasional deliveries of shipments to small shippers at team tracks where they perform their own unloading. The record shows Swift does receive all of its direct shipments at its Omaha plant, located on the Burlington Railroad, without payment of any transportation charge other than that made for the line-haul carriage to Chicago. In view of this situation it is difficult to see how Swift is discriminated against or that its competitors are preferred at Chicago. On the contrary it would appear that Swift has the preference in Chicago.[18]

[18] In respect of the delivery of livestock at the Omaha plant as well as at the Stockyards as compared with the delivery sought by Swift, the Commission found that:

"The transportation services, conditions, and circumstances connected with deliveries at the Omaha plant pens are substantially dissimilar from those connected with the delivery here sought. There, the unloading chutes are on the rails of

In regard to Swift's claim that the rates and charges assessed on the transportation of livestock to its private siding in Chicago are unduly prejudicial to Swift and preferential of its competitors in midwestern states, the evidence of record shows, with but a single exception,[19] that no packer at any place named in states alleged to be preferred receives any greater service than does Swift at its Omaha Packing Company plant at Chicago. Each of the packers, which receives livestock at its plant, is located, like Swift's Omaha plant, on the rails of a line-haul carrier. At least at 25 of the 37 points named as preferred, and tabulated on Swift's Exhibit No. 12, there is no public stockyard which can serve, as does the Union Stockyards in Chicago, as a proper and adequate terminal for livestock.[20]

---

a line-haul carrier, outside the stockyard congested area, and the delivery made by that carrier is nothing more than a simple switch, at carrier's ordinary operating convenience and without interruption or interference from connecting line engines, as all of the switching is under the control of and performed by the Burlington. The transportation services, conditions, and circumstances connected with deliveries by the line-haul carriers at the unloading chutes of the Union Stock Yards, as hereinbefore described, also are substantially dissimilar from the private track delivery sought." Commission's report, p. 574.

[19] Sioux City, Iowa. Even there the operations are not comparable to those in Chicago. Swift's Exhibit No. 12.

[20] Even at Sioux City, the only place where a competitor of Swift's receives livestock at a plant located in the immediate area of the public stockyards, Cudahy receives only a few

Based upon the evidence the Commission found no Section 3 violation and said with reference to the cases relied upon by Swift to prove undue prejudice and preference (pages 574–75 of the report) that:

> As support for the delivery of livestock to private industrial tracks without charges in addition to line-haul rates, complainant refers to *Baltimore Butchers Abbattoir & Live Stock Co.* v. *Philadelphia B. & W. R. Co.*, 20 I. C. C. 124, by the Commission, *Swift & Co.* v. *Baltimore & O. R. Co.*, 266 I. C. C. 55, by the Commission, and *Neuhoff Packing Co.* v. *Louisville & N. R. Co.*, 268 I. C. C. 271, by division 3, in which the refusal to make such deliveries at Baltimore, Md., Cleveland, Ohio, and Nashville, Tenn., respectively, was found unlawful. Deliveries to private industrial tracks at those points did not require substantial modification of terminal operations and

---

shipments of sheep at its plant, which is located on the rails of the Sioux City Terminal Railroad.

In referring to the points named as preferred, in violation of Section 3, Swift's principal witness, Tally, testified that he did not know the detailed facts as to the physical operations at any of the places alleged to be preferred (Tr. 152) and stated, "I can't recall any place where the situation is identical (with Chicago)." (Tr. 154.) As against this evidence Witness Heinemann, Executive Vice President of the National Independent Meat Packers Association, testified that at no point in any state named is there a situation which is comparable to the conditions which would be created at Chicago by the delivery of direct shipments at plants of the packers located in the stockyards area (Tr. 1066).

> interferences with established operations in a manner required at Chicago for such deliveries, and did not involve, as at Chicago, serious disruption of operations. There is no showing that services as desired will result in a situation similar to that at a point or points alleged to be preferred.

It is seen, therefore, that the published switching charge of Junction for delivery of direct shipments of livestock to the private plants of packers does not result in undue prejudice to Swift and preference to its competitors at any place said to be preferred. It is submitted that the finding of the Commission that there was no showing of undue preference and prejudice is supported by substantial evidence and is in accord with the legal standards which must be applied in determining the lawfulness of transportation rates and charges. (*Manufacturers Ry. Co.* v. *United States*, 246 U. S. 457, 481; *United States* v. *Wabash R. Co.*, 321 U. S. 403, 410–13.) Such issue presents no substantial question.

There is no merit to Swift's contention, as revealed in its jurisdictional statement, that the Commission erred in treating Junction as an independent carrier rather than as a part of the New York Central. It is difficult to see how Swift could be serious in contending that these are substantial issues. Junction's status in this regard does not and could not have any bearing on

the reasonableness and lawfulness of its switching charge.

Likewise, there is no merit with respect to the contention that Union Stock Yards has a pecuniary interest in Junction, protected by a covenant, which Swift apparently contends the rulings of the Commission and the District Court have enforced, resulting in Swift being deprived of a service to which it would otherwise be entitled.

Neither the Commission's order nor the decision of the Court was based in any respect on the questioned covenant, and while it was in effect refusing to recognize by failing to give any effect to the covenant, the Commission expressly held that the operation of the Junction was subject to the conditions imposed by the Commission itself and the Interstate Commerce Act. By the covenant referred to, contained in a lease, dated December 1, 1913, between Union, lessor, and Junction, lessee, Junction agreed "to conduct, manage, and operate the line of railroad by this instrument demised, and insofar as possible the same to conduct in such manner as will tend to the benefit, advantage, and behoof of the business and affairs of the yards." This same clause was incorporated in a later lease executed May 19, 1922, when Junction subleased its line to the Chicago River & Indiana R. Co. (a subsidiary of N. Y. C. R. R.) for 99 years with option to renew in perpetuity. In connection with this contention

the Commission found that the lease of Junction to the River Road completely divested the stockyards of operations and control of the terminal railroad.[21] This finding was approved and adopted by the court below. See *Neuhoff Packing Co.* v. *L. & N. R. Co.*, 268 I. C. C. 271; *Great Northern Ry. Co.* v. *Delmar Co.*, 283 U. S. 686, 691. Cf. *United States* v. *Baltimore & Ohio R. Co.*, 333 U. S. 169.

Swift asserts that another substantial question presented on this appeal is whether the Commission may lawfully deny service at the line-haul rate to a single shipper at its own side-track in respect of a single commodity, on the ground that

[21] The Commission's report states (p. 575):

"The effect of the leases was to completely divest the Union Stock Yards of operation and control of the terminal railroad, the Court saying that by ceasing to operate or control its railroad directly or indirectly, the Union Stock Yards restricted its transportation service to the loading or unloading of livestock as specified in its tariff. The operation of the Chicago Junction is subject not only to the provisions of the Interstate Commerce Act but also to the conditions imposed by the Commission in the *Chicago Junction Case*, *supra* [71 I. C. C. 631]. Those conditions were particularly intended to insure that the Chicago Junction and the Chicago River & Indiana should be operated as neutral terminal carriers, without special advantage favoring the New York Central but the conditions were and are broad enough to inhibit operation of the Chicago Junction to the special advantage and interest of the Union Stock Yards."

The Commission retained jurisdiction in the *Chicago Junction Case* for the purpose of making any additional requirements or conditions as may be necessary for the protection of the public.

the furnishing of the service would interfere with and disrupt terminal operations while still permitting the identical service at a high additional charge (Junction's switching charge). This insistence assumes that the Commission should proceed to deal with practical problems blindfolded. Swift's main contention and prayer was that line-haul rates include the switching service. That meant that all of Swift's shipments of livestock would have to be delivered through the already crowded and congested terminal facilities of Junction. In fixing the rate for switching of livestock, it is now and always has been necessary to have such a rate as emergency shipments were always possible. The great difference the service involves between livestock and dead freight, not only because of the very nature of the delivery but because the yards had been adapted to dead freight delivery, would make the higher rate reasonable for livestock.

The Commission will not, and should not be required to resort to legalistic thinking as a substitute for the application of reason to practical problems. While the charge was entirely reasonable for the service the Commission knew that it would be availed of when Swift had special need to have livestock moved in that way.

Appellee submits, for the reasons heretofore stated, that this appeal involves no substantial questions. Appellant's argument as revealed by

its Statement as to Jurisdiction is simply reiterations of arguments previously rejected by the Commission and the District Court. The determination of the reasonableness of a rate, or whether it is discriminatory is a question, as previously stated, on which the finding of the Commission is conclusive if supported by substantial evidence unless there was some irregularity in the proceedings or some error in the application of the rules of law. *Western Paper Makers' Chemical Co.* v. *United States,* 271 U. S. 268, 271; *Virginian Ry. Co.* v. *United States,* 272 U. S. 658, 665; *Mississippi Valley Barge Line Co.* v. *United States,* 292 U. S. 282, 286; *Board of Trade of Kansas City* v. *United States,* 314 U. S. 534, 546. The issues involved in this appeal are the same as were before the Court in *Atchison, T. & S. F. Ry.* v. *United States,* 295 U. S. 193, in which the Court only reversed the Commission insofar as it failed to make adequate findings in support of its order with respect to the yardage charges assessed by Union. Since the Supreme Court has affirmed the principles involved in this appeal time and again, it is submitted that no substantial question requiring oral argument is raised here.

In respect of the further contention of Swift (Jurisdictional Statement, p. 12) that the Commission's decision is wrong because it excused Junction's discriminatory service on the ground of inadequate motive power (found to be using

only 47 engines at the time of the hearing as against 86 engines in 1925) the fallacy of this contention is readily apparent when consideration is taken of the fact, as revealed by the evidence of record, that Junction is operating in an efficient manner and that any additional side-track delivery is not dependent upon the increase in the number of switching engines but upon the ability of Junction to obtain the maximum use of the 47 it now operates over the congested yards and tracks in the stockyard area. The assumption that the use of any number of engines over 47 would slow down deliveries is much more logical it would seem, than that an additional number would facilitate switching and relieve congestion. This is true because of the scarcity of tracks and yards available for switching.

In connection with the contention of Swift that the Commission erred in failing to find a violation of Section 1 (9) of the Act (Jurisdictional Statement, pp. 12–13), it is submitted that there is no basis for such an allegation. The facts are, as shown by the record, that under the Commission's order Swift can receive its shipments of livestock on its private side track by the payment of the switching charge, which charge has been found to be reasonable and otherwise lawful. Section 1 (9) does not impose any other requirement.

In the light of the facts in the case at bar, the District Court's holding is amply sustained by the authorities cited herein. It is submitted that the findings and conclusions of the District Court are sound and that this appeal presents no substantial question.

For the foregoing reasons, it is respectfully submitted that the judgment of the District Court should be affirmed.

SWIFT & COMPANY,

Appellant,

v.

UNITED STATES OF AMERICA, INTERSTATE COMMERCE COMMISSION, ET AL.,

Appellees

MOTION TO AFFIRM ON BEHALF OF INTERVENERS

Pursuant to Rule 12, paragraph 3, of the Revised Rules of the Supreme Court of the United States, the railroad appellees,[1] The Union Stock Yard and Transit Company

[1] The Atchison, Topeka and Santa Fe Railway Company, The Baltimore and Ohio Chicago Terminal Railroad Company, The Baltimore and Ohio Railroad Company, The Belt Railway Company of Chicago, The Chesapeake and Ohio Railway Company, Chicago & Eastern Illinois Railroad Company, Chicago and North Western Railway Company, Chicago, Burlington & Quincy Railroad Company, Chicago Great Western Railway Company, Chicago, Indianapolis and Louisville Railway Company, Chicago, Milwaukee, St. Paul and Pacific Railroad Company, Chicago River and Indiana Railroad Company, Chicago, Rock Island and Pacific Railroad Company, Chicago South Shore and South Bend Railroad, Erie Railroad, Grand Trunk Western Railroad Company, Gulf, Mobile and Ohio Railroad Company, Illinois Central Railroad Company, Indiana Harbor Belt Railroad Company, Minneapolis, St. Paul & Sault Ste. Marie Railroad Com-

of Chicago, The Chicago Live Stock Exchange, Chicago Traders Live Stock Exchange, National Live Stock Producers Association, and Chicago Producers Commission Association, interveners in the District Court and appellees herein, move that the final order and decree of the District Court be affirmed.

This is a direct appeal from a final order and decree entered on June 21, 1951, by a three-judge District Court, specially constituted pursuant to 28 U.S.C. §§ 2284 and 2325, dismissing appellant's complaint which sought to enjoin, set aside and annul a report and order of the Interstate Commerce Commission.

On July 29, 1947, appellant, Swift & Company, filed a complaint with the Interstate Commerce Commission which, as subsequently amended, alleged, in substance, that the charges on direct shipments of livestock in carloads from points in states other than Illinois, for delivery to appellant's plant at Chicago, were unreasonable, unduly prejudicial to livestock as a commodity, and preferential of appellant's competitors at points in Illinois, Iowa, Nebraska, Missouri, Kansas, Minnesota, Wisconsin, and Indiana, all in violation of Sections 1 and 3 of the Interstate Commerce Act, 49 U.S.C. §§ 1 and 3. Appellant asked the Commission to prescribe rates, charges, rules, regulations or practices, including joint through rates, under which appellant's direct shipments of livestock would be delivered at its private track at the line-haul rates to Chicago. (Appellant's Complaint before the Commission, Exhibit A to Appellant's Complaint in the District Court.)

There were numerous interventions in opposition to the complaint on behalf of the Union Stock Yards, producers, buyers and sellers of livestock. After a full hear-

---

pany, The New York Central Railroad Company, The New York, Chicago and St. Louis Railroad Company, The Pennsylvania Railroad Company, and Wabash Railroad Company.

ing, including oral argument and an extended presentation on brief, the Commission, by order and report, dismissed the complaint. (*Swift & Co.* v. *Atchison, T. & S.F. Ry. Co.*, 274 I.C.C. 557.)

As the basis for its dismissal of appellant's complaint, the Commission found that the line-haul rates on carload shipments of livestock to Chicago, previously prescribed by it (*Livestock-Western District Rates*, 176 I.C.C. 1; *Chicago Livestock Exchange* v. *A.T. & S.F. Ry. Co.*, 219 I.C.C. 531), were not designed nor intended to compensate the carriers for the livestock delivery service sought by appellant, and that, considering the transportation service required for such delivery and all of the attending facts and circumstances, the published switching charge of the Chicago Junction Railway in addition to the line-haul rates was not unreasonable nor otherwise unlawful for deliveries of livestock to appellant's private tracks. (274 I.C.C. 557 at 574-76.) The Commission also found that the establishment of joint rates for this traffic, as requested by appellant, would not be necessary or desirable in the public interest. (274 I.C.C. 557 at 576.)

In response to appellant's allegation of prejudice to livestock as a commodity, the Commission found that "the measure of transportation services rendered shipments of live animals is substantially greater than that accorded dead freight." (274 I.C.C. 557, at 563.) Appellant's claim that the published charges were prejudicial to it and preferential of its competitors at certain points was similarly disposed of by findings that the transportation services, conditions, and circumstances at each of the allegedly preferred points were substantially dissimilar from those attending delivery of livestock at appellant's private track.[2]

---

[2] This dissimilarity is due primarily to the long-established practice of delivering livestock within this greatly congested area of Chicago only at the public Stock Yards. The evidence (Exhibit 42) proves that for many

(274 I.C.C. 557, at 574-75.) The Commission also referred to its decision in a previous case entitled *Hygrade Food Products Corp.* v. *A.T. & S.F. Ry. Co.*, 195 I.C.C. 553, where it had found the identical switching charge here assailed not unreasonable or otherwise unlawful for performance of the same service now demanded by appellant.[3]

In the proceedings before the District Court, comprehensive briefs were filed, and an entire day was consumed in oral argument. Appellant then presented each and every issue which it raises here. After a full hearing, the District Court found that the Commission's findings were adequately supported by the evidence of record and were in accordance with the applicable statutory standards and

---

years Swift and the other Chicago packers insisted upon receiving their direct shipments of livestock at the Union Stock Yards. In return for a substantial proprietary interest in the Stock Yards, Swift and other Chicago packers in 1892 abandoned their private facilities for the receipt of livestock, such as Swift would again construct, and agreed that "they would not interest themselves in any other stock yards for the receipt and use of their own livestock." (*Swift & Co.* v. *United States*, 316 U. S. 216, at 229; Exhibit 42) The unique physical development of the stock yards area in Chicago and the unusual, and onerous transportation services required to deliver livestock at Swift's proposed private stock yards, stem directly from this action by the packers. Commenting upon the history of the delivery practice in Chicago in the prior *Swift case* (238 I.C.C. 179, 188) the Commission said with reference to the same evidence now embraced in Exhibit 42:

> "For many years, the packers including the complainant, made the practice of which they now complain their own practice. They gave up their own terminal facilities at the Central Stockyards for a substantial consideration and by their covenants with the Yards Company, made the Union Stock Yards their own terminal facilities at Chicago."

On appeal this Court addressing itself to the same point declared:

> "It was the packers themselves who suppressed the competitive yards and alternative facilities for unloading their stock." (*Swift & Co.* v. *United States*, 316 U. S. 216 at 230)

[3] On appeal to this Court, the Commission's findings as to certain other unrelated issues were held to be inadequate, but its determination of the issue here was not challenged. (*Atchison, T. & S. F. Ry. Co.* v. *United States*, 295 U. S. 193)

principles of law. (Conclusions of Law, 1-4, Exhibit A to Appellant's Statement As To Jurisdiction) An order dismissing appellant's complaint was thereafter entered by the Court. It is plain that the Commission's report and order and the District Court's decision affirming the Commission's action involve nothing more than the application of well-settled principles of law to undisputed facts within the field in which the Commission has long been recognized by this Court to be an expert body.

As noted above, appellant's primary purpose in the proceeding before the Commission was to secure a ruling that the published charges for the delivery service which it desires at its proposed private stock yard were, and are, unreasonable, and otherwise unlawful. The measure of the rate was the principal matter in issue before the Commission, and the validity of the Commission's action with respect thereto is necessarily the principal issue raised by appellant here. Appellant contends, therefore, that an appeal from a determination by the Commission, affirmed by the District Court, that a particular rate, applying to a single commodity, is not unreasonable or otherwise unlawful, presents substantial questions for this Court to decide.

With respect to the Commission's findings that the charge in question is not unreasonable or otherwise unlawful, it would seem indisputable that no substantial question is involved. This Court has repeatedly held that the lawfulness of a particular rate or rates is a matter for the informed judgment of the Commission, and the determination of that expert body will not be disturbed if supported by substantial evidence of record. (*Interstate Commerce Commission* v. *Union Pacific R. Co.*, 222 U.S. 541; *Skinner & E. Corp.* v. *United States*, 249 U.S. 557; *Swift & Co.* v. *United States*, 316 U.S. 216; *Interstate Commerce Commission* v. *Jersey City*, 322 U.S. 503; *Ayrshire Corp.* v. *United*

States, 335 U.S. 573.) The District Court found that the Commission's findings had the requisite support and that the Commission's action conformed to the governing principles of law. (Conclusions of Law, 1-4, Exhibit A to appellant's Statement As To Jurisdiction) Cursory reference to the Commission's report will demonstrate the correctness of that determination by the District Court.

In its exhaustive consideration of the issues raised by appellant's complaint, the Commission discussed at length the detailed evidence introduced by the defendants (appellees here) designed to show the operating conditions involved in and the transportation services required to effect delivery of livestock at appellant's private yards. It considered and weighed the conditions and circumstances involved in making delivery at the points alleged to be preferred and in regard to the commodities supposedly receiving preferred treatment from the carriers. The Commission found that the services required, and all other relevant conditions and circumstances, justified the measure of the charge. (274 I.C.C. 557, at 575-76) It also found that there was no showing of similar conditions and circumstances with respect to transportation services at points allegedly preferred (274 I.C.C. 557, at 575), that a substantial dissimilarity was shown as to certain allegedly preferred points (274 I.C.C. 557, at 574), and that allegedly preferred commodities required substantially less transportation service than that accorded livestock. (274 I.C.C. 557, at 563) These findings are in accord with the legal standards which must be applied in determining the lawfulness of transportation charges, and the District Court so found. (*Interstate Commerce Commission* v. *Union Pacific R.R.*, 222 U.S. 541, at 549-50; *Manufacturers Ry. Co.* v. *United States*, 246 U.S. 457, at 481-82; *L. T. Barringer & Co.* v. *United States*, 319 U.S. 1, at 6-7; *United States* v. *Wabash*

R. Co., 321 U.S. 403, at 410-13; Conclusions of Law, 1-4, Exhibit A to appellant's Statement As To Jurisdiction.) [4]

The issues presented by this appeal thus arise in an area where the applicable legal principles are well settled, and as shown above, the Commission's findings conformed with those principles in every respect. Furthermore, this Court has repeatedly recognized the Commission's expert competence in its special field, and has consequently restricted the matters which it will consider on appeal. Because of these elementary and well-settled rules, the issues open for review in this case do not present any substantial questions not previously determined by this Court.

Moreover, this appeal involves the same questions before the Court in *Atchison, Topeka & Santa Fe Railway Co.* v *United States*, 295 U.S. 193. As shown by the Commission's report in that case (*Hygrade Food Products Corp.* v. *Atchison, T. & S.F. Ry. Co.*, 195 I.C.C. 553) the Hygrade Company, a Chicago packer with a plant located in the same area as appellant's packinghouse, filed a complaint with the Commission alleging, among other things, that the published switching charge in addition to the line-haul rates for delivery of livestock at its private track, was unreasonable, discriminatory, prejudicial and preferential. (195 I.C.C. at 553) The switching charge attacked in that case was the identical charge assailed by appellant in this proceeding, subject only to authorized general rate increases since that time, and the Commission so found. (274 I.C.C. 557 at

---

[4] Appellant contends that the Commission erred in failing to find violations of §§ 1(9) and 2 of the Interstate Commerce Act. (Statement As To Jurisdiction, p. 3) In its complaint before the Commission appellant did not raise those issues, and they cannot, therefore, be raised here. *United States* v. *Capital Transit Co.*, 338 U. S. 286, at 291; *United States* v. *Baltimore & Ohio R. Co.*, 231 U. S. 274, at 297-98; *Oregon R. & N. Co.* v. *Fairchild*, 224 U. S. 510, at 526. In any event, the Commission's findings noted above dispose of any contention that there is any unlawful discrimination or any other violation of §§ 1(9) and 2.

573) The Commission found in that case, as it has in this proceeding, that "the assailed switching charge on carloads of livestock placed for delivery at complainant's plant is not shown to be unreasonable or otherwise unlawful." (195 I.C.C. 553 at 558) On appeal to this Court, the Commission's finding as to the lawfulness of the switching charge was specifically noted in language that leaves no doubt as to the similarity between that proceeding and this. The Court stated:

> "Consignee sought free delivery in cars switched into its plants, but the Commission found the switching charge not unreasonable" (295 U. S. 193 at 200).

In addition to its attack on the switching charge, the Hygrade Company sought free use of certain Yard Company facilities in connection with deliveries at the Union Stock Yards (295 U. S. 193 at 200). This second issue was determined in favor of the Hygrade Company, but was reversed on appeal because the Commission failed to make adequate findings in support of that aspect of its order (295 U. S. 193 at 201-202). This reversal, however, did not relate to the determination that the switching charge was not unreasonable or otherwise unlawful, and it is that aspect of the case which is again presented to this Court by the appellant in this proceeding.

In the argument by which it attempts to show—that the questions raised are substantial, appellant pretends to find an unwarranted discrimination in the fact that the published charges for private track delivery of its livestock exceed the charges applicable to certain other traffic. (Appellant's Statement As To Jurisdiction, p. 10) There is not the slightest reference in this argument to the Commission's findings in regard to the dissimilarity between the transportation services, circumstances and conditions attending delivery of livestock to appellant's private track and delivery of the shipments supposedly receiving preferred

treatment. It is obvious, of course, that the Commission's findings, noted above, disprove any discrimination.

In view of these findings and the evidence of record which sustains them, appellant then attempts to divert attention from the issues presented by its complaint before the Commission by an extended discussion—of extraneous and irrelevant matters. The agreement referred to in paragraph 2 (Appellant's Statement As To Jurisdiction, p. 11) was introduced in the hearings before the Commission by the appellant. It has no relation to the reasonableness or lawfulness of the published charges. The sole issue raised by appellant's complaint before the Commission, and neither the defendant carriers nor any of the other appellees have at any time sought to justify such charges by reference to that covenant. In its report, the Commission found that the asserted contractual relationship between the Chicago Junction Railway and the Union Stock Yards was subject to the conditions imposed in *Chicago Junction* case, 71 I. C. C. 631,[5] and that those conditions were effective to prevent the operation of the Chicago Junction Railway for the special advantage of the Union Stock Yards (274 I. C. C. 557, at 575).

The second attempt to divert the Court's attention from the issues involved in this proceeding may be found in the extended discussion of the Chicago Junction's legal status and the assertion that the Commission's decision was based on an inadequacy of the Chicago Junction's motive power (Appellant's Statement As To Jurisdiction, pp. 11-12). Appellant does not explain how the Chicago Junction's status, whether it be regarded as an independent carrier (*Chicago Junction* Case, 71 I. C. C. 631, at 639-41) or part

[5] The Commission retained jurisdiction of that proceeding for the purpose of making such amendments or modifications of its conditions as might become necessary or desirable in the public interest. (71 I.C.C. 631 at 641)

of the New York Central, impinges in any manner upon the findings made by the Commission in determining the reasonableness and lawfulness of the assailed switching charge. The truly significant facts as to the transportation, conditions and circumstances in the Chicago Stock Yards area would not vary with a variation in the Chicago Junction's legal status, and the argument which assumes, but does not explain, why that status is important here is, therefore, irrelevant. So far as the claimed inadequacy of motive power is concerned, the Commission's decision dispels any assumption that any such factor was used to support its findings. There is a single passing reference to motive power in the Commission's report (274 I. C. C. 557 at 566), and the matter is not thereafter alluded to, nor does it enter into the Commission's findings.

The contention that the Commission erred in failing to find a violation of § 1(9) is equally without merit (Appellant's Statement As To Jurisdiction, pp. 12-13). Under the commission's order in this case, appellant can receive its direct shipments of livestock over its private track upon payment of the charge found to be not unreasonable, discriminatory or otherwise unlawful, and Section 1(9) does not require more. In support of its argument on this particular aspect of the case, and at numerous other points throughout its Statement As To Jurisdiction, appellant cites *United States* v. *Baltimore & Ohio R. Co.*, 333 U. S. 169. In that case, the carriers serving appellant's plant at Cleveland had for many years delivered livestock to appellant's plant without any charge in addition to the line-haul rates and the performance of that service at the line-haul rates was expressly authorized by the published tariffs. The defendant carriers continued to perform that service for appellant's competitors while refusing it to appellant (*Swift & Co.* v. *Baltimore & Ohio R. Co.*, 266 I. C. C. 55, at 60, 333 U. S. 169, at 174, Footnote No. 3)

Here, however, private track delivery of livestock to any of the packers in the stockyards area has never been performed at the line-haul rates, and the Commission expressly found that the line-haul rates do not cover livestock deliveries at appellant's private track (274 I. C. C. 557 at 559 and 574-75). *United States* v. *Baltimore & Ohio R. Co.*, 333 U. S. 169 did not involve any controversy as to the measure of the charge for the delivery sought by appellant. As stated by this Court:

> "Ownership of Track 1619 by Stock Yards and its objection to livestock deliveries is, in fact, the only reason suggested for the railroad's failure to deliver shipments of livestock to Swift as they do to neighboring packers . . ." (333 U. S. 169 at 175).

The carriers here make no such defense. The published charges for private track delivery of livestock at appellant's plant are the same as those available to the other Chicago packers for that same type of delivery. What appellant seeks here is a basis of rates for private track delivery that would place it in a preferred position over any other Chicago packer desiring that character of service.

In its report herein, the Commission considered appellant's argument that the *Cleveland* case supported its demands in this proceeding, and found:

> "There is no showing of a similarity in any respect of the services required and circumstances affecting services" (274 I. C. C. 557 at 575).

Appellant's reliance upon *United States* v. *Baltimore & Ohio R. Co.*, 333 U. S. 169, thus utterly disregards the fact that dissimilar situations produce different results.

We respectfully submit, therefore, that appellant presents no substantial question for the decision of this Court,

and that the order and decree of the District Court should be affirmed.

SWIFT & COMPANY,

Appellant,

vs.

UNITED STATES OF AMERICA, INTERSTATE COMMERCE COMMISSION, ET AL.,

Appellees.

APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE NORTHERN DISTRICT OF ILLINOIS.

BRIEF ON BEHALF OF THE NATIONAL LIVE STOCK PRODUCERS ASSOCIATION AND CHICAGO PRODUCERS COMMISSION ASSOCIATION, INTERVENERS.

PRELIMINARY STATEMENT.

This case involves a direct appeal from an order and decree of the District Court, that dismissed appellant's complaint seeking to enjoin, set aside, and annul a report and order of the Interstate Commerce Commission (*Swift & Co.* v. *Atchison, T. & S. Fe Ry. Co.*, 274 I. C. C. 557).

In that case appellant sought to have its direct shipments of live stock delivered at its private side track at a

proposed private stock yard at the line-haul rates applicable to centralized delivery of shipments at the public stock yard at Chicago.

The principal findings of the Commission in the case on appeal here are:

> "(1) that in the circumstances presented the published switching charges in addition to the line-haul rates will not be unreasonable or otherwise unlawful for the transportation of live stock for delivery on the private sidetracks to be constructed by complainant, which will connect with the Junction, provided that the tracks to be constructed will be adequate for deliveries by the Junction at its ordinary operating convenience and without interruption or interference, and
>
> (2) that establishment of joint rates for the transportation of this traffic is not necessary or desirable in the public interest" (274 I. C. C. 557, 576).

STATEMENT OF FACTS AND STATUTES INVOLVED.

For the purpose of this brief, interveners herein adopt the statements found in the brief for the United States and that of the defendant railroads for a more complete statement of facts and statutes involved with respect to the opinion of the District Court below and the decision of the Interstate Commerce Commission.

POSITION OF PRODUCER INTERVENERS.

In the interest of its live stock producer members and in the general public interest, the intervener live stock associations seek to preserve the efficiency and economy and all other advantages incident to the centralized delivery of all shipments of live stock at the public stock yards at Chicago, whether consigned for sale on the public market or shipped direct to packers in the Chicago stock yards area, and contend that the decision and order of the Interstate Commerce Commission under attack here are supported by substantial evidence, are otherwise lawful and are within the proper exercise of the powers conferred on it by the Congress under provisions of the Interstate Commerce Act.

The Chicago Producers Commission Association and the National Live Stock Producers Association intervened in opposition to the complaint of the appellant before the Commission, and, consequently, have so intervened in the action before this Court.

The Chicago Producers Commission Association is a cooperative association of approximately 40,000 live stock producers. It is incorporated under the laws of the State of Illinois, and its principal office is located at the Union Stock Yards in Chicago. In 1947, it received, handled and sold an equivalent of 14,821 carloads of all species of edible live stock.

The National Live Stock Producers Association is a cooperative association, composed of nineteen cooperative live stock associations (including the Chicago Producers Commission Association) that are engaged in receiving, shipping, selling and buying live stock on over forty public live stock markets and other points and places throughout

the country. The total annual volume of live stock handled is equivalent to about 150,000 carloads and originates in about thirty-four States.

Through its nineteen member associations, the National represents approximately 350,000 live stock producers in the United States.

The officers and directors of the National and its member associations are live stock producers elected from their various districts of the country in which they reside.

These associations of producers, interveners, here were interveners in the proceedings before the Interstate Commerce Commission and the District Court.

These producer interveners also took an active part in the reopening of *Chicago Live Stock Exchange* v. *Atchison T. & S. F. Ry Co.*, 219 I. C. C. 531, decided in 1936, in which the terminal charge, in addition to the line-haul rates on shipments of live stock to the Union Stock Yards, that had been the subject of complaints and extensive litigation for over forty years, was finally eliminated, and as a result of the decision in that case the line-haul rates prescribed by the Interstate Commerce Commission in *Livestock—Western District Rates*, 176 I. C. C. 1, were applied on shipments of live stock to the Union Stock Yards without an additional charge.

SCOPE OF THE BRIEF.

It is our purpose to direct our remarks to matters of particular interest and concern to live stock producers and their marketing associations and we rely on a more comprehensive treatment of other pertinent points by counsel for the Government and the defendant railroads.

SUMMARY OF ARGUMENT.

I.

The Union Stock Yard Is the Only Public Live Stock Market in Chicago, It Is the Terminal of All the Railroads and With One Exception the Only Suitable Place for the Delivery of Live Stock.

A concise statement of the early history and development of the present public stock yard appears in *Chicago Live Stock Exchange* case, *supra* (1936), where beginning at p. 533 the Commission said:

> "Prior to 1865 there were four different points in Chicago at which live stock was delivered and marketed. The different roads transporting such traffic to Chicago delivered it at any of these points without charge in addition to the Chicago rate. The maintenance of four different markets was found burdensome by the carriers, and in 1865 for the purpose of concentrating these markets at one point, the Union Stock Yards & Transit Company was organized, stockholders in this company being the carriers transporting live stock to Chicago. This company acquired real estate, constructed the Union Stock Yards and railroad tracks connecting the trunk lines entering Chicago with the pens at the yards. Other markets in Chicago were abandoned. Slaughterhouses were located in the vicinity of the Union Stock Yards, and these yards became the sole place in Chicago where live stock was marketed for slaughter" (p. 533).

The Union Stock Yards are the only public live stock yards in Chicago and, with the exception of the plant of the intervener Omaha Packing Company, the only suitable place for the delivery of live stock (541).

II.

The Services Rendered in Delivering Live Stock to the Union Stock Yard and to the Plant of the Appellant's Subsidiary, the Omaha Packing Company, Are Not More Onerous Than Terminal Services Contemplated Under the Scale of Rates Prescribed in the Western Live Stock Case (176 I. C. C. 1).

Appellant's present plant like those of other packers, located adjacent to the Union Stock Yard, is connected with overhead runways, tunnels, and viaducts, that are owned and maintained by the Union Stock Yard and are used to drive live stock from the yards to the slaughtering plants of the various packers, including that of appellant. (*Swift & Co.* v. *Atchison, T. & S. Fe Ry. Co.*, 274 I. C. C. 557, 563.)

Appellant also receives shipments of live stock at its private stock yard known as the Omaha plant pens, located about two and one-half miles north of the Union Stock Yard. This yard is used only for live stock—there are no slaughtering facilities there—and the live stock received there is transported to appellant's slaughtering plant, a distance of about two and one-half miles, in appellant's trucks.

The same basis of rates applies to the Omaha plant pens of plaintiff as applies to the Union Stock Yard. This is pursuant to a decision of Commission in *Chicago Live Stock Exchange* v. *Atchison, T. & S. F. Ry. Co.*, 219 I. C. C. 531, where at p. 546 it said in part:

> "The services rendered in delivering live stock to the Union Stock Yard, and to the plant of intervener, Omaha Packing Company, at Chicago, as shown by the present record, are not more onerous than ter-

minal services contemplated under the scale of rates prescribed in *Livestock—Western District Rates,*" (176 I. C. C. 1, decided in 1931).

In *Swift & Company, et al. v. Alton Railroad Company, et al.*, 238 I. C. C. 179 (1938), the Commission said:

> "For many years the packers, including complainant, made the practice of which they now complain their own practice. They gave up their own terminal facilities at the Central Stock Yards for a substantial consideration, and, by their covenants with the Yard Company, made the Union Stock Yards their own terminal facilities in Chicago" (p. 188).

III.

There Is Great Dissimilarity Between Delivery of Live Stock at the Union Stock Yard, the Only Public Stock Yard in Chicago, and the Delivery of Live Stock at the Appellant's Proposed Private Stock Yard.

The following points are representative, but not all inclusive, of the differences in the facts and circumstances and conditions incident to the delivery of live stock at the Union Stock Yard as compared with the delivery of live stock shipments to the appellant's proposed private stock yard that were considered by the Commission and are based on substantial evidence of record.

Delivery of live stock shipments at the Union Stock Yard:

> For over eighty years all live stock shipments have been delivered by the engines and crews of the line-haul carriers direct to the yards. (274 I. C. C. 557, 569.)
>
> Both the yards and service were specially designed to facilitate expeditious handling of live stock shipments. (Defendant's Exhibit 42.)

Assures immediate return of empty cars.

Provides capacity and facilities to handle a large volume in the shortest possible time.

Service no more onerous than that contemplated by Commission in *Livestock—Western District Rates.* (176 I. C. C. 1.)

Western Livestock scale of rates was prescribed by Commission for delivery of live stock shipments at the Union Stock Yards.

The Union Stock Yards is the only suitable place for delivery of any appreciable volume of live stock in the Chicago area, with the exception of the Omaha Stock Yards operated by appellant. (219 I. C. C. 531.)

Delivery of live stock shipments at appellant's proposed private stock yard:

Carload shipments of live stock would have to be switched and otherwise intermingled with dead freight.

Would make expedited handling and delivery of live stock to appellant's proposed private yard extremely difficult on account of complex switching operation through a congested terminal area.

There is no room for expansion of yards or the building of additional transportation facilities.

Appellant's proposed private stock yard is served only by the Junction (a switching road) and subject to a switching charge.

Appellant's proposed private stock yard is inaccessible to line-haul carriers.

Would interrupt service to the public stock yard on account of necessity to stop consolidated trains to set out cars on a switch track for delivery to proposed private stock yard.

Would cause delay due to special handling required to place live stock shipments on set out track for subsequent movement to appellant's proposed private stock yard.

Would cause delay on account of operating difficulties encountered in moving empty stock cars from proposed private yard to the tracks of the line-haul carriers.

Would delay delivery of market live stock and the delivery of direct shipments moving to the public stock yard and require unloading of live stock for feed, water, and rest under the Federal 28-36 hour law.

Would compel lengthening of train schedules which would require earlier loading at country points, and result in extra charges incident to unloading live stock for feed, water and rest.

Would cause interference and delays to shipments of live stock consigned to the Union Stock Yards and the return of empty cars as well as the handling of dead freight for other industries in the switching district.

The following are other significant points bearing on the difference between delivery at the Union Stock Yard and delivery at appellant's private yard, namely:

Ordinary live stock is never handled in switching service, except in case of emergency and has been always subject to a switching charge.

Line-haul rates into Chicago do not include delivery to appellant's proposed private sidetrack which is located on a switching line.

Junction has no facilities for such resting, watering, and feeding live stock on its lines as may be required by Federal law.

Would require a new kind of service.

Delivery at appellant's proposed private stock yard is not adapted to the Junction's tracks and other transportation facilities because these were designed and developed for centralized delivery by the line-haul carriers at the Union Stock Yard.

Other packers would be under a competitive compulsion to make similar demands if appellant's demands were granted. *Swift & Company* v. *A. T. & S. Fe Ry. Co., et al.*, 274 I. C. C. 557-573.

BRIEF AND ARGUMENT.

I.

The Union Stock Yard is the Only Public Live Stock Market In Chicago. It Is the Terminal of All the Railroads and With One Exception the Only Suitable Place For the Delivery of Live Stock.

For over eighty years the Union Stock Yards has been the sole place in Chicago where live stock for slaughter has been handled in any appreciable volume. The only exceptions to this are the Omaha Yards (appellant's private yard before mentioned) and few isolated shipments at team tracks of some of the carriers (R. 163, 360, 888).

The consequences of appellant's proposal would seriously interfere with shipments of live stock consigned to the public market at the Union Stock Yards, and shippers of other freight would also be affected (R. 503, 1229-30).

Testimony of Producers.

Mr. David Swanson, Manager of the Chicago Producers Commission Association who has had many years of experience on the Chicago market, testified to the effect that there were four main classes of buyers, including the big packers, small local packers, order buyers and traders. He described the function of salesmen representing live stock producers, and the function of buyers for the various packers and other interests in the determination of prices. He stated that all buyers must always be forced to give all they can afford (R. 855); that it is important that live stock arrives on the market early so that there is ample time for proper resting, feeding, watering and

sorting, before the salesmen start to show them to the buyers; that the most important thing is to give the live stock producer access to all the markets, the early market, the middle market and the late market of the day (R. 859); that it is in the interest of live stock producers to have an effective live stock market at Chicago. The Chicago market must have high volume and sufficient action in order to determine fair live stock prices for those sending live stock there and also to be used as a guide throughout the entire live stock industry. The stabilizing effect of the Chicago market is a benefit to consumers, as well as producers and processors. Anything done to decrease volume to the Chicago market and slow up its action would be detrimental to the public interest (R. 859).

Mr. Theodore Funk, President of the Chicago Producers Commission Association and Vice President of the National Live Stock Producers Association, a farmer and live stock feeder in Illinois, whose ancestors brought live stock to Chicago before it was an organized market, and with the railroads and other interests played a prominent part in bringing about the establishment of one central public live stock market, and the abandonment of the other separate live stock markets in Chicago, testified that the central live stock market at the Union Stock Yards in Chicago has been in continuous operation since it was organized, that interference or disruption of the service would tend to decrease volume, and that this would have a detrimental effect on the interests of live stock producers; that a market to be effective has to have a large volume, that if volume is decreased substantially, buyers will look elsewhere for their live stock, and that the presence of more buyers results in obtaining the best price that conditions warrant, that time in transit bears directly upon the net returns that any producer will get from his live stock because the less time that it takes for the live

stock from the time it leaves the producer's feed yard until it is over the scales and sold, the greater will be his total weight and his net returns, that the sooner live stock can be unloaded after they reach their destination the better appearance they will have, the more bloom they will carry, and the less weight they will lose. Especially is this true in the summer time when it is extremely hot, or in the winter time when it is cold. As long as live stock are moving they do not suffer as much, but when they have to stand in a car on track before being unloaded, that is where your greatest loss takes place, that lengthening of time in transit would divert a tremendous amount of live stock, especially if the delay was such that they had to feed these animals enroute, that on shipments made where the cattle have to be unloaded and fed the shrink amounts to practically twice as much as when they can get through without an unloading enroute (R. 796-801).

Testimony of Operating Witnesses.

There is abundant and uncontroverted testimony of operating officials and representatives of the defendant carriers which conclusively shows that granting of the plaintiff's request would seriously disrupt and interfere with the services in connection with the handling of live stock at the Union Stock Yards. Mr. Sorenson, Superintendent of the Chicago Junction Railway, testified on this point in part as follows:

> "In my considered opinion, based on my twenty years' experience in the operating end of the railroad industry, all of which time has been spent in terminal yards, if the Chicago Junction Railway was forced to handle direct shipments of live stock for delivery to private siding of the packing companies located on our rails, the net result would be the complete breakdown of the operation of the Chicago Junction Railway" (R. 457).

Extensive similar testimony relating to the present operating practices, and the interference, delay and congestion that would result if plaintiff's request was granted, was given by operating witnesses of the line-haul carriers (R. 455, 571, 615, 617, 619, 684 and 685).

The major part of the live stock shipments coming into the Union Stock Yards by rail must pass through the Ashland Avenue Yard of the Chicago Junction Railway. The operations of this yard are complex and congested, as both inbound and outbound traffic to and from various industries in the area are handled through it and twenty-two line-haul carriers must interchange traffic within the confines of that yard and this includes all cars of dead freight and perishables consigned to and by industries on the Junction tracks. It should be observed that never before, except in isolated emergencies, has live stock traffic, consigned to the Union Stock Yards, been handled by the Chicago Junction Railway. Rail shipments of live stock have been handled into the yards by engines and crews of the line-haul carriers for over eighty years (R. 355-360).

Granting of the plaintiff's request would require the setting out of shipments consigned to its proposed private yard and subject this highly perishable class of traffic to the unavoidable delay amidst congestion and other consequential complications that would result. The operation through the Ashland Avenue Yard under present conditions is not without interference, as a substantial number of the stock trains going to the yards are held up and required to wait on the main running tracks (R. 590, 614, 617, 619, 684).

Granting of the plaintiff's request would also make it necessary for line-haul carriers to use additional engines because of the more frequent runs that would be necessary. Furthermore, its operating witnesses testified that there just are not enough engines and crews to go around now;

if we have this greatly increased number of cars to be classified, it is going to make matters much worse (R. 662).

Any additional engines and men necessary to handle the live stock to the private yards of the plaintiff's would also materially retard the handling of dead freight and perishable freight (R. 657).

Additional delays and other interference in the handling of live stock in the Ashland Avenue Yard would lead to other detrimental consequences.

Live stock shipments by rail are subject to what is known as the Federal 28-36 Hour Law. This law requires live stock to be unloaded for feed, water and rest for a minimum of five hours in the event that it cannot be delivered within the time limitations prescribed by the law.

To live stock producers the loading time in the country and the arrival time at the market are very important. Train schedules for many years have been established to meet the limitations of this Federal law. Many of them provide only a slight margin based on current operating experience and any substantial delay would jeopardize the movement of live stock and would inevitably require a readjustment of the schedules by appropriately lengthening them or otherwise compel the unloading of live stock for feed, water and rest in accordance with the law. This would seriously affect the interests of all shippers of live stock, by rail to Chicago whether they were moving to the Union Stock Yard—consigned to the public market for sale or direct to packers. On shipment consigned for sale it would result in added shrink, added expense, and deterioration in the marketable condition of the live stock, all of which would be detrimental to the interests of the producers.

As a consequence of the lengthening of the schedules and

the detriments incident to the additional delays, rail live stock traffic would be diverted to the trucks (R. 801).

To handle live stock shipments to the complainant's proposed yard adjacent to the public stock yards, it would be necessary for the line-haul carriers to make many more runs to avoid violation of the 28-hour law (R. 563, 591, 592).

The prompt return of empty stock cars is of great importance to both live stock producers and carriers. The proposed operation would not only cause serious delay in the handling of the loaded cars, but also seriously delay the return of empty stock cars. It is reliably estimated by a railroad operating witness of long experience that the return of empties would require at least a 24-hour delay and this is in sharp contrast to the prompt return of empty cars from the unloading chutes at the Union Stock Yard by engines and crews of the line-haul carriers (R. 457, 662).

Diminished receipts on the public live stock market at Chicago would tend to increase the yardage charges that would be borne by the producers and others using the facilities of the Union Stock Yards & Transit Co. (R. 499, 509).

There are thirteen or more other live stock slaughterers with plants in what is commonly called the Chicago stock yards area (Rec. 122). These and others are in competition with the appellant. Consequently, the Commission did not consider the matter as a request of only one packer, and we contend properly so.

II.

The Services Rendered In Delivering Live Stock to the Union Stock Yard and to the Plant of the Appellant's Subsidiary, the Omaha Packing Company, Are Not More Onerous Than Terminal Services Contemplated Under the Scale of Rates Prescribed in the Western Live Stock Case (176 I. C. C. 1).

The Chicago Terminal Case.

About fifteen years ago the Commission had before it the *Chicago Live Stock Exchange* case, 219 I. C. C. 531, *supra,* decided in 1936. In that proceeding the application of the line-haul rates without the imposition of a terminal charge was sought. The terminal charge then imposed in addition to the line-haul rates was the subject of bitter complaint on the part of various live stock producer interests from time to time for a period of about forty years. A very complete record of operating conditions and other facts and circumstances was presented in that case by the parties seeking the elimination of the terminal charge.

The following extracts from the Commission's decision in that case in which it condemned the terminal charge and required the application of the line-haul rates without an additional charge are rather significant in connection with the consideration of the Commission's decision under attack here.

A concise statement of the early history and development of the present public stock yard appears in *Chicago Live Stock Exchange* case, *supra* (1936), where beginning at p. 533 the Commission said:

> "Prior to 1865 there were four different points in Chicago at which live stock was delivered and marketed. The different roads transporting such traffic

to Chicago delivered it at any of these points without charge in addition to the Chicago rate. The maintenance of four different markets was found burdensome by the carriers, and in 1865 for the purpose of concentrating these markets at one point, the Union Stock Yards & Transit Company was organized, stockholders in this company being the carriers transporting live stock to Chicago. This company acquired real estate, constructed the Union Stock Yard and railroad tracks connecting the trunk lines entering Chicago with the pens at the yards. Other markets in Chicago were abandoned. Slaughterhouses were located in the vicinity of the Union Stock Yards, and these yards became the sole place in Chicago where live stock was marketed for slaughter" (p. 533).

"Most of the trunk lines entering Chicago have direct connections with the Chicago Junction, and their road engines operate into the stockyards, although the crews are frequently changed at the break-up yards as the trains pass through, in instances where the matter of overtime pay is involved. The train proceeds to an unloading platform, the engine cuts loose and, proceeding to the rear, removes the caboose and places it at what was the head of the train. Then, proceeding to the other end, it is ready to remove the empty cars. The unloading is very expeditious as the stockyards now have dock capacity for setting 283 cars of live stock for unloading at one time. Each chute has capacity for two carloads of live stock, so that the first 283 cars may be removed when empty, and 283 more carloads set immediately. The trains placed at the chutes may contain hogs, cattle, or sheep, in single-deck or double-deck cars, or short cars with long cars, yet only one spotting is necessary to take care of the whole trainload. In other words, no further "cutting" or "spotting" is necessary because of different species of live stock or types or size of cars" (p. 538).

"The services rendered in delivering live stock to the Union Stock Yard, and to the plant of intervener Omaha Packing Company, at Chicago, as shown by the present record, are not more onerous than ter-

minal services contemplated under the scale of rates prescribed in *Livestock-Western District Rates, supra.*"

"In prescribing the rates in *Livestock-Western District Rates, supra,* we specifically took into consideration as an element the rendition of terminal services in connection with the transportation of live stock, and included what we considered sufficient to cover such terminal services under a normal operation, as well as to cover the unloading and loading of live stock at public stockyards" (p. 546).

The Commission in its decision in the *Chicago Live Stock Exchange* case, *supra,* concluded with the following significant statements:

"In the case of live stock, the terminal operations are in many respects simpler and less expensive than those required by other classes of freight. The railroads do not hold themselves out to deliver at all points within the Chicago switching district, but, as the majority report shows, at practically only two points, by far the most important of which is the Union Stock Yard.

"The Union Stock Yard is, in effect, the terminal of all the railroads, and they reach it with their own rails. That is to say, they do not depend upon the Chicago Junction Railway for switching service, but have trackage rights over it, operating to and from the stockyards with their own engines and crews. They pay a charge for these trackage rights, but it is in lieu of the capital charge to which they would be subject if they owned the rails themselves. We have never had occasion to pass upon this trackage charge, and for its level the railroads are themselves responsible (p. 550).

"As shown by the majority report, the concentration of the traffic to this point of delivery, the Union Stock Yards, together with the trackage rights, makes operating conditions very favorable in important respects. In general, the trains are hauled through to the stockyards without the classification at, and switch-

ing service from, the break-up yards which is usually necessary at other cities. Unloading and removal of the empty cars can be accomplished in exceptionally quick time. All of this tends to reduction in terminal expense (p. 550).

"As a matter of fact, as above stated, the Union Stock Yards is a point of live stock delivery for all the lines and it is, through the trackage rights, in effect located on their own rails" (p. 551).

III.

There Is Great Dissimilarity Between Delivery of Live Stock At the Union Stock Yard, the Only Public Stock Yard In Chicago, and the Delivery of Live Stock at the Appellant's Proposed Private Stock Yard.

The Present Case.

It appears that there never was a case, with the exception of the *Chicago Live Stock Exchange* case, *supra,* where more evidence was presented relating to the operating conditions and transportation services in the stockyard area, and considered more carefully by the Commission than in this case.

That the facts, circumstances and conditions that generally prevailed at the time of the *Chicago Live Stock Exchange* case still exist today and the effect of appellant's request if granted, is shown by th lengthy discussion by the Commission in its report in the case on appeal here, 274 I. C. C. 557, *supra,* of which the following excerpts are representative:

"At present, approximately 63 percent of the trains of the trunk lines going to the Union Stock Yards handle live stock exclusively. Solid trains of live stock entering the stockyard area from the west are handled by the line-haul carriers over eastbound track

1103 to the unloading chutes in the Union Stock Yards. No separation is required of live stock by species to make delivery at particular pens. While the cars are being unloaded, the engine cuts off, passes around the train, and couples on to the other end. The unloading operation consume but a few minutes a carload."

Further discussion of the existing facts, circumstances and conditions and consideration of the effect that the granting of the plaintiff's request would have on the situation, appears throughout the Commission's report as indicated by the following:

"We have indicated generally the difficulties which would confront defendants if required to make delivery of livestock at complainant's plant, the basic difficulty being that such method of delivery is not adapted to defendant's service, tracks and yards, as specially designed and developed, along with the city's intensive development, for performance of the centralized delivery service rendered at Chicago. For some 70 years the method of conducting terminal operations in the stockyards district has been for the line-haul carriers, using Junction tracks, to carry all shipments of livestock to the stockyards and make deliveries there, and for the Junction to perform the switching and spotting of other freight for the packers and many other industries in the area. As a result, the Junction's main tracks, its yards and subyards and their tracks, are peculiarly designed and fitted for the operations and service described, and any change, particularly as contemplating deliveries of livestock to the plants of the packers, would, as might be expected and as is shown, require a conflicting use of such yards and tracks and subject defendant's operations to interference and delays" (p. 569).

"Complainant does not dispute, but instead concedes, that the other packers, if providing the necessary facilities therefor, would be entitled to the same delivery service at the same rates as accorded it. What it urges is that the carriers' contention as to additional burdening and disruption of their operations because

of demands for the service from other packers rests on an untested assumption or conjecture, and would thus require us to decide the case, not upon facts, but upon prediction, opinion and prophecy.

"But the very nature of complainant's complaint, asking, as it does, that defendants be required to render for its proposed plant a delivery service of a kind new to the stockyards district, necessarily requires exercise of judgment as to future effects and results. The record contains ample facts showing that, if complainant's demand for the service without charge in addition to the line-haul rates were granted, the other packers would be under considerable, if not great, competitive compulsion to provide the necessary facilities enabling them to make like demands. We may take account of, and give effect to, such conditions without being definitely apprised as to what each and all of the other packers will do, or will find it financially profitable and otherwise advantageous to do" (p. 572).

"Interferences with the movement of livestock to the stockyards is a serious concern not only of defendants but also of producers and livestock marketing agencies who desire expeditious movement of livestock and continued functioning of the public market in a manner that is adequate for their needs. It is the position of these interests that deliveries of livestock on private industrial tracks served by the Junction should be condemned upon the ground that such disposition of livestock is contrary to the public interest.

We may, however, disapprove the inauguration of a continuing practice of delivering livestock directly to packers in circumstances where, as we have found would be the case here, such practice would seriously interfere with, delay, and disrupt terminal transportation operations and the movement of livestock generally" (p. 573).

"The transportation services, conditions, and circumstances connected with deliveries by the line-haul carriers at the unloading chutes of the Union Stock Yards, as hereinbefore described, also are substantially dissimilar from the private track delivery sought" (p. 574).

"There is no showing of a similarity in any respect of the services required and circumstances affecting services. There is no showing that services as desired will result in a situation similar to that at a point or points alleged to be preferred" (p. 575).

"The evidence affords no basis for a conclusion that the terminal charge of the Junction in addition to the line-haul rates is unreasonable for deliveries of livestock to the proposed plant, considering services and modification of services that would be required for the desired deliveries and the effect upon terminal operations generally of performing such delivery service to the proposed plant" (pp. 575, 576).

* * * * *

Delay Would Lengthen Time in Transit and Would Otherwise Be Detrimental to Producers and Others Shipping Live Stock to Chicago.

Loading time at country shipping points is determined by present operating schedules, including the delivery of live stock by the line-haul engines and crews direct to the unloading docks at the public stock yard, and the limitations of the Federal law relating to the time live stock may be confined in cars without unloading for feed, water and rest.

For delivery at the private side tracks additional time would have to be allowed.

Delay due to interference would compel lengthened schedules and compel live stock producers to load earlier for arrival on the intended market day and bear the burden of added shrink, depreciation in the marketability of the live stock and the added expense incident to unloading of live stock enroute for feed, water and rest.

In *Swift & Company* v. *Atchison, T. & S. F. Ry. Co.*, *supra* 274 I. C. C. 557, the Commission said:

"Under the Federal law, livestock may be confined in

cars for not more than 28 hours without unloading for watering and feeding unless the shipper requests in writing that the time be extended to 36 hours. In practically all cases, stock arriving at Chicago has only a limited time within which it must be unloaded from the cars in order to avoid violation of the 28-hour law. The outer yards of the line-haul carriers, from which runs are made to the Union Stock Yards, contain very limited feeding, watering, and rest facilities. Many stock runs are made with but one or two cars per train. Under the present practice of handling directly to the unloading chutes in the Union Stock Yards, it is unnecessary to unload the stock for water, feed, and rest at some intermediate location on the Junction. In fact, facilities for that purpose do not exist on that line. That carrier contends that if it should attempt to switch livestock to private delivery tracks an additional 1 to 8 hours would be required before cars could be set for unloading. Accordingly, it is contended that the line-haul carriers would have to allow the Junction at least 8 hours after interchange within which to effect delivery to the industry and where there was not sufficient time to make delivery within the period prescribed by law, the line-haul carriers would be compelled to unload the stock on their rails or rearrange their train schedules. In this connection, it is shown that, while livestock arrives at all hours, the bulk of the traffic is consigned so as to make the early morning market. The market period extends to 2 p. m. each day but as a practical matter trading is over about 11 a. m. Late arrivals must often be carried over, resulting in some depreciation, as well as added costs for feeding and handling'' (274 I. C. C. 562-563).

Complainant Has Available Use of Facilities at Union Stock Yard Same as Other Packers in the Stock Yard Area.

Appellant has also available facilities for receiving live stock at its plant at the Union Stock Yard same as other packers in the stock yard area, whether such live stock consists of direct shipments or of live stock that complainant may purchase out of consignments on the open public market at the yard.

The owners of the live stock pay the yardage charge and other marketing costs on live stock sold on the market and the appellant and other packers are obliged to pay charges for use of the yards and facilities provided by it for delivering the live stock to their plants.

In the decision on appeal here the Commission continued:

> "At present the Junction connects at Ashland Avenue with private tracks serving complainant's present plant which is in the northern section of an area known as "Packingtown", located just west of the Union Stock Yards. That connection would be used in reaching complainant's proposed unloading facilities for direct shipments of livestock. The Junction also serves numerous other packing plants in the packinghouse district which is bounded on the west by Ashland Avenue, on the south by Forty-seventh Street, on the east by Racine Avenue, and on the north by Thirty-ninth Street. This area is connected with the Union Stock Yards by a network of overhead runways, tunnels, and viaducts which are owned and maintained by the Union Stock Yards and used to drive livestock from those yards to the slaughtering floors of the packers, including complainant" (274 I. C. C. 563).
>
> "Complainant's counsel objected to the receipt in evidence of an exhibit containing copies of agreements and other documents relating to certain events which gave rise to the present practice of delivering live-

stock to the Union Stock Yards and showing that this practice was inaugurated in 1867 when the Union Stock Yards were constructed to displace four widely separated stockyards which had proved unsatisfactory to the railroads and to the livestock industry, and indicating that in 1892 complainant, or its predecessor, and other packers acquiesced and concurred in that development of the terminal practices and facilities for the handling of livestock at Chicago. The objection was overruled and the exhibit was received. After the hearing, complainant filed a memorandum in support of a motion to exclude the exhibit from evidence as being irrelevant to the issues. All facts relating to the existing custom and practice of making deliveries of livestock and also facts and circumstances leading up to that custom and practice, as well as the effect of the proposed practice on the interests of the carriers, the public, and other shippers, are relevant. The motion is denied" (274 I. C. C. 567-568).

A Granting of Appellant's Demand Would Seriously Deteriorate Live Stock Service at Chicago.

Present long established method of delivering all shipments of live stock at the stock yards by engines and crews of line-haul carriers, leaving the Junction to perform the switching and spotting of other freight for the packers and many other industries serves the needs of all interests best. Any change, particularly delivery of live stock to side tracks at plants of the complainant and other packers would result in interference and delay not only in the delivery of live stock at the stock yards, but also the delivery at the private side tracks of the complainant and the side tracks of any other packers in the area.

In this connection the Commission stated:

"We have indicated generally the difficulties which would confront defendants if required to make delivery of livestock at complainant's plant, the basic difficulty being that such method of delivery is not adapted to

defendant's service, tracks and yards, as specially designed and developed, along with the city's intensive development, for performance of the centralized delivery service rendered at Chicago. For some 70 years the method of conducting terminal operations in the stockyards district has been for the line-haul carriers, using Junction tracks, to carry all shipments of livestock to the stockyards and make deliveries there, and for the Junction to perform the switching and spotting of other freight for the packers and many other industries in the area. As a result, the Junction's main tracks, its yards and subyards and their tracks, are peculiarly designed and fitted for the operations and service described, and any change, particularly as contemplating deliveries of livestock to the plants of the packers, would, as might be expected and as is shown, require a conflicting use of such yards and tracks and subject defendant's operations to 'interference and delays'' (274 I. C. C. 569).

A Centralized Place of Delivery at Chicago Serves All Interests to Best Advantage.

Conditions and circumstances require prompt handling of live stock shipments. It was long recognized that delivery of the shipments of all live stock at one centralized place would serve all interests—live stock producers, packers, and the railroads.

As to the advantages of centralized delivery compared with the plant delivery sought by appellant, the Commission said:

"As above mentioned in practically all cases, livestock arriving at Chicago has only a limited time left before it must be unloaded to avoid violation of the law governing watering and feeding; the Junction has no facilities for watering or feeding anywhere on its lines and such facilities of the kind as are maintained by the line-haul carriers are very limited. While these conditions—all necessitating prompt handling of the

traffic—are suited to the practice, long followed, of making deliveries of all shipments of livestock at the stockyards, they are not, it is evident, at all suited to the plant delivery service sought by complainant, in the performance whereof the cars of livestock would have to be switched and otherwise intermingled with cars of dead freight which latter, it appears, may, in the case of perishable freight, require nearly a full day for movement through the yards to points of delivery, and in the case of other dead freight, nearly 32 hours" (274 I. C. C. 570-571).

"Having in mind the congested condition of yards and tracks, it is clear that the attempt to make plant delivery through and over them of even 18 cars of livestock daily would considerably delay and burden defendants' operations. Moreover, although it is shown that complainant's direct shipments of livestock average 18 cars a day, such average necessarily includes days when the shipments exceeded 18 cars. Also it appears that the number of complainant's direct shipments of livestock in proportion to the number bought at the stockyards has been steadily increasing, and the testimony of complainant's witnesses affords ground for the belief that that condition will continue" (274 I. C. C. 571).

The Decision In Cleveland Case Not Applicable Here.

Appellant's counsel is trying to make this case appear to be like the so-called Cleveland case, *Swift & Company* v. *Baltimore & Ohio Railroad Company, et al.* (266 I. C. C. 55, and *United States of America, Interstate Commerce Commission and Swift & Company, appellants* v. *Baltimore and Ohio Railroad Company, et al.*, 333 U. S. 169, 92 L. Ed. 618 (1948).

The two cases are definitely different and not comparable.

In the *Cleveland* case the fundamental point in the controversy was that the Stock Yard Company sought to

change a long established custom and practice at the plant of the complainant at Cleveland. This the Commission refused to permit and its position was sustained by the Supreme Court.

Here it is a packer that seeks to change the established practice and the Commission has found the existing practice to be reasonable and lawful exactly as it found the practice complained of at Cleveland, to be reasonable and lawful. In this case the appellant relies upon the refusal of the Commission to change the customary delivery practice at Cleveland to contradict the Commission's refusal to change the customary delivery practice at the Union Stock Yard at Chicago.

In the *Cleveland* case, the rail carriers had made plant door delivery of live stock to the packers since the turn of the century. It is very significant that at a time while the appellant and other packers in Chicago were instrumental in getting live stock delivered at the public stockyards in Chicago, because the appellant was one of the proprietors in that enterprise, live stock was being delivered at the public stock yard and at the packers' plants in Cleveland, so that operations in the Cleveland area were developed on that basis and were geared to that method of delivery just as at Chicago they were developed and geared to a different method of delivery.

Accordingly the Commission found that the linehaul live stock rates establfshed by it to Cleveland contemplated and covered that type of delivery, while the Commission found that the line-haul rates which it had established to Chicago do not contemplate or cover the delivery of live stock to the private side track at the appellants' proposed private stockyard.

In the *Cleveland* case the railroads were ready and willing to continue the customary service at Cleveland, but the Yard Company there that owned a part of the track

running to the Swift plant tried to prevent its use for delivery of live stock shipments to the plant.

That was the sole reason advanced for a change in the established practice. The Commission in *Swift & Co.* v. *B. & O. R. Co., supra,* at page 69, said in part:

> "The only reason advanced for the failure to perform such service is the question as to the New York Central's right to use its spur for the delivery of livestock because of its contract with the stockyards respecting the use of track 1619."

In the *Cleveland* case the Commission and the Supreme Court both held that private contracts could not be used to justify a change in the customary service which railroads were being paid to perform.

In this case no such defense nor contention is made by anyone. Appellant in an attempt to obtain some benefits from the *Cleveland* decision as to itself put in the record the terms of an old agreement between the Union Stock Yards & Transit Co. and the Junction. This is nothing more than an attempt to bring in an issue that does not exist in this case.

The Commission made a very clear distinction between the circumstances and conditions relating to delivery of live stock to private industrial tracks (in *Baltimore Butchers Abattoir & Live Stock Co.* v. *Philadelphia B. & W. R. Co.*, 20 I. C. C. 124, by the Commission, *Swift & Co.* v. *Baltimore & O. R. Co.*, 266 I. C. C. 55, by the Commission, and *Neuhoff Packing Co.* v. *Louisville & N. R. Co.*, 268 I. C. C. 271), by division 3, in which refusal to make deliveries without an additional charge to the line-haul rates was found unlawful and the circumstances and conditions at the Union Stock Yard in Chicago in this case where at page 575 it stated:

> "Deliveries to private industrial tracks at those points did not require substantial modification of ter-

minal operations and interferences with established operations in a manner required at Chicago for such deliveries, and did not involve, as at Chicago, serious disruption of operations. There is no showing of a similarity in any respect of the services required and circumstances affecting services. There is no showing that services as desired will result in a situation similar to that at a point or points alleged to be preferred."

Furthermore, there is no contract here that prevents the Junction from delivering shipments of live stock at appellant's proposed private stock yard or on a private side track of any other packer in the Chicago area, located on switching line. The situation here is due to a difference in transportation conditions that have been in existence for over eighty years and acquiesced in by appellant.

Granting of appellant's request would completely disrupt and destroy the efficiency and other benefits of a centralized system for the delivery of live stock shipments at the Union Stock Yard, that has been maintained continuously for over eighty-seven years. Obviously, it would be against the public interest to subject all other shippers of live stock to Chicago to the disruption of service, the lengthening of train schedules, and the burden of other inconveniences and expenses, in order to grant a selfish demand.

Appellant Failed to Sustain Burden of Proof in Support of the Allegations in Its Complaint.

The appellant has not only failed to sustain the burden of proof that the switching charge in addition to the line-haul rate for delivery of live stock at its proposed private stock yard is unjust and unreasonable under Section 1 of the Interstate Commerce Act, but it also failed to prove that there is any semblance of similarity in circumstances or con-

ditions necessary to sustain the Section 3 allegation in its complaint.

The fact is that the evidence overwhelmingly shows a great dissimilarity on a substantial number of points with not a single point of similarity whatsoever.

It is appropriate to state again that since 1865 (over 87 years ago) the present stock yards and the adjacent packing plants were constructed the whole development was directed along a plan for centralized delivery of rail shipments of live stock at the Union Stock Yard and has been continuously maintained up to the present time.

Uncontroverted evidence of record clearly shows that delivery of live stock shipments to appellant's proposed private stock yard would involve many complications wholly detrimental to proper and safe handling of live stock and interfere with and seriously disrupt the delivery of shipments of live stock to the Union Stock Yard.

In view of this it is apparent that there is no substantial similarity of circumstances and conditions between the delivery of live stock shipments to the Union Stock Yard and the delivery of live stock to the appellant's proposed private stock yard.

It should be observed that in *Hygrade Food Products Corporation* v. *Atchison, Topeka and Santa Fe Railway Co.*, 195 I. C. C. 553, decided in 1933, the elimination of both yardage charges and switching charges on direct shipments was sought. The Omaha Packing Company (a wholly owned subsidiary of appellant) intervened against the complaint because of an allegation that the Omaha Packing Company, a competitor of complainant, was unduly preferred by reason of the fact that the switching charges demanded for placement of carloads of live stock at complainant's plant were inapplicable for delivery of carload shipments of live stock to the plant of the Omaha Packing Company.

The intervener (subsidiary of appellant here) strenuously opposed the complaint.

Defendants refused to provide delivery of live stock at complainant's plant at the same rates and charges that applied on live stock delivered at the Union Stock Yard or at the plant of the Omaha Packing Company.

The Commission held, among other things, that there was no indication of substantial similarity in circumstances and conditions connected with delivery at complainant's plant and the delivery at the plant of the Omaha Packing Company.

That finding was not brought before this Court on subsequent appeal. *A. T. & S. Fe Ry. Co.* v. *United States,* 295 U. S. 193.

Appellant now demands the very same thing that it so strenuously and successfully opposed in the *Hygrade* case. It wants delivery of live stock at its proposed private stock yards at the line-haul rates without additional charge, same as in deliveries to the Union Stock Yard and the Omaha Packing Company, to each of which the line-haul rates apply today.

Appellant seeks to relieve itself of the cost of trucking the live stock from its Omaha Packing Company yard, where there are no slaughtering facilities, to its slaughtering plant adjacent to the Union Stock Yard, and it also wants to relieve itself of the switching charge in addition to the line-haul rate for delivery of live stock to its proposed private stock yard.

In other words, it wants to eat its cake and have it too.

At its Omaha yard appellant has, among other things, the advantage of delivery of rail shipments at the line-haul rates without any additional charge, but it has the disadvantage of having to truck the live stock some 2½ miles to its slaughtering plant adjacent to the Union Stock Yard.

By delivery of live stock at its proposed private stock yard it would eliminate the expense of trucking from its Omaha yard, but it would have one disadvantage that it cannot overcome and that is on account of its proposed private yard being located on a switching line, and not on the rails of a line-haul carrier as it is at the Omaha yard.

In avoiding any disadvantage peculiar to one location appellant must assume any inherent disadvantage along with any advantage of another location.

Appellant has failed to prove that it is entitled to relief from the switching charge in addition to the line-haul rate in the delivery of shipments at its proposed private stock yard.

In any event, it would be most unfair and against the public interest if appellant's demand was granted to the disadvantage and detriment of others.

Proof of any substantial similarity in circumstances and conditions is lacking; on the contrary, evidence of dissimilarity is overwhelming.

CONCLUSION.

We respectfully submit that the decision of the Commission, unanimously affirmed by the District Court is supported by substantial evidence of record; that it otherwise is within the proper exercise of the powers conferred on it by the Congress, that it is in the public interest and that this Court should "ascribe" to its findings "the strength due to the judgments of a tribunal appointed by law and informed by experience". *Interstate Commerce Commission* v. *Union Pacific R. R. Co.*, 222 U. S. 541, 56 L. Ed., decided 1912, citing: *Interstate Commerce Commission* v. *Illinois C. R. Co.*, 215 U. S. 470, 54 L. ed. 287, 30 Sup. Ct. Rep. 155; *Southern P. Co.* v. *Interstate Commerce Com-*

mission, 219 U. S. 433, 55 L. ed. 283, 31 Sup. Co. Rep. 288; *Interstate Commerce Commission* v. *Northern P. R. Co.*, 216 U. S. 554, 54 L. ed. 609, 30 Sup. Ct. Rep. 417; *Interstate Commerce Commission* v. *Alabama Midland R. Co.*, 168 U. S. 146, 174, 42 L. ed. 414, 425, 18 Sup. Ct. Rep. 45, and *Illinois C. R. Co.* v. *Interstate Commerce Commission*, 206 U. S. 441, 51 L. ed. 1128, 27 Sup. Ct. Rep. 700.

WHEREFORE interveners urge that the final decree and order of the District Court be affirmed.

TABLE OF CONTENTS.

INDEX TO SUBJECT MATTER.

	PAGE
The Opinions Below	1
Statement of the Case	2
Summary of Argument	20
Argument	22
Foreword	22
I. The Commission's Findings Are Adequately Supported by Substantial Evidence of Record	25
A. It is Established on This Record That Delivery of Livestock to Swift's Private Tracks in the Stockyards Area Would be an Impractical and Costly Operation Which Would Adversely Affect Other Interests in That Area	27
1. The Present Operation	32
a. The Ashland Avenue Yards of the Chicago Junction Railway Are the Bottleneck in Which All Freight Destined to Industries on the Junction Must be Interchanged and Through Which All Livestock Going to the Stockyards Must Pass	32
b. The Present Method of Delivering Livestock to the Union Stock Yards Has Developed Through Generations and the Custom and Practice Which Has Resulted Is an Efficient and Carefully Organized Operation	37
c. Even Under Present, Long Established Procedure the Tremendous Growth of Industry in the Stockyards Area Has Brought Rail Operations to Full Capacity With Only a Narrow Margin Between the Present Efficient Operation and Disruption of the Entire Terminal Operation	40

2. The Attempt to Effect Delivery of Livestock to the Private Sidings of the Packers by Interchange of Such Traffic in the Ashland Avenue Yards Would be a Physical and Practical Impossibility Because of the Operating Conditions Which Would Result in the Yards of the Line-Haul Carriers and the Ashland Avenue Yards 49

a. The Service Which the Line-Haul Carriers Would Have to Accord the Packers' Livestock Under the Proposed Operation Would be Extremely Difficult and Costly 50

b. The "Services and Modification of Services Which Would be Required for the Desired Deliveries" (R. 80) Would Cause a Collapse of Terminal Operations in the Junction's Ashland Avenue Yards 54

c. The Proposed Operation Will Require Greatly Increased Service With Respect to Livestock Because of Set-outs for Feed, Water and Rest Which Would be Required by Federal Statute 64

d. Direct and Immediate Injury Would Result to Shippers of Livestock to the Stockyards and to Shippers of Dead Freight in the Stockyards Area From the Difficulties Inherent in Any Attempt to Work 75,000 Cars of Added Traffic Through the Ashland Avenue Yards 66

3. The Line-Haul Rates to Chicago Were Prescribed by the Commission for Application to the Public Stockyards and Would Not Compensate the Carriers for the Service Now Requested by Swift 72

4. Swift & Co. Defaulted in the Presentation of Any Substantial Showing in Support of Its Claim 73

a. In Support of Its Section 3 Allegation Swift Offered No Proof That Conditions in Chicago Are Similar to Conditions at Points Named in Its Complaint, and the Carriers Affirmatively Proved the Complete Dissimilarity Between Conditions at Those Points and at Chicago 76

b. Swift Did Not Call Its Yardmasters to Testify as to the Operating Conditions in the Stockyards Area, But, Instead Attempted Unsuccessfully, to Qualify Its Rate Witness to Deal With That Subject 82

5. The Commission's Findings 83

II. The Commission's Findings Are in Accord With the Applicable and Governing Principles of Law and Fully Support Its Order of Dismissal 88

III. The Purported Errors Urged by Swift Are Without Merit 89

IN THE

Supreme Court of the United States

OCTOBER TERM, 1951.

No. 282

SWIFT & COMPANY,

Appellant,

vs.

THE UNITED STATES OF AMERICA, INTERSTATE COMMERCE COMMISSION, ET AL.,

Appellees.

APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE NORTHERN DISTRICT OF ILLINOIS.

BRIEF FOR THE RAILROAD INTERVENERS.

THE OPINIONS BELOW.

The report of the Interstate Commerce Commission appears in the record at pages 57 to 89. The decision is published as No. 29809, *Swift & Co.* v. *Atchison, T. & S. F. Ry. Co.*, 274 I. C. C. 557. The findings of facts, conclusions of law, and decree of the District Court dismissing the complaint appear at pages 197 to 210 of the record. No opinion was filed by the District Court. This brief is filed on behalf of the carriers who were defendants in the proceeding before the Commission and interveners in the Court below.

STATEMENT OF THE CASE.

It is necessary to supplement appellant's statement of the case. In the complaint by which it initiated this litigation before the Interstate Commerce Commission, Swift alleged that the applicable charges for delivery of livestock to receiving pens which it proposed to construct in Chicago consisted of the line-haul rate plus a switching charge, and that this charge was unjust and unreasonable in violation of Section 1(5)(a) of Part I of the Interstate Commerce Act, unduly prejudicial in violation of Section 3(1) of that Act, and also in violation of Sections 1(4) and 1(6). Swift asked that the Commission prescribe joint through rates applicable over the line-haul defendants and the Chicago Junction Railway under which its direct shipments of livestock would be delivered to its proposed facility at a charge not in excess of the line-haul rates to Chicago. (R. 50-56) By this complaint, Swift thus undertook to establish that the published switching charge for private track delivery of its livestock was unreasonable and otherwise unlawful, and that the joint through rates which it sought were "necessary or desirable in the public interest." (49 U. S. C., § 15(3))

Swift's witness testified that certain buildings which had become obsolete were being replaced by new structures and that stockyards for the receipt of livestock were to be constructed in an area adjacent to the new buildings. (R. 267) Although it was stated that work on the new facilities had been started at the time of the hearing (R. 269), subsequent testimony showed that construction work at the designated site had not, in fact, been commenced at that time. (R. 455-56, 931) Counsel for Swift now states that "needless to say, that plant could easily have

been built during the many months (July 28, 1947-February 6, 1950) that this case was before the Commission." (Memorandum for Appellant in Opposition to the Motions to Affirm, p. 4, footnote 1.) It is not apparent whether this is intended to mean that the plant has been built or that its construction was delayed to await the Commission's decision. If the first meaning is intended, the statement is contrary to the facts. The proposed plant has not been built and there is no visible evidence of any construction at the designated location. If the second meaning is intended counsel's statement is contradicted by the testimony of Swift's witness:

> "Q. And that construction, I take it, then, does not in any degree depend upon whether or not this complaint of Swift's is granted?
>
> "A. No, sir.
>
> "Q. It is entirely separate and apart. I mean the complaint or what you seek in the complaint is entirely separate and apart from the considerations which have forced you, according to your informant, to build this new building?
>
> "A. That is correct." (R. 319)

In any event, the proposed plant and facilities for receipt of livestock do not exist and the proceeding is therefore, in effect, one for a declaratory judgment.

There were numerous interventions in opposition to the complaint on behalf of producers, buyers, sellers of livestock and the Union Stock Yards. The Department of Agriculture appeared through counsel and offered evidence to show that the granting of Swift's demands would operate to increase the charges to be paid by the producers who would continue to use the public yards. (R. 567-79) After a full hearing, including oral argument to the entire Commission, and an extended presentation on brief,

the Commission, by order and report, dismissed the complaint, *Swift & Co.* v. *Atchison, T. & S. F. Ry. Co.*, 274 I. C. C. 557. The Commission found that the line-haul rates on carload shipments of livestock to Chicago previously prescribed by it (*Livestock-Western District Rates*, 176 I. C. C. 1; *Chicago Livestock Exchange* v. *A. T. & S. F. Ry. Co.*, 219 I. C. C. 531) were not designed or intended to compensate the carriers for the livestock delivery service sought by Swift, and that, considering the transportation service required for such delivery and all of the attending facts and circumstances, the published switching charge of the Chicago Junction Railway in addition to the line-haul rates was not unreasonable or otherwise unlawful for delivery of livestock to Swift's private tracks. (R. 60, 78-79, 80-81) The Commission also found that the establishment of joint rates for this traffic, as requested by Swift, would seriously disrupt and interfere with the terminal services in the stockyards area and would not be necessary or desirable in the public interest. (R. 77, 81) Swift does not assign error with respect to this finding and thus concedes that the conditions which must, by the express terms of the Interstate Commerce Act (Sec. 15(3)), precede the granting of the relief sought by it, do not exist. In fact, Swift has omitted all reference to the Commission's findings with respect to the public interest in its brief and the joint rates sought by Swift are alluded to only once and then for the purpose of advising the Court that it will be "conducive to clarity to omit all further reference to the establishment of joint rates." (Brief, footnote 15, p. 31) This is quite consistent with Swift's presentation to the Commission in which it admitted that it was not concerned with the effect of its proposal upon the producers who would continue to receive their livestock at the Union Stock Yards or upon the numerous industries in the stock-

yards area who depend upon the Junction's facilities for their rail transportation service. (R. 336-39) Swift nevertheless asks the Court to reverse the decision below and to accord to it something that has been found to be, and is in effect admitted to be, contrary to the public interest.

Following the filing of Swift's complaint, the Chicago Junction Railway, taking the position that it could not, as a practical matter, undertake to deliver livestock to the plants of the various packers in the stockyards area, amended its tariff to exempt livestock from the traffic which it would transport, although the switching rate had been in effect for many years and the Commission had found it to be applicable to livestock and not unreasonable. (*Hygrade Food Products Co.* v. *A. T. & S. F. Ry. Co.*, 195 I. C. C. 553) Upon the protests of Swift and other packers, this action was suspended, and was heard, as I. & S. No. 5543, with the proceeding on Swift's complaint. The Commission ordered a cancellation of the suspended schedules, and required the Junction to retain the switching charge on livestock for such emergency use as might exist for it. (R. 80-81) There has been no appeal from that order. In effect, therefore, the Commission left the terminal practices at Chicago undisturbed, denied the lower rate sought and held that Swift must pay the applicable and reasonable charges for the service it desires.

On appeal to the three-judge District Court, Swift raised each of the issues which it raises here. Comprehensive briefs were filed, and an entire day was devoted to oral argument. That Court affirmed the Commission's action. It found that the Commission's findings were adequately supported by the evidence of record, that those findings were adequate to support the Commission's order, and that the Commission's findings and order conformed to the applicable and governing principles of

law. (R. 209) Thereafter, an order dismissing Swift's complaint was entered and the present appeal followed.

In order to comprehend the extreme nature of Swift's complaint and the soundness of the decision below, an appreciation of the historical development of livestock delivery practices in Chicago is essential. Beginning with the Yard Company's operations in 1865 the Chicago packers utilized the public yard for the receipt of their livestock, and paid the yardage charges assessed by that concern.[1] At a time when this practice was approximately 25 years old, Swift and the other Chicago packers decided that their patronage was a thing of value and that the Yard Company should be forced to allow the packers to participate in its profits. Their strategy was simple and effective. They purchased property located near the Union Stock Yards, and constructed their own private stock pens for the purpose of receiving their direct shipments. (Ex. 42, R. 892, 1179) The packers also filed a complaint in an Illinois Court by which they sought to force the Yard Company to permit the line-haul carriers to use its track in making deliveries to their new facility which they called the "Central Stock Yards." (Ex. 42, R. 892, 1179)

The successful culmination of this strategy was described by the Court in *Swift & Co.* v *United States*, 316 U. S. 216, as follows:

> "Having put themselves in this independent position and threatened to reduce the revenues of the Yard Company, the packers negotiated a contract which, in substance, involved the abandonment by the packing companies of this threatened move to Indiana and surrender of their own facilities for receiving direct shipments in return for a participation in the

[1] The facts recited in this portion of the brief appear in greater detail in *Swift & Co.* v. *United States*, 316 U. S. 216 at 227-230 and in exhibit 42, R. 892, 1174-1638.

profits and capital of the Yard Company. In 1892, the packers conveyed to Stock Yard interests the Indiana site and the Central Stock Yards, and agreed by contract to dismiss the suit filed in the Illinois court and to refrain from filing any similar suit for a period of fifteen years; to continue their business at Packingtown, adjacent to the Union Stock Yards, for fifteen years from July 1, 1891; to have all livestock slaughtered by them on their premises or within two hundred miles of the City of Chicago, during such period, pass through and use the Union Stock Yards, and to pay the usual yardage charge therefor; and they guaranteed that the Yard Company would receive and collect from its yardage charges on packers' livestock the aggregate sum of $2,000,000 within six years, and agreed to make up any deficiency in that amount. *The packers also agreed that, as long as the Yard Company conducted its business in Chicago, they would not interest themselves in any other stockyards in Chicago for the receipt and use of their own livestock.*

"The packers received income bonds of a new corporation, the security of which was the revenues of the Stock Yards, in the amount of $3,000,000. Swift received approximately one-third. These bonds were subsequently redeemed by the issuing corporation.

"The railroad companies were not parties to this agreement, and the Commission found that the packers, at the time the agreement was entered into, did not consider the assessment of the yardage charges to be a matter of any concern to the railroads. During the existence of the agreement described, the packers paid the yardage charges, and participated in the receipts from such charges. *This agreement expired*

> *in 1907, except for the covenant by the packers not to establish or become interested in any other stockyards for the receipt of their livestock so long as the Yard Company maintained its business in Chicago.* It appears, however, that after the expiration of the contract the Yard interests were informed that the packers were still threatening to move their plant from Chicago, and it appears that Swift expected to receive a share of the Yard's earnings as late as 1918, but there is no proof that it did receive anything in addition to the bonds received under the contract of 1892. J. O. Armour, of Armour & Company, however, received substantial benefits after 1907." (pp. 228-30, italics added)

The result was that the Union Stock Yards continued as the sole public terminal for the delivery of livestock in Chicago and has retained that status to this day.[1] In the first of a series of Chicago stockyard cases, this Court stated: "That the yards are, in effect, terminals of the railroads is clear. *They are in effect used as terminals and necessarily so.*" (*Adams* v. *Mills*, 286 U. S. 397 at 409, italics added) Deliveries at the public yards are made by the line-haul carriers operating over the Junction's main running tracks. (R. 469) The Junction itself has never, except in emergencies, handled any livestock but has instead devoted its yards and other facilities to the

[1] About 1915 or shortly prior thereto, Swift began the practice of consigning some of its direct shipments to private pens maintained by it at the site of the Omaha Packing Company, a Swift subsidiary, located a distance of some 2½ miles from the stockyards area. (R. 262, 265) Swift continued to receive other shipments of its directs at the Union Stock Yards, however, and in 1929 and for several years thereafter, a substantial number of such direct shipments were received at that terminal. (*Swift & Co.* v. *Alton R. Co.*, 238 I. C. C. 179 at 183.) After 1938, Swift consigned practically all of its directs to the Omaha plant pens on the rails of the Burlington. (*Swift & Co.* v. *Alton R. Co.*, 238 I. C. C. 179 at 183.)

receipt and delivery of dead freight consigned to the 499 industries served solely by it. (R. 483, 520) Since the inception of the Union Stock Yards in 1865, the terminal practices in the stockyards area have thus followed a pattern which was fostered and shaped by the packers themselves. With respect to livestock, the customary and accepted usage has been for delivery to be made by the line-haul carriers at the Union Stock Yards. Dead freight on the other hand, has been handled by the Junction, that line receiving the freight from the line-haul carriers, classifying it in the yards designed for that purpose and switching the cars to the appropriate consignee. During this same period, the stockyards area has become one of the most intensively developed industrial areas in the world, and the transportation facilities in that area have developed in conformity with the customary and long standing practices of delivery with respect to livestock and dead freight.

In its report in the *Chicago Junction Case*, 71 I. C. C. 631 (1922), the Commission discussed in detail the operations of the Chicago Junction, and with respect to the handling of livestock, it stated:

> "The movement of livestock in and out of the Junction yards is essentially different from the method of handling the dead freight, in that each carrier moves its trains to the unloading chutes with its own power, and goes into the pens for outbound stock destined for its own line. *All parties concede that that is the only practical method of handling that traffic.*" (p. 633, italics added.)

As the record before the Commission in that proceeding shows, Swift intervened and was a party. (Transcript of Testimony, I. C. C. Finance Docket No. 1165, p. 2) This finding reflects Swift's recognition over a period of several generations that the physical circumstances and the result-

ing terminal practices in the stockyards area make the delivery which it now seeks an extremely difficult and impractical operation.

At a time when the terminal practices described above were approximately 65 years old, the Hygrade Packing Company, one of Swift's small competitors, filed a complaint with the Commission asking delivery of livestock at its private tracks in the stockyards area without the payment of the applicable switching charge. This is precisely what Swift is seeking here, and Swift intervened in the proceeding and vigorously opposed plant door delivery of livestock. The Hygrade Company also challenged the imposition of yardage charges on shipments of its directs to the Stock Yards. *Hygrade Food Products Corp.* v. *Atchison, T. & S. F. Ry. Co.*, 195 I. C. C. 553.

To support its attack upon the Junction's switching charge for plant door delivery of livestock, the Hygrade Company alleged that delivery of livestock to Swift's subsidiary in Chicago, the Omaha Packing Company, without the assessment of such a charge, constituted violations of Sections 2 and 3 of the Interstate Commerce Act. Swift's counsel (R. D. Rynder and W. N. Strack, who have also represented Swift throughout this proceeding) appeared at the hearings on behalf of its subsidiary, and Swift's Assistant to the Freight Traffic Manager testified in that proceeding. As stated in the brief filed with the Commission by Swift's subsidiary:

> "Omaha Packing Company is one of the subsidiaries of Swift and Company and all of its transportation matters are handled by Swift and Company." (Appendix A, p. 3)

Consequently, that brief, which has been reproduced as Appendix A hereto, was in reality filed by Swift in support of its militant opposition to Hygrade's request for the

plant door delivery of the livestock in this area adjacent to the public stockyards. That document, consisting of 64 pages, is in its entirety, a most forceful defense of the long-established custom of delivering livestock in the congested stockyards area only at the public yard. The Court will note, in particular the full and detailed statements made by Swift as to the difficult and impossible operating conditions which would be encountered in delivering livestock, through the Junction's Ashland Avenue Yards, to the Hygrade plant, located in the same area in which Swift now seeks that same service, and what are characterized by Swift as the demoralizing effects that would attend that practice. (Appendix A, pp. 41-52) The facts as stated by Swift in that case are the facts found by the Commission in this case on the basis of the uncontradicted testimony in the record now before the Court. We respectfully submit that the validity of Swift's present attempt to impeach the Commission's findings and order may be judged by reference to the factual representations and argument by which Swift successfully opposed the Hygrade Company's attempt to secure plant door delivery of livestock without payment of the applicable switching charge. The Commission found in that case, as it did here, that the switching charge was not unreasonable or otherwise unlawful for delivery of livestock to Hygrade's plant in the stockyards area.

A few years later, however, the big packers sought to avoid payment of the Yard Company's so-called yardage charge on all shipments received at the yard by compelling delivery of their direct shipments in the public streets adjoining the public yards. But due to their long participation in the stockyards business, both at Chicago and elsewhere, and their own vital part in the assessment of yardage charges and in the revenue thus derived, the Chicago packers have never made any direct at-

tack on the measure of the yardage charges in a proceeding before the Secretary of Agriculture, who has exclusive jurisdiction of those charges. They have preferred, instead, to ask delivery within the narrowly confined and congested stockyards area, but at points outside the public yards. In a case filed in an Illinois state court and removed to the Federal District Court, Armour proposed to evade the payment of the yardage charges by taking its livestock from the unloading pens into the public streets. The complaint was dismissed by the District Court and on appeal, this Court affirmed. *Armour & Co.* v. *Alton R. Co.*, 312 U. S. 195. In the meantime, Swift instituted a proceeding before the Commission, seeking an order which would enable it to obtain its direct shipments of livestock from the Yard Company's unloading pens and thence into the public streets without the payment of the yardage charges. The Commission found that the delivery of such livestock into the Yard Company's pens without affording free egress into the public streets was not an unreasonable practice, and dismissed the complaint. *Swift & Co.* v. *Alton R. Co.*, 238 I. C. C. 179. On appeal to this Court, the Commission's decision was affirmed, and after an extended consideration of the documents now embraced in exhibit 42 (R. 892; 1174-1638), the Court stated:

> "The Commission finds that it was the attitude of the packers that their patronage was a thing of value to the Stock Yards, and they proposed to sell that patronage to the Yard Company. The Packers and Stockyards Act having made private arrangements of this kind unlawful, the packers now contend that the carriers must protect them against yardage charges on their direct shipments."
>
> "It was the packers themselves who suppressed the competitive yards, and alternative facilities for unloading their stock." (316 U. S. 216 at 230)

It is interesting to note the fidelity with which history has made full circle. The facilities which Swift now proposes to construct for the receipt of its direct shipments of livestock would be located only a short distance from the Central Stock Yards which the packers constructed and then conveyed to the Yard Company in 1892 in their campaign to acquire an interest in the public yards.

This proceeding is the most recent attempt by the packers to retrace their steps and to be restored to the position they abandoned in 1892 in return for a share in the profits of the Yards Company. This they propose to accomplish at the expense of the carriers and all other interests in the stockyards area by obtaining a rate basis which would completely ignore the transportation services required to effect private track delivery to the Chicago packers within the stockyards area and which would, as Swift asserted in the *Hygrade* case, "absolutely demoralize transportation in or about the stock yards." (Appendix A, p. 48)

Livestock consigned to points in Chicago takes one of two bases of rates. Shipments moving to the Union Stock Yards, to Swift's so-called "Omaha plant" pens, or delivered at the public team tracks, all served by the line-haul carriers, take the line-haul rate. (R. 260, 375, 836) Livestock delivered by the Junction would take the line-haul rate plus a switching charge, which at the time of the hearing before the Commission was $28.80 per car. This latter is the rate applicable to the private track delivery sought by Swift as well as such delivery to the other packers on the rails of the Junction but it is a rate basis which, except in some emergencies, has never been used. (R. 520, 838-40)

Under a trackage arrangement which has existed since 1865, and has, in effect, extended the rails of the trunk lines to the chutes and pens of the Union Stock Yards, livestock consigned to the Yards is placed at the Yards' unloading pens by the line-haul carriers which bring the stock to

Chicago. (R. 609, 635, 649-50, 839, 923) This traffic, averaging 76,920 cars per year for the five years preceding the hearing before the Commission, moves from the outer yards of the line-haul carriers directly to the public yards. (Ex. 28, R. 607, 1117, 609, 635, 677) The cars set at the unloading chutes by the line-haul crews are immediately unloaded, and the empties are then returned by the line-haul crews to their own property. (R. 609, 635, 677) The Junction does not in any manner participate in the transportation and delivery of this livestock. (R. 539) Of this total annual movement, 31,000 cars were consigned to the packers at the Union Stock Yards as so-called direct shipments. (Ex. 28, R. 607, 1117) None of that number were Swift's. For some years, Swift has been receiving all of its directs, averaging approximately 6,500 cars per year, at the facilities of its subsidiary, the Omaha Packing Company, located on the Burlington Railroad approximately 2½ miles from the public yards, and outside of the stockyards area. (R. 262, 266, Ex. 28, R. 607, 1117) Swift is the only large packer having unloading facilities located on the rails of a line-haul carrier in Chicago, and since the stock received there takes the flat Chicago rate, Swift has for many years secured delivery of its direct shipments on a basis which is not available to the other packers.

Swift's purpose here is to secure delivery of its directs within the stockyards area, in receiving pens which it proposes to construct near the public yard and within the area presently occupied by its Chicago plant. It is in this area, sometimes called "Packingtown", that the numerous buildings comprising Swift's Chicago plant, and the plants of thirteen other packers are located. (R. 272, 327, 540) These plants are served only by the Junction, and it is the Junction's applicable tariff charge for delivery of livestock to a plant facility in that area that Swift attacked in its complaint before the Commission in this

case and defended so vigorously and successfully in the *Hygrade* case. (R. 444-45, 838-40, Appendix A)

The stockyards proper and the contiguous Packingtown together constitute what is sometimes referred to as the "Mile Square." The entire area is bounded by Ashland Avenue on the west, Halsted Street on the east, Pershing Road (39th Street) on the north and 47th Street on the south. (R. 272) The public stockyards extend from Halsted Street on the east to a private way called Racine Avenue on the west, and from 39th Street on the north to 47th Street on the south. (Ex. 3, R. 1041) The stockyards and Packingtown together are sometimes referred to herein as "the stockyards area."

The flow of a great and continuous volume of raw materials and supplies essential to the operation of the industries in the stockyards area and vicinity and the outbound movement from those industries depends on the ability of the railroads serving the area to furnish efficient service. The funnel through which this tremendous tonnage must be moved is the Chicago Junction Railway.

The Chicago Junction Railway is a switching line which provides the sole connection between the lines of the line-haul carriers and 499 industries having 645 private sidings, most of which are in the stockyards area and its vicinity. (R. 443) These include Swift's present plant, the site of its proposed facilities, and the plants of 13 or more other packers. (R. 444-46, 467, 540) Within this crowded area the Junction annually handles hundreds of thousands of cars of dead freight, perishables and empties, moving to and from the hundreds of industries served by it, including all of the cars of dead freight consigned to the packing houses within the stockyards area and the empties and cars of packing house products removed therefrom. (R. 443-46, 465)

The sidings and chutes of the Union Stock Yards are the only facilities on the Junction which the line-haul carriers, by means of running rights, serve with their own crews and power. (R. 443, 839-40) Their running rights do not give them access to industry sites in Packingtown and it would be manifestly impractical for the Junction's 27 connecting roads to exercise such rights. (R. 527) It is to avoid such conflicting operations by many individual carriers that that terminal road exists.

The numerous packers in that area other than Swift receive their directs through the public yards by means of an extensive system of overhead viaducts owned and maintained by the Yard Company.[1] (R. 539, 983-84) All dead freight moving to and from the industries in the stockyards area is delivered to and received from the shippers by the Junction, and interchanged by the Junction with the line-haul carriers at the Junction's Ashland Avenue Yards. (R. 443, 462-63) This means, in short, that all livestock has been delivered and received in this area exclusively by the trunk lines without interchange, and all other freight moving to or from this area has been delivered and received by the Junction and interchanged by it with the line-haul carriers. It cannot be over-emphasized that the physical plant, and the entire operation, both of the Junction and the line-haul carriers, have been developed and geared to that method of handling from the beginning. In its extensive consideration of the transportation conditions which would attend the delivery sought by Swift and the services required to effect such delivery, the Commission stated:

> "We have indicated generally the difficulties which would confront defendants if required to make delivery of livestock at complainant's plant, the basic difficulty

[1] This method of delivery is equally available to Swift but is not presently being used by that packer.

being that such method of delivery is not adapted to defendant's service, track and yards, as specially designed and developed, along with the city's intensive development, for performance of the centralized delivery service rendered at Chicago. For some 70 years the method of conducting terminal operations in the stockyards district has been for the line-haul carriers, using Junction tracks, to carry all shipments of livestock to the stockyards and make deliveries there, and for the Junction to perform the switching and spotting of other freight for the packers and many other industries in the area. As a result, the Junction's main tracks, its yards and subyards and their tracks, are peculiarly designed and fitted for the operations and service described, and any change, particularly as contemplating deliveries of livestock to the plants of the packers, would, as might be expected and as is shown, require a conflicting use of such yards and tracks and subject defendant's operations to interference and delays." (R. 72)

This "basic difficulty" arises out of the physical conditions that Swift and the other Chicago packers created by their historic choice to receive all livestock at the public yards and to participate in the profits of that business. These proceedings by the large Chicago packers, of which this is the third, are the results of the packers being required to divest themselves of their interest in the stockyards business. They would now ignore the fact that by reason of their illegal participation in that business and their insistence for many years that livestock be delivered in this area only at the public yards the physical development of the area has been such as to preclude the service they now demand.

In its brief before the Commission in the *Hygrade* case,

Swift opposing what it now seeks, strongly emphasized the nature and effects of this development, as follows:

> "This is the point where probably the greatest live stock market in the world is located. Necessarily any system of transportation which has been evolved for the handling of live stock into and out of a market such as the Chicago live stock market, including the packing companies which are adjacent to and form a part of said market, must be so constructed as to furnish the type of service demanded by probably the most perishable type of traffic handled by the railroads. The record shows that the present system of receiving at the unloading docks of the Union Stock Yards & Transit Company all live stock consigned to either commission men or packers located in or adjacent to said stock yards, has been in existence since 1865 (T. 249)." (Appendix A, p. 35)
>
> "The entire transportation system in and about the stock yards and adjacent packing plants has been constructed on the basis of delivering all live stock direct to the unloading chutes of the Union Stock Yards & Transit Company. According to the testimony in this case, any other method of handling would absolutely demoralize transportation in or about the stock yards." (Appendix A, p. 48)
>
> "Another reason why the circumstances and conditions surrounding the transportation service being rendered to, or requested by, complainant, and that being rendered to intervener [are dissimilar], is because the absorption of switching charges[1] in the stock

[1] Swift asked for joint rates while the Hygrade Company sought to compel the absorption of the Junction's switching charge. Both, however, sought private track delivery without the assessment of the switching charge. This is the basis of the charges applicable to Swift's Omaha plant pens and the Union Stock Yards. In its discussion of the *Hygrade* case, the Commission stated:

> "It was there sought, as in the instant proceeding, to have certain private tracks used for the receipt of livestock without any additional charge for switching." (R. 77)

yards district on live stock would completely demoralize the present system of handling live stock. As indicated above, the present method of handling live stock in the stock yards has been in force since 1865. All of the railroad facilities in and about the stock yards have been constructed to conform with the practice of delivering all incoming live stock direct to the loading and unloading chutes of the Union Stock Yards & Transit Company." (Appendix A, pp. 48-49)

SUMMARY OF ARGUMENT.

The primary propositions upon which the railroad interveners rely are as follows:

I. The Commission's findings are adequately supported by substantial evidence of record.

II. The Commission's findings are in accord with the applicable and governing principles of law and fully support its order of dismissal.

Swift's complaint before the Commission was, in substance, an attack upon the published charges for delivery of livestock to its private track in the stockyards area. The applicable charges were said to be unreasonable and unduly prejudicial. Swift asked that the Commission prescribe joint rates and charges which would not exceed the line-haul rates on livestock to Chicago. In effect, therefore, Swift sought an order which would reduce the published rates by the total amount of the Junction's switching charge for the private track delivery of livestock to the Chicago packers. (R. 50-56) Having thus invoked the Commission's rate jurisdiction, Swift's appeal therefrom is necessarily governed by the well established rule that the Commission's informed judgment in such matters will not be disturbed except for pervading errors of law or a lack of substantial evidence to support its necessary findings. *Interstate Commerce Commission* v. *Union Pacific R. Co.*, 222 U. S. 541; *Skinner & E. Corp.* v. *United States*, 249 U. S. 557; *Swift & Co.* v. *United States*, 316 U. S. 216; *Interstate Commerce Commission* v. *Jersey City*, 322 U. S. 503; *Ayrshire Corp.* v. *United States*, 335 U. S. 573.

In the argument which follows, we shall show that the Commission painstakingly considered each of the issues

raised by Swift's complaint, and that, in its disposition of those issues, it applied the principles of law that have been repeatedly announced and approved by this Court. We shall show that the Commission's findings conform to those governing principles, and that each of those findings is sustained and abundantly supported by the evidence of record.

ARGUMENT.

Foreword.

Although the nominal complainant is Swift & Company, the Commission recognized that there are thirteen or more other packers (R. 272, 327) whose plants are located in the same area, who are in competition with Swift and who would be entitled to the same privilege of plant delivery at the line-haul rates. The Act would not sanction granting special rates and services to Swift alone.

In a previous case[1] in which it sought delivery in the public streets within the stockyards area, Swift was nominally the sole complainant as here, but the Commission, recognizing the true scope of the issue before it, considered not merely the traffic of Swift but the volume of direct shipments of all of the Chicago packers. This Court, sustaining the conclusion of the Commission, quoted from the latter's report as follows:

> "The Commission found that the direct shipments of livestock transported by rail to the packers at Chicago have exceeded 30,000 carloads annually for several years." (316 U. S. 216 at 226)
>
> * * * * *
>
> "The Commission has found that 'the evidence fails to disclose how, as a practical matter, an annual volume of 30,000 carloads of livestock could be discharged into and handled through the public streets of Chicago.'" (316 U. S. 216 at 227)

[1] *Swift & Co. v. Alton R. R. Co.*, 238 I. C. C. 179; *Swift & Co. v. United States*, 316 U. S. 216.

Also, in *Hygrade Food Products Corporation* v. *Atchison, T. & S. F. Ry. Co.*, 195 I. C. C. 553, in which it upheld the same switching charge involved here, the Commission recognized as Swift insisted, that it must consider the total of the direct shipments received by all of the Chicago packers. Swift, in opposing plant-door delivery of livestock to its competitor, earnestly argued, on brief before the Commission, that it would be error to proceed otherwise, stating as follows:

> "In this connection the complainant [the Hygrade Company] may state that its business is so small as to make no particular effect upon the method of handling livestock into the Chicago live stock market. It is doubtful if this is true, but even if it were, that is not the question which is here before the Commission. As we shall indicate in point 6 which will follow, there are many other packers receiving live stock direct under identical circumstances applicable to complainant and if complainant finds it of advantage to receive this livestock direct at its plant, and it has stated it intends to do so in the event the carriers absorb the switching charges, there will be many other larger packers who will demand the same thing." (Appendix A, p. 36)
>
> "The Commission should not confine itself to the consideration of complainant alone but must also consider the other shippers engaged in like business and located in relatively the same position as complainant." (Appendix A, p. 49)

Point 6 of its brief in that case was then devoted by Swift to an extensive argument, designed to show that the relief asked by the Hygrade Company would "completely demoralize the present system of handling live stock". (Appendix A, pp. 48-52) The Court will note that this argument was predicated on Swift's assertion that "if receipt of livestock direct to the packing plant of complainant is of

advantage to it, it will be of advantage to every one of its competitors. They will all have to have the same service (T. 270)." (Appendix A, p. 50) It is now argued that that identical procedure by the Commission in this case constitutes one of the major issues before the Court, (Statement As To Jurisdiction, pp. 4, 14-15) and that consideration of the basis which Swift rightly insisted was so proper and necessary in the determination of the complaint of Swift's competitor creates a serious error here. (Brief, pp. 95-99) It is informative to compare the quoted statements from Swift's brief in the *Hygrade* case showing the vital interest of all packers in plant-door delivery with the reiterated statements in the brief in the case at bar, that "Swift still stands alone". (Brief, pp. 31-32, 95-99) In view of the facts so forcefully stated by Swift in opposing Hygrade's request, it is evident that "Swift stands alone" here only nominally and purely for tactical reasons. As Swift previously insisted, all the packers would demand like service on their direct shipments. They have not participated in this proceeding simply to assist Swift in making the argument that the case should be treated as though it involved a special arrangement available to Swift alone.

In response to Swift's position that the requirements of Section 3 should be disregarded in this case, and that the matter must be viewed without regard to the rights of the other packers to obtain the same advantages that might be accorded to Swift, the Commission stated:

> "Complainant does not dispute, but instead concedes, that the other packers, if providing the necessary facilities therefor, would be entitled to the same delivery service at the same rates as accorded it. What it urges is that the carriers' contention as to additional burdening and disruption of their operations because of demands for the service from other

packers rests on an untested assumption or conjecture, and would thus require us to decide the case, not upon facts, but upon prediction, opinion, and prophecy.

"But the very nature of complainant's complaint, asking as it does, that the defendants be required to render for its proposed plant a delivery service of a kind new to the stockyards district, necessarily requires exercise of judgment as to future effects and results. The record contains ample facts showing that, if complainant's demand for the service without charge in addition to the line-haul rates were granted, the other packers would be under considerable, if not great, competitive compulsion to provide the necessary facilities enabling them to make like demands. We may take account of, and give effect to such conditions without being definitely apprised as to what each and all of the other packers will do, or will find it financially profitable and otherwise advantageous to do." (R. 75-76)

The Commission thus recognized and dealt with the realities of the situation, and this is objected to by Swift only because it makes clear the true nature of its complaint and the effect of what is proposed on the carriers, the public and other shippers.

1. THE COMMISSION'S FINDINGS ARE ADEQUATELY SUPPORTED BY SUBSTANTIAL EVIDENCE OF RECORD.

The Commission's order dismissing Swift's complaint is based upon findings which dispose of every issue raised by Swift in this proceeding. In response to Swift's contention that the carriers should be required to deliver livestock to Swift's private tracks in the stockyards area at the flat line-haul rates, the Commission found that those rates, previously prescribed by it, were not designed or intended to compensate the carriers for the livestock deliv-

ery service sought by Swift, and that, considering the transportation services required for such delivery and all of the attending facts and circumstances, the published switching charge of the Junction in addition to the line-haul rates was not unreasonable or otherwise unlawful for deliveries of livestock to Swift's private tracks. (R. 78-81) The Commission found that Swift's claim of prejudice to livestock as a commodity because of the different charges applicable to delivery of livestock to Swift's private track as contrasted with deliveries of dead freight thereto was without merit because "the measure of transportation services rendered shipments of live animals is substantially greater than that accorded dead freight." (R. 65) Swift's claim that the published charges were prejudicial to it and preferential of its competitors at certain points named in the complaint was similarly disposed of by a finding that there was no showing "that services as desired will result in a situation similar to that at a point or points alleged to be preferred." (R. 79) The Commission also found that the transportation services, conditions, and circumstances required to make delivery at the Omaha plant pens and at the Union Stock Yards were substantially dissimilar from those involved in making delivery at Swift's private tracks in the stockyards area. (R. 78) In its consideration of Swift's request that joint rates, not in excess of the line-haul rates, be established for delivery of livestock to its private track the Commission determined that the establishment of such rates would not be necessary or desirable in the public interest. (R. 77, 81)

The District Court noted each of the findings referred to above and concluded that the Commission's findings were supported by substantial evidence. (Conclusion of Law No. 1, R. 209) In the discussion which follows, we shall endeavor to show that the District Court's determination is unassailable.

A. It Is Established on This Record That Delivery of Livestock to Swift's Private Tracks in the Stockyards Area Would Be an Impractical and Costly Operation Which Would Adversely Affect All Other Interests in That Area.

At the time that Swift and Armour sought to compel the carriers to effect what this Court characterized as "a readjustment of their rate schedules" on direct shipments of livestock to Chicago (*Armour & Co.* v. *Alton R. Co.*, 312 U. S. 195 at 201), the considerations which must govern the Commission's action were clearly delineated. The Court, affirming the Commission's decision in the companion case, stated that the question presented "was to be decided by the Commission upon the facts of each particular case, and not by mechanical application of a fixed rule of law as contended by appellants" (316 U. S. 216 at 225) and that "the Commission was justified in considering, as it did, all that would account for the evolution of the practice complained of as well as the effect of existing and proposed practices on the interests of the carriers, the public, and other shippers. *Adams* v. *Mills, supra*, at 409 *et seq.; Atchison, T. & S. F. Ry. Co.* v. *United States*, 295 U. S. at 198, *et seq.; Armour and Co.* v. *Alton R. Co., supra* at 201. Neither the railroads nor the Stock Yards exist for the benefit of the packers alone. Their patronage is large and important, but neither in the regulation of the carriers nor in the regulation of the Stock Yards are they entitled to facilities or treatment that will ignore the existence of other interests." (316 U. S. 216 at 225-26)

Similarly in this proceeding, the packers seek a readjustment of the published charges applicable to livestock and, in its consideration of the present complaint, the Commission stated:

"In the determination of the issues raised in this

proceeding, it is necessary to consider the track layout of the Junction, and the present operations thereover in the handling of so-called dead freight, which term includes perishable and all other freight other than livestock; the method by which livestock has for many years been handled by the line-haul carriers to the Union Stock Yards; the physical operations that would be necessary if the Junction were required to make private-track delivery of livestock, as sought by the complainant; and also, in order to avoid undue preference and prejudice, if it were required to make similar deliveries to complainant's competitors." (R. 60)

"All facts relating to the existing custom and practice of making deliveries of livestock and also facts and circumstances leading up to that custom and practice, as well as the effect of the proposed practice on the interests of the carriers, the public, and other shippers, are relevant." (R. 71)

It is thus obvious that the Commission's decision closely adhered to and applied the principles previously enunciated by this Court. We shall show that the evidence before the Commission, considered in the light of these principles, required its dismissal of Swift's complaint.

Before discussing the evidence in detail, it may be of convenience to the Court if a brief and concise statement is made outlining (1) the present method of delivering livestock in Chicago and, (2) in contrast, the method of delivery which would be required under Swift's proposal.

1. The evidence shows that under the present method of delivery, after trains carrying both livestock and dead freight have entered the Chicago yards of the line-haul carriers, the stock is separated from the dead freight and then moved directly to the chutes of the Union Stock

Yards by the crews and engines of the line-haul carriers.[1] To reach the chutes these carriers have trackage rights over the rails of the Chicago Junction Railway on whose line the chutes of the stock yards are located.

In a large number of instances, stock arriving at Chicago on one train is held up pending the arrival of more stock in order that a consolidated run may be made to the chutes, thereby saving extra runs and avoiding added costs and increased difficulties in the crowded stockyards area. Only about 37 per cent of the trains handling stock to the chutes also carry dead freight for industries on the Junction which must be interchanged with the Junction at its Ashland Avenue Yard *before* the stock is delivered at the chutes. Immediately upon unloading the stock at the chutes, the line-haul crew and engine returns with the empty stock cars to its own yard.

It will be shown that rail operation in the stockyards area is today heavily congested, due primarily to the enormous growth of industry in that area. As a consequence, the delivery of dead freight, and livestock has pushed the rail facilities to capacity with the result that there is only a narrow margin between efficient service and great delay and injury to all shippers served in this area. The most graphic evidence of this may be found in the fact that it now takes the Junction an average of nearly 32 hours to classify and deliver ordinary freight through the Ashland Avenue Yards now unburdened with livestock.

2. In contrast to the present method of delivering livestock the evidence shows that under the proposed method nearly one-half of the annual volume of stock now going to the public yards would have to be segregated and de-

[1] Since record references are supplied with the more complete discussion of the evidence which follows, they are omitted in this summary statement.

livered to the various packing plants on the rails of the Junction. This would require that when stock comes into the yards of the line-haul carriers two separations would have to be made, one of the stock which would still go to the public yards, one of the packers' stock consigned to the private sidings. All trains carrying stock to the chutes at the public yards would include direct shipments consigned to private sidings of packers. The livestock consigned to private sidings would have to be interchanged with the Junction at Ashland Avenue, and the Junction would have to make delivery of this stock after separating it from dead freight and classifying it in the Ashland Avenue Yards according to consignee. This operation would also require the Junction to return the empty stock cars to the Ashland Avenue Yards, classify them according to the line-haul carrier which would receive them and then interchange them with the line-haul carriers.

The evidence shows clearly that difficulties of such consequence as to cause a breakdown of terminal operations in this area would result from the attempt to carry out the proposed operation. Even under present conditions, the consolidated trains, constituting 37 per cent of those carrying livestock to the public yards, cause a piling up of as many as four trains at a time on the running track to the public stock yard while dead freight is interchanged with the Junction. When this percentage is increased to 100, as it would be under the proposed operation, use of the Junction's main running track for deliveries of livestock to the Union Stock Yards would be a practical impossibility. The attempt to interchange highly perishable livestock with the Junction in a yard that has no receiving or classification tracks available for that purpose and no room in which to expand, the impossible operation that the Junction would have to undertake in its efforts to receive and classify this livestock in a yard already saturated with dead freight,

the fact that this livestock on short time would be buried behind dead freight which now takes over 31 hours for delivery from the time of its receipt by the Junction, and the necessity of digging out the livestock for preferred treatment, at the sacrifice of all other traffic, all demonstrate the unfairness and extremely impractical nature of Swift's proposal. Swift's proposal would revolutionize the entire switching operation in those yards for another reason. The intermingling of livestock and dead freight on the same receiving and classification tracks would require that all freight, both the livestock and dead freight, be shoved to rest and not "kicked" in the customary and time-saving manner and freight would be arriving at the yards faster than it could be handled. The thousands of empty stock cars, none of which are handled at present by the Junction, would have to be collected by that carrier from the packers' private sidetracks and returned to its Ashland Avenue Yards for transfer to the line-haul carriers. In short, the evidence shows that the proposed private track delivery of livestock to the packers in the stockyards area would require services and entail operating difficulties of an insuperable character.

The evidence also shows that Swift's proposal would gravely impair the rail transportation service required by other shippers in this area. It would be practically impossible for the line-haul carriers to continue to deliver the producers' livestock to the public yards. The main running track which must be used by the line-haul carriers for that purpose would be blocked while the packers stock and the dead freight carried on consolidated trains was being interchanged with the Junction in its Ashland Avenue Yards. These trains would not be able to interchange all of that tremendously increased volume of freight with the Junction while that switching line was using its lead tracks to work the livestock through its re-

ceiving and classification facilities with the result that numerous trains would pile up on the main running track waiting for an opportunity to interchange traffic with the Junction. That main running track would also be blocked while the Junction switched the empty stock cars from the packers private tracks to its yards for return to the line-haul carriers. At a time when such cars are in especially short supply, their return for use by the shippers would be delayed at least two days. The evidence also shows that the Junction cannot maintain its present dead freight service to the 499 industries served solely by it if it must also handle livestock for the packers and that those industries would be denied their sole source of rail transportation. This, then, would be the effect of the proposed practice on the interests of "the public and other shippers".

The evidence also shows that the rate basis which Swift demands for private track delivery of livestock in the stockyards area was not constructed or designed for the difficult and impractical service which it now seeks, and that, on the basis of uncontradicted cost studies, the terminal allowance included in that rate basis would be wholly inadequate for the proposed service.

1. THE PRESENT OPERATION.

a. The Ashland Avenue Yards of the Chicago Junction Railway Are the Bottleneck in Which All Freight Destined to Industries on the Junction Must Be Interchanged and Through Which All Livestock Going to the Stockyards Must Pass.

A vital, governing factor of the rail operation in this great industrial area is the physical layout and the operation of the Ashland Avenue Yards of the Chicago Junction Railway. Into those yards each working day pour hundreds

of cars of dead freight destined to the many industries in the area. The twenty-seven trunk lines and switching carriers that connect with the Junction must interchange, within the confines of that yard, *all* cars of dead freight consigned to the hundreds of industries on the Junction. (R. 436, 443, 539) In this yard the Junction also delivers to the line-haul carriers the great bulk of the loads and empties going out of this industrial area. (R. 464-65)[1] It is in such a yard, already saturated with traffic, but which has never handled a car of livestock except in an emergency, that Swift proposed that the carriers should be required to interchange, classify and deliver all of the thousands of cars of livestock which are consigned directly to the packers. An appreciation of the operating conditions and physical layout in and around Ashland Avenue is thus essential to an understanding of the grossly extreme character of this proposal, and the soundness of the decisions below.

The Ashland Avenue Yards, which are shown on the aerial photograph attached to this brief as Appendix B (Ex. 19, R. 553, 1104), are bounded by 43rd Street on the south, Pershing Road on the north, Western Avenue on the west, and Ashland Avenue on the east. (Ex. 14, R. 472, 1092)

Although this collection of tracks might be deemed to constitute one yard, for purposes of identification and operating convenience one group of tracks is referred to as the "north yard", another as the "south yard" and a third as "The Damen Yard." (R. 460-61) All are sometimes referred to as the Ashland Avenue Yards. The so-called North Yard and South Yard are separated by the main running tracks which are indicated by arrows on the

[1] Outbound traffic to be delivered to southern and eastern carriers is interchanged by the Junction at its Loomis Street yard at 47th and Loomis. This yard has only 20 tracks available for classification. (R. 464-65)

attached photograph. (R. 458-61, Ex. 14, R. 472, 1092) There are three of these main running tracks by means of which trains may pass through and move to and from the Ashland Avenue Yards. Only one of these tracks, numbered 1103 but sometimes referred to as track 3, is available and used for all *eastbound* traffic, moving from the left hand side of the photograph through to the right hand side and beyond. (R. 459, 486-87) This track is the sole means of ingress for those line-haul carriers which enter the area served by the Chicago Junction from the west. (R. 486-87) All livestock delivered to the stockyards by the principal carriers of livestock, with the exception of the Rock Island, must move through Ashland Avenue on this one track, and it is emphasized here, in the light of the evidence to be discussed later, that any blocking of this track shuts off access to the public stockyards. (R. 487-89) Immediately north and south of this track are the two other main running tracks which are used exclusively for *westbound movements*. (R. 459) About twelve line-haul carriers use these tracks to effect deliveries of dead freight and perishables to the Junction, and nearly all the empty stock cars returning from the stockyards must use these two tracks. (R. 636, 474) These same carriers also use these tracks as a passage through the Ashland Avenue Yards to other yards west and north of this area, and the same tracks are used by the Junction in effecting return of empties from private sidings, and in bringing loads from industries on its line for interchange with line-haul carriers. (R. 478, 637)

Immediately adjacent to the most northerly of these three main running tracks, there are 24 tracks known as the Ashland Avenue North Yard. (R. 522) These tracks are used exclusively for traffic, loads and empties, outbound from industries on the Junction. (R. 464) Only the first three tracks just north of the main running tracks, however,

are available for receiving cars. (R. 459-60) On these three tracks all the loaded and empty cars moving outbound are placed by Junction crews in whatever order they may be received. These cars must then be separated by a Junction crew according to the line-haul carrier which will pick them up. This operation is performed by switch engines moving up and down the lead track and pushing the cars from one of the three receiving tracks to the 20 classification tracks at the northernmost (or top) part of the Ashland Avenue Yards. (R. 465-66)

Immediately south of the three main running tracks which bisect the area are 33 tracks known as the South Yard. (R. 458-59) Here all freight destined to industries on the tracks of the Junction must be placed by line-haul carriers, whether they enter the yards from the east or west. (R. 463) Here, again, only a few of these tracks can be used for receiving inbound freight. The first nine tracks south of the main running tracks are all the available receiving tracks. *All freight destined to the 499 industries located on the Junction must funnel through these nine tracks.* (R. 463, 527, 538-39) It is on these nine tracks that all livestock going directly to any packing plant would have to be interchanged if space were available for that purpose, as in fact it is not. (R. 539, 547, 563) As in the Ashland Avenue North Yard, a Junction switch engine works up and down a single lead track transferring cars from the nine receiving tracks to the 24 classification tracks according to the destination of the particular car. (R. 466, 539) This is the same lead track that the Junction's connecting roads must use to reach the nine receiving tracks. (R. 546, 659)

Immediately south of the southernmost track in the Ashland Avenue South Yard (track 1033 on exhibit 14, R. 472, 1092) are fifteen additional tracks. This group of

tracks, known as the Damen Avenue Yard, is used for temporary storage of cars. (R. 460)

The Ashland Avenue Yards are hemmed in by the solid growth of industry on all sides. (R. 454, 467) Immediately to the north are government and private warehouses on property owned by the Central Manufacturing District. In the southwest corner is property of Wilson & Company whose plant immediately abuts the southeastern portion of the tracks. Immediately to the northwest is municipal property. (R. 445, 541)

Traffic moving from the west out of or through this Ashland Avenue Yard, and traffic moving from the east to or through the yard must pass through the bottleneck at Ashland Avenue. (R. 450) Immediately at the viaduct over Ashland Avenue there are seven tracks. These seven converge into four a few hundred feet east of the crossing. (R. 450-51) These four consist of the three main running tracks (one eastbound, two westbound) and one auxiliary track which runs only as far east as Packers Avenue, the first north-south street east of the proposed Swift facility. (R. 450-51, 549-51)

The Ashland Avenue Yards are not only the key to efficient railroad operation in the stockyards area, but are the focal point of no less complicated operations by the Junction in the entire area served by it. (R. 467) Once cars destined to industries on the Junction have been classified in the Ashland Avenue South Yard, they must be moved to base yards in the various operating districts. (R. 465-66) Before this movement can be made the inspection and other work necessary to the effectuation of the interchange must be performed in the Ashland Avenue South Yard. (R. 465-66) At the base yards the cars are reclassified for handling to the various consignees. For example, at the Halsted Street Yard, in Zone 4, ten further sep-

arations are made. (R. 466) Traffic moving out from industries on the Junction is removed from one of the industrial sidings or one of the team tracks in the area to one of the sub-classification yards, and is then returned to the Ashland Avenue Yard or to the Loomis Street Yard. (R. 464-66) It is not disputed that these Ashland Avenue Yards and the area they serve involve the busiest, most congested rail operation in the Chicago area. (R. 467, 701, 925) Faced with tremendous difficulties the Junction Railroad must and does operate this property with maximum efficiency and a minimum of delay. But it is of utmost significance in this case that the only type of rail operation the Junction has never regularly performed, in the many years of its operation, is the switching, handling and delivery of livestock. For over eighty years this job has been done exclusively by the line-haul carriers. (R. 469, 493)

b. The Present Method of Delivering Livestock to the Union Stock Yards Has Developed Through Generations and the Custom and Practice Which Has Resulted Is an Efficient and Carefully Organized Operation.

For the five years 1943-47, the years preceding immediately the making of the record in this proceeding, the average annual movement of livestock to the Union Stock Yards was 76,920 cars. (Ex. 28, R. 607, 1117) This means that more than 150,000 cars, loaded and empty, were handled annually by the line-haul carriers over the Junction running tracks to the public yard. None of that number was Swift's. For some years Swift has been receiving all of its directs, averaging approximately 6,500 cars a year, at the facilities of its subsidiary, the Omaha Packing Company, located on the Burlington Railroad approximately two and one-half miles from the public yard and outside the stockyards area. (R. 262, 266, Ex. 28, R. 607, 1117) From its pens at that site it transports the livestock into the stock-

yards area by truck. (R. 266) Swift is the only large packer having a plant located on the rails of a line-haul carrier in Chicago and, since the stock received there takes the flat Chicago rate, Swift secures delivery of its direct shipments on a basis which is not available to the packers who must transport their stock into the stockyards area by rail. (R. 483)

With certain minor variations as between the several roads, the handling of livestock by line-haul carriers into Chicago follows a uniform custom and usage constructed out of generations of experience. Stock from outlying points moves into the outer yards of the line-haul carriers in the Chicago area on trains which also carry dead freight and perishables. There cars of livestock and dead freight are separated and the livestock is collected for delivery to the chutes of the stockyards. (R. 609, 635, 650, 677, 692) If there is sufficient time within which to make the market within the detention period permitted by the Federal statute, livestock coming into the yards of the line-haul carriers on one train is frequently held at these yards for brief periods, for consolidation with livestock arriving on another train. In this way it is possible to have one crew and one engine perform a service which otherwise would require two or more runs to the chutes of the stockyards. (R. 631, 650, 677)

In the run from the outer yards to the chutes at the stockyards most of the stock must pass over the sole eastbound running track which lies between the "North" and "South" Ashland Avenue Yards. (R. 486) Of all the western railroads, which are the principal carriers of livestock to Chicago, only the Rock Island approaches the chutes from the east. (R. 547, 649)[1]

[1] As pointed out at pages 43-44 of this brief, even the trains coming into the stockyards from the east now encounter difficulties because of crowded conditions extending two miles west at Ashland Avenue.

Under the existing practice the majority of the trains or cuts carrying livestock to the chutes do not carry freight to be interchanged with the Junction at Ashland Avenue. This is an important fact in measuring the consequences of Swift's proposal. Superintendent Kinsella of the Junction stated that during a test period from December 1 to December 7, 1947, 63 per cent of the trains carrying livestock to the chutes from the line-haul yards did not carry any other type of freight but made the run directly through to the chutes without stopping to interchange other freight with the Junction at Ashland Avenue. (R. 485, 543) This is typical as shown by the experience of the individual roads during other periods. During the month of December, 1947, the North Western ran 123 trains to the public chutes. Of these, 90 moved directly to the chutes without making setouts of dead freight into the Ashland Avenue Yards. (R. 956)

From April 16 to May 10, 1947, the Burlington ran 89 trains with livestock to the unloading chutes. Of these, 53 trains, or 59 per cent, made the run without making setouts of dead freight at Ashland Avenue. (R. 611-12) During the period April 15 to May 15, 1947, the Santa Fe made 74 trips to the chutes with livestock, of which 47 trips or approximately 60 per cent were direct runs to the stockyards without setouts at Ashland Avenue.[1] (R. 694)

When a train is made up in the outer yard consisting of livestock consigned to the stockyards and dead freight for delivery to the Junction, the dead freight is placed im-

[1] The test period from approximately the middle of April, 1947, to the middle of May, 1947, was selected because Swift's exhibit 16 (R. 534, 1095-1101) might otherwise appear to suggest that the majority of engines carrying livestock to the stockyards during this period made set-outs of dead freight at the Ashland Avenue Yard. As the record shows this Swift exhibit is a small selected list of trains and was furnished by the carriers upon the request of Swift for the consist of those specific trains only. (R. 532)

mediately behind the engine. (R. 487) Proceeding east over the east-bound running track the train pulls clear through to the east end of the Ashland Yard. (R. 486) The engine then cuts off the livestock and holding on to the dead freight backs down the lead track and kicks the dead freight and perishables into any available receiving track in the Ashland Avenue South Yard. Upon the completion of that operation it returns to the stock cars, couples onto them and proceeds to the chutes. (R. 487-88) During this entire period, while the crew is effecting the interchange of dead freight at Ashland Avenue, the cars of stock are standing on the main running track and are, of course, blocking any other movement through Ashland Avenue from the west on that sole running track. (R. 487-89)

On the other hand, the trains which contain only livestock move to the chutes without setting out loads at Ashland Avenue, and except for such interference as is encountered from trains engaged in setting out cars in the Ashland Avenue Yards, proceed straight through to the chutes. Immediately upon the unloading of the stock at the chutes the line-haul crew and engine returns with the empty cars to its own yard. (R. 469)

c. Even Under Present, Long Established Procedure the Tremendous Growth of Industry in the Stockyards Area Has Brought Rail Operations to Full Capacity With Only a Narrow Margin Between the Present Efficient Operation and Disruption of the Entire Terminal Operation.

The present method of delivery of stock directly to the chutes of the Union Stock Yards, developed through many years of experience, is a workable and reasonably efficient operation. Even under present conditions, however, the livestock encounters interference and operating difficulties

in its movement to the stockyards over the eastbound running track. This condition is greatly aggravated by the fact that the livestock as well as dead freight does not arrive in an even flow but is concentrated during the early morning hours of the first days of the week. (R. 468, 555, 561)

The very narrow margin which exists today between efficient operation and a breakdown in the terminal service in this area is attributable to the tremendous industrial growth in this district served by the Junction necessitating full capacity operation by that railroad.

Witnesses Kinsella and Sorenson of the Junction emphasized this fact, as follows:

> "Q. Are your yards and facilities taxed to capacity at the present time?
>
> "A. They are running bank full. We just have all we can do to master what we have to handle now." (R. 484)
>
> "As I stated before we are presently handling between 1,000 and 1,100 cars per day through this [Ashland Avenue] Yard, and the yard is being operated to capacity, and if the burden of handling this additional traffic was put upon us, *our yard operation would break down in its entirety.*" (R. 547, italics added)

The testimony of the operating witnesses of the line-haul carriers—all men with years of experience in and around the Chicago terminal area—fully demonstrates the critical nature of present operating conditions and the effect of Swift's proposal on the handling of stock and other freight.

Witness J. J. Stein, for 31 years with the Chicago North Western Railroad, nearly all of it in the Operating Department, and presently General Manager of that rail-

road, described the conditions now encountered in getting livestock to the chutes as follows:

> "Train operation under present conditions in the Ashland Avenue area is seriously hampered because of inevitable congestion in this district. About 8 line-haul carriers enter Ashland Avenue from the west as does the North Western. About 12 other line-haul carriers come in from the east. Our experience shows that even under present conditions, our stock relief crews trying to get stock to the unloading chutes encounter serious delay at Ashland Avenue due to other line haul carriers attempting to enter this point and because of the activities of the C. J. cars and engines. A score of carriers—both line haul and terminal—attempting to operate in and through an area as congested as Ashland Avenue just cannot avoid conflict with one another in many ways.
>
> "The result is that the run through Ashland Avenue to the Yards even today is not a rapid one which moves without interference. A large number of our stock trains going to the Yards today are stopped and must wait on the main running tracks because of the congestion." (R. 636)

Each of the other operating witnesses from the Burlington, Rock Island, Milwaukee and Santa Fe testified that his road was faced with similar operating difficulties and delays in moving cars of stock into the Ashland Avenue area because of the growth of the industries in this area, the consequent increased rail movement and the difficulty of effecting interchange of the dead freight in the Ashland Avenue Yards. (R. 624, 650-51, 677-78, 695-96, 701)

Witness Heide, Superintendent of the Rock Island, Chicago Division, and an operating man since 1905, stated:

> "Right today the Rock Island is having all it can

do to meet its schedules on delivery of livestock to the Stockyards because of the delays and congestion in that area under present conditions." (R. 651)

The difficulties encountered by the Rock Island in making deliveries to the stockyards emphasizes the seriousness and extent of the operating problem in and around Ashland Avenue. That road, unlike most of the other principal carriers of stock, does not have to use the running track through the crowded Ashland Avenue Yards in order to reach the stockyards. (R. 649-50) It might thus appear that the Rock Island would not face the same operating problem. As stated by witness Heide:

"But that isn't the way it works. The congestion arises because of this bottleneck at the Ashland Avenue interchange, and it spreads out and backs up for quite a distance on both sides of that interchange. For example, the Rock Island in carrying stock to the Yards from the east enters Chicago Junction tracks at Root Street, which is about two miles due east of the Ashland Avenue Yards, and we frequently have to stop our trains and hold up stock at Root Street, even though we are two miles from the Ashland Avenue interchange, because of delays at Ashland Avenue. In other words, even though we do not have to pass through Ashland Avenue in order to reach the Yards, we are many times forced to hold up our stock trains because of delays in the Ashland Avenue area. We are not the only carrier using the Junction tracks from the east. The Illinois Central, the Wabash, the C. I. & L., Erie, Pennsylvania, N. Y. C. and Nickel Plate, and some other roads coming in from the east may be delayed and back us up. *It isn't an uncommon experience for a Rock Island engine to take seven hours from the time it enters the Junction tracks at Root*

Street until it reaches the C. & N. W. Potato Terminal via Ashland Avenue. The potato terminal is four miles west and north of the Ashland Avenue Yards. *Seven hours to run approximately six miles*—that gives an idea of the operating problem we are facing in this Ashland Avenue area where Swift wants to create an additional burden." (R. 651-52, italics added)

The testimony of these practical operating men who have the direct responsibility of getting this stock to the market leaves no doubt that the interchange of direct shipments with the Junction for delivery by that road would convert a difficult operation into an impossible one. Witness Heide gave specific examples of just how close to capacity the rail movement is today.

Exhibit 38, introduced by witness Heide, consisted of foremen's trip reports on *all* Rock Island trains moving from the Burr Oak Yards of the Rock Island near Chicago to the chutes of the stockyards, Ashland Avenue, and to terminals just west and north of Ashland Avenue Yards between January 18 and 24, 1948. (R. 652, Ex. 38, R. 665, 1163-70) This exhibit shows the running time of each train which moved down to the stockyards and Ashland Avenue during this week. This exhibit shows that 60.6 per cent of these Rock Island trains during that week were delayed for one reason or another. (R. 655) On Sheet 1 of Exhibit 38, Engine 2100 is shown delayed at Root Street (the point just east of the stockyards' chutes where the Rock Island trains move onto Junction tracks). (R. 1163) Witness Heide testified as to this train:

"• • • he was held at Root Street to enter the C. J. tracks as I mentioned here by reason of the backups of other trains in there and we cannot even get on

their tracks from 2:35 A. M. to 5:20 A. M. on January 18, 1948, waiting for permission to enter C. J. tracks on account of congestion." (R. 653)

On page 2 of Exhibit 38, Engine 2539 on January 18th left Burr Oak (14 miles from Ashland Avenue) at 6:25 P. M. (R. 654) It arrived at Ashland Avenue at 4:10 A. M., the following day. It was delayed from 7:30 P. M. to 10:15 P. M., at Packers Avenue (just east of the Ashland Avenue Yards). At 10:15 P. M. this engine moved to the west end of Ashland Avenue where it stood until 4:05 A. M., waiting to switch off the cars which were to be interchanged with the Junction at Ashland Avenue. (R. 654) Witness Heide testified that:

"* * * the entire delay from 7:30 P. M. to 4:05 A. M. should be charged to the delay of not being able to get into the yard by reason of the other crews ahead of him that could not get into the yard." (R. 654)

Similar conditions are encountered by each of the other roads. The Santa Fe Corwith Yard at which it receives livestock is 3.75 miles from the chutes of the stockyards. (R. 694) If there should be relatively little difficulty, this run could be made through the Ashland Avenue Yard in 45 minutes. (R. 695) During a test period, November 1 to 7, 1947, inclusive, the Santa Fe made eight trips to the stock yards without having to stop at Ashland Avenue to interchange dead freight with the Junction. These trips took from 45 minutes to 4 hours (less than one mile an hour). (R. 694-96) On November 4th a Santa Fe train carrying only stock for the public chutes waited one hour and 45 minutes at the west end of the Ashland Avenue Yard and then consumed another hour and 45 minutes getting from the Ashland Avenue Yard to the chutes, a distance of about one mile when, as the operating witness stated,

without train interference "the move should be made in 10 to 15 minutes." (R. 695-96)

On November 5th, another Santa Fe crew trying to move direct to the public chutes consumed one hour and 20 minutes getting from Ashland Avenue to the chutes. This run consumed three hours and 10 minutes from Corwith Yard through the Ashland Avenue Yard to the chutes—a little better than one mile an hour. (R. 696)

On Santa Fe runs which required set-offs at the Ashland Avenue Yard the record is even more unfavorable. Witness Clousing of the Santa Fe testified as follows with respect to the operating problems caused by set-outs at Ashland Avenue:

> "Even more delay is frequently encountered on runs where traffic for Ashland Avenue Yard is consolidated with traffic for the Stock Yards. For example, a consolidated run on November 1st to Ashland Avenue Yard and the chutes took our crew five hours and 30 minutes in all, four hours and 50 minutes of the time being spent in moving through the congested area between Corwith Yard and Ashland Avenue Yard. In other words, it took from 7:00 P. M. to 12:30 A. M. to move from Corwith Yard to the chutes, making set-out at Ashland Avenue Yard. *This check of running times was made only for the period November 1st to 7th, inclusive, 1947, and there are many more such cases.*" (R. 696, italics added)

The Commission described these conditions in its report, stating:

> "Manifestly, as the line-haul carriers must use the same east-bound track into the Union Stock Yards, any delay to a train on that track results in 'piling up' trains of other lines seeking ingress to the Union Stock Yards. Frequently as many as four trains must wait

to enter this track as a result of its being blocked at the east end. Delays are necessarily experienced also because of 'set outs' made by consolidated trains, consisting of livestock and dead freight." (R. 63)

The difficulties and delay in making deliveries of livestock to the chutes due to crowded conditions in and around Ashland Avenue Yard have been getting steadily worse because of the growth of industry in this district. (R. 467; 501, 950) Traffic has increased enormously as the industrial area has developed but the Ashland Avenue Yard, closed in as it is by other structures, has no place in which to expand, and has become, year by year, a more serious bottleneck. (R. 523-24, 563, 925-26) The operating witness for the Burlington testified that a study of foremen's trip reports for a number of years shows that while in October, 1941, a round trip from the Burlington yards to the public chutes averaged slightly less than two hours, in October, 1947, on the same trip the average time had increased to four hours. (R. 624)

All of this testimony by experienced operating witnesses for the line-haul carriers was corroborated by the men who operate the Junction Railway—the crux of this entire operation. Witness Sorensen, Assistant Superintendent of the Junction, stated:

"* * * on several occasions during the past three months just handling the traffic which we were handling during that time and not handling any direct shipments of livestock, we were forced to delay foreign line crews waiting to set cars out at the Ashland Avenue South Yard of the Chicago Junction Railway as high as nine and ten hours before they could effect delivery of cars to our line, this being due to our badly congested yard and unable to handle the cars quickly enough to avoid such delay." (R. 547)

The tremendous volume of traffic handled by the Junction in its Ashland Avenue Yards, averaging some 726,144 cars in recent years (R. 465), requires full and maximum use of the receiving and classification facilities in those yards. As stated by the Superintendent of the Junction, those yards are now "running bank full." (R. 484) The difficulties which inhere in this full capacity operation are aggravated by the fact that the necessary terminal functions performed by that carrier for its twenty-seven connecting lines involves the use of Junction tracks by 167 foreign line crews per day for an average per crew of 3 hours and 12 minutes. (R. 467) With respect to the yard in which all inbound freight is received, classified and sent to base yards for further classification and delivery, the Commission found:

> "Having in mind the need for taking into account periods of peak movements and maximum use, the south yard appears to be used to capacity with no space for construction of additional tracks." (R. 73)

The vital significance of these operating conditions in and around the Ashland Avenue Yards may be fully appreciated when it is realized that it now requires a total of nearly 32 hours to deliver dead freight through these yards from the time that that traffic is interchanged with the Junction by the connecting carriers. (R. 471) This single fact forcefully demonstrates the extraordinary service which would be required in receiving, classifying and delivering livestock on short time through these yards and the destructive effect of that effort.

2. THE ATTEMPT TO EFFECT DELIVERY OF LIVESTOCK TO THE PRIVATE SIDINGS OF THE PACKERS BY INTERCHANGE OF SUCH TRAFFIC IN THE ASHLAND AVENUE YARD WOULD BE A PHYSICAL AND PRACTICAL IMPOSSIBILITY BECAUSE OF THE OPERATING CONDITIONS WHICH WOULD RESULT IN THE YARDS OF THE LINE-HAUL CARRIERS AND THE ASHLAND AVENUE YARDS.

Swift contends that the Commission should have required delivery of its directs on the siding at its proposed facility at the line-haul rate, the same rate which now applies to delivery at Swift's outlying Omaha plant pens and to the Union Stock Yards. This would mean that its directs, which have averaged 6,500 cars a year or 13,000 cars loaded and empty, would be added to the great volume of traffic handled by the Junction through the Ashland Avenue South Yard. (Ex. 28, R. 607, 1117) Moreover, the other packing companies would, of course, desire to place themselves on a competitive parity with Swift by providing similar yard facilities on their respective properties. As Swift stated to the Commission at the time that its small competitor, the Hygrade Company, attacked the Junction's switching charge for private track delivery of livestock, "if receipt of livestock direct to the packing plant of complainant is of advantage to it, it will be of advantage to every one of its competitors. They will all have to have the same service (T. 270)." (Appendix A, p. 50) This would mean that the direct shipments of all of the packers would be added to the volume of traffic handled by the Junction through its Ashland Avenue Yards. (R. 540-41) In the years 1943-47, an average of 31,000 cars of livestock or 62,000 cars loaded and empty were consigned to packers other than Swift, as so-called direct shipments. (Ex. 28, R. 607, 1117) The proposed operation must therefore be considered in terms of the effect on operations of a movement not only of the 13,000 Swift

cars but also in terms of a total movement of 75,000 cars through the Ashland Avenue switching yards.

The difficulties which necessarily attend terminal operations in the stockyards area would be multiplied and compounded by any attempt to perform the extraordinary service which Swift proposes. Indeed, while the witnesses attempted to visualize and describe the proposed operation it was their unanimous view that the inevitable result would be a complete breakdown of the rail transportation facilities in this heavily industrialized area. (R. 529-30, 547, 625-26, 636-37, 640, 644-45, 658-59, 683) The accuracy of this undisputed testimony may be fully appreciated by reference to the aerial photograph attached to this brief as Appendix B. That photograph accurately portrays the volume of traffic normally present in the Ashland Avenue Yards, except that the traffic shown in the North Yard is less than normal. (R. 550) Swift's proposal would place in those yards daily, a volume of livestock traffic, loads and empties, equivalent to a train two miles in length.

a. The Service Which the Line-Haul Carriers Would Have to Accord the Packers' Livestock Under the Proposed Operations Would be Extremely Difficult and Costly.

Starting with the operations which would be required in the outer yards of the line-haul carriers, the evidence shows that the proposed method of delivery would entail a vastly increased measure of service and operating difficulties of a serious nature. In the first place, private track delivery of livestock to the packers would involve a great deal of additional switching of livestock in the yards of the roads bringing stock to Chicago. (R. 620, 641, 656) This would result from the fact that the packers' stock which now goes to the Union Stock Yards would have to be interchanged with the Junction. It would thus be necessary to separate

all directs, amounting to almost 43 per cent of the total movement of livestock to Chicago, from the producers stock which would still be delivered at the chutes. (R. 622, 641, 656)

A train coming into a line-haul yard would have a number of cars of livestock as part of its consist, some of which would be consigned to private sidings. These cars would be mixed in with those still going to the public chutes. Each of the cars would have to be separated and reclassified into two groups before being hauled down to Ashland Avenue and the stockyards. (R. 620-23, 641, 656)

The operating men agreed that while *under ideal conditions*, this additional switch in their own yards would require at least one extra hour of time *per train* (R. 623-24, 641, 657, 700), the actual time consumed would probably be considerably greater because of an acute shortage of men and equipment to handle this additional work. (R. 656)

This additional segregation and classification of livestock in the yards of the line-haul carriers and the serious operating difficulties which would be encountered in attempting to interchange livestock with the Junction in the Ashland Avenue Yards would necessitate the operation of many more trains from the base yards of the line-haul carriers to the Ashland Avenue Yards and the Union Stock Yards. (R. 618-19, 624, 638, 679) This would be due to the inability of the line-haul carriers to consolidate the livestock for runs to the public yards to the extent that is now possible. Consolidation is possible only where there is sufficient time to hold cars pending the arrival in the line-haul yards of additional stock. (R. 638, 677) But because of the additional service which would have to be performed in the yards of the line-haul carriers and the serious operating difficulties which would be encountered

in the Ashland Avenue Yards, livestock could not be held for consolidation in the outer yards even for a few moments and many more runs would have to be made with one, two or three cars. (R. 631, 638, 679) Even under present conditions small cuts must sometimes be immediately run to the yard to avoid a violation of the Federal 28-hour law. (R. 631)

This point is forcefully illustrated by exhibit 41, introduced by witness Kiesele of the Milwaukee Road. (R. 687, 1173) That exhibit shows that during December, 1947, stock came *into* the Milwaukee yards on 168 trains permitting the operation of only 67 trains *from* the Milwaukee yards to the public chutes. (R. 679, 1173) But under the conditions which would inhere in the Swift proposal witness Kiesele stated:

> "We would have been required to operate up to 168 trains under the plan proposed and certainly many in excess of the 67 trains actually operated through the numerous consolidations made under the present plan." (R. 679)

Witness Starbuck of the Burlington stated:

> "The C. B. & Q. will be compelled as a result to make many additional runs in order to get stock to the C. J. and to U. S. Yards within the time limit, or much of the stock will have to be unloaded and fed at Clyde (C. B. & Q. Yards) before it can start for the stockyards. At Clyde, where the C. B. & Q. receives this stock there are feed and rest facilities for only fourteen cars of stock." (R. 619-20)

The witnesses from the North Western, the Rock Island, and the Santa Fe also testified that the proposed change would entail many additional runs to the Junction interchange and the stockyards. (R. 638, 663, 701-702)

Aside from the additional cost this would impose upon the railroads, it is obvious that the piling up of more engines and crews in the Ashland Avenue bottleneck would multiply the operating difficulties in that area.

The problems thus produced by the great increase in the number of engines and crews converging on the Ashland Avenue Yard would be compounded by the fact that, in contrast to today's operations, nearly every train carrying livestock to the stockyards would have to stop to make setouts at Ashland Avenue. Today, only about one-third of the trains carrying livestock to the public chutes stop to make setouts of dead freight at Ashland Avenue. (R. 485, 543) In contrast, the testimony shows, and it is obvious, that with almost 50 per cent of all the stock consigned to points on the Junction, practically every cut of cars would have stock to be set out at Ashland Avenue. (R. 488, 612, 663, 681, 696)

Swift so advised the Commission in its brief in the *Hygrade* case, stating:

> "In practically every train of livestock coming into the stockyards there are cars consigned direct to packers (Tr. 280)." (Appendix A, p. 49)

The vital point about this is that every time a train stops to make a setout at Ashland Avenue it must leave the cars bound for the public chutes standing on the main running track and thus stop all other movements to the public yard. (R. 487-89) In the case of all traffic entering Ashland Avenue from the west, and this includes all the major carriers of livestock except the Rock Island, the only passage to the stockyards through this bottleneck is closed.

The Commission's finding with respect to this feature of the proposed operation is as follows:

> "While, as above stated, any cars of livestock con-

signed to complainant could be handled in consolidated trains by grouping such cars at the head of the train with the cars of dead freight intended for set-out in the south yard, nevertheless, because of difficulties peculiar to livestock traffic, such handling would, it appears, affect adversely the line-haul carriers' operations in carrying livestock to the stockyards. As previously stated, all such traffic must move over east-bound track 1103 and, for that reason, any delay in unloading the stock tends to delay and 'pile up' other trains seeking ingress over the tracks to the stockyards. Consolidated trains always occasion some delay since the cars of livestock destined to the stockyards are left standing on the track while the engine hauls the cars of dead freight a short distance eastward and then, after backing them onto a sidetrack leading to the receiving tracks of the south yard, 'kicks' the cars as previously described." (R. 72)

b. The "Services and Modification of Services Which Would Be Required For the Desired Deliveries" (R. 80) Would Cause a Collapse of Terminal Operations In the Junction's Ashland Avenue Yards.

Although the operating difficulties which would confront the line-haul carriers in their efforts to interchange the packers' stock with the Junction in its Ashland Avenue Yards are substantial, the burdens which the Junction would have to assume are insurmountable.

As Swift pointed out in its brief in the *Hygrade* case, "the spotting and switching involved, and which the charge of the Chicago Junction would cover, is quite complicated and complex." (Appendix A, p. 39) The "considerable and detailed proof of operating conditions involved in a movement" to the Hygrade plant (Appendix A, p. 45)

was declared by Swift to show that such an operation "would be *very expensive, very difficult* and would undoubtedly affect the other perishable freight business of the Chicago Junction (T. 264)" (Appendix A, p. 47, italics added), and that the necessity of furnishing such service to all of the packers in the stockyards area "*would increase the difficulties of operation to the point of making such deliveries impossible.*" (Appendix A, p. 50, italics added) As the record here shows, these statements are equally true with respect to the identical service now sought by Swift.

The fact that this livestock would have to be interchanged with another carrier instead of being moved directly to its destination by the line-haul carrier would mean up to two hours of delay solely because of the additional mechanical and clerical work which would have to be done. (R. 539-40) Under the proposed method after receipt of the cars by the Junction, it would be necessary that they be given interchange inspection by the Junction's car inspectors as required by the Safety Appliance Act; the yard clerks would be required to check the trains, record seal protection, and apply side-carding in accordance with the data shown on the train consist; and the cars would have to be bled. (R. 539-40) Under the present method, none of this costly and time consuming procedure is necessary.

All of the large volume of livestock consigned to the packers would have to be received on the Junction's nine receiving tracks and classified on the 24 classification tracks in the South Yard. (R. 539) It is these same tracks that are now used for the receipt and classification of over 1,000 cars of dead freight per day, and as the evidence shows, the handling of that traffic requires maximum utilization of those facilities. (R. 484, 529-30, 547) As the Commission stated in its report:

"Having in mind the need for taking into account

periods of peak movements and maximum use, the south yard appears to be used to capacity with no space for construction of additional tracks." (R. 73)

In the process of placing this livestock on the Junction's receiving track and assuming that in some unknown manner space had been found for that purpose, the line-haul carriers would shove those cars only far enough to clear the switch point. (R. 494) Before another line-haul carrier could get its cars off the single main running track by which the public yard can be reached from the west, a Junction crew would have to shove the first cut of cars further down the receiving track. (R. 494-95, 660) The Junction would then have to separate the stock cars from the dead freight, switch the cars onto its overcrowded classification tracks and there classify the cars according to consignee. (R. 469-70, 495, 544-45) In other words, stock for Swift, for example, would be segregated from that going to the other packers. (R. 492-93) This segregation is always the job of the receiving carrier in any interchange of freight. (R. 492-93) After this separation, the livestock would have to be moved to an appropriate base yard and held there until moved to the packers' private tracks. (R. 469-70)

Since the packers' livestock would have to be received and classified on the same tracks that are now utilized to capacity by dead freight, the inevitable result would be that that livestock would be intermingled with and buried behind dead freight that now requires nearly 32 hours from the time it is received by the Junction in its Ashland Avenue Yards and delivered to the consignee. (R. 495, 545-46, 659) This is in excess of the total elapsed time that livestock may be confined in cars from its origin in the country without unloading for feed, water and rest. It is thus obvious that livestock could not wait its turn for de-

livery by the Junction as does the dead freight, but would instead require a degree of expedited service that is beyond the capacity of that terminal line.

The livestock blocked in between cars of dead freight which arrives in a continuous stream would have to be "dug out" and given preferred handling in every respect. (R. 496, 497-500, 544-46) It would be necessary to make special runs to the packers' private tracks in this extremely congested area in order that this livestock which invariably reaches Chicago on short time could be unloaded before expiration of the statutory confinement time. (R. 496, 544-46) It is indisputable that the attempt to render this preferred service to the packers' livestock would disrupt the classification and delivery of the dead freight now handled in that yard. (R. 529-30, 538, 546) Witness Sorenson described that necessary consequence of the proposed operation, stating:

> "It would so seriously hamper our switching operations that in my opinion as an operating man, we could not keep our yard open for the receipt and classification of cars consigned to industries located on our rails." (R. p. 546)

The Superintendent of the Junction testified:

> "* * * about the second day we were doing it, I don't know what we would do with the dead freight that we did not yet handle because we were trying to segregate and handle livestock * * * we would have to sacrifice the other freight for the livestock." (R. 529-30)

Although the extremely difficult and impractical character of the proposed operation is quite evident when it is considered in connection with the present delivery time required on dead freight, that comparison substantially understates the operating burdens which the Junction

would have to assume. (R. 499-500) The figures with respect to dead freight relate to switching operations as they are now performed in the Ashland Avenue Yards, but they do not reflect the wholly dissimilar switching operations which would be necessary if the livestock consigned to the packers were handled in those yards. In performing its traditional and customary job of receiving, classifying and delivering dead frieght consigned to the 499 industries served solely by it, the Junction employs the time saving and efficient technique of a "kicking" operation. (R. 543-44) The Commission described this practice as follows:

> "In the ordinary and usual course of classifying dead freight by the Junction, the engine pushes a string of cars along a track leading to the classification tracks. Uncoupled cars are 'kicked' or given impetus to roll freely through a switching lead onto the proper classification track." (R. 65)

It is only by such a method that the Junction can handle the great flow of traffic through this yard. But livestock cannot be switched in that manner. Because of its extremely perishable nature, it must be shoved to rest and carefully placed on the receiving and classification tracks. (R. 469, 543-44) As the Commission stated, "if livestock were so handled it would result in injury to the animals by being thrown against the ends or sides of the cars or knocked down. Cars of livestock must necessarily come to rest without rough shocks or jolts." (R. 65-66) It should also be emphasized that that painstaking and time consuming method of switching would have to be employed with respect to a commodity as to which the statutory confinement time has almost expired and must therefore be delivered in a fraction of the time that is now required for dead freight in the Ashland Avenue Yards unburdened with livestock and switched by the much speedier practice of "kicking".

It would not only be necessary to shove and carefully place the cars of livestock which would move through the Ashland Avenue Yards. The tremendous volume of dead freight would also have to be handled in that same manner. (R. 544) Because of the lack of any space for expansion of the Junction's receiving and classification facilities, the livestock would have to be handled on the same tracks that are presently utilized to capacity for dead freight, assuming that space could be found for that traffic. (R. 495-96, 539-40, 543-44, 563) Once the cars of livestock were carefully brought to rest, subsequent cars of dead freight could not be kicked and allowed to roll against the cars of livestock. (R. 544) As the Commission stated:

> "Whether the livestock were handled alone or together with the dead freight, the cars could not be simply 'kicked', but would have to be switched and actually placed on the receiving track to avoid risk of injury to the animals; and, once the cars were so placed, subsequent switches of dead freight could not be 'kicked' and thus permitted to roll freely against the cars of livestock." (R. 73)
>
> "In its work of classifying dead freight for switching delivery, the Junction, which serves, not only the packers, but hundreds of other industries, follows the usual and time-saving practice of 'kicking', whereby uncoupled cars at the end of the string of cars being classified are sent on their way over the switching lead and onto the proper classification track; but if classification track 19, or any other, were to be used for the livestock destined to complainant, neither the livestock cars nor subsequent cars of dead freight could be so 'kicked', but would have to be pushed over the lead and along the track to the point of placement, such cars remaining coupled until brought to rest." (R. 73)

In short, the service which would have to be accorded to the packers' livestock in the Junction's yards would revolutionize the operations in those yards and would in fact precipitate a total collapse of the terminal service in the stockyards area. Witness Sorenson, one of the principal operating officers of the Junction, testified:

> "In my considered opinion, based on my 20 years' experience in the operating end of the railroad industry, all of which has been spent in terminal yards, if the Chicago Junction Railway was forced to handle direct shipments of livestock for delivery to private sidings of the packing companies located on our rails, the net result would be the complete breakdown of the operation of the Chicago Junction Railway." (R. 548)

It is also clear that the Junction's efforts to "work" a large volume of livestock through yards saturated with dead freight would seriously interfere with and impede the efforts of the line-haul carriers to interchange traffic with it in the Ashland Avenue Yards and to deliver the producers stock at the public yards. As the operating witnesses testified, the Junctions' efforts to segregate this livestock according to consignee and to dig it out from between cars of dead freight would preclude the use of its receiving tracks for set-outs by the line-haul carriers. (R. 469-70, 529, 546, 613) The trains "piled up" on running track 1103, waiting for an opportunity to interchange livestock and dead freight with the Junction and to deliver livestock at the public yards, would have to remain there, thus blocking any movement on that main running track and further compounding the delays and difficulties which would accrue from the proposed operation. (R. 612-13, 637)

Witness Starbuck of the Burlington stated the practical

effect of this Junction operation upon the crews and engines of the line-haul carriers:

> "* * * while the C. J. is switching cars on their lead [track] no other engine can enter that yard during the time that operation is being performed." (R. 613)

Witness Heide of the Rock Island described these difficulties which would result from the Junction's attempt to handle this tremendous increase of new traffic as follows:

> "The Junction would be getting livestock and dead freight set out all over its yards, mixed right in together. It would have to switch out the livestock from the dead freight, and then block the livestock at Ashland Avenue according to the consignee. All this activity—if the job can be done at all—would mean more delay to the Rock Island when it attempts to place its cars on the Ashland Avenue interchange. If the Junction is blocking the receiving yard lead because of an attempt to separate and then collect stock, dead freight or perishables, we just aren't going to be able to set off our cars of stock at that point. Neither is the fellow ahead of us or behind us. And furthermore, if the Junction hasn't been able to clear out stock which had arrived previously because of these difficulties, there isn't going to be any room for us to put our stock on the interchange tracks. How the Junction people could do it I don't know. I do know, after many years' experience in this area, that the Junction's handling, however it does it, is going to have a very bad effect upon our operations." (R. 659)

The attempt of the Junction to handle thirty-five to forty thousand cars of stock in the Ashland Avenue Yard would not be the only source of difficulty inherent in Swift's proposal. The problem raised by the attempted

return of an equivalent number of empty stock cars by the Junction would be equally serious. Today all empty stock cars are brought back to the outer yards by the line-haul crews as soon as they are unloaded at the chutes. This is a relatively fast and efficient operation which requires no interchange, and places no burden upon the tracks in the Ashland Avenue North Yard. (R. 469, 548) But the Swift proposal would require the Junction to collect all empty stock cars at the private sidings, run them either into the Ashland Avenue or Loomis Street yards and classify them according to the line-haul carrier which was to receive them. (R. 470, 547-48) This would materially interfere with the attempt of the line-haul carriers to make setouts at Ashland Avenue. For example, in order to return empty cars from the proposed Swift facility to that part of the Ashland Avenue Yard where the Junction interchanges the empty cars with the line-haul carriers, the Junction would have to cut across and interfere with the main running track which must be used to get stock to the public chutes. (R. 637) Likewise, the line-haul carriers would not be able to get in to make setouts at Ashland Avenue because the Junction could not get over to the North Yard to place the empties without blocking the tracks the line-haul carriers use in making such setouts. (R. 637, 660)

The handling of the empties would cause serious difficulties because of another factor. In the opinion of the carriers' operating officers, their roads would have to send additional engines and crews down to Ashland Avenue to pick up the empties as they assemble in Ashland Avenue. (R. 660, 683, 700)

Witness Stein described the problem the North Western would face as follows:

"Today, we have several transfer runs every 24

hours that pick up traffic including empties for our line in the Ashland Avenue District, but the point is that we will not be able to depend upon those transfer trains to handle the greatly increased number of cars the Junction will be turning back to us at Ashland Avenue, and in my opinion there is not ample facility in this congested yard for assembling and holding the number of stock cars which will be made empty awaiting movement on scheduled transfers. This is one illustration of the necessity of operating additional engines which will be required in this congested area." (R. 638)

The handling of these empties will be particularly acute with respect to the Rock Island which, entering the stockyards area from the east, never takes stock cars, loaded or empty, as far as Ashland Avenue. (R. 660) Under this proposed setup the Rock Island must, of course, take stock into the Ashland Avenue Yard and pick up empty stock cars at this yard. In this connection Witness Heide observed:

"I know that we would have to send down additional engines to collect these empties under the proposed arrangement. Today, we have two runs every 24 hours to pick up cars from the Junction. Now, those trains can handle just so many cars. Furthermore, the Junction would probably have to ask us to act more quickly in getting the empties out of the Ashland Avenue Yards than twice in every 24 hours." (R. 660)

Thus, here again the proposal would require the cramming of additional engines and crews into the narrow and confined Ashland Avenue Yards and the stockyards area.

c. The Proposed Operation Will Require Greatly Increased Service With Respect to Livestock Because of Setouts for Feed, Water and Rest Which Would be Required by Federal Statute.

The requirements of the Federal Confinement Law would also pose most serious operating difficulties in connection with the proposed private track delivery of livestock. Once unloaded to comply with the law the stock must remain outside the car a minimum of five hours. (45 U. S. C. § 71) The effect of this regulation in its relation to the question here is apparent from a study of the time schedules of stock cars moving into the Union Stock Yards. A substantial percentage of the stock coming into the chutes is running on very short time and any delay would mean a violation of the Federal law unless provision be made for an additional stop for feed, water and rest. (R. 642-43, 680-81) Exhibit 45 shows in detail the very close margin of safety on much of this stock. (R. 825-26, 1681-1842) The increased delay in the yards of the line-haul carriers and at Ashland Avenue, would mean that a great volume of stock which is now delivered within the prescribed time would have to be unloaded to avoid violation of the law. (R. 619-20, 642-43, 657, 680-681, 702-03) Since there are no facilities on the Junction to feed, water and rest the animals, it would fall to the line-haul carriers to unload the stock, either in Chicago, where adequate facilities do not presently exist, or by a complete reorganization of their operating schedules, to provide unloading at some intermediate point. (R. 489, 619-20, 643, 657, 681) The former would occasion delay and added service not only to stock on short time but to other stock on sufficient time which must be separated out from those cars which must be unloaded. (R. 643) For example, *witness Stein of the North Western estimated that during the period from April 15 to May 15, 1947, 209*

cars of livestock from 36 trains, constituting 33 per cent of the trains hauling livestock during this period, would have required set-outs for feed and rest if the proposed plan with all its delays had been in effect. (R. 642-43) To meet such a condition it would be necessary for the line-haul carriers to revise their livestock schedules and provide an additional stop for a substantial part of the traffic. (R. 643, 657, 682-83, 702)

By this latest effort to secure a special advantage, Swift would precipitate the collapse of an operating system founded upon the long recognized principle that the regular terminal for livestock in the stockyards area in Chicago is the public yard. At the time that the Hygrade Company proposed the identical service to its plant in the stockyards area, Swift advised the Commission that "the complainant desires to overturn a method of receiving livestock which has been a part of and essential to the growth and operation of the Chicago live stock market" (Appendix A, pp. 35-36), and that the plant-door delivery sought by its competitor "would absolutely demoralize transportation in or about the stock yards." (Appendix A, p. 48) This is an equally accurate characterization of what Swift itself now proposes.

The evidence which describes the disastrous consequences of attempting to work livestock through the Ashland Avenue Yards proves the Swift proposal to be a physical and practical impossibility, and as pointed out, the testimony of the operating officers as to the conditions which would be created by Swift's proposal is uncontradicted on this record. It may fairly be said that its accuracy is accepted. Swift conceded in the submission of its case in chief, on the first day of the hearing that it was not concerned with the practicality or the possibility of performing the service requested by it. (R. 336-39) The carriers then offered a mass of operating evidence showing in full detail

the operating conditions which would be created by Swift's proposal. Before the conclusion of the hearing, and nine days after Swift had acknowledged that it was not concerned with the operating results of its request it offered rebuttal testimony on miscellaneous matters of highly dubious relevance, but it made no pretense of questioning the accuracy of the testimony as to the conditions at Ashland Avenue, and the result which would flow from the change in practice which is here proposed. We desire particularly to emphasize the fact, as the record shows, that Swift employs yardmasters who spend their working lives in the Ashland Avenue Yard and are fully acquainted with the railroad operations in that area. (R. 1034) Swift dared not call these men as witnesses either in chief or on rebuttal. It made its presentation through a tariff man. The explanation for all this is apparent. As shown by its brief in the *Hygrade* case, Swift recognizes that the statements of the railroad witnesses as to the operating consequences of this proposal are correct and unassailable.

d. Direct and Immediate Injury Would Result to Shippers of Livestock to the Stockyards and to Shippers of Dead Freight in the Stockyards Area from the Difficulties Inherent in Any Attempt to Work 75,000 Cars of Added Traffic Through the Ashland Avenue Yards.

The effect of this proposal on the handling of the producers' livestock which would continue to go to the public yard makes it clear that Swift is not interested in the continuance of the public yard in Chicago or the maintenance of the livestock market in that yard. In addition to the serious financial and operating consequences to the railroads through the disruption of their terminal service, it is abundantly clear from the testimony that the consequences of this proposal would fall heavily upon the shippers of

other freight and particularly the shippers of livestock who would still desire to consign their stock to the Union Stock Yards. (R. 496, 500, 624-25, 638-39, 655, 683)

The producers who intervened in this proceeding in opposition to the complaint, both in the lower Court and before the Commission, testified to the adverse effect of the proposal on their interests. They are ably represented and will present their own case. It should be noted, however, that the duties of the railroads in the handling of the producers' stock are clearly defined, and if they are not properly discharged, damage results and claims are invariably filed.

The producer counts upon his stock reaching the Chicago market in the very early morning hours and the well-established railroad schedules are set up to meet this essential requirement. (R. 719-21) A delay of even a few hours would frequently mean that the producer would miss the intended market. (R. 721) But the consequences of delay are not limited to loss of market. The shippers claim that physical damage to stock invariably results from serious delay. (R. 721-22) It is indisputable that the delays incident to this proposed change would force the roads to revise their livestock schedules, thus providing an additional unloading for feed and rest of stock which could not be delivered within the time allowed by law. (R. 643, 657, 682-83, 702) But this would itself increase the expense of handling and the loss to the shipper. One witness testified:

> "Our figures show that on shipments that we have made where the cattle have to be unloaded and fed at one time our shrink would amount to practically twice as much as it will if they can get through without an unloading while en route." (R. 772)

Witness H. R. Park, presently and for 29 years traffic manager of the Chicago Livestock Exchange, summed up the effect of the Swift proposal as follows:

> "I would say, Mr. Belnap, it would crucify the Chicago market if things came to pass as has been depicted here by these railroad witnesses. It would crucify the Chicago market." (R. 722)

The railroad operating officers emphasized the consequences of the proposed change on the market stock.

Witness Starbuck of the Burlington stated that there would be delay to all livestock "with greatest delay occurring to stock which would still be delivered to U. S. Yards." (R. 624-25)

Witness Stein of the North Western testified as follows:

> "One of the important facts about this added delay is that people will suffer who have nothing to do with the proposal; namely, shippers who still choose to take their deliveries at the unloading chutes. When we are delayed at Ashland Avenue because of the Swift demand, it is going to mean, of course, that that stock which must run through Ashland Avenue to get to the Yards is going to be held up while the operations just described are taking place in that area." (R. 638-39)

Witness Heide summed up his testimony by stating:

> "In my opinion, if the Rock Island and all these other carriers were required to throw all this livestock on the hands of Junction at Ashland Avenue, it is going to create a terrible congestion there. I would like to further say that this congestion and delay is not going to be just on stock consigned to these packers

but is going to definitely delay stock which we still have to deliver to the stockyards and the delivery of dead freight as well." (R. 655.)

Witness Heide's testimony concerning dead freight calls attention to another consequence of the proposed change; namely, that the carriers which would have to furnish this new service to the 13 packing plants in this area also have obligations to hundreds of other industries in Packingtown. The responsibilities to maintain efficient service on the dead freight and perishables could not be met. Even under present conditions it takes the Junction nearly 32 hours from the time of interchange with the line-haul carriers to effect delivery of dead freight. (R. 471)

The Junction's principal operating officers summed up the plight of shippers of dead freight as follows:

"I would say from my own observation that about the second day we were doing it, I don't know what we would do with the dead freight that we did not yet handle because we were trying to segregate and handle the livestock.

"Exam. Diamondson: In other words, it is your position based on the present track facilities, you just could not do it?

"The Witness: That is correct, we would have to sacrifice the other freight for the livestock." (R. 529-30)

"This would also result in our being unable to switch cars of dead freight consigned to industries on our railroad because of our switching leads being tied up in the handling of this livestock. It would so seriously hamper our switching operations that in my opinion as an operating man, we could not keep our yard open for the receipt and classification of cars consigned to industries located on our rails." (R. 546)

The disruption of service to other industries would not be confined to those in and around Ashland Avenue. The operating witnesses of the line-haul carriers testified that the delay to the livestock imposed by Swift's proposal would ultimately force the railroads to overhaul their schedules to provide for additional stops for water, feed and rest. (R. 643, 657, 682-83, 702) The effect of this upon *other* freight was described by witness Stein of the North Western as follows:

> "We have a through time freight train and those are the trains on which stock is usually carried. We will say that train is operating from Omaha to Chicago. The schedule is set up with certain terminal points for switching for any setouts or additions, inspection and servicing of the trains and based upon years of experience and operation, that train is fitted in between other trains, freight and passenger alike, and streamliners, and we have many of them on our lines. We have a train to Calumet which carries quite a bit of Swift and Company stock quite regularly. That train is now set up so that if we had to make a stop say at West Chicago to set out one car of stock, that train would make no eastern connections. That schedule of that train would be entirely disrupted.
>
> "Q. Do you have a number of trains that are on tight schedules of that sort that would be interfered with by these additional settings out?
>
> "A. Yes. Mr. Kinsella and Mr. Sorensen of the Junction have emphasized the delay and inconvenience which will result to other non-packer shippers on the Chicago Junction. Similarly with the North Western, the Swift demand will not merely add cost and confusion to our handling of stock, but will inevitably delay our deliveries for other industries." (R. 644-45)

It must be emphasized that the proposed method of handling would also seriously impede the return of the empty stock cars for reloading, the prompt handling of which is obviously imperative to the normal flow of live-stock to the public markets. The Junction would be required to collect the empties, bring them into Ashland Avenue Yards and then sort them out for a return to the line-haul carriers. (R. 547-48) Mr. Sorensen of the Junction estimated that its part of the operation would result in "at least a 24 hour delay in most cases to this equipment, which presently it is not receiving." (R. 548) Witness Keisele of the Milwaukee explained the additional difficulties and delay which would attend this change in the method of returning empty stock cars, stating:

> "The proposed plan would result in the change in the handling of return empty stock cars after being unloaded at the packers' plants. Our present agreement with the labor organizations would not permit stock relief crews to pick up empty stock cars at either Ashland Avenue Yard or Seeley Avenue Yard upon return from the stockyards, and this would result in the operation of additional crews to handle the empty stock cars for return movement to Bensenville.
>
> "It is estimated that the required handling under the new plan would result in as much as *two days' additional delay in returning the empty cars to the stock loading territory for subsequent loading.*" (R. 683, italics added)

The conclusion is unavoidable in the opinion of the men who have the responsibility for the conduct of these operations that the interests of every shipper concerned with operations in this area would be adversely affected by the proposed change of practice. As Swift stated the matter in the *Hygrade* case, "the absorption of switching charges in the stock yards district on live stock would completely

demoralize the present system of handling live stock" and "would absolutely demoralize transportation in or about the stock yards." (Appendix A, p. 48)

3. THE LINE-HAUL RATES TO CHICAGO WERE PRESCRIBED BY THE COMMISSION FOR APPLICATION TO THE PUBLIC STOCKYARDS AND WOULD NOT COMPENSATE THE CARRIERS FOR THE SERVICE NOW REQUESTED BY SWIFT.

In seeking delivery at its plant in the stockyards area at the flat Chicago rate, Swift is asking that the line-haul carriers be required to absorb the switching charge of the Chicago Junction Railway which was $28.80 at the time of the hearing. This rate basis has been in effect for many years. It is exactly the same rate, subjected to certain general increases, which the Commission held to be reasonable in the *Hygrade* case. (R. 342-43, 838-39)

The packers may not be accorded a service they do not pay for, and the carriers made studies to determine whether the line-haul rates prescribed by the Commission include any allowance for such a terminal service. The studies prove that the carriers receive no revenue from the handling of the stock on the basis of the terminal allowance in the line-haul rates that could be used to pay, or to permit the absorption of, the applicable switching charge. (R. 952-71, Ex. 50, R. 964, 1856-63; Ex. 51, R. 964, 1863; Ex. 52, R. 971, 1864)

In its report herein, the Commission expressly stated that the line-haul rates to Chicago, prescribed by it in prior proceedings, do not and were not intended by it to compensate the carriers for the delivery service which Swift seeks here. The Commission's discussion of that point was as follows:

"The line-haul rates on livestock to Chicago are Commission-prescribed rates. In *Chicago Livestock*

Exch. v. *Atchison, T. & S. F. Ry. Co.*, 219 I. C. C. 531, 545, 546, we said that 'the line-haul carriers operate over the tracks of the Chicago Junction to the Union Stock Yards and make delivery there thereby making these yards their own terminals.' We pointed out that in prescribing the rates on livestock to Chicago, among other markets, there was specifically taken into consideration as an element 'the rendition of terminal service in connection with the transportation of livestock,' and there was included what was considered 'sufficient to cover such terminal services under a normal operation as well as to cover the unloading and loading of livestock at public stockyards,' *but we did not there consider what the services would be in connection with deliveries of livestock by the Junction on private industrial tracks. That carrier did not then and does not now perform such services.*" (R. 78-79, italics added)

It is indisputable, we submit, that on the basis of the uncontradicted cost studies in the record and the Commission's express finding as to the transportation services covered by the line-haul rates that they do not provide any compensation for plant-door delivery of livestock.

4. SWIFT & CO. DEFAULTED IN THE PRESENTATION OF ANY SUBSTANTIAL SHOWING IN SUPPORT OF ITS CLAIM.

Swift's presentation before the Commission must be deemed, by any standard, an extraordinary one. It has form and bulk, but is utterly without substance. In view of its default in the submission of any substantive showing Swift must take the position that the historic practice of delivering livestock in Chicago should be condemned, regardless of the practicality or even the possibility of the proposed change and regardless of its effect on the public

interest, the shippers, or the railroads. It evinced no interest in the facts and simply went through the form of offering evidence.

The reason is plain. The proposal is so extreme and impractical, and its effect would be so disastrous to every other interest that Swift was obliged to disclaim any knowledge of the realities, despite its position and brief in the *Hygrade* case, and to deal with the whole matter in a peculiarly shallow manner.

The witness Tally, Swift's Assistant General Traffic Manager, offered a number of maps and pictures of scenes in the stockyards area with which the Commission had become intimately familiar through years of litigation involving the delivery of livestock in Chicago. (R. 267-80, Exs. 1-9, R. 389, 1040-46) The witness then submitted his exhibit 10, a document consisting of 27 pages, which may be succinctly summarized. (R. 389, 1047-74)

The first eight pages consist only of an index and certain letters from the respective traffic officers of the carriers to Swift, declining the request which is the subject of this complaint. (R. 1047-52) Those letters give bulk to Swift's presentation, nothing more.

The next eight pages, 9 to 16, inclusive, are devoted to a comparison between the actual per car revenues on livestock delivered to Swift during a certain period and purely fictitious or hypothetical revenue on a number of supposititious shipments of dead freight. (R. 1053-61) The distances which the livestock actually moved, and the distances which the theoretical shipments of dead freight were assumed to have moved, are not shown. (R. 344-45) The compared livestock revenue is actual, the per car revenue on the dead freight is based on the tariff minimum, not the higher actual minimum in effect for years under the orders of O. D. T. (R. 345-46) In the light of these facts it was

not pretended by the witness on cross-examination that the showing has any meaning. (R. 344-45) It proves nothing save that defendants maintain tariff rates on both livestock and dead freight. What conceivable use could be made of it was not disclosed.

The submission of such material reflects nothing but Swift's desire to make some capital of the fact that dead freight is frequently delivered on industrial sidings at the flat Chicago rate, whereas a substantial switching charge is now applicable on livestock delivered to Swift's plant in the stockyards area. But Swift would be the last to accept the rates or service on dead freight as the standard for livestock. It is not attacking the line-haul rates on livestock, and it recognizes, of course, as the Commission has found (R. 65) that the livestock must have a very different and faster service than that accorded dead freight. (R. 300, 340-41) The average time consumed by the Junction in handling a car of dead freight, from the time it is placed in Ashland Avenue until it is delivered, is over thirty-one and a half hours. (R. 471) Under similar circumstances livestock would suffer an additional unloading for feed, water and rest, with all the loss and expense attendant upon that action. This shows the hypocrisy of pretending to rely on comparisons between the handling of dead freight and livestock.

The tariffs pertaining to the delivery of dead freight and livestock in Chicago are essentially the same as those in effect when the Commission decided the *Hygrade* case, *supra*, and found applicable to livestock, and lawful in all respects, *the very switching charge which is here again attacked.* (R. 342-43)

a. In Support of Its Section 3 Allegation Swift Offered No Proof That Conditions in Chicago Are Similar to Conditions at Points Named in Its Complaint, and the Carriers Affirmatively Proved the Complete Dissimilarity Between Conditions at Those Points and at Chicago.

In the same casual manner that characterized its submission respecting other issues in the case, Swift scarcely made a gesture of attempting to support the allegation that it was being discriminated against in Chicago by services rendered to other packers at other points. The reason for this perfunctory attitude is that no one knows better than Swift that conditions governing the delivery of livestock within the stockyards area in Chicago have no counterpart anywhere else in the country. And no one had more to do with that fact than Swift.

The concluding pages of witness Tally's exhibit 10, pages 17 to 27, simply make reference to certain tariff provisions pertaining to delivery of livestock at other points. (R. 389, 1062-72) As pointed out below they show nothing as to the conditions existing at other points in relation to the conditions surrounding delivery at Chicago.

The history, custom and usage surrounding the delivery of livestock at Chicago makes the practice there *sui generis*. The operations there are not remotely comparable to the relatively simple conditions surrounding the delivery of livestock at any of the points named in the complaint. In keeping with the purely routine nature of its Section 3 allegation, and with its knowledge of the actual facts, Swift made no pretense of comparing conditions at the several points named with those existing at Chicago. Nevertheless, as part of their own case, the carriers demonstrated the wide difference between conditions at those points and

Chicago. This showing appears in exhibits 12, 53 and 54, the accuracy of which was stipulated by Swift. (R. 420, 972-75, 1083-90, 1868-1896)

Exhibit 12 shows that with the exception of Sioux City, Iowa, no packer whether he be at Fort Atkinson, Wisconsin or Kansas City, Missouri, or any other point named in the complaint, receives any greater service than does Swift at its Omaha Packing Company plant at Chicago. (R. 973, 1083-90) Each of the packers which receives livestock at its plant is located, like the Omaha Packing Company, on the rails of a line-haul carrier. Indeed, at 25 of the 37 points named in the complaint and tabulated on exhibit 12, there is no public stockyard which can serve, as does the Union Stock Yards in Chicago, as the proper and adequate terminal for livestock at that station. The maps which make up exhibit 53 show more clearly than could words, the relatively simple operation at each of the compared points. (R. 975, 1868-95)

Only at Sioux City does any competitor of Swift receive livestock at a plant located in the immediate area of the public stockyards. (R. 973, Ex. 12, R. 420, 1083-90) Even there, where Cudahy receives a few shipments of sheep at its plant on the rails of the Sioux City Terminal Railroad, the differences in history, custom and operating conditions make any comparison to Chicago ridiculous. The movement of livestock to Sioux City averages less than 15,000 cars a year, approximately the amount of stock brought to Chicago by one of the major roads, and in 1946 Cudahy received a total of only 211 cars directly at its plant, and in 1947, 289 cars. (R. 973-75) In contrast to the revolutionary change in operations which Swift's proposal would work at Chicago, the small movement of sheep to Cudahy's plant involves the identical operation for the line-haul carriers at Sioux City as the delivery of stock going to

the public yards in that city. In either instance the carrier interchanges the cars with the terminal railway in the latter's yard, and the terminal carrier makes all deliveries, both of livestock and other freight. (R. 974-75; Ex. 54; R. 975, 1896)

Referring to the points named in the Section 3 allegation of the complaint, Swift's witness Tally testified on cross-examination: "Well, I will start by saying that I don't know the detailed facts as to the physical operations at any of them" (R. 347), and again "I can't recall any place where the situation is identical [with Chicago]." (R. 348) In contrast the witness Heinemann, whose knowledge of the handling of livestock in the various terminals throughout the west is probably more extensive than that of anyone else in this field, testified that at no point named in the complaint is there a situation which is comparable to the conditions which would be created at Chicago by the delivery of directs at the plants of the packers located in the stockyards area. (R. 945-46)

Counsel for Swift in effect conceded that he was making no attempt to prove his Section 3 allegation, but, instead, was relying on something said by the Commission in its report in the *Chicago Livestock Exchange* case, 219 I. C. C. 531 (1936). This is shown by the following colloquy between the Examiner and Mr. Rynder:

> "Exam. Diamondson: Yes. I mean are you going to go beyond the mere showing as to what the tariffs say about delivery at these various points?
>
> "Mr. Rynder: I don't think you can show that the services at any two points are exactly similar.
>
> "Exam. Diamondson: Well, under an allegation under Section 3 there has got to be some showing of similarity of circumstances and conditions.
>
> "Mr. Rynder: I think the Commission has about

settled that for us. It said in the *Livestock Exchange* case here that that scale was made to cover the origin and terminal costs at all points and as to the deliveries at Chicago that the matter must be considered as an average matter and that there wasn't such a great difference between deliveries at Chicago and at these other Western Trunk Line points as to warrant any difference in terminal treatment." (R. 302)

When asked to identify the language of the report on which he relied to prove that the terminal service at other points named in the complaint is not dissimilar to *the proposed new terminal service to Swift's plant in the stockyards area*, Mr. Rynder made the following statement:

"Mr. Rynder: Here is one statement. I will not go through the entire decision. At page 538:

" 'Although these facts do not establish that the terminal operations at the points mentioned are identical with those in Chicago, it is clear that the character of the services rendered and the charges at the compared points do not vary greatly.'

Mr. Rynder added:

"And the points they are referring to are named earlier in the decision." (R. 303)

The statement of the Commission which immediately follows the part quoted by Mr. Rynder shows that *the terminal service at Chicago* there stated by the Commission not to "vary greatly" from that rendered at other points, was, of course, the service of making delivery at the public stockyards at Chicago and not the proposed new service to Swift's plant. We quote the part omitted by counsel as follows:

"While defendants' witnesses testified at considerable length respecting the details of the movement, the

terminal service at Chicago is not a complicated one, *as was stated at page 122 of the report in Live Stock-Western District Rates, supra.* Most of the trunk lines entering Chicago have direct connections with the Chicago Junction, and their road engines operate into the stockyards, although the crews are frequently changed at the break-up yards as the trains pass through, in instances where the matter of overtime pay is involved. The train proceeds to an unloading platform, the engine cuts loose and, proceeding to the rear, removes the caboose and places it at what was the head of the train. Then, proceeding to the other end, it is ready to remove the empty cars. The unloading is very expeditious as the stockyards now have dock capacity for setting 283 cars of livestock for unloading at one time. Each chute has capacity for two carloads of livestock, so that the first 283 cars may be removed when empty, and 283 more carloads set immediately. The trains placed at the chutes may contain hogs, cattle, or sheep, in single-deck or double-deck cars, or short cars with long cars, yet only one spotting is necessary to take care of the whole trainload. In other words, no further 'cutting' or 'spotting' is necessary because of different species of livestock or types or sizes of cars." (219 I. C. C. 531 at 538-39)

The reference to the report of the Commission in *Live Stock-Western District Rates,* 176 I. C. C. 1 (1931), which the Commission cited, as shown above, is as follows:

"The terminal service covered by the charge is not a complicated one. The road engines generally operate into the stockyards, although the crews are often changed in the break-up yards as the trains pass through. The train proceeds to the unloading platform, the engine cuts loose, and proceeding to the rear

end removes the caboose and places it at what was the head of the train; then proceeding to the other end it is ready to remove the train of empties. The ordinary train of 30 to 40 cars is usually unloaded in an hour. However, on days when receipts are heavy, trains are frequently required to wait, sometimes for several hours, before they can get into the stockyards." (p. 122)

In its report in *Live Stock-Western District Rates* the Commission then proceeded to discuss delivery of livestock to public stockyards at other points.

It is thus perfectly clear that the Commission was comparing the delivery of livestock *at the public stockyards in Chicago* with the delivery of livestock at public stockyards elsewhere. As the Commission stated in its present report, "we did not there consider what the services would be in connection with deliveries of livestock by the Junction on private industrial tracks. That carrier did not then and does not now perform such services." (R. 79) We think the effort on Swift's behalf to make it appear otherwise, speaks for itself, and very eloquently. It was an effort to pervert the Commission's clear statement into a finding that the conditions *which would be encountered in delivery of livestock at Swift's plant*, as here proposed, would not be dissimilar from terminal services performed at other points. The Commission had no such question before it and made no such finding; consequently in its reliance on the report in the *Chicago Livestock Exchange* case, Swift is simply in default of any showing in support of its Section 3 allegation.

b. Swift Did Not Call Its Yardmasters to Testify as to the Operating Conditions in the Stockyards Area, But Instead Attempted, Unsuccessfully, to Qualify Its Rate Witness to Deal With That Subject.

Swift recognized that it should at least make a pretense of offering some showing concerning the operating conditions in the stockyards area. Because of the great volume of Swift's dead freight handled by the Junction through its Ashland Avenue Yard, Swift employs a general yardmaster and several assistant yardmasters who have had training as operating men and who work in the Ashland Avenue Yard with the Junction's operating officers. Presumably these men are intimately familiar with the railroad operations in that area. (R. 1034) They were not called as witnesses. Instead, a rate or tariff man, the witness Tally was asked to testify on the subject. Witness Tally testified:

> "Q. I believe you said that you were quite familiar with the operations in the Ashland Avenue Yard and the layout there, did you not?
>
> "A. I said that I had a general idea of it. I have watched the operation on several different occasions, I am not a yardmaster or out there every day. I won't say that I have complete knowledge." (R. 328)

Witness Tally then proceeded to disclose the fact that he knew nothing about the operations in the Ashland Avenue Yards and, of course, he was not asked by his counsel to discuss the really critical point as to the operations which would have to be performed to effectuate the new proposed service.

It was developed that the witness Tally was unacquainted with the track layout of the yard (R. 328-29) or with the approximate volume of traffic handled there. (R.

329) He thought that the predominant movement of stock to the yard was in consolidated trains, whereas the reverse is true. (R. 330) He was completely misinformed as to how the stock is handled on consolidated trains, a point which of very great significance in its relation to Swift's proposal. He erroneously thought that the stock in a train with dead freight was handled on the head end of the train and taken at once to the yard. (R. 330-31) Actually, the operating necessities are such that the dead freight is on the head end, and the stock is cut off and left standing on the running track, thus blocking that track, and the sole ingress to the stockyards until the cars to be interchanged with the Junction have been set out in the Ashland Avenue Yards. (See *supra*, pp. 39-40)

The witness admitted finally that he did not understand even the present operations and could not describe them. (R. 331-32) The witness conceded, also, and we think the fact is entitled to great emphasis, that Swift, which had just experienced the most profitable year in its history under the existing practice (Ex. 11, R. 397, 1074-82), filed the complaint before the Commission and made the charges and the demand stated in the complaint without the slightest concern as to the practicality of its proposal, or its profound effect on any of the many other interests involved. (R. 336-39)

5. The Commission's Findings.

On the basis of the evidence discussed above and considered in detail in its report, the Commission found:

> "We find (1) that in the circumstances presented the published switching charges in addition to the line-haul rates will not be unreasonable or otherwise unlawful for the transportation of livestock for delivery on the private sidetracks to be constructed by com-

plainant, which will connect with the Junction, provided that the tracks to be constructed will be adequate for deliveries by the Junction at its ordinary operating convenience and without interruption or interference, and (2) that the establishment of joint rates for the transportation of this traffic is not necessary or desirable in the public interest." (R. 81)

With reference to the reasonableness of the switching charge, the Commission stated:

"The evidence affords no basis for a conclusion that the terminal charge of the Junction in addition to the line-haul rates is unreasonable for deliveries of livestock to the proposed plant, considering services and modification of services that would be required for the desired deliveries and the effect upon terminal operations generally of performing such delivery service to the proposed plant." (R. 80)

The Commission found that the existing charges were not prejudicial to livestock as a commodity, stating:

"The measure of transportation services rendered shipments of live animals is substantially greater than that accorded dead freight. Livestock cannot be switched in the same manner as other freight." (R. 65)

Its findings with respect to deliveries of livestock at the Union Stock Yards and at Swift's Omaha plant pens in Chicago were as follows:

"The transportation services, conditions, and circumstances connected with deliveries at the Omaha plant pens are substantially dissimilar from those connected with the delivery here sought. There, the unloading chutes are on the rails of a line-haul car-

rier, outside the stockyard congested area, and the delivery made by that carrier is nothing more than a simple switch, at carrier's ordinary operating convenience and without interruption or interference from connecting line engines, as all of the switching is under the control of and performed by the Burlington. The transportation services, conditions, and circumstances connected with deliveries by the line-haul carriers at the unloading chutes of the Union Stock Yards, as hereinbefore described, also are substantially dissimilar from the private track delivery sought." (R. 78)

In regard to Swift's allegation of preferential treatment to certain points named in paragraph VII of its complaint, the Commission found:

"There is no showing that services as desired will result in a situation similar to that at a point or points alleged to be preferred." (R. 79)

With respect to the difficulties inherent in the proposed practice and its effects upon terminal operations in the stockyards area, the Commission made the following findings:

"Under the present practice, followed since the inauguration of services to the Union Stock Yards in the interest of expeditious centralized delivery, the yards of the Junction are not burdened with livestock cars either loaded or empty. It clearly appears that any attempt by the Junction to make deliveries of livestock generally to packers or to transport an amount of livestock substantially greater than complainant's present needs, would result in serious disruption of operations and services and serious delays in the delivery of livestock." (R. 71)

"We have indicated generally the difficulties which

would confront defendants if required to make delivery of livestock at complainant's plant, the basic difficulty being that such method of delivery is not adapted to defendant's service, tracks and yards, as specially designed and developed, along with the city's intensive development, for performance of the centralized delivery service rendered at Chicago. For some 70 years the method of conducting terminal operations in the stockyards district has been for the line-haul carriers, using Junction tracks, to carry all shipments of livestock to the stockyards and make deliveries there, and for the Junction to perform the switching and spotting of other freight for the packers and many other industries in the area. As a result, the Junction's main tracks, its yards and subyards and their tracks, are peculiarly designed and fitted for the operations and services described, and any change, particularly as contemplating deliveries of livestock to the plants of the packers, would, as might be expected and as is shown, require a conflicting use of such yards and tracks and subject defendant's operations to interference and delays." (R. 72)

The Court will note that what is here described as the "basic difficulty" is that arising out of the practice which Swift actively initiated and sponsored in order that it might profit as a partner in the public yards. (Ex. 42, R. 1174-1638, 316 U. S. 216 at 227-31)

"While, as above stated, any cars of livestock consigned to complainant could be handled in consolidated trains by grouping such cars at the head of the train with cars of dead freight intended for set-out in the south yard, nevertheless, because of difficulties peculiar to livestock traffic, such handling would, it appears, affect adversely the line-haul carriers' operations in carrying livestock to the stockyards." (R. 72)

"While these conditions—all necessitating prompt handling of the traffic—are suited to the practice, long followed, of making deliveries of all shipments of livestock at the stockyards, they are not, it is evident, at all suited to the plant delivery service sought by complainant, in the performance whereof the cars of livestock would have to be switched and otherwise intermingled with cars of dead freight which latter, it appears, may, in the case of perishable freight, require nearly a full day for movement through the yards to points of delivery, and in the case of other dead freight, nearly 32 hours." (R. 74)

"Having in mind the congested condition of yards and tracks, it is clear that the attempt to make plant delivery through and over them of even 18 cars of livestock daily would considerably delay and burden defendants' operations. Moreover, although it is shown that complainant's direct shipments of livestock average 18 cars a day, such average necessarily includes days when the shipments exceeded 18 cars. Also it appears that the number of complainant's direct shipments of livestock in proportion to the number bought at the stockyards has been steadily increasing, and the testimony of complainant's witnesses affords ground for the belief that that condition will continue." (R. 74-75)

In response to the statutory requirement that the joint rates sought by Swift must be "necessary or desirable in the public interest" (49 U. S. C. Sec. 15(3)) the Commission made the following findings:

"There is no warrant, however, for a conclusion that the establishment of joint rates as desired by complainant is necessary or desirable in the public interest." (R. 77)

"* * * establishment of joint rates for the transportation of this traffic is not necessary or desirable in the public interest." (R. 81)

These two findings taken together not only mean that Swift failed to satisfy the statutory specifications for the relief sought by it, but that the evidence of record affirmatively demonstrates that such joint rates would be contrary to the public interest. As noted above, Swift has not assigned error with respect to these two findings and in all of the 140-some pages of its brief in this Court there is not a single reference to these two vital findings. Swift thereby admits, we submit, that it has not established its right to the relief which it sought.

The findings quoted above, as well as the others which appear in the Commission's report, are addressed to every issue in this case. We respectfully submit that these findings are abundantly supported by the evidence discussed above, and that the record before the Commission required the findings which it made. There is no evidence to the contrary in this record.

II. THE COMMISSION'S FINDINGS ARE IN ACCORD WITH THE APPLICABLE AND GOVERNING PRINCIPLES OF LAW AND FULLY SUPPORT ITS ORDER OF DISMISSAL

The principles of law which govern the issues raised by Swift's complaint before the Commission have been stated by this Court on numerous occasions and are well settled. It is elementary, of course, that a rate which fairly reflects the quantum and character of the service performed is not unreasonable, and that a difference in charges is not discriminatory or preferential where the services involved are rendered under substantially dissimilar circumstances and conditions. *Interstate Commerce Commission* v. *Union Pacific R. Co.*, 222 U. S. 541 at 549-50; *Manufacturers Ry.*

Co. v. *United States*, 246 U. S. 457, at 481-82; *L. T. Barringer & Co.* v. *United States*, 319 U. S. 1; *United States* v. *Wabash R. Co.*, 321 U. S. 403 at 410-13; *New York* v. *United States*, 331 U. S. 284 at 305.[1] It is these very principles which the Commission applied in its determination of Swift's complaint, and it was the conclusion of the lower court that the Commission's application of these principles was without error. (R. 195) These findings dispose of every contention advanced by Swift and fully support the Commission's order of dismissal.

III. THE PURPORTED ERRORS URGED BY SWIFT ARE WITHOUT MERIT.

Swift's first point concerns the following finding made by the Commission:

> "The evidence affords no basis for a conclusion that the terminal charge of the Junction in addition to the line-haul rates is unreasonable for deliveries of livestock to the proposed plant, considering services and modification of services that would be required for the desired deliveries and the effect upon terminal operations generally of performing such delivery service to the proposed plant." (R. 80)

Swift says that this was "the sole finding of the Commission as to the quantum of the switching charge." (Brief, p. 50) Actually it is merely a conclusion, which by the reference to "services and modifications of services required for the desired deliveries" is expressly based upon the numerous findings on this subject to which the Commission devoted almost its entire report. The Commission's conclusion is supported by detailed findings as

[1] We also refer the Court to Swift's discussion of Sections 2 and 3 of the Interstate Commerce Act in its brief in the *Hygrade* case. (Appendix A, pp. 10-28, 55-56)

to the services covered by the Junction's terminal charge and as to the services required for delivery of livestock to the Union Stock Yards and for delivery of ordinary freight through the Ashland Avenue Yards. The Commission in its report made a step by step comparison of each of these operations which showed that the delivery of livestock to Swift's sidetrack requires services substantially dissimilar from and much greater than those required by either of the other operations. (R. 60-79) Swift's objection must be evaluated therefore not in terms of the one sentence quoted from the report, but in terms of the total effect of all the Commission's comprehensive findings.

While Swift pretends to ignore these primary, underlying findings,[1] its contention must be construed to mean that these findings were not enough to support the conclusion that the Junction's switching charge was not shown to be unreasonable. In the light of the findings establishing the substantial difference in the quantum and nature of the service covered by the compared rates, Swift finds it necessary to contend that the Commission's conclusion is unsupported because it did not make findings as to the precise dollars and cents difference in cost between the delivery of livestock at the packer's plant, on the one hand, and on the other, the delivery of livestock at the public yards and the delivery of ordinary freight at industries on the Junction.

Swift's position is, therefore, that in the absence of such cost findings, the Commission was obliged to find the Junction's switching charge to be unreasonable. But the burden of proof was on Swift. It is well established that the burden of showing the unreasonableness of a

[1] Swift asserts that there is not a "syllable of evidence" or a "shred of testimony" on which such findings could be based. (Brief, p. 55)

rate in a complaint proceeding is always on the complainant. *Louisville & Nashville R. Co.* v. *United States*, 238 U. S. 1, 11 (1915); *Miller Brothers Foods Co.* v. *Atchison, Topeka & S. F. Ry. Co.*, 273 I. C. C. 562, 565 (1949); *Moore Business Forms, Inc.* v. *New York Central R. Co.*, 274 I. C. C. 404, 407 (1949).

It appears to be Swift's theory that a complainant meets the burden of proving a rate to be unreasonable simply by referring to the rates charged for other services, no matter how dissimilar such other services may be, and that when this is done the Commission must strike down the rate attacked as unreasonable unless the defendant carriers or the Commission itself have produced studies establishing the precise dollars and cents cost of the services covered by the rate attacked and by the other rates referred to.

Entirely apart from the fact that here the burden of proof was upon Swift, it has never been held that an assailed rate must be found to be unreasonable *per se* unless it is supported by a finding as to the costs of the service rendered. This court has said recently as to this in *Alabama G. S. R. Co.* v. *United States*, 340 U. S. 216, at 223: "Neither the Commission nor this court has held that lesser cost of service is a finding without which the Commission may not fix a charge, division of rate, or differential." No court has ever held that a rate is unreasonable unless justified in terms of mathematical cost relative to the rates covering wholly different services. In the earlier case of *Commission* v. *Texas & N. O. R. Co.*, 284 U. S. 125, this Court disposed of a contention similar to that which Swift advances, stating:

"While in the making of reasonable rates all the

> material facts are to be regarded, it has never been deemed necessary or practicable—if indeed it is at all possible—to ascertain in advance the cost to carriers of each of the various elements embraced in the transportation service. The Act does not require any such determination." (p. 132)

Swift has not cited any cases in support of its position because it cannot do so. It has cited cases only for the general proposition that there are circumstances in which subsidiary findings are required to support an ultimate finding.[1] One of these cases clearly shows the error of Swift's position. In *New York Central R. Co.* v. *United States*, 99 F. Supp. 394 (D. Mass., 1951), affirmed, 342 U. S. 890 (1951) the court, discussing the kind of a case which is presented here, stated:

> "The difference in physical operations might indicate that the rates to the ports would not have to be the same; to that extent, the Commission's statement that the terminal operations are sufficiently different 'to warrant' the differential may well be accurate. And of course this was all the Commission had to decide in the 1941 proceeding, for there the carriers were defending the differential against attack by the New York port interests. *Port of New York Authority* v. *Baltimore & Ohio Railroad Co.*, 248 I. C. C. 165 (1941). The present proceeding is quite different."

It is thus obvious that in this case, the carrier's evidence as to the substantial dissimilarity of the services not only

[1] *Florida* v. *United States*, 282 U. S. 194; *United States* v. *Baltimore & O. R. Co.*, 293 U. S. 454; *United States* v. *Chicago, M. St. P. & Pac. R. Co.*, 294 U. S. 499; *Interstate Commerce Commission* v. *Mechling*, 330 U. S. 567; *New York Cent. R. Co.* v. *United States*, 99 F. Supp. 394 (D. Mass.), affirmed, 342 U. S. 890; *Tennessee Valley Authority* v. *United States*, 96 F. Supp. 409 (N. D., Ala.); *Palmer* v. *United States*, 75 F. Supp. 63 (D. D. C.).

precluded a finding of unreasonableness but in fact required the contrary conclusion.[1]

After the complaint was filed the Junction sought to cancel the long established switching rate applicable to the plant-door delivery of livestock in this area because of the great difficulty of making such a placement and the fact that the rate has practically never been used. Swift, joined by Armour and Wilson, protested and accordingly the Commission required that the rate be retained in the tariff for such use as might be made of it and found the rate to be reasonable and lawful for the service covered. Swift now asserts that the switching charge is not "an honest fee measured by the cost of services to be rendered," but is instead a penalty charge. (Brief pp. 56-62) The Commission did not, of course, measure in dollars and cents the cost of the service which Swift seeks, which has never before been performed, and which Swift formerly described as "very expensive, very difficult", and "impossible." (Appendix A, pp. 47, 50) The Commission did investigate, analyze and describe in full detail the special services that would be required to accomplish such a delivery of the stock, and found on the basis of that evidence that the rate had not been shown to be unreasonable. Now the strange contention is advanced that when the Commission refused to permit the rate to be cancelled, as the packers demanded, and found the measure of the rate to be warranted by the quantum and nature of the services covered, that the Commission was guilty of establishing a penalty charge. In characterizing the rate as a penalty, Swift is simply resorting to epithet. It is inevitable that a rate covering

[1] A determination of the precise mathematical cost of performing plant door delivery of livestock in this area reflecting all the factors which would be involved in such an ascertainment would be an undertaking of great magnitude. Moreover, in view of the extreme differences in the quantum of the services covered by the compared rates a cost study would have been superfluous.

plant-door delivery of livestock in this area under the circumstances attending such a service must exceed the charge for the efficient and economical delivery to the public yard or Swift's Omaha plant. But the fact that Swift naturally does not use the higher rate applicable to the more onerous service does not make the higher rate in any sense a penalty charge.

In this connection and in support of practically every argument made by it, Swift elaborates at great length what it characterizes as an "inconsistency" in the Commission's report. (Brief, p. 60) This argument is summarized at page 2 of Swift's brief as follows:

> "2. Whether the Interstate Commerce Commission may lawfully sanction a high additional charge for switching service in respect of a single commodity to a particular sidetrack which service it asserts would lead to interference with and disruption of terminal transportation operations, where it refrains from prohibiting such switching service altogether, where it cancels as 'not just and reasonable' a proposal by a carrier to exempt that particular commodity from transportation altogether and where it permits the identical service by the same carrier without such additional switching charge in respect of the same commodity consigned to a stockyards on the same line of railroad a few city blocks distant from the same sidetrack."

A careful reading of the text shows that the essential question posed by this argumentative statement is the question whether the Commission may find lawful, and forbid the cancellation of a long existing rate basis, and yet refuse to establish a *lower rate* basis for the same service on the grounds that the nature of the service, the operating conditions under which it must be performed, and the effect

of the proposed rate on the carriers, the public, and other shippers are such that a lower joint rate is not "necessary or desirable in the public interest."

It is claimed that when the packers induced the Commission not to permit the cancellation of the rate the Commission was somehow trapped, that it lost its power to pass upon the issues raised by Swift's complaint and had no alternative but to establish the lower rate sought by Swift. The argument, in effect, is that the Commission thus recognized it to be physically possible to set a car of livestock at Swift's proposed facility, and, therefore, that the administrative body was forced by some automatic compulsion to substitute for the approved rate the lower rate for that service which is sought by Swift, and to do so notwithstanding any other considerations whatsoever. Swift is obliged to try to give the case this strange twist because it cannot deal with the facts which underlie the Commission's determination.

In its appraisal of the demands made by Swift the Commission considered and weighed not only the special services and preferred treatment which the livestock would require in the Ashland Avenue Yards because of its highly perishable character and the speed with which it must be handled, but also the interferences, delays and disruptions which that service would necessarily impose upon the whole terminal operation in the stockyards area. The request was that joint rates, not in excess of the line-haul rates to Chicago, be established for application to deliveries of livestock at Swift's proposed receiving pens. Under the terms of the Interstate Commerce Act it thus became necessary for the Commission to determine whether the proposed joint rates would be necessary or desirable in the public interest. (49 U. S. C. Sec. 15(3)) The manner in which the proposed delivery would affect

the numerous other interests served by the Junction and the line-haul carriers was therefore a matter of major importance in the proceeding before the Commission, and in its findings, the Commission accorded proper weight to that factor.

In addition to the plain mandate of the statute, this Court, in the previous attempts by Swift and Armour to compel the carriers to effect a "readjustment of their rate schedules" on livestock (312 U. S. 195 at 201), made it altogether clear that the interests of other shippers and receivers of freight cannot be disregarded. As the Court stated; "*the Commission was justified in considering, as it did, all that would account for the evolution of the practice complained of, as well as the effect of existing and proposed practices on the interest of the carriers, the public and other shippers. Adams* v. *Mills, supra,* at 409, *et seq.; Atchison, T. & S. F. Ry. Co.* v. *United States,* 295 U. S. at 198, *et seq.; Armour & Co.* v. *Alton R. Co., supra,* at 201. *Neither the railroads nor the Stock Yards exist for the benefit of the packers alone. Their patronage is large and important, but neither in the regulation of the carriers nor in the regulation of the Stock Yards are they entitled to facilities or treatment that will ignore the existence of other interests.*" (316 U. S. at 226-27, italics added). The Commission did not ignore the existence of other interests and its finding that delivery of livestock to Swift's private tracks at the flat line-haul rates would adversely affect those interests is overwhelmingly supported by the undisputed evidence discussed above. (R. 77, 81)

The record before the Commission also shows, and the Commission found, that the Junction has never been called upon to make private track deliveries of livestock to any of the Chicago packers. (R. 60) Swift and the other packers had elected in return for a large participation in the

profits of the Yard Company to receive their livestock only at the public yards "so long as the yard company maintained its business in Chicago." (316 U. S. 216 at 228-30) Entirely apart from that fact, however, delivery of the stock at the public yards was faster, more efficient and economical and therefore took a lower rate. As the Commission pointed out in *Chicago Livestock Exchange* v. *A. T. & S. F. Ry. Co.*, 197 I. C. C. 463:

> "Centralized delivery has been found to be advantageous to both the carriers and the livestock industry." (p. 466)

Consequently, the Commission's finding that the published switching charge was not unreasonable or otherwise unlawful is not at all inconsistent with its failure to permit the cancellation of the rate over the protest of the packers. In its report, the Commission stated:

> "The published switching charge is appropriate for any switching that may occur of cars of livestock to complainant's proposed plant. It does not appear that the maintenance of a switching charge for livestock will have any detrimental effect upon terminal operations." (R. 80-81)

This finding is a recognition of the undisputed fact that the Junction's switching charge for private track delivery of livestock has never been used.

As Swift states (Brief, p. 11) it has for some years received its direct shipments of livestock at the Omaha plant pens outside of the stockyards area. Since the flat line-haul rates apply to such deliveries, Swift considers this method of delivery preferable to receipt at the public yards or at its plant in the stockyards area. But the fact that Swift prefers to take its directs at the Omaha plant pens does not in any manner impinge upon the lawfulness of the charge applicable to the delivery of its directs at its plant

in the stockyards area or convert that charge into a "penalty." We doubt that it would be possible to add anything to Swift's own defense of this difference in the two charges as stated in its brief in the *Hygrade* case where it was specifically involved. (Appendix A)

The result of the Commission's decision, therefore, is to leave in effect a rate basis which the evidence shows, and the Commission found, to be lawful and proper in all respects, but because there are alternative and more attractive facilities available to the packers for the receipt of their direct shipments, it is also a rate basis that will not be used, in all probability, except, as in the past, in case of emergency. Swift's argument that the Commission's decision makes "neither good sense nor good law" (Brief, p. 59) is thus predicated on the unreal assumption that the packers will now utilize a rate basis which has been in existence for generations but which they have never before utilized. The Commission found to the contrary and the evidence of record sustains that finding. (R. 60) Furthermore, the assertion of an inconsistency between the Commission's findings in the I. & S. proceeding and its findings with respect to Swift's complaint presents matters which this Court has repeatedly held to be outside the scope of judicial review. In *Western Chemical Co.* v. *United States*, 271 U. S. 268, Mr. Justice Brandeis, on behalf of a unanimous Court, stated:

> "The objections presented here in brief and argument were addressed mainly to the soundness of the reasoning by which the Commission reached its conclusions. *It was urged that these are inconsistent with conclusions reached by it in similar cases; that the findings are inconsistent with some views expressed in its report in this proceeding;* that some evidence was improperly considered; and that inferences drawn from

some of the evidence were unwarranted. *These objections we have no occasion to discuss. The determination whether a rate is unreasonable or discriminatory is a question on which the finding of the Commission is conclusive if supported by substantial evidence, unless there was some irregularity in the proceeding or some error in the application of the rules of law.*" (p. 271, italics added)

See also *Georgia Comm.* v. *United States*, 283 U. S. 765 at 775 and *St. Joseph Stock Yards Co.* v. *United States*, 298 U. S. 38 at 75-76 (concurring opinion by Mr. Justice Brandeis).

It should also be noted that Swift's brief in the *Hygrade* case stressed the "demoralizing" effect upon transportation in and about the stockyards area that would result from plant door delivery to the Hygrade plant as a particularly persuasive reason why the Commission should sustain the switching charge. (Appendix A, pp. 47, 48-52) Consideration of those same factors in this case and the same result as Swift urged in the *Hygrade* case is now said to be "neither good sense nor good law." (Brief, p. 59)

In support of its argument with respect to Sections 3(1) and 2 of the Act, Swift pretends to rely upon a comparison between the charges applicable to dead freight delivered by the Junction, livestock delivered at the Union Stock Yards by the line-haul carriers, and the charges which would apply to the delivery service sought by it.[1] (Brief, pp. 63-80) As the evidence shows, and the Commission found, the measure of service rendered shipments of livestock is

[1] Although Swift purports to rely on Secs. 1(9), 1(10), 1(11), 2, and 15(5), its complaint before the Commission did not raise those issues, and they cannot, therefore, be raised here. *United States* v. *Capitol Transit Co.*, 338 U. S. 286 at 291; *United States* v. *Baltimore & Ohio R. Co.*, 231 U. S. 274 at 297-98; *Oregon R. & N. Co.* v. *Fairchild*, 224 U. S. 510 at 526.

substantially greater than that accorded dead freight. (R. 65) Swift's acknowledgment of this indisputable fact in its brief in the *Hygrade* case was as follows:

> "Necessarily, any system of transportation which has been evolved for the handling of livestock into and out of a market such as the Chicago live stock market, including the packing companies which are adjacent to and form a part of said market, must be so constructed as to furnish the type of service demanded by probably the most perishable type of traffic handled by the railroads." (Appendix A, p. 35)

This Court has recognized the vital dissimilarities between the transportation characteristics of dead freight and livestock and the substantially higher degree of service which must be accorded the latter. In the prior *Swift* case, the Court stated:

> "This transportation is of a special kind of property on the hoof, which calls for special handling in the interests of economy, safety, sanitation, and health." (316 U. S. 216 at 227)

The "special handling" which the proposed operation would entail is fully apparent from the fact that livestock on short time would have to be received, classified and "dug out" from between cars of dead freight, constantly flowing into the Yards, which now require over 31 hours for delivery through the Ashland Avenue Yards under the present terminal practice unimpeded by the presence of "a special kind of property on the hoof." (R. 74)

Swift insists that it is discriminated against if livestock is denied what it calls "equal treatment" (Brief, p. 76) in the Ashland Avenue yards, knowing perfectly well that the perishable nature of that traffic, the expedited service which it requires, and the mandate of the 28-hour law, would force the carriers to accord that commodity not

equal service, but preferred service, and to do so at the sacrifice of all other traffic in the terminal. In every metropolitan area there are terminal facilities which, like the public stock yards,[1] are designed for the handling of a particular type of traffic. In Chicago, for example, there are special facilities for the unloading of ore, automobiles, fresh produce, coal, express matter, LCL and other commodities. Ore cannot be given what Swift calls equal treatment in the stock yards, or coal at the automobile docks, or LCL in the produce terminal, but such special facilities available only for the commodities for which they are designed are recognized to serve the public interest and have never been deemed discriminatory because the governing conditions are essentially different.

The Commission also found that the line-haul rates on livestock, prescribed by it, were not intended to compensate the carriers for the type of delivery sought by Swift (R. 60, 78-9) and the cost studies introduced by the carriers show that the terminal allowance included in those rates would be wholly inadequate for delivery of livestock by the Junction. (Exs. 50-52, R. 952-70, 1856-67) Livestock delivered to the Union Stock Yards is not handled by the Junction, and therefore does not require the difficult and costly service that deliveries to Swift's private track would entail. We have described in detail, as does the Commission in its report, the operation which would be necessary in working Swift's livestock through the Junction's Ashland Avenue Yards after delivery by the line-haul carriers to that road. That operation, in its entirety, is foreign to deliveries at the Union Stock Yards. With regard to the contention that deliveries to the Union Stock Yards were accorded preferred treatment, the Commission found:

"The transportation services, conditions, and cir-

[1] This Court stated in *Adams* v. *Mills*, 286 U. S. 397: "That the yards are in effect, terminals of the railroads is clear. They are in effect used as terminals and necessarily so" (p. 409).

cumstances connected with deliveries by the line-haul carriers at the unloading chutes of the Union Stock Yards, as hereinbefore described, also are substantially dissimilar from the private track delivery sought." (R. 78)

This finding is abundantly supported by the evidence of record and it destroys any pretended reliance upon a comparison between the charges applicable to deliveries at the Union Stock Yards and deliveries of livestock at Swift's private track.

Swift's attempt to support its assertion of a violation of Sections 3(1) and 2 by reference to the charges applicable to delivery at the Union Stock Yards produces certain statements which fully demonstrate the difficulties under which it labors. The first such statement which we desire to call the Court's attention to is as follows:

"Moreover, and this is of the essence here, at least 37% of the livestock consigned to the Union Stock Yards *arrives there* in consolidated trains (*i. e.*, intermingled with dead freight), so that switching and 'set outs' are necessary to get that livestock to the Union Stock Yards. See 274 I. C. C. at 561-562. Yet neither the Union Stock Yards nor their consignees are subjected to the $39.24 a car switching charge in respect of that 37% so switched." (Memorandum for Appellant in Opposition to the Motions to Affirm, p. 6, italics added)

This representation, made in substantially the same form throughout Swift's brief (pp. 38, 40, 55, 65, 71), is contrary to the facts. In the first place, livestock does not arrive at the Union Stock Yards in consolidated trains. The consolidated trains to which Swift refers consist of dead freight and livestock which are not "intermingled", the

dead freight being grouped behind the engine while the livestock makes up the rear part of the train. (R. 487) The livestock is left standing on the running track, the dead freight is cut off from the train and placed in the Ashland Avenue Yards. The engine thereafter returns to the running track, couples onto the livestock, and proceeds to the public yards. (R. 487-89) The train which arrives at the Union Stock Yards does not therefore contain cars of dead freight. Those cars are set out at the Junction's yards. Furthermore, that operation does not in any degree involve the switching or setting out of livestock as Swift asserts. It is the dead freight and not the livestock that is set out at the Ashland Avenue Yards. As stated by the Commission at the pages referred to by Swift in the above quote:

> "In a consolidated train the dead freight is on the head and behind the engine. The cars of livestock are cut off and left standing at the eastern end of the eastbound running track while the line-haul carrier's engine sets the dead freight on one of the nine receiving tracks in the south yard. This operation blocks the running track until the engine returns and hauls the livestock into the Union Stock Yards." (R. 63)

In short, the livestock now carried in consolidated trains does not receive any switching service by reason of its inclusion in such trains. So far as the handling of the livestock is concerned, the movement is precisely the same as that involved in exclusive livestock trains except that the livestock cars stand on the running track while the dead freight is being interchanged with the Junction in its Ashland Avenue Yards.

Immediately following the matter quoted above, Swift states:

> "Furthermore, considerable switching of livestock takes place earlier, since—*although the Commission*

> *significantly fails to advert thereto*—it is the fact that even the trains destined to the Union Stock Yards which consist of livestock exclusively are made up at the several line-haul carriers' break-up yards from mixed trains arriving at Chicago." (Memorandum For Appellant In Opposition To The Motions To Affirm, pp. 6-7, Brief, p. 65, italics added)

In connection with the italicized portion of the above statement, we quote from the Commission's report as follows:

> "The following operation over the Chicago, Rock Island & Pacific Railway Company, hereinafter called the Rock Island, is typical of the operation over other line-haul carriers entering the stockyards area from the east. Consolidated trains containing livestock and dead freight, arrive at that carrier's Burr Oak Yard, 14 miles from the Ashland Avenue yards. At Burr Oak yard, the cars of livestock and dead freight are separated, and cars of livestock consigned to the Union Stock Yards are hauled directly to the latter yards by a Rock Island switch engine without passing through the Ashland Avenue yards." (R. 70)

The Commission did not fail to "advert" to the fact that livestock arrives at the carriers' outer yards in trains containing livestock and dead freight, and it described fully the process by which livestock is separated from the dead freight and made up into trains for movement to the Union Stock Yards. What Swift fails to point out, however, is the fact that that operation is performed with respect to all livestock regardless of whether it moves to the public yards or to Swift's Omaha plant pens, and the same operation would be necessary in connection with delivery to Swift's proposed plant. That service is a recognized part of the line-haul movement. It does not even remotely resemble the "very expensive, very difficult" and "impossi-

ble" (Appendix A, pp. 47, 50) delivery service which Swift seeks in this proceeding.

An additional statement, cut from the same cloth as those noted above, is the assertion that delivery to Swift's proposed stockyards is "the identical service by the same carrier" as that involved in delivering livestock to the Union Stock Yards. (Brief, p. 2) Swift thus represents to the Court that delivery to its proposed plant by the Junction through the Ashland Avenue yards is the "identical service by the same carrier" as the delivery made by the line-haul carriers directly to the public yards without interchanging that traffic with the Junction.

The evidence in this case, discussed above and in the Commission's report, establishes clearly and without contradiction the utter dissimilarity between the two, and we respectfully submit that the statement referred to is entirely unjustified and contrary to the facts.

Swift's claim of a violation of Section 2 (Brief, 69-80) is predicated wholly on the fact that the Junction's switching charge does not apply to deliveries at the public yard by the line-haul carriers while it does apply to livestock funneled through the Junction's Ashland Avenue Yards and delivered by that terminal road. The short answer to this is the following finding by the Commission:

> "The transportation services, conditions, and circumstances connected with deliveries by the line-haul carriers at the unloading chutes of the Union Stock Yards, as hereinbefore described, also are substantially dissimilar from the private track delivery sought." (R. 78)

Nowhere in its discussion of Section 2 (Brief, pp. 69-80) does Swift specifically refer to this finding which completely defeats its claim. It should also be noted that the applicable rates to the Union Stock Yards apply equally

to all shippers of livestock including Swift and its competitors, and the Junction's switching charge also applies to all private track deliveries of livestock by it, including deliveries to Swift and its competitors. Swift's complaint is not that its competitors utilize a rate basis inapplicable to it but that the Commission refused to accord it a rate basis that is not available to its competitors. As stated by the Commission in *Richfield Oil Corp.* v. *Central R. Co. of N. J.*, 232 I. C. C. 505, in connection with a similar claim:

> "Complainant has not shown or contended that it could not have shipped over the routes accorded the 19-cent rate. A showing of inequality between shippers over the same line is necessary to prove discrimination." (p. 505)

It would seem elementary that there can be no inequality between shippers when the rate complained of is equally available to all shippers as it is here. *Philadelphia Commercial Traffic Mgrs.* v. *B. & O. R. Co.*, 104 I. C. C. 173 at 177; *American Warehousemen's Assn.* v. *Inland Waterways Corp.*, 188 I. C. C. 13 at 17. In other words, Swift's claim of discrimination is based upon a situation in which there is a precise equality in the rates available to Swift and its competitors.

So far as the claim of a violation of Section 1(9) is concerned, that issue, as we have pointed out above, was not raised by Swift in its complaint before the Commission and is therefore not present here. *United States* v. *Capitol Transit Co.*, 338 U. S. 286 at 291; *United States* v. *B. & O. R. Co.*, 231 U. S. 274 at 297-98; *Oregon R. & N. Co.* v. *Fairchild*, 224 U. S. 510 at 526. Furthermore the record shows and Swift admits that the switch connection required by that section is constructed, maintained and operated. It is the *measure* of the published charges for delivery of livestock via that switching connection

of which Swift complains. As Swift recognized in its complaint before the Commission, that matter is governed by other provisions of the Act, and the Commission found that the present charge complies with each of those provisions cited and relied upon by Swift at the time that it invoked the Commission's jurisdiction. (R. pp. 53-54)

As authority for its demands in this proceeding and in support of practically every argument made by it, Swift cites *United States* v. *Baltimore & O. R. Co.*, 333 U. S. 169, in which this Court upheld the action of the Commission.

In that case (hereinafter sometimes referred to as the *Cleveland case*) the carriers serving Swift's plant at Cleveland, had for many years delivered livestock at Swift's private track at the flat line-haul rates and the same service had been accorded other packers at Cleveland. *Swift & Co.* v. *Baltimore & O. R. Co.*, 266 I. C. C. 55 at 58. As the Commission pointed out, that had been the practice at Cleveland since 1910. (266 I. C. C. at 59) These deliveries of livestock were made by the line-haul carriers in the same manner as livestock is presently delivered to Swift at its Omaha plant pens in Chicago. In Chicago, livestock deliveries to the packers at their plants in the stockyards area would have to be funneled through the Junction's yards for delivery by that terminal carrier. Such deliveries have never been attempted by that road, and as the Commission found, the line-haul rates to Chicago prescribed by it, do not encompass that type of service. (R. 79)

In 1935, the stock yards, which owned a segment of the track used to make deliveries of livestock at Swift's Cleveland plant, demanded a payment equal to its yardage charges on each car of livestock delivered to Swift. The carriers refused to pay this charge and consequently discontinued deliveries of livestock to Swift's plant. (333

U. S. at 173-74) At the same time, however, the carriers *continued to deliver livestock to Swift's competitors in Cleveland* whose plants were served without use of the track owned by the stock yards. (333 U. S. at 174-75) In other words, Swift at Cleveland was seeking a continuation of the service which had been accorded that company for many years and was currently accorded other packers; in fact, the New York Central's tariff continued to provide for such deliveries to Swift at the flat line-haul rates. (333 U. S. at 174)

The situation at Chicago is the precise reverse of that which existed at Cleveland. At Chicago, it is Swift which seeks a type of delivery service which is different from the long custom and usage in Chicago, and is not accorded any other Chicago packer. Here Swift contends that the Commission erred in considering the rights of the other Chicago packers to demand the same privileges which might be granted to Swift.

With respect to deliveries of livestock to Swift's competitors at Cleveland whose plants were reached without the use of track owned by the Stock Yards, the Commission found that the transportation services, circumstances and conditions were substantially the same as those involved in making deliveries to Swift. (266 I. C. C. 55 at 68) In the present case, the Commission found that deliveries of livestock at points which take the line-haul rates to Chicago (deliveries to the public yard, and to Swift's Omaha plant) were substantially dissimilar from those involved in making delivery to Swift's proposed facility. The sole issue involved in the Cleveland case was defined by this Court on appeal as follows:

> "Ownership of track 1619 by Stock Yards and its objection to livestock deliveries is, in fact, the only reason suggested for the railroads' failure to deliver

> shipments of livestock to Swift *as they do to neighboring packers*, and for their failure to provide switching connections for livestock shipments." (333 U. S. at 175)[1]

The Commission thus held that since the New York Central's tariff provided for delivery of livestock to Swift at the line-haul rates, a charge which Swift was ready and willing to pay, Swift was entitled to that service. This Court affirmed the Commission's decision.

In the present case, Swift is unwilling to pay the published charges for the delivery which it seeks, and asks instead, for a rate basis that is conclusively shown to be noncompensatory with respect to such delivery service to Swift's proposed facility. This record thus presents no issue which is even remotely similar to that presented by the Cleveland case.

In the Cleveland case the Commission refused to permit the Stock Yards Company to destroy the historic custom of delivering livestock at that point and this Court sustained its action; in this proceeding, the Commission sustained the long existing terminal custom at Chicago. The decision in the Cleveland case does not impeach, but sustains the Commission's action here.

The argument which appears at pages 90-104 of its brief reflects Swift's position that in its rate determinations the Commission may not consider the physical conditions under which the traffic moves and the consequent operations which the carriers must perform in according the service which the rate covers. In its report, the Commission referred to and considered the congested conditions

[1] Swift pretends to challenge the statement that, in the *Cleveland* case, "the defendant carriers continued to perform that service for appellant's competitors while refusing it to appellant." (Brief, p. 87, footnote 12.) We respectfully refer the Court to the italicized portion of its decision in that case.

in the Junction's Ashland Avenue Yards and the stockyards area in general, and necessarily so. It is in that area and through those yards that Swift seeks private track delivery of its livestock and the physical circumstances under which such traffic would move is, therefore, of vital importance.

Operating conditions encountered in the movement of the traffic involved are always considered by the Commission in determining the lawfulness of the transportation charges applicable thereto and necessarily so. Congestion and other like factors affecting the character of the service and the measure of the rates necessary to compensate therefor have been considered in countless cases. *St. Louis Chamber of Commerce* v. *B. & O. R. R. Co.*, 57 I. C. C. 639 at 646; *Illinois Brick Co.* v. *Director General*, 73 I. C. C. 215 at 217; *Illinois Brick Co.* v. *Director General*, 102 I. C. C. 64 at 66; *Mississippi Valley Iron Co.* v. *C. & N. W. Ry. Co.*, 104 I. C. C. 243 at 245-46; *Carload Traffic In Chicago District*, 174 I. C. C. 111 at 116; *Sonken-Galamba Corp.* v. *Chicago & A. R. Co.*, 181 I. C. C. 229 at 247; *Switching Fruits and Vegetables at Baltimore, Md.*, 201 I. C. C. 689 at 695 and 697. It would be novel indeed, if the Commission were required to appraise the lawfulness of the charges for a particular movement without regard to the physical conditions under which the service is performed. If the Commission were to ignore, as Swift suggests, the congested traffic in and around the Ashland Avenue Yards, it would accord no weight to the fact that the receiving and classification tracks in those yards are used to capacity for dead freight, that any livestock moving through those yards must be received and classified on those same tracks, that that short time livestock would be mixed in with cars of dead freight that now require more than 31 hours for the movement through those yards and would have to be "dug out" for special treatment, that the entire switching operation in those yards would be revolutionized

and that the effort to deliver this livestock would preclude proper service to the dead freight and producers' stock. All of these facts derive wholly or in part from the extreme congestion in and around the Ashland Avenue Yards, and it is not possible to appreciate the service demanded by Swift without reference to that vital operating condition.

The suggestion that the Commission's report has the effect of assessing "the entire cost of the congestion" against livestock is wholly untenable. (Brief, p. 93) In its report the Commission considered in detail the services that Swift's livestock would require in a movement through the Ashland Avenue Yards and it is those "very expensive, very difficult" and "impossible" services (Swift's Brief in the *Hygrade* case, Appendix A, pp. 47, 50) that justify the Junction's switching charge in all respects. What Swift proposes is that the cost of that service, peculiar to livestock, should be assessed against the shippers of dead freight.

With respect to the Commission's finding that any attempt to receive, classify and deliver Swift's livestock through the congested Ashland Avenue Yards would considerably delay and burden defendants' operations, Swift asserts that this is "an amazing conclusion which necessarily generates disbelief even on its face." (Brief, p. 100) It is said that 20 cars of livestock per day could not possibly have that effect. We respectfully refer the Court to our previous discussion of the evidence which shows in detail the disastrous consequences of any attempt to funnel livestock on short time through the overcrowded Ashland Avenue Yards. (*Supra*, pp. 54 to 64) As we have pointed out Swift did not undertake to question this evidence in any manner and it abundantly supports the Commission's findings. In this connection, the record in the *Hygrade* case shows that the volume of direct shipments to Swift's

competitor was less than one-half of the present volume of Swift's directs. (I. C. C. Docket No. 24375, Ex. 24) In that case, Swift advised the Commission as follows:

> "In this connection the complainant [Hygrade Company] may state that its business is so small as to make no particular effect upon the method of handling livestock into the Chicago livestock market. It is doubtful if this is true * * *." (Appendix A, p. 36)

In other words, the effect of intermingling any livestock in those congested yards would be so drastic if the stock were to be protected from injury and yet handled with the necessary speed that less than ten carloads per day would, Swift asserted, "absolutely demoralize transportation in or about the stockyards." (Appendix A, p. 48) But the Commission's finding that Swift's much larger volume would have that same effect "generates disbelief even on its face."

Swift argues that private track delivery by the Junction of the direct shipments of livestock consigned to Swift and the other Chicago packers would not disrupt and interfere with terminal operations in the stockyards area because there have been periods in the past when the movement of livestock to the public yards exceeded the present volume of that traffic. (Brief, p. 100) As the Commission stated in its report (R. 71), there were fewer cars of livestock going to the Union Stock Yards at the time of the hearing than there were at certain periods in the past, but the fact Swift ignores is that that livestock is not and never has been handled by the Junction. The livestock consigned to the Union Stock Yards moves from the outer yards of the line-haul carriers directly to the unloading chutes at the public yards over the Junction's main running track, and it is not funneled through the Junction's receiving and classification facilities. (R. 493) On the

other hand, delivery to Swift's proposed facility would involve receipt, classification and delivery by the Junction through its Ashland Avenue Yards, and it is that feature of the delivery service sought by Swift that would interfere with, and disrupt the terminal operations of the Junction and all other carriers operating in the stockyards area. In this connection the significant fact is that the traffic handled by the Junction in its Ashland Avenue Yards, the same yards through which Swift proposes to move its livestock, has increased tremendously. (R. 501, 950) The record in this case shows that during the years 1945, 1946 and 1947, the Junction handled through its Ashland Avenue Yards, an average of 726,144 cars, loads and empties (R. 465), and that there are 499 industries served solely by that road. (R. 443) In 1922, at the time of its report in the *Chicago Junction Case, supra*, the Commission stated:

> "Besides serving the stockyards and Packingtown, the Junction performs terminal service for all the carriers in reaching the Central Manufacturing district, which as an institution has been in existence for about 15 years and has 180 industries, producing a tonnage of over 100,000 carloads per year and 100,000 tons per year of less-than-carload freight." (71 I. C. C. 631 at 633)

It is thus obvious that during the years in which there has been a decline in the movement of livestock to the public yards, the volume of traffic moving through the Ashland Avenue Yards and handled by the Junction has multiplied, and it is through those congested yards that Swift proposes to funnel its livestock. What Swift suggests is that the substantial flow of livestock which remains should be taken off the running track over which the traffic has declined and turned into the already saturated Ashland Avenue Yards

laboring under a greatly increased burden of traffic. In its report, the Commission noted the same spurious argument advanced by Swift, stating:

> "Complainant contends that any disruption of operations would be the result of inefficiency, and that this is indicated by the fact that in the past there were times when the movement of livestock to the stockyards was much greater than the present movement. There can be longer trains and greater movements of livestock by the line-haul carriers to the stockyards, but the conclusion is warranted that a substantial movement of livestock by the Junction would adversely affect efficient and expeditious terminal operations generally and that operations would be disrupted if much of the large movement of livestock to the stockyards area and the return movement of the empty cars, were performed by the Junction." (R. 71)

Confronted with overwhelming proof that a complete breakdown in the terminal service in the stockyards area would attend its proposal, Swift now purports to state advice as to the manner in which these terminal operations should be conducted. (Brief, pp. 106-17) Swift has a number of employees in its operating department, sometimes called yardmasters (R. 1034), whose duties have to do with the handling of Swift's traffic in the Ashland Avenue Yards. In that work, they are "associated with the Chicago Junction" (R. 1034) and they spend their entire time in that yard. Although the hearing was held in Chicago and there was every opportunity to offer rebuttal, Swift found it impossible to call any of those men as witnesses, or otherwise to offer testimony that its proposal is practical or even possible. As shown by its brief in the *Hygrade* case, Swift recognizes that its proposed operation is a practical impossibility. (Appendix A, pp. 45-52) In

view of the proof and its own admission that an effort to deliver direct shipments of livestock to private yards would be disastrous to every interest involved, Swift now finds it necessary to attack the Junction's efficiency.

The best possible proof of the efficiency of that road is that it is actually doing its real job effectively and to the satisfaction of those who have always depended upon it for service. In a greatly restricted space in a densely developed district, it has successfully handled the increasing business that has come to it through an intensification of the industrial activity in that area. Swift's complaint is that the Junction is not able to supply an entirely new and different service which the developments of eighty years, in which Swift played a major role, have made it impossible to render. Swift fully appreciated this at the time that it opposed the Hygrade Company's request for plant door delivery of livestock by the Junction, stating: "All of the railroad facilities in and about the stock yards have been constructed to conform with the practice of delivering all incoming live stock direct to the loading and unloading chutes of the Union Stock Yards and Transit Company." (Appendix A, pp. 48-49) Notwithstanding the long custom and usage under which the Junction has never been called upon to handle livestock, and the conditions which have come into existence, in conformity with and as a result of that fact, Swift argues that the Junction's inability now to change those immutable physical conditions is evidence of its inefficiency.

This assertion of inefficiency is predicated in part on a claim that the Junction's motive power is inadequate, which is based entirely upon a count of the engines on the Junction. It completely ignores the fact that many of the units in service in 1948 were capable of a much higher tractive effort than those in service in 1922 and that the units disposed of since

1922 were replaced by engines that are more efficient and better suited to the operating needs of the Junction. (Ex. 58, R. 1963-65) In other words, the changes made in the type and quality of locomotives coupled with the revised operating practices described in exhibit 58 (R. 1963-65) have produced a substantial increase in the operating efficiency of the Junction. So far as the decrease in the number of locomotives is concerned, that same trend has characterized the transition from steam to diesel power on all of the rail carriers. Diesel power has enabled the carriers to reduce the number of units owned by them, and at the same time it has improved their ability to meet their line-haul and switching requirements. With respect to this same period of time, statistics published by the Commission show that the number of locomotives owned by all of the roads has declined from 69,414 in 1923 to 44,474 in 1948. (Thirty-Seventh Annual Report on the Statistics of Railways in the United States, 1923, p. XVI; Sixty-Second Annual Report on the Statistics of Railways in the United States, 1948, p. 14) Figures for the same two years with respect to the Junction are 77 and 47. (Ex. 58, R. 1963-65) The percentage decrease on the Junction is therefore approximately the same as that on the roads as a whole. Furthermore, the same statistics show that all of the railroads owned a total of 8,981 diesels in 1948, constituting twenty percent of the total while the Junction's diesels in that same year (12) amounted to more than twenty-five percent of the total number of locomotives (47) operated by it. (R. 466) Swift's preoccupation with numbers is, therefore, utterly meaningless.

The nature of Swift's efforts to support its claim of inadequate motive power is adequately characterized by the following statement:

"For the Superintendent of the Chicago Junction

testified that that carrier did not have sufficient *engines* to take care of all of the industrial placement of cars (Tr. 422)," (Memorandum for Appellant in Opposition to the Motion to Affirm, p. 8, Brief, p. 107, italics added)

The testimony thus referred to is as follows:

"Q. Have you sufficient *Diesels* to take care of all of the industrial placement of cars?

"A. No, sir, no, sir, we have not." (R. 524)

The statement that the Junction does not have a sufficient number of *diesels* to do all of its industrial placement work is thus converted into an assertion that that road does not have sufficient *engines* to perform that service. As the record shows, there are 24 steam locomotives, in addition to the 12 diesels, that are suitable for and are used in the industrial placement of cars. (R. 466-67)

Despite the enormous increase in traffic moving through its Ashland Avenue Yards, the Junction has handled and continues to handle that traffic as promptly and expeditiously as possible. As stated by witness Kinsella, Superintendent of the Junction, in response to interrogation by Swift's counsel:

"Q. But granting that that is true the inability to handle it as promptly as you might desire would be due either to lack of motive power or lack of tracks or both?

"A. I don't quite understand your question. *We are handling it now.*" (R. 526)

The Junction has not, however, undertaken to acquire and maintain, on a standby basis and subject always to Swift's command, the facilities that would be required to effect plant door delivery of livestock to the packers in the stockyards area. Throughout the period of intensive in-

dustrial development in that area, the packers chose to enrich themselves by becoming partners in the public yards and insisted with that purpose in view that livestock be delivered in this area only at that point. As a result, the entire development of the transportation and industrial facilities in the stockyards area has been geared to the long established and customary practice of delivering livestock at the public yards and interchanging dead freight with the Junction for delivery to the various industries. As early as 1922, the Commission recognized and Swift, a party to the proceeding, conceded that livestock could not be handled in any other way:

> "The movement of livestock in and out of the Junction yards is essentially different from the method of handling dead freight, in that each carrier moves its trains to the unloading chutes with its own power, and goes into the pens for outbound stock destined for its own line. All parties concede that that is the only practical method of handling that traffic." (*Chicago Junction Case,* 71 I. C. C. 631 at 633)

The Junction's facilities have developed in conformity with those historical facts, and it has not been possible to reserve, subject to Swift's call, the terminal facilities required to meet that packer's present demands.

Swift refers to an agreement made to avert a threatened strike by the Junction's employees as one which "a carrier chooses to sign." (Brief, p. 111) It does not require a long memory to recall that Swift's management has recently entered into agreements with its organized employees which its executives probably do not regard as altogether a matter of choice. Swift may not like the Junction's agreement with its employees or, for that matter, its own, but what conceivable action the Commission should or could take with reference thereto is not explained. Practically

every operating practice in the railroad industry is governed by agreements between the roads and their employees negotiated and arrived at pursuant to the provisions of the Railway Labor Act. Followed to its logical conclusion, Swift's argument that operations which conform to collective bargaining agreements must be disregarded would require the Commission to ignore all operating conditions and circumstances and to pass upon the lawfulness of rates without the slightest consideration of the transportation services actually involved.

Still struggling against the undisputed evidence which shows that the proposed operation cannot be performed, Swift finds it necessary to inveigh against the fact that trains handling both livestock for the public yards and ordinary freight for interchange with the Junction in its Ashland Avenue Yards cannot take the entire train into the unloading chutes at the public yards. (Brief, p. 112) Swift offers no suggestion as to what would be done with the dead freight in the public stock yards while the livestock was being unloaded and of course there is no place at that livestock terminal for the storage of dead freight.

In its Exceptions to the Examiner's Proposed Report, Swift advised the Commission that the "operations on the Junction could be improved" by requiring the line-haul carriers to interchange all freight with the Junction in its Ashland Avenue Yards, including all the packers' directs (37,500 loads, 75,000 loads and empties) and the producers' stock (46,000 loads, 92,000 loads and empties). (Swift's Exceptions to the Examiner's Proposed Report, pp. 120-121) In short it was suggested that the way to fix the Junction so that it could handle the great volume of direct shipments of livestock was to double the burden by adding thereto all the producers' stock consigned to the public yards. Swift thus proposed that the line-haul carriers should be barred from operating over the Junction's tracks (including running

track 1103) except for the purpose of interchanging traffic with that switching line in its Ashland Avenue Yards. This matter has apparently been given some further consideration and the opinion now offered is exactly the reverse of that tendered to the Commission. It is now suggested that the Commission should have required the Junction to accord trackage rights to its 27 connecting lines and that all deliveries of livestock to the packers on their private tracks should be made by those connecting carriers without interchanging that traffic with the Junction. (Brief, pp. 112-13) In other words, the proper way to relieve the congestion on the Junction's tracks is to multiply by 27 the number of carriers making deliveries to the industries served by the Junction. It would be difficult to decide which of these two contradictory suggestions is the more fantastic.

In connection with what it characterizes as "the heart of the case," Swift argues that the Commission, by its decision, undertook to enforce a covenant between the Union Stock Yards and the New York Central, which purportedly requires operation of the Junction in such a manner as to accord special advantages to the Union Stock Yards. The agreement to which Swift refers was introduced by its own counsel in the closing minutes of the hearing before the Examiner. (R. 1038-39) It has no relation to the issues raised by the complaint before the Commission and neither the carriers nor any of the other parties who opposed Swift's complaint have at any time sought to justify the charges under attack by reference to that covenant. We respectfully submit that Swift cannot identify a single finding by the Commission which is in any manner dependent upon the covenant to which it refers.

In its report, the Commission considered Swift's own reliance upon the agreement in question and stated:

"The operation of the Chicago Junction is subject

not only to the provisions of the Interstate Commerce Act but also to the conditions imposed by the Commission in the *Chicago Junction Case, supra.*[1] These conditions were particularly intended to insure that the Chicago Junction and Chicago River & Indiana should be operated as neutral terminal carriers, without special advantage favoring the New York Central but the conditions were and are broad enough to inhibit operation of the Chicago Junction to the special advantage and interest of the Union Stock Yards." (R. 80)

It is thus plain that the Commission did not, as Swift charges, undertake to enforce the covenant in question, but instead, held the covenant ineffective insofar as it might be construed to require the Junction to accord special advantage to the Union Stock Yards. Apparently, Swift's position is not that the covenant must be neutralized and held ineffective but on the contrary that it must be construed to require line-haul carriers who were never parties to the covenant to perform a transportation service for Swift at rates substantially less than those found to be reasonable and lawful in every respect.

The letter written by Counsel for the Yard Company to the New York Central and River Road appears to reflect the Yard Company's apprehension that in this case, as in most rate cases brought by large shippers, potential traffic pressure might be brought to bear upon individual carriers in an effort to affect their participation in the defense of the case. Swift conceded at the hearing that prior to the date of this letter the operating officers of the Junction had advised their executives that the Junction could not handle livestock through its Ashland Avenue Yards without completely disrupting the operation of those Yards. (R. 1039)

[1] The Commission retained jurisdiction of that proceeding for the purpose of making such amendments or modifications of its conditions as might become necessary or desirable in the public interest. (71 I. C. C. 631 at 641)

CONCLUSION.

The railroad interveners respectfully pray the Court to affirm the decision of the lower court.

Respectfully submitted,

BEFORE THE

Interstate Commerce Commission

HYGRADE FOOD PRODUCTS CORPORATION vs. ATCHISON, TOPEKA & SANTA FE RAILWAY COMPANY et al.	Docket No. 24375.

BRIEF ON BEHALF OF INTERVENER, OMAHA PACKING COMPANY.

STATEMENT OF THE CASE.

This is an action brought by complainant, a packing company located in the stock yards district of Chicago, Illinois, on the rails of a terminal switching carrier, Chicago Junction Railway Company. The complainant seeks to obtain delivery of incoming live stock at the chutes of the Union Stock Yards & Transit Company at Chicago, without charges other than the through Chicago rate, plus $2.70 per car, and also the receipt of live stock direct at its plant without charges other than the through Chicago rate plus $2.70 per car. In seeking to obtain this relief, complainant contends, first, that the other charges being made for either service are unrea-

sonable and that under section 1, it should be entitled to this relief. It further asserts that because these other charges are being made to complainant, while no charges, other than $2.70 per car, are being made to intervener, a packing plant located two and one-half miles north of the stock yards district, on the rails of the Chicago, Burlington & Quincy Railroad Company, there is a violation of both sections 2 and 3 of the Interstate Commerce Act. Intervener is only interested in the allegations of complainant that any services being rendered for intervener, or any charges in connection therewith, are either discriminatory or prejudicial in connection with services and charges to complainant. Therefore, the following presentation is being made solely with respect to the alleged violations of sections 2 and 3 of the Interstate Commerce Act in so far as they relate to intervener.

ABSTRACT OF EVIDENCE.

TESTIMONY ON BEHALF OF INTERVENER, OMAHA PACKING COMPANY.

W. C. WATSON, a witness called on behalf of intervener, Omaha Packing Company, testified in substance as follows:

He is assistant to the Freight Traffic Manager of Swift and Company and its subsidiaries (309).

Qualifications of Witness.

For twenty-eight years he has been in the Transportation Department of Swift and Company, a greater portion of which time he was assistant to the Freight Traffic Manager and specialized in rates, rules and regulations pertaining to stock yards and the transportation of live stock. Omaha Packing Company is one of the subsidiaries of Swift and Company and all its transportation matters are handled by Swift and Company. Witness particularly looks after matters pertaining to live stock of the Omaha Packing Company.

Location and Character of Business Done by the Omaha Packing Company.

The Omaha Packing Company is a corporation incorporated in the State of Kentucky and operates a packing plant at Chicago, Illinois, slaughtering principally hogs. It is located at 2320 South Halsted Street (310), which is slightly in excess of two miles north of the Union Stock Yards. It is located on the tracks of the Chicago, Burlington & Quincy Railroad Company. It is not

reached by the tracks of the Chicago Junction Railway Company. It is one of the industries of the Chicago, Burlington & Quincy Railroad Company here in Chicago.

Source of Live Stock Shipped to Omaha Packing Company.

The Omaha Packing Company obtains its live stock, and has for a good many years, from direct shipments from various country points, the location of which depends upon the market supply of live stock and other items which normally enter into the purchasing of live stock. It never buys any live stock at the Union Stock Yards (311). In the event it did, it would be necessary to either reload the live stock and switch it to the Omaha Packing Company plant at a charge of 2½ cents per hundred pounds, minimum 60,000 pounds, or virtually $15.00 per car, or drive the live stock approximately two and one-half miles north on Halsted Street to the plant of the Omaha Packing Company. The purchase and loading of live stock into cars would involve a substantial delay. It would probably be an over-night move from the Stock Yards to the plant of the Omaha Packing Company.

Halsted Street, between the plant of the Omaha Packing Company and the Union Stock Yards, is strictly a business thoroughfare upon which there are double street car tracks, and in addition to the street cars, many trucks and automobiles pass along this street. Also, many automobiles and trucks are parked from time to time along the curbs of the street. There are a number of stop and go lights at various corners (312). The character of the adjoining property is strictly business and industrial. The traffic on Halsted Street is very heavy.

Municipal Ordinances of Chicago, Restricting the Driving of Live Stock on Public Streets.

Witness has made an investigation of the city ordinances respecting the driving of live stock in the streets of Chicago. Section 977, of the Revised Code of Chicago —1931, provides:

> "No person or persons shall, between the hours of seven o'clock A. M., and seven o'clock P. M., of each and every day, drive upon or along any public street or alley within the city more than five head of cattle at any one time. Any person who shall violate the provisions of this section shall be fined not less than ten dollars nor more than one hundred dollars for each offense." (313)

Section 3936 of the Revised Code of Chicago—1931 provides:

> "No person having the charge, custody or control thereof shall permit any horse, mule, ass, ox, cow, goat, pig or other like animal to go loose or at large in any of the public ways in the city; and the running at large within the limits of the city, except in inclosed places on private property, of poultry, chickens, hens, turkeys, ducks, geese, and other like fowl is hereby declared to be a common nuisance and the same is hereby prohibited. Any person owning, in charge of, or having the custody or control of such animals or fowls that shall permit the same to run at large contrary to the provisions of this section shall be subject to a fine of not more than ten dollars for each offense." (314)

Irrespective of the question of city ordinances, it would not be a practical proposition to drive live stock two and one-half miles north on Halsted Street to the Omaha Packing Company.

Rail Movement of Live Stock Destined to Omaha Packing Company.

None of the live stock purchased by the Omaha Packing Company, even though not purchased at the Union Stock Yards, moves to the Union Stock Yards. Ship-

ments destined to the Omaha Packing Company are billed direct from either country shippers or its own shippers from stations located on various lines of railroad, including the Chicago, Burlington & Quincy. From stations on all lines other than the Chicago, Burlington & Quincy, the Omaha Packing Company pay a terminal charge of $2.70 as is assessed at the Union Stock Yards. From points on the Chicago, Burlington & Quincy the delivery is made free, the same as is made to all industries located on its rails, and as published in C. B. & Q.—I. C. C. 17660.

The Omaha Packing Company has six switch or spur tracks leading from the main line of the Chicago, Burlington & Quincy. Four of these tracks are used for incoming dead freight and outgoing fresh meat and packing house products. The westerly two tracks are used solely for unloading live stock. Between these tracks is an unloading platform about 11 feet, 8 inches wide, and about 496 feet 6½ inches long. The platform is closed in at the north end and has sides consisting of a series of sliding slatted doors. The platform has room for eleven cars on one side and twelve cars on the other. Because the sides consist of these sliding doors, cars can be spotted at any place on the tracks and an opening made at the door of the car. At the south end of this platform, the Omaha Packing Company maintains a first-class standard live stock scale, quite similar to scales maintained at public stock yards.

When live stock arrives at this unloading platform, it is unloaded by employes of the Omaha Packing Company, driven a short distance to the scale at the south end of this platform, where it is weighed on this scale, owned by the Omaha Packing Company, by an employe of the Omaha Packing Company. A representative of the Western Weighing & Inspection Bureau checks all

weighing done by the Omaha Packing Company. In addition to that, the scale is checked daily by employes of the Omaha Packing Company, and at least twice a year the scale is checked by representatives of the City of Chicago. No notice is given the Omaha Packing Company of the time of these inspections.

The live stock is then driven from the scale to the holding pens owned and maintained by the Omaha Packing Company. The unloading platform is likewise owned and maintained by the Omaha Packing Company (317).

No firm or corporation, including all of the railroads which enter the City of Chicago, the Union Stock Yards and Transit Company of Chicago, or the Chicago Junction Railway Company, furnish any yarding, unloading, weighing, driving or holding of live stock in pens after unloading, in connection with any live stock received by the Omaha Packing Company at its plant other than the Omaha Packing Company itself. There is no service of yarding, unloading, weighing, driving or holding performed even by the Chicago, Burlington & Quincy Railroad Company.

Basis of Freight Rates Paid by Omaha Packing Company.

The basis of the freight rates now paid by the Omaha Packing Company for the receipt of live stock by rail was prescribed by the Interstate Commerce Commission in *Omaha Packing Company* v. *C. M. & St. P. Ry. Co.*, 37 I. C. C. 378, in which the charge of $2.00, in addition to the line-haul rate on live stock to Union Stock Yards, Chicago, Illinois, was prescribed on all shipments of live stock not originating on the lines of the Chicago, Burlington & Quincy Railroad Company. On shipments originating on the Chicago, Burlington & Quincy, the rates prescribed were the line-haul rates to Chicago, Illinois, without the addition of the $2.00 terminal charge.

The subsequent percentage increases and reductions have changed this $2.00 terminal charge to $2.70.

The Omaha Packing Company has been in its present location, to the best of the knowledge of witness, from fifty-five to sixty years which precedes the time when it became a subsidiary of Swift and Company.

Facilities Maintained by the Omaha Packing Company for Holding of Live Stock.

The Omaha Packing Company has forty-seven pens for the holding of live stock. The pen capacity is approximately 8000 head of hogs. The killing capacity of the plant is 4500 hogs per day (318).

Receipt of Direct Shipments by Swift and Company at Union Stock Yards.

Swift and Company receives direct shipments of live stock at the Union Stock Yards in substantial quantities. When it does receive such direct shipments of live stock the service charges, etc., are exactly the same as those which have been described by witnesses for the Hygrade Food Products Corporation. There is no difference in the service charges and the terminal charges.

ARGUMENT.

INTRODUCTION.

The intervener, Omaha Packing Company, is directing its argument solely to the allegations of violations of Sections 2 and 3 of the Interstate Commerce Act, insofar as said allegations affect said intervener. We shall show; first, that the rates and charges in effect on shipments of livestock destined to the plant of the Omaha Packing Company have been fixed by the Commission and are, therefore, both legal and reasonable; second, that because of vastly different circumstances and conditions, no discrimination, prejudice or preference, prohibited by law, exist. Therefore, the Commission should dismiss that part of the complaint based upon alleged violations of Sections 2 and 3 of the Act.

RATES APPLICABLE ON LIVESTOCK TO INTERVENER'S PLANT FIXED BY COMMISSION.

This is not the first time the Commission has had before it the rates on livestock destined to the plant of intervener. In *Omaha Packing Company* v. *C. M. & St. P. Ry. Co.*, 37 I. C. C. 378, a complaint was filed by the Omaha Packing Company attacking the rates being charged it by the carriers on shipments of hogs destined to its plant. At the time the complaint was filed the Milwaukee was absorbing $4.00 of the $6.00 switching charge of the Burlington, on whose rails the Omaha

Packing Company is situated. For a period from January 12, 1913 to April 6, 1913, the Milwaukee refused to absorb any part of the $6.00 switching charge. The Omaha Packing Company sought a through rate to its plant on the basis of the Chicago rate. It appeared that on shipments to the Chicago Union Stock Yards there was a terminal charge of $2.00 per car. The Commission found that the rates charged were unreasonable to the extent that they exceeded the rates to Chicago plus the charge of $2.00 per car. The reasonable rate prescribed was the Chicago rate plus $2.00 per car. Since that time the percentage increase and reductions have changed this $2.00 per car rate to $2.70 per car (T. 138). Therefore, intervener is now paying rates fixed by the Commission in 1915. By reading the report of the Commission in that case, it will be seen that conditions were substantially the same then as they are now. Therefore, the finding of the Commission fixing a lawful rate to intervener's plant should apply equally at the present time.

ALLEGED VIOLATION OF SECTION TWO.

The complaint alleged that the defendants were violating section 2, by discriminating against it in favor of intervener. Although no formal announcement was made that it was abandoning this allegation, complainant has completely failed to prove any violation of section 2. The only facts proved by complainant, which could possibly apply to a section 2 case, were that both complain-

ant and intervener had shipped livestock from some of the same origin points. However, the evidence clearly shows that these shipments to complainant were consigned to it either at its plant at 3830 S. Morgan Street, Chicago, Illinois, or at the Chicago Union Stock Yards, both on the rails of the Chicago Junction Railway Company. The evidence shows that the shipments to intervener were consigned to its plant at 2320 S. Halsted Street, Chicago, Illinois, being located on the rails of the Chicago, Burlington & Quincy Railroad Co. Under these facts there could not possibly be a violation of section 2.

Section 2 of the Interstate Commerce Act provides:

> "That if any common carrier subject to the provisions of this Act shall, directly or indirectly, by any special rate, rebate, drawback, or other device, charge, demand, collect, or receive from any person or persons a greater or less compensation for any service rendered, or to be rendered, in the transportation of passengers or property or the transmission of intelligence, subject to the provisions of this Act, than it charges, demands, collects, or receives from any other person or persons for doing for him or them a like and contemporaneous service in the transportation or transmission of a like kind of traffic or message under substantially similar circumstances and conditions, such common carrier shall be deemed guilty of unjust discrimination, which is hereby prohibited and declared to be unlawful."

The decisions under this section may be summarized as holding that in order to show a violation of section 2,

it is encumbent upon a complainant to practically prove that the carrier or carriers have charged the favored shipper less than the published rate while charging complainant the published rate for the same identical transportation, in other words, that the carriers are guilty of giving a rebate.

Respecting the elements of a case under section 2 of the Interstate Commerce Act, the Supreme Court said, in *Interstate Commerce Commission* v. *B. & O. R. Co.*, 145 U. S. 263, 36 L. ed. 699, 703:

> "For instance, it would be obviously unjust to charge A a greater sum than B for a single trip from Washington to Pittsburg; but if A agrees not only to go, but to return by the same route, it is no injustice to B to permit him to do so for a reduced fare, *since the services are not alike*, nor the circumstances and conditions substantially similar, *as required by Section 2 to make an unjust discrimination*" (italics ours).

Again on page 705 of the law edition, the court stated:

> "In order to constitute an unjust discrimination under Section 2, the carrier must charge or receive directly from one person a greater or less compensation than from another, or must accomplish the same thing indirectly by means of a special rate, rebate, or other device; but, in either case, it must be for a 'like and contemporaneous service in the transportation of a like kind of traffic, under substantially similar circumstances and conditions.' To bring the present case within the words of this section, we must assume that the transportation of ten

persons on a single ticket is substantially identical with the transportation of one, and, in view of the universally accepted fact that a man may buy, contract, or manufacture on a large scale cheaper proportionately than upon a small scale, this is impossible."

In *U. S.* v. *Delaware, L. & W. R. Co.*, 40 Fed. 101, 103, in discussing sections 2 and 3, the court stated:

"The former (section 2) relates to unjust discrimination in rates. The latter (section 3) is comprehensive enough, standing alone, to include every form of unjust discrimination, not only in rates, but also in the conveniences and facilities supplied to shippers in any of the details of the carrying service."

In *Interstate Commerce Commission* v. *Detroit, G. H. & M. R. Co.*, 57 Fed. 1005, Circuit Judge Taft (later Chief Justice of the Supreme Court) held that the furnishing of free cartage in Grand Rapids and refusing to do so in Ionia was not a violation of section 2. When the case got to the Supreme Court, the assistant attorney general abandoned any claim of violation of section 2 (see *Interstate Commerce Commission* v. *Detroit, G. H. & M. R. Co.*, 167 U. S. 633, 42 L. ed. 306.)

The same question has come before the Commission in numerous cases. There have, however, been few findings of violations of section 2. In order to clearly illustrate that complainant has not made out a case under section 2, we shall quote from a few of the decisions of the Commission.

In *East Springfield Citizens' Club* v. *Am. Ry. Exp. Co.*, 68 I. C. C. 482, the only question involved was an alleged violation of section 2, because defendant furnished delivery service to certain parts of the city of Springfield, Mass., *i. e.*, Park and Franconia sections, and did not furnish it to the East Springfield section. Because in many respects that case is quite clearly analogous to the case here presented to the Commission, we are quoting extensively from said decision. On page 483, the Commission stated:

> "Complainants do not allege that the failure of defendant to extend its free collection and delivery limits to the East Springfield section is unreasonable, but merely that it is unjustly discriminatory under section 2 of the act. In *Interstate Com. Commiss.* v. *B. & O. Railroad*, 145 U. S. 263, 281, the Supreme Court of the United States said:
>
> > In order to constitute an unjust discrimination under section 2, the carrier must charge or receive directly from one person a greater or less compensation than from another, or must accomplish the same thing indirectly by means of a special rate, rebate or other device; but in either case it must be for a 'like and contemporaneous service in the transportation of a like kind of traffic, under substantially similar circumstances and conditions.'
>
> "It becomes necessary, therefore, to consider whether the 'kind of traffic' of the East Springfield section is 'like' the traffic of the Park and Franconia sections, and whether the transportation would be 'under substantially similar circumstances and conditions.' As before stated, the principal express

traffic in East Springfield which would receive the benefit of the desired free collection and delivery service is that of the manufacturing concerns, parties to the complaint. During the first six months in 1921 it is shown that there were 2,767 outbound and inbound shipments from and to East Springfield, over 2,500 of which were for the Westinghouse Electric & Manufacturing Company and the Rolls-Royce company alone. The shipments of the Westinghouse Company consist principally of small motors, electrical appliances and parts, the average weight being about 130 pounds. The express traffic of the Rolls-Royce company is principally inbound and consists of automobile head lamps and delicate automobile parts. The average weight of these shipments is not shown. The shipments of the Storms Drop Forging Company consist of forgings and dies averaging about 54 pounds. The character of the traffic of the other complaining plants is not disclosed. The traffic of the Park and Franconia sections is chiefly to and from householders, the shipments of the Diamond Match Company and the small chemical manufactory being the only important exceptions. The average weight of the shipments of these sections is materially less than in the case of East Springfield.

"From the Union Depot the present free collection and delivery limits extend 1.9 miles in the direction of East Springfield. The Springfield Tool Company, the most distant manufacturing plant in that section, is 3.1 miles beyond these limits, or 5 miles from the depot. The most distant house in the Park and Franconia sections is 3.6 miles from the depot. All told, there are approximately 370 families in East Springfield as compared with 3,777 families in the

Park and Franconia sections. The testimony indicates that the density of residences in the latter section is probably not substantially greater than in East Springfield, but defendant states that while it holds itself out to deliver and collect in the Franconia section, no such service has, as a matter of fact, been rendered during the past three years.

"The service of free collection and delivery is performed in the Park section with a 2-ton truck driven by one man. Defendant estimates that to collect and deliver the heavier shipments of the East Springfield section would necessitate the acquisition of a 3.5-ton electric truck, requiring a driver and helper. At the present time several of the complaining plants perform the service with their own trucks in connection with other hauling.

"Upon this record we find that it has not been shown that the express traffic to and from the East Springfield section is 'like' that to and from the Park and Franconia sections, within the meaning of that word as used in section 2 of the act; and that the free collection and delivery of express shipments in the East Springfield section, as compared with such service in the Park and Franconia sections, would not be 'under substantially similar circumstances and conditions.' As aforesaid, the reasonableness of the practice of defendant in refusing to extend its free collection and delivery limits to the East Springfield section is not in issue."

In the instant case, complainant has made no showing at all as to the amount of traffic to intervener so that it may be compared with the traffic to complainant to see if the traffic is "like". Also there has been absolutely

no proof of the fact that the transportation was "under substantially similar circumstances and conditions." The record clearly shows that any movement to complainant at either its plant or at the Chicago Union Stock Yards must move over the Chicago Junction Railway Company, which has no part in the transportation to the plant of intervener. While the service rendered by the Chicago Junction is described in great particularity by witness O'Brien, on pages 246 to 271 of the transcript, giving the difficulties of both the service to the Chicago Union Stock Yards and the service requested by complainant at its plant, there is no evidence of the details of the service rendered in a movement to intervener's plant after it leaves the break-up yards, so it would be impossible to prove any similarity, even if the hurdle of the independent switching carrier, the Chicago Junction, could be jumped by complainant. In view of the decisions of both courts and the Commission, however, it seems that that fact alone would make section 2, and probably section 3, inapplicable.

In *Providence Fruit & Produce Exchange* v. *R. I. Co.*, 69 I. C. C. 422, the Commission held that failure of defendant to absorb switching charges of an electric line while absorbing switching charges of connections on competitive points was not a violation of section 2. In that connection the Commission stated, on page 424:

> "The unjust discrimination prohibited by section 2 is in *movements over the same road or roads*, and *not over* different roads or *partly over the same road and partly over different roads*" (italics ours).

A substantially similar question was before the Commission in *Rates on Bunker Coal*, 73 I. C. C. 62. One of the questions was whether the fact that different rates apply on coal to piers for unloading into vessels and coal to industries or team tracks within the terminal district was a violation of section 2. The Commission held, on page 75, that the two classes of movements are not made "under substantially similar circumstances and conditions" of carriage.

In *Lehigh Portland Cement Co.* v. *Director General*, 62 I. C. C. 231, 234, the commission held that failure to do spotting, switching, etc., without charge on a system of tracks, in and about complainant's plant, of 2.96 miles, all owned by complainant, was not a violation of section 2, even if defendant performed free spotting in instances where the tracks were owned by defendant.

That case is very close to the case now before the Commission, because the contemplated direct delivery to the plant of complainant would involve considerable switching and spotting of cars, done entirely on tracks owned by complainant, and within its plant. Deliveries to intervener's plant do not involve any switching or spotting, as intervener's plant is directly adjacent to the right of way of the Chicago, Burlington & Quincy Railroad Company, and is served direct from the tracks of that railroad.

The Commission recently decided in a somewhat similar case that there was no violation of section 2. In *Dor-*

chester Board of Trade, Inc., v. *N. Y., N. H. & H. R. R. Co.*, 179 I. C. C. 423, it was alleged that failure to include that part of Boston, known as Dorchester, and served by the Neponset Station, in the switching limits of Boston, violated section 2 because other parts of Boston were included. The Commission found that there was no violation of section 2. The facts there, in respect to a violation of section 2, were quite similar to the facts in the case now before the Commission. The object of the complaint in that case was to get an absorption of switching in that part of the Dorchester district, served by the Neponset Station. That is the object of complainant here. There complainant felt it had made a case under section 2, because the territory served by other stations, *i. e.*, Harrison Square, Harvard Street, etc., received free switching. In holding that there was no violation of section 2, the Commission established a precedent which is controlling in this case.

It is possible that complainant may urge that *Richmond Chamber of Commerce* v. *S. A. L. Ry.*, 44 I. C. C. 455, 466, affirmed in *Seaboard Air Line Ry. Co.* v. *U. S.*, 254 U. S. 257, is authority for a finding that the existing practice of non-absorption of switching charges of the Chicago Junction is a violation of section 2. As indicated, both in the decision of the Commission and the decision of the Supreme Court, the evidence must come within certain narrow confines to warrant such a finding. The Commission clearly predicated its decision on the following findings:

"Where *the short delivery service* within the

switching district *is substantially the same in either instance,* we are of the opinion that the line-haul carrier is receiving a greater compensation from one shipper than from another for a like service when it absorbs the switching charges of one switching line and not those of another" (italics ours).

The Commission then continued:

> *"We do not consider that the carriers must absorb the switching charges* indiscriminately *to all industries* within the switching limits of Richmond *if they choose to absorb the swiching charges to any one industry off their rails. The illegality* herein found to exist *is the receiving of a greater compensation for one service than for a like service under substantially similar circumstances and conditions"* (italics ours).

There is absolutely no showing of "a like service under substantially similar circumstances and conditions" in this case. The complainant utterly failed to make proof of the character of the service rendered in respect to either movements to complainant's or intervener's plants. The defendant, Chicago Junction, gave in great detail the difficult and complex service involved in a switching movement to complainant's plant. We shall go into this question more in detail later in this argument, where we shall point out the absolute dissimilarity of circumstances and conditions which make both sections 2 and 3 inapplicable to this case. Furthermore, as we shall later indicate in connection with the section 3 allegations, complainant has failed to prove the amount, if any, of the switching absorption on shipments to intervener's plant.

REFUSAL OF CHICAGO JUNCTION TO DELIVER CARS TO COMPLAINANT'S PLANT NOT A VIOLATION OF SECTION THREE.

We now come to the allegations of violations of section 3. In that connection there are three possible aspects: (1) the refusal of the Chicago Junction to deliver livestock at complainant's plant; (2) requiring complainant to pay yardage charges on all livestock received by it through the facilities of the Chicago Union Stock Yards Company; and (3) refusal of the line haul carriers to absorb the switching charge of the Chicago Junction in case shipments are made direct to complainant's plant. We shall discuss these three aspects in order.

The refusal of the Chicago Junction to switch cars of livestock to complainant's plant may or may not be a reasonable practice under section 1, but clearly it has no place in the section 3 aspect of this case. The evidence clearly shows that the Chicago Junction is not a party in any way to the delivery of livestock to intervener. Intervener is an industry on the Burlington Railroad (T. 311). Complainant is located solely on the Chicago Junction (T. 80). No other railroad is closer than a mile or possibly two miles (T. 111). According to the testimony of its general manager, (T. 248 to 271, inclusive) the Chicago Junction should not be required to deliver livestock direct to complainant's plant. He gave numerous reasons not only why it is not reasonable, but even went further, stating such a proposition is impossible from a practical operating point of view. However,

that is the argument of the Chicago Junction and does not concern intervener, except as a basis for possible refusal of railroads to deliver direct to intervener's plant.

In the refusal to deliver direct to complainant's plant, only the Chicago Junction is concerned and the other railroads, which take part in any movement to intervener's plant, have no connection with it. The Commission has repeatedly held that there can be no undue prejudice under section 3, unless it be within the power of the carrier charged with causing the undue prejudice to remove it by its own act.

This is clearly shown in *Richmond Chamber of Commerce* v. *S. A. L. Ry.*, 44 I. C. C. 455, 462, 463, where the Commission held there was no violation of section 3 under somewhat similar circumstances. The only difference there was that the prejudiced point was on the rails of the C. & O., a line-haul carrier, while here the alleged prejudiced point is on the rails of a purely switching carrier. In that case the Commission stated:

> "We have expressly said that there can be no undue prejudice within section 3, unless it is within the power of the carrier charged with the discrimination to do away with it by its own act."

In this case, if the line-haul defendants be charged with undue prejudice, and ordered to remove it, they cannot require the Chicago Junction to switch cars direct to complainant's plant. It is beyond their power. The

only thing they could do would be to refuse to participate in a delivery to intervener's plant. This, for reasons we shall later indicate, would be a most unreasonable requirement. The fault of the refusal, if a fault, is one of the Chicago Junction. Even if all the line haul defendants desired to participate in direct deliveries to complainant's plant, they are powerless to do so, because the plant is not on the line of any of them, but on a purely switching road.

There are other decisions of the Commission to the same effect. Some of them are given below:

Ohio-Michigan Coal Cases, 80 I. C. C. 663, 677.

Peters Cartridge Co. v. *Director General*, 73 I. C. C. 311, 313, 314.

Wood, Iron & Steel Co. v. *P. R. R. Co.*, 83 I. C. C. 503, 507.

We, therefore, believe the conclusion is reasonable, that the mere refusal of the Chicago Junction to make direct deliveries of livestock to complainant's plant does not make out a case of undue prejudice under section 3, merely because the Burlington Railroad makes delivery direct to intervener's plant in an entirely different section of Chicago.

Furthermore, the record conclusively shows that unless the line-haul carriers absorb the Chicago Junction switching charge of $12.00 per car, the complainant does not want direct delivery of live stock to its plant. We say the record conclusively shows this because complain-

ant attempted to have a total of 22 cars delivered direct to its plant (T. 58, 59). The record shows that none of these cars were so delivered because complainant refused to pay the Chicago Junction switching charge of $12.00 per car (T. 66, 244, 293). If the action of the complainant in that respect has any meaning at all, it is that it is not interested at all in the bare question of delivery of live stock direct to its plant. It is only interested in direct delivery *if the line-haul carriers agree to absorb the incidental expense,* covering switching, spotting, etc., connected with it. Therefore, the question of direct delivery really is not in this case so far as either alleged violations of sections 2 or 3 are concerned. Actually the sole question presented is: Does the failure of the line-haul carriers to absorb the incidental expenses of switching, spotting, etc., in connection with direct deliveries to complainant, constitute a violation of either sections 2 or 3?

We have already discussed the section 2 aspect of the case. We shall later specifically discuss the section 3 aspect of the refusal of line-haul carriers to absorb the incidental expenses of switching, spotting, etc., under the heading, "Refusal of Line-Haul Carriers to Absorb Chicago Junction Switching Charge Not a Violation of Section 3."

ESSENTIALS OF A CASE OF VIOLATION OF SECTION THREE.

The pertinent portion of section 3 reads as follows:

> "(1) That it shall be unlawful for any common carrier subject to the provisions of this Act to make or give any undue or unreasonable preference or advantage to any particular person, company, firm, corporation, or locality, or any particular description of traffic, in any respect whatsoever, or to subject any particular person, company, firm, corporation, or locality, or any particular description of traffic, to any undue or unreasonable prejudice or disadvantage in any respect whatsoever."

In connection with this section, the Supreme Court has repeatedly held that there must be a substantial identity of circumstances and conditions. In one of the leading cases, *Interstate Commerce Commission* v. *B. & O. R. R. Co.*, 145 U. S. 263, 36 L. ed. 699, the Supreme Court stated (see page 705 of the law edition):

> "In this connection we quote with approval from the opinion of Judge Jackson in the court below: To come within the inhibition of said sections (2 and 3), the differences must be made under like conditions; that is, there must be contemporaneous service in the transportation of like kinds of traffic under substantially the same circumstances and conditions. In respect to passenger traffic, the positions of the respective persons, or classes, between whom differences in charges are made, must be compared with each other, and there must be found to exist substantial identity of situation and of service, accompanied by irregularity and partiality resulting in undue advantage to one, or undue disadvantage

to the other, in order to constitute unjust discrimination' ".

It has been repeatedly held by the Supreme Court, and lower federal courts, that the mere existence of a preference or advantage in a particular case is not enough to bring it within the prohibition of section 3. Some of the cases so holding are:

Texas, etc. R. Co. v. *Interstate Commerce Commission*, 162 U. S. 197, 40 L. ed. 940.

Interstate Commerce Commission v. *Alabama Midland R. Co.*, 168 U. S. 144, 42 L. ed. 414.

Gamble-Robinson Commission Co. v. *Chicago & N. W. Ry. Co.*, 168 Fed. 161.

Union Pac. R. Co. v. *Updike Grain Co.*, 178 Fed. 223, affirmed 222 U. S. 215, 56 L. ed. 171.

Interstate Commerce Commission v. *Chicago Great Western Ry. Co.*, 141 Fed. 1003, affirmed 209 U. S. 108, 52 L. ed. 705.

In *Manufacturer's Ry. Co.* v. *U. S.*, 246 U. S. 457, 62 L. ed. 831, the Supreme Court held that section 3 did not denounce every preference and prejudice, but only those that are undue or unreasonable.

It has also been held that the question of what constitutes an undue preference or advantage under section 3 is not a question of law, but one of fact. In this connection, the Supreme Court stated in *Texas and P. R. Co.* v. *Interstate Commerce Commission*, 162 U. S. 197, 40 L. ed. 940 (see page 947 of the law edition):

"The 3d section forbids any undue or unreason-

able preference or advantage in favor of any person, company, firm, corporation, or locality; and as there is nothing in the act which defines what shall be held to be due or undue, reasonable or unreasonable, such questions are questions, not of law, but of fact. The mere circumstance that there is in a given case a preference or an advantage does not of itself show that such preference or advantage is undue or unreasonable within the meaning of the act. Hence it follows that before the Commission can adjudge a common carrier to have acted unlawfully, it must ascertain the facts; and here again we think it evident that those facts and matters which carriers, apart from any question arising under the statute, would treat as calling, in given cases, for a preference or advantage, are facts and matters which must be considered by the Commission in forming its judgment whether such preference or advantage is undue or unreasonable. When the section says that no locality shall be subjected to any undue or unreasonable prejudice or disadvantage in any respect whatsoever, it does not mean that the Commission is to regard only the welfare of the locality or community where the traffic originates, or where the goods are shipped on the cars. The welfare of the locality to which the goods are sent is also, under the terms and spirit of the act, to enter into the question."

This quotation is particularly pertinent where the court refers to the duty of the Commission to ascertain the facts. As we shall later indicate, there are lacking, due to failure of proof or otherwise, certain fundamental facts which must exist in order to prove a violation of section 3.

It has also been repeatedly held that, in determining whether an alleged preference is undue or unreasonable, the dissimilarity of the circumstances and conditions affecting the two contrasted classes of transportation are to be taken into consideration and may prevent the alleged preference from being undue or unreasonable. These decisions are:

Texas & P. R. Co. v. *Interstate Commerce Commission*, 162 U. S. 197, 40 L. ed. 940.

Wight v. *U. S.*, 167 U. S. 512, 42 L. ed. 258.

U. S. v. *Atchison, T. & S. F. R. Co.*, 234 U. S. 476, 58 L. ed. 1408.

The foregoing general discussion of some phases of the construction of section 3 by the Supreme Court has a very important bearing upon the questions involved in complainant's allegation of undue prejudice under section 3. By way of summary, it may be said that the foregoing cases hold:

1. Every preference or advantage is not prohibited.

2. Only undue or unreasonable preferences or advantages are prohibited.

3. Whether a preference or advantage is undue is a question of fact.

4. The Commission must decide the question based on evidence of existing facts.

5. Facts must show a substantial identity of circumstances and conditions in order for a preference or advantage to be undue or unreasonable.

These principles should be borne in mind in the discussion which is to follow.

COLLECTION OF YARDAGE CHARGES NO VIOLATION OF SECTION THREE.

We do not know if complainant will seriously contend that, because it has been compelled to pay the Chicago Union Stock Yards a yardage charge in connection with its inbound shipments of live stock, there has been a violation of section 3. It is true that intervener did not pay, and never has paid, any yardage to said stock yards company. It is likewise true that none of its live stock moves through the Chicago Union Stock Yards (T. 311). The record clearly shows why that is. If its shipments were consigned to the stock yards, it would be necessary to reload them and switch them to its plant, involving substantial additional expense and delay (T. 312). It would be both impractical and illegal to drive the hogs along Halsted Street two and one-half miles north from the stock yards to intervener's plant. This is clearly established in the record (T. 312, 313, 314) and there is no testimony to the contrary.

The record shows that there is an ordinance in effect in the city of Chicago prohibiting the driving of more than five head of cattle along any public street. The word cattle has two meanings, one a broad meaning including all species of live stock, and the other a narrower meaning restricted to animals of the bovine family. In statutes or ordinances of the type referred to, the word cattle is usually held to mean all live stock (see *Mathews* v. *State*, 47 S. W. 647; *State* v. *Brookhouse*, 38 Pac. 862; *State* v. *Lawn*, 80 Mo. 241).

Even if this construction were not proper, another ordinance prohibits any and all live stock running loose on any public street. Loose, according to Webster's New International Dictionary, means, "not fastened." Obviously, it would be unlawful to drive hogs or other live stock along a public street in Chicago.

On shipments of complainant, the record shows that they are unloaded by the Chicago Union Stock Yards Company in and by means of facilities owned by said company and by employes of said company. Intervener has supplied its own facilities consisting of an unloading platform 11 feet 8 inches wide and 496 feet 6½ inches long. The platform is closed in at the north end and has sides consisting of a series of sliding slatted doors. Eleven cars can be unloaded on one side and twelve cars on the other (T. 317). The stock is unloaded by employes of intervener and driven to the scales by these same employes (T. 317).

Complainant's shipments are weighed by employes of the Chicago Union Stock Yards Company on scales owned by that company (T. 42). Intervener owns its own scales and does its own weighing (T. 317).

Complainant's live stock is yarded by the Chicago Union Stock Yards Company by its employes and in its pens (T. 40 and 41) with few exceptions. Intervener's live stock is driven by its own employes to holding pens, owned and maintained by it (T. 317).

The record is full of evidence that the Chicago Union

Stock Yards Company performs a substantial amount of service in connection with complainant's shipments of live stock. This was frankly admitted by complainant. Its only contention was that the service performed was really for the railroads and should be covered by the line-haul rate paid by complainant plus $2.70 per car.

On the contrary, the record shows that no firm or corporation, including all the railroads entering Chicago, the Chicago Union Stock Yards Company, and Chicago Junction Railway Company, furnish any yarding, unloading, weighing, driving or holding of live stock in pens after unloading in connection with any live stock received by intervener at its plant (T. 318). Not even the Chicago, Burlington & Quincy Railroad Company performs any service of yarding, unloading, weighing, driving or holding of live stock for intervener (T. 318).

It is hard to imagine a greater lack of similarity of circumstances and conditions. In fact, they are absolutely dissimilar. Applying the facts to the positive requirements of a violation of section 3, as set forth by our Supreme Court in the cases hereinbefore cited, it will be found that there is absolutely no evidence of a violation of section 3, in respect to the charges for yarding, weighing, etc., by the Chicago Union Stock Yards Company.

REFUSAL OF LINE-HAUL CARRIERS TO ABSORB CHICAGO JUNCTION SWITCHING CHARGE NOT A VIOLATION OF SECTION THREE.

Under a previous heading "Essentials of a Case of Violation of Section 3", we have pointed out from decisions of the United States Supreme Court and other federal courts, the absolute obligations of a complainant in a section 3 case. Under that heading we summarized these essentials as follows:

1. Every preference or advantage is not prohibited.

2. Only undue or unreasonable preferences or advantages are prohibited.

3. Whether a preference or advantage is undue is a question of fact.

4. The Commission must decide the question based on evidence of existing facts.

5. Facts must show a substantial identity of circumstances and conditions in order for a preference or advantage to be undue or unreasonable.

We shall now discuss the facts as presented at the hearing and point out particularly wherein these facts fail to show any preference or advantage and that, in connection with any alleged preference or advantage, there is no such substantial identity of circumstances and conditions as to warrant a finding of a violation of section 3.

In that connection it must be borne in mind that it is not the duty of either the defendants or the in-

tervener to make out a case for complainant. The burden rests solely upon complainant. The rule is tersely stated by the Commission in *Biggs Boiler Works* v. *Erie R. Co.*, 171 I. C. C. 712, 714, as follows:

> "The burden of proof rests on complainant to establish the existence of undue prejudice and preference."

We believe that the record shows that complainant has failed to make out a case of a violation of section 3, in so far as a comparison of movements to its plant with movements to the plant of intervener are concerned, for the following reasons:

1. Complainant is located on a purely switching line and intervener is an industry on a line-haul carrier.

2. Complainant is located at the Union Stock Yards, along with many other packers, all being adjacent to the Union Stock Yards & Transit Company, while intervener is two and one-half miles away in a different district.

3. Complainant desires free switching, spotting and holding of cars involved in a plant layout of privately owned tracks while intervener gets only a delivery on the tracks of the Chicago, Burlington & Quincy Railroad, on which intervener is an industry.

4. Complainant does not either own or have available facilities for unloading, weighing and handling incoming live stock while intervener owns ample facilities.

5. Operating conditions connected with the di-

rect delivery of live stock to complainant's plant are much more difficult than to intervener's plant.

6. Absorption of charges in connection with direct delivery to complainant's plant and the resultant direct delivery would demoralize live stock deliveries to the stock yards district of Chicago, while no such situation exists in connection with deliveries to intervener's plant.

7. There is no proof of the amount of the absorption by line-haul carriers in deliveries to intervener's plant.

8. Complainant has made no proof of damage by reason of the alleged violation of section 3.

9. The Commission has already recognized the substantial difference between the location of complainant and intervener.

We shall now briefly discuss each of these reasons, pointing out wherein the record supports these reasons and the conclusions naturally resulting therefrom.

1. Complainant Is Located on a Purely Switching Line and Intervener Is an Industry on a Line-Haul Carrier.

There should be no dispute of this point as the record clearly shows that complainant is located solely on the rails of the Chicago Junction Railway Company (T. 80). Intervener is an industry located solely on the tracks of the Chicago, Burlington & Quincy Railroad Company (T. 311). The Chicago Junction Railway Company does not participate in any movement of cars to the plant of intervener (T. 140).

2. Complainant Is Located at the Union Stock Yards, Along With Many Other Packers, All Being Adjacent to the Union Stock Yards & Transit Company, While Intervener Is Two and One-half Miles Away in a Different District.

The record shows that complainant is one of many packers located adjacent to the Union Stock Yards & Transit Company. Mr. O'Brien enumerated seventeen packing companies, all located similarly to complainant, both adjacent to the Union Stock Yards & Transit Company and on the rails of the Chicago Junction Railway Company (T. 277). This is the point where probably the greatest live stock market in the world is located. Necessarily, any system of transportation which has been evolved for the handling of live stock into and out of a market such as the Chicago live stock market, including the packing companies which are adjacent to and form a part of said market, must be so constructed as to furnish the type of service demanded by probably the most perishable type of traffic handled by the railroads. The record shows that the present system of receiving at the unloading docks of the Union Stock Yards & Transit Company all live stock consigned to either commission men or packers located in or adjacent to said stock yards, has been in existence since 1865 (T. 249). Mr. O. T. Henkle, Vice President and General Manager of the Union Stock Yards & Transit Company, gave a history of the development of this method of handling live stock (T. 209-226, inclusive). As indicated by this testimony of Mr. Henkle, the complainant desires to overturn a method of receiving live stock which has

been a part of and essential to the growth and operation of the Chicago live stock market. In this connection the complainant may state that its business is so small as to make no particular effect upon the method of handling live stock into the Chicago live stock market. It is doubtful if this is true, but even if it were, that is not the question which is here before the Commission. As we shall indicate in point 6 which will follow, there are many other packers receiving live stock direct under identical circumstances applicable to complainant and if complainant finds it of advantage to receive this live stock direct at its plant, and it has stated it intends to do so in the event the carriers absorb the switching charges, there will be many other larger packers who will demand the same thing.

The present method of handling shipments of live stock to the plant of intervener is likewise a situation which has existed for many years. Witness on behalf of the intervener testified that to his own knowledge the plant of the Omaha Packing Company has been in its present location for from fifty-five to sixty years (T. 318). He also testified that this plant had always received its live stock direct at its plant without going through the Union Stock Yards (T. 311).

As a matter of fact, we believe the plant of intervener existed possibly before the opening of the Union Stock Yards & Transit Company. That was probably the reason why intervener's plant was located some miles away

from the live stock market. During all that time it has been an industry on the line of the Chicago, Burlington & Quincy Railroad Company, receiving its live stock direct on the rails of that company. During the same period of years the packing companies located adjacent to the Union Stock Yards & Transit Company have been receiving their live stock at the unloading docks of said Stock Yards Company. Certainly, the history in connection with the facts alone finds ample justification for the finding that there is no substantial identity of circumstances and conditions. Delivery to intervener's plant, in a different section of Chicago, is obviously substantially dissimilar to delivery to any part of the largest live stock market in the world.

3. Complainant Desires Free Switching, Spotting, and Holding of Cars Involved in a Plant Layout of Privately Owned Tracks While Intervener Gets Only a Delivery on the Tracks of the Chicago, Burlington & Quincy Railroad, on Which Intervener Is an Industry.

This is not a case where the defendant carriers are performing for another shipper the identical service requested by complainant. The record shows that in the contemplated direct delivery to complainant, use will be made of a system of purely private industrial tracks, the sole property of the complainant. In fact, an exhibit was placed in the record, exhibit No. 2, upon which these tracks are shown. It conclusively appears that these tracks are owned by complainant (T. 112). The record also shows that, in the performance of the service necessary in direct delivery of live stock cars to the

plant of complainant, it would be necessary for the Chicago Junction Railway Company to spot cars (T. 123, 268, 278, 279), use the Chicago Junction tracks for storage (T. 128-129), and perform the service of feeding, watering and resting live stock (T. 130). For example, in describing the manner of making the delivery contemplated by complainants, witness O'Brien testified that the Chicago Junction Railway Company would remove such cars as might interfere, would place the car at the unloading platform and chute designated for that particular kind of stock, complete its delivery, and then remove the empty car as soon thereafter as possible. It would be necessary to make such switches as were necessary. If there were more cars than the track would hold at one time (the record shows the track could handle but very few), there would be additional switching, cutting and spotting (T. 268). Again Mr. O'Brien testified that the entrance to the two tracks which the complainant contemplated using for unloading live stock is from the east whereas the traffic approaches from the west and the so-called tail track room is quite small being only five or six car-lengths. This would be a most awkward, expensive and poor switching arrangement, and one that no one would undertake to lay out for the prompt, proper and efficient handling of live stock (T. 278-279). As stated by Mr. O'Brien, the service could be performed if they stayed as it long enough (T. 279).

By way of contrast the record shows that intervener is located directly adjacent to the tracks of the Chicago,

Burlington & Quincy Railroad Company. There is absolutely no spotting or other intraplant service performed for intervener while it is quite evident that the absorption which complainant desires in this proceeding is the absorption of charges for services which will include intraplant spotting and switching service upon the industrial plant lay-out of complainant.

In *Tide Water Oil Co.* v. *Director General*, 58 I. C. C. 92, the Commission held there was no undue prejudice in refusing to absorb charges of an industrial switching road for switching and spotting cars at complainant's plant, although defendant did absorb the charges of this switching road on certain independent industries served by it. This latter absorption did not involve any intraplant spotting, while the service performed for complainant did involve intraplant spotting.

This case is very much in point in this proceeding. The record shows that intervener is on the rails of the Burlington and there is absolutely no intraplant spotting involved. If the direct deliveries requested by complainant were made by the Chicago Junction, it would require considerable intraplant spotting; in fact, the record indicates that the spotting and switching involved, and which the charge of the Chicago Junction would cover, is quite complicated and complex.

4. Complainant Does Not Either Own or Have Available Facilities for Unloading, Weighing and Handling Incoming Live Stock While Intervener Owns Ample Facilities.

Still another difference in the circumstances and conditions surrounding the delivery of live stock direct to complainant as compared with delivery direct to intervener is in respect to the facilities available for this service. The record shows a total lack of such facilities at the plant of complainant. Complainant has no unloading dock or platform (T. 82, 83); it has no scales at its Chicago plant (T. 84); it has no runway for the driving of live stock to its holding pens (T. 82); and the tracks upon which it contemplates the unloading of its live stock are now leased to the Mather Stock Car Company (T. 206). These tracks are now used for the storage of cars (T. 113).

On the other hand, the situation at the plant of intervener is entirely different. Intervener has provided, at its own expense, an unloading platform about 11 feet, 8 inches wide, and about 496 feet 6½ inches long. The platform is closed in at the north end and has sides consisting of a series of sliding slatted doors. This permits cars being spotted at any place on the tracks and an opening being made at the doors. At the south end of the platform intervener maintains a first class standard live stock scale, quite similar to scales maintained by public stock yards. The live stock is driven from the unloading platform over the scales by employes of intervener into

holding pens maintained by it (T. 317). Again, we find a substantial difference in circumstances and conditions.

5. Operating Conditions Connected With the Direct Delivery of Live Stock to Complainant's Plant Are Much More Difficult Than to Intervener's Plant.

Necessarily, in consideration of the question of whether or not failure to absorb switching charges is undue prejudice under section 3, the question of the comparative difficulty of the operating conditions involved in the two transportation movements is quite important. We contend that before complainant can prove any undue prejudice of itself or undue preference of intervener in respect to the absorption of switching charges, complainant must prove that there is a substantial similarity in the operations and conditions under which the live stock is handled to the plant of intervener as compared with the movement to the plant of complainant. This similarity must exist from the time the cars leave the hands of the road-haul carriers in their break-up yards.

In *Omaha Live Stock Exchange* v. *C. M. & St. P. Ry. Co.*, 69 I. C. C. 688, the Commission had before it a complaint which alleged among other things that the failure of the defendants to absorb the entire amount of the charges assessed by the terminal carrier for switching carload shipments of live stock to or from the public stock yards at Omaha was prejudicial to complainant and unduly preferential of competitive markets at other named points where defendants absorbed all switching charges on live stock to and from said public stock yards.

The Commission, in holding that there was no proof of a violation of section 3, stated on page 693:

> "The record discloses no such substantial similarity in operations and conditions under which live stock is handled at Omaha and at the other markets that a finding of undue prejudice against Omaha can be predicated thereon. There is some testimony of a very general nature and expressions of opinion that conditions are similar, but the location of the public stockyards at the alleged preferred points and the physical operations incident to shipping live stock to and from them are not shown in any degree of detail."

In *Aurora, Elgin & Chicago R. R. Co.* v. *I. H. B. R. R. Co.*, 51 I. C. C. 331, the complainant, an electric line, was seeking relief from defendant's charges for switching cars to the connection with complainant's line. It was alleged that the rates charged violated sections 1, 2 and 3 of the Act. The violation of the latter section was because it listed complainant as an industry and treated it differently from other common carriers. After reviewing the evidence showing how expensive and difficult it was to perform the switching involved, and the larger volume of traffic in other interchanges, as compared with the amount interchanged with complainant, the Commission stated:

> "Under the circumstances shown of record the complaint should be dismissed. The difference in charges is justified by the difference in circumstances affecting the cost of services rendered in connection with complainant's traffic and that of other connecting lines, respectively."

Arizona Packing Company v. *Director General*, 74 I. C. C. 387, involved an alleged violation of section 3 because the defendants failed to absorb switching charges at complainant's plant at Cactus, while absorbing such charges on shipments to packing plants located at the Union Stock Yards of Phoenix, which it was alleged was a competitive point. In respect to this allegation of undue prejudice the Commission stated (see page 388):

> "The services rendered in connection with such shipments are essentially dissimilar from those rendered at complainant's plant."

That case is just the reverse of the present case. There, complainant was located away from the stock yards and here complainant is at the stock yards. The evident dissimiiarity, however, exists in either instance.

The only evidence offered by complainant was of the type condemned by the Commission in *Omaha Live Stock Exchange* v. *C. M. & St. P. Ry. Co., supra*, it being "testimony of a very general nature and expressions of opinion that conditions are similar". It is true complainant offered as a witness a man who had considerable experience in the operation of railroads. However, he had not been connected with any railroad since 1925 and gave absolutely no description of the movement of traffic from the break-up yards of any line-haul carrier to the interchange with the Chicago, Burlington & Quincy Railroad Company and, thence, over that line to the plant of intervener. Apparently, the extent of his investigation of that phase of the operation was to make

a personal examination of the tracks at intervener's plant. He told about the two tracks which were adjacent to the plant of intervener, stating in respect to that, "a very nice lay-out" (T. 180). The balance of his testimony respecting the operations to intervener's plant was most general and purely opinions not backed up by any investigation or statement of facts or based upon any prior knowledge he may have had of the situation. Examples of some of these statements are as follows:

> "Well, after the Chicago, Burlington & Quincy gets to the plant with their transfers in every instance the operation is simple enough. They run through a congested territory which is located down in the so-called lumber district and quite an operating problem to get down there and back. A lot of grade crossings, tracks on the streets" (T. 181).

Again he stated:

> "In making deliveries from the Chicago, Milwaukee, St. Paul & Pacific, for instance, to the Chicago, Burlington & Quincy of stock for the Omaha Packing Company, they are liable to run across the same delays we would run across" (T. 198).

We have referred above to all the testimony there is in the record showing the details of the operations involved in the switching movement from break-up yards of line-haul carriers to the plant of intervener. It certainly is most general in character and it is difficult to see how such general, inconclusive and speculative testimony could possibly be the basis of any finding of violation of a provision of the Interstate Commerce Act. We believe that the record clearly justifies a finding that

there is no violation of either section 2 or section 3 of the Interstate Commerce Act, if for no other reason, because the complainant has failed to prove substantial identity of operating conditions in respect to the two movements here before the Commission.

However, the lack of proof of the details of the operations in a movement to intervener's plant is not the sole reason why there is no proof of a substantial identity of operating conditions. There was considerable and detailed proof of the operating conditions involved in a movement to complainant's plant. The witness produced by complainant testified, in relation to the switching at the plant "It is not quite as simple as the Omaha situation" (T. 183). In respect to the movement of live stock into the stock yards district, he testified that he had never seen anything more congested than the stock yards district at the time live stock was coming in (T. 187). He further testified that if a train stopped before getting to the unloading chutes of the Union Stock Yards & Transit Company, it would be quite a serious matter (T. 188). He further testified that from a point perhaps six or eight miles from the stock yards, stock destined to complainant's plant would have to pass through a very congested district and any stops to switch out cars within that six or eight miles would delay a great many trains and would be a very serious matter (T. 190). He further testified, "It would be a very difficult matter to switch those cars out" (T. 191). He further testified that if other packers in the same vicinity would demand

the same service, "That would be quite a problem, would be another problem" (T. 192).

Mr. O'Brien, General Manager of the Chicago Junction Railway Company further testified as to the difficulties involved in moving live stock direct to the plant of complainant. In that connection he stated, "It would be awkward and fruitful of delay, and expensive more than usual,—more than the ordinary handling of the business" (T. 249). He further testified in relation to the tracks of the Chicago Junction in the stock yards district, "I do not know of any place in Chicago where we find so many so-called foreign line crews moving over the tracks of another company" (T. 251). Further in connection with this district, he stated:

> "It is closely built up, yes sir, and a highly developed industrial territory. We do move our traffic promptly but because of the intense industrial development there are a great many so-called cross movements from one district to another, and necessarily so; but the principal movement of traffic must be maintained at a high order, to avoid congestion and delay. We have that provided today in the present manner of conducting our business. That is the result of this present method of handling live stock has developed over a period of 66 years" (T. 251).

Mr. O'Brien also testified that, while it would not be impossible to deliver cars of live stock direct at the plant of complainant, providing they were equipped with proper unloading facilities, it would be very impractical

(T. 255). Mr. O'Brien further testified that the handling of live stock to the plant of complainant in the manner contemplated would be very expensive, very difficult and would undoubtedly affect the other perishable freight business of the Chicago Junction (T. 264).

As we shall indicate under point No. 6, which immediately follows, further operating difficulties would probably occur due to the fact that all other packers located in the stock yards district would demand the same sort of service here sought by complainant.

Not only do the facts before the Commission utterly fail to prove any similarity of operating conditions respecting the two switching movements but all the implications are to the contrary. The movement involved to intervener's plant has been going on for years, apparently, without difficulty. As pointed out above, the basis of the charges now in existence to the plant of intervener were prescribed by the Commission in *Omaha Packing Company* v. *C. M. & St. P. Ry. Co.*, 37 I. C. C. 378. From these facts it would be logical to assume that the movement of live stock direct to the plant of intervener is no more difficult than the movement of any other freight to industries on the line of the Chicago, Burlington & Quincy Railroad Company or any other line-haul carrier. This method of handling has grown up through years and, no doubt, the facilities in the operations of the various carriers have been adapted to that method of handling. The contrary is decidedly true in respect to the

contemplated direct movement to the plant of complainant. The entire transportation system in and about the stock yards and adjacent packing plants has been constructed on the basis of delivering all live stock direct to the unloading chutes of the Union Stock Yards & Transit Company. According to the testimony in this case, any other method of handling would absolutely demoralize transportation in or about the stock yards. In view of these two situations, the conclusion is inevitable that there is no substantial similarity of circumstances and conditions respecting the operations in deliveries of live stock direct to the plant of complainant, as compared with deliveries of live stock direct to the plant of intervener.

6. Absorption of Charges in Connection With Direct Delivery to Complainant's Plant and the Resultant Direct Delivery Would Demoralize Live Stock Deliveries to the Stock Yards District of Chicago, While No Such Situation Exists in Connection With Deliveries to Intervener's Plant.

Another reason why the circumstances and conditions surrounding the transportation service being rendered to, or requested by, complainant, and that being rendered to intervener, is because the absorption of switching charges in the stock yards district on live stock would completely demoralize the present system of handling live stock. As indicated above, the present method of handling live stock in the stock yards has been in force since 1865. All of the railroad facilities in and about the stock yards have been constructed to conform with the practice of delivering all incoming live stock direct

to the loading and unloading chutes of the Union Stock Yards & Transit Company.

Any finding by the Commission of violation of section 3 must have as its basis a finding that the circumstances and conditions surrounding the transportation of incoming live stock in the stock yards is substantially similar to the circumstances and conditions surrounding the delivery of incoming live stock at the plant of intervener. Because complainant is a part of a distinct district, known as the stock yards district, it naturally must partake of the advantages or disadvantages of being so located. In determining whether there is a substantial identity of circumstances and conditions, the Commission should not confine itself to the consideration of complainant alone but must also consider the other shippers engaged in like business and located in relatively the same position as complainant.

The record shows that complainant is not the only packer in the stock yards district which receives direct shipments of live stock. Practically all of them receive direct shipments (T. 260). In practically every train of live stock coming into the stock yards there are cars consigned direct to packers (T. 280).

Another witness testified that there are eight or ten others besides complainant who receive direct shipments (T. 286). One of these shippers receives nine times as many hogs direct as complainant, and another ten times as many, and, still another, four times as many (T. 287).

For the first six months of 1931, 1,425,892 hogs were received at the stock yards, consigned direct to the packing houses (T. 288). The total number of hogs received during that same period at the stock yards was 4,028,544 (T. 289). All of these packers to whom this live stock was consigned are located immediately adjacent to the stock yards and on the rails of the Chicago Junction Railway Company (T. 290).

According to the witness for complainant, the situation with respect to the delivery of live stock direct to all the other plants in the same neighborhood is identical to the situation with respect to the delivery of live stock to complainant (T. 108). Another witness testified that Swift and Company received direct shipments at the Union Stock Yards in substantial quantities. It received the same services and paid the same charges respecting these shipments as did complainant. There is no difference between the handling and the charges on Swift and Company's shipments and those of complainant (T. 319).

The testimony in the record is that, if receipt of live stock direct to the packing plant of complainant is of advantage to it, it will be of advantage to every one of its competitors. They will all have to have the same service (T. 270). This, according to the testimony of the General Manager of the Chicago Junction Railway Company, would increase the difficulties of operation to the point of making such deliveries impossible. In answer

to a question as to whether the delivery direct to the packers of their direct shipments would be possible, Mr. O'Brien stated:

> "I view with a great deal of alarm any thought of that kind, because I know from the experience that I have had the difficulties already encountered in handling these heavy runs of live stock, and necessarily I can only visualize or try to imagine what the conditions would be that we would have to deal with on this new proposed basis; and having regard for the fact that all of the territory has been built up on the old basis of handling, I can conceive of very great difficulties and changes in facilities involving possibly the tearing down of immense buildings, and the construction of new facilities adequate to take care of the peak requirements, that make of this something that—well, it impels me to say that it is almost impossible, except at an enormous expenditure of money that would not be at all justified in my opinion" (T. 256).

Still again Mr. O'Brien testified that making direct shipments to all of the various firms which receive direct shipments of live stock would be a task beyond anything with which he had ever had to deal (T. 260).

The figures quoted above indicate that approximately 35 per cent. of all of the hogs received at the Union Stock Yards & Transit Company for the first six months of 1931 were consigned direct to the packing companies located adjacent to the stock yards and all of them are industries on the rails of the Chicago Junction Railway Company.

Certainly, in view of the above situation, no one could assert that the circumstances and conditions surrounding the delivery of live stock to either complainant, or any other packing company located in the stock yards district, on the rails of the Chicago Junction Railway Company, is even remotely, let alone substantially, similar to the receipt of live stock by rail at the plant of intervener, located, as it is, two and one-half miles north of the stock yards district, on the rails of the Chicago, Burlington & Quincy Railroad Company and away from all of the influences and advantages of being located in and a part of probably the greatest live stock market in the world. Even assuming the switching haul is the same, and there is absolutely no proof of that fact, there is no more similarity between the circumstances and conditions surrounding intervener's receipt of live stock by rail and the receipt of live stock by rail within the stock yards district than if intervener were located entirely away from Chicago.

We, therefore, respectfully submit that the Commission must find that there is no substantial identity of circumstances and conditions as between complainant and intervener.

7. There Is No Proof of the Amount of the Absorption by Line-Haul Carriers in Deliveries to Intervener's Plant.

While there is much testimony in the record that the amount of absorption of switching charges in cases of direct shipments to the plant of the complainant would

be $12.00 per car, there is absolutely no testimony as to the specific amount, if any, the various line-haul carriers, other than the Chicago, Burlington & Quincy Railroad Company, absorb in connection with shipments of live stock made to the plant of intervener. The record shows that intervener pays the Chicago rate, plus $2.70 per car. The record further shows that this rate was prescribed by the Commission in *Omaha Packing Company* v. *C. M. & St. P. Ry. Co.*, 37 I. C. C. 378. The record does not, however, show in what manner this charge is divided, whether the Chicago, Burlington & Quincy Railroad Company only gets $2.70 or whether some greater or lesser amount is paid. A showing of the exact amount of the switching absorption is one of the primary essentials of the case of complainant in making out a violation of either section 2 or section 3. The record does not even show what the switching charge of the Chicago, Burlington & Quincy Railroad Company would be for that haul or any other switching movement. In failing to make any proof whatsoever, complainant has failed in one of the first essentials of its case and the Commission should accordingly find that there is no violation of either section 2 or section 3 in so far as intervener is concerned.

8. Complainant Has Made No Proof of Damage by Reason of the Alleged Violation of Section Three.

There was little or no evidence offered as to the damage done to complainant by reason of the alleged undue preference. The only witness, who testified at all on the

subject, stated that complainant and intervener both sold some of the same commodities in the same territory in Chicago (T. 202). The extent of the competition was not shown. It was not shown that intervener was able to sell cheaper or undersold complainant or that complainant was forced to sell below its normal price by reason of any advantage which intervener is alleged to have.

The record shows that there are at least seventeen other packers in Chicago, many of which are much larger than either complainant or intervener. The witness for complainant stated that there is general competition here among all packers (T. 202). No attempt was made by any witness to go into the question of marketing products in Chicago and how prices were fixed, etc. Obviously, most of complainant's competition comes from packing companies located at the stock yards and it is extremely doubtful if intervener's alleged advantage is really working any damage to complainant. The other packers all pay the same charges on direct shipments that complainant pays and none of them are claiming any violation of sections 2 or 3. Furthermore, there is no proof that an order which would leave it to the option of the railroad defendants to cause intervener to pay some switching charges would be of any substantial help to complainant. Quite apparently, the only relief complainant is seeking is a decrease in its charges on direct shipments. It now has to pay certain charges at the Union Stock Yards & Transit Company, and if shipments are made direct to complainant's plant, it would

have to pay certain charges to the Chicago Junction Railway Company. It desires to have these removed. That is apparently the only thing which will help complainant.

The Commission has held in a number of cases that a complainant must prove that it suffers an injury and that it will cease if the prejudice is removed, regardless of the manner of removal.

In *Sioux City Grain Exc.* v. *Chicago, B. & Q. R. Co.*, 173 I. C. C. 506, 510, involving alleged violation of section 3 because of non-absorption of switching charges, the Commission quoted with approval the following quotation from *Duluth Chamber of Commerce* v. *C. St. P. M. & O. Ry. Co.*, 122 I. C. C. 739, 742:

> "But to prove that this discrimination results in a violation of section 3 it must be shown that complainant suffers injury by reason of the discrimination, and that this injury will cease if the discrimination is removed, regardless of the manner of its removal."

In *Hawley Pulp & Paper Co.* v. *Aberdeen & R. R. Co.*, 168 I. C. C. 747, 749, the Commission stated:

> "Although complainant presented testimony to the effect that the granting of this stop-in-transit arrangement to its competitors in the East might enable the latter to ship mixed carloads to markets which they might not otherwise be able to reach, thus intensifying competition, and to obtain thereon the benefit of a lower basis of rates than it enjoyed on similar shipments, defendants urge that this evi-

dence is not sufficient to show undue prejudice. Complainant failed to cite any specific instance where it had lost business either by reason of defendants' failure to accord it the transit service sought or the granting of such service to its eastern competitors; nor has it shown that its competitors were thereby enabled to control any markets or the prices it received for its products. Preference to be unlawful must be undue, and prejudice to one shipper to be undue must be such that it shall be a source of positive advantage to another. *Indianapolis Board of Trade* v. *B. & O. R. R. Co.*, 129 I. C. C. 675. Here no such showing has been made. Neither has complainant shown that the transit service it seeks is a commercial necessity. *Ohio Farm Bureau Federation* v. *N. & W. Ry. Co.*, 136 I. C. C. 602. The mere showing that complainant's competitors are accorded lower aggregate charges on some westbound mixed-carload transcontinental shipments than complainant pays on like shipments eastbound is not sufficient to support either allegation of the complaint."

In view of the above decisions, the Commission should find that complainant has failed to prove that the alleged preference to intervener has damaged complainant, and, therefore, it has failed to make out a case under section 3.

9. Commission Has Already Recognized Substantial Difference Between the Location of Complainant and Intervener.

The Commission has already recognized that there is a substantial difference in the circumstances and conditions between complainant and intervener. Intervener filed a complaint some ten or eleven years ago, attacking

the practice of the carrier's of loading and unloading live stock at the Chicago Union Stock Yards, while refusing to do it at intervener's plant. This practice was alleged to violate section 3 of the Act. Other packers, in other cities, located away from the public market, also filed similar complaints which were consolidated with intervener's complaint. The case is reported in *Omaha Packing Company* v. *A. T. & S. F. Ry. Co.*, 66 I. C. C. 44. In discussing the relative location of these plants, the Commission stated (see page 46):

> "The packing plants of the complainants are widely scattered throughout the country and respectively served by one or more of the defendant carriers. Adjacent to each plant are stock pens, equipped with chutes and other necessary facilities, into which inbound shipments of live stock are unloaded and from which the animals are transferred to the plants for slaughter. These stock pens are adjuncts of the plants, maintained by or for the benefit of the latter, and are neither terminal facilities of the carriers nor otherwise public in any sense. Some of the plants and adjacent pens are located at points at which there are no public stockyards, as the latter term is defined, although it was suggested at the argument that at more or less of them the carriers may have provided unloading facilities not falling within the definition. Several of the plants are in New England, in which region there is but one public stockyard, located at Brighton, Mass., and used as a market for milch cows, not for the handling of beef cattle intended for slaughter. At other points covered by the complaints public stockyards are maintained, adjacent to which are

packing plants with which complainants are said to come more or less into competition in the purchase of live stock and in the sale of the products. A notable instance is Chicago, where the complainant Omaha Packing Company operates a packing plant and adjacent private pens, situate a considerable distance from the public stockyards operated by the Union Stock Yard & Transit Company and adjacent to which are the plants of some of the principal packers of the country. Another is Cleveland, Ohio, where the complainant in No. 12131 operates a plant near the public Cleveland Union Stock Yards, as do certain competitors, and operates another, with adjacent unloading pens, some 3 miles distant. Another situation is that a public stockyard is maintained at East St. Louis, Ill., while at St. Louis, Mo., having no such facility, one of the complainants and another large concern operate packing plants and accessorial unloading pens."

In holding that the practice of loading and unloading live stock at public markets, and refusing to do it at packing plants located away from public markets, was not a violation of section 3, the Commission stated (see page 49):

"We are also of opinion that the differentiation of the traffic covered by the amendment does not result in unjust discrimination or undue or unreasonable prejudice or preference; and we have more than once emphasized the distinction between mere discriminations or differences in transportation charges and services and those which are unjust or undue and unreasonable. Indeed, in obeying the amendment to the act the carriers do not load and unload live stock at public stockyards for the benefit

> of *certain* shippers or consignees; the service is available to *all* shippers or consignees who desire it. Whatever the practical advantages may be, the propinquity of certain packers is merely their good fortune, for which the carriers are not chargeable; and the latter are under no duty to make compensating concessions to competing packers less fortunately situated. *There is, in fact, an advantage to the complainants in having their inbound shipments placed alongside their plants in lieu of public terminal delivery''* (italics ours).

Complainant's plant is one of the plants located adjacent to the Chicago Union Stock Yard & Transit Company and referred to, as a group, by the Commission on page 47. Therefore, the Commission clearly found in that case that there was a substantial difference of circumstances and conditions and that obviously there may be advantages one way or the other. In that case the advantage lay with the packers located adjacent to the Chicago Union Stock Yards in that they had their live stock unloaded and loaded without charge. The Commission decided that this was but an advantage of location, stating:

> ''Whatever the practical advantages may be, the propinquity of certain packers is merely their good fortune, for which the carriers are not chargeable; and the latter are under no duty to make compensating concessions to competing packers less fortunately situated. *There is, in fact, an advantage to the complainants in having their inbound shipments placed alongside their plants in lieu of public terminal delivery''* (italics ours).

In other words, "every cloud has a silver lining." We now find there are both disadvantages and advantages in being located away from a public stock yards. If the disadvantages are not "undue or unreasonable" because they are caused by location, likewise the advantages are not "undue or unreasonable" for the same reason.

The advantage, if any, in this case certainly is solely one of location and because intervener is an industry located immediately adjacent to the right of way and tracks of the Chicago, Burlington and Quincy R. R. Company, while complainant is located adjacent to the right of way of a purely switching railroad. Obviously there may be many advantages in the latter location which are not enjoyed by intervener, but there is one disadvantage which cannot be overcome in being located on a purely switching road, and that is that in movements over said switching road, necessarily, switching charges are involved. Furthermore, because it has no line haul, it is in no position to take advantage of reciprocal switching arrangements. This was recognized by the Commission in *Omaha Packing Co.* v. *C. M. & St. P. Ry. Co.*, 37 I. C. C. 378, 380, where the Commission stated:

> "The stockyards are situated on a switching road that cannot participate in reciprocal switching, while complainant's plant is located on the rails of a line carrier which serves 302 industries in Chicago."

The Commission has repeatedly recognized that advantages or disadvantages of location are not undue or unreasonable under sections 2 or 3 of the Act. For ex-

ample, in *Port Arthur Board of Trade* v. *A. & S. Ry. Co.*, 27 I. C. C. 388, 402, the Commission stated:

> "Unjust discrimination by carriers can not be predicated upon their failure or declination to remove, by preferential rates, services, or privileges, the natural disadvantages of location under which one community rests in competition with another that is more favorably located. We have consistently held that it is not our province to adjust rates for the purpose of equalizing natural or commercial advantages. Neither may the carriers lawfully do so. *Red River Oil Co.* v. *T. & P. Ry. Co.*, 23 I. C. C. 438. The interstate commerce act is not intended to equalize fortune, opportunities, or abilities. *I. C. C.* v. *Diffenbaugh*, 222 U. S. 42, 46."

In *Rates on Sand, Gravel and Crushed Stone*, 177 I. C. C. 123, 133, a good illustration is given of the type of advantage, due solely to location, and which is not undue. In that case the Commission held that the fact that a shipper can use a single line haul under a lower rate than another shipper who must use a joint line haul under a higher rate, does not confer upon the first one an undue advantage under section 3.

That is very much the same situation in this case. The advantage, if any, is because intervener is located away from the stock yards district, on the right of way of a line-haul carrier, while complainant is located at the stock yards on the right of way of a switching carrier.

NO ALTERNATIVE ORDER SHOULD BE ISSUED IN THIS CASE.

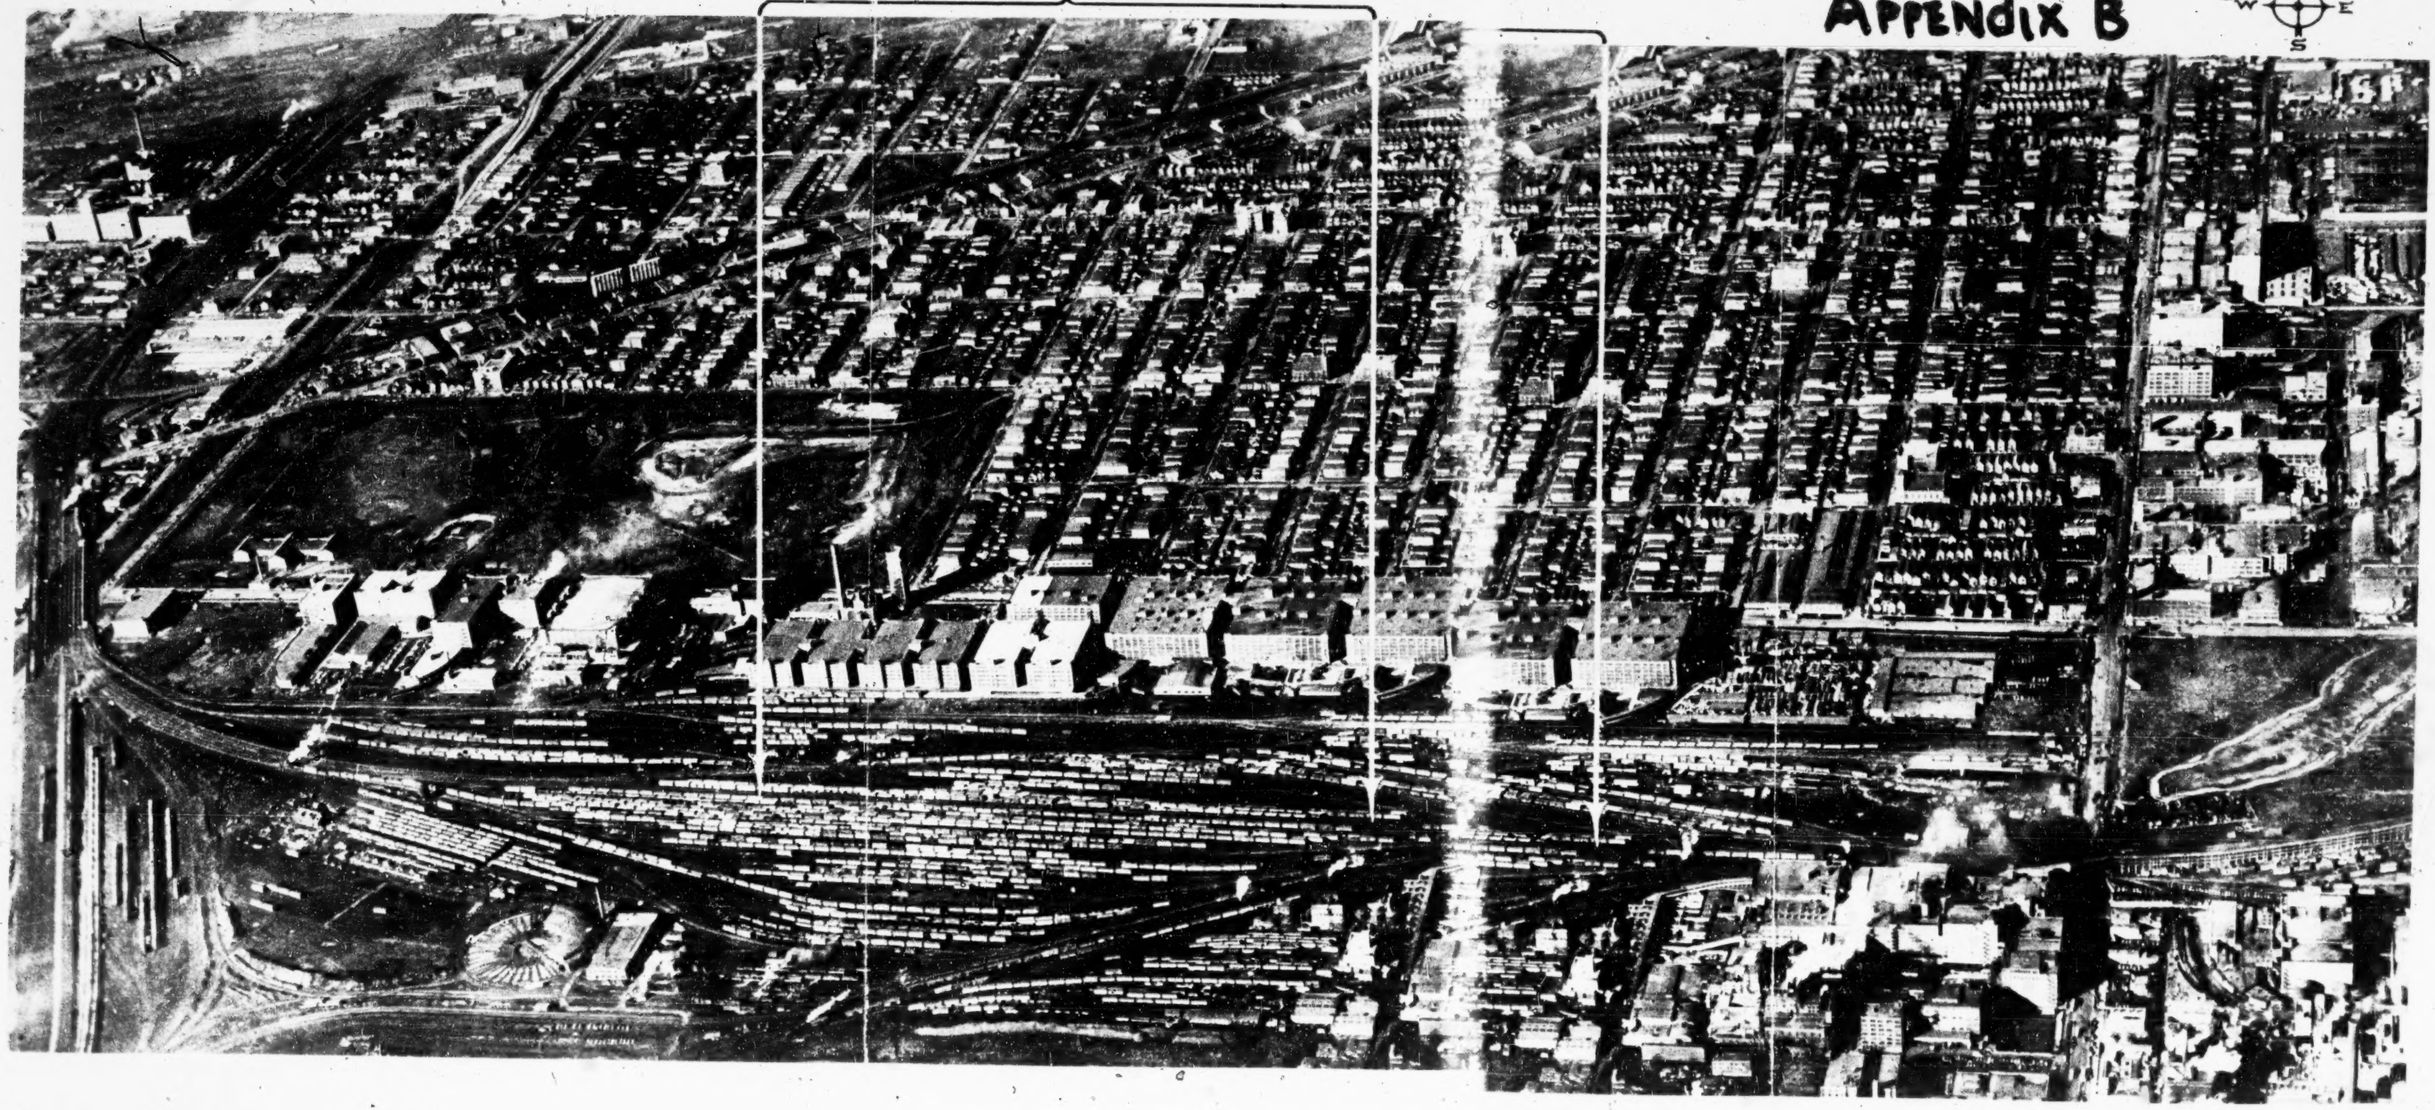
Even if the Commission should find that there is a violation of either sections 2 or 3, it should not give to the defendants the alternative of removing the discrimination or preference by either increasing intervener's charges or decreasing the charges of complainant. If an order of this sort is entered, the carriers will probably increase intervener's charges. This will not help complainant any and will only create a new discrimination. If the order related to the charges now received by the Union Stock Yards & Transit Company, an alternative order would probably require intervener to pay yardage charges on live stock where no yardage, weighing, watering, feeding, unloading, driving and/or other handling was rendered and where intervener, at its own expense, had performed for itself all this service. Such a procedure would be both unreasonable and discriminatory as no other shipper of live stock is required to pay for services it does not receive.

If the order related to the charges which are made by the Chicago Junction Railway Company, an alternative order would probably cause the defendants to charge intervener an amount equal to the Chicago Junction switching charge, less $2.70 per car, or $9.30 per car. This would cause intervener to pay the Chicago Junction switching charge when no switching was performed for intervener by the Chicago Junction.

To require intervener to pay the additional amount of $9.30 per car ($12.00 minus $2.70) would certainly unduly prejudice intervener and discriminate against it when the seventeen packers located in the stock yards district receive their live stock at the chutes of the Union Stock Yards & Transit Company without any charge above the Chicago rate except the $2.70 per car terminal charge. Intervener now pays this terminal charge although it makes no use of the rails of the Chicago Junction. An order which would permit an increase in intervener's rates, without a corresponding increase in the rates to the stock yards, would also be in direct conflict with the decision of the Commission in *Omaha Packing Company* v. *C. M. & St. P. Ry. Co.*, 37 I. C. C. 378, where the Commission prescribed the present rates to intervener's plant. In that case intervener sought the Chicago rate, without the terminal charge. The defendants contended that the terminal charge should be added "to avoid discrimination against complainant's competitors in the stock yards district." The Commission added the terminal charge to the Chicago rate, thus recognizing that the rates to intervener's plant and the unloading chutes of the Union Stock Yards & Transit Company should be on a parity. An alternative order in this proceeding would probably destroy that parity and create a new discrimination.

CONCLUSION.

We believe we have shown the lawfulness of the present rates to intervener's plant, and that there has been no proof that the existence of these rates violates sections 2 and 3. Therefore, the Commission should find that the allegations in respect to said sections 2 and 3 have not been sustained.



Respectfully submitted,

No. 282

SWIFT & COMPANY, *Appellant*,

vs.

THE UNITED STATES OF AMERICA, INTERSTATE COMMERCE COMMISSION ET AL., *Appellees*.

Appeal from the United States District Court for the Northern District of Illinois.

BRIEF FOR THE UNION STOCK YARD AND TRANSIT COMPANY OF CHICAGO, INTERVENER-APPELLEE.

MAY IT PLEASE THE COURT:

This brief is filed on behalf of The Union Stock Yard and Transit Company of Chicago, owner and operator of the Union Stock Yards in the City of Chicago, Ill. This Company, which will be referred to as "the Yard Company," was an intervener in the proceedings before the Interstate Commerce Commission, and is also an intervener in the present action. (R. 59, 124, 250.)

OPINIONS BELOW.

No opinion was written by the District Court, but its findings of fact and conclusions of law appear in the record. (R. 197-209.) The report of the Interstate Commerce Commission appears in the record (R. 57-81.), and is reported in the Commission's published reports. *Swift & Co.* v. *A. T. & S. F. Ry. Co.*, 274 I.C.C. 557.

JURISDICTION.

The jurisdiction of this Court to review the judgment of the District Court is based on 28 U.S.C.A. Secs. 1253 and 2101(b). This Court noted probable jurisdiction on October 15, 1951. (R. 228.)

STATEMENT OF THE CASE.

The proceedings before the Interstate Commerce Commission embraced two separate cases which were consolidated for hearing and covered by one report. (R. 58–9.)

One of these cases was a complaint filed by Swift & Company charging that the interstate through rates on livestock to its plant in the Stockyard District of Chicago, Ill.—each of which is a combination of the line-haul rate to Chicago and a switching charge—were unjust and unreasonable, unduly prejudicial to Swift at Chicago and preferential of competitors at other points, and unduly prejudicial to livestock as a commodity. (R. 50-5.) The prayer of the complaint, as amended, asked for the establishment of just and reasonable rates, rules and practices, including joint through rates, under which the defendant rail carriers would afford delivery of interstate shipments of livestock upon an industrial sidetrack serving Swift's plant at the flat line-haul rates to Chicago. (R. 55–6.) A reading of the complaint and the amendment thereto would indicate that the plant referred to therein was in existence; but it appeared at the hearing that the place where Swift wants delivery is a site in the vicinity of its present plant at which it proposed to construct a new plant, unloading facilities and pens.* (R. 267–9, 455–6, 931–3, 1033–4.)

The other case before the Commission was an investigation and suspension proceeding involving a tariff amendment by

* Appendix B to the Swift brief shows *proposed* buildings, switch tracks and pens indicated on Exhibit 1 before the Commission. (R. 267; Ex. 1, R. 389, 1040.)

which The Chicago River and Indiana Railroad Company, lessee and operator of the terminal switching railroad in the Stockyard District of Chicago known as the Chicago Junction Railway, proposed to cancel the application of its switching charges to shipments of livestock, except on movements to and from the Union Stock Yards in Chicago. (R. 59.) The issue presented by the proposed tariff amendment was whether, in view of the operating conditions on the Junction, a request for switching service on livestock to and from private sidetracks on its rails was a "reasonable request" within the meaning of Section 1(4) of the Interstate Commerce Act, which imposes upon common carriers by railroad the duty "to provide and furnish transportation upon reasonable request therefor." (49 U.S.C.A. Sec. 1(4).)

In its report made on July 6, 1949, the Commission concluded (1) that the combination of line-haul rates and switching charge "will not be unreasonable or otherwise unlawful" on shipments of livestock consigned to the proposed new plant, (2) that the establishment of joint through rates to Swift's sidetrack "is not necessary or desirable in the public interest," and (3) that the proposed tariff amendment "is not just and reasonable." An order was entered dismissing Swift's complaint and requiring cancellation of the suspended tariff amendment. (R. 81.)

The order entered in the complaint proceeding is attacked by the complaint filed by Swift in the District Court. (R. 1.) No challenge has been made by any party to the order entered in the investigation and suspension proceeding.

The Union Stock Yard and Transit Company of Chicago—the Yard Company—was an intervener in support of the carriers in the proceedings before the Commission, and was given leave by the District Court to intervene as a defendant in the present case. (R. 59, 124, 250.) The position of the Yard Company is that the judgment of the District Court dismissing Swift's complaint should be affirmed. (R. 210.)

Business of Yard Company.

The Yard Company owns and operates the Union Stock Yards in Chicago. At this stockyard the Yard Company furnishes various stockyard services, and also unloads inbound and loads outbound livestock by rail. (R. 423–7, 470–1, 955–6, 985–8.) In rendering stockyard services, the Yard Company is a stockyard owner subject to the Packers and Stockyards Act, 1921, and in the performance of its loading and unloading services it is a common carrier subject to the Interstate Commerce Act. (R. 926–7.) *Atchison, T. & S. F. Ry. Co.* v. *United States,* 295 U.S. 193, 195; *Union Stock Yard & Transit Co.* v. *United States,* 308 U.S. 213, 217–22; *Swift & Co.* v. United *States,* 316 U.S. 216, 232.

The Union Stock Yards.

The Union Stock Yards in Chicago is the largest public market for livestock in the world, and occupies the greater part of a half section of land on the south side of the City of Chicago. (R. 719, 811, 919; Ex. 2, R. 389, 1041.) The stockyard is located on the rails of a terminal switching carrier known as the Chicago Junction Railway, and is connected, directly or indirectly, through the rails of the Junction with all of the trunk-line railroads entering Chicago. (R. 436; Ex. 9, R. 389, 1046; Ex. 13, R. 472, 1091.)

Livestock is consigned to the Union Stock Yards from nearly all sections of this country and from points in the Dominion of Canada. The major part comes from the livestock producing areas in the West and Southwest. (R. 741, 831; Ex. 43, R. 769, 1678–9.) In recent years, the total receipts of livestock of all species have ranged from more than 7 to more than 10½ million head per year. (Ex. 46, R. 845, 1848.) Approximately one-half of the receipts move into the Yards by rail and the remainder by truck. (R. 796, 997; Ex. 46, R. 845, 1843–8.) Livestock which arrives by truck comes for the most part from an area

within 175 to 200 miles from Chicago. (R. 760.) Shipments of livestock consigned to the Yards fall into two groups: (1) shipments consigned for sale on the public market at the Yards, which are commonly called "market" shipments, and (2) shipments purchased outside of Chicago by packers for slaughter in Chicago, which are known as "direct" shipments. (R. 263, 717–18.)

The Union Stock Yards is also an important shipping point for livestock. Animals are shipped from the Yards to the country for further finishing, and to packinghouses in the East and Southeast. (R. 713–4, 789–95, 818, 927–8; Ex. 43, R. 769, 1680.) The annual volume of outbound shipments in recent years has ranged from more than 1½ to more than 2 million head. The outbound movement is principally by rail. (Ex. 43, R. 769, 1680; Ex. 46, R. 845, 1849, 1853.)

In the course of a year, several hundred thousand livestock producers ship animals to the Union Stock Yards for sale. (R. 743.) Livestock is purchased at the Yards by approximately 50 packers in Chicago, by livestock feeders, by dealers, and by more than 900 packers in the East and Southeast. (R. 730–1, 789, 927, 946.) Any kind of a meat animal can be sold or purchased on the market. (R. 717, 920.)

All of the larger meat-packing plants, including the plant of Swift, and many of the smaller packing plants are located immediately west of the Union Stock Yards in a highly congested section of the Stockyard District of Chicago known as Packingtown. Other packing plants are located south, east and north of the Yards. (Ex. 2, R. 389, 1041; Ex. 21, R. 553, 1106; Ex. 34, R. 628, 1159.) There are 13 slaughterhouses on the Junction which have private sidetrack connections with its rails. (R. 444–5, 540.) Many of the smaller packers have no slaughtering facilities, but have their animals slaughtered under a custom killing basis at one of the abattoirs located near the

Yards. (R. 946.) An extensive system of alleys, overhead viaducts and tunnels owned by the Yard Company extends from the Yards to the packing plants or to public and private passageways leading thereto. These alleys, viaducts and tunnels are used in moving animals from the Yards to the packing plants. (R. 325–6, 429–33, 561, 983–4; Ex. 61, not printed.)

Throughout the years, the Union Stock Yards has been recognized by the railroads and the livestock industry as the livestock terminal of the trunk-line railroads in the Stockyard District of Chicago (R. 829, 839, 924); and it has also been so recognized by the Interstate Commerce Commission and by this Court. See, *e. g.*, *Cattle Raisers' Ass'n* v. *Ft. W. & D. C. Ry. Co.*, 7 I. C. C. 513, 523; *Live-Stock Loading and Unloading Charges*, 52 I. C. C. 209, 219–20, 224; *Hygrade Food Products Corp.* v. *A. T. & S. F. Ry. Co.*, 195 I. C. C. 553, 554; *Chicago Live Stock Exchange* v. *A. T. & S. F. Ry. Co.*, 219 I. C. C. 531, 545; *Swift & Co.* v. *Alton R. Co.*, 238 I. C. C. 179, 181; *Adams* v. *Mills*, 286 U.S. 397, 409; *Atchison, T. & S. F. Ry. Co.* v. *United States*, 295 U.S. 193, 195; *Swift & Co.* v. *United States*, 316 U.S. 216, 225–7. Livestock is transported to and from the chutes in the Yards by the line-haul carriers, which operate with their own power and crews over the rails of the Junction directly to and from the chutes. (R. 839, 920.)

Most of the livestock consigned to Chicago by rail is delivered at the Union Stock Yards. The volume varies from year to year; but during the years 1943 through 1947, the last five-year period shown of record, it averaged about 77,000 cars per year, of which approximately 31,000 were direct shipments and 46,000 market shipments. (R. 428, 836; Ex. 28, R. 607, 1117; Ex. 43, R. 769, 1639.) Some shipments—approximately 1500 per year—are delivered on public team tracks of five of the line-haul carriers; and approximately 6500 cars per year are delivered at the facilities of the Omaha Packing Company, a wholly-owned subsidiary of Swift, located on the rails of the

Burlington several miles north of the Yards. (R. 262, 282; Ex. 9, R. 389, 1046; Ex. 17, R. 536, 1101.)

History of Union Stock Yards and Junction.

The history of the Union Stock Yards and of the Junction appears in *Chicago Live Stock Exchange* v. *A. T. & S. F. Ry. Co.*, 219 I. C. C. 531, and in *Chicago Junction Case*, 71 I. C. C. 631, referred to at the hearing before the Commission.* (R. 388, 841, 914–27.)

The Yard Company is a corporation created by and existing under a special act passed by the General Assembly of the State of Illinois in 1865. (Ill. Laws 1865, vol. 2, p. 678.) At that time, four separate stockyards were maintained by individual railroads in the Chicago district. The maintenance of these yards was burdensome to the owning railroads, and their widely separated locations were unsatisfactory to the livestock industry and the railroads. The Yard Company was organized to replace the four separate yards with a union stockyard which would provide a livestock terminal for the railroads and a central market for livestock. The original stockholders of the Yard Company were the nine railroads then serving the Chicago district, but during the following decade they sold their holdings to other interests. (219 I. C. C. at 533; R. 769, 914–18.)

The special charter of the Yard Company authorized it (1) to construct and operate, upon land south of the southerly limits of the City of Chicago as they then existed, a general union stockyard for livestock; (2) to construct a railroad to connect the stockyard with the lines of all railroads terminating in Chicago; and (3) to operate the railroad constructed by it or

* Other cases containing a history of the Union Stock Yards and the terminal railroad known as the Junction are: *United States* v. *Union Stock Yard & Transit Co.*, 226 U.S. 286, 296–300; *Union Stock Yard & Transit Co.* v. *United States*, 308 U.S. 213, 215–16; *Cattle Raisers' Ass'n* v. *Ft. W. & D. C. Ry. Co.*, 7 I. C. C. 513, 521–3; *Live Stock Loading and Unloading Charges*, 52 I.C.C. 209, 210–13.

enter into operating contracts with the various connecting railroad companies. (Ill. Laws 1865, vol. 2, pp. 679–80.) The company acquired the necessary land in the open prairies south of the city, and constructed the Union Stock Yards and 30 miles of railroad connecting the Yards with the trunk-line railroads. The other four stockyards in Chicago were then abandoned. (219 I. C. C. at 533; R. 916–7, 921.)

Construction of the Union Stock Yards and of the terminal railroad was completed by December 25, 1865. During the remaining days of the year 19,810 head of livestock were received at the Yards, and more than 1½ million head were received at the Yards the following year. (R. 918; Ex. 46, R. 845, 1847.) Due to its strategic location at the junction of the termini of the western and eastern railroads, good transportation service, the rigid enforcement of honest trading practices, and high standards of service, the Union Stock Yards became, and still is, the largest and most important livestock market in the world and the price-determining market of the United States. (R. 717, 719, 722–3, 754, 770–1, 783, 806–7, 811–2, 915, 918–20.)

The 30 miles of terminal railroad constructed by the Yard Company in 1865 were the nucleus of the present Chicago Junction Railway. (71 I. C. C. at 633.) In the early days of its existence, the facilities of the terminal railroad were expanded from time to time with the growth of industries and the construction of additional railroads into Chicago. (R. 922, 925–6; Ex. 3, R. 389, 1042.) At the beginning, the road was used almost exclusively for the transportation of livestock to and from the chutes at the Union Stock Yards. (R. 921.) The trunk-line carriers were given permission by the Yard Company to operate over its tracks with their own engines and crews for that purpose, and this practice has continued throughout the years. (71 I. C. C. at 633; R. 469, 839, 920.)

Commencing about 1870, packing plants were constructed in the vicinity of the Yards, and the line-haul railroads were then

given permission by the Yard Company to carry dead freight over its terminal railroad. Lack of central control over the operations of the individual railroads on the terminal railroad resulted in unsatisfactory operation and service, and from 1887 to 1893 the road was operated first by one and later by another association controlled by the railroads. In 1893 the Yard Company acquired locomotives and commenced the handling of dead freight itself. (71 I. C. C. at 633; R. 922–3.)

In 1897 the Yard Company leased its terminal railroad to Chicago & Indiana State Line Railroad Company, and during the following year the lessee and the Chicago, Hammond & Western Railroad Company were consolidated into a corporation known as Chicago Junction Railway Company. The former Chicago, Hammond & Western properties were sold by the Junction Company in 1907 to the Indiana Harbor Belt Railroad Company. A new lease of the terminal railroad was made in 1913 by the Yard Company to the Junction Company. In 1922, pursuant to authorization given by the Interstate Commerce Commission in *Chicago Junction Case*, 71 I. C. C. 631,* the Junction Company subleased the terminal railroad to The Chicago River and Indiana Railroad Company (the River Road), a wholly-owned subsidiary of The New York Central Railroad Company,** and the Junction has since been operated by the River Road, as lessee, under the name "Chicago Junction Railway (C. R. & I. R. R. Co., Lessee)." (71 I. C. C. at 633; 219 I. C. C. at 533; R. 436, 923; Ex. 57, R. 1039, 1961.) As was pointed out in *Baltimore & Ohio R. Co.* v. *Chicago Junction Ry. Co.*, 156 F. 2d 357, 358 (C.A. 7th), since the lease of 1922, the Chicago Junction Railway Company has been

* In a supplemental report, 150 I.C.C. 32, one of the conditions prescribed in the original report, not here material, was modified.

** The order authorizing the River Road to lease the Junction properties also authorized the New York Central to acquire control of the River Road by purchase of its capital stock. *Chicago Junction Case*, 71 I.C.C. 631, 650.

"a non-operating, lessor railroad corporation," and the River Road "has been the sole operator of [the Junction railroad] under the name of Chicago Junction Railway, Chicago River and Indiana Railroad Company, Lessee."

After the construction of the first packing plants about 1870, the area in the vicinity of the Union Stock Yards began to develop industrially. By 1874 there were 15 packing plants. (R. 922.) In 1889 the Stockyard District was annexed to the City of Chicago. Annexation gave impetus to the opening up of public streets around the Stockyard District. Industrial development was rapid, and by 1907 the entire area in the vicinity of the Union Stock Yards was built up almost solid with permanent buildings owned by various industries, principally those engaged in the handling of meats, meat products, and by-products of the packing industry. In later years, many manufacturing and other industries located along the lines of the Junction. Industrial development also resulted in the construction of housing in areas in the vicinity of the Junction for the employes of the industries. (R. 501, 523–4, 924–6; Ex. 15, R. 502, 1094; Ex. 19, R. 553, 1104; Ex. 20, R. 553, 1105; Ex. 21, R. 553, 1106; Ex. 34, R. 628, 1159; Ex. 61, not printed.) There are now 499 industries with 645 private sidings served by the Junction, and the great majority of them are located in the Stockyard District or in the vicinity thereof. (R. 61, 443; Ex. 2, R. 389, 1041; Ex. 13, R. 472, 1091; Ex. 34, R. 628, 1159.)*

Deliveries of Livestock on the Junction.

The unimpeded and prompt delivery of inbound livestock is a *sine qua non* to the successful operation of a large central

* The River Road also has a number of industries with private sidetracks on its own rails to the west of the Stockyard District of Chicago. The two switching railroads (Junction and River Road proper) now operated by the River Road together have a total of 653 industries with 823 sidetracks. (R. 61, 436.)

livestock market. Ever since the original tracks of the Junction were constructed in 1865, the trunk-line railroads have been permitted to carry livestock to the Union Stock Yards over the terminal railroad with their own power and crews. Although this practice was inaugurated at a time when the Yard Company was controlled by the railroads, no change was ever made in the practice by the Yard Company after the railroads sold their holdings of its capital stock. The practice was continued by the Chicago & Indiana State Line Railroad Company and by the Chicago Junction Railway Company; and since the lease of 1922, has also been continued by the River Road, as lessee of the Chicago Junction Railway. (R. 469, 483, 493, 839, 920.)

At no time in the long history of the Union Stock Yards has livestock ever been delivered to private sidetracks of the packers. (R. 354, 471, 483, 829, 838–9, 924.) The only services which the Junction has ever rendered on inbound shipments of livestock are the switching of cars of ordinary livestock to the unloading chutes at the Yards in isolated emergency situations and the switching of cars of exhibition stock to the International Amphitheatre in the Yards. (R. 354, 429, 519–20, 530; Ex. 46, R. 845, 1846.)

Prior to the request by Swift for plant siding delivery at the flat Chicago rates,* which was made shortly before the filing of its instant complaint with the Commission, none of the large packers in Chicago had ever made any similar request. (R. 354, 838–9; Ex. 10, R. 389, 1047.) About 1890 Swift and two other packers acquired some property near the Union Stock Yards on which they constructed facilities for the receipt and holding of livestock; and in 1891 they made demands upon the Yard Com-

*This request was "that the line haul carriers accord us [Swift] direct delivery of livestock at our Chicago plant at rates no higher than those assessed by the line haul carriers for delivery at the pens of the U.S.Y. & T. Company." (Ex. 10, R. 389, 1048.) All carriers addressed denied the request. (Ex. 10, R. 389, 1049–52, 1073.)

pany that it permit the line-haul carriers to transport livestock over its terminal railroad direct to this location, which was designated as the Central Stock Yards. Upon the refusal of these demands by the Yard Company, the packers instituted suits in an Illinois state court for writs of injunction requiring the Yard Company to deliver livestock at the Central Stock Yards or to permit the line-haul carriers to make such deliveries. (R. 924; Ex. 42, R. 907, 1203–58.) On January 15, 1892, a compromise agreement was entered into, and the suits were thereafter dismissed. (R. 924; Ex. 42, R. 907, 1177–88, 1304–6.) The demands made in these suits, it should be noted, were not for plant siding delivery. The historical facts just reviewed were the subject of discussion in the opinion of this Court in *Swift & Co.* v. *United States*, 316 U.S. 216, 228–9.

In 1931 Hygrade Food Products Corporation, a small packer whose plant is located near the Union Stock Yards, filed a complaint with the Commission in which it alleged, *inter alia*, that the Junction's switching charge was inapplicable to shipments of livestock which might be placed at Hygrade's plant sidings, and, if applicable, was unreasonable, unjustly discriminatory, unduly prejudicial to Hygrade, and unduly preferential of the Omaha Packing Company, a subsidiary of Swift. The Omaha Packing Company, appearing by two of the counsel who here represent Swift, opposed parts of this claim, and the Commission found it without merit. *Hygrade Food Products Corp.* v. *A. T. & S. F. Ry. Co.*, 195 I. C. C. 553, 554, 558. In its report, at page 554, the Commission stated that no livestock had ever moved by rail to or from Hygrade's private tracks. This is the only case, prior to the present litigation, in which any packer in the vicinity of the Union Stock Yards has ever attempted to obtain private sidetrack delivery on the rails of the Junction at the line-haul rates. The Hygrade Corporation acquiesced in the decision of the Commission, and, as previously stated, the Junction has never been called upon to perform any switching serv-

ice on shipments of ordinary livestock except in emergencies, and then only to the Union Stock Yards.

A part of the Commission's order in the *Hygrade* case, not pertinent to the present discussion, was set aside at the suit of the defendant railroads in *Atchison, T. & S. F. Ry. Co.* v. *United States*, 295 U.S. 193. In its opinion in that case, at page 195, this Court stated:

> "*** the Hygrade Company elects, as did its predecessors, to have all livestock intended for slaughter at the plant shipped to the [Union] stockyards. These yards are livestock terminals of the carriers and are served by trains operated by them over the tracks of the Junction Railway."

This observation with respect to Hygrade applies equally to all other packers which have had livestock consigned to the Stockyard District of Chicago.

Importance of Good Railroad Service to Union Stock Yards.

The public livestock market at the Union Stock Yards is dependent upon good railroad service for the continuance of the large supply of livestock which is essential to the maintenance of a sustained buying demand. (R. 716–7, 719, 722–3, 783, 791, 808–9, 816, 928.) Delay in the transportation of livestock results in shrinkage and adversely affects its appearance. Shrinkage results in loss to the producer, and appearance has an important bearing on the price which prospective purchasers will pay. (R. 721–2, 745, 771–2, 780–2, 920–1, 943–4.) Transit time is therefore an important factor in determining the outlet to which a producer will ship. (R. 722–4, 782–3, 817, 991.) Good railroad service has been a most important factor in making the Union Stock Yards the world's largest market for livestock and the price-determining market of the United States. (R. 722–3, 791–2.)

The market at the Union Stock Yards opens about 7 A.M., and the earlier trading hours are generally the more favorable because competition during those hours is usually more intense. (R. 720, 776–7, 780, 792.) Livestock which does not arrive in time for the early morning market may have to be held over until the following day. (R. 780.) The schedules of the line-haul carriers are, for the most part, set up for arrival at the Yards between midnight and 6 A.M., so that the animals can be watered, fed, rested and classified for sale before the opening of the market. (R. 719–21, 775–6, 809.) The western railroads now have schedules under which delivery is made at the Union Stock Yards within 36 hours from points as far west as Jamestown, N. Dak., Aberdeen, S. Dak., Grand Island, Neb., Dodge City, Kans., and Oklahoma City, Okla., without a stop in transit for feed, water and rest. (R. 697, 705–6, 722, 725–6.)*

Effect of Grant of Swift Demand on Transportation of Livestock to Union Stock Yards.

The grant of the Swift demand for plant delivery of livestock at the flat Chicago rates would have a serious effect on the transportation of livestock consigned by several hundred thousand producers to the Union Stock Yards. In its report the Commission found:

> "* * * it is our best judgment, and we, therefore, so find and conclude, that, if complainant's [Swift's] demand for the [plant] delivery service at the line-haul rates were granted, there would result demands from other packers requiring defendants [railroads] to render like delivery service in an amount and volume which together with such service rendered complainant *would seriously interfere with, delay, and disrupt defendants' terminal operations*

* Under the Twenty-Eight Hour Law, the period of confinement may be extended from 28 to 36 hours upon written request of the owner or person in custody of the animals. (45 U.S.C.A. Sec. 71.)

in carrying livestock to the Union Stock Yard and in making deliveries of other freight to the industries on the Junction's lines.

"Interferences with the movement of livestock to the stockyards is a serious concern not only of defendants but also of producers and livestock marketing agencies who desire expeditious movement of livestock and *continued functioning of the public market* in a manner that is adequate for their needs." (R. 76–7; emphasis supplied.)

The congestion and consequent delays which would result from the Swift demand are so great that, even if plant delivery were otherwise practicable, the Junction would have to insist that all cars of livestock have eight hours of unexpired confinement time under the Twenty-Eight Hour Law at the time they were delivered in the Ashland Avenue South Yard. (R. 484, 522, 542–3, 561–2.) An ample margin is necessary because the operating officials of the Junction would not be able to advise the line-haul carriers, prior to the departure of a train of livestock from their outer yards, what amount of time the Junction would require to move any particular car from the receiving tracks in the Ashland Avenue South Yard to the consignee's siding. (R. 522, 562, 642, 678.)

The demand of the Junction for a safe margin of unexpired confinement time on cars of livestock consigned direct to packing plants and the congestion on its rails from the handling of such livestock would adversely affect the handling of shipments of livestock—market as well as direct—by the line-haul carriers, and the inevitable result would be a substantial increase in the overall time in transit. Additional stops for feed, water and rest would be required on shipments from more distant areas. (R. 642–3, 680–1, 702–3.) A stop for feed, water and rest always adds five hours to the running time because of the requirement of the Twenty-Eight Hour Law that the animals be given at least five consecutive hours of rest. (R. 656–7.) The actual delay may be longer because the next

train which could pick up the animals may not arrive at the stopping point until more than five hours after the animals were unloaded. (R. 785.) The making of a stop for setting out of cars of livestock also results in delay to other cars of livestock in the same train which do not have to be set out. (R. 644, 656–7.) The congestion on the rails of the Junction which would result from the handling of livestock direct to packing plants would increase the running time of the line-haul carriers from their outer yards to the Union Stock Yards by at least an hour. (R. 624, 642, 678–9, 682, 702–3.) The necessity of segregating livestock consigned direct to packing plants from other livestock in the same train would result in additional delays in the outer yards of the line-haul carriers estimated at about one hour per train. (R. 620, 623, 640–1, 657, 699–700.)

Rate Bases on Livestock to Chicago.

There are two bases of rates on livestock consigned to points in the City of Chicago. One basis, the flat line-haul rate, applies to public team tracks and industrial sidings on the rails of the line-haul carriers, and also to the Union Stock Yards, which, in legal effect, is on the rails of the line-haul carriers because they have running rights for the carriage of livestock over the rails of the Junction to the unloading chutes at the Yards. (R. 286, 375–6, 834–5, 839–40.) The other rate basis is the line-haul rate plus a switching charge, which at the time of hearing before the Commission was $28.80 per car. This rate basis applies to private sidetracks of all packers on the rails of the Junction; but it is a basis which has never been used. (R. 288–9, 354, 483, 838–9.)

Both rate bases, it will be noted, apply to deliveries on the Junction in the Stockyard District of Chicago. The line-haul rates apply where delivery is made at the Union Stock Yards by the line-haul carriers operating over Junction tracks with

their own power and crews. The line-haul carriers have no running rights to transport freight of any kind over the Junction direct to the private sidetrack of an industry. For this reason, any livestock consigned to the private sidetrack of a packer must be interchanged by the line-haul carriers to the Junction on the receiving tracks in the Ashland Avenue South Yard. (R. 497, 527, 539–40, 543, 840.) The switching charge would be assessed for the service of the Junction in handling the loaded car from the Ashland Avenue South Yard to the plant of the consignee, and thereafter returning the empty car to the line-haul carrier.

Terminal Services on Shipments to Union Stock Yards and Packing Plants on the Junction.

The terminal service required for deliveries of livestock under the rate basis applicable to private sidetracks at the packing plants on the Junction would be materially greater than the terminal service performed under the rate basis applicable on shipments delivered at the Union Stock Yards. The differences in terminal service explain the difference in the two rate bases.

Deliveries at Union Stock Yards

Livestock consigned to the Union Stock Yards is transported direct to the unloading chutes in the northern section of the Yards over the rails of the Junction by the 22 line-haul carriers with their own power and crews. (R. 439, 452–3, 469, 543; Ex. 46, R. 845, 1846.) There are 10 of these chutes with a total capacity of 350 cars. (R. 439, 475.) The train is moved onto a chute track adjacent to an unloading platform of the Yard Company. While the cars are being unloaded by the Yard Company, the engine runs around the train, and when the unloading is completed the engine takes the empty livestock cars back to the outer yards of the railroad from which they came. (R. 470–1, 474–6, 479–80, 539, 632, 660, 950.) The receiving

and delivering yards of the Junction are thus not burdened with livestock cars, either loaded or empty. (R. 469.)

Witness C. B. Heinemann, who had had many years of experience in the livestock industry and had studied the operations at terminal markets throughout the United States (R. 908–14, 945.), described the operations at the Union Stock Yards in Chicago as follows:

> "* * * you have a situation at Chicago that is unparalleled in any terminal of the world, and I think I have studied a lot of them. In this livestock traffic, as it comes to the chutes of the Union Stock Yards, you have solid trains, whether they consist of one car or 60 cars. The trains move directly to the chutes, and while the engine is cutting off and running around the train, the cars are being unloaded; and in tests that we made out there on solid trains, we found cases where they averaged 55 seconds per car in unloading this livestock." (R. 945.)

Deliveries at Packing Plants

Shipments of livestock consigned direct to packing plants, as previously stated, would have to be interchanged to the Junction in the Ashland Avenue South Yard. Because of the Twenty-Eight Hour Law and the nature of the commodity, shipments of livestock would have to be given priority in handling over other freight. *Swift & Co.* v. *United States*, 316 U.S. 216, 227.

Shipments of dead freight are classified in the Ashland Avenue South Yard for further movement to base yards serving the various operating districts. After arrival at the base yards, the cars are again classified for movement to the industries to which they are destined, and are thereafter switched to those industries. (R. 466, 476–7, 480, 557–8, 559–60.) The average time required to handle a shipment of dead freight from the time it is received at the Ashland Avenue South Yard until it is placed for delivery at an industry is 23½ hours in the case of

perishable freight and nearly 32 hours in the case of non-perishable freight. (R. 471, 511, 559–60.) It is thus obvious that shipments of livestock consigned direct to packing plants would have to be specially handled by the Junction.

Cars of livestock delivered to the Junction in the Ashland Avenue South Yard would inevitably be mixed with cars of dead freight on the receiving tracks in the yard. (R. 495–6, 528–30, 545–7, 659, 700.) Junction employes would have to segregate the livestock cars from the dead freight. This would require that inspection and other work incident to interchange be promptly performed. Engines would have to be made available to segregate the cars of livestock and return the cars of dead freight to the receiving tracks for subsequent handling by breakup crews. (R. 469–70, 496–7, 500–1, 539–40, 544–6, 639, 659.)

There are no separate tracks available for the classification of livestock, and the work of classifying the cars for delivery to the various packing plants would have to be performed by the Junction on its present classification tracks in the Ashland Avenue South Yard. It is quite possible that some of the packing companies would demand delivery of the several species of animals at different locations; and if such demands were made, there would be additional classification work in the Ashland Avenue South Yard. (R. 470, 482–3, 544, 563, 699–700.) Since cars loaded with livestock cannot be kicked, all switching operations would have to be performed with the cars coupled to the engine, and this would greatly slow up the operations on the receiving and classification tracks. (R. 469, 482, 543–4, 728–9.)

Special engine assignments would have to be made by the Junction to handle the cars of livestock from the classification tracks in the Ashland Avenue South Yard to the various packing plants, which are located in seven operating districts. If

upon arrival at the consignee's siding it appeared that the engine had more cars of livestock than could be accommodated on the siding, the engine and crew would have to remain and perform whatever switching services were required to meet the situation presented. (R. 470, 483–4, 452–3.)

Plant siding delivery of livestock by the Junction would also necessitate the removal of the empty cars by it. These cars would have to be handled through the base yards to the outbound delivering yards, which are now badly congested—to the Ashland Avenue North Yard in the case of cars for most of the western lines, and to the Loomis Street Yard in the case of cars destined to other lines. After the cars had arrived in the outbound yards of the Junction, they would have to be classified for return to the various line-haul railroads, and would subsequently have to be picked up by transfer crews of those railroads. (R. 466, 470, 477–8, 498–9, 505–6, 542, 547–8, 558, 563, 660, 700–1.)

Scope of this Brief.

Since the findings of the Commission and the evidence relating to the lawfulness of the present combination through rates on livestock to Swift's private sidetrack will undoubtedly be discussed in the briefs filed by the Government, Commission and railroads, we shall not attempt to duplicate the work of the able counsel who represent those parties. It is the position of the Yard Company that the long-established practices and rate bases affecting the transportation of livestock to points of delivery on the Junction in the Stockyard District of Chicago are not unreasonable or otherwise unlawful; that the findings and conclusions of the Commission are fully supported by the evidence; that the Commission did not commit any error affecting Swift; and that the judgment of the District Court should be affirmed.

ARGUMENT.

I.

Immediate and Ultimate Purposes of Swift's Demand for Private Sidetrack Delivery at Line-Haul Rates.

Swift's complaint and the argument advanced in its brief are directed to securing plant delivery of direct shipments at the flat Chicago rates applicable to the public livestock terminal of the railroads. Since it is obvious that, if Swift should prevail in this effort, other packers in the Stockyard District of Chicago would demand and be entitled to like treatment on their direct shipments,* and since Swift's competitive position would not be improved if Armour, Wilson and other packers could obtain plant delivery at the same rates as Swift, the immediate purpose of Swift's complaint must necessarily be to obtain an advantage over market stock purchased by its competitors at the Union Stock Yards. The ultimate purpose of Swift's effort to obtain an advantage over market stock is the destruction of the public market at Chicago as the price-determining market of this country. This conclusion is fully warranted by the record.

Since Swift was forced by a decree of the Supreme Court of the District of Columbia to divest itself of the extensive and substantial interests which it formerly had in various public stockyards, and was perpetually enjoined from owning, directly or indirectly, any interest in any public stockyard company in the United States, it has established a number of buying stations in the country to purchase livestock directly from the producer, and has consigned substantially all of the animals so purchased for its Chicago slaughterhouse to the facilities of its wholly-owned subsidiary, the Omaha Packing Company. (R. 391; Ex. 29, R. 707, 1118–21; Ex. 42, R. 907, 1458–76, 1610A–36.) Only a small part of Swift's requirements at Chi-

* This was the judgment of the Commission, and it is supported by the opinions of well qualified witnesses. (R. 76, 928, 988–9.)

cago are purchased on the public market. (R. 410–11, 1012–13, 1019.) At the hearing before the Commission Swift's counsel referred to public stockyards as "a sort of a fungus growth" and "parasitic." (R. 587, 593.) The handling of livestock by the Junction to packing plants on its line, as Swift well knows, would seriously disrupt and delay the handling of market stock to the Union Stock Yards; and the deterioration in transportation service to the Yards, as Swift also well knows, would inevitably result in the destruction of the market.

The effect of the granting of the Swift demand upon the public market at the Union Stock Yards was described by well qualified witnesses.

The Traffic Manager of the Chicago Live Stock Exchange testified as follows:

> "Q. If the Swift demand were granted and there was this interference with railroad operation resulting therefrom to which the railroad witnesses have testified, would that adversely affect the market?
>
> A. I would say * * * it would crucify the Chicago market if things came to pass as has been depicted here by these railroad witnesses, It would crucify the Chicago market." (R. 722.)

A witness who was Executive Vice President of the National Independent Meat Packers Association and Secretary of the Eastern Meat Packers Association expressed the following opinion:

> "Q. What, in your opinion, would be the effect of granting the relief that is prayed for by Swift in this case?
>
> A. Based on my experience and observation out in that [stockyard] area, I am convinced that if even a measure of the delay is encountered as has been testified to [by] previous witnesses, it would effect the serious impairment of the Chicago market and its eventual destruction." (R. 928.)

The General Manager of the Yard Company concluded his testimony with respect to the effect of the granting of the Swift demand by saying:

> "Carried through to its logical conclusion, the loss of its packer directs and a resulting reduction in open market receipts, will bring about a vicious cycle of higher and higher marketing costs per animal and lighter and lighter receipts. The result can be only one thing. As the net earnings of the Stock Yard Company become smaller and smaller, so as to yield little or no profit, the owners of the property will probably have to find some other use for it than as a livestock market, and the great Chicago livestock market would then become a thing of the past." (R. 992.)

The destruction of the Chicago market as the price-determining market of the country would put Swift in a more advantageous position in dealing directly with the livestock producers, who in general, as one of the foremost authorities* in the field of livestock marketing testified, do not have the training and experience to sell their livestock to the best advantage, and who must deal with carefully selected and thoroughly trained buyers employed by the packers.** (R. 814–15.) The

* Dr. A. C. Ashby, Professor of Livestock Marketing, University of Illinois College of Agriculture, and at one time District Livestock Market Supervisor for the Packers and Stockyards Administration of the Department of Agriculture in Chicago, Cincinnati and Indianapolis. (R. 810.)

** Compare the following excerpt from Swift's Year Book for the year 1947:

> "The steaks that sold for $1 a pound in New York City on September 10 came from cattle dressed ten days to two weeks earlier. Although this meat could have come from many markets, let's assume that it came from Chicago.***
>
> "The farmer who produced the choice steer sent it to the Chicago market consigned to *an experienced commission agent.* The steer was displayed in a pen and *the commission man sold it for the highest price he could get from any of a large number of buyers* representing meat packing companies in Chicago and elsewhere." (Ex. 11, R. 397, 1078; emphasis supplied.)

prices at the Chicago market are now the principal guide of the producers as to the value of their livestock. (R. 717, 770–1, 818.) If Swift can destroy the Chicago market as the price-determining market, it will also be able to improve its competitive position over many of the smaller packers in Chicago, which do not have, and probably could not afford to establish, buying stations and organizations in the country.

The importance of the public market to the producer of livestock was recognized by Swift in its Year Book for 1947, from which the following is taken:

> "The meat packer who did not bid the market price for livestock would find that his competitors were getting increased volume while he would be unable to keep his plants operating and his customers supplied.
>
> "Anybody in the meat business who stays below the market quickly finds himself out of business. * * *
>
> "Meat and livestock, therefore, are just naturally going to be sold to those who bid market prices.
>
> "Competitive market prices of livestock and meat are among the most flexible in our entire economy. They must change quickly and with delicate precision to make possible the fair and efficient marketing of a perishable product whose supply varies weekly and daily." (Ex. 11, R. 397, 1076–7.)

The importance of the part played by the Chicago Union Stock Yards in the livestock industry was recognized by this Court in *Swift & Co.* v. *United States*, 316 U.S. 216, where, at page 226, the Court declared:

> "Neither the railroads nor the Stock Yards exist for the benefit of the packers alone. *** The Stock Yards are not only a facility for the transportation of direct shipments from points of country origin to the packers; they also are an important factor in the entire animal industry of the United States."

In pointing out the immediate and ultimate purposes of the Swift complaint, we have not overlooked the fact that it is not the function of the Commission to pass upon the relative merits of the two different methods of buying livestock, or to the fact that Swift has the legal right—provided it keeps its buying practices within the limitations of the Anti-Trust Laws—to employ either method in purchasing its requirements of livestock. The Commission, however, is concerned with the transportation rights of producers who ship their livestock to the Chicago market, as well as with the transportation rights of Swift. The decision of the Commission is based upon the rate standards of the Interstate Commerce Act, and those standards require a higher rate basis for private sidetrack delivery by the Junction at the various packing plants on its tracks than for centralized delivery by the line-haul carriers at the Union Stock Yards.

II.

The Long Established Practice of the Line-Haul Railroads in Making Centralized Delivery at the Union Stock Yards Is a Reasonable Practice.

Swift's complaint before the Commission was, in essence, an attack against the long established practice of the railroads—concurred in by Swift and other packers—of making centralized delivery of livestock at the Union Stock Yards. Since 1865, the Union Stock Yards has been the livestock terminal of the line-haul carriers in what is now the Stockyard District of Chicago, and Swift and other packers have concurred in the practice of the railroads since 1892. (See Statement, *supra*, pp. 6, 11–12.)

The yards and tracks of the Junction were not laid out for the handling of livestock to packing plants. The original plan of the railroads which were instrumental in bringing about the organization of the Yard Company was to make the Union Stock Yards their livestock terminal. There has never been any

departure from the original plan, and for 86 years the Union Stock Yards has been the only livestock terminal for the delivery of livestock on the rails of the Junction. It may safely be assumed that Swift and other packers have long had knowledge of this practice. *Atchison, T. & S. F. Ry. Co.* v. *United States*, 295 U. S. 193, 199. At no time prior to the demands made by Swift which preceded its present complaint to the Commission had any large packer ever made a request for private sidetrack delivery at the line-haul rates. (See Statement, *supra*, pp. 11–13.)

The demands made in 1891 were for delivery at a private stockyard established by Swift and two other packers; and the suits which were filed to enforce those demands resulted in the compromise agreement of 1892, pursuant to which the suits were dismissed. During the period following the dismissal of these suits the area in the vicinity of the Union Stock Yards became so closely built up as to preclude expansion of the yards and other facilities of the Junction. (See Statement, *supra*, pp. 10–12.)

Speaking in 1940, the Commission said in *Swift & Co.* v. *Alton R. Co.*, 238 I. C. C. 179:

> "For many years the packers, including complainant [Swift], *made the practice of which they now complain their own practice*. They gave up their own terminal facilities at the Central Stock Yards for a substantial consideration, and, by their covenants with the Yard Company, *made the Union Stock Yards their own terminal facilities in Chicago*." (238 I. C. C. at 188; emphasis supplied.)
>
> * * * * *
>
> "The packers, including complainant [Swift] and intervener [Armour], not only acquiesced in the usage and practice but, in addition * * * *have concurred in the practice and have made it their own*." (238 I. C. C. at 196; emphasis supplied.)

The evidence on which these findings were based was introduced in the present proceeding before the Commission as Ex-

hibit 42 (R. 907, 1174-1638), and there is no countervailing evidence.

Throughout the years, the Junction had no reason to anticipate that it would ever be called upon to handle livestock to packing plants, and no provision for the necessary facilities was made while it was still possible to do so. Except for the elevation of the tracks, the Ashland Avenue Yards are substantially the same today as they were in 1907, and there is now no room for expansion. (R. 461, 544, 563, 925-6.) As the Commission found in the present case:

> "There is no land available for the expansion of those [Ashland Avenue] yards or the building of additional facilities nearby for interchange and classification of traffic." (R. 60.)*

The present case is the third effort made by packing interests to destroy the Union Stock Yards by an attack upon the practice of making centralized delivery of livestock, which, under the circumstances obtaining, is an essential element of its continued operation. In the two earlier cases the practice was upheld by this Court.

In *Atchison, T. & S. F. Ry Co.* v. *United States*, 295 U.S. 193, it was held that the transportation of livestock consigned direct to the Hygrade Food Products Corporation, a packer whose plant was near the Union Stock Yards, did not include delivery within the packing plant by means of facilities of the Yard Company. The order under review had been entered by the Commission in *Hygrade Food Products Corp.* v. *A. T. & S. F. Ry. Co.*, 195 I. C. C. 553. The Commission had held that the packing company was entitled, as a part of the service

---

* In *Chicago Junction Case*, 71 I.C.C. 631, 634, the Commission had previously (1922) found: "The Junction properties are incapable of expansion so as to afford adequate facilities for interchange and classification, since the district in which they lie is highly developed and intensively used,***."

covered by the line-haul rates, to use the properties of the Yard Company, including an overhead runway, to remove its animals from the unloading pens in the Yards to its plant. In holding that transportation did not include the use of the properties of the Yard Company for egress, or delivery within the consignee's plant, this Court, at pages 200-1, said:

> "Long continued practice and special conditions made unloading at these [Union Stock] yards a transportation service to be performed by the carrier. *Adams* v. *Mills, supra*, 410. So the long established and uniform practice to provide a route via the overhead runway to the Hygrade plant distinguishes the use of the Yards Company's properties for this service from mere egress such as is included in transportation of livestock to destinations other than public yards. Plainly there is an essential difference between the route from unloading pens to consignee's plant and a mere way out to the public highways. Transportation does not include delivery within the Hygrade plant or the furnishing of the properties, overhead runway and all, that are used for that purpose. Usage and physical conditions combined definitely to end transportation, at least in respect of these shipments, with unloading into suitable pens as is now required by § 15(5)."

More recently, in *Swift & Co.* v. *United States*, 316 U.S. 216, this Court upheld the order entered by the Commission in *Swift & Co.* v. *Alton R. Co.*, 238 I.C.C. 179. In that case Swift, supported by Armour, asked for an order requiring the railroads serving the Union Stock Yards to afford egress for direct shipments of livestock from the unloading pens at the Yards to a public street without charge in addition to the line-haul rates. The final conclusion of the Commission was that the transportation of direct shipments ended when they were unloaded into the unloading pens at the Yards; and in reaching this conclusion the Commission relied heavily upon the practice which had obtained and the acquiescence of the packers therein. The conclusions of the Commission were held

by this Court to be amply supported by the evidence, and were accordingly sustained.

At page 226, this Court made the following pertinent observations:

> "Neither the railroads nor the Stock Yards exist for the benefit of the packers alone. Their [packers'] patronage is large and important, but neither in the regulation of the carriers nor in the regulation of the Stock Yards are they [packers] entitled to facilities or treatment that will ignore the existence of other interests."

The Court, at page 227, directed attention to certain important considerations, saying:

> "The interests of the public and of the community are entitled to consideration. This transportation is of a special kind of property on the hoof, which calls for special handling in the interests of economy, safety, sanitation, and health. The Commission has found that 'the evidence fails to disclose how, as a practical matter, an annual volume of 30,000 carloads of livestock could be discharged into and handled through the public streets of Chicago.' "

In the course of its opinion, at pages 230–1, this Court further stated:

> "It was the packers themselves who suppressed the competitive yards and alternative facilities for unloading their stock. The Commission, however, has not held the packers to be estopped by their conduct. It has only considered the practice and usage of the packers as bearing on the suitability of the Yard Company's unloading pens as a point of termination of the carriers' responsibility. The Commission has held it to be a reasonable practice that the railroads' responsibility for transportation of such direct shipment consigned by the packers to themselves at the Union Stock Yards ends with unloading into the unloading pens, which it found to be suitable, and that the carriers' failure to negotiate or purchase free egress for such shipments from the unloading pens has not resulted and does not result in an unreasonable practice."

After pointing out that the Union Stock Yards was named in the railroads' tariffs as a station to which the line-haul rates on livestock were applicable, that the Yard Company's unloading service was subject to regulation by the Interstate Commerce Commission, and that the stockyard services of the Yard Company were under the jurisdiction of the Secretary of Agriculture, the Court said at pages 232–3:

> "The Union Stock Yards are a public utility. The decision of the Commission that the transportation ends with unloading leaves the stock in the hands of a public utility—the Union Stock Yards—for delivery to the consignee. Neither the Interstate Commerce Commission nor this Court can assume that the charges or practices of that utility are unfair or unreasonable, that it is charging for services that are not performed or facilities not used, or that it is imposing on consignees unnecessary services."

In the present case, the Commission has not held that Swift is estopped by its adoption of the railroads' practice of making the Union Stock Yards their livestock terminal in the Stockyard District of Chicago, and has not denied Swift the right to have private sidetrack delivery of livestock. The Commission, however, could not ignore the fact that the practice of making centralized delivery—concurred in by Swift and other packers—had resulted in a physical plant and methods of operation which would make private sidetrack delivery both difficult and expensive. As the Commission said:

> "We have indicated generally the difficulties which would confront defendants if required to make delivery of livestock at complainant's plant, *the basic difficulty being that such method of delivery is not adapted to defendant's service, tracks and yards, as specially designed and developed, along with the city's intensive development, for performance of the centralized delivery service rendered at Chicago.* For some 70 years the method of conducting terminal operations in the stockyards district has been for the line-haul carriers, using Junction tracks, to carry all shipments of

livestock to the stockyards and make deliveries there, and for the Junction to perform the switching and spotting of other freight for the packers and many other industries in the area. As a result, *the Junction's main tracks, its yards and subyards and their tracks, are peculiarly designed and fitted for the operations and service described*, and any change, particularly as contemplating deliveries of livestock to the plants of the packers, would, as might be expected and as is shown, require a conflicting use of such yards and tracks and subject defendant's operations to interference and delays." (R. 72; emphasis supplied.)

The Commission outlined in detail the special services and handling which would be required to make private sidetrack delivery of livestock, and concluded that the assessment of the published switching charge of the Junction in addition to the line-haul rates would not be unreasonable or otherwise unlawful for private sidetrack delivery. (R. 72-81.) The findings of the Commission—all of which are fully supported by the record—plainly show that the line-haul rates prescribed for centralized delivery of livestock are not adequate for the expensive, specialized service involved in making plant delivery.

III.

The Rule of the Yard Company Prohibiting Cars of Dead Freight from Blocking Its Chutes Was Not in Issue and Is Not Unlawful.

Counsel for Swift argue (Brief 26-7, 44, 112) that the operating rule of the Yard Company which prevents cars of dead freight from being pulled into its chutes causes obstruction to the flow of traffic which the Commission should have noticed and remedied. It is asserted (Brief 112) that this rule, "which prevents even a single car of dead freight from resting on its [Yard Company's] tracks, is obviously designed to facilitate shipment of livestock to its own chutes and to burden such shipments destined elsewhere* * *."

This rule was not placed in issue by Swift's complaint before the Commission, and the Yard Company was not named as a defendant in that complaint. (R. 50–5.) The Commission properly confined its decision to the issues before it. *Oregon R. & N. Co.* v. *Fairchild*, 224 U.S. 510, 526.

The purpose of the rule is to prevent the blocking of the unloading chutes. (R. 664.) There is no evidence that the rule adversely affects the operations of any railroad except the Rock Island, which reaches the Union Stock Yards from the east, and has to operate through the Yards in order to get to the Ashland Avenue Yards. (R. 650.) The chute tracks of the Yard Company are adjacent to the running tracks of the Junction. (R. 650.) The Yard Company obviously could not permit the heavy flow of livestock to its public stockyard to be delayed by the blocking of its chutes with cars of dead freight any more than Swift could permit the loading and unloading of its freight upon its private sidetracks to be interfered with by even a temporary use of those tracks in connection with the handling of cars for other industries.

IV.

The Trackage Arrangements in Effect on the Chicago Junction Railway Are Not Unlawful.

Swift criticizes (Brief 26, 44, 112–13) the trackage arrangements on the Junction whereby the line-haul carriers are permitted to operate over its rails with their own power and crews for the purpose of handling livestock to and from the Union Stock Yards, but are not authorized to handle livestock to private sidetracks on the Junction. These arrangements date from 1865, and their validity cannot be doubted.

As a part of the original plan of establishing at one place a railroad livestock terminal and a central market for livestock, the railroads were given permission by the Yard Company,

which was then controlled by them, to use the terminal railroad now known as the Junction as a means of access to the union livestock terminal. This permission was continued by the various lessees of the terminal railroad, and is now extended by the River Road. One of the important purposes of the trackage privilege has been to enable the line-haul railroads to make delivery of livestock at the same place in order to avoid the necessity of switching livestock from one railroad terminal to another. (See Statement, *supra*, pp. 7–8, 11.) Livestock which comes in over one of the western roads is often reshipped to the east via one of the eastern roads; in fact, an average of about 300 carloads of livestock is so reshipped daily. (R. 795.)

There is no written agreement covering the use of the running tracks of the Junction by the line-haul carriers for the handling of livestock; but the practice is, and since 1865 has been, for the line-haul carriers to use those tracks as a means of ingress to and egress from the chutes at the Union Stock Yards. This service is one which the Junction itself would have to render if it were not performed by the line-haul carriers.

Private sidetrack delivery of livestock was never contemplated by any of the railroads. Their plan for a union terminal for livestock in what is now the Stockyard District of Chicago contemplated that all livestock would be delivered at one place, and that they would have running rights over the terminal railroad for the handling of livestock to and from the union livestock depot. (See Statement, *supra* pp. 7–8.) That privilege was given, and is still accorded, to them. The operations of the line-haul carriers over the Junction to and from the Union Stock Yards could not be discontinued without the approval of the Commission based upon a finding that public convenience and necessity permit the abandonment of such operations. *Smith* v. *Hoboken R. Co.*, 328 U.S. 123, 130; *Thompson* v. *Texas Mexican R. Co.*, 328 U.S. 134, 144–7.

In *Chicago Junction Case*, 71 I. C. C. 631, the Commission, in authorizing the sublease of the Junction railroad to the River Road, stated at page 633:

> "The movement of live stock in and out of the Junction yards is essentially different from the method of handling the dead freight, in that each [line-haul] carrier moves its trains to the unloading chutes [at the Union Stock Yards] with its own power, and goes into the pens [at the Union Stock Yards] for outbound stock destined for its own line. All parties concede that *that is the only practical method of handling that traffic.*" (Emphasis supplied.)

The Commission in *Chicago Junction Case, supra*, also imposed, as condition No. 3, the following requirement:

> "The present traffic and operating relationships existing between the Junction and River Road and all carriers operating in Chicago shall be continued, in so far as such matters are within the control of the [New York] Central." (71 I. C. C. at 639.)

This condition requires, among other things, that the New York Central and its wholly-owned subsidiary, the River Road, shall continue to permit the line-haul carriers to handle livestock over the tracks of the Junction to the Union Stock Yards. The power of the Commission to attach this condition cannot be doubted. *United States* v. *Lowden*, 308 U.S. 225, 229–30, 238.

Trackage rights could not be granted to the line-haul carriers for the handling of livestock to private sidings without the approval of the Commission under Section 5(2) of the Interstate Commerce Act; and that section requires, as a condition to approval, that the Commission shall find that the proposed transaction "will be consistent with the public interest." (49 U.S.C.A. Sec. 5(2)(a) and (b).) The standard of "public interest," as this Court has said, "has direct relation to adequacy of transportation service, to its essential conditions of economy and efficiency, and to appropriate provision and best use of

transportation facilities." *Texas* v. *United States*, 292 U.S. 522, 531; *United States* v. *Lowden*, 308 U.S. 225, 230, 238. It would be physically impossible for the 22 line-haul carriers to transport shipments of livestock over the rails of the Junction to the private sidetracks of the packers.

The fact that the running rights of the line-haul carriers are not broad enough to enable them to carry livestock to the private sidetracks of Swift and other packers on the Junction is legally immaterial. Private sidetrack delivery is now offered by the Junction itself; and it must be presumed that it will perform the service to the limited extent that it may be requested so to do.

The proposal of the Junction to withdraw its holding out to perform private sidetrack delivery on livestock was not upheld by the Commission. In its report the Commission found:

> "The proposed complete exemption of livestock from transportation by the Junction under any circumstances is not justified." (R. 77.)
>
> * * * *
>
> "The published switching charge is appropriate for any switching that may occur of cars of livestock to complainant's proposed plant. It does not appear that the maintenance of a switching charge for livestock will have any detrimental effect upon terminal operations." (R. 80–1.)

The Commission presumably was of the opinion that the Junction should continue its switching charge on livestock in effect to enable the packers to obtain plant delivery by rail whenever some unusual situation, such as a strike of truck drivers or employes of the Yard Company, might make it necessary for the packers to use that kind of service.*

* A Swift witness, when asked why Swift sometimes took delivery of its direct shipments at the Union Stock Yards, stated there were times when trucks break down, truck drivers are not working, or the facilities at the plant of the Omaha Packing Company are overtaxed. (R. 410–11.)

This is not a case where trackage arrangements cause undue preference or prejudice. Swift may take delivery of its livestock at the established livestock terminal of the line-haul railroads at the same through rates paid by others who take delivery at that place; and it also may have plant delivery at the same through rates published for application to the private sidetracks of all other packers on the Junction. The higher rate basis for private sidetrack delivery is due to the much greater and more expensive terminal service required. (See Statement, *supra*, pp. 17–20.)

The through rates published from western origins to the Union Stock Yards were originally prescribed by the Commission in *Livestock-Western District Rates*, 176 I.C.C. 1, 190 I.C.C. 611. (R. 831.) As the first report in that case shows (176 I.C.C. at 122), the terminal operations at Chicago there considered were those of the line-haul carriers in making deliveries at the Union Stock Yards.* In *Chicago Live Stock Exchange* v. *A. T. & S. F. Ry. Co.*, 219 I.C.C. 531, the terminal operations at Chicago under consideration were also those involved in making deliveries at the Union Stock Yards. (219 I.C.C. at 538–9.) As the Commission stated in its report in the present case, "we did not there [in the *Chicago Live Stock Exchange* case] consider what the services would be in connection with deliveries of livestock by the Junction on private industrial tracks." (R. 79.) The switching charge for private sidetrack delivery at packing plants on the Junction, then $12 per car, was found not unreasonable or otherwise unlawful in *Hygrade Food Products Corp.* v. *A. T. & S. F. Ry. Co.*, 195 I.C.C. 553, 558, a case in which the Omaha Packing Company, Swift's wholly-owned subsidiary, was an intervener. (R. 77.) Again in the present

* A witness who participated in *Livestock-Western District Rates* testified that no evidence was offered therein relating to private sidetrack deliveries at packing plants in the vicinity of the Union Stock Yards in Chicago. (R. 765–6.)

case, the Commission found that the rate basis for private sidetrack delivery was not unreasonable or otherwise unlawful. (R. 80–1.)

V.

The Commission Did Not Give Effect to the Covenant Between the Yard Company and the New York Central.

The effect of the decision of the Commission, Swift argues at length (Brief 117–34), is to give effect to a covenant by which the River Road, a wholly-owned subsidiary of the New York Central, is to operate the Junction railroad in a manner which will discriminate in favor of the business conducted at the Union Stock Yards. That business is the operation of a union railroad terminal and public market for livestock—a public utility business in both of its aspects. *Union Stock Yard & Transit Co.* v. *United States*, 308 U.S. 213, 217–22; *Swift & Co.* v. *United States*, 316 U.S. 216, 232. The argument of opposing counsel is advanced notwithstanding the statements of the Commission in its report that the operation of the Junction by the River Road under the control of the New York Central is subject to the requirements of the Interstate Commerce Act, and also to conditions imposed in *Chicago Junction Case*, 71 I.C.C. 631, 639–41, which "were and are broad enough to inhibit operation of the Chicago Junction to the special advantage and interest of the Union Stock Yards." (R. 80.)

The covenant to which Swift has reference is one in the lease of December 1, 1913, whereby the Yard Company leased the Chicago Junction Railway in perpetuity to Chicago Junction Railway Company, and the Junction Company agreed, among other things, "to conduct, manage, and operate the line of railroad by this instrument demised, and in so far as possible the same to conduct in such manner as will tend to the benefit, advantage, and behoof of the business and affairs of the Yards." By an indenture of May 19, 1922, the Junction Company sub-

leased the terminal railroad to the River Road, and in that lease the River Road and the New York Central undertook to perform the above-quoted covenant of the Junction Company in the 1913 lease. (Ex. 57, R. 1039, 1961.)

The covenant is not an unqualified undertaking by the New York Central companies to operate the terminal railroad in such manner as will tend to benefit the Union Stock Yards, but is merely a covenant by which they undertook "in so far as possible" to so operate the demised railroad. This qualifying phrase requires the New York Central companies to do no more than is *physically* and *legally* possible. Contracts are not construed as requiring a violation of law if any other reasonable interpretation can be placed upon them. *Great Northern Ry. Co.* v. *Delmar Co.*, 283 U.S. 686, 691; *Chicago & Eastern Illinois R. Co.* v. *Doyle*, 256 Ill. 514, 519.

It should be borne in mind that the terminal railroad known as the Junction was originally constructed to connect the line-haul railroads with the Union Stock Yards, and that the Union Stock Yards was designed and constructed to provide a railroad terminal for the line-haul carriers and a public market for livestock. (See Statement, *supra*, pp. 6–8, 11.) This historical background explains the covenant, which does no more than require the New York Central companies to operate the demised railroad, to the extent they are legally and physically free so to do, in such manner as will tend to the benefit of the public market and livestock terminal at Chicago. The covenant does not require that the Junction railroad be operated or managed in any way contrary to federal or state law.

The covenant has operation only in those limited areas in which the New York Central companies are free to determine policy. The Union Stock Yards is a public livestock terminal and market which has an important and direct relation to the transportation of livestock. The unloading service performed

by the Yard Company is legally a part of the transportation service. *Union Stock Yard & Transit Co.* v. *United States*, 308 U.S. 213, 217–22. Although the services rendered after unloading are subject to the jurisdiction of the Secretary of Agriculture,* they are to a large extent services which the railroads would have to furnish if delivery were made at a terminal owned and operated by them. At such a terminal, the animals would have to be placed in pens and cared for until the consignees called for them, and egress would have to be provided to a public street. The cost of furnishing these terminal services would be reflected in the rates charged by the railroads. Even a packing company which took private sidetrack delivery would have to provide pens, because it obviously could not slaughter the animals as they came in, but would have to hold and care for them until it was ready to move them into the slaughterhouse.

The relationship of the business of the Union Stock Yards to the transportation of livestock and to the livestock industry of the country was pointed out by this Court in *Swift & Co.* v. *United States*, 316 U.S. 216, as follows:

> "The Stock Yards are not only a facility for the transportation of direct shipments from points of country origin to the packers; they also are an important factor in the entire animal industry of the United States." (316 U.S. at 226.)
>
> * * * * *
>
> "The Union Stock Yards are a public utility. The decision of the Commission that the transportation ends

---

* "Neither the Interstate Commerce Commission nor this Court can assume that the charges or practices of that utility [the Yard Company] are unfair or unreasonable, that it is charging for services that are not performed or facilities not used, or that it is imposing on consignees unnecessary services. Nor can the Commission or this Court assume that, if unreasonable practices or charges are imposed by this utility, the Secretary of Agriculture would fail to correct them upon an appropriate complaint ***." *Swift & Co.* v. *United States*, 316 U.S. 216, 232–3.

with unloading leaves the stock in the hands of a public utility—the Union Stock Yards—for delivery to the consignee." (316 U.S. at 232.)

The argument concerning the covenant of the New York Central companies presents a false issue which Swift attempted to inject in the proceeding before the Commission. The Yard Company did not ask the Commission to enforce the covenant, and the River Road and the New York Central did not plead or urge it by way of defense. The Commission, moreover, did not in any way attempt to enforce or give effect to the covenant. Its decision is based solely on the transportation standards of the Interstate Commerce Act.

In its report, the Commission said:

> "The effect of the leases was to completely divest the Union Stock Yards of operation and control of the terminal railroad, the Court [in *Union Stock Yard & Transit Co.* v. *United States*, 308 U.S. 213, 216–17] saying that by ceasing to operate or control its railroad directly or indirectly, the Union Stock Yards restricted its transportation service to the loading or unloading of livestock as specified in its tariff. The operation of the Chicago Junction is subject not only to the provisions of the Interstate Commerce Act but also to the conditions imposed by the Commission in the *Chicago Junction Case, supra*. Those conditions *** were and are broad enough to inhibit operation of the Chicago Junction to the special advantage and interest of the Union Stock Yards." (R. 80.)

There is nothing in the report of the Commission which warrants any charge that its conclusions were influenced in the slightest degree by the covenant of the River Road and the New York Central; on the contrary, the passage just quoted from its report plainly shows that the Commission would not permit operation of the Junction by the New York Central companies "to the special advantage and interest of the Union Stock Yards." At the hearing before the Commission,

counsel for Swift solicited and obtained from counsel for the New York Central companies a stipulation "that the Chicago Junction is being operated or leased, whatever you want to call it, under and in accordance with the terms and conditions set by the Commission in the *Chicago Junction Case*, 71 I.C.C. 631." (R. 388.) In view of this stipulation, it must be assumed that the conditions imposed by the Commission have been and are being strictly observed, and Swift is not in position to make any charge to the contrary.

The decision in *United States* v. *Baltimore & Ohio R. Co.*, 333 U.S. 169, cited by counsel for Swift (Brief 118), is not pertinent. The track involved in that case was owned by the Cleveland Union Stock Yards Company, and was used by the New York Central under a trackage agreement which did not permit the railroad to use the track for the carriage of livestock to private sidetracks of the packers. None of the tracks of the Junction is closed to the handling of livestock; and Swift can have private sidetrack delivery of livestock at any time it wishes upon payment of a switching charge found reasonable by the Commission.

Attention is directed by Swift (Brief 121–2) to a letter written by counsel for the Yard Company to the General Counsel of the River Road and New York Central under date of September 4, 1947, in which counsel for the Yard Company stated that those carriers were obligated by the above-mentioned covenant to defend Swift's complaint and to take appropriate steps to raise the issues necessary for a determination of all the questions involved. It is then suggested (Brief 123) that the New York Central companies defended the Swift complaint only because counsel for the Yard Company wrote that letter.

The letter was put in evidence by counsel for Swift shortly before the close of the hearing before the Commission. (R. 1038–9; Ex. 57, R. 1039, 1961–2.) As the letter indicates, it was written because one of the officers of the New York Cen-

tral companies had advised counsel for the Yard Company during the week previous to the date of the letter (September 4, 1947) that they were not planning to take any part in the defense of Swift's complaint, even though most of the evidence necessary for defense and the power to raise the necessary issues for the determination of all questions involved were in the possession of the River Road. (R. 1961–2.)

Swift's complaint before the Commission was filed on July 29, 1947. (R. 1, 58.)* In August, the chief operating officers of the River Road were advised by its Vice President of the allegations of the Swift complaint and asked whether the Junction could handle livestock through the Ashland Avenue Yards. The operating officers replied that livestock could not be so handled without disrupting the operations of those yards. (R. 1039.) It was only shortly thereafter (the week previous to September 4) that one of the traffic officers of the New York Central Lines advised counsel for the Yard Company that Swift's complaint would not be defended. (R. 1961.)

What could have happened in this short period of time to cause the two carriers to decide not to defend a complaint which would result in the complete disruption of the operations of the Ashland Avenue Yards? A deposition taken by counsel for the Live Stock Exchanges, which gives the answer to this question, was held inadmissible by the District Court. (R. 140–5, 149.)

Counsel for the Yard Company presumably were fully aware of the natural reluctance of the management of any railroad to take the lead in the defense of a rate complaint filed by a large shipper against a number of railroads; and the letter undoubtedly was written because it was important to the Yard Company that the issues and evidence necessary to a

* The date shown at page 58 of the printed record is July 9, but this is a misprint. The correct date, July 29, is shown in paragraph 4 of Swift's court complaint. (R. 1.)

full understanding of the entire problem be presented to the Commission. The letter did no more than call upon the two New York Central companies—the only defendants in position to do so effectively—to lay before the tribunal established by Congress to hear rate complaints against railroads the evidence and the issues necessary to enable it to reach an informed judgment.* The fact, apparent throughout its brief, that Swift is chagrined because the chaotic operating conditions that would result from the granting of its demand were disclosed to the Commission does not give Swift any ground for complaint.

The suggestion is made by counsel for Swift (Brief 122–3) that the letter contained an implied threat that, if the Swift complaint were not defended, the lease of the Chicago Junction Railway to the River Road would be terminated and the property leased to a competitor of the New York Central. This suggestion has no warrant in the text of the letter. (R. 1961–2.) In making the suggestion, moreover, counsel for Swift would seem to have overlooked the pertinent provisions of the Interstate Commerce Act. The lease of 1922 could not be effectively terminated, even for breach, without a certificate from the Commission under Section 1(18) of the Interstate Commerce Act (49 U.S.C.A. Sec. 1(18)) that public convenience and necessity permitted the abandonment of operation by the River Road. *Smith* v. *Hoboken R. Co.*, 328 U.S. 123, 130; *Thompson* v. *Texas Mexican R. Co.*, 328 U.S. 134, 144–7. A new lease to another carrier would also require the approval of the Commission under Section 5(2) of the Interstate Commerce Act (49 U.S.C.A. Sec. 5(2)). *Thompson* v. *Texas Mexican R. Co.*, *supra*, 146-7.

---

* "The prohibitions of the statute against unjust discrimination relate not only to inequality of charges and inequality of facilities, *but also to the giving of preferences by means of consent judgments or the waiver of defenses open to the carrier.*" *Phillips* v. *Grand Trunk Western Ry. Co.*, 236 U.S. 662, 667; emphasis supplied.

CONCLUSION.

The decision of the Interstate Commerce Commission that the rate basis complained of is not unreasonable or otherwise unlawful has "the strength due to the judgments of a tribunal appointed by law and informed by experience." *Illinois Central R. Co.* v. *Interstate Commerce Commission*, 206 U.S. 441, 454. Counsel for Swift have not advanced any sound reason for disturbing the order of the Commission, and the judgment of the District Court upholding that order should be affirmed.

Respectfully submitted

I. With few exceptions, the issues argued by the appellant are not within the scope of judicial review of Interstate Commerce Commission orders under the Administrative Procedure Act	17
II. The Commission committed no error of law, either of omission or commission, in construing and applying the various provisions of the Interstate Commerce Act which deal with the justness and reasonableness of rates	21

PAGE

The unchallenged finding of the Commission that through routes to the Swift private siding with joint rates thereover on the flat Chicago basis are not necessary or desirable in the public interest adequately supports the Commission's conclusions that the rates assailed are not unjust and unreasonable in violation of section 1 of the Act..... 21

The Commission rightfully dismissed the Swift complaint because what it sought was against the public interest..... 25

Findings to show that the measure of an assailed rate or rate relation is justified by the cost of the services covered thereby are not required to support the validity of an order which dismisses a complaint upon a finding that the assailed rates are not shown to be unreasonable..... 28

The switching charge of the Junction on livestock is not a penalty charge, prohibitive or otherwise..... 31

III. The Commission committed no error of law, either of omission or commission, in construing and applying the various anti-discrimination provisions of the Interstate Commerce Act..... 33

The dismissal of the section 3(1) allegations of the complaint is supported by adequate findings and such findings are supported by substantial evidence..... 33

The refusal of the Commission to find a violation of section 2 of the Act is adequately supported by findings and said findings have the support of substantial evidence..... 36

PAGE

Appellant's complaint before the Commission involved no situation to which section 1(9) of the Act applies 39

IV. The instant case is neither like nor controlled by United States v. Baltimore & O. R. Co., 333 U.S. 169 40

V. The Swift complaint did not pray for relief with respect to the adequacy of facilities and service on the Junction and the fact the Commission issued no order to require additional facilities or services does not invalidate its order of dismissal of Swift's rate complaint 45

VI. The covenant in the lease given by the Yards Company to the Chicago River and Indiana Railroad Company, lessee and operator of the Junction, has no pertinency to any issue or question in the instant case 46

IN THE

Supreme Court of the United States

OCTOBER TERM, A. D. 1951

No. 282

SWIFT & COMPANY,

Appellant,

vs.

THE UNITED STATES OF AMERICA, INTERSTATE COMMERCE COMMISSION, et al.,

Appellees.

On Appeal from the United States District Court for the Northern District of Illinois.

BRIEF FOR CHICAGO LIVE STOCK EXCHANGE AND THE CHICAGO TRADERS LIVE STOCK EXCHANGE, APPELLEES.

OPINIONS BELOW.

The District Court entered findings of fact and conclusions of law (R. 197-209), but wrote no opinion. The report of the Interstate Commerce Commission (R. 57-89) is reported as *Swift & Co.* v. *Atchison, T.&S.F.Ry.Co.* at 274 ICC 557.

Jurisdiction.

The jurisdiction of this Court rests on 28 USC 1253 and 2101(b). Probable jurisdiction was noted on October 15, 1951. (R. 228).

QUESTIONS PRESENTED.

1. Did the Interstate Commerce Commission act rationally and within its authority in dismissing a complaint brought by appellant which assailed rates on livestock in carloads from interstate origins destined to a private sidetrack of the appellant on the Chicago Junction Railway near the Union Stock Yards in Chicago?

2. Does the report of the Commission dismissing said complaint contain adequate findings to show the reasons and basis for said dismissal?

3. When said findings are affirmative in form, are they supported by substantial evidence, and, when said findings are negative in form, do they fairly reflect the state of the record as to evidence on the point?

STATEMENT.

Purpose of statement.

These appellees intervened in the proceeding before the Commission in opposition to Swift, the complainant there and the appellant here, (R. 250), and they intervened as defendants in the Court below. (R. 131). They submit their Statement to state, with somewhat greater clarity and accuracy than is found in appellant's Statement, what the evidence shows (1) as to the operation of the carriers and the *quantity* of services involved in the terminal handling of livestock to Chicago, both present and upon the assumed issuance of an order in favor of Swift; and (2) how the deterioration in the *quality* of the railroad service provided

for producers' livestock sent to the public market for sale, which deterioration would inevitably result from the grant of the Swift demand, would disadvantage and injure the public market and the several hundred thousand producers who rely on its proper functioning. The evidence under (1) is essential to an understanding of the difference between the services covered by the rates to the Swift private sidetrack, which are assailed as unduly preferential, and the services covered by the rates to the unloading chutes at the Union Stock Yards, which are alleged to be unduly prejudicial and discriminatory. The evidence under (2) provides the basis for the Commission's conclusion that Swift was not entitled to rates on the level sought by it as a matter of justness, reasonableness, and desirability in the public interest. To avoid duplication, the statement of evidence showing the prospective deterioration in railroad service, which is the premise for the evidence under (2), is left to the briefs of other appellees.

Appellant's complaint before the Commission.

Appellant alleged before the Commission that the rates and charges on shipments of "direct[1]" livestock from interstate origins to its private sidetrack at its slaughter house at Union Stock Yards (hereinafter referred to as *the Yards*), Chicago, Illinois, are unreasonable in violation of section 1 of the Interstate Commerce Act, as well as unduly preferential and prejudicial in violation of section 3(1). (R. 50-55) By amendment, appellant prayed for an order requiring the defendant railroads to establish through routes and to apply thereover joint rates not in excess of those applicable to livestock destined to the unloading chutes of The Union Stock Yard & Transit Company (here-

[1] Shipments consigned directly to packers for slaughter and not shipped to the public market for sale thereon.

inafter referred to as *the Yards Company*) at Chicago,[2] (R. 55-56).

The rates assailed are made on combination, that is, the line-haul rate from origin to Chicago, plus the switching charge of the Junction ($28.80 per car at time of hearing) from its interchange with the line-haul railroad to the Swift delivery. The only rates on livestock published to private sidetrack deliveries served by the Junction are on this basis. However, the flat Chicago rate applies without the addition of any switching charge on livestock which is consigned to and delivered at the unloading chutes of Yards Company. While such chutes are on the rails of the Junction, that line does not participate in the service required in making such deliveries. Rather, such line-haul carriers have trackage rights over Junction rails to and from such chutes, and operate their own trains directly thereto from their outer yards.

What appellant demands by its complaint before the Commission is a through rate to cover the service of the line-haul carriers, *plus the switching service of the Junction* required in making delivery to appellant's private siding, on a basis the same as the through rate assessed for the service of the line-haul carriers alone in making delivery to the unloading chutes of the Yards Company. Such a rate basis is hereinafter referred to *as the flat Chicago rate or basis.*

Since appellant does not dispute the right of the Junction to compensation for its services, the Swift demand could be satisfied in only two ways: (1) by an order requiring the line-haul railroads and the Junction to establish through routes and to join in establishing thereover single factor

---

[2] This prayer sought the exercise by the Commission of the power conferred by section 15(3) of the Act, reproduced in Appendix A hereto.

rates on the flat Chicago basis;[3] or, (2) by an order directed *wholly at the line-haul carriers* which would require such carriers to absorb the separately published switching charge of the Junction out of their flat Chicago rates.

The services presently provided on livestock destined to deliveries at the Yards and the services which would be required upon the grant of the Swift demand.

The present method of handling livestock destined to delivery at the Yards is as follows (R. 62-63): The line-haul carriers at their outer makeup and breakup yards assemble trains containing cars to be delivered in the Yards area. Sixty-three percent of such trains contain livestock exclusively. These trains of the line-haul carriers proceed directly from the outer yards to the unloading chutes of the Yards Company where the cars are spotted for unloading. While the cars are being unloaded, the engine cuts off, passes around the train and couples on to the other end, and then hauls the empty cars to the line-haul carrier's home yard. The remaining 37 percent of the trains contain both dead freight and livestock, and are referred to as consolidated trains. In the consolidated trains the dead freight is assembled immediately behind the engine. When the consolidated train reaches the eastern end of the eastbound running track going to the unloading chutes of the Yard Company, the train is stopped on the main line, the dead freight is cut out and then set in on one of the receiving tracks in the Junction's Ashland Avenue south yard. The engine then returns, couples on to the livestock and completes the remainder of its run in the same fashion as an exclusive livestock train. There is no switching of the livestock over switching leads, in and out of yard tracks, or to

[3] This is the relief sought under section 15(3) of the Act by appellant's amendment to its complaint. (R. 55-56)

or from private sidings, in the case of either the exclusive livestock train or the consolidated train. Nor, as to the livestock in either train, is there any service other than the direct move by the line-haul carrier's engine from its outer yard to the unloading chutes of the Yard Company.

If the Swift demand were granted, the producers' livestock destined to the unloading chutes at the Yards would continue to be handled in the manner just described, subject, however, to the additional interference, delay, congestion on running tracks, lengthened line-haul schedules, etc., shown by the evidence as summarized in the briefs of other appellees.

As to the direct livestock consigned to Swift (and other packers), completely new services of two separate carriers would be required: (1) The line-haul carrier would bring the stock from its outer yard to the east end of the Junction's Ashland Avenue south yard and would carefully place the livestock cars on an appropriate interchange track in that yard. (2) After that, the Junction would be required to provide the special switching service from the interchange track and through its various yards, running tracks, switching leads, etc., to the private siding of Swift, and to handle the empty cars in a reverse move after the livestock is unloaded.

The foregoing facts are stated so that the Court may be clearly advised as to: (1) the *direct* handling by line-haul carriers of producers' livestock from outer yard to unloading chutes at the Yards, whether in exclusive or consolidated trains; and (2) the essentially different *quantity* of service that would be required if a complete switching service by the Junction were added to a line-haul-carrier service, the line-haul-carrier portion of such through service being the practical equivalent of the complete service required in making direct deliveries to the unloading chutes of the Yards Company.

Injury to producers, and to the functioning of the public market and market agencies on which they rely, if the Swift demand were granted.

The Chicago Live Stock Exchange is an association of livestock market agencies which has 225 members. These members are the consignees for the livestock which producers send to the public market for sale. They act as agents and factors for the producers. (R. 710-711). There is an exceedingly close community of interest between livestock market agencies and the producers whom they represent. Such producers are vitally interested in the preservation of a flourishing central market. (R. 716)

The Chicago Traders Live Stock Exchange is an organization of dealers and order buyers who buy and sell livestock in the public market. (R. 787). The order buyers represent 920 slaughterers to the east and south for whom the Chicago public market is an important source of supply. (R. 789).

The ability of the Chicago market to perform its proper function in the economy of livestock production and marketing—this in the interest of and to the benefit of the producer—is dependent upon the railroad service rendered to Chicago and the railroad terminal handling of the public market stock at Chicago. It is essential that the railroad service be good railroad service. (R. 716-7, 719, 722-3, 783, 791, 808-9, 928). The producers, farmers, feeders, and livestock marketing agencies in whose interests this brief is presented, are concerned with the public market as a place at which livestock of all grades and species is bought and sold, publicly and freely. They have no concern with the so-called "direct" livestock which the appellant and other packers ship in, and which does not choose to use the market facilities of the public yards. So long as the railroad service to and from the public market is not handicapped,

impeded, and interfered with, these appellees are not affected, whether such "directs" be received by appellant (1) at its Omaha Packing Company pens, or (2) through the unloading chutes and overhead driveways of the Yards Company or (3) on its private siding at appellant's slaughter house. However, they do become vitally concerned with the place and method of delivery for "direct" livestock when such place and method interfere with and impede the orderly, efficient, and prompt transportation service to and from the public market on which so many are dependent.

The evidence before the Commission as to the interference with, delay to, and disruption of the railroad terminal operations in handling public market stock at the yards which would result from the grant of the Swift demand, and the lengthened and unsatisfactory line-haul operations and schedules from country points to Chicago which would be compelled in such a case, is summarized in the briefs of other appellees and need not be repeated here. Below is summarized the evidence which shows the direct and immediate injury of serious proportions which would be suffered by the public market and the vast number of producers, farmers and feeders who are dependent on its efficient operations, if the consequences testified to by the defendant railroads came to pass.

Several hundred thousand, possibly one-half a million, producers ship livestock to Chicago for sale on the public market during the course of the year. (R. 743) That livestock is consigned to commission firms which are members of The Chicago Live Stock Exchange. (R. 710, 744) After that livestock is unloaded into unloading chute pens of the Yards Company, it is delivered to employees of a commission firm who drive it to sales pens where it is prepared for sale. The livestock is fed, watered, rested and, when necessary, sorted. It is sorted so as to suit the needs of purchasers who desire a particular weight, flesh or class of animals. (R. 710, 744)

After the stock is sorted so as to put up the best appearance and bring the highest sales price, it is shown to all buyers on the market. Everyone is given an equal opportunity to buy in a free and open market. (R. 775-776)

The ability of the public market at Chicago to perform its function in the economy of livestock production and marketing, is dependent upon the railroad service received. The livestock must arrive early in the morning in order to be available for sale and in a fit condition at the opening of the market. Most railroad schedules are set up so as to provide for delivery well ahead of the opening hour. When livestock is delayed, it suffers in appearance, loses weight, and deteriorates generally. When the arrivals are late, the livestock must often be carried over, resulting in some depreciation as well as added cost for feeding and handling. (R. 719-722, 786, 809) The time in transit to market bears directly upon the net return which the producer receives. The longer the time in transit, the less satisfactory is the condition of the livestock when offered for sale. Additionally, the livestock shrinks, that is, it suffers a loss in weight. (R. 771-772)

A substantial volume of salable livestock is essential to the proper functioning of a public market. The greater the volume, the more effective will be the handling of the temporary and seasonable surplus from all parts of the country, and the less violent will be the swing in prices. Anything which tends to decrease the volume of livestock shipped to the Chicago market or to slow up the action of that market would be detrimental to the public interest. (R. 808-809)

If it becomes necessary for trunk lines to lengthen their schedules so as to allow for time to handle the "directs" to private sidings at the plant of Swift or other packers, the area from which livestock is now brought in without

stopping for feed, water or rest will be shortened. The shortening of that area will reduce the volume of livestock which producers are willing to send to Chicago for sale. (R. 722-723)

If schedules are lengthened, it will also impose on shippers additional hazards in connection with market fluctuations and that, in turn, will discourage shipments to Chicago. (R. 724)

If schedules are lengthened, the expense to the shipper in connection with stops for feed, water and rest, where none are now required, will be increased. That will be another deterrent to the use of the Chicago market. (R. 725) Within the last few years this particular situation occurred as to schedules from Colorado and the result has been a decline in the volume of livestock shipped to Chicago from that state. (R. 782-783, 785)

Any delay in the handling of livestock within the Chicago area will seriously interfere with the proper functioning of the market, not only as to the condition and appearance of the livestock, but also as to prices received. (R. 724, 778-781)

Prompt, speedy and efficient railroad service is also essential to the functioning of the public market as a source of supply to packers located to the east and south thereof. Shipments of such livestock run as high as 500 cars per day and average about 300 cars. Such cars must be ordered by 1:30 P.M. if shipment is to be made the same day. That is not possible unless the livestock arrives early so that it may be purchased by the order buyer and the necessary arrangements made for reshipment. Whenever there is a delay or an interference with the inbound movement, the outbound movement is disorganized. (R. 792-793, 795-796)

SUMMARY OF ARGUMENT.

I.

The scope of judicial review of Interstate Commerce Commission orders under the Administrative Procedure Act and the cases both prior and subsequent to the passage of that act is limited to an inquiry as to whether there is a rational basis for the Commission's conclusion, whether there has been a full and impartial hearing and whether the Commission acted within its statutory authority. The appellants apparently lose sight of these restrictions upon the judicial function and seek to have this Court substitute its judgment for that of the Commission on the question of what rate would be just, reasonable, non-preferential, non-prejudicial and non-discriminatory upon all the evidence. They base their objections to the Commission order dismissing their rate complaint upon the assertion that the Commission gave inordinate weight to certain circumstances and insufficient weight to certain other circumstances. This Court should not and cannot entertain such a plea since to do so would be to impose upon a field which has been left by Congress to the absolute discretion of the Commission. These appellees will show that the Commission's report discloses a rational basis for its order of dismissal and that the reasons given therefore find support in substantial evidence of record.

II.

The Commission's construction and application of the provisions of the Interstate Commerce Act dealing with the justness and reasonableness of rates is sound and in accord with the law.

In the absence of a finding of unjust discrimination and undue prejudice the Commission has no power, by order directed against the line-haul carrier alone, to require such carrier to extend a rate published by it to Chicago, as a point on its line, to a delivery not on its line, that is, to require such carrier to absorb switching charges. The Commission found no such discrimination or prejudice. That subject is discussed under III below.

Under section 15(3) of the Act, the Commission does have the power to require the establishment of through routes and joint rates, that is, to require the line-haul railroads and the Junction to establish single factor rates on the flat Chicago basis from an interstate origin to Swift's private track, but such power can only be exercised when the through route and joint rate is necessary or desirable in the public interest. The Commission not only made the finding that the establishment of joint rates was not necessary or desirable in the public interest, but further held that appellant's proposal would be detrimental to or against the public interest. This finding was premised on the effect on livestock transportation services which would result from calling upon the line-haul carriers and the Junction to handle a large volume of "direct" livestock to packers through the Junction's Ashland Avenue south yard. The Commission found that the burden of handling such stock would seriously interfere with, delay and disrupt terminal operating conditions and the movement of livestock generally.

Swift offered no evidence on the question of public interest and neither in its complaint in the lower court nor its brief in this court does it assert that the findings of the Commission as to the matters of public interest fail to conform with the evidence. Under these circumstances the order of dismissal as to matters of justness, and reasonableness under section 1 of the act would appear to be incontestable.

Appellant argues that the Commission's order dismissing its complaint is invalid because the Commission made no finding that the cost of the service of the line-haul carrier plus the cost of the Junction to the Swift private sidetrack exceeded the cost of service of the line-haul carrier alone to the unloading chutes of the Yards company. Since the burden was on Swift as a complainant, it was not incumbent upon the defendant or the Commission to make any showing as to relative costs. Furthermore, this Court has repeatedly held that evidence and findings with respect to costs are not indispensable support for an order fixing rates and rate relations.

The validity of the Commission's order must be tested from the standpoint of whether its report contains adequate reasons supported by substantial evidence for refusing to require line-haul carriers to maintain in connection with the Chicago Junction, a rate basis to the Swift private siding no higher than that which the line-haul carriers maintain to the unloading chutes of the Yards company. It has already been demonstrated that the Commission correctly refused to require the line-haul carriers and the Junction to establish the through routes and joint rates desired by Swift under section 15(3) because of the adequately supported findings that such would not be necessary or desirable in the public interest. The important thing to note is that the validity of this latter finding being established, the only questions remaining relate to whether the higher combination of through rates on livestock destined to Swift's private siding than on the single factor rate of the line-haul carriers to the unloading chutes of the Yards, is justified by differences in transportation circumstances and conditions. This question is discussed under the next heading.

III.

In finding that the assailed rates did not violate either sections 3(1), 2, or 1(9) of the Act, the Commission acted rationally and upon substantial evidence. In dealing with the question of alleged unlawful rate relations, that is, undue preference, prejudice and discrimination, the issue turns on the matter of similarity or dissimilarity of the services involved.

The contention of appellant that section 3(1), which prohibits undue preference and prejudice, is violated because dead freight moves to the Swift private siding on the flat Chicago basis, whereas livestock is required to pay the combination of the line-haul carriers rate plus the switching charge of Junction, cannot be sustained for two reasons. In the first place, the Commission found affirmatively that there was a difference in the measure of the transportation services required, dead freight as compared with livestock. In the second place, there is no competitive relation between dead freight and livestock and consequently it cannot be said that dead freight is unduly advantaged merely because livestock pays a combination rate basis instead of the flat Chicago basis provided for dead freight.

As to the claimed violation of section 2 (which prohibits the exaction of different rates for like services in the transportation of like kinds of traffic under substantially similar circumstances and conditions), there is an affirmative finding by the Commission, adequately supported by evidence, that deliveries made at Chicago on the flat Chicago rate basis, such as those of the line-haul carriers at the unloading chutes of the Yards company, are substantially dissimilar from the private track delivery sought by Swift.

As to the alleged violation of section 1(9) of the Act (which deals with the operation of connections with private

sidetracks and with the furnishing of car service without discrimination), it is sufficient to say that the Commission correctly viewed that section as inapplicable to the case before it. This is because Swift's complaint to the Commission was directed to the lawfulness of rates and rate relations and not to the matter of physical operations and car service, the latter being the subject of section 1(9).

IV.

Appellant writes his entire brief as if this case were controlled by *United States* v. *Baltimore and Ohio R. Co.*, 333 U.S. 169, in which this Court sustained the order of the Interstate Commerce Commission in *Swift & Co.* v. *Baltimore & O. R. Co.*, 266 ICC 55. That case is completely dissimilar to the instant case. In the first place it involved exclusively the question of service, whereas the instant case involves a question of rates and rates only. In the second place, the services required to be performed in the case cited constituted a restoration of a practice of many years standing. In the instant case the rate basis sought by Swift and the method of handling livestock which would be followed under that rate basis is completely opposed to the practice of many years standing.

V.

Appellant contends that the Commission's order is invalid because it failed to require the Junction to equip itself with sufficient additional properties and additional facilities to take care of the handling of packer "direct" livestock to private sidings. But that cannot be so since the Swift complaint before the Commission was silent on such issues and prayed for no order to be issued requiring the Junction to do anything at all about its facilities and properties devoted to common carrier service.

VI.

The alleged illegal covenant in the lease of the Junction properties to the Chicago River and Indiana Railroad has no pertinency to any issue decided by the Commission and no pertinency to any question involved in the instant review of the Commission's order of dismissal. The Commission treated that covenant as having no bearing on either side of the case. Even if the covenant is an illegal covenant, it has no pertinency to any of the rates involved in the Swift complaint. It has no pertinency to the switching rate of the Junction considered independently of the through rates since that rate was found by the Commission to be reasonable in the light of the services covered thereby. The covenant has no pertinency to the refusal of the line-haul carriers to absorb the Junction switching charge since the covenant is not that of the line-haul carriers but is that of the switching line. Under such circumstances the Commission's failure to give weight to the covenant did not constitute action which was arbitrary or beyond its power.

ARGUMENT.

I.

With few exceptions, the issues argued by the appellant are not within the scope of judicial review of Interstate Commerce Commission orders under the Administrative Procedure Act.

The classic formulation of the proper scope of judicial review with respect to orders of the Interstate Commerce Commission was spelled out in detail more than 40 years ago, by Mr. Chief Justice White in *Interstate Commerce Commission* v. *Illinois Central Railroad Company*, 215 U.S. 452, 470 and by Mr. Justice Lamar in *Interstate Com. Com.* v. *Union P. R. Co.*, 222 U.S. 541, 547. Every word and every term which is used to define the scope of judicial review in the Administrative Procedure Act was anticipated, either in so many words or in substance, in the opinions just cited. In more recent cases the issues open to review have been specified somewhat more tersely, yet consistent with the requirements of the Administrative Procedure Act. In *Mississippi Valley Barge L. Co.* v. *United States*, 292 U.S. 282, 286-287, this Court said:

> . . . The judicial function is exhausted when there is found to be a rational basis for the conclusions approved by the administrative body.

In *Rochester Telephone Corp.* v. *United States*, 307 U.S. 125, 140, this Court said:

> Only questions affecting constitutional power, statutory authority and the basic prerequisites of proof can be raised.

The question of what rate is necessary to conform to the standard of reasonableness under section 1 of the Act; the question of whether through routes and joint rates are necessary or desirable in the public interest, the standard of lawfulness under section 15(3) of the Act; and the question of whether a particular rate relation is, or is not, a prohibited preference, prejudice or discrimination under sections 2 and 3(1), are solely questions of fact as to which the Commission, when acting within its authority, has the final say-so. *Manufacturers R. Co.* v. *United States*, 246 U.S. 457, 481; *Nashville, C. & St. L. R. Co.* v. *Tennessee*, 262 U.S. 318, 322; *United States* v. *Chicago Heights Trucking Co.*, 310 U.S. 344, 353; and *Virginian R. Co.* v. *United States*, 272 U.S. 658, 663.

Appellant rarely pays even lip service to the rule of the cases above cited. The preponderance of its argument is directed to this Court as if it were the administrator and as if it were the function of this Court to determine, *as a fact*, whether the rates assailed are in violation of the statute as alleged by appellant. In so arguing the case, appellant is consistent with the grounds recited in its complaint in the lower court for the alleged invalidity of the Commission's order. That complaint covers 44 numbered paragraphs and 50 printed pages in the record (R. 1-50); and in paragraphs 9(f), 11, 13, 15, 16, 18(c), 19, 20, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 35, 37, 42 and 43 thereof, we find a direct charge *in so many words* that the error of the Commission consisted of "giving weight" to particular facts and findings. The other paragraphs in that complaint largely consist of allegations that the Commission erred because it failed to give weight to, and have its decision controlled by, this, that, or other isolated items of facts, which the Commission treated as not controlling to the extent claimed by the appellant upon its decision.

The only issues raised by appellant's complaint in the

lower court which are actually within the scope of judicial review, are first, whether the report of the Commission provides an adequate, that is, a rational, statement of reasons and basis for the order of dismissal; second, whether there is substantial evidence to support the reasons and basis for the dismissal recited in the report; third, whether the facts and circumstances relied upon by the Commission in dismissing the complaint were legally relevant, that is, entitled to consideration by the Commission as an administrator; and fourth, whether the Commission acted within its authority in refusing to rule in appellant's favor as to particular issues of unlawfulness raised by the appellant's complaint before the Commission and the proof adduced in support thereof. It takes a very careful search of appellant's brief to find a specification of an error which is within any one of the issues just listed, or to find any argument other than that which simply asks this Court to substitute its judgment for that of the Commission as to the questions of fact which are within the Commission's final say-so.

By way of illustration, we call attention to the following: Appellant argues that the addition of the switching charge in case of livestock delivered at Swift's private side track is unreasonable *per se*, and therefore illegal as a matter of law, just because other freight moves to private sidings on the Junction over through rates and at joint rates on the flat Chicago basis (I D, p. 60). All of appellant's point II, which deals with alleged discrimination growing out of the rates assailed, proceeds upon the theory that the alleged violations of the various sections of the Act cited are violations *as a matter of law*, and that, upon the facts, the Commission *was without power* to find otherwise (II pp. 63-89). In its point IV appellant not only goes out of the field of judicial review, but even leaves the case, because the argument there advanced is that the Commission erred in failing

to require improved operating conditions of the Junction (IV, pp. 105-116), a matter not remotely in issue. Likewise in point V, which involves what appellant alleges to be a discriminatory and an illegal covenant under which the New York Central agrees to operate the Junction for the "benefit, advantage, and behoof of the business and affairs" of the Yards Company, appellant completely departs from the issues before the Commission and the question of whether the Commission's report provides a rational explanation for its rulings on the issues. Rather, appellant contends, first, that the Commission should have found the covenant mentioned illegal, although no issue as to the covenant is raised by the complaint, and second, that upon such a finding the Commission, *as a matter of law*, should have found the assailed rates to be unreasonable and discriminatory. This is about as far removed as one can possibly get from the proper field of judicial review, because the Commission treated that covenant as without either significance or bearing on any issue decided by it. (R. 79-80)

There is nothing peculiar or unusual about the instant case which should lead this Court to test the validity of the Commission's order by other than the usual standards. Those standards are noted above and the only possible questions which can arise thereunder have been listed. Consequently, we confine the remainder of the brief of these appellees to alleged grounds of invalidity which fall within the range of issues open to review.

II.

The Commission committed no error of law, either of omission or commission, in construing and applying the various provisions of the Interstate Commerce Act which deal with the justness and reasonableness of rates.

Point I of appellant's argument (pages 48-62 of brief) challenges the action of the Commission in finding that the rates assailed are not unjust and unreasonable in violation of section 1 of the Act. Much of appellant's argument on this point is in the direction of asking this Court to substitute its judgment for that of the Commission as to the questions of fact involved. Since that portion of the argument deals with issues not within the scope of judicial review, it will not be noted. As to issues within the province of this Court to consider, we develop below under appropriate subheadings the fallacies in appellant's contentions and argument.

First, however, we develop under the two subsections which follow immediately, a rationale for the Commission's dismissal which appellant virtually ignores, i.e., the injury to the public interest which the evidence shows and the Commission found would result upon the grant of the Swift demand. That circumstance, standing alone, is sufficient to validate the Commission's ultimate conclusion that the rates assailed are not unjust and unreasonable in violation of section 1 of the Act.

The unchallenged finding of the Commission that through routes to the Swift private siding with joint rates thereover on the flat Chicago basis are not necessary or desirable in the public interest adequately supports the Commission's conclusions that the rates assailed are not unjust and unreasonable in violation of section 1 of the Act.

The Commission has no power by order directed against a line-haul carrier alone to require such line-haul carrier to

extend the rate published by it to Chicago (as a point on its own line) to a delivery not on its line—that being the effect of an order requiring the absorption of a switching charge—in the absence of a finding of unjust discrimination and undue prejudice, that is, in the absence of proven violations of section 2 or 3(1) of the Act. See *Automatic Gravel Prod. Co.* v. *Burlington M. & N. W. Ry. Co.*, 151 ICC 481, 486; *Switching Charges on Crushed Stone*, 186 ICC 322, 327; *Fitchburg Gas & Electric Light Co.* v. *B. & M. R.R.*, 147 ICC 145, 149; *Reciprocal Switching at Richmond, Va.*, 222 ICC 783, 800; *Standard Packing Co.* v. *South Omaha Term. Ry. Co.*, 229 ICC 479, 482; *Crossfield Ice Co.* v. *Southern Ry. Co.*, 232 ICC 795, 799; *Price Chemical Co.* v. *Louisville & N. R. Co.*, 215 ICC 365, 367. The soundness of the rule of the cases just cited is manifest. When a through rate from a C&NW origin, such as Omaha, Nebraska, to a location on a separate switching line, such as the private siding of Swift on the Junction, is made up of two separately stated charges, the switching line may not be charged with responsibility for an unreasonable through rate in the absence of proof that its rate is excessive for the separate services covered thereby—a claim not made by appellant in this case—; and the C&NW may not be charged with responsibility for an unreasonable through rate merely because a switching service beyond its rails is required to make delivery and the switching line insists on being paid therefor. Consequently, the C&NW in the situation mentioned—two separate charges being published and maintained—may not be compelled to provide the shipper with the flat Chicago rate by absorbing the separate charge of the switching line, except when necessary to correct an unlawful discriminatory, preferential, and prejudicial rate relation.

However, the Commission does have power under section 15(3) of the Act,[4] to require the line-haul carrier, as, for

[4] Set out in full in Appendix A hereto.

example, the C&NW from Omaha to Chicago, and the Junction to establish a through route from an interstate origin to the Swift private track and to apply thereover a maximum reasonable single-factor joint rate on the flat Chicago basis, provided that the one who seeks such a through route and joint rate bears the burden of proving that he is entitled to it under statutory standards. That is the relief sought by Swift under sections 1 and 15(3) by the amendment to its complaint. (R. 55-56)

The power conferred by section 15(3) is expressly conditioned on a finding by the Commission that the particular through route and maximum reasonable joint rate prescribed is "necessary or desirable in the public interest". In its report the Commission found flatly that the evidence would not warrant the necessary finding as to the rate sought by Swift. At page 573 of 274 ICC, the Commission said (R. 77):

> There is no warrant, . . . for a conclusion that the establishment of joint rates as desired by complainant is necessary or desirable in the public interest.

In its formal conclusions on page 576 of 274 ICC, the Commission said (R. 81):

> We find . . . (2) that the establishment of joint rates for the transportation of this traffic is not necessary or desirable in the public interest.

Appellant's complaint in the lower court does not allege that the Commission erred either in law or in fact in making the finding and conclusion just quoted. There is no claim in the pleadings or in the brief that such finding or such conclusion are contrary to or without substantial support in evidence of record. Appellant makes no claim that it offered any proof whatsoever on the question of public interest. Under such circumstances, it would seem that this Court must accept as incontestable the Commis-

sion's order in so far as it dismissed the sections 1 and 15(3) issues raised by appellant's complaint.

This, of course, does not settle the entire controversy since appellant alleges error on the part of the Commission in disposing of issues as to discrimination, preference and prejudice raised under other sections of the Act. The validity of the Commission's findings and order of dismissal with respect to such other issues are dealt with separately under appropriate headings herein.

Applicant apparently seeks to escape the force of the propositions developed above, which, if valid, would eliminate from this review all questions of evidence, fact and law as to the reasonableness of the charges under section 1, by treating the section 15(3) findings as without significance. On this point, appellant in a footnote on page 31 of brief says:

> The complaint as amended also contained a prayer (R. 56) for the establishment of joint-through rates between the line-haul carriers and the Chicago Junction. The merits of that prayer turn in part on the difference between the absorption of a switching rate by the line-haul carrier, which is the general practice throughout the country, and a division of the joint rate, which is the practice in Chicago (R. 293-294, 295, 843-845). Since, however, the basic issue in the present controversy, is, on the Commission's own statement (R. 59), the legality of the switching charge, and since in our view a joint rate which included the switching charge would be equally illegal, we have thought it conducive to clarity to omit all further reference to the establishment of joint rates.

Illegality of rates can take several forms. Rates can be illegal because excessive and unjust, thus in violation of section 1. Rates can be illegal because they occasion unjust discrimination or undue preference and prejudice in violation of section 3(1). When, as the Commission found, the appellant failed to prove that a through route with

a joint rate thereover on the flat Chicago basis is necessary or desirable in the public interest, appellant's case then becomes limited to the legality of the added switching charge under the anti-discrimination provisions of the Act.

The Commission rightfully dismissed the Swift complaint because what it sought was against the public interest.

Appellant concedes on page 59 of its brief:

> * * * If what Swift sought was against the public interest, it should not be permitted at any price.

In the preceding section of this argument we quote two very specific findings of the Commission that what Swift sought was not necessary or desirable in the public interest. (R. 77, 81) Those findings provide the rational basis for the Commission's conclusion that the rates assailed were not unreasonable. Those findings are not challenged by the appellant, either as to their sufficiency or as to their support in the evidence. The Commission's findings on the question of public interest, when read in the light of the discussion which leads up to them, are not mere negative findings; rather, they reflect a view that distinct harm to the public interest would result from the grant of the Swift demand.

In addition to the findings of the Commission which use the phrase "public interest", above quoted, the Commission dealt in two other findings with the harm to the public interest, which would result from the grant of the Swift demand.

R. 76-77:

> Interferences with the movement of livestock to the stock yards is a serious concern not only of defendants but also of producers and livestock marketing agencies who desire expeditious movement of livestock and continued functioning of the public market in a manner that is adequate for their needs.

And (R. 77):

> We may, . . . disapprove the inauguration of a continuing practice of delivering livestock directly to packers in circumstances where, as we have found would be the case here, such practice would seriously interfere with, delay, and disrupt terminal operating conditions and the movement of livestock generally.[5]

---

[5] Preliminary findings of the Commission as to the effect on the railroad services of the line-haul defendants and the Junction if the Swift demand were granted, read as follows:

> Under the present practice, followed since the inauguration of services to the Union Stock Yards in the interest of expeditious centralized delivery, the yards of the Junction are not burdened with livestock cars either loaded or empty. It clearly appears that any attempt by the Junction to make deliveries of livestock generally to packers or to transport an amount of livestock substantially greater than complainant's present needs, would result in serious disruption of operations and services and serious delays in the delivery of livestock. * * * (R. 71)
>
> * * *
>
> . . . the conclusion is warranted that a substantial movement of livestock by the Junction would adversely affect efficient and expeditious terminal operations generally and that operations would be disrupted if much of the large movement of livestock to the stockyards area and thereturn movement of the empty cars, were performed by the Junction. (R. 71)
>
> * * *
>
> While, as above stated, any cars of livestock consigned to complainant could be handled in consolidated trains by grouping such cars at the head of the train with the cars of dead freight intended for set-out in the south yard, nevertheless because of difficulties peculiar to livestock traffic, such handling would, it appears, affect adversely the line-haul carriers' operations incarrying livestock to the stockyards. * * * (R. 72)
>
> * * *
>
> * * * Having in mind the congested condition of yards and tracks, it is clear that the attempt to make plant delivery through and over them of even 18 cars of livestock daily would considerably delay and burden defendants' operations. Moreover, although it is shown that complainant's direct shipments of livestock average 18 cars a day, such average necessarily includes days when the shipments exceeded 18 cars. Also it appears that the number of complainant's direct shipments of livestock in proportion to the number bought at the stock-

While the foregoing findings do not use the phrase "public interest", it may not be doubted that they relate thereto. The serious harm to livestock producers and shippers generally, which would inevitably result from the grant of the Swift demand (See Statement, pages 7 to 10 above), is an exceedingly important circumstance to be considered in evaluating the public interest. Here again, there is no claim from appellant that the findings immediately above quoted are not supported by substantial evidence. If they are challenged at all, it is only with respect to their legal relevancy to the Commission's conclusion.

In *United States* v. *Pierce Auto Freight Lines*, 327 U.S. 515, 535-536, this Court said that the matter of public interest "is . . . the business of the Commission, made such by the very terms of the statute".

In the instant case the Commission concerned itself with "its business" and found that what Swift sought was **not** in the public interest. There being no question as to the substantiality of the support which the evidence provides for the findings on this point, the Commission's order, in so far as based thereon, becomes incontestable.

This should be sufficient to settle all questions presented by the case with respect to the reasonableness of rates under sections 1 and 15(3).

---

yards has been steadily increasing, and the testimony of complainant's witnesses affords ground for the belief that that condition will continue. (R. 74, 75)

* * *

* * * Nevertheless, it is our best judgment, and we, therefore, so find and conclude, that, if complainant's demand for the delivery service at the line-haul rates were granted, there would result demands from other packers requiring defendants to render like delivery service in an amount and volume which together with such service rendered complainant would seriously interfere with, delay, and disrupt defendants' terminal operations in carrying livestock to the Union Stock Yard and in making deliveries of other freight to the industries on the Junction's lines. (R. 76)

Findings to show that the measure of an assailed rate or rate relation is justified by the cost of the services covered thereby are not required to support the validity of an order which dismisses a complaint upon a finding that the assailed rates are not shown to be unreasonable.

The appellant had the burden of proof in the proceeding before the Commission. In disposing of the issue raised by its complaint under sections 1 and 15(3), the Commission found, as noted above, no warrant for a conclusion that a joint rate on the flat Chicago basis to the Swift private siding is necessary or desirable in the public interest. In addition, the Commission found (R. 80):

> The evidence affords no basis for a conclusion that the terminal charge of the Junction in addition to the line-haul rates is unreasonable for deliveries of livestock to the proposed plant, considering services and modification of services that would be required for the desired deliveries and the effect upon terminal operations generally of performing such delivery service to the proposed plants.

Appellant says that the foregoing finding is not sufficient to support the order of dismissal; that, in the absence of findings as to rate versus cost relations, the conclusion of the Commission "stands simply as an arbitrary *ipse dixit*" (page 54); and that, for this reason, the Commission's order of dismissal must be set aside. This is the burden of appellant's entire argument under point I on pages 50-62 of its brief, although presented with variations.

This contention of appellant's is a strange one. A shipper complains that his rate is excessive in relation to the rate of his competitor and, according to appellant, he must prevail *as a matter of law* unless the railroad defendants bear the burden of a cost-of-service justification, and the Commission specifically finds that the difference in rates assailed

by the shipper is justified from a cost-of-service standpoint. Lacking such finding and such evidence—such evidence from the defendants being essential to the entry of a finding as to costs under appellant's theory—the appellant says that the Commission has no power to dismiss the complaint. Before looking at a single authority relied upon, common sense tells us that no such rule of law has ever been enunciated by this or any other court. There is no possible theory under which the burden of proof can be shifted, as appellant would shift it, from the shoulders of Swift to the shoulders of the railroads which were the defendants before the Commission.

When we come to consider the authorities cited and relied upon, we find that appellant has confused the instant case, in which the Commission neither prescribed nor approved any rate, but only found appellant's allegations as to unlawfulness not sustained by its proof, with cases in which the Commission has prescribed or approved rate differences or increases in charges without evidence or findings to justify or support its action.

Interstate Commerce Com. v. *Mechling,* 330 U.S. 567, is typical of appellant's authorities. In that case railroads operating east from Chicago performed identical services in the on-transportation of grain whether it arrived at Chicago via rail or via barge, but the Commission fixed and approved a rate difference (3 cents per 100 pounds) to the disadvantage of the ex-barge grain. This Court simply held that the prescribed rate difference for services apparently identical could not be sustained in the absence of a proven difference in cost. The prescription of different rates for identical services, as in the *Mechling* case, has nothing in common with the instant case in which the Commission found that the through rate assessed for the *two-line services* of the line-haul carrier and the Junction to the Swift private siding had not been shown to be

excessive and unreasonable in violation of section 1, even though it was higher than the through rate assessed for the *one-line service* of the line-haul carrier to the unloading chutes of the Yards Company. Obviously, the *Mechling* case and the instant case have nothing in common.

Likewise as to *New York Central R. Co.* v. *United States,* 99 F. Supp. 394 (D. Mass.) affirmed, 342 U.S. 890; *Palmer* v. *United States,* 75 F. Supp. 63 (D.D.C.); and *Tennessee Valley Authority* v. *United States,* 96 F. Supp. 409 (N.D. Ala.). In the *New York Central* case the order of the Commission had the effect of requiring railroads to continue in effect a higher rate on grain to Boston and New York than to Baltimore and Philadelphia, although they proposed a reduction in rates to Boston and New York so as to provide port equalization. The District Court set that order aside because neither the evidence nor findings in the report provided support for an order compelling the continuation in the future of the rate difference which the railroads proposed to eliminate. In the *Palmer* case the order of the Commission required an increase in the rental charge on freight cars. The order was set aside because the Commission failed to provide findings to justify its requirement that the rental charge be increased. In the *Tennessee Valley Authority* case the Commission approved a railroad proposal to apply a higher switching charge on ex-barge grain than on ex-rail grain without evidence to support the rate difference given its affirmative approval. The District Court treated that case as controlled by the *Mechling* case, as indeed it was. But for reasons stated above, such a case has nothing in common with the instant case.

Except in cases like *Mechling* and *Palmer,* neither this nor any other Court has held that evidence and findings with respect to rate versus cost relations are essential to the validity of a Commission order. In cases involving

different services in which the Commission has actually prescribed the rates to be charged, as well as the arbitraries or differentials by which they should differ, this Court has held squarely that such evidence and findings are not necessary supports for a challenged order. In *Louisiana Pub. Serv. Com.* v. *Texas & N.O.R. Co.*, 284 U.S. 125, this Court had under review an order of the Commission prescribing mileage scale rates on sand and gravel which included an arbitrary when the service involved a crossing of the Mississippi River. The order was assailed on the ground that the arbitrary was not supported by evidence or by findings with respect to the cost thereof or the difference in cost. This Court sustained the order against that attack. To the same effect, is *Alabama Great S. R. Co.* v. *United States*, 340 U.S. 216, 223, 225. Compare *New York* v. *United States*, 331 U.S. 284, 331, and *Ayrshire Collieries Corp.* v. *United States*, 335 U.S. 573, 592.

The switching charge of the Junction on livestock is not a penalty charge, prohibitive or otherwise.

Appellant repeatedly characterizes the switching charge of the Junction on livestock as a penalty charge and as if its only purpose were to make prohibitive (from the standpoint of costs) the handling of livestock by the Junction in switching service. There is no warrant in the facts of the case for either contention.

The switching charge of the Junction represents the compensation which it believes it should have whenever required to undertake the difficult task of handling livestock in switching service from its Ashland Avenue south yard to a private industry track on its rails. Appellant does not challenge the right of the Junction to be compensated for that service. Appellant does not challenge the measure of the charge, considered independently of the through rate.

We find in its brief no mention of any evidence offered by it tending to prove that the $28.80 switching charge per car, in effect at the time of the hearing, was excessive for the livestock switching services covered thereby. A penalty rate or charge connotes the addition of something over and above what would otherwise be just, reasonable and compensatory. But applicant cannot show that the Junction arrived at the $28.80 per car charge by adding some amount to what would otherwise be a normally reasonable and compensatory charge. It is a misnomer to call the switching charge of the Junction a penalty charge.

Nor is appellant on sounder ground when it characterizes the switching charge of the Junction as if designed to prohibit the movement of livestock over its rails. Its only basis for that characterization is that the Junction's switching charge exceeds appellant's trucking cost from the Omaha Packing Plant tracks to the Yards, and also exceeds the stock yards charges assessed by the Yards Company on shipments of "direct" livestock delivered through and by use of the facilities of the Yards Company. But that does not mean that the switching charge was fixed higher than the charges or costs of other methods of delivery so as to induce appellant to use one instead of the others.

If the higher charge or cost for one method of delivery than another is, in truth, a penalty charge, then, by the same token, the charges assessed by the Yards Company are penalty charges because higher than the cost to appellant of truck delivery for its direct livestock. The statement of the proposition indicates its absurdity.

The switching charge is simply a charge thought necessary by the carrier to cover the services involved. There isn't a scintilla of proof that it was made in consideration of or with regard to either the trucking cost of the appellant or the stock yard charges of the Yards Company. The

switching charge stands here on its own bottom, related only to the service which it covers. It is a reasonable charge according to the findings of the Commission and those findings are supported by substantial evidence. It should not be looked upon by this Court in any other light, regardless of the extravagance of appellant's language.

III.

The Commission committed no error of law, either of omission or commission, in construing and applying the various anti-discrimination provisions of the Interstate Commerce Act.

Under point II of brief (pp. 63-89), appellant contends that the rates assailed are in violation of sections 3(1), 2, and 1(9) of the Act. The dimissal of the complaint with respect to issues raised under various anti-discrimination provisions of the Act was based on adequate findings and substantial evidence which we discuss below.

The dismissal of the section 3(1) allegations of the complaint is supported by adequate findings and such findings are supported by substantial evidence.

Appellant argues that livestock is unduly prejudiced and dead freight is unduly preferred because the dead freight consigned to Swift's private siding is transported thereto via through routes over which apply joint rates on the flat Chicago basis, whereas livestock must pay the combination basis hereinabove described. (Brief, pp. 63-69)

The refusal of the Commission to require a like scheme of rates for livestock and dead freight by an alternative order issued under section 3(1) of the Act is clearly within its authority. For one reason, the Commission's report

contains an affirmative finding as to differences in services. On that point, the Commission said (R. 65):

> The measure of the transportation services rendered shipments of livestock is substantially greater than that accorded dead freight. * * *

The differences in the services required is spelled out in detail by the Commission on the several pages of its report which follow immediately after the sentence above quoted. (R. 65-74) Appellant does not dispute the truth of the facts stated by the Commission with respect to the services required when livestock is switched as compared with the services required when dead freight is switched. Rather, appellant marshals the facts to suit its own ideas on the matter and argues, in effect, that the Commission came to an erroneous conclusion. Here again appellant addresses itself to issues not within the scope of judicial review because this Court has repeatedly held that all questions as to the weight of the evidence are exclusively for the Commission to decide. See *Virginian R. Co.* v. *United States*, 272 U.S. 658, 663; *Merchants Warehouse Co.* v. *United States*, 283 U.S. 501, 508; *Interstate Commerce Com.* v. *Louisville & N. R. Co.*, 227 U.S. 88; *Board of Trade* v. *United States*, 314 U.S. 534, 548; *United States* v. *Berwind-White Coal Min. Co.*, 274 U.S. 564, 580-581; *Baltimore & O. R. Co.* v. *United States*, 298 U.S. 349, 359; *New York* v. *United States*, 331 U.S. 284, 331, 349; and *Ayrshire Collieries Corp.* v. *United States*, 335 U.S. 573, 593.

The second ground on which the Commission's order of dismissal as to the issue under section 3(1) may be supported involves the universally accepted rule that section 3(1) does not apply to other than competitive situations. See *Barrett Co.* v. *Atchison T. & S. F. Ry. Co.*, 172 ICC 319, 333-334. Livestock is not competitive with dead freight. Consequently, it is not disadvantaged by reason of the fact that dead freight is transported to private

sidings on the Junction without the addition of switching charges. Conversely, dead freight gains no benefit or advantage whatsoever from the fact that the switching charge is added in the case of livestock. If an alternative order were issued under section 3(1) and the railroads, in compliance therewith, cancelled the joint rates on the flat Chicago basis on the dead freight, thus making applicable the combination line-haul rates plus the switching charge of the Junction, the appellant's position as to livestock delivery cost would not be imroved. That means livestock is not *unduly* prejudiced and dead freight is not *unduly* preferred. It necessarily follows that to treat livestock differently than dead freight in respect to the construction and application of through rates does not violate section 3(1), even if such difference in treatment were not justified by difference in transportation conditions.

It is significant that in *Swift & Company* v. *Baltimore & O. R. Co.*, 266 ICC 55, in which the Commission required railroads at Cleveland, Ohio, to provide service for the delivery of livestock on a private siding[6] of Swift & Co., the finding under section 3(1) did not relate to the delivery of dead freight on that siding. Rather, the Commission made its finding and granted Swift relief under section 3(1) because other packers adjacent to the Stock Yards at Cleveland were provided with service in the delivery of livestock under circumstances and conditions which the Commission found were similar to those encountered on the tracks serving Swift over which service as to livestock was refused.

[6] The order of the Commission in that case was sustained by this Court in *United States* v. *Baltimore and Ohio R. Co.*, 333 U.S. 169.

The refusal of the Commission to find a violation of section 2 of the Act is adequately supported by findings and said findings have the support of substantial evidence.

On pages 69 to 79 of brief, appellant argues that the prohibition in section 2 against unjust discrimination is violated when livestock destined to Swift's private siding is subjected to a combination through rate and livestock destined to the unloading chutes of the Yards Company in the same general area is subjected to the lower, flat Chicago rate.

Section 2 forbids the exaction of different rates for "like and contemporaneous service[s] in the transportation of . . . like kind[s] of traffic under substantially similar circumstances and conditions . . .".

The Commission made a finding of fact which is directly opposed to appellant's claim under section 2, saying at page 574 of 274 ICC (R. 78, italics supplied):

> * * * The transportation services, conditions, and circumstances connected with deliveries by the line-haul carriers at the unloading chutes of the Union Stock Yards, as hereinbefore described, also are *substantially dissimilar from the private track delivery sought.*

Appellant ignores the finding just quoted. Yet that finding stands in the way of every contention advanced by it under section 2 unless the finding is not supported by substantial evidence. As to that, it should be sufficient for the purposes of this review simply to note that a direct one-line service by the line-haul carrier is involved in delivering at the unloading chutes of the Yards Company, whereas a two-line service of the line-haul carrier and the Junction is involved in delivering to the Swift private siding. That circumstance, even if it stood alone, is sufficient to make section 2 inapplicable.

However, before we conclude our consideration of the

facts, it is desirable to make clear the services rendered by line-haul carriers in handling the livestock which is transported from outer yards to the unloading chutes of the Yards Company, whether in exclusive or in consolidated trains (See Statement, pp. 5 to 6 above). We deal with the point because at many places in its brief appellant says, in effect, that the livestock handled in the consolidated trains—such trains constituting 37 percent of the total trains transporting livestock to the unloading chutes—requires additional set outs, additional switching, etc., beyond the simpler operation involved in delivering to unloading chutes of the Yards Company the livestock contained in the exclusive livestock trains (Appellant's brief, p. 71).

The fact is that the livestock contained in the consolidated trains is neither "switched" nor "set out" during the course of its journey from the line-haul carrier's outer yards to the unloading chutes of the Yards Company. The consolidated train is stopped on the running track near the east end of the Ashland Avenue south yard so that the dead freight, which is at the head end of the train, may be cut loose from the livestock and switched into receiving tracks in the Ashland Avenue south yard of the Junction. Then, the engine picks up the livestock cars at the place where they were left to proceed thence to the unloading chutes, a short distance to the east. But there is no set out of the livestock. It moves over precisely the same route in every particular as that over which move the exclusive livestock trains. The stopping of the livestock in the consolidated train on the running track has no greater significance than the stopping of the exclusive livestock train on the same running track while waiting opportunity to proceed to the unloading chutes.

In the course of its argument on its section 2 point, appellant cites *Seaboard Airline Railway Co.* v. *United States*,

254 U.S. 57, in which this Court sustained the order of the Commission in *Richmond Chamber of Commerce* v. *S. A. L. Ry.*, 44 ICC 455, as if it held that section 2 requires the *charging* of an identical rate to all deliveries in the same terminal district. That case had nothing to do with the *measure* of the charges for switching services when in addition to line-haul rates. That case arose because line-haul railroads reaching Richmond, Virginia, followed a practice with respect to absorption of switching charges under which such charges would be absorbed *if* the switching line also served the origin point, but would not be absorbed as to *like* traffic from the *same* origin point if switched by another line not serving said origin point. The Commission held that this difference in treatment was a violation of section 2 because the difference in absorptions was not based on a difference in transportation conditions, but was based on the matter of a difference in carrier competition. No similar situation is involved in the instant case. Furthermore, it is significant that in the *Richmond* case, the Commission acknowledged by its discussion the propriety of different switching charges in the same terminal area; and its command as to quality of treatment did not disturb that situation.

Appellant cites no case involving a higher *charge* assessed for the combined services of two lines to a place of delivery different from the place of delivery to which a lower charge applied for a single line service in which a violation of section 2 has been found. No such case is cited because there is none.

In *Barringer & Co.* v. *United States*, 319 U.S. 1, was involved an order of the Commission which authorized the addition of a loading charge to the line-haul rate on cotton when destined to the southeast and at the same time authorized the elimination of such loading charge *for an identical loading service at the same point* when the cotton

was destined to the Texas Gulf ports. The Supreme Court sustained the order because of a difference which the Commission found as to circumstances surrounding the services to the two different delivery points for the cotton. The Court at page 6 said:

> * * * But differences in rates as between shippers are prohibited only where the "circumstances and conditions" attending the transportation service are "substantially similar." Whether those circumstances and conditions are sufficiently dissimilar to justify a difference in rates, or whether, on the other hand, the difference in rates constitutes an unjust discrimination because based primarily on considerations relating to the identity or competitive position of the particular shipper rather than to circumstances attending the transportation service, is a question of fact for the Commission's determination. Hence its conclusion that in view of all the relevant facts and circumstances a rate or practice either is or is not unjustly discriminatory within the meaning of section 2 of the Act will not be disturbed here unless we can say that its finding is unsupported by evidence or without rational basis, or rests on an erroneous construction of the statute.

Appellant's complaint before the Commission involved no situation to which section 1(9) of the Act applies.

On pages 80-83 of brief, appellant argues that the switching charge of the Junction violates section 1(9) of the Act. The ground for that contention is that a joint through rate applies on dead freight, as compared with the combination of line-haul rate and switching charge on livestock, so that the livestock is discriminated against in the "operation of the switch track."

Section 1(9) requires every common carrier subject to the act to "construct, maintain, and operate upon reasonable terms a switch connection with any . . . private sidetrack which may be constructed to connect with its railroad" and such a common carrier is required to "furnish

cars for the movement of such traffic to the best of its ability without discrimination in favor of or against any such shipper."

Plainly, section 1(9) deals only with facilities and with service. It does not deal with switching rates, whether alone or in combination with line-haul rates, nor does it deal with rate relations. The instant proceeding involves no question of discriminatory service. Nor does it involve a refusal to furnish cars, the service which the section specifies shall be rendered "without discrimination".

A check of the decisions in which the Commission has found it necessary to apply section 1(9) indicates that in every instance they involved a limitation on the service which a carrier was willing to provide to or from private sidetracks, rather than the measure or relation of the rates to be applied upon the furnishing of the services. This is sufficiently illustrated by the cases which appellant cites on pages 80 to 83 of its brief.

IV.

The instant case is neither like nor controlled by United States v. Baltimore & O. R. Co., 333 U.S. 169.

In *United States* v. *Baltimore and Ohio R. Co.*, 333 U.S. 169, hereinafter referred to as the *Cleveland* case, this Court sustained an order entered by the Commission in *Swift & Company* v. *Baltimore & O. R. Co.*, 266 ICC 55. That decision of this Court is cited on 20 different occasions in appellant's brief. It is characterized as the "controlling precedent" (pp. 41, 86). The appellant claims that "the facts in the two cases are the same in every relevant particular" (p. 41), and that "it would be difficult . . . to find two cases which are closer on their facts . . .". (p. 88)

We propose to show that neither the facts nor the issues

in the *Cleveland* case are like those in the instant case, and that the questions on which that case turned in this Court are not even remotely like the questions presented on the review of the Commission's order in the instant case.

The facts in the *Cleveland* case as shown in the report of the Commission in 266 ICC 55 are as follows: The Swift Packing plant at Cleveland was served by the New York Central Railroad. In serving the plant, the New York Central operated over Track 1619, which was owned by the Cleveland Union Stock Yards Company, hereinafter called the *Stock Yards*. For many years the New York Central had operated over the track in question in delivering both livestock and dead freight on the basis of the flat Cleveland rates. That was the practice whether the New York Central was the line-haul carrier as to the traffic in question, or whether other railroads brought the traffic to Cleveland and the New York Central acted simply as a switching carrier.

In 1935, upon notice as provided under the existing trackage agreement, the trackage agreement was amended to prohibit the use of Track 1619 by the New York Central in hauling livestock to Swift, unless a separate charge or rental was paid to the Stock Yards Company. The railroads were unable to agree with the Stock Yards as to the price on which they would be allowed to continue the use of Track 1619 in delivering livestock to Swift. Consequently, the railroads declined to continue such deliveries. However, deliveries at the flat Cleveland rate were continued for numerous competitors of Swift at Cleveland who could be and were served without the use of Track 1619.

In the case before the Commission there was no issue as to rates. The only issue related to services. The flat Cleveland rate basis applied on livestock delivered to the Swift track during many years in which livestock was transported thereto, and it was only the insistence of the Stock Yards

that it be paid a special charge whenever the track was used for livestock that led the New York Central to make its switching charge inapplicable to livestock.[7]

The railroads agreed that there was no physical difficulty in continuing the delivery which had been performed for many years. They rested their defense entirely on the prohibitory charge or rental which they would have to pay the Stock Yards if the track were used for livestock. The Commission held that the New York Central used the track in question as a common carrier and that it could not justify its refusal to serve thereover merely because of its trackage agreement with the Stock Yards.

In deciding that case in favor of Swift, all violations of law found related wholly to the refusal of the New York Central to serve; none involved the measure or relation of rates. For the convenience of the Court, we quote the finding as to each violation of the Act found by the Commission. As to section 3(1) (266 ICC 68):

> * * * The evidence shows, and we so find, that, with respect to the service, including the effecting of plant delivery, involved in transporting livestock to all of the plants, including that of complainant, the circumstances and conditions of transportation are substantially the same; that all plants are engaged in the same general business, buying their livestock in the same markets and disposing of the same dressed products in the same consuming territory; and that active competition exists between them in purchasing the live animals and in selling the dressed products. Accordingly, we conclude that the defendant carriers' failure, in connection with the transportation of carload shipments of livestock consigned to complainant's plant, to accord delivery thereof on the latter's sidetracks while according such service in connection with like shipments consigned to its competitors subjects com-

[7] The reciprocal switching charge of the New York Central was $3.47 per car and the charge demanded of it by the Stock Yards exceeded that amount.

plainant to undue prejudice and unduly prefers the competing plants above named.[8]

As to the violation of section 1(6), which prohibits unreasonable and unlawful practices, the Commission found (266 ICC 69):

> * * * Accordingly, based on the above facts, circumstances, and considerations, we find and conclude that the defendants' failure, in connection with the transportation of carload shipments of livestock consigned to complainant's plant, to accord delivery thereof directly to the latter's sidetracks, is an unreasonable and unlawful practice in violation of section 1(6) of the Act.

As to the violation of section 1(9), the Commission found (266 ICC 71-72):

> We find that the complainant has made application in writing to the carrier for the operation of the switch connection discussed and has tendered interstate traffic to such carrier; that the New York Central has refused to maintain or operate such connection for the transportation of livestock to complainant's plant; that the facts shown above depicting operation over the track for a number of years for the transportation of livestock and since used for the transportation of commodities other than livestock shows that the connection is practicable and may be made with safety, and such refusal constitutes justification for the connection, and that the number of carloads of livestock which complainant is ready and willing to have transported by railroad will furnish reasonable compensation to the carrier with whose line the connection is made, in this case the New York Central. We also find that the failure or refusal of the defendant, New York Central, to furnish cars for the movement of livestock traffic to complainant's plant at Cleveland, Ohio, while furnishing cars for the movement of other classes of traffic, constitutes a discrimination against Swift & Company within the meaning of this section. Consequently, we

[8] These competing plants were also adjacent to the stock yard facilities at Cleveland.

find that a violation of section 1(9) of part I of the Interstate Commerce Act follows.

The railroads and the Stock Yards brought separate actions to enjoin the order of the Commission. The lower court enjoined the order on the ground that the Stock Yards had a property right in Track 1619 which entitled it to restrict the character of use to which it might be put by the New York Central under the trackage agreement. This Court reversed and stated the question to be (333 U.S. 175):

> * * * Can the non-carrier owner of a segment of railroad track who contracts for an interstate railroad's use of the segment as part of its line reserve a right to regulate the type of commodities that the railroad may transport over the segment, or would such a reservation be invalid under the Interstate Commerce Act?

In sustaining the order of the Commission, this Court held that the Commission had power to require a correction by the railroad of the discriminatory practices found to have been followed in respect to services rendered, and *held* that that power was not affected by the private ownership of the track in question. The narrow ground of the holding of this Court is indicated by the concluding paragraph from its opinion:

> We hold that the Commission's order was authorized by statute and that it does not deprive Stock Yards of its property without due process of law. In doing so we do not pass upon any questions in relation to the dedication of Track 1619 to railroad use. Neither do we decide what are the relative financial rights of Stock Yards and New York Central under their contracts, nor whether Stock Yards can cancel the contract with New York Central, nor what would be the duty of New York Central should Stock Yards attempt to terminate its right to use Track 1619. We only hold that Stock Yards' ownership of Track 1619 does not vest it with power to compel the railroads to operate in a way which violates the Interstate Commerce Act.

Plainly, the *Cleveland* case has nothing in common, either as to its facts, or as to the issues decided by the Commission, or as to the questions decided by this Court, with the instant case. Even taking the broadest view of the case and the matters involved therein, the two cases are fundamentally different. In the first place, what Swift sought and obtained in the *Cleveland* case was the restoration of an operating practice as to the use of trackage which had been followed for many, many years. In contrast, what Swift seeks in the instant case is a rate basis for livestock destined to private sidings on the Junction which is contrary to the accepted practice of many decades. In the second place, the defendants in the *Cleveland* case had declined to perform a service which it was both practical and possible for them to perform with ease and safety, and there was no suggestion that transportation services in the handling of livestock for the general public would be impeded or disadvantaged by the restoration of the service which Swift sought. In contrast, the grant of the rate basis which Swift seeks in the instant case would adversely affect transportation services rendered for the general public so that what Swift seeks is manifestly against the public interest, and the Commission so found upon substantial evidence.

V.

The Swift complaint did not pray for relief with respect to the adequacy of facilities and service on the Junction and the fact the Commission issued no order to require additional facilities or services does not invalidate its order of dismissal of Swift's rate complaint.

Under point IV in its brief (pp. 105-116) appellant argues that the Commission's order of dismissal of Swift's rate complaint should be set aside because the Commission failed to require such added facilities and service by the

Junction as might be necessary to handle livestock in switching service to private sidings.

Whether the facts are such as to warrant an order under section 1(11) of the Act, is not a question for decision in this case since the Commission proceeding involved no issue under that section. If there is a question as to the adequacy of the Junction properties and facilities, that question must be presented to and decided by the Commission before this Court can say whether or not the Commission acted within its authority in the premises.

VI.

The covenant in the lease given by the Yards Company to the Chicago River and Indiana Railroad Company, lessee and operator of the Junction, has no pertinency to any issue or question in the instant case.

Appellant devotes point V in its brief (pp. 117-141) to a covenant whereby the Chicago River and Indiana Railroad Company, a wholly owned subsidiary of the New York Central, agrees to operate the Junction in such manner "as will tend to the benefit, advantage, and behoof of the business and affairs of the Yards". Appellant says that the covenant mentioned is "the heart of the case", that it is illegal, and that solely by reason of the covenant the Junction has failed to equip itself with the property and facilities necessary to the handling of livestock in switching service to private sidings. To prove this point, applicant relies wholly on a letter written by counsel for the Yards Company to counsel for the New York Central with reference to the production of evidence by the New York Central in defense of the Swift complaint before the Commission (Exhibit 57, R. 1961-1962). In that letter counsel for Yards expressed the opinion that the covenant required

the River Road and the New York Central to defend against the Swift complaint and that any failure to do so would be a breach of the covenant. Appellant argues that because the Commission dismissed the Swift complaint, it is, in effect, enforcing the covenant which is discriminatory and therefore illegal *per se*.

The Commission did not consider the matter of this covenant to have any pertinency to the issues before it or to be responsible for the rate basis assailed by the Swift complaint. The Commission's discussion and findings on this point read, (274 ICC 555, 575):

> Complainant asserts that a contractual relation exists between the Union Stock Yards and the Chicago Junction under a lease dated December 1, 1913, whereby the carrier agreed "to conduct, manage and operate the line of railroad by this instrument demised, and in so far as possible the same to conduct in such manner as will tend to the benefit, advantage, and behoof of the business and affairs of the Yards." The covenant quoted was incorporated in a later lease executed May 19, 1922, when the Chicago Junction subleased its line to the Chicago River & Indiana, a wholly owned subsidiary of the New York Central Railroad, for 99 years with an option to renew in perpetuity. *Union Stock Yard & Transit Co.* v. *United States*, 308 U.S. 213, 216. The effect of the leases was to completely divest the Union Stock Yards of operation and control of the terminal railroad, the Court saying that by ceasing to operate or control its railroad directly or indirectly, the Union Stock Yards restricted its transportation service to the loading or unloading of livestock as specified in its tariff. The operation of the Chicago Junction is subject not only to the provisions of the Interstate Commerce Act but also to the conditions imposed by the Commission in the *Chicago Junction Case*, *supra*. Those conditions were particularly intended to insure that the Chicago Junction and the Chicago River & Indiana should be operated as neutral terminal carriers, without special advantage favoring the New York Central but the conditions were and are broad enough

to inhibit operation of the Chicago Junction to the special advantage and interest of the Union Stock Yards.

Since the Commission treated the covenant in question as having no bearing on the matters before it, either in the direction of warranting an order in favor of Swift or as warranting an order against it, there is no possible basis for the claim that the existence of the covenant operates so as to invalidate the Commission's order. Yet, that is what appellant's argument seems to come down to, i.e., that the mere existence of the covenant in question precludes the Commission from a dismissal of the Swift complaint.

Appellant apparently makes much of the matter of the covenant in the hope that it will make this case look like the *Cleveland* case. Obviously, the covenants in the two cases have nothing in common. In the *Cleveland* case the railroad entered into a contract which obligated it not to transport livestock over the track leading to the Swift plant unless it paid the Stock Yards Company a special charge which was higher than the switching charge named in the railroad's tariff. In the instant case there is no covenant as to either the rendition or the withholding of service, nor is there any covenant as to a particular rate basis. There is no evidence in this record which even suggests that the measure of the switching charge on livestock maintained by the Junction is due to any circumstance other than the operating conditions encountered when the services for which the charge is assessed are performed. That circumstance, and the others, noted under point IV above (pp. 40 to 45), show how dissimilar is the *Cleveland* case.

There is still another reason why everything that appellant argues about the covenant is completely beside the

point. The Swift complaint does not attack the reasonableness of the switching charge considered independently of the through movement. The Swift complaint is actually directed to the failure of the line-haul carriers to absorb the switching charge, or to the failure of the line-haul carriers and the Junction to join in a single-factor through rate on the flat Chicago basis. In either situation it is primarily the line-haul carriers who are responsible for the measure of the rates and the rate relations about which Swift complains. Taking this view of the case, which is the only proper view, it is obvious that the covenant between the Yards Company and the River Road had no bearing whatsoever on any issue decided by the Commission and has no pertinency to any question involved in this review as to the validity of the Commission's order.

CONCLUSION.

The Commission committed no error in dismissing the Swift complaint. Accordingly, the judgment of the District Court upholding that order should be affirmed.

APPENDIX A.

Pertinent statutory provisions.

The statutory provisions referred to herein are set out in Appendix A to the brief of the appellant, with the exception of section 15(3) (49 U.S.C. 15(3)) of the Interstate Commerce Act which is set out below:

> The Commission may, and it shall whenever deemed by it to be necessary or desirable in the public interest, after full hearing upon complaint or upon its own initiative without complaint, establish through routes, joint classifications, and joint rates, fares, or charges, applicable to the transportation of passengers or property by carriers subject to this part, or by carriers by railroad subject to this part and common carriers by water subject to part III, or the maxima or minima, or maxima and minima, to be charged, and the divisions of such rates, fares, or charges as hereinafter provided, and the terms and conditions under which such through routes shall be operated. The Commission shall not, however, establish any through route, classification, or practice, or any rate, fare, or charge, between street electric passenger railways not engaged in the general business of transporting freight in addition to their passenger and express business, and railroads of a different character. If any tariff or schedule canceling any through route or joint rate, fare, charge, or classification, without the consent of all carriers parties thereto or authorization by the Commission, is suspended by the Commission for investigation, the burden of proof shall be upon the carrier or carriers proposing such cancelation to show that it is consistent with the public interest, without regard to the provisions of paragraph (4) of this section.

SWIFT & COMPANY, APPELLANT

v.

THE UNITED STATES OF AMERICA, INTERSTATE COMMERCE COMMISSION, ET AL., APPELLEES

APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE SOUTHERN DISTRICT OF ILLINOIS

BRIEF FOR THE UNITED STATES AND THE INTERSTATE COMMERCE COMMISSION

OPINIONS BELOW

The findings of fact and conclusions of law (no opinion was filed) of the specially constituted District Court are set forth in the transcript (R. 197–210). The report of the Interstate Commerce Commission (R. 57) appears at 274 I. C. C. 577.

JURISDICTION

The final judgment of the District Court was entered June 21, 1951 (R. 210), and the appeal was allowed July 26, 1951 (R. 211). The juris-

diction of this Court is invoked under 28 U. S. C. 1253 and 2101 (b). Probable jurisdiction was noted October 15, 1951. (R. 228)

QUESTIONS PRESENTED

1. Whether, in the light of the long-existing conditions found to exist in the Chicago stockyard area, the Interstate Commerce Commission acted within its powers in concluding that appellant Swift was not entitled to delivery of livestock at its proposed plant in that area at the line-haul rate.

2. Whether the evidence before the Commission warranted its findings that the switching charge for private delivery to Swift had not been shown to be either unreasonable or discriminatory.

STATUTES INVOLVED

For the pertinent provisions of the Interstate Commerce Act and other Acts here involved, the Court is respectfully referred to Appendix A of appellant's brief.

STATEMENT

This is a direct appeal from the final judgment of a specially constituted district court, sustaining as in all respects valid a report and order of the Interstate Commerce Commission issued and entered in a proceeding entitled No. 29809, *Swift & Company* v. *Atchison, Topeka & Santa Fe Railway Company, et al.*

The Commission proceeding was instituted by complaint filed by appellant (hereinafter called Swift), alleging in substance, that the rates and charges on direct[1] shipments of livestock, in carloads, from points outside Illinois for delivery at its plant in Chicago are unreasonable, unduly prejudicial to livestock as a commodity, and unduly prejudicial to it and preferential of its competitors in Illinois and several other midwestern states (R. 58), in violation of sections 1 and 3 of the Interstate Commerce Act. The complaint prayed the Commission to prescribe reasonable rates, charges and practices, and, particularly, joint through rates between the line-haul railroads serving Chicago and the Chicago Junction Railway[2] and Chicago River and Indiana Railroad, such joint rates to include delivery of livestock shipments on the industrial sidings at Swift's plant in the stock yard area and not to exceed the rates applying on shipments of livestock to the Union Stock Yards (hereinafter called the stockyards) and other points in Chicago at which the railroads deliver such ship-

[1] Shipments consigned directly to packers for slaughter and not offered for sale in the public interest.

[2] The Chicago Junction Railway, a terminal switching carrier, is the only railroad which reaches with its own rails either the stockyards or the industries (including the packers) within that part of the industrial area of Chicago known as the stock yard area. It is operated by the Chicago River and Indiana Railroad as lessee, in connection with the latter's own terminal switching line. For convenience, these two terminal carriers will hereinafter be called the Junction.

ments at the line-haul rates without additional charge (R. 55–56, 59).

Although the Junction has never, except in cases of emergency, switched or transported livestock either to the stockyards or industry sidings, its tariff provided for switching charges on "all carload freight" to or from industries, sidings, team tracks and districts as shown therein. And, following the filing of Swift's complaint with the Commission, the Junction filed schedules proposing to specifically exempt livestock from the traffic it would transport and to cancel the application on livestock of all switching charges published by it except to and from chutes and sidings at the stockyards. On protest of Swift and others the Commission suspended operation of the proposed schedules until July 14, 1948, and thereafter the Junction voluntarily postponed the effective date thereof pending the Commission's decision. The two proceedings were heard on a consolidated record and decided in the same report (R. 59).

Numerous parties representing the Union Stock Yards, producers, buyers, and sellers of livestock, intervened in opposition to the complaint. The United States Department of Agriculture also intervened as an interested party under its administration of the Packers and Stock Yards Act, 1921 (R. 59). Following extensive hearings, a proposed report was issued by the examiner. Exceptions to the proposed report and replies to

exceptions were filed by the parties, and thereafter they were heard in oral argument by the entire Commission (R. 58).

The main issue presented in the Commission proceedings was whether or not Swift was entitled to have direct shipments of livestock delivered by the Junction without a charge in addition to the line-haul rates on a private siding at a plant which it proposed to construct in that part of the stockyard area known as "Packingtown" and just north of its present plant (R. 55–56, 59, 65). Certain of the buildings and facilities of Swift's present plant had become obsolete and inadequate and, therefore, Swift proposed to construct a new packing plant which would have substantial facilities for unloading livestock brought in by rail or truck, including adequate plant tracks and holding pens[3] (R. 65).

The flat line-haul rate on livestock to Chicago applies to public team tracks and industrial sidings on the rails of the line-haul carriers,[4] and

[3] At the time of the hearing, the new, or additional, site was occupied by another concern, but the latter's structures and tracks were to be removed and replaced by new buildings, tracks and facilities (R. 65).

[4] About 1,500 shipments of livestock per year are delivered at public team tracks of five of the line-haul railroads (Ex. 17, R. 1101), and about 6,500 cars per year are delivered on sidings of the Omaha Packing Company, a wholly owned subsidiary of Swift, located on the Burlington some miles north of the stockyards. Formerly the Omaha plant slaughtered and processed a substantial part of the livestock received by it, but in 1932 the plant was destroyed by fire and

also to the stockyards which, in legal effect, is on the rails of the line-haul carriers, since they have trackage rights over the rails of the Junction leading to the stockyards and have for years transported livestock directly thereto, operating with their own engines and crews (R. 60, 78, 79, 286). The line-haul carriers do not have trackage rights to operate over the rails of the Junction to reach Swift's plant or the plants of other packers on the Junction. Nor does the flat line-haul rate to Chicago include delivery of livestock to such plants (R. 60, 78–79, 527, 838–840). The charge of the Junction for switching livestock from junctions with connecting carriers to Swift's plant and other points on its line is $28.80 per car. "That carrier, however, has never, except in an emergency handled ordinary livestock in switching service." (R. 60.) With the exception of such emergency situations,

> For some 70 years the method of conducting terminal operations in the stockyards district has been for the line-haul carriers, using Junction tracks, to carry all shipments of livestock to the stockyards and make deliveries there,[5] and for the

---

has not been rebuilt. However, Swift continued to receive and now receives livestock at the unloading pens on the Omaha plant site and trucks the animals from there to its plant in Packingtown (R. 67–68).

[5] Most of the larger packing plants as well as some of the smaller ones and also a number of industries of other sort are located in Packingtown which adjoins the stockyards on

> Junction to perform the switching and spotting of other freight for the packers and many other industries in the area. As a result, the Junction's main tracks, its yards and subyards and their tracks, are peculiarly designed and fitted for the service described, and any change, particularly as contemplating deliveries of livestock to the plants of the packers, would, as might be expected and as is shown, require a conflicting use of such yards and tracks and subject defendant's operations to interference and delays. (Commission's report, R. 72.)

As above said, the main issue in the Commission proceeding was whether Swift was entitled to plant delivery by the Junction of its direct shipments of livestock without charge in addition to the line-haul rates to Chicago. Based upon allegations that the existing interstate rates, charges, and practices on direct shipments of livestock to its plant in Packingtown were un-

---

the west and is connected therewith by a network of overhead runways, tunnels and viaducts, owned and maintained by the stockyards. These runways, tunnels, and viaducts are used to drive livestock from the stockyards to the slaughtering floors of the packers, including Swift (R. 65), which latter, however, uses them only to drive livestock which it purchases at the stockyards to the floors of its plant in Packingtown. All of its direct shipments of livestock Swift receives at pens on the property of the Omaha plant on the rails of the Burlington and well outside the congested stockyard area. From there it trucks the animals about 2½ miles to its plant in Packingtown (R. 67).

reasonable and unduly prejudicial and preferential, Swift's complaint prayed the Commission to order the defendant carriers to establish and apply just and reasonable rates, charges, and practices, including joint through rates between the trunk lines and the Junction, under which delivery will be afforded on the sidetrack of its plant and under which the rates and charges shall not exceed those applying to the stockyards and other points in Chicago where the line-haul rates apply without charge in addition thereto (R. 56).

Manifestly and, as stated by the Commission (R. 60), the determination of the issues raised in the proceeding made it

> necessary to consider the track lay-out of the Junction, and the present operations thereover in the handling of so-called dead freight, which term includes perishable and all other freight other than livestock; the method by which livestock has for many years been handled by the line-haul carriers to the Union Stock Yards; the physical operations that would be necessary if the Junction were required to make private-track delivery of livestock, as sought by the complainant; and also, in order to avoid undue preference and prejudice, if it were required to make similar deliveries to complainant's competitors."[6]

[6] The Stockyard Company, created by special statute of Illinois in 1865, was organized by the railroads entering Chicago to replace four widely separated stockyards by a

In performing the switching of dead freight in the stockyard area, the Junction acts as terminal carrier for 27 railroads, 22 of which are

---

union stockyard which would provide a livestock terminal for the railroads and a central market for livestock (R. 1019–25). While the original stockholders were the organizing railroads, they disposed of their holdings during the succeeding 12 years. *Chicago Live Stock Exchange* v. *A. T. & S. F. Ry.*, 219 I. C. C. 531. In addition to the establishment of the Union stockyard, the company was authorized by its special charter to construct a terminal railroad to connect with the lines of all railroads terminating in Chicago. Late in 1865, the company completed construction of the stockyard in the open prairies south of the city (R. 917) and also 30 miles of terminal railroad to connect with the then nine railroads serving Chicago (R. 915–9, 920–1). At the beginning the terminal road was used almost wholly for the transportation of livestock to and from the stockyards, the trunk lines then, as now, operating with their own engines and crews over tracks of the terminal road connecting their lines with the stockyards (R. 469, 920). With the establishment, "starting about 1870," of packing plants in the stockyards area and the construction of additional railroads into Chicago, the tracks and facilities of the terminal road were extended to reach such plants and to connect with the new railroads. But, since the packing plants were at first small and the establishment thereof and of other industries was at first gradual, the individual trunk lines were for some years authorized to operate over the switching tracks of the terminal road in carrying dead freight to and from the plants and industries in the area, this continuing until 1887. Thereafter, from 1887 to 1893, the dead freight operations over the tracks of the terminal road were conducted first by one and later by another association controlled by the trunk lines, but, in the latter year, the yard company acquired locomotives and commenced the handling of dead freight itself (R. 921–4). In 1897 the yard company leased its terminal road to Chicago & Indiana State Line Railroad, which railroad and another small railroad were the following

trunk lines; and it serves, not only the packers, but a total of about 499 industries. The principal place of interchange between the Junction

year consolidated into a company known as the Chicago Junction Railway. In 1922, pursuant to authorization by the Commission, the Junction subleased the terminal road to the River Road, a subsidiary of the New York Central (see footnote 2, *supra*), the method of conducting terminal operations, however, remaining the same. In short, from 1865 on, the trunk lines, operating over the main running tracks of the terminal road (now the Junction), have hauled their cars of livestock to the stockyards, making delivery there, and also have hauled all empty stock cars back to their own yards. While for some years the trunk lines conducted dead freight operations to and from the plants of the packers (R. 923), they were not then or at any time authorized to transport livestock over the "dead freight tracks" (R. 924). And from the time when the stockyard company acquired locomotives and commenced its own dead freight operations, the carriers' method of conducting terminal operations in the stockyards area has, except in emergencies, always been the same, that is, the trunk lines operating over the tracks of the terminal road, have carried all livestock to the stockyards and the terminal road, or the lessees thereof, have performed the switching of all other freight for the packers and other industries in the area (R. 469, 920, *Chicago Junction case*, *supra*, 71 I. C. C., at 433).

The industrial development of the stockyards area began with the construction of the first packing plant in 1870 and by 1887 there were 15 such plants (R. 922). Following the annexation in 1889 of the stockyards district to Chicago, public streets were opened up and industrial development became rapid until by 1907 the entire area in the vicinity of the stockyards was built up solidly with permanent buildings (R. 924–6). There was even at that time great congestion in the interchange yards of the Junction, causing delay in the handling of dead freight (R. 925) and, since then, many manufacturing industries have located along the lines of the Junction until now there are 499 served by that carrier (R. 442).

and connecting railroads is the Junction's Ashland Avenue Yard. While that yard consists of a solid mass of tracks, based on the operating purposes thereof it is divided into two yards, known as the South Yard and the North Yard. All inbound cars of dead freight destined to the many industries on the Junction must be delivered by connecting carriers on 9 receiving tracks in the South Yard, and nowhere else, pursuant to a labor agreement between the Junction and its employees entered into in 1946 to avert a threatened strike (R. 61, 463–4, 515–7). After completion of the necessary inspection and carding, the cars are switched by Junction break-up crews to adjoining classification tracks (25, with a capacity of 680 cars) for grouping and movement to base yards serving the respective operating districts. There the cars are reclassified and switched to the private sidings of the industries or to team tracks (R. 61).

The North Yard, which has 24 tracks with a capacity of 700 cars, is the Junction's interchange yard for delivery to western connecting lines of outbound cars of dead freight and of "empties," other than empty stock cars. Cars, loaded and empty, moving from industries on the Junction, are first switched to base yards where they are classified for further movement either to the North Yard or to the Loomis Yard, if for delivery to eastern or southern connecting lines. When moving to the North Yard, such outbound cars,

loaded or empty, are first placed by Junction crews on 3 of the 24 tracks in that yard. Seven other of said tracks are used for holding or classification purposes, leaving available 14 tracks for the delivering of cars to western connecting lines. The movement through the North Yard ranges from 600 to 800 loaded and empty cars per day. The Loomis Yard, above referred to, is the Junction's interchange yard for delivery of outbound dead freight and "empties" to eastern and southern connecting lines. That yard contains 20 tracks with a capacity of 420 cars (R. 62).

A third and very important use is made of the Ashland Avenue yards. Between the North and South Yards the Junction has three parallel main running tracks designated 1102, 1103, and 1104, respectively. The line-haul carriers have trackage rights to operate east-bound over 1103 to the stockyards [7] and west-bound from the yards over 1102 and 1104; and for these rights they pay the Junction $1.50 per car, loaded or empty, handled to or from the stockyards (R. 62). About 63 percent of the trains of the trunk

[7] Such right to operate over track 1103 also extends to dead freight either as carried in a consolidated train for set out on the receiving tracks of the Ashland Avenue South Yard or where the trains consist wholly of dead freight for delivery to the tracks of that yard. See example of Burlington's operations (R. 63). The 12 carriers entering the stockyard area from the east use west-bound running tracks 1101 or 1104 in making delivery of dead freight to the South Yard (R. 70, 636).

lines moving to the stockyards consist exclusively of cars of livestock. Solid trains of livestock entering the stockyard area from the west are hauled by the line-haul carriers over east-bound track 1103 to the unloading chutes in the stockyards. While the cars are being unloaded the engine cuts off, passes around the train and, having coupled on to the other end, hauls the empty cars over westbound tracks 1102 or 1104 to the line-haul carrier's home yard. As stated by the Commission (R. 63):

> Manifestly, as the line-haul carriers must use the same east-bound track into the Union Stock Yards, any delay to a train on that track results in "piling up" trains of other lines seeking ingress to the Union Stock Yards. Frequently as many as four trains must wait to enter this track as a result of its being blocked at the east end. Delays are necessarily experienced also because of "set outs" made by consolidated trains, consisting of livestock and dead freight. In a consolidated train the dead freight is on the head and behind the engine. The cars of livestock are cut off and left standing at the eastern end of the east-bound running track while the line-haul carrier's engine sets the dead freight on one of the nine receiving tracks in the south yard. This operation blocks the running track until the engine returns and hauls the livestock to the Union Stock Yards.

The principal carriers of livestock to the Chicago stockyard district are the western carriers and such carriers, except the Rock Island,[8] must use track 1103, not only because it is assigned for eastbound use, but also because the other two running tracks are used to capacity (R. 636–7). As above stated, all inbound cars of dead freight, whether from western or eastern carriers, must be delivered on receiving tracks in the Junction's Ashland Avenue South Yard. And all outbound dead freight cars, loaded or empty, moving to western carriers, must be delivered by the Junction on tracks in its North Yard. Through those yards there were "funnelled" an average per annum of 726,144 loaded and empty cars during 1945, 1946 and 1947. The yards are in a densely developed industrial part of the city and there is no land available for the expansion thereof or the building of additional facilities nearby for interchange and classification of traffic (R. 60). Under the present practice,

[8] The Rock Island enters the stockyard area from the east. Upon arrival of a consolidated train at the Rock Island's outer yard, the cars of livestock are separated from the dead freight and the former are hauled to the stockyards without passing through the Ashland Avenue yards. All cars of dead freight, however, must be hauled over the Junction's westbound running tracks to the Ashland Avenue South Yard. And any cars of livestock destined to the Omaha plant must also be hauled over those running tracks. These operations of the Rock Island are typical of the operations of other carriers similarly entering the stockyard area from the east, of which there are 12 (R. 70, 489, 636).

followed since 1865, of centralized delivery by the line-haul carriers of all livestock to the stockyards, such carriers also hauling the empty stock cars directly back to their respective home yards, the Junction's interchange and classification yards are not burdened with livestock cars, either loaded or empty (R. 71). In handling the present dead freight traffic alone, the Junction's interchange and classifying yards are worked to capacity (R. 547, 701). And even accepting the view, urged by Swift, that all the Commission needed to consider was the plant delivery of its direct shipments of livestock, averaging 18 cars a day, still cars of livestock cannot be handled in the same simple and expeditious way customarily used in switching and classifying cars of dead freight. While Swift's cars of livestock could be handled in consolidated trains by grouping such cars at the head of the train with the cars of dead freight intended for set-out in the South Yard, nevertheless it would have to be expected that such course would add to the delay and "piling up" of the livestock trains of other carriers, seeking ingress to the stockyards over the same running track. Speaking of this, the Commission report says (R. 72–3):

> * * * Consolidated trains always occasion some delay, since the cars of livestock destined to the stockyards are left standing on the track while the engine hauls the cars of dead freight a short

> distance eastward and then, after backing them onto a sidetrack leading to the receiving tracks of the south yard, "kicks" the cars as previously described. But, while in the case of dead freight the cars may be simply "kicked," if the switching were to include livestock for complainant or other packers, the service would have to be differently performed. Whether the livestock were handled alone or together with the dead freight, the cars could not be simply "kicked," but would have to be switched and actually placed on the receiving track to avoid risk of injury to the animals; and, once the cars were so placed, subsequent switches of dead freight could not be "kicked" and thus permitted to roll freely against the cars of livestock.

Furthermore, the difficulties in handling Swift's cars of livestock would obtain even in greater degree in the Junction's congested South Yard, its base yard (Damen Avenue), and also in making final delivery over auxiliary track 1105 and other track leading to Swift's proposed plant (R. 66–7). Referring to the added burden that would be cast on the South Yard if livestock were diverted through it, the Commission's report says (R. 73–5):

> * * * In its work of classifying dead freight for switching delivery, the Junction, which serves, not only the packers, but hundreds of other industries, follows the usual and timesaving practice of

"kicking," whereby uncoupled cars at the end of the string of cars being classified are sent on their way over the switching lead and onto the proper classification track; but if classification track 19 [assigned to Swift for dead freight], or any other, were to be used for the livestock destined to complainant, neither the livestock cars nor subsequent cars of dead freight could be so "kicked," but would have to be pushed over the lead and along the track to the point of placement, such cars remaining coupled until brought to rest.

Moreover, in the making of any such use of classification track 19, or any other, for complainant's livestock shipments, it would have to be expected that the cars of livestock would often be blocked in between cars of dead freight, and would have to be "dug out" for a special run to complainant's plant. Indeed, it appears that in some instances, immediately upon arrival of a consolidated train including cars of livestock for complainant, the Junction might have to make a special run to deliver the cars at the latter's plant. As above mentioned in practically all cases, livestock arriving at Chicago has only a limited time left before it must be unloaded to avoid violation of the law governing watering and feeding;[9] * * * *.

[9] The law referred to (45 U. S. C. 71–74) provides that livestock may be confined in cars for not more than 28 hours without unloading for rest, watering and feeding unless the

> * * * Moreover, although it is shown that complainant's direct shipments of livestock average 18 cars a day, such average necessarily includes days when the shipment exceeded 18 cars. Also it appears that the number of complainant's direct shipments of livestock in proportion to the number bought at the stockyards has been steadily increasing, and the testimony of complainant's witnesses affords ground for the belief that that condition will continue.

By consigning all its direct shipments of livestock to the Omaha Plant site, Swift now avoids, to some extent at least, (R. 68), the costs incurred by other packers taking delivery of their direct shipments of livestock at the stockyards and paying yardage charges [10] for use of the yards, overhead runways, tunnels and viaducts in driving the animals to their plants. Swift's complaint to the Commission asked for the establishment of joint rates on livestock between the trunk lines and the Junction to its proposed plant, such rates to be at the line-haul level and to include delivery on tracks to be built at the proposed plant. If granted, Swift would, in effect, have been enabled

shipper requests in writing that the time be extended to 36 hours. It is important to note that a stop for rest, water and feed always adds 5 hours to the running time because the law specifies that the animals be given at least 5 consecutive hours of rest.

[10] Sixty-five cents per head on cattle, 40 cents on calves, 21 cents on hogs, and 15 cents on sheep (R. 68).

to avoid any of the running expense incurred by its competitors by reason of the yardage charges they pay. Yet, before the Commission, Swift, in referring to the railroads' contention that, if its demand for plant deliveries at the flat line-haul rate were granted, other packers would make like demands which would have to be complied with, characterized the contention as one resting on an untested assumption or conjecture and thus requiring the Commission to decide the case, not upon facts, but upon prediction, opinion, and prophesy. Answering, the report says in part (R. 76–77):

> But the very nature of complainant's complaint, asking, as it does, that defendants be required to render for its proposed plant a delivery service of a kind new to the stockyards district, necessarily requires exercise of judgment as to the future effects and results. * * * The other packers or some of them may encounter difficulties occasioning delay in the establishment of unloading facilities; in instances the difficulties may cause the packer or packers to conclude not to change to the new method of receiving livestock. Nevertheless, it is our best judgment, and we, therefore, so find and conclude, that, if complainant's demand for the delivery service at the line-haul rates were granted, there would result demands from other packers requiring defendants to render like delivery service in an amount and volume

which together with such service rendered complainant would seriously interfere with, delay, and disrupt defendants' terminal operations in carrying livestock to the Union Stock Yard and in making deliveries of other freight to the industries on the Junction's lines.

Interferences with the movement of livestock to the stockyards is a serious concern not only of defendants but also of producers and livestock marketing agencies who desire expeditious movement of livestock and continued functioning of the public market in a manner that is adequate for their needs. It is the position of these interests that deliveries of livestock on private industrial tracks served by the Junction should be condemned upon the ground that such disposition of livestock is contrary to the public interest. We are not authorized to prescribe the manner in which livestock shall be marketed in the public interest.

We may, however, disapprove the inauguration of a continuing practice of delivering livestock directly to packers in circumstances where, as we have found would be the case here, such practice would seriously interfere with, delay, and disrupt terminal transportation operations and the movement of livestock generally. The proposed complete exemption of livestock from transportation by the Junction under any circumstances is not justified. There is no warrant, however, for a conclusion that the

establishment of joint rates as desired by complainant is necessary or desirable in the public interest.

The record contains adequate facts showing that, if Swift's demand for plant delivery of livestock were granted, other packers would be under strong competitive compulsion to make like demands. The Commission's principal function is legislative in nature, requiring it to project its judgment into the future. Cf. *Group of Investors* v. *Milwaukee R. Co.*, 318 U. S. 523, 542–544.

Interference with the expeditious movement of livestock to the Chicago stockyards is, indeed, matter of serious concern, not only to the railroads performing the transportation, but to producers and consumers throughout a wide area of the country and also Canada. It is the greatest livestock market in the world (R. 918). In the course of a year, several hundred thousand, possibly half a million, producers ship livestock for sale on the Chicago stockyards market (R. 743). To that market a producer can ship any meat animal, regardless of its species, grade, type or weight, and he will find a buyer. And any buyer in the country, regardless of the quality he likes to buy, the grades, weights or whatnot, can come to Chicago with assurance that he will find the animals he wants (R. 920). This favorable condition of the Chicago stockyards market and its value to producers and consumers necessarily depends on good railroad service. Although now

hemmed in my the City's intensive industrial and municipal development, the Junction's lay-out of yards and tracks is still well adapted for rendering expeditious service by the method, always pursued, of centralized delivery of all livestock at the stockyards by the trunk lines. However, any change now in such method of delivery, particularly as requiring the Junction to assume the lengthy undertaking of switching the livestock of Swift and other packers through its congested yards would not only greatly add to the number of set-outs at the South Yard and consequent delaying of trains seeking ingress to the stockyard, but would also interfere with the trunk line's train schedules by adding to the number of stops for rest, feed and water, increasing the shipper's costs and inevitably narrowing the area from which producers may profitably avail themselves of the Chicago market. (R. 642–4; 680–1; 702–3; 724–7.)

Doubtless it is true, as pointed out in Swift's brief (14–5), that the distance to its proposed plant is about the same as that to the stockyards. But, if the Commission, in meeting its transportation and rate problems, should always treat distance or other mathematical guide as governing, that would often result in the narrowing of areas of production contrary to the interests of consumers, of many producers, and of the general public. Cf. *Ayrshire Corp.* v. *United States*, 335 U. S. 573, 576, and cases cited. And here, too,

the Commission had to particularly consider the public interest as affected by the general disruption in service that would result from compliance with Swift's demand.

Coming to the question whether in any event the joint rates at the line-haul level sought by Swift include compensation for the delivery of livestock to its proposed plant, the Commission's report says (R. 78–79):

> The line-haul rates on livestock to Chicago are Commission-prescribed rates. In *Chicago Livestock Exch.* v. *Atchison, T. & S. F. Ry. Co.*, 219 I. C. C. 531, 545, 546, we said that "the line-haul carriers operate over the tracks of the Chicago Junction to the Union Stock Yards and make delivery there thereby making these yards their own terminals." We pointed out that in prescribing the rates on livestock to Chicago, among other markets, there was specifically taken into consideration as an element "the rendition of terminal service in connection with the transportation of livestock," and there was included what was considered "sufficient to cover such terminal services under a normal operation as well as to cover the unloading and loading of livestock at public stockyards," but we did not there consider what the services would be in connection with deliveries of livestock by the Junction on private industrial tracks. That carrier did not then and does not now perform such services.

The Commission report also discusses at some length the Section 3 issues and certain others raised by Swift which will, however, be left for later mention when reached in argument.

Thereafter, the report concluded with the following findings and conclusions: (R. 80, 81.)

> The evidence affords no basis for a conclusion that the terminal charge of the Junction in addition to the line-haul rates is unreasonable for deliveries of livestock to the proposed plant, considering services and modification of services that would be required for the desired deliveries and the effect upon terminal operations generally of performing such delivery service to the proposed plant.
>
> The Junction provides for switching charges on "all carload freight." That provision, without qualification, includes livestock. There is therefore a holding out by the Junction to switch livestock to and from industries, sidings, team tracks, and districts listed in the tariff. The published switching charge is appropriate for any switching that may occur of cars of livestock to complainant's proposed plant. It does not appear that the maintenance of a switching charge for livestock will have any detrimental effect upon terminal operations.
>
> We find (1) that in the circumstances presented the published switching charges in addition to the line-haul rates will not be unreasonable or otherwise unlawful for

the transportation of livestock for delivery on the private side-tracks to be constructed by complainant, which will connect with the Junction, provided that the tracks to be constructed will be adequate for deliveries by the Junction at its ordinary operating convenience and without interruption or interference, and (2) that establishment of joint rates for the transportation of this traffic is not necessary or desirable in the public interest.

We further find that the proposal to specifically exempt livestock from the traffic which will be transported by the Junction at Chicago and to cancel the application on livestock of switching charges, except to and from chutes and sidings at the Union Stock Yards at that point, is not just and reasonable.

Following entry of the Commission's order carrying out its findings, Swift brought its suit to set aside the order (R. 1). The United States and the Commission filed separate answers (R. 90, 94). Having been given leave to intervene (R. 97), the railroads (including the River Road, lessee of the Junction) filed their answer (R. 98). Others intervening and filing answers were the Union Stock Yards (R. 125), the Chicago Live Stock Exchange, the Chicago Traders Live Stock Exchange (R. 132), the National Live Stock Producers Association and the Chicago Producers Commission Association (R. 135). At the hearing before the specially constituted dis-

trict court a complete record of the proceedings before the Commission, including exhibits, was introduced (R. 196). The court's findings of fact and conclusions of law (R. 197-209) were filed May 28, 1951; its order dismissing Swift complaint (R. 210) was entered June 21, 1951.

SUMMARY OF ARGUMENT

I

What appellant Swift sought of the Commission in this case was an order requiring private delivery to it, at its private side track, without any charge in addition to the line-haul rate. But the line-haul rates do not include compensation for such switching, and the Chicago Junction Railroad could not be expected to perform such switching without compensation.

The Commission could neither ignore the history of the development of the stockyards area nor the fact that inauguration of regular, continuing switching service to effect plant delivery of livestock would inevitably interfere with, and delay, the Junction's dead freight service and the operations of the line-haul carriers in making delivery of livestock to the stockyards, all to the detriment of producers and consumers generally and to the public interest.

Taking these factors into account, the Commission could properly, and did, find that the granting of Swift's request would "seriously

interfere with, delay, and disrupt terminal transportation operations and the movement of livestock generally."

II

The Commission's findings that the switching charge upheld had not been shown to be prejudicial and discriminatory are amply supported by the evidence. It is clear enough, as the Commission found, that live freight—cars filled with cattle—cannot be handled in the same manner as dead freight. The measure of the transportation services rendered the former is substantially greater than that required by the latter. Cars of livestock cannot be subjected to rough shocks or jolts, and the Federal 28-hour law requires special handling of livestock, not necessary with respect to dead freight, in the interests of economy, safety, sanitation, and health.

Swift did not bear its burden of showing that other packers, under substantially the same conditions and circumstances, were being accorded perferred treatment. The Union Stock Yards is not a packer; it has been held by this Court to be a terminal, and terminal delivery cannot be equated with private sidetrack delivery. Swift's Omaha plant is not in the congested stockyard area as its proposed plant would be, and so the fact that delivery there is made at the line-haul rate does not show discrimination.

United States v. *Baltimore & Ohio R. Co.*, 333 U. S. 169, was quite a different case. There was not involved in that case the congestion and delays which would be a consequence of the private side-track delivery Swift seeks here. Indeed, in that case, involving the Cleveland stockyards area, railroads had been making plant delivery of live-stock for many years, and the only question was whether the Yard Company's ownership of track could be used as a device for terminating such plant delivery which adversely affected the Yard Company's business.

III

The Commission's decision in this case was in no way based on the covenant between the River Road and the Union Stock Yards. It was based on transportation standards, and was the product of an effort to give effect to the interests of producers, consumers, carriers and the general public. To suggest that the private agreement referred to was in any respect influential on the Commission is an affront to that public body which is wholly unjustified.

IV

The switching charge upheld by the Commission in this case is the same (subject to general increases) as that it upheld, almost twenty years ago, when Hygrade Food Products asked for what Swift is now here seeking. (195 I. C. C. 553.)

It is not a penalty charge directed at Swift, or at livestock, or designed indirectly to accomplish an indirect prohibition of private sidetrack delivery to Swift. For the history of the charge demonstrates that it was designed to apply to "all carload freight" not merely livestock.

Swift had the burden of showing that charge to be unreasonable; it failed to meet that burden and hence cannot complain simply because it is not accorded private delivery at rates which would be lower than its expenditures for delivery at the Union Stock Yards or at the Omaha plant.

ARGUMENT

I

In determining the issues raised in the proceedings, it was essential that the Commission consider the lay-out of yards and tracks of the Junction; the Junction's present operations in handling dead freight; the method by which livestock had for many years been handled by the line-haul carriers to the stockyards; and the physical operations that would be necessary if the Junction were required to make private-track delivery of livestock

Based on allegations that the interstate rates, charges and practices on and in respect of direct shipments of livestock to its plant in the stockyard area of Chicago were unreasonable and unduly prejudicial in violation of sections 1 and 3, Swift's complaint prayed the Commission to order the defendant carriers (line-haul and terminal) to establish in lieu thereof and apply

in future just and reasonable rates, charges and practices, including joint through rates between the line-haul carriers and the Junction, such rates to cover delivery of the livestock on a private siding at its plant and not to exceed the rates charged on shipments of livestock to the stockyards and other points in Chicago where delivery is afforded without charge in addition to the line-haul rates.

Thereupon, the Junction which had never, except in an emergency, handled livestock in switching service and yet, under the joint rates sought, would be the carrier making switching delivery thereof at the plant which Swift proposed to construct with connecting track in Packingtown, filed schedules proposing to specifically exempt livestock from the traffic it would transport and to cancel the application on livestock of all switching charges published by it, except to and from chutes and sidings at the stockyards. By action of the Commission, supplemented by voluntary action of the Junction, the operation of the schedules was postponed pending the Commission's decision. The two proceedings were heard on a consolidated record and decided in the same report (R. 57, 59).

The main issue presented was whether or not Swift was entitled to delivery without charge in addition to the line-haul rates of its direct shipments of livestock on the private sidings at a plant it proposed to construct in Packingtown just

north of its present plant (R. 59, 63). Swift's demand ignored the heavy burden of switching livestock through the crowded main and base yards of the Junction and thence over the latter's spurs to Swift's proposed plant. The line-haul rates do not include compensation for such switching (R. 78–79); the Junction could not be expected to perform such switching without compensation. And it is not apparent that the establishment of joint through rates between line-haul carriers and the Junction would eliminate the heavy burden of switching livestock through the Junction's yards and over its spurs to Swift's proposed plant. Moreover, a factor having to be particularly considered was that the inauguration of regular, continuing, switching service to effect plant delivery of livestock would necessarily interfere with and delay the Junction's dead freight service and the operations of the line-haul carriers in making delivery of livestock to the stockyards, all to the detriment of producers and consumers generally and to the public interest.

Accordingly, in order to properly determine the issues raised, the Commission regarded as necessary that it consider the layout of the yards and tracks of the Junction; the Junction's present operations in handling dead freight; the method by which the line-haul carriers had for many years transported livestock to the stockyards; the physical operations that would be necessary if the

Junction were required to make private-track delivery of livestock, as sought by Swift; and also, in order to avoid undue preference and prejudice, if it were required to make similar deliveries to Swift's competitors.

There are few cases, Court or Commission, involving shipments (direct or market) of livestock to the Chicago stockyards which have been determined without giving consideration to the history of the stockyards and of the company's terminal railroad (now the Junction), the conditions which induced the construction thereof, the rapid extension of the City, its streets and industries, into the area, and other conditions accounting for the practices of the stockyards or those of the railroads serving it. This has always been true of the Courts' decisions involving direct shipments of livestock consigned to packers at the stockyards. *Swift & Co.* v. *United States,* 316 U. S. 216; *Armour & Co.* v. *Alton R. Co.,* 312 U. S. 195; *Atchison, T & S. F. Ry Co.* v. *United States,* 295 U. S. 193; *Adams* v. *Mills,* 286 U. S. 397. In the *Swift case, supra* (pp. 222–3) this Court quoted from *Adams* v. *Mills,* as follows:

> * * * That the yards are, in effect, terminals of the railroads is clear. They are in fact used as terminals; and necessarily so. Whether the unloading in the yards was a part of transportation was not a pure question of law to be deter-

mined by merely reading the tariffs. Compare *Great Northern Ry. Co.* v. *Merchants Elevator Co.*, 259 U. S. 285, 294. The decision of the question was dependent upon the determination of certain facts, including the history of the Stock Yards and their relation to the line-haul carriers; the history of the unloading charge at these yards; and the action of the parties in relation thereto. If there was evidence to sustain the Commission's findings on these matters, its conclusion that the collection of the extra charge from the shippers was an unreasonable and unlawful practice must be sustained. * * *.

Later on in its decision in the *Swift* case, this Court said (pp. 225–227):

> In determining whether the Yard Company's unloading pens were suitable points at which to terminate the duties of carriers to consignees, and points where the consignees entered into a relationship with someone other than the carriers, the Commission was justified in considering, as it did, all that would account for the evolution of the practice complained of, as well as the effect of existing and proposed practices on the interest of the carriers, the public, and other shippers. *Adams* v. *Mills, supra,* at 409, *et seq.; Atchison, T. & S. F. Ry. Co.* v. *United States,* 295 U. S. at 198, *et seq.; Armour & Co.* v. *Alton R. Co., supra,* at 201. Neither the railroads nor the Stock Yards exist for the benefit of the

packers alone. Their patronage is large and important, but neither in the regulation of the carriers nor in the regulation of the Stock Yards are they entitled to facilities or treatment that will ignore the existence of other interests. The Stock Yards are not only a facility for the transportation of direct shipments from points of country origin to the packers; they also are an important factor in the entire animal industry of the United States. * * *

The bulk of the movement of stock is received in the Yards during the first days of the week, and approximately three-fourths of the daily movement is unloaded between three and eight in the morning. * * * * * * The customary handling over many years led to the building up of a physical plant which the Commission finds makes it physically impossible to remove this stock from the unloading pens except by use of the property of the Yard Company.

The interests of the public and of the community are entitled to consideration. This transportation is of a special kind of property on the hoof, which calls for special handling in the interests of economy, safety, sanitation, and health. The Commission has found that "the evidence fails to disclose how, as a practical matter, an annual volume of 30,000 carloads of livestock could be discharged into and handled through the public streets of Chicago."

The history and the practice deemed so weighty by this Court in the past, Swift would now prefer to put aside—to label as a product of "Railroad Statics" (Appellant's Br. 45, 89, 135), and so labeled to be ignored. In their stead, appellant bears heavily on the injustice and perhaps illegality involved in forcing packers, like Swift, to use the Union Stock Yards and pay them for unwanted and unnecessary services.

That these grievances have no place in this case, arising under the Interstate Commerce Act, has already been made clear by this Court. In *Swift & Co.* v. *United States,* 316 U. S. 216, 232–233, this Court said:

> Neither the Interstate Commerce Commission nor this Court can assume that the charges or practices of [the Union Stock Yards] are unfair or unreasonable, that it is charging for services that are not performed or facilities not used, or that it is imposing on consignees unnecessary services. Nor can the Commission or this Court assume that, if unreasonable practices or charges are imposed by this utility, the Secretary of Agriculture would fail to correct them upon an appropriate complaint in a proceeding in which the Yard Company is a party and may defend its practices for itself. In any event, Congress has provided that the Secretary of Agriculture is the forum in which such charges and practices may be questioned and may be weighed in the interest, not only of the

> packers but of others who use the Yards and markets and who might be affected competitively by granting the packers' present demands. Congress has established appropriate forum in which any complaint of the packers against the real party in interest may be heard and any lawful grievances adjusted, and the Commission was quite right in refusing to trespass on its jurisdiction.

Thus, the charges imposed by Union Stock Yards have no bearing whatever on this case. Cf. Appellant's Brief, pp. 12–13, 117–141.

While, in the *Swift* case, *supra*, and the other so-called "egress" cases, the basic question involved—the point where transportation ends—was one committed to the Commission, equally, in the case here, the questions whether Swift was subjected to undue prejudice, whether the carriers' practices respecting terminal deliveries were unreasonable, whether the joint rates sought were in the public interest, all were questions committed to administrative judgment, and clearly, in determining them, the Commission was expected to have full evidence as to past and present conditions accounting for existing practices as well as evidence as to the effect of proposed practices on the carriers and on producers, consumers, and the general public. As stated in the Commission's report (R. 72):

We have indicated generally the difficulties which would confront defendants if required to make delivery of livestock at complainant's plant, the basic difficulty being that such method of delivery is not adapted to defendant's service, tracks and yards, as specially designed and developed, along with the city's intensive development, for performance of the centralized delivery service rendered at Chicago. For some 70 years the method of conducting terminal operations in the stockyards district has been for the line-haul carriers, using Junction tracks, to carry all shipments of livestock [11] to the stockyards and make deliveries there, and for the Junction to perform the switching and spotting of other freight for the packers and many other industries in the area. As a result, the Junction's main tracks, its yards and subyards and their tracks, are peculiarly designed and fitted for the operations and service described, and any change, particularly as contemplating deliveries of livestock to the plants of the packers, would, as might be expected and as is shown, require a conflicting use of such yards and tracks and subject defendant's operations to interference and delays.

[11] With the exception of team track deliveries and deliveries to Swift at the Omaha Plant site, referred to in footnote 4, page 5, *supra*.

Continuing, the Commission's report outlined in considerable detail the adverse effects of any undertaking by the Junction to make switching deliveries of livestock through its yards, both as blocking and delaying the trunk lines' trains of livestock seeking ingress to the stockyards and as delaying and disrupting the Junction's operations in classifying and switching dead freight to and from the 499 industries on its lines. Thereafter, the Commission stated and found (R. 76–77):

> Interferences with the movement of livestock to the stockyards is a serious concern not only of defendants but also of producers and livestock marketing agencies who desire expeditious movement of livestock and continued functioning of the public market in a manner that is adequate for their needs. * * *
>
> We may * * * disapprove the inauguration of a continuing practice of delivering livestock directly to packers in circumstances where, as we have found would be the case here, such practice would seriously interfere with, delay, and disrupt terminal transportation operations and the movement of livestock generally. The proposed complete exemption of livestock from transportation by the Junction under any circumstances is not justified. There is no warrant, however, for a conclusion that the establishment of joint rates as desired by complainant is necessary or desirable in the public interest.

II

Swift's allegation that the Commission erred in failing to find that the existing rates, charges and practices of the carriers resulted in undue prejudice and preference in violation of Section 3 is without merit

As regards Swift's contention that the carriers' existing rates, charges and practices on and in respect of shipments of livestock to its proposed plant resulted in undue prejudice to livestock as a commodity, it will be noted that the Commission found (R. 65–72):

> The measure of the transportation services rendered shipments of live animals is substantially greater than that accorded dead freight. Livestock cannot be switched in the same manner as other freight. In the ordinary and usual course of classifying dead freight by the Junction, the engine pushes a string of cars along a track leading to the classification tracks. Uncoupled cars are "kicked" or given impetus to roll freely through a switching lead onto the proper classification track. Manifestly, if livestock were so handled it would result in injury to the animals by being thrown against the ends or sides of the cars or knocked down. Cars of livestock must necessarily come to rest without rough shocks or jolts. * * *

Subsequently, in discussing the difficulties the Junction would encounter in classifying and switching livestock in yards, already worked to capacity in handling dead freight; the report

shows in considerable detail the greater service that would have to be rendered livestock than is accorded dead freight (R. 72–4). In fact, it seems beyond dispute, not only that the measure of service rendered livestock is greater than that accorded dead freight, but that the circumstances and conditions that accompany its handling are far different. As stated in the previous *Swift case, supra,* p. 227:

> * * * This transportation is of a special kind of property on the hoof, which calls for special handling in the interests of economy, safety, sanitation, and health. * * *.

In the proceeding before the Commission Swift had the burden of showing that the rates in effect were unduly prejudicial to it and preferential of its competitors. To do this Swift was required to show that other packers under substantially the same conditions and circumstances were being accorded preferred treatment. Swift failed to sustain this burden. Not only did Swift fail to show that facts, circumstances, and conditions at other midwestern points were the same or very similar to those at Chicago,[12] but rather

[12] The record shows that at the other midwestern points the so-called preferred packers occupied the same position with respect to line-haul carriers as did Swift with respect to its private sidings on the right-of-way of the Burlington which serves Swift's Omaha plant (Ex.'s 12 and 53, R. 1083, 1868). In this connection Swift's position becomes in effect one of complaining, among other things, because Swift itself at its

the evidence indicates that Swift was in a better position than other Chicago packers because Swift had the choice of receiving its "directs" either at the Omaha Packing Company or at the Stockyards.

The cases cited by Swift as involving situations analogous to those in this case do not sustain its position here. In *Neuhoff Packing Co. v. L. & N. R. Co.*, 268 I. C. C. 271, the complainant was a wholly owned subsidiary of Swift and it operated a meat-packing plant at Nashville, Tenn. The complaint there alleged that the railroads' refusal to deliver interstate carload shipments of livestock upon complainant's sidetrack was unreasonable and unduly prejudicial to the complainant, and unduly preferential of its competitors in the southeast, in violation of Sections 1 and 3 of the Interstate Commerce Act. The Commission upheld the complainant after stating that "the sole basis for the defendants' refusal to make the sidetrack deliveries to the complainant is a provision in a contract with the stockyard company which designated the stockyard as the only depot for receipt of livestock in Nashville." (268 I. C. C. 271, 273.) The Commission went on to say that if the contract "transgresses or conflicts with any of the provisions of the Interstate Commerce Act, it must be disregarded, and that since no rule of universal ap-

---

Omaha plant is receiving a preference over Swift itself at its proposed new plant.

plication could be laid down, each case must be determined according to the facts, circumstances, and conditions presented." (268 I. C. C. 271, 273.)

In *Nashville Abattoir, Hide & Melting Assn.* v. *L. & N. R. Co.*, 40 I. C. C. 134, the issues raised were substantially the same as those in this case. There, as here, the Commission found that upon the facts of record defendants' regulations and practices governing the delivery of livestock in Nashville were not shown to be unreasonable or unjustly discriminatory. The Commission distinguished the *Neuhoff* case from the *Nashville Abattoir* case on the ground that the facts, circumstances, and conditions in that proceeding are entirely dissimilar from those in the *Neuhoff* case.

In reaching its decision in the *Neuhoff* case, the Commission cited an analogous case as the basis of its decision. Thus, at page 274 of the *Neuhoff* case, the Commission said:

> In *Baltimore Butchers Live Stock Co.* v. *P. B. & W. R. Co.*, 20 I. C. C. 124, the Commission considered a situation similar to that here presented. There, complainant had yards for the receipt and care of livestock with a switch connection and sidetrack reaching the yards which were then and for many years had been in use. *No physical obstacles to the delivery of livestock at the yards were shown to*

> *exist.* That is the case here. [Emphasis supplied.]

The *Neuhoff* and *Baltimore Butchers* cases are readily distinguishable from this; in those cases no physical obstacles to the delivery of livestock were shown to exist. In the instant case the record and the Commission's findings demonstrate that the physical obstacles that would be encountered in switching livestock through the Junction's yards would be very great and that the undertaking of such service would seriously interfere with all terminal operations in the stockyard area.

Kriel v. *Baltimore and Ohio R. R. Co.*, 41 I. C. C. 434 (1916), involved another unsuccessful attempt to obtain plant delivery of livestock on the ground that defendant carriers' customary method of delivery to the Union Stock Yards in Baltimore, about 3½ miles from complainant's plant, was unreasonable and unduly prejudicial. Complainant relied on the *Baltimore Butchers* case, *supra,* but the Commission, distinguishing that case, said:

> If defendant is required to provide the desired delivery for complainant, other packers might with equal propriety demand similar treatment. Defendant states that to make such delivery, it would be necessary to provide a permanent double-deck unloading chute and also a pen to prevent the hogs from straying over the streets. Cars

> for unloading are ordinarily placed on the tracks in question during the night, and in certain seasons there is considerable congestion. Defendant states that under present train schedules livestock shipments would not arrive there until 9 A. M., and that the delays incident to the spotting of cars, especially if the tracks were congested, might necessitate the return of such livestock to the Claremont yards to be watered, fed, and rested within the time required by law.
>
> It cannot be denied that to have the unloading of livestock concentrated facilitates inspection, tends to prevent the spread of disease, and improves sanitary conditions generally (p. 435).

In addition to the *Neuhoff* and *Baltimore Butchers* cases, Swift, before the Commission, as here, relied particularly on the so-called *Cleveland Stockyard* case, 266 I. C. C. 55, the Commission's order in which was sustained as valid in *United States* v. *Baltimore & Ohio R. Co.*, 333 U. S. 169. In that case, Swift's plant and the plants of certain other packers were reached by a spur of the New York Central, a middle segment of which was owned by the Cleveland Union Stock Yards Company but for years had been operated over by the Central under trackage right agreements. The agreement of 1924 was cancellable by either party on 30 days' written notice; and, in the early 1930's the Yard Company, whose income

is largely derived from fees it charges for unloading and delivering livestock into pens within its yard, concluded that it was losing patronage and fees because of the deliveries of livestock to Swift and other packers on the Central's spur. With a view toward collecting such fees, the Yards Company instituted negotiations with the Central which in 1935 resulted in a modified agreement. Whereas, under the former agreement the Central was granted the free and uninterrupted use of the track segment (called track 1619), the modified agreement added the clause "except for competitive traffic a charge for which shall be the subject of a separate agreement."

In subsequent negotiations the parties agreed that the words "competitive traffic" meant livestock, and the Yards Company demanded that the Central either stop carrying livestock over track 1619 to Swift and other packers or pay it for such use thereof an amount equivalent to the fees the Yards Company would have collected had the livestock consigned to such packers been unloaded and delivered in its yard. This amount was considered exorbitant by the Central and the other railroads for which it performed switching and they refused to pay it. The result was that in 1938 the railroads ceased delivering livestock to the sidings of Swift and the other packers served by the Central's spur, although under agreement with the Yards Company they continued to use

the spur for delivery of all other kinds of commodities.

Swift filed its complaint with the Commission and, following full hearings, the Commission found that the railroads' refusal to carry livestock to Swift's plant subjected Swift to undue prejudice and unduly preferred several nearby competing plants which continued to receive deliveries of livestock on sidings which could be served without using track 1619. The Commission further found that under the circumstances shown at Cleveland such refusal of the railroads constituted a violation of section 1 (6) and also of section 1 (9). (266 I. C. C., at 68–70.) In connection with these findings it is important to keep in mind that the railroads had made plant delivery of livestock at Cleveland for many years. The operations there were geared to that method of delivery just as at Chicago they have developed on the basis of delivery to the public yard. The Commission found (pp. 68–69) that for years all the defendant railroads had recognized that the performance of plant delivery of livestock was included in the line-haul rates to Cleveland while in the case here the Commission found that the line-haul rates on livestock to Chicago which it had prescribed do not contemplate or cover deliveries to plants on the Junction.

The Commission's findings in the *Cleveland Stockyard* case were not in fact challenged. All turned on the Yard Company's ownership of track

1619 and the question whether, although contracting for the use of the track as part of the line of an interstate railroad, it could compel that railroad to operate in a way which violates the Interstate Commerce Act. This Court's answer to the question was "no"; that "the Commission's order was authorized by statute and that it does not deprive Stock Yards of its property without due process of law." *United States* v. *Balto. & O. R. Co., supra,* p. 177.

Appellant complains that an unlawful discrimination is involved in "the transportation of livestock to the Swift sidetrack for the line-haul rate plus $39.24 per car switching fee, while similar transportation of the same commodity to the Union Stock Yards is made at the line-haul rate without any switching fee" (Br. 70).

This complaint ignores what this Court has always recognized to be the fact: "That the yards are, in effect, terminals of the railroads is clear. They are in fact used as terminals; and necessarily so." *Adams* v. *Mills,* 280 U. S. 397, 409; *Swift & Co.* v. *United States,* 316 U. S. 216, 222. In recognition of this fact, Congress has explicitly and clearly distinguished between public stockyards deliveries and other deliveries. By Section 15 (5) of the Interstate Commerce Act, Congress has stipulated for stockyards delivery at the line-haul rate but gone on to provide that "Nothing in this paragraph shall be construed to affect * * * the duty of performing service as to

shipments other than those to or from public stockyards."[13] [Italics supplied.]

This Court has said that a carrier cannot exact an extra charge for the use of a terminal.[14] It hardly follows that a carrier may not exact an extra charge from one who chooses not to use the terminal and who desires and receives private sidetrack delivery.

Whether such a charge is unlawfully exacted depends upon "whether in view of the conditions of the distribution of the carload freight through a large area there was in fact such a similarity of movement as to negative the basis for a separate charge." *Los Angeles Switching Case*, 234 U. S. 294, 312. Here the Commission found no

[13] Section 15 (5) provides, in full, as follows:

SEC. 15. (5) Transportation wholly by railroad of ordinary livestock in carload lots destined to or received at public stockyards shall include all necessary service of unloading and reloading en route, delivery at public stockyards of inbound shipments into suitable pens, and receipt and loading at such yards, of outbound shipments, without extra charge therefor to the shipper, consignee, or owner, except in cases where the unloading or reloading en route is at the request of the shipper, consignee, or owner, or to try an intermediate market, or to comply with quarantine regulations. The commission may prescribe or approve just and reasonable rules governing each of such excepted services. Nothing in this paragraph shall be construed to affect the duties and liabilities of the carriers now existing by virtue of law respecting the transportation of other than ordinary livestock, or the duty of performing service as to shipments other than those to or from public stockyards.

[14] *Covington Stock Yards Co.* v. *Keith*, 139 U. S. 128, 135–136.

such similarity of movement (R. 70) and to Swift's insistence "that the contrary of this finding is self-evident," this Court's answer in the Los Angeles Switching Case has equal force here: "The facts with respect to the movement of freight in a great terminal district are by no means so simple that the deliberate judgment of the Commission can be regarded as contradicting the obvious." 234 U. S., at 314.

III.

Swift's contention that the Commission's order gives effect to an unlawful covenant is without merit

Swift urges at some length (Br. 117–34) that the Commission's order gives effect to a covenant by which the River Road, a subsidiary of the New York Central, is to operate the Junction in a way discriminating in favor of the stockyards business. In the Commission proceeding Swift introduced a letter (Ex. 57, R. 1038–9, 1961–2) written by counsel for the stockyards to the General Counsel of the River Road and New York Central stating that those carriers were obligated by such covenant to defend against Swift's complaint and to take the proper steps to raise the issues necessary for a determination of all the questions involved. Swift's brief (123) suggests that the River Road and New York Central undertook to defend against its complaint only because of the letter. In its report the Commission

refers to the covenant and Swift's contention as follows (R. 79–80):

> Complainant asserts that a contractual relation exists between the Union Stock Yards and the Chicago Junction under a lease dated December 1, 1913, whereby the carrier agreed "to conduct, manage, and operate the line of railroad by this instrument demised, and insofar as possible the same to conduct in such manner as will tend to the benefit, advantage, and behoof of the business and affairs of the Yards." The covenant quoted was incorporated in a later lease executed May 19, 1922, when the Chicago Junction subleased its line to the Chicago River & Indiana, a wholly owned subsidiary of the New York Central Railroad, for 99 years with an option to renew in perpetuity. *Union Stock Yard & Transit Co.* v. *United States*, 308 U. S. 213, 216. The effect of the leases was to completely divest the Union Stock Yards of operation and control of the terminal railroad, the Court saying that by ceasing to operate or control its railroad directly or indirectly, the Union Stock Yards restricted its transportation service to the loading or unloading of livestock as specified in its tariff. The operation of the Chicago Junction is subject not only to the provisions of the Interstate Commerce Act but also to the conditions imposed by the Commission in the *Chicago Junction Case*, *supra*. Those conditions were par-

> ticularly intended to insure that the Chicago Junction and the Chicago River & Indiana should be operated as neutral terminal carriers, without special advantage favoring the New York Central but the conditions were and are broad enough to inhibit operation of the Chicago Junction to the special advantage and interest of the Union Stock yards.

The complete answer to Swift's contention is that the Commission's decision is not in any respect whatsoever based on the contract clause in question. The Commission not only gave it no weight at all in reaching its conclusion, but on the contrary rejected the suggestion that it had any significance. The Commission's attitude on that question was succinctly stated in the *Neuhoff case, supra,* where it said that if any private contract conflicts with the provisions of the Interstate Commerce Act then it must be disregarded. What Swift wants is that its proposed plant in Packingtown be accorded at the flat Chicago rate the same delivery service as is accorded its plant and also all other packing plants at Cleveland. But, as above stated, operations in Chicago have developed on the basis of an entirely different method of effecting deliveries. That this was known to the Commission and all parties to the *Chicago Junction case,* 71 I. C. C. 631, is shown by the Commission report in that case wherein it is stated (p. 633):

> The movement of live stock in and out of the Junction yards is essentially different from the method of handling the dead freight, in that each carrier moves its trains to the unloading chutes with its own power, and goes into the pens for outbound stock destined for its own line. All parties concede that that is the only practical method of handling that traffic. * * *

As is so unmistakably shown in its report in the case here, the Commission's decision was based on transportation standards, giving effect to the interests of producers, consumers, carriers and the general public. It was not in the slightest degree influenced by any special interest.

IV

The switching charge of the Junction in addition to the line-haul rates is not a penalty charge as termed by Swift

As bearing on the switching charge of the Junction to points on its lines, the Commission said in its report in this case (R. 77–8):

> In *Hygrade Food Products Corp.* v. *Atchison, T. & S. F. Ry Co.*, 195 I. C. C. 553, complainant therein alleged, among other things, that switching charges demanded for the placement of carloads of livestock at complainant's plant directly north of the unloading pens of the Union Stock Yards in Chicago, were inapplicable and, if applicable, were unreasonable, un-

duly prejudicial to complainant, and unduly preferential of the Omaha Packing Company, in Chicago, a competitor of complainant.

The plant of the complainant in that proceeding also is served only by the rails of the Junction. It was there sought, as in the instant proceeding, to have certain private tracks used for the receipt of livestock without any additional charge for switching. We found that the published switching charge there assailed, $12 per car, which, as increased by subsequent general authorized increases, is the identical switching charge here assailed, was applicable to the placement for delivery of carloads of livestock at complainant's plant, and had not been shown to be unreasonable or otherwise unlawful.

In the report in that proceeding we said at page 555:

While deliveries are made at the plant of the Omaha Packing Company without the assessment of a switching charge such as applies to deliveries at complainant's plant; there is no indication that transportation services, conditions, and circumstances connected with deliveries at complainant's plant would be substantially similar to those connected with deliveries at the plant of the Omaha Packing Company, and no facts of record lead to the conclusion that charges applicable to such services as may be performed in making deliveries at complainant's plant are un-

reasonable or that the differences in these charges are not warranted.

Apparently, Swift, in contending that the Junction's switching charge is a penalty charge means that it is, and has been, a charge made purposely high to force deliveries of livestock at the public yards (Appellant's Br. 57). But, as pointed out in the Commission report here (R. 80), the switching charge is one applying on "all carload freight." It is because the tariff provision is thus unqualified that it includes livestock, but, for the same reason, it includes and applies to any dead freight as to which joint rates have not been established, or specific charge published. Certainly, as so applying on both dead freight and livestock, it cannot be logically assumed that the switching charge is, or ever was, one made purposely high to force deliveries of livestock at the public yards instead of at the plants of the packers. It may be that in cases where the charge applies to dead freight it is excessive, but the record makes even that assumption doubtful. The evidence is all one way, fully supporting the Commission's finding that in view of the services and modification of services to effect the desired deliveries of livestock and the effect on terminal operations generally, the switching charge in addition to the line-haul rates will not be unreasonable or otherwise unlawful.

What Swift sought was joint through rates not

to exceed the flat line-haul rates to Chicago. But the Commission could not disregard the evidence. Apparently, Swift believes that any switching charge not adjusted so as to be below the Stockyards yardage charges or below his costs for trucking the animals from the Omaha plant site would be penalty charges. But the statute does not contemplate that the Commission apply such standards.

CONCLUSION

For the above reasons it is respectfully submitted that the decree of the lower court should be affirmed.

PHILIP B. PERLMAN,
Solicitor General.

DANIEL W. KNOWLTON,
Chief Counsel,
Interstate Commerce Commission.

FEBRUARY 1952.
